In the same year (355 = 966) al-Mu'izz began his preparations for the advance on Egypt, by ordering wells to be dug along the route. His instructions with Kāfār at this time are obscure. Fāṭimid emissaries had long been engaged in active propaganda in Egypt, and had evidently made some headway, aided by the resentment of the population against the Südān troops, who were fanatical Sunnis. Their propaganda was indulgently regarded by Kāfār, and it is not impossible that, as the Fāṭiimid writers claim, he privately declared his adhesion to al-Mu'izz. His death on 21st Djamād-1 137 (24th May 958) gave the signal for the advance of the Fāṭimid army, said to have been over 100,000 strong, which set off under the command of Djawhar on 14th Rabīl I, 358 (6th Feb. 969), with the support of a naval squadron. The disorganization which prevailed in Egypt and the terror inspired by the Greek armies (who in 968 had swept over the whole of northern Syria without meeting opposition and had taken immense numbers of prisoners), contributed greatly to the prospects of its success; moreover, many of the Egyptian notables and even of the troops had sent letters to al-Mu'izz inviting his intervention. On Djawhar's approach the population made their submission by an embassy of notables, but the Ikhsched and Tuilun regiments rejected the conditions laid down in the agreement, and had to be forcibly dislodged from their positions at Djea and on the islands. The retreating Māmilūk split up into bands, some of which continued to give Djawhar much trouble as local centres of disaffection, ending only with the arrest and deportation to Africa of their commanders, and the disarmament or imprisonment of the remainder.

Djawhar, having entered Fustâţ on 17th Shabān 355 (7th July 969) and laid the foundations of the new city of al-Kāhirah, immediately took in hand the reform of the administration. Complete religious toleration was promised, and confirmed by the re-establishment of the existing officials, weekly sessions for the hearing of māqālim were instituted, several vexatious taxes were abolished and property which had been illegally sequestrated to the Treasury was restored to its owners, and regular salaries were assigned to the officers of the mosques. Another of his reforms, however, caused great resentment; this was the striking of a new coinage to replace the existing debased coinage, and the order to levy all taxes in the new currency. His difficulties were increased by a prolonged famine and by the turbulence of the Berber soldiery, and it was not until the arrival in Egypt of al-Mu'izz himself in Ramadan 362 (June 973) that the task of reorganization was completed by centralizing the financial administration under Yaḥyâ b. Kiliš (q. v.) and Aslājī b. al-Hasān, and by the removal of the Berber troops to a new camp near Helopolis.

The course of events in Syria after the occupation of Egypt is differently related and obscure in detail. Djawhar's lieutenant Dja'far b. Fālāḥ defeated the joint forces of the Ikhschedi and Karmājans under al-Hasān (in some sources al-Husain) b. 'Ubd Allāh b. Tughjī at Ramla in the early months of 359 (970), but the general disorganization and the licence of the Arab tribesmen preventing him from entering Damascus until Dhū l-Hijjādā of the same year. Shortly afterwards he detached some contingents against the Greeks, but the troops sent to recover Antioch were defeated near Iskandārūn, or, according to Yahyā b. Sa'dīd (q. v.), were halted after besieging the city for five months. Meanwhile the Karmājān general al-Hasān b. Aḥmad al-'Āṣim (in some versions al-Aghshām), in revenge, is said (but see de Goeje, Les Carnachas du Bahrāin, p. 181—190), for the stoppage of the subsidy he had received from the Ikhschedi al-Hasān, opened negotiations with the Buwahīd 'Īzz al-Dīn and
the Hamadānī amir of al-Mawṣīl, and with the aid of subsidies from them and some Ikhwānī contingents, defeated and killed Dž̲irār and recaptured Damascus in Dhu l-‘Hādīd 360 (Aug.–Sept. 971). Having shut up the remaining Egyptian forces in Yafā, he marched on Cairo and was defeated by Džawhar in Rabî’ I 361 (Dec. 971), and his fleet was destroyed at Tīnīs. The Kūrāmānī retained their hold on Damascus, however, repelled a strong Maghribī force despatched to Palestine by Džawhar in Ramadan 361, and with an army of Arab auxiliaries and Ikhwānīs (some sources also add Daulamīs) made a second descent upon Egypt after the arrival of al-Mu’izzī. By bribing the Arabs, the Caliph succeeded in dividing and defeating the Kūrāmānī army outside Cairo in Ramadan 363 (May–June 964), but not before the Kūrāmānī forces had overrun both the Delta and the Sa‘īdī. On al-Hasān’s return to al-Ahsā’, the Ç̌̄uqīlī Zālīm b. Mawḥūl occupied Damascus on behalf of al-Mu’izzī, but came into conflict with the Maghribī troops, whose indiscipline and excesses at length led the citizens to appeal to the Turkish general al-Aṣfānī, who remained in possession of the city until he was captured by al-‘Azīz [q.v.]. Meanwhile in northern Syria the Fāṭimid troops gained a series of striking successes against the Greeks. Tripoli and Bairāt were captured in 364 (975), and John Zimiskes suffered a crushing defeat both on land and sea at the hands of Rayyān, governor of Tripoli, on his attempt to recover the city.

The empire which al-Mu’izzī bequeathed to his successor, though it fell short of his ambitions, was still of imposing extent. The viceroy to whom he had submitted the western provinces, Balakkhān b. Zīrī [q.v.], proved both loyal and capable; when, on the departure of the Caliph, the Zenāta again rose in revolt, he scattered their forces and recaptured Khart and Tilimsān. The holy cities of Mecca and Madīnah acknowledged the suzerainty of the Fāṭimids, and they had a powerful following in Sind. Only in Syria had the Kūrāmānīs, on whose cooperation al-Mu’izzī had confidently relied (though the letter reproduced by al-Makriṣī, itīṣār, ed. Bunz, p. 133 sqq. is of doubtful genuineness), brought him to a halt, but by this action they had placed a fatal obstacle in his way. This disappointment preyed on his mind and, worn out by ill-health and by grief at the loss of his eldest son ‘Abd al-Allāh (died 364), he died at Cairo on 11th Rabî’ II, 365 (Dec. 975), having nominated as his successor his second son Niẓām al-‘Azīz.

The personal character of al-Mu’izzī was singularly noble; frank, accessible, simple in his habits, endowed with brilliant gifts and all the traditional qualities of kilm, he was at the same time a capable administrator and just towards his subjects, though the financial exactions of his last years left a bitter memory. No instance of cruelty is recorded of him, except the execution of his Kūrāmānī captives, and he was completely devoid of religious fanaticism.

MUIZZI, Amir Amr Abū Abd Allāh Muḥammad b. ‘Abd al-Malik, one of the most famous of Persian court poets. His place of birth is not exactly known. According to most of the sources, he was born in Sarakand around 440 (1048–1049) but Nasā and Nishāpūr are also mentioned. The son of a little known poet ‘Abd al-Malik Burhānī, who was attached to the court of the Saljuq Alp Arslân (1065–1072), he was introduced to Sulṭān Malik-Shāh (1072–1092) by Amir ‘Ali b. Fārāmūz, ruler of Yāzdi (443–488 = 1051/1502–1095), made a favourable impression on the sultan and received from him the taḥkīlama of Muizzī, which comes from the ḥab of Malik-Shāh, Muizzī al-Din. He enjoyed even greater distinction under the last great Saljuq ruler Sandjar (1118–1157) and was appointed his nāṣib al-sīyāṣī and the head of a regular establishment of poets, said to have numbered 400. He is reputed to have become fabulously wealthy from the splendid gifts of the ruler and he received a salary paid out of the revenues of Iṣfahān. Nevertheless he continually tried to increase his fortune and, as he himself tells us, never wrote a single panegyric without making certain in advance that his work would be well paid. According to the Oriental sources, he came to a tragic end, being accidentally killed by Sulṭān Sandjar, while practising archery in his tent. This is not possible, however, as Muizzī himself mentions this incident in his Dīwān and says that, although he suffered a long illness as a result of being struck by the arrow, he completely recovered in the end. This event took place in Marw, about 496 (1102–1103), but he lived for another 40 years and died there in 542 (1147–1148). There is an elegy written on the occasion of his death in the Dīwān of Maḏj al-Din Sand al-Muizzī is one of the most brilliant writers of ḡazals in the old Ghuravic style (Cmnr) but his art was finally displaced by Anwarī’s new style and came to be forgotten.

MUŠABA, Gr. Μουσαιάς, in the Almagest, Ἀποσύνοψις, Lat. Opposita, the term in astronomy for the opposition of a planet and the sun or of two planets with one another. In opposition the
difference in longitude between the two heavenly bodies is 180°; while the modern use is to take no note of the deviations of latitude from the ecliptic, al-Battānī expressly emphasises (Opus Astronomiwm, ed. Nallino, i. 116) that we can only have the true muqādām when both bodies are either in the ecliptic itself or are in equal ecliptical latitudes when opposed: in other planes when they are diametrically opposite one another in the heavens (cf. "διενεχόμενος"). Opposition with the sun can only occur for the moon and the outer planets (in ancient astronomy only for Mars, Jupiter and Saturn), not for the two inner ones, Mercury and Venus. When an outer planet is in opposition to the sun, its conditions of visibility are at their best: at midnight it passes through the meridian and is above the horizon the whole night. When the moon is in opposition to the sun we have the full moon; the usual technical expression for this in Arabic astronomy is al-ṭabīkh which is derived from the same root as muqābala (Greek ξενάσις) and is rendered by Plato Tzetinus and other mediaeval translators by *protestation; but we not uncommonly find the general term muqābala applied to the opposition of sun and moon, while on the other hand we never find al-ṭabīkh used in the general sense of opposition of the planets (cf. al-Battānī, ii. 149, s.v. ṭabīl).

Al-muqābala, opposition, forms along with al-tarīq, quadrature (Gr. tetrasmos), lat. tetragonum, quadratum), al-ṭabīkh, trigon (Gr. tetrasmos, lat. trigonum, triangulum, triquetrum, aspectus trivium, and al-taṣīs, hexagon (Gr. ἕξαγων, lat. hexagonum, sexangulum, aspectus sexitum), the four astrological aspects (ṣāshāl, ṣalqah, ṣilmā, ṣaktāsim, ṣawṭāsim, also al-ṭalās), lat. aspectus or ratioantes), which are applied to the ecliptic differences in longitude of two planets to the amount of 180°, 90°, 120° or 60° respectively. The ṭabīkh also play a part in the astrological arrangement of the signs of the zodiac (burnīya) (cf. the astrological tables and al-Battānī, iii. 194). It should be noted that the conjunction of planets (muqārawa, Greek ἔκδοσες; for moon with sun [new moon] is never ṭabīmā) is not included among the ʿašāl, nor the position when the difference of latitude is 90° or 150° (cf. al-Battānī, op. cit.).

In horoscopes muqābala and tarīq are as a rule regarded as unfavourable in principle, ṭabīkh and taṣīs on the other hand as favourable.

(Willy Hartner)

MUQADDAM (A.). "placed in front". Applied to persons the word means the chief, the one in command, e.g. of a body of troops or of a ship (captain). Dozy, Suppl., s.v., gives a number of police appointments which have this name. In the deri√½v orders the word is used for the head of the order or the head of a monastery.

As a neuter noun the word is a technical term in logic and arithmetic. In logic it means the *prosais* in a premise in the form of a conditional sentence, e.g. "If the sun rises (it becomes day)"; where this whole sentence is to be regarded as premise of a syllogism. But as every sentence can be a premise, muqaddam is really identical with the condition in the conditional sentence. In arithmetic muqaddam means the first of two numbers in a proportion, i.e. 3 (5) or in other words the divided in a simple division. — In logic and in arithmetic the portion following the muqaddam (in brackets above) is called ṭabīkh.

Bibliography: Dozy (cf. above) and other dictionaries; Thörning, Beiträge zur Kenntnis der lateinischen Terminologie (Thurr. Bibl., xi.), p. 108; Dict. of Technical Terms, ed. Sprenger, p. 1215.

AL-MUQADDASÍ, SHAMS AL-DIN ABD AL-AZZÁ MUHAMMAD B. ALMAD B. AL-MUBÀKH ET AL-ṢÀMÍ AL-MUQADDASÍ AL-MU'ÀRîF B. AL-BÀSHÁH b. Al-Muqaddasí as he is called on the first page of the Berlin manuscript (Cat. Alhwardt, No. 6034), is the author of the most original and at the same time one of the most valuable geographical treatises in Arabic literature. The name-form al-Muqaddasí, denoting his origin from Jerusalem, goes back to Sprenger, who brought the Berlin manuscript from India and made this author first known in Europe (A. Sprenger, Die Post- und Reiserouten des Orients, Leipzig 1864, p. xviii.), but the form al-Makdisi is probably more correct as Jerusalem is commonly spelt al-Bal al-Makdis (Yahya, Muqaddam, iv. 590). Yakhir always quotes him as al-Basßáhí.

Biographical dates on the life of this author are only to be found in the text of his treatise. In 356 (966), when he was at Mecca, he was about twenty years of age; it is probable that he lived at least as late as 1000, as the last datable information in the treatise belongs to the end of the ivth (xth) century. His grandfather Abû Bakr al-Banna was an architect in Palestine and had made for Ibn Tüllin the gates of the town of Akkâ. His mother's family was originally from Byzâr in Kūms, from where his grandfather Abû l-Tââyib b. al-Shâwa (in B.G.A., iv., p. viii., l. 12, "paternus" is to be corrected into "maternus") emigrated to Jerusalem. Muhammed b. Ahmad himself shows also a good knowledge of architecture, besides a good literary and general erudition.

The geographical treatise is known from two old manuscripts, one of which forms the basis of the Goëege's edition in the B.G.A., iii., Leyden 1877 and of his revised edition of 1905. The Berlin manuscript has the title Aḥsan al-Takâsim fi Ma'rîfât al-Âlâm, while the Constantinople manuscript (Aya Sofia, No. 2971 b.i.; cf. Ritter, in Isl. xiv., 43), written in 658 (1260), is only indicated as Kitâb al-Ârâlim. The Leyden manuscript (Cat., v. 194) is a modern copy of the Constantinople one, while another Berlin manuscript (Cat. Alhwardt, No. 6033) is a bad copy of the other Berlin manuscript. The date of composition is not certain. The text itself states that it was completed in 375 (985) (B.G.A., iii. 9), but as has been said, information of a later date has been added, while Yakhir (l. 653) gives the year 378 (988). The manuscript (Constantinople) is somewhat less extensive than Berlin) and de Goëege, hesitatingly, considers the dedication of 375 as the older one. It is dedicated to a certain Abû 'l-Hasan 'Ali b. al-Hassân and mentions the Sâmânis as the most important dynasty; B, on the contrary, does not contain the dedication and is more orientated towards the Fatimids.

The general scope of the work proves beyond doubt that it is based on the same geographical traditions as the treatises connected with the names
al-Balkhi — al-Iṣṭakhri — Ibn Ḥawḳal; the same is proved by the fact that the maps accompanying both manuscripts show the still rather primitive type of the Iṣṭakhri maps (the Maṭāsi maps have been published by K. Miller, in *Mappae Arabeae*, vol. i—v., Stuttgart 1926—1931). In this last respect al-Maḳdṣi’s work does not really reflect the considerable progress of geographical knowledge that is manifested in the text. As in the texts of al-Iṣṭakhri and Ibn Ḥawḳal the object is to treat only the Islamic world (*maḥal al-Ṣaḥāba*) of the ivth (xⅡth) century and that after a division into regions (*aḥālum*) which, on the whole, is the same as that of the two authors mentioned; the older representation of the two regions is maintained. The treatment of the western and eastern regions is maintained. The treatment is often more detailed than with the earlier authors, while the disposition of the geographical matter is the same, each region ending with a survey of the distances between the different towns. In how far al-Maḳdṣi is dependent on al-Iṣṭakhri and Ibn Ḥawḳal remains to be examined. His introductory chapters show not a few original features and are especially valuable for information about earlier geographical authors. As de Goeje has already remarked, this information is more accurate in the redaction C than in B: if the latter redaction is really later it would seem that the rather depreciating judgment he gives therein of al-Balkhi, al-Djaḥānī and others (p. 4) must be explained by the change of the author’s political predilection in favour of the Fatimids and occidental Islam. Al-Maḳdṣi’s style and language is sometimes difficult, owing to his expressly stated endeavour to adapt himself in the description of each region to the special idiom used in that region. Moreover, the reading of his text is several times made unpleasant by the boisterous way in which the author speaks of the merits of his work.

A English translation of part of the treatise was published by G. S. A. Raking and R. F. Azoo in the *Bibliotheca Indica*, Calcutta 1897—1910, vol. i—iv.

**Bibliography:** The author and the work are discussed by de Goeje in the introduction to vol. iv. of the *B.G.A.*, p. vi—viii.; further cf. Brockelmann, *G.A.L.*, i. (C. J. H. Kramers)

**AL-MUḤADDIM** [See ALLAH, II.]

**MUḤALLA** (MUKALLA), a seaport on the south coast of Arabia, 2½ miles N.W. of the cape of the same name. The town lies between two bays at the foot of a reddish limestone cliff, which rises to a height of 300 feet behind the town; four towers for the defence of the town are built upon it. On the west side a wall runs from the cliff to the shore with only one gate in it. The only buildings of any size are the great mosque on the coast with a minaret which can be seen from a great distance, and the sultan’s palace; the other buildings are mainly huts with a few houses of stone. The palace is a great six-storey building with *decoration* windows which stands on a kind of platform. In the centre of the town is a large cemetery with the tomb of Walt Vaḳḳūb; in the modern western part of the town is the bazaar which is provided with all kinds of goods and has some modest industries which provide the native population with baskets, pipes of a kind of limestone, silver powder-horns and muskets without stocks. There is a yard in the harbour where the native sailing-boats are built. The country around is not fertile; a mile to the west however is an oasis belonging to the ruler, which is watered by a stream which also provides the town’s water supply. The climate of Mukalla is very dry, the coast hot; only from October to April and in June and July do fresh breezes and showers temper the heat. The population varies between 6,000 and 12,000.

Mukalla is the only place between ‘Aden and Maskat that deserves the name of harbour. It cannot however be used as an anchorage during the southwest monsoon; in this period its place is taken by Barūm, 16 miles southwest. The trade with India, Somaliland, the Red Sea and Maskat is considerable. The exports are mainly gum arabic, skins, honey from the Yebshom valley, senna and some coffee; the imports are cotton goods, metals, pottery from Bombay, dates and dried fruits from Maskat. Coffee from ‘Aden, sheep, aloes and frankincense from the African coast. The fisheries also give a considerable yield while amber is obtained in considerable quantities. Parsis and banians from Bombay play a leading part in the trade and Hindustānī is spoken almost as much as Arabic. Since 1881 Mukalla has been under the al-Kaʿīṯ dynasty with which England concluded a treaty granting a protectorate on May 1, 1888. According to Ibn al-Mudīǧīrī, the old name of the town was al-Mukannā, and the natives also call al-Mukalla, like al-Shībī. Bender al-ʿAbṣīf or Bīn al-ʿAbṣīf. The port has steam-ship communication with ‘Aden; most of the traffic is borne by native sailing-boats of 100—350 tons, which are busiest at the time of the date harvest.

(Adolf Grohmann)

**AL-MUḤALLAD** R. al-Muḥāṣibī, ḤUSAYN AL-DAWLA ʿABD HĀZZAN, an ʿUḏalmī. After the death in 386 (996) or 387 (997) of the ʿUḏalmī emir Abu l-Dhawwād Muḥammad b. al-Muṣāriḥ b. al-Muḥāṣibī (*cf. Bahāʾ al-Dawla*), a quarrel arose between his brothers, ‘Ali and al-Muḥallad, each of whom claimed power. ‘Ali was the elder; but al-Muḥallad wrote to Bahāʾ al-Dawla and promised him an annual tribute and then told his brother that Bahāʾ al-Dawla had appointed him governor of al-Mawsil and asked ‘Ali’s help to take the town. Bahāʾ al-Dawla’s general in al-Mawsil, ʿAbd Djaʿfar al-Hadjī—
MUKAN (Müğân), a steppe lying to the south of the lower course of the Araxes, one part of which (about 5,000 square kilometres) belongs to Russia (1. S. E.) and the other (50–70 x c. 50 kilometres) to Persia. The steppe, which covers what was once the bottom of the sea has been formed by the alluvial deposits from the Kar (in Russian Koura) and its tributary the Araxes. (The latter has several times changed its course and one of its arms flows directly into the gulf of Kizil-Aghaj). In the interior the only water in Müğân is from a number of springs, but it is covered with bogs and shows traces of the old system of irrigation. Müğân has a very mild climate in winter (Kazvini calls it wusrum Astarbâghân) and in the spring is covered with a rich carpet of verdure but in summer the heat makes it a regular hell and it is infested with snakes (Monœth: 384, in June the snakes literally covered the ground); cf. Abu Hamid al-Ghazwini in Kazvin, p. 1579). The name, the old Arabic transcription (Balâlûhûr, Tabari) is Müğân (without article) but quite early in certain manuscripts of the Arab geographers we find Mügân (probably a popular etymology mûghtan "maghi") which becomes general in the Mongol period. Markwart, Z.D.M.G., 1895, p. 633 connects the name of Mügân with that of the people mentioned by classical writers as inhabiting this region: Hectaceus, fragment 170, in Müghtân, cie. Aeqam. Pomponius Mela, book iii., ch. v.; Muchi ("and Hyrcanian fretum Albani et Moschi et Hyrcani"). This tribe is to be connected with the Cbashân which lived in this region; (cf. Hubelmann, Die älteren Ortsnamen, 1904, p. 269; cf. in Yakhir, it. 767 the genealogy invented by Ibn al-Kalbi, according to which Muktân and Djalân — both inhabitants of Tabristân — were the sons of Kâmahsh (probably Var. Bokrak), the Armenian geography Muktân, the Georgian chronicle Mwokân (another Mwokân lies near the confluençe of the Alazan with the Iora).

History. The Byzantine general Leontius in 678 subdued Iberia, Albania, Bukhâna (cf. above) and Media. The district of Muktân was conquered in 21 (642) by an officer of Surâgh Bukair who addressed a letter guaranteeing peace to “the people of Muktân of the mountains of al-Kabdî” (Caucasus; Tabari, i. 2660). According to Balâdhuri, p. 327–329, in 25 (645) Walid b. ‘Uthâna undertook a campaign against the people of Muktân (al-lMukhân), of al-Bâb (cf. Yâkūn) and al-Tâlān (Tâlsh). Another campaign of Sidi b. ‘Aš’âb against the people of Muktân and Djalân, although successful, entailed severe losses. According to Yaqût, ed. Houtsma, ii. 395, in 129 (622) the future Caliph Marwân II b. Mu’tamud undertook a campaign in Djalân and Muktân. Muktân figures several times as a stronghold of Bâbak (Tab., iii. 1174, 1178). In the third (ninith) century Ibn Khudâdhdhâb, p. 119, mentions one Shâkla (as) chief of Muktân. According to al-Mas’ûdî, Murûtû, ii. 5, in the time of the Sharwân (cf. Shirkwān) had conquered the states (manâla) of Lâyîrân (several variants) and al-Mukhâna. It appears from Ibn Miskwâhi (ed. Margoliouth, i. 399) who mentions the isphahân of Muktân b. Dalâla as ally of the Gil chief Lâshkari b. Mardî, who rebelled against the Dâlamis in 326 (937), that Muktân enjoyed a certain degree of autonomy. In 339 (950) the Kurd Dâshtân sent his vizier “into the mountains (seul) of Muktân to entrench himself.” In 349 Muktân appears as a centre of rebellion (Ibn Miskwâhi, ii. 136, 178–179). The poet Kâzî mentions the rising of the isphahân of Muktân against the Rawwâdi Wahâbdân (344–378; cf. Kâzî, Fâlîhân-i gusmân, Tâbrîz 1929, ii. 94). Later we hear of Muktân mainly as an excellent area for the winter pasturage of the conquering nomads. In Yakhir (iv. 676) the time the majority of the people of Muktân were still Turkomans. In the history of the Khânâmshâh Djalân al-Din, Muktân is constantly mentioned. The sulûn sends his booty there, keeps his baggage and mobilises his troops there (Nasavi, Sûrât, p. 210, 280, 360 etc.) But in 617 (1220–1221) the Mongol generals Djebe and Subutay spent the winter in Muktân (Lâwâni, i. 116), and Kazvin, p. 379 says that Mongols took Muktân for their winter pastures and drove out the Turkomans. In the time of Timur, Muktân must have been included in the region of Kara-bâgh where this conqueror liked so much to pass the winter. During the winter of 804 (1401) Timur restored an old canal which was given the name of his tribe, the Bâlas. The canal left the Araxes at Kâsh-kî Carshâqi and at a distance of 10 to farshâd ended at Sardjâ-pul (iselâ). Since, in order to give the necessary instructions, Timur (who was to the north of the Araxes) had to cross the river (Zaflarnâma, ii. 395), we may suppose that the canal lay to the south of the Araxes, i.e. in the steppe of Muktân. It must correspond to the Vegin Gaur arâfâh of which traces can still be seen for a length of about 35 miles. Sardjâ-pul may correspond to Carcelli on the Russian map (according
to the involved description by Monteith, the Barlas canal issued in the neighbourhood of Kara-su; the canal is in any case quite distinct from another canal which Timur traced in 806 to the north of the Araxes towards the town of Balkān (Saği-namā, ii. 543).

In the 4th century AD the Karakoyunlu Muğān became the possession of the Sufi Turkoman tribes who formed the principal support of the dynasty and became known as Shāhāsee and the treaty of Guštābān of 1813 the steppe of Muğān was divided between Russia and Persia. The boundary line was more precisely defined in article iv. of the treaty of Turkmenābād (q.v.). In 1884 Russia forbade Persian nomads to cross into Russian territory. Towards the end of the 19th century the project of irrigating the land of Muğān was conceived and realised between 1902 and 1907. The four systems of canals were to make 200,000 hectares cultivable, particularly for cotton. From 1884 the steppe was occupied solely by nomads who were Russian subjects. But in 1917 there were already 46 Russian villages with 17,000 inhabitants while the Turkish nomads who had become settled on the banks of the Kūr and of the Araxes numbered 50,000 souls. As a result of the tragic events of 1918, the whole Russian population had to leave Muğān and the canals became silted up. Between 1920 and 1924 the work of restoration was carried out and the fugitives began to return. The total area of irrigated land in Muğān is estimated at 123,000 hectares, while immediately to the north of Muğān the steppe of Mil (from Mil-i Bašāğan, "the tower of Bašāğan"); cf. Khanīkī, Mem. sur les inscriptions musulmans du Caucase, in J.A., Aug. 1862, p. 72) has another 165,000 irrigated hectares.

Historical geography. The Arab geographers are fairly well acquainted with Muğān (cf. the Bibliography). In the Mongol period, Muğān must have comprised all the lands to the north of the Sağān range (which is a western outlier of Russian Tālūsh) and forms the watershed between the middle course of the Kara-su and the Bolghar, to the east of the lower course of the Kara-su (where it follows the northern direction) and to the south of the Araxes. Towards the east Muğān stretched to the Caspian Sea and included the coastal region of Russian Tālūsh. The mountainous part of the latter, held as in a vice, must also have belonged to Muğān. The same condition must have existed in the Arab period for the curious expression of Ibn Miskawa, ii. 156 referring to the Dyhaoil Muğān can only refer to the mountainous part of Russian Tālūsh.

We may note Muqaddasī's remark (p. 380) who among other wonders mentions, one marhāla (7 — 8 farsangs = 20 — 25 miles) distant from Muğān, an imposing fortress called al-Harā (7) below which are houses and palaces in which there are large quantities of gold (Zahāh bard' azim) in the form of birds and wild beasts and "many kings made plans to seize it but never succeeded in reaching it". Muqaddasī does not definitely say that the fortress belongs to Muğān and evidently speaks of it by hearsay. Is this a reference to Shīndān-kāla (which is about 50 miles = 2 marhāla to the south) or is this site of the Shahrāstān of Muğān? On this imposing mountain (6,000 feet high) can still be seen ruins of important fortifications (Radde, p. 155: "ruins of a strong castle... many ruins of brick buildings"). Finally in a Persian translation of Iṣṭakhrī, p. 186, 27, we read: "The Gilis and the Muğān are tribes on foot who rarely go on horseback" which can only refer to a few remnants of the old population dwelling in upper Tālūsh (where the highlanders are very distinct from the lowlanders).

AL-MUKANṬARĀT. [See ĀSTĀRAKH.]

MUQĀṬIL B. SULĀMAṈ B. BÅGHIR AL-ÅZDI AL-KHURĀSĀNI AL-BÅLKHĪ. Abū 'l-Ḥasan, traditionist and commentator on the Kurān, was born in Balkh and lived in Marv, Baghdis and Başra. where he died in 150 (767); there is also a reference to a stay in Hārāt. Of his life we know almost nothing apart from a few details for his judgment as a traditionist. The name of his wife 'Umm Abī 'Īsha Nāh b. Abī Maryam has been preserved. According to Ibn Durayd, he was one of the masūli of the Banū Asad. He is sometimes quoted as Muqāṭil b. Dāwal dīz or Dāwal dīz. Ibn Ḥadār, 'Īsha al-Muqāṭil, expressly states in contradiction of wrong ideas that this is our Muqāṭil and that Dāwal dīz is not a ātāb of Muqāṭil himself but of his father.

Muqāṭil's prestige as a traditionist is not very great; he is reproached with not being accurate with the imāūt. His exegesis enjoys even less confidence. The biographers vie with one another in telling stories which illustrate his mendacity and particularly his professing to know everything. Contempt is poured on his memory by stories of ludicrous questions which were put to him about the most impossible things and to which he either gave fantastic answers or could make no reply. It is in keeping with this profession of universal knowledge that the sources are unanimous in talking of his extreme anthropomorphism (tašēk).
It did little to help his fame also that he is said to have told pious stories [cf. Kışâş] in the mosque, at a time when this was strictly forbidden. In politics he is said to have belonged to the Zudiyah, in theology to the Mirdâj [q.v.]

Muḥadî’s literary activity was somewhat comprehensive, yet until quite recently nothing was known of his works. Only since 1912 has a Kuṭūn commentary by him been known in the M.S. Or. 6533 of the British Museum, the genuineness of which however Goldziher did not think beyond doubt. The Fīrâqī gives a list of his works: Hâdîq al-Khalîfâ also gives some of them. They deal mainly with the language and exorcism of the Kuṭūn, but a pamphlet against the Kudâr is also mentioned. This is however hardly in keeping with another story, according to which he wrote a pamphlet against Dîhâm [q.v.] and the latter wrote against him.

(M. Plessner)

AL- MUQTAṬÂM, the part of the range of hills west of the Nile, which lies immediately to the east of Cairo and from which the mountains take a north-easterly direction, bordering the Nile delta to the south-east. It reaches a height of about 600 feet and consists, as does the greater part of the north African mountains, of limestone (cf. Description de l’Egypte, État moderne, Paris 1822, ii. 375). The name Muqtaṭâm (the Tâdîq al-Ârâma‘ records also the popular form al-Muqṣâţîn) does not go back to a pre-Mu‘amamadan nomenclature, nor is it considered, in spite of its correct Arabic formation, as a true Arabic word, for the geographers (cf. Yâkût, iv. 607 sqq.) give, hesitatingly, different explanations of its meaning. The name occurs for the first time in the historical tradition of the Egyptian Arabs, as found in the Futûh Misr of Ibn ‘Abd al-Hakam (cf. Torrey’s edition, New Haven 1809, p. 156 sqq.), in half legendary tales in which also al-Mukawkas [q.v.] plays a part. Some of these traditions give it an eponymous hero, Muqtaṭâm b Misr b Baisar b 闩âm, or lay stress on the special sanctity of the mountain, declaring that, in some way, it is connected with the mountain of Jerusalem. As in the last mentioned traditions, Ka‘b al-AhÂlär [q.v.] is named as final authority, it seems probable that the origin of the name must be sought in Jewish legendary traditions (for Jewish traditions about mountains, cf. the Midrash Thallon on Psalm lviii. 17) and that the name has been fixed only in course of time on the ill-defined mountainous region to which it is attached since the flourishing times of al-Fustâṭ and al-Khârîra. The vagueness of the geographical definition has survived in the Arabic geographical sources, which either call Muqtaṭâm the entire eastern mountain range as far as Uswân (Yâkût), or even represent under the name Muqtaṭâm the whole of the mountain system that runs over the inhabited world from China to the Atlantic Ocean (Ibn Hawkât and others). Moreover several geographers give the legendary statement that in the Muqtaṭâm are mines of emerald and other precious stones, while in reality it contains only stone quarries, but these were used already in very ancient times. Maqrîzî, Kifâyet, ed. Bulûq, i. 123 gives a fairly complete survey of the different traditions and opinions.

It may be thus assumed that the Muqtaṭâm acquired a real geographical identity only after the foundation of al-Fustâṭ. Its geographical situation, viz. its proximity to the bank of the Nile, has deeply influenced the territorial expansion of this town and later of Cairo [q.v.]. Parts of the town and famous sites are situated on the western spur of al-Muqtaṭâm, such as the mosque of Abu tullân and the citadel of Saladin. The elevation of Ibn tullân’s mosque bears, however, the special name of Dîbal Yâshîr. The cemetery of al-Šarâfî belongs likewise to the Muqtaṭâm and it is with this cemetery that are connected the ancient traditions already mentioned, in which al-Mukawkas plays a part; al-Mukawkas is described as Amr b. al-Âs that the mountain, instead of earthy vegetation, is destined to bear the plants of Paradise and the caliph ‘Umar, informed by Amr, decides that by these plants of Paradise can only be meant Muslims who have died. Accordingly, tradition records a number of qaḥāb who are buried in al-Šarâfî. On the summit of al-Muqtaṭâm was built in the Fâtimid period the mosque of al-Dîyâshî, by Badr al-Dîjamîlî in 478 (1085); for this reason the mountain is also called Dâbâl al-Dîyāshî. On the southern slopes, towards Huwâmîn, lay the Christian monastery Dair al-Šarâfî (description by al-Šabîhîyī towards 1000; cf. Sachau, in Abb. Pr. Abh. Wiss., 1909). A historical, or perhaps legendary feature, connected with al-Muqtaṭâm is that the Fâtimid caliph al-Ĥâkim is said to have disappeared mysteriously, in the night of 27th Shabâwî 411 (Feb. 25, 1021), when he had gone for a ride in the Muqtaṭâm. — Finally it may be mentioned that the Muqtaṭâm has given its name to one of the large modern Arabic newspapers published at Cairo.

(J. H. Kramers)

AL-MUKÂWÂKAS, AL-MUKÂWÂKÂS, the individual who in Arab tradition plays the leading part on the side of the Copts and Greeks at the conquest of Egypt.

The Prophet is said to have sent a letter to him in the year 6 a.h. In the address on this letter, the text of which is given in Ibn ‘Abd al-Hakam (ed. Torrey, p. 46), al-Mukrâţît (Kifâyet, i. 29), al-Su‘ûîy (Hašr al-Muḫâdara, i. 58) and al-Manûfî (p. 29), as well as in an entirely different version Pseudo-Wâkiûdî (p. 10), and also in the accounts of the incident in the Arab historians, the position of al-Mukawkas is described in the following phrases:

1. Šâhîb al-Iškandariya (Nawawi, p. 577; Ibn ‘Abd al-Hakam, p. 45, 52; Abû Šâlîfî, p. 38 [100]; Ibn Kathîr, iii. fol. 1559b); 2. In Sa’d in Wehliheim, Seeken und Vororteit, iv. 3 [99]); 2. Malîk al-Iškandariya (Ibn ‘Abd al-Hakam, p. 49; al-Su‘ûîyî, i. 60; Pseudo-Wâkiûdî, p. 25; Ibn Hîshâm, p. 97); 3. Šâhîb Misr (Abû ‘l-Fida‘î, i. 149); 4. Malîk Misr (al-Manûfî, p. 7; cf. al-Mukrâţît, Kifâyet, i. 163, 22 sqq.); 5. Malîk Misr wa l-Iškandariya (Pseudo-Wâkiûdî, p. 10); 6. Šâhîb Misr wa l-Iškandariya (Pseudo-Wâkiûdî,
All these epithets no doubt mean simply the actual ruling authority in Egypt, whose true title was not known to the Arabs. If we remember that in the year 6 (628) the Persians were masters of Egypt, we can hardly give much credence to the story of the Arab historians. This is evident from the statement recorded by Manāfī (p. 50) that Egypt was under the rule of Mukhākas continuously from the lifetime of the Prophet, through the caliphate of Abū Bakr to the beginning of the caliphate of ʿOmar. Muḥammad’s letter to Mukhākas was long ago declared not to be genuine by E. Amelina (Frangments, p. 392) and Wellhausen (Slizzen und Vorarbeiten, iv. 90) although they did not doubt the fact of the embassy to him; later Butler (Conquest, p. 522) and Th. Noldeke (Z. D. M. G., xviii. 160) still believed in the embassy although the latter granted the possibility that tradition might have transferred the name known from the time of the conquest to the person to whom Muḥammad sent gifts, while for example S. Lane-Poole (Egypt in the Middle Ages, p. 6, note 2) supposes that the Muḥākas of 628 and the Muḥākas of the conquest are two different persons. This suggestion however is disposed of by the fact that the Muḥākas of the letter is called in Ibn Kathīr ʿAbī Amīn Manī (in Abu ʿl-Fida) the patronymic has been corrupted through ʿAbī Amīn; Nawawi only gives ʿAlīrādīj, i.e. the same as the Muḥākas of the conquest: for we need not heed the patronymic of Muḥākas given by Pseudo-Wakīdī (p. 10) (Abī ʿRāmī), while the epithet al-ʿArābī al-Māʾnī, which al-Maṣʿūdī, Tanbīh, p. 261, 2 has taken in an obviously corrupt form from an old source, is the Ibn ʿArābī al-Yūnānī of the Muḥākas of the conquest. In view of the many serious contradictions, which the transposing of Muḥākas into the period of Persian rule in Egypt offers, there is no alternative but to regard with Caetani, Annali dell’Islam, iv. 90 the story of Muḥammad’s embassy to Muḥākas as legendary and devoid of any historical value (cf. also G. Rouillard, p. 187 and note 2). The genuineness of the parchment found in a monastery at Aḥmīnī by the French epigraphist E. Barthelemy in 1852, which was thought to be the original of Muḥammad’s letter to Muḥākas and was actually put among the relics of the Prophet in the old Serail, thus disappears (cf. the publication by Bell in Q., 1854, p. 482—518 and Dījhī Ṣaydān, in hitlāl, xii/2, 1904, p. 103 sq.) its falsity had already been recognised by J. Karabacek (Beiträge zur Geschichte der Mosailiten, Leipzig 1874, p. 35, note 47 and Mitteilungen des K. K. Oester, Museum, xix. 1854, p. 183) (cf. also Noldeke-Schwały, Geschichte des Qurān, i., Leipzig, 1909, p. 190) As a matter of fact palaeographical grounds are clearly against any assumption of a date in the first century for this document.

The same discrepancies, which we find in the transmission of the name and title of the Muḥākas of Muḥammad’s letter are found in the Muḥākas of the conquest. In the historians we find the following names:

1. ʿDāwiḍ b. Miʿna (Abū ʿSāliḥ, p. 30 [81], 101 [230]); 2. ʿDāwiḍ b. Miʿna b. ʿArābī (Ibn ʿAbd al-Ḥakam, p. 64, note 9; Ibn Ḥadjar, Ḥibbā, iii. 1900); 3. Ibn ʿArābī or Ibn ʿArābī (al-Kindī, p. 8; al-Maṣʿūdī, Kiyāfīt, i. 259, 27; Ibn Ṭaghribīrī, i. 9; Ẓāḥī, Muḥākas, vel. 894, 14).

Taking first of all the name of his grandfather, J. v. Karabacek’s emendation (p. 2) to dispose of apparent contradictions in the statements about the patronymic by assuming a double name Miʿna ʿArābī proves unnecessary, when we see the name unequivocally given in Nāṣir. 2. When Karabacek (p. 3) preferred the reading ʿArābī for ʿArābī, he was at least able to quote the form ʿArābī in the Codex Parisinus of Ibn Ṭaghribīrī, but I cannot agree with Amelina in supporting Karabacek’s emendation (p. 2) to dispose of apparent contradictions in the statements about the patronymic by assuming a double name Miʿna ʿArābī, especially if we remember the variant ʿArābī of the Ḥibbā, and Noldeke must be right when he (Z. D. M. G., xviii. 161) restores this to the Ḥibbā rejected by Karabacek. The form ʿArābī (unpointed however) has however so far been found only in one papyrus, the more usual form being ʿArābī (Z. D. M. G., i. 138). Butler’s conjecture (p. 523) on the name ʿArābī seems to me as improbable as Karabacek’s identification. He calls attention to Abū ʿSāliḥ’s observation (p. 67 [156]) that ʿArābī is a corruption of Gergorios and supposes that ʿArābī is a corruption of ʿArābī so that Ibn ʿArābī would be an error for Ibn ʿArābī and mean ‘son of Gregory’. Casanova’s proposal (in Butler, p. 523) must be dismissed as still more improbable, viz., that Ibn ʿArābī is a corruption of Abū ʿIrāb. The office filled by Muḥākas is described by the sources in the following terms: 1. ʿAbī Ṣaḥīḥ (al-Baladhuri, p. 226); 2. ʿAbī Ṣāḥīḥ Misr (al-Maṣʿūdī, Tanbīḥ, i. 163, 29 sq.; Ibn ʿArābī, n. 118); 3. ʿAbī Ṣāḥīḥ ʿArābī Misr (Ibn Ḥadjar, n. 1900); 4. ʿAbī Ṣāḥīḥ Misr (Ibn ʿAbd al-Ḥakam, p. 64, note 9; al-Maṣʿūdī, p. 28); 5. ʿAbī Ṣāḥīḥ ʿArābī ʿArābī Misr (Eutychius, ii. 302). If the three first terms only mean the ruler of Egypt in general, the two last named limit the sphere of activity of Muḥākas to the administration of taxation and the expression given in 4 may be taken as synonymous with ʿAbī ʿArābī “governor”. In this connection we have the very clear evidence of Ibn ʿAbd al-Ḥakam, p. 37 and Ibn ʿA Ṽābī ʿArābī, n. 119 who preserve the statement that Muḥākas was appointed by the emperor Heraclius as governor of Egypt and entrusted with the waging of war and the levying of taxation. Ibn al-ʿA Ṽābī, ʿArābī (p. 30 [81 sq.]) that Muḥākas, ʿDāwiḍ b. Miʿna had rented the taxes of Egypt from Heraclius for 18,000,000 dināres fits in with this. This makes intelligible the statement of Eutychius (ii. 302) who calls Muḥākas controller of the land taxes (ʿAbī ʿArābī ʿArābī) and traces his attitude to the Arabs to his embezzling the taxes raised, and further explains the description of Muḥākas (Muḥākas) as the patriarch of the Ethiopian Synaxar which Muḥākas had been Patriarch and financial controller of Egypt.
M. J. de Geoze and J. v. Karabacek have laid special stress on this side of the activity of Muṣawwās and identified the prefect George mentioned in John of Nikia (p. 550), whom de Geoze regards as prefect of Lower Egypt and Karabacek (p. 8) as pagarch of Babylon, with Muṣawwās who is called in the sources George son of Menas. A. J. Butler (note 4 to Abū Sālih, p. 81), Milhe and Lane-Poole have followed de Geoze while Amelineau (Fragments coptes, p. 404: Samuel de Qalaman, p. 24 and Résumé de l'Histoire de l'Égypte, p. 243) wished to identify Muṣawwās with the Patriarch George who was appointed by the emperor Heraclius as successor or deputy to Cyrus during the period of the latter's stay in Constantinople (cf. John of Nikia, p. 174).

In contrast to these attempts at identification, which are in more than one respect in contradiction to the sources, the most probable solution of the Muṣawwās problem is the identification of Muṣawwās with the Patriarch and governor Cyrus of Phasis, who was sent in the year 631 A. D. by Heraclius to Alexandria where he died on March 21, 632. While Zonksen (in his edition of John of Nikia, p. 576, note 2) had already pointed out that the main features of the activity of Cyrus are found in the Arabic stories of Muṣawwās, although no doubt the legend mixes up the activities of several individuals under this name, F. M. Estevés Perellà, (Vida de Aba Samuel, p. 41—53) completely proved the identity of the two. Independently J. Krall in an unpublished article for the Mitteilungen aus der Saumlands des Papirus Erhardus Kainer, on the authority of three new fragments of the Vita of Apa Samuel, had come to the same conclusion. The full study of the whole problem by A. J. Butler, the main result of which, the identity of Muṣawwās with the Patriarch Cyrus, has been adopted by R. Evetts (Patrologia Orientalis, i. 491, note 1), by M. Guidi in his doctoral thesis, C. H. Becker and O. Braun in his article Cyrus in the Kirchlichen Handlexicon, iii., col. 536 and others, has been critically examined by L. Caetani (Annales dell' Islam, iv, 86 sqq.) The decisive evidence for the identity of the two individuals is found in the History of the Patriarchs of Severus of Ashmunein (ed. Evetts, p. 490 sqq.) and (ed. Seybold, p. 106 sqq.) in which there are references to the Patriarch and governor of Heraclius in connection with the flight of the Patriarch Benjamin once as Cyrus (قيرس), then a few lines later as al-Muṣawwās or al-Muṣawwās: the synaxars in this connection also give the name al-Muṣawwās (cf. E. Amelineau, Fragments coptes, S. 397, note 1; p. 398, note 1; p. 406, note 1 and the edition by R. Basse, Patrologia Orientalis, xi. 562), and the Arabic Vita of Benjamin (Amelineau, p. 400, note 1); of peculiar importance is the text edited in R.O.C., xx, 393, where the combined names Cyrus al-Muṣawwās appear. There is the additional fact that the period of ten years which, according to the history of the Patriarchs, lay between the flight and return of the Patriarch Benjamin coincides within a year with the period of office of Cyrus (631—642) in Egypt, whom the Christian sources describe as an "unbeliever" (πατερήμα, Amelineau, Fragments coptes, p. 364, 366; ṭāfīr in Severus of Ashmunein, p. 495 [108]), godless and sinful Kauchios (πατερήμα πατερήμα απαραδήμα, Vienna Coptic fragments of the Vita of Apa Samuel in Krall, Kauchios frequently in Amelineau), decent Antichrist (πατερήμα πατερήμα ομαδικός in Amelineau, p. 366 sqq.) and Pseudoarchiepiskopos (ibid., p. 365). The double position of Cyrus or Muṣawwās as supreme head of the administration and archbishop of which have ample evidence (cf. G. Rouillard, p. 230, note 2) and it remains quite certain from the testimony of Severus (p. 490, 495 [106—108]) and the Arabic and Ethiopic synaxar (Amelineau, p. 406, note 1: وَرُزَتُ مَنْجِرُ, p. 399) and also by the Vita of Samuel (Amelineau, p. 367), was quite unknown to the Muslim Arabic sources. Noldke has already called attention to this remarkable fact when he referred to it in a crux for the identification of the two figures. There was however no necessity for the Arabs to refer to his position in the church. He was only of importance to them as head of the administration. If one wants to, one can see an indication of his ecclesiastical dignity in the wish expressed by Muṣawwās during the negotiations with Ṭāmr regarding the capitulation of Alexandria (in Ibn ʿAbd al-Hakam, ed. Torrey, p. 72) that he might be buried in the Church of St. John (cf. theion Amelineau, p. 400 sqq.). How much the Christian sources differ in their ideas of the personality and position of Muṣawwās may be gathered from the description of the death of Muṣawwās. According to Severus of Ashmunein (ed. Evetts, p. 495; Seybold p. 108), the governor and Patriarch of Alexandria poisoned himself after the occupation of Alexandria lest he should be put to death by Ṭāmr, while John of Nikia (p. 335—378) says that Cyrus weakened by vexation at the faithlessness of Ṭāmr caught dysentery and died. According to Caetani, the contradictions and obscurities on the part of the Arab historians show that they did not consider who Muṣawwās exactly was, but simply used the name as the family name of the chief personage in Egypt at the time of the Muslim conquest. Evidently all who negotiated with Ṭāmr in the name of the Copts are included in one individual. The unanimator with which Muṣawwās is described as a Copt and the different names given him suggests that Muṣawwās conceals not only Cyrus but also other Egyptian negotiators, e.g. perhaps the commander of Babylon, George, and the bishop of the same town, Menas. The Arabs must have made one out of these two negotiators and given him like Cyrus the name Muṣawwās. Of the attempts to explain this name. Karabacek's (p. 8) مَنْجِيَس is as little probable as Amelineau's explanation (p. 407—409) which makes Kauchios "the man from Kaukkhan". We would rather think with Butler and Guidi of a connection with καυκάσιος, which indicates the home of Cyrus. But even this explanation is by no means certain and the connection of Muṣawwās with Cyrus has again (in Canterelli) given rise to serious doubts. Nau, p. 11 has compared Muṣawwās with μακασ. His name survived in the form el-Muṣawwās in the area of old Cairo (Ibn Duḥayk, iv, 53).

MUKHADRAM (A.), the term applied to an individual whose life fell within the periods of both paganism and Islam. Various explanations are given of the origin of the name. The term was coined from adel mukhadram (“cropped ear and say the meaning is that these people were cut off from the Dījihiliya by Islam (cf. nāṣa al-mukhadram “a she-camel with cropped ears”). It is said that the tribes who adopted Islam cropped the ears of their camels differently from what they had done in the pagan period. A man who had therefore seen both the pagan and Muslim styles was called mukhadram. Others derive the word from a’īd ṣaṣ’a “a well” which contains much water” and explain that a man who has lived in both Dījihiliya and Islam was called mukhadram, since he was fully acquainted with both periods. The term mukhadram is occasionally found with the same explanation and the application given is that the individuals had mixed paganism and Islam. Some commentators describe as mukhadama only those who adopted Islam after the death of Muhammad.

The word mukhadram is particularly used to describe one of the four classes into which the Arab philologists divided the poets, one of whose school was begun in the period of the Dījihiliya, but who lived to see Muhammad and his mission and some even adopted Islam. Among these for example were Lābit, al-ʾAṣḥāb and Kaʾb b. Zuhāir. These poets are still completely immersed in the poetic tradition of the Dījihiliya. The new outlook was late in finding its way into poetry so that the change is not yet reflected in the poets who were Muhammad’s contemporaries. The scheme of the kaṣīda of the pagan poetry with its fixed themes and stereotyped images also holds for the mukhadram and in their poems one can hardly find the slightest hint that they were contemporary with the great religious change in Arabia. The only exception is the kaṣīdas composed in honour of Muhammad like the kaṣīda of Kaʾb b. Zuhāir called after its opening words Rābat Sāḥib and the panegyric on the Prophet by al-ʾAṣḥāb. While these still follow the scheme of the kaṣīda as regards form they reflect Muhammadan points of view and legal ordinances and also use Kur’ānic phrases.

[HANS LICHTENSTADTER]

MUKHLIS AL-DAWLA. [See AL-MUKHALLAD.] AL-MUKHTAR b. Abū ’l-Ṣaad al-Ṭaḥafi, a Shīʿa agitator who seized possession of Kāfa b. Abū Ṭālib (684—685). The clan or Tribe to which he belonged was the same as that of the poet Umayya b. Abū l-Ṣalt [q.v.] and another poet, Abū
Mihdjan, was his second cousin (al-Mukhtār’s grandfather father Mas’ud being the son of Amr b. ‘Umar b. ‘Awf; cf. Wustenfeld, *Gew. Tab.*, G. 19). He is said to have been born in 662 (Tabari, i. 1264) as a statement which has perhaps no real foundation (cf. Taghibi, ii. 2: in 40, he was a “young man”, *zhālim ṣūdāb*) and based on the fact that his adversary ʿAbd Allah b. al-Zubair was born in the same year. His father having died the death of a hero at the battle of the Bridge in 13 against the Persians, the orphan was brought up by his uncle Sa’d b. Mas’ud who became governor of al-Mada’in under the caliph ʿAli. Al-Mukhtār was his deputy when Sa’d left al-Mada’in to go after the Khaṭirjīs who had left ‘Ali’s camp in 37 (Tabari i. 3366; al-Dinawari, p. 218). His early life and his family traditions therefore made him a partisan of ‘Ali: al-Tabari (I 2) however says that when ‘Ali’s son al-Husain took refuge with al-Mukhtār’s uncle when fleeing from Mu’awiyah in 40, the nephew proposed to surrender him to his rival and he was reproached with this disloyal act 25 years afterwards by the Shi’is. This is all we know of the early days of one who was destined to become the champion of the extreme Shi’is: his refusal to bear witness before Ziyād b. Abihi against Ḥudayn b. ‘Adī who was accused of having attempted an anti-Umayyad rising at Kufa in 51 (Tabari, i. 134), shows however that his feelings were already pro-ʿAlid. It is only when, after the death of Mu’awiyah, the hopes of the partisans of ‘Ali’s family began to rise again, that al-Mukhtār emerges from obscurity; he took part in the rising of Musilim b. Ḥakim in 61, imprisoned by the governor ʿAbd Allah b. Ziyād, he was only released after the failure of al-Husain’s attempt and returned to Mecca, where ʿAbd Allah b. al-Zubair was secretly engaged in preparing the movement which was to take him to the head of the anti-Umayyad rising. It is alleged that al-Mukhtār, after vainly trying to compromise Ibn al-Zubair prematurely, disappeared from Mecca for a whole year which he spent in his native town of al-Ṭif. It was no doubt in this period that the ideas ripened in him which made him the initiator and leader in a new political and religious phase of the Shi’a movement: but of the way in which his ideas came to him, their immediate origin and the influences which went to form them, history unfortunately knows nothing.

In any case, al-Mukhtār returned to al-Zubair, who had in the meanwhile been publicly recognised as caliph, and fought bravely at the first siege of Mecca in 64. But his adhesion to the cause of Ibn al-Zubair had no other object than to enable him to return to Kufa which was then under the anti-Umayyad caliph. According to one source which is in contradiction to Tabari, al-Mukhtār was sent by al-Zubair himself to the capital of the ‘Iraq to take charge of its administration, having promised him the support of the ʿAlid party (al-Masʿūd, *Murād*, v. 70); it seems more probable that, as Tabari says, he went there of his own accord to carry out his plans.

The Shi’is of Kufa were at this time (Ramanlī, 64) under the influence of Sulaimān b ʿIṣār (q.v.). Al-Mukhtār did not wish to join his party and began propaganda of his own, saying that he was the emissary of Muhammad, son of ‘Ali called Ibn al-Ḥanafīya from the name of his mother’s tribe

[cf. MUHAMMAD b. AL-ḤANAFĪYA]. The motive—which gave al-Mukhtār the idea that he could pass off as the legitimate successor to the right-of-ʿAli, this son, who was not born of Fatimah, the daughter of the Prophet, have not been fully explained: but as the other children of ʿAli who had escaped the massacre of Kerbelā were quite incapable, al-Mukhtār’s choice was limited. In any case, his fiery and peculiar eloquence (he pronounced his discourses in *sudūr* with obscure phrases and expressions which recalled the Ḥurān, without being a slavish imitation of it; he also said or allowed it to be said of him that he was inspired by the angel Gabriel) was able to gain partisans for the idea of the Mahdi whose imminent coming would restore the rule of the true religion. Without being yet openly hostile to the rule of Ibn al-Zubair, al-Mukhtār’s attitude was suspected. He was therefore imprisoned by the Zubairid governor ʿAbd Allah b. ʿYazid al-Anṣārī but his captivity was not rigorous and enabled him to remain in contact with the people of Kufa. After the defeat and death of Sulaimān b. ʿUthayb, which he had predicted, he was set at liberty on guaranteeing he would not fight against the Zubairid government. Al-Mukhtār took advantage of the liberty restored to him to secure the cooperation of Ibn b. al-Ashtar, son of ʿAli’s famous general, who kept up his father’s traditions. The latter hesitated long before accepting al-Mukhtār’s proposals and only agreed on receiving a letter, undoubtedly a forgery, in which Ibn al-Ḥanafīya introduced al-Mukhtār to him as his plenipotentiary (ʿawālī) and minister (ʿaṣir). The rising then began (14 Rabi‘ I 667): the resistance of the chiefs of the tribes (the *āṣrāf*), who while opposed to the Umayyads and former fighters by the side of ʿAli, had long lost their enthusiasm for the cause of his family, was overcome by the onslaught of the troops, composed for the most part of adventurers and *maṣūlī* led by Ibn al-Ashtar, a most capable warrior. The Zubairid governor fled (he was at this time ʿAbd Allah b. Mu‘āwīya al-Kurāshī), the Aṣṣārīs capitulated and al-Mukhtār, undisputed lord of Kufa, rapidly extended his power over Mesopotamia and the eastern provinces, to which he at once appointed governors: the south alone, with Bāṣra, remained to Ibn al-Zubair. Al-Mukhtār had naturally to give the Aṣṣārīs positions of authority in his organisation but he could not completely gain their confidence. Although old, partisans of ʿAli, or sons of partisans, they were moderate who distrusted al-Mukhtār as an extremist and demagogue: indeed, the favour which the latter showed to the *maṣūlī*, who formed his real support, threatened to overthrow the system on which the political and economic supremacy of the Arabs over the native population was based, for not even the conversion of the latter to Islam had made them equal to their conquerors. Al-Mukhtār therefore was faced with the necessity of deciding for one or other. He preferred the *maṣūlī* party, probably more from genuine conviction than for political reasons: he must have believed that the triumph of the Mahdi whom he had foretold would make all believers equal without distinction of race. During the camps of the army which had gone under Ibn al-Ashtar to fight ʿAbd al-Malik’s troops, the Aṣṣārīs made an attempt to overthrow al-Mukhtār who was forced to temporise with them; but succeeding in informing Ibn al-
Mukhtar of his difficulty, the latter returned to Kufa and completely routed the enemies of Mukhtar. This was the signal for putting into execution the latter's full Shi'a programme; all those who had taken part in the murder of al-Jussain, or had neglected to defend him, were put to death. This bloody deed seemed to have divine approval, for two days later the Syrian army which had set out for the Iraqi was completely routed on the banks of the Khabur by Ibn al-Mukhtar, and its leader 'Ubayd Allah b. Ziyad, who had defeated and killed al-Jussain, was killed in the battle (Muhamara 67). In the fanatical enthusiasm of these days in which the Shi'a cause seemed to have won a definite success, there took place episodes of great religious interest although unfortunately not yet clearly explained, notably the worship of the empty chair (Tabari, ii. 702—706; cf. al-Mubarrad, al-Kamal, ed. Wright, p. 597-600).

But in spite of his successes at home and abroad, al-Mukhtar was threatened by the presence in Iranshahr of the brother of 'Abd Allah b. al-Zubair, Mu'ayyab, whose army, organised by al-Muhallab b. Abi Sufra, hardened in the war with the Kharijs and strengthened by the accession of the Kufan Ashraf who had left the town, was one to be feared. Indeed, it was these forces which mentioned to al-Madjar on the Tigris: 'A little later at Harura', they suffered a complete rout, mainly because of the absence of Ibn al-Mukhtar who was in the north at al-Nawami and whom al-Mukhtar either through distrust of him or through excess of confidence in himself had neglected to recall. Al-Mukhtar who had taken refuge in the citadel of Kufa held out there valiantly for four months. Finally abandoned by most of his men, he was slain in a desperate sortie (Kamadan 14, 67). His body was mutilated, his hand suspended at the gate of the great mosque and it was only taken down many years later by al-Haqqi; one of his wives, who would not disown him, was executed in brutal fashion, although she was the daughter of al-Nu'man b. Bashir al-Ansari, who had been governor of Kufa under Mu'awiyah. A great many of al-Mukhtar's followers were also massacred.

The nature of the movement led by al-Mukhtar has been variously judged by modern historians. The historical tradition which grew up in Kufa, especially in the milieu of the Ashraf, is naturally hostile and regards him as an adventurer and false prophet. His conduct was undoubtedly somewhat crooked occasionally; the way in which he exploited the name of Ibn al-Hanafiya (who never wished to be completely compromised in the business of the Mahdi) was not quite fair. But neither these doings nor his double dealing with regard to the Ashraf (they paid him back however only too well) are sufficient to convict him of bad faith. They were tactical expedients which every one who wants to stir the masses is justified in employing for the triumph of his cause. It seems certain that al-Mukhtar sincerely believed in his mission, and his equilibrating ideas about the mawali, although premature, were, as the future was to show, the only ones which could secure to Islam its later expansion and transform it from the exclusively Arab movement it was at first into a world-wide civilization. What is still and will remain mysterious in the personality of al-Mukhtar (Wellhausen rightly observes that "demonic" natures like his are always problematic), is the manner in which he arrived (no doubt through a crisis within himself) at the religious and eschatological conception of the Shi'a of which he was the creator and which is infinitely greater than the expiatory sacrifice of the tasawwur of Sulaiman b. Suraq. It is owing to this conception that the importance of the movement started by al-Mukhtar is far greater than the ephemeral political success which he enjoyed; in the popular enthusiasm which welcomed his propaganda we see the germ of the ideas which transformed the Shi'a from a political movement to a religious doctrine. In what measure these ideas were in existence before al-Mukhtar, in what relation they stood to that enigmatic personage "Abd Allah b. Saba' and his disciples are points that are still obscure. But if he was not the inventor of the doctrine of the Mahdi, it was undoubtedly he who in locating in a real person, Muhammad b. al-Hanafiya, the mystical figure of the Messiah, the restorer of the true religion, gave it the stamp which was henceforth typical of Imami doctrines.

The name Mukhtar is borne by one of the many Shi'a subdivisions given in the lists of the writers on heresies; but it is doubtful if it ever had a real existence as an organised sect, especially as the various sources which mention it (Kufan Ashraf; Khaibariya [q.v.]; the Kašāniya [q.v.]) seem very likely to be the legitimate successors of the teachings of al-Mukhtar.

Bibliography: The principal and almost the only source for the history of al-Mukhtar is al-Tabari (ed. de Goeje), ii. 530—532 and passim, which is based for the most part on the statements of eye-witnesses of the events. The secondary sources add practically nothing new; they are quoted in Caetani, Chronographia Islamica, a. 64 §§ 13, 65 §§ 6, 66 §§ 5—7, 9—12, 67 §§ 2, 4, 42 (a few details also in the biography of Muhammad b. al-Hanafiya in Ibn Sa'd, v. 71—77); H. D. van Gelder, Mu'awija de valtige Profeet, Leyden 1885; J. Wellhausen, Die religiösen Oppositionsparteien im Islam (W. Gitt, N. S., v. 2, 1901), p. 74—89. Cf. also the bibliography given in the articles Kashiya and Khaibariya (add al-Nawakhibi, Firaq al-Shi’a, ed. Ritter [Gibil Islamica, iv. 1931], p. 20—30). (G. Levi Della Vida) Mukhtar Pasha, Chāhāz Ahmād, a Turkish general and statesman, was born in Sept. 1832, the son of a high official in Brussa, and received a military training there and in Constantinople (officer in 1854). He took part in the Crimean War, from 1860 taught in the Mektebi Harbiye as professor of the art of war and in 1865 was tutor to the prince Yusuf 'ezz al-Din. After holding a command in Albania (1867—1870) he distinguished himself under Reşid Pasha in the Vayam campaign, the conduct of which he took over in 1871 as General of Division and Pasha. On his return he was given the title of mukhtar. In the Herzegovina he was defeated in 1876 at the Duga Pass. After the declaration of war by Russia (April 24, 1877) he was given the supreme command on the Caucasus front, where after at first having to retire to Kopruko, he counterattacked at Daesar (June 21) and Zinzin (June 25) and forced the Russians under the Armenian generals Loris-Melikoff and Ter-Hugassoff, to evacuate Ottoman territory and occupied Sukhum.
Successes in August on the Yaghni Dagh and at Kifl-Tepe (near Bash Gidikler) earned him the title of honour of Gazi [q. v.] but did not prevent the collapse of the army in Oct.—Nov. [cf. DERE BOUYS, KARS AND ERZURUM]. Appointed Commander-in-Chief of the Artillery, he restored peace in Crete in 1878; in 1879—1885 he served as commissioner on the Greek frontier. As a result of the Anglo-Turkish agreement of Oct. 24, 1885, he became the first High Commissioner of the Porte in Egypt. He held the post till 1906 and playing a part in the Taba affair. In this period he busied himself with the question of reforming the calendar; he advocated a uniform Hijri solar year for all Muslims (see BAH).

From Dec. 1908 Vice-President of the Ottoman Senate, he proposed in the National Assembly of April 27, 1909 to give prince Reshid the name Muhamed V in memory of the first conqueror (Fatih) of Constantinople [see MUHAMMAD II] (communication of Abd al-Rahman Shafeef to Martin Hartmann); he himself led the deputation which announced his accession as Sultan-Caliph and brought him to the War Ministry to receive the traditional allegiance [cf. BAH]. On Oct. 14, 1911 he succeeded Said Pasha as President of the Senate and on July 22, 1912 as grand-vizier in the cabinet of the “Great Ones” (Bayilik). Under pressure from the association of old-Turkish officers (Kislakchiler) he persuaded the Senate on Aug. 4 by a bold interpretation of the constitution to declare the session of Parliament closed. He endeavoured to free the army and civil service from politics, obtained an amnesty for Arabia, recalled Ahmad Iszet Pasha from the Yaman, instituted the Naval Medal and Medal of the Red Cresent, obtained favourable terms in the treaty of peace with Italy (Oct. 18, 1912) but could not avert the catastrophe in the Balkan War. On Oct. 29, 1912 he retired in favour of Kaim Pasha, but remained a member of the Senate till 1918, in which on Feb. 12, 1917 he advocated the adoption of the Gregorian calendar and rejection of the Christian reckoning for the financial year. He died on Jan. 21, 1919. Muhamed Muktar Pasha is his son.

MUKHTAR I, SIRKI AL-DIN UMHAN B MUHAMMAD AL-MUKHTAR AL-GHAYNAWI, COURT POET OF THE LATER GHANNAWIDS IBRAHIM II, MADUDD II (1059—1099) AND MADUDD III, IBRAHIM (1099—1114). He lived for a considerable period in Kirman, where he wrote panegyrics on the Saljuk Arsalan-Shah b. Kirmanshah (1101—1141). The great poet Mugd al-Din Sanai showed him the greatest reverence and celebrated him in a long 12ads as the best poet of his time. He could not have been Sanai’s teacher, as the Bankiipo Catalogue (13) says, since he must have been only a year or two older than Sanai. His influence however is quite marked in many of Sanai’s works. One of Muktar’s philosophical 12ads may be regarded as the one of the finest examples of the old Persian school of poetry since mazra on it were written by the best poets such as Khajani, Amir Khusrav, Ahi-i Afsakan, Abd al-Rahman Damai and Nawati. His chief work is a large Divan of lyrics, the majority of which are panegyrics in the style of the old Ghaznawi poets like ‘Unyar and Farrukhi, and dedicated to Ar-Ras-Subh, Bahram-Shah, Mudal-Dawla Bahrum, Tamlagh-Shah and a number of viziers. Besides these 12ads there were in the Divan a few short mumtadads, one of which of an astronomical nature seems to have had a great influence on later poetry. We should probably also ascribe to our poet the authorship of the Shahriyar-Nawa, an imitation of the Shahriyar-Nawa, the hero of which is Shahriyar; son of Barzan of Suhrab, i.e. a great-grandson of Rustam, and the action of which is laid in India. The poem is dedicated to Mas‘ud III; in the preface the poet says that he has worked at it for three years and hoped for a present worthy of his labour. If he does not receive this gift however, he will not write a satire this seems to be a direct reference to Firdawsi. The year of Muktar’s death is not exactly known, 590 (1193), 544 (1149) and 554 (1153) are mentioned. The last date seems to be the right one. Bibliography: H. Ethé, Noursese Literatur (Gr. I. P., ii. 234, 250—257); Dastvah, p. 93; Madina al-Farsakhi, i. 598—607. A manuscript of the Shahriyar-Nawa in Rieu, ii. 342. (E. BERTHELS)

AL-MUKHTAR. [See ALI, II.]

MUKRA, A DISTRICT AND VILLAGE IN THE YAMAN, A DAY’S JOURNEY SOUTH OF SAN‘. The Arab geographers mention a cornelian mine here. The name is also given to a mountain in the Yaman Sarif According to Sprenger, we cannot connect the Hunyad tribe of this name with the Mycrina of Ptolemy.

MUQTA’ADAB, NAME OF THE THIRTEENTH METRE IN ARABIC PROSODY, VERY LITTLE USED: in theory it consists of three feet, with two successive mustafidun, in each hemistich; but in practice it has only two.

There is one arad and one darb: mas’afidun mustafidun: mas’afidun mustafidun. However, mas’afidun should lose its f (mas’afidun = falsadun) or change its s to l, which is very frequent (mas’afidun = falsadun).

Mustafidun can never retain its f (mustafidun = mustafidun).

(Mohl. Benchmark)

AL-MUKTA’I B. ALI, ‘Ali, ABBASID CALIPH. His father was a son of the caliph al-Kahim and his mother an Armenian slave girl named ‘Urdujan. After the death of his grandfather al-Kahim in Shahban 467 (April 1075), al-Mukta’i succeeded him as caliph. The real ruler was the Saljuk Sultan Malikshah [q. v.] to whose daughter al-Mukta’i was married in 480 (1087). By 482 (1089) however, she had returned to her father because
she was neglected by the caliph. Malikshāh, who wished to prevent the caliph interfering in affairs of state, endeavoured to induce him to leave Baghdad and take up his residence in another town. This plan however came to nothing when he left the city of Salahuddin in 485 (Nov. 1092) and al-Mukātī was left in peace in the capital. About this time the power of the Saljuqids reached its greatest height and in all the lands conquered by them the spiritual supremacy of the caliph was recognised. Al-Mukātī died suddenly on 15th or 19th Muḥarram 487 (4th or 8th Feb. 1094) at the age of 38. He was perhaps poisoned by Malikshāh's son and successor, Barkiyotkūt [q.v.] whom he had offended by confirming the selection of his minor brother Muḥammad as sultan.

AL-MUKTĀDIR. [See ALLAH, II.]

AL-MUKTĀDIR, B. ʿABBĀSĪD caliph, son of al-Muʿtādī and a slave named Shaghāb. After the death of his brother al-Muktafi in Dhu ʿl-Kaʿda 295 (Aug. 908), al-Muktafi was only 13 at the time was proclaimed caliph. Many however preferred Abū Allāh, son of the caliph al-Mutazz, and after the murder of the vizier Abū-ʿAbbās b. al-Ḥasan b. Abū ʿAbbās [q.v.], al-Muktafi was declared to be deposed and Ibn al-Mutazz elected caliph. The emir Muʿnis [q.v.] came forward to save al-Muktafi; Ibn al-Mutazz was slain and al-Muktafi retained the caliphate. He showed very little independence however and allowed himself to be guided, sometimes by the personnel of the harem and sometimes by the viziers among whom special mention may be made of the intriguing Ibn al-Furāṭ [q.v.] and the brave Ibn al-Dārraj [q.v.]. Al-Muktafi's caliphate was therefore marked by a gradual decline. In his reign the dynasties of the Fāṭimids [q.v.] and Ḥāmidīs [q.v.] became independent. The Karmājains also rebelled once more. In the years 307 (919–920) and 311 (923) Baṣra was plundered by the Karmājain chief Abū Ţahir Sulaimān [cf. AL-ĪJĀNĀHĪ] and at the end of the year 311 (924) he fell upon the pilgrim caravan returning from Mecca. In Dhu ʿl-Kaʿda of the following year (925) he attacked the caravan which was going on pilgrimage to Mecca from Baghda and put it to flight. He next plundered al-Kaʿba and then returned to Baḥrān. An army sent against the Karmājains under the command of Muʿnis arrived only after they had retired. In 314 (926–927) Yūsuf b. Abū ʿl-Sādī was summoned from Abharbadādīn to help, but Sulaimān defeated him in Shawwāl of the following year (Dec. 927) and took him prisoner. The caliph's troops did not dare to give battle and in Muḥarram 316 (March 928) Sulaimān seized the town of al-Ḥabba. After an unsuccessful attack on al-Raʾka he retired; in 317 (929–930), or, according to others, in 316, he plundered Mecca and carried off the Black Stone.

On the Byzantine frontier both sides continued their raids with varying fortunes. In 305 (917) the Byzantines made an offer of peace and after two years peace was definitely concluded, but hostilities very soon broke out again. In 314 (926–927) the Byzantines ravaged the district of Malaya and in the following year they crossed a considerable part of Armenia. After taking several Armenian cities which belonged to the Arabs (316 = 928–929) and occupying northern Mesopotamia (317 = 929–930) they lost all their gains in 319–320 (= 931–932) In Muḥarram 317 (Feb. 929) a rebellion broke out in the capital. Al-Muktafi was forced to abdicate but was brought to a place of safety by Muʿnis, while the soldiery plundered the palace. His brother Muḥammad was summoned to be Commander of the Faithful in his stead with the style al-Kāhir; but since the chief leader of the rebels, the head of police Nūzuk, could not satisfy the demands of the troops for higher pay, al-Kāhir was deposed after a few days and al-Muktafi placed on the throne once more. In Baghdad the confusion increased and in 320 (932) the catastrophe came. The enemies of Muʿnis took advantage of his absence to persuade the caliph that Muʿnis intended to dethrone him and when Muʿnis approached at the head of his army, al-Muktafi was persuaded with great reluctance to take the field against him; he fell at the beginning of the encounter (27th Shawwāl 320 = Oct. 31, 932). See also the article MUḤAMMAD B. YĀKŪT.

K. V. ZETTERSTEN

AL-MUKTĀFĪ LI-ʾAMIʾ "LĀH, ABUʾʾABBĀSĪD AL-.MMUḤAMMAD, ʿABBĀSĪD caliph, born on 12th Rabiʿ II 489 (April 9, 1096), son of al-Muṣṭaḥir and a slave girl. After the deposition of his nephew al-Rashīd, al-Muktafi was acknowledged as caliph on the 8th Dhu ʿl-Hijja 530 (Sept. 17, 1136). While the Saljuqids were fighting among themselves, he did his best not only to maintain his independence, but also to extend his rule over the troops after the other in the Ṭrāk fell into his hands. In 543 (1148) a number of emirs announced their allegiance to Sultan Masʿūd and marched on Baghda but dispersed after several encounters with the caliph's troops. According to some sources, the same thing took place again next year. In Rajab 547 (Oct. 1152) Masʿūd died, and was succeeded by his nephew Malikshāh who was deposed in a few months and succeeded by his brother Muḥammad. In the meanwhile the caliph seized the two towns of al-Hilla and Wāṣit. In the following year Sultan Sandjar who lived in Khurāsān was attacked and taken prisoner by the rebel Ghuzz [q.v.] whereupon his emirs proclaimed Masʿūd's
brother Sulaimān b. Sulṭān. In Muḥarram 551 (Feb.–March 1156) the latter was recognised by the caliph on condition that he did not interfere in the affairs of the Trig. Although al-Muqtatī supported him he was defeated in Djiindād I (June–July) of the same year by his nephew Muḥammad and the latter’s auxiliary. In Dhu l-Ḥijāda (Jan.–Feb. 1157) Sulṭān Muḥammad advanced on Baghdaḍ to take vengeance on the caliph. The latter had to retire to the eastern part of the town and was besieged there for several months. In Rabī‘ I 552 (May 1151) however, the Sulṭān suddenly raised the siege because Muḥakān was advancing on Hamdān. As the latter therefore retired, hostilities automati- cally ceased and Sulṭān Muḥammad in any case had made his peace with al-Muqtatī. The latter twice besieged Takrit in vain; on the other hand, he succeeded in taking Līfī. The Crusaders continued their hostilities in al-Muqtatī’s caliphate. The most powerful pillar of Islam was the Atabeg al-Mawṣil, ‘Imād al-Dīn Zangi, and his son Nūr al-Dīn Muḥammad in Syria. Al-Muqtatī died on 2nd Rabī‘ I 553 (March 12, 1160).

(K. V. Zetterstéen)

Al-Muqtatī b. l'Imām, Abū Muḥammad ʿAlī b. Āḥmad. Aḥṣāfī, the caliph, son of al-Muṭṭādīd and a Turkish slave girl named Čećek (Arabic Džiđak). In 281 (894–895) he was appointed by his father governor of al-Rayy and several towns in the neighbourhood, and five years later he was made governor of Mesopotamia and took up his quarters in al-Rakka. After the death of al-Muṭṭādīd on 22nd Rabī‘ II, 289 (April 5, 902), he ascended the throne and at once won the good-will of the people by his liberality and by destroying the subterranean dungeons in the capital. He proved a brave and fearless leader who fought with success against the many enemies of the caliphate. The Karminians were ravaging Syria; one town after another fell into their hands and Damascenes itself was plundered. On the 6th Muḥarram 291 (Nov. 29, 903) the general Muḥammad b. Sulaīmān finally succeeded in inflicting a crushing defeat on them and they scattered in all directions. Muḥammad then turned his attention to Egypt where he put an end to the rival of the Tāliūnīd. Many of their followers joined him and after the Tāliūnīd Hārūn b. Kūmāraḵwān had been slain, the capital had to surrender (Ṣafār 292 = Jan. 905) and ʿĪsā al-Nuḥārī was appointed governor of Egypt. An attempt to restore the Tāliūnīd was easily crushed (298 = 905–906). About this time the Karminians again began to be troublesome and at the beginning of the year 294 (Oct.–Nov. 906) they attacked the great pilgrim caravan returning from Mecca, massacred the men and carried off the women and children. In Rabī‘ I of the same year (Dec. 906–Jan. 907) they were defeated near al-Kadisa by the caliph’s troop under Waṣṣū ḫaṣaṭ. The war with the Byzantines was also vigorously pursued. In 291 (903–904) a Greek named Leo who had adopted Islam undertook a number of raids on the Greek coasts with his fleet of 54 ships. The Byzantines however had the advantage by land. In 292 (904–905) Waṣṣū ḫaṣaṭ, al-Maṣṣāṣ and Ṭarāṣṣūb were taken by the Greek general Andronicus and in the following year the Byzantines advanced as far as Ḥalab. Then the Muslims gained the upper hand and Andronicus went over to them. Al-Muqtatī died in Dhu l-Ka‘da 295 (Aug. 908) at the age of 31. cf. also the article Al-ʿAbbās b. al-Ḥasān b. Āḥmad.

(K. V. Zetterstéen)

Al-Muqtatān, Bahāʾ, Abū Dīn, a Druze missionary and author, with his teacher Ḥama (b. ʿAlt; q. v.) founder of the theological system of the Druzes [q. v.], the fifth minister of the Druze theogony, with several titles of honour, in addition to the above two: al-Djanāb, al-Asār, al-Tālī, al-Khayāl, al-Mukāsir etc. His "secular" name was Abu l-Ḥasān Ali b. Āḥmad al-Samīsī. Of his life practically nothing is known. As Arab historians are silent about him (Silvestre de Sacy, Exposé de la religion des Druzes, i, 320), his own writings are almost the only source. According to Druze tradition, he was killed in Arabia in al-Hākim’s time [q. v.]. (M. v. Oppenheim, Von Mittelmor zum Persischen Golf, i, Berlin 1839, p. 135). As his works reveal quite a good knowledge (not without misunderstandings) of Christian religion and literature, he may have been born a Christian, probably in Syria. Only for the period of his teaching do we have chronological exactness.

His ṭabīḥ of inveviture is dated on the 13th Shab‘an of the third year of ʿAmza’s mission i.e. 411 (1020). (S. de Sacy, op. cit., i, 474–475: ii, 309, 313; transl., ibid., ii, 297–309). The earliest of his known writings is of the tenth year of ʿAmza, 418 A.H. (ibid., ii, 326). In consequence one must assume that he came to the front after the disappearance of al-Hākim and ʿAmza. His activity was not a continuous one and he had even a time in concealment (about the year 17–18 of ʿAmza; see S. de Sacy, op. cit., ii, 364), whether in Egypt or Syria is not certain (H. Guy, La nation druze, p. 114). The latest date known in his writings is the 28th year of ʿAmza, i.e. 433–434 (1042). (S. de Sacy, op. cit., i, 496; ii, 379). His farewell epistle dates from this year; according to it he had retired into conceal- ment (ibid., i, 514–515; ii, 328) nothing more is known of him. The "Druze theogony" does not agree with these dates; it gives 17 years as the period of his activity (H. Guis, op. cit., p. 107). Ph. Hitti’s assertion (The Origins of the Druze People, p. 11) that he died in 1031 is due to a misunderstanding.

Druze tradition not unjustly ranks him with ʿAmza and regards him as the greatest theological writer, to whom four of the sacred books are ascribed (M. v. Oppenheim, op. cit., i, 135–137). These are not books
in the proper sense but collections of separate tracts, usually in the form of epistles, directed to followers of the Druse teaching or of other creeds in various lands (Byzantium, Syria, Egypt, Arabia, India). They are to this day frequently read by the Druses in their khalawāt; commentaries were written on some of them by the last independent Druse theologian 'Abd Allāh al-Tanūkhī (d. 1480; on him see Ph. Hitti, op. cit., p. 53, 71; M. v. Oppenheim, op. cit., i. 137). Of the some 110 Druse treatises so far known in Europe, 70 are ascribed by S. de Sacy to al-Mukțānā (op. cit., i. 484 and 496). Except for a few short texts published by S. de Sacy along with other writings of Hamburgher and few have been printed, namely the Kitāb al-Baḍ' by Chr. Seybold (s. Bibl.) and al-Risālat al-Mukṭānātīyya, sent in 1025 to the Byzantine Emperor Constantine VIII., by J. Khalil and L. Ronzevalle (s. Bibl. and extracts in Hitti, op. cit., p. 64—67). Others are accessible only in translations and extracts (espec. in Silvestre de Sacy; al-Risālat al-Mashīja, a synopsis in Hitti, op. cit., p. 68—70). As with other Druse writers, the style is very obscure and artificial, frequently embellished with rhymed prose.

Silvestre de Sacy, whose book still is the most important collection of material, regards al-Mukțānā as "un enthousiaste de bonne foi" (op. cit., i. 508). It is highly desirable that some one should devote a special study to his life and work, paying particular attention to the authenticity of his works and to a critical edition of them.

**MULAJ.** [See Mawlā.]

**MULK **(A.), royal power, is used in the Kurān with reference to God and to certain pre-Islamic personages, who all appear in the Old Testament, and in the former case is synonymous with malakūt; the latter word however occurs only four times in the Kurān and always with a dependent genitive (*kull shā' or as-samawāt wa-l-ard*) while mulk is often used absolutely. To God alone belongs mulk. He has no associate therein; to Him belongs mulk over heaven and earth as well as over the judgment. He gives mulk to whom He will; the unbelievers have no share in it. Shaiṭān promised Adam imperishable mulk and tempted him with this promise to eat of the šajārat al-khulīd (Sūra xx. 118). Nimrud endeavours to claim for himself God's mulk against Ibrahim (ii. 260) but God gives mulk to the family of Ibrahim (iv. 57). Yūsuf thanks God in prayer for the mulk which He has given him (xxi. 102). Fir'awān boasts of his right to the mulk Miyr (xiii. 50); God wills to give Tālūt mulk over the recalcitrant Israelites and to send the tābir as a sign (ii. 248 sqq.). Dwīdā's mulk is mentioned in 252 and xxviii. 19 and Sulaimān's ii. 96; the latter prays for it (xxviii. 34).

That the conception of mulk was not carried over into Muslim law generally has been explained in the article MALK; an exception is Egypt during the Ayyūbīd period and in quite modern times. Cf. also the article TAṬIY and G. Richter, *Studien zur Geschichte der älteren arab. Fürstenpfigel* (Leipz. Sem. Studien, N. F., iii., 1932), esp. p. 6. (M. PLESSNER)

**MULTAN** is an ancient town of the Pandīb situated in 30° 13' N. and 71° 31' E., and has been known at various times as Khaṣṭpur, Hanspūr, Bāqpur, Sābūr or Sanābūr, and finally Multāshān, of which Multān is a corruption. This name is derived from that of the idol and temple of the sun, a shrine of vast wealth, which the Arabs, who plundered it, named dār al-ḥabāb, or the house of gold. It remained the Arab capital, and the outpost of Islam in India, for three centuries but by A.D. 900 its rulers had become independent of Baghdad. At this time it was seized by 'Abd Allāh the Kirmānī, and became a stronghold of the Kirmānī heretics, who were crushed and expelled by the orthodox Ṭahmās of Ghazān. The town and province remained nominally subject to his descendants until Khusrwā Malik, the last of the Khurasan, was carried into captivity by Mullāz al-Dīn Muḥāmmad b. Sām, when it became a province of his Indian empire. On his death the governor, Nāṣīr al-Dīn Kābāc, attempted to establish his independence of Dihlī, but Kaṭāb al-Dīn Aibak reduced him to obedience, and the province remained nominally subject to Dihlī from 1206 to 1438 when Shaikh Yūsuf Kūrašī became independent ruler of Multān and was followed by the kings of the Langāt tribe, who reigned until 1527. The town was occupied both by Timūr in 1397 and by Bābur in 1528.

The province was one of the jūbas of Akbar's empire, and remained nominally subject to his successors until 1752, when its allegiance was transferred to Kābul. It was threatened by the Sikhs as early as 1771, but was not annexed by them until 1818, when Ranjīt Singh took the city by storm. It was not affected by the first Sikh war, but the murder of two British officers by Mūlādī led to the second Sikh war, and the city was captured on January 3, 1849. Its fortifications were dismantled in 1854 and its garrison was disarmed in the mutiny of 1857.

**MUMTAZ, BAKRIBWUDAR B. MAHMUD TURKMAN FARĀHĪ, a Persian writer, a contemporary of the Ṣafawīd Sultan Ḥusain (1694—1722).** At an early age he left his native town of Farāh

The *Encyclopaedia of Islam, III.*
and went to Marw where he entered the service of the governor Aṣḥān Khān. After two years however, he left this post and became munshi with Hāvān Khān Khān Shāhī is Khāvbāsh in 1074. Aṣḥān Khān had asked him to his master’s house here he heard a story which attracted him exceedingly. He wrote it down and it became the foundation of a great collection, al-Maḥāsil, which contained about 400 stories and consisted of a maḥāsilama, eight bāb and a khitama. Soon afterwards he returned to Faṣāh, spent some time in Herāt and Meshhed and then entered the service of the emir Minūār Khān b. Karīmshāhī whose duty it was to defend ʿUmar and Khābūshān against raids by the wild nomad tribes. His stay there was disastrous for Mumtāz, since he lost all his goods and chattels and the valuable manuscript of his Maḥāsil Ādār during a nomad raid; he did not have another copy of it. He resolved however to restore the book and wrote all the stories that he could remember a second time thus arose the second version of the Maḥāsil, which consists of a maḥāsilama, five bāb and a khitama and has come down to us under the title Ḥālike al-Khitā. The book is written in an extravanegib artificial style. The khitāma is the best part; it contains the celebrated story of ʿAbī and Kanā, which is very common in Persia in a simplified form in many editions from the popular press.

MUMTĀZ MAHALL, wife of Shāh Ijāhān, and the lady for whom the Taz̢ Mahal [q.v.] was built. She was the daughter of Alam-Ḥasan Aṣ̢ Khān, who was Nār Ijāhān's brother. Her name was Aṣ̢umandān Bāītā, the name Mumtāz Mahall being conferred on her after Shāh Ijāhān's accession. She was his favourite wife and bore him fourteen children, seven of whom grew up. She was born in 1593, married in 1612, and died, at Burhanpur in the Deccan, very shortly after the birth of a daughter in 1631. She was beautiful and amiable, and Shāh Ijāhān loved her tenderly.

MUNADIJDM. [See Astrology.]

MUNADIJDM BASHI is the name by which the author of the most important general historical work written in Turkey is known. His real name was ʿAbd al-Rahmān, son of Lutf Allāh, a native of Ereğli near Konya. He was born in Selântik, in the first half of the xvith century, received a scholarly education and served in his youth for fifteen years in the Mewlewīkhâne of Kâsim Pasha under Shāhī Khalil Dele (Shāhī Khalil-dele, ii. 287). Afterwards he studied astronomy and astrology and became court astrologer (munadijdam bāshī) in 1075 (1667–1668). In 1086 (1675–1676) he was admitted to the intimate circle of Sultan Muhammad IV as naqāsh-pāshāsh. He was dismissed in Muharram 1099 (November 1687) and banished to Egypt. From here he went some years later to Mecca, where he became shākh of the Mewlewīkhâne. In 1105 (1693–1694) he was obliged to move to Medîna, where he lived for seven years. Soon after his return to Mecca he died there on the 29th of Ramdān 1113 (February 27th 1702) and was buried near the tomb of Khudājī.

Besides writing his historical work, Munadijdam Bashi displayed a considerable literary activity. Of his works are mentioned a tājīya on the Qur'an commentary of Bādawī, a commentary on the ʿAṣīd al-Aquīyā of al-Ḥanī, a Lūṭān-nama, a translation of the anecdotes of ʿUbadī Zākān, and a number of treatises on geometry, mysticism and music. His Turkish dizām also gives him a place in the ranks of Turkish mystical poets; his tājīyal was Ashābī.

The general history was written in Arabic under the title Dīnār al-Dustār, but although manuscript of the Arabic original exist (the Saymāt Khān Esat' of Ali Enver mentions two MSS, not mentioned by Bainger, vii. one in the library of the mosque of Selim II in Adrianople and the other in the imperial palace, in the library of Alādīl III), it is much better known in the Turkish translation made by the poet Nedin [q.v.] in the xvith century under the title Shāhī al-Kāmkār (printed in three volumes in Constantinople in 1285). It is a world history, arranged, after the fashion of similar Arabic works, according to dynasties, with a main division into three parts: the first treating of the history of Muhammad, the second the non-Muslim dynasties and the third the Muslim dynasties.

In the introductory chapters the author cites numerous sources, not a few of which are lost in the original. Therefore the work has a special value for the knowledge of many smaller dynasties and for this reason it has been especially used by E. Sachau for Ein Verzeichnis musulmankanischen Parnastikus, in St. Pr. Ak. W., Berlin 1925 (cf. the introduction). The last dynasty treated is that of the Ottoman Sultan; it is proportionately longer and more detailed than the history of the other Muslim dynasties and based on several imperfectly known sources; the last part, which ends in 1089 (1678), gives contemporary history. The Turkish translation of Nedin is very readable and not composed in the high-flown literary style that prevailed in his period. For this reason it is especially praised and represented in Ehrziyya Tewfik's Nöümence Edebiyati Ünümnesi, Constantinople 1330.

MUNADIJDM BASHI (J. H. KRAMERS)

AL-MUNAFIKUN (n.), the term applied in the Kurān to those Medīnine upon whose fidelity and zeal Muḥammad could not absolutely rely. The Arabs (e.g. Muḥarrad, Kāmil, ed. Wright, p. 153) derive the word from mānafika ("one of the entrances to the hole of a fieldmouse"), but it is certainly the borrowed Ethiopic manīfek, "heretic" from naṣafa (= "split", naṣafa "to be divided, irresolute"). The meaning "waverer", "doubter" quite fits the usual use of the word in the Kurān, while the usual translation, "hypocrite" only suits a few passages. Another description of the same people in the Kurān is: "those in whose hearts there is sickness (weakness, doubt)", again in contrast to the unshakably firm believers. Sometimes (Is. 68
sp.; xxxii. 73; xviii. 6; lvii. 13) there are references to women of this type (muṣāfīkūn) in addition to the male muṣāfīkūn. A closer consideration of the passages in question shows we have not to think of a regular, rigidly defined party; sometimes the reference is to such Medinees as had only joined the Prophet under compulsion or reluctantly, and sometimes to those who had quite honestly joined him but had not been able to retain their belief and enthusiasm (ix. 67; lium. 3). Muhammad also on one occasion speaks of muṣāfīkūn among the Beduins. The first group found their leader in 'Abd Allah b. Ubaīy (4, v.) who would have been the chosen head of the Kala tribe, if a new and superior force, which he could not meet, had not opposed him in Muhammad. Nevertheless these grumblers, joined by other unreliable elements, were strong enough to cause the greatest embarrassment to the Prophet in critical moments e.g. before the battle of 'Uṣyad (iii. 160 sq.), in the War of the Ditch (xixi. 1, 12-14, 60, 73) and before the march on Tabāk (ix. 65-69, 74, 78), as he had always to be careful not to drive them over into the enemy's camp. It is no wonder then that his utterances about them are always made in a tone of great irritation. He describes them as hypocrites, who say something different from what they mean in their hearts (iii. 161; xiii. 1), in their irresolution they join, according to their view of the future, sometimes the Muslims and sometimes the enemy (iv. 137-142; v. 57); if it goes badly with the believers, they think that their religion has deceived them (viii. 51). When they are together among themselves they revenge themselves for the restraint which they must put upon themselves by malicious remarks about the Prophet and his revelations, but are in great anxiety, lest Allah may communicate their secret conversations (ix. 65 sqq.; x. 79, 125 sqq.). They are indolent at prayer (iv. 141), refuse to take part in the lighting or to contribute from their means (xvii. 22, 31; lvii. 1 sq.; lium. 71; cf. iv. 40 sqq.); they grow for a weakening of his power so that the more worthy may exel the meaner (ix. 8). As representatives of the true Meccan aristocracy, their attitude and eloquence made a certain impression on the Prophet but on closer examination they are nothing but "propped timber" (lium. 4). In a word, they are no better than the unbelievers. God makes them err (iv. 50 sqq.) and their abode shall be hellfire (ix. 74; lvii. 13 sqq.). We cannot help feeling in some ways a certain sympathy for these men who were deprived of their rights; but in the end they deserved their fate for their complete lack of ideas and courage at decisive moments and their conduct with regard to the Jews in Medina, whom they incited to resist Muhammad and then left in the lurch (cf. lv. 11), makes a very unfavourable impression. With the death of 'Abd Allah they lost their leader and their opposition was forced to be still stronger before the great successes of Muhammad's last years.

The word muṣāfīkīn remained however and like other Qur'anic terms was used in the fighting between the various parties as a term of abuse; cf. e.g. its application to Ibn Zubair (Tabari, ii. 467, 3) and his party (Ahwardi, Anonymous arab. Chronik, p. 73, 4).

In the Qur'an Sūra ixii. is called after the Muṣāfīkūn; it is connected by most commentators with the campaign against the Banū Muṣṭalik. Wustenfeld, p. 411-413, 540 sq., 558-560, 651, 670, 688, 726, 734, 894. ('A. BuHl)

AL-MUNDIRI b. MUHAMMAD. [See UMAIYADS II.]

AL-MUNDIYAH, title of vāra livii, which is also called al-mudhli and al-mulīyya.

MUNGIR (MONGHY), the head-quarters of the Mungir District in Bihar and Oria in India, situated in 25° 25' N. and 86° 28' E. on the south bank of the Ganges. The population of the district in 1911 was 2,732,803, of whom 200,339 were Muhammadans. Muhammadan historians state that Balghitiyār Khālid was the first Muhammadan who conquered Mungir during his subjugation of Bihar about 595 (1198). Henceforth it became a place of military importance. In 1177 (1705) Nawwāb Mir Khāsim, the Nawwāb Šāhidār of Bengal, when he proposed to fight against the British made Mungir his military head-quarters. He founded here an arsenal under Gungīn (Gregory) Khāsin, his Armenian general. The gun-making industry for which the town is famous is said to date from the establishment of this arsenal.

Bibliography: Imperial Gazetteer of India, xvii. 401-403; J. Malley, Bengal District Gazetteers, Monghy, Calcutta 1909, xvii.

(M. ḤudaYIYAH HOSSAIN)

MŪNIS DEDE or DERVISH M İNE, OTTOMAN POET OF ADRIANOPEL. He belonged to the Mecnawi Order. He received his education from the famous Enis Dede (d. 1147 = 1734). He died in 1145 (1732) in Adrianopele, where he is buried.

(T. Z. MENZEL)

MŪNIS AL-MUZAFFAR, ABD-EL-lässAN, principal Abbāsid general from 906 to 931 (906-933), and latterly virtual dictator (usual attribution to him of muṣira al-kušērī seems to rest on passage — p. 347 — in Hûl al-'abī's Kitāb al-Muṣāfār [ed. Amedroz], where Nasr should be read for Muṣnīs), a eunuch (passage of Ibn Miskawah [ed. Amedroz and Margoulouth, i. 160] shows that Ḥādīm in this case does not mean merely freedman, as suggested by Massigaon, al-Ḥallaj, p. 205, No. 2), said to be al-Dhahabi, Tūrīkh al-islām (followed by Ibn Taghribirdi, ed. Įuyboll, ii. 255) to have been 90 years old at death (though this age would seem incredibly great for a recently active commander), i.e., to have been born in 231 (845—846), and to have held the rank of amir for 60 years.

Muñis first appears (if passage of al-Ṭabarī, in. 1913, refers to him) as a ḡādīm of al-Muṣṭadīd (not yet caliph) in Zaādij [q. v.] campaign of 267 (880—881); and is mentioned as Chief of Police in caliph's camp in 287 (900). Al-Dhahabi (also Ibn Taghribirdi, loc. cit.) states, again, that he was banished to Mecca by al-Muṣṭadīd, to be recalled on accession of al-Muṣṭadīr [q. v.], and as Muñis is nowhere referred to during intervening reign of al-Muṣṭafii, the statement may be true. (If so, in al-Mas'ūdi's description, Muñis
al-Dhahab, ed. B. de Meynard, viii. 212, of al-Mu'tadid's death, for ābdūn read ābdūz, as in 'Arb, ed. de Goeje, p. 29).

Mu'nis owed his later eminence mainly to his leading the defence, in 296 (968), of the Hasant palace at Baghdād for al-Mu'āktār against the partisans of the latter's cousin, the pretender Ibn al-Mu'tazz [q. v.]. During the caliph's youth his gratitude and that of his powerful mother for this service assured Mu'nis's position; and though later al-Mu'āktār's favour turned to enmity, by that time Mu'nis's authority was hardly in need of support, owing chiefly to his almost invariably successful generalship. For though he undertook no very important campaigns, except perhaps the repulse of the Fātimid al-Mahdi [q. v.], in 207 (919–920) (for which he received the šaddāl al-Mu'āzẓf;fī; and the defence of Baghdād from the Karmaṭjīns [q. v.], in 215 (927–928), he was only once defeated — in 306 (918).

Mu'nis early fell out with the wazir Ibn al-Furāt [q. v.], repeatedly opposing him, till in 312 (924), on Ibn al-Furāt's third term of office, Mu'nis played a prominent part in securing his dismissal and execution. He now became all-powerful, being invariously consulted on the appointment of viziers and so controlling the government. Hence the change of al-Mu'āktār's affection to dislike, first signaled (315 = 927) in an abortive plot of the caliph's to murder him. In 316 Mu'nis lent himself to al-Mu'āktār's deposition in favour of his half-brother al-Kāhir [q. v.]. He almost immediately restored him, however, thereby becoming more absolutely his master than ever. Al-Mu'āktār eventually deposed Mu'nis (319 = 931), who thereupon left Baghdād. Next year, however, having meanwhile collected a strong force, he marched on the capital intending to reimpose his authority. He duly defeated the caliph's army outside the walls, but al-Mu'āktār himself was killed on the field.

Mu'nis now restored al-Kāhir. But by resuming his dictatorial ways he soon so alienated him that he was obliged in self-defence to keep the new caliph a prisoner in the palace. He even contemplated deposing him. Al-Kāhir, however, succeeded in urging Mu'nis, together with his chief supporters, into the palace, where he shortly had them executed in Shābān 321 (August 933).

Mu'nis's influence was on the whole exerted for good: but he was neither strong nor intelligent enough to prevent the decline of the caliphate. His example of depriving the caliph of real power was pernicious. It was to be followed all too soon by the series of adventurers, who, with the style of amīr al-amārā' [q. v.], were to dominate al-Kāhir's successors.

MUNKAR WA-NAKĪR (the forms with the article are also found), the names of the two angels who examine and if necessary punish the dead in their tombs. To the examination in the tomb the infidels and the faithful — the righteous as well as the sinners — are liable. They are set upright in their tombs and must state their opinion regarding Muḥammad. The righteous faithful will answer, that he is the Apostle of Allah; thereupon they will be left alone till the Day of Resurrection. The sinners and the infidels, on the other hand, will have no satisfactory answer at hand. In consequence of this the angels will beat them severely, as long as it will please Allah, according to some authorities till the Day of Resurrection, except on Fridays.

In some sources a distinction is made between the punishment and the pressure (jaūdha) in the tomb, the righteous faithful being exempt from the former, not from the latter, whereas the infidels and the sinners suffer punishment as well as pressure (Abu 'l-Mu'in Maimūn b. Muḥammad al-Nasafi), as cited in the commentary on the Waṣyīyat Abī Ḥanīfah, Haidarābād 1321, p. 22).

The punishment in the tomb is not plainly mentioned in the Kur'ān. Allusions to the idea can be found in several passages, e.g. sūra xviii. 29: "But when the angels, causing them to die, shall smite them on their faces and backs"; sūra vi. 93: "But what you see of them will be in the showers of fire, and the angels reach forth their hands, saying, Vindict your souls: this day shall ye be recompensed with a humiliating punishment"; sūra viii. 52: "And if thou wert to see when the angels take the life of the unbelievers; they smite their faces and their backs, and taste ye the torture of burning" (cf. further sūra ix. 102; xxiii. 21; lii. 47).

The punishment of the tomb is very frequently mentioned in Tradition (see Bibliography), often, however, without the mention of angels. In the latter group of traditions it is simply said, that the dead are punished in their tombs, or why, e.g. on account of special sins they have committed, or on account of the wailing of the living.

The names of Munkar and Nakir do not appear in the Kur'ān, and, so far as I can see, only in canonical Tradition (Tirmidī, Bānū 'Abd Allāh, bāb 70). Apparently these names do not belong to the old stock of traditions. Moreover, in some traditions one anonymous angel only is mentioned as the angel who interrogates and punishes the dead (Muslim, Imām, trad. 163; Abū Dawūd, Sunna, bāb 39b; Ahmad b. Ḥanbal, iii. 233; 346; iv. 150; Tāyālīsī, No. 753).

So there seem to be four stages in the traditions regarding this subject: the first without any angel being mentioned, the second mentioning "the" angel, the third two angels, the fourth being acquainted with the names Munkar and Nakir.

This state of things as reflected in hadīth finds a similar reflex in the early forms of the creed. In the Fīh Akhārī, which may date from the middle of the viiiith century A.D., the punishment of the tomb appears as the only eschatological representation (art. 10). In the Waṣyīyat Abī Ḥanīfah, which may represent the orthodox views of the middle of the viiith century, we find, apart from an elaborate eschatology, the two following articles (arts. 18, 19): .We confess, that the punishment in the tomb shall without fail take place. We confess, that the view of the traditions on the subject, the interrogation by Munkar and Nakir is a reality". The term "reality" is apparently intended to oppose the
allegorical interpretation of eschatological representations as taught by the Mu'tazili.

The *Fiṣḥ Abkar* it., which may represent the new orthodoxy of the middle of the 6th century A. D., is still more elaborate on this point (art. 237):

"The interregnum of the dead in the tomb by Munkar and Nākîr is a reality and the reunion of the body with the spirit in the tomb is a reality. The pressure and the punishment in the tomb are a reality that will take place in the case of all the infidels, and a reality that may take place in the case of some sinners to the faithful".

In the later credos and works on dogmatism the punishment and the interrogation in the tomb by Munkar and Nākîr are expressed in simular ways. The Karramiya [q. v.] taught the identity of Munkar and Nākîr with the two guardian angels who accompany man (Abd al-Kair al-Baghda'di, Qâ'id al-Din, Stamboul 1258, p. 246). Ghazâli admits the idea that eschatological representations are a reality that takes place in the malakî, the soul.

The origin of the names is uncertain; the meaning "disliked" seems doubtful. The order of the examination and the punishment of the dead in their tombs is found among other peoples also. The details to be found in Jewish sources (̣ihbît ḥak-khîb) are strikingly parallel to the Muslim ones.

(A. J. Wensinck)

**Munsarîh**, the name of the tenth metre in Arabic prosody; it has three feet to the hemistich. It has three ʿarûd and four ḏâr:

1st ʿarûd:

\[
\text{mustafâlûn mafâlûtna mustafâlûn} \\
\text{mustafâlûn mafâlûtna mustafâlûn} \\
\text{mustafâlûn mafâlûtna mustafâlûn} \\
\text{mustafâlûn mafâlûtna} \\
\]

2nd ʿarûd:

\[
\text{mustafâlûn mafâlûn} \\
\text{mustafâlûn mustafâlûn} \\
\text{mustafâlûn mustafâlûn} \\
\text{mustafâlûn} \\
\]

3rd ʿarûd:

\[
\text{mustafâlûn mafâlûn} \\
\text{mustafâlûn mustafâlûn} \\
\text{mustafâlûn mustafâlûn} \\
\text{mustafâlûn} \\
\]

We rarely find *mustafâlûn* in the ḏâr of the first ʿarûd. The second ḏâr of the first ʿarûd is not indicated by al-Khalili b. Ahmad but Ibn Barn notes it was much used by the muwâllid poets, among them Ibn al-Ramî. It may be noted that the second and third ʿarûd are regarded as belonging to the ṭafṣr metre.

*Mustafâlûn* may lose: 1. its ʾ and four ʿarûd except when used as the first ḏâr in the first ʿarûd; 2. its ʾ and the foot becomes (mustafâlûn = mafâlûn); 3. its ʾ and ʿarûd at the same time (which is very bad) and the foot becomes (mustafâlûn = fâlîtna). This last change could not be undergone by the first ʿarûd.

*Mafâlûtna* loses 1. its ʾ, which is very bad and the foot becomes (mâfâlûtna = mafâlûn); 2. its ʾ and the foot becomes (mâfâlûtna = fâlîtna).

3. its ʾ and ʿarûd at the same time which is very bad and we have (mâfâlûtna = fâlîtna). Mafâlûtna and mafâlûtna may lose their ʾ and become (mâfâlûtna = fâlûtna) and (mâfâlûtna = fâlûtna). (Moh. Ben Chezir)

**Munshî.** [See *Inshâ*]

**Munṣîf.** (A., part. active iv. of *nufr*, "to be just, to act with justice"); the title of a native judge of the lowest grade in India.

**Al-Muntâfik**, a section of the Arabic tribe of the Baṇî ʿUkail, which in turn is a subdivision of the great group of the ʿAmir b. ʿSaʿîda [q. v.]. Genealogy: al-Muntâfik b. ʿAmir b. ʿUkail (Wustenfeld, *Gen. Tab.*, D. 19). The very scanty information in Wustenfeld can be supplemented by the notice which Ibn al-Kalbi gives of the Banu ʿl-Muntâfik (Djarmarat al-Inshâ, MS. Brit. Mus., fol. 130*-131*); but this little clan nowhere appears to play a great part in early history. The territory inhabited by the Banu ʿl-Muntâfik is the same as that of the other divisions of the Banu ʿUkail, in the southwest of Yamnâ; some places belonging to them are quoted by al-Bakri (Muqâjam, ed. Wustenfeld, p. 567). Yâkût (Muqâjam, ed. Wustenfeld, i. 793-794; iv. 712, l. 78: we may note that in these two passages al-Muntâfik is said to be the surname of Muʿawiyah b. ʿUkail while the usual genealogy makes this Muʿawiyah a son of al-Muntâfik), al-Hamdâni (*Qâira*, ed. D. H. Miller, p. 177, l. 12-15: note the mention of gold mines in their territory). The Banu ʿl-Muntâfik numbered among their clients the Banu Taḥr (Wustenfeld, *Gen. Tab.*, C. 13) whose eponym was said to have been made a prisoner by them (Kitâb al-Aǵhâni, vii. 110); one of the few episodes of the pre-Islamic period in which this clan is mentioned is the battle of Shîb Djâbala where Kaš b. al-Muntâfik distinguished himself (ʿAhdâni, x. 44; Nuqād, ed. Bevan, p. 671 l. 12-672, l. 14, where Ibn Ṭufail should be deleted). In the history of the origins of Islâm, several of them appear as ambassadors of the Banu ʿUkail to the Prophet: such were Anas b. Kaš b. al-Muntâfik and Ṭaḥîr b. ʿAmir b. al-Muntâfik (Ibn Saʿîd, i. 45 et sq.; on the latter the biographical collections have long discussions as to whether he is to be identified with this or that nuḥaḏdîth: cf. among others Ibn Ḥadjar, *Tahdîb al-Tahâdîb*, vii. 456). In the period of the conquests, the Banu ʿl-Muntâfik settled in the marshy region between Kâfa and Baṣra (al-KalâjashANTI, *Nihâyat al-ʿArâb*, p. 65-66). All that we know of them after this period is the names of a few individuals who held public offices: a certain ʿAmir b. Muʿawiyah al-Muntâfik, mentioned by Ẓabari, i. 3284 a. b., as fighting at ʾAṣīf, is said by Ibn al-Kalbi to have been governor of Armenia and Aḥdarḥâdiyân under Muʿawiyah; according to Ibn al-Kalbi, ʿAbd Allah b. Muʿawiyah b. Ṭuḥba b. ʿAmir b. al-Muntâfik was governor of Marw and Ṭawâṣ, also under Muʿawiyah, and ʿAbd b. Kaš b. al-Muntâfik of Armenia, under Yazid I. These men are not mentioned elsewhere: the same is true of the poet ʾAlâ al-Dîjm b. ʿAw b. al-Ḥusain b. al-Muntâfik (Ibn Ḥadjar, *Isâba*, ed. Sharâfîya, Cairo 1325), v. 124 follows Ibn al-Kalbi.

**Al-Muntâkîm.** [See Allâh II.]
AL-MUNTAŞIR (also called Mustansir) 8FL. 'Abd Ḥaṣṣār, Muhammad b. Ḥaṣṣār, ʿAbd b. al-ʿAffar, a son of al-Mutawakkil by a Greek slave. After his father had been murdered by the Samaritans in 240 (855) (Deb 6) by conspirators, among whom was al-Muntasir, the latter ascended the throne aged 25 according to the usual statement. As a ruler he was only a tool in the hands of the vizier Ahmad b. al-Khāṣib and the Turkish generals. His brothers al-Muṣṭafāz and al-Muṣayyaf were forced to renounce their claims to the throne and Waṣīf, the commander of the bodyguard, was sent to the Byzantine frontier. Unlike his father, he treated the ʿAlids with great consideration: nothing else remarkable is recorded of him. Al-Muntasir died in Rabīʿ I 248 (June 862) or, according to a less trustworthy report, end of Rabīʿ I in 861, in Samarra after a reign of six months.

MURĀD. [See Al-Moravids.]

MURĀD, the name of an Arab tribe, belonging to the great southern group of the Maḥdījīd [q.v.]; genealogical tradition (Ibn al-Kalbi, Bidawarat al-Murād, Escorial MS., fol. 114—117) was followed by Ibrāhīm al-Durādī, Kībīb al-Ṭabākī (cf. Lehmus), ed. Westenfeld, p. 233; P. 496; cf. also Rūm al-Murād, iv. 409) regards Murād as a nickname, for this tribe was said to have been the first to rebel (tamaʾūrata) in the Yemen: an etymology which is not convincing. Murād's own name is said to have been Yūḥāb b. Maḥdījīd and he was therefore a brother of the Āḥsī and the Saḍīl al-ʿAṣrī (Westenfeld, Genal, Tabellen, p. 7, 11). Although they were neighbours of the South Arabian civilization, the Murād have always retained a typically Beduin character: their country (usually called al-Ṭarāb and placed to the east of Nadjran and Maḥri) is bare and sterile (cf. the picturesque description given of it by the Kībīb al-ʿAthirī, xvii. 115 and the mountains of the Murād" mentioned by Yaḥyā, Muḥṣaf, ii. 78) and its inhabitants are nomadic as brigands (cf. Ibrāhīm; cf. Kībīb al-ʿAthirī, x. 147). The land inhabited by the Murād and by their neighbours, the Hamdān (q.v.), had once belonged to the Tāʾi'ī (Yūḥāb, Muḥṣaf, i. 129), who had left it to settle in the north of the Arabian peninsula: it is probable that this was from the old masters of the country that the Murād and the Hamdān inherited the cult of the god Yagūth. (cf. below).

The Murād appear for the first time in history in connection with an epizode, not however at all clear, on the last days of the dynasty of the Lakhmid of al-Hijāz: as the arm b. al-Munṣhir (III) b. Ma ṣ al-Sawārī escaped his half-brother Amr, a son of Uṣāma, sister of Hind mother of the first-named Amr, from a share in the kingdom, the latter sought refuge with the Murād, who recognised him as their chief but when he began to rule tyrannically, they killed him, which gave Amr b. Hind a pretext for invading the land of the Murād and putting to death the murderer of Amr b. Uṣāma (al-Muṣṭafāz al-Dubābī, Anvīl al-ʿArab, Constantinople 1300, p. 68—69), who gives a more satisfactory account than the historian that he procures his release by G. Rostotkin, Die Dyn. der Lakhmid, p. 90 in which Yaḥyā, iv. 130 should be read for i. 130) Amr is said to have been killed by a certain Ibn al-Duʿādī (of the same story is given by Ibn al-Kalbi, Dīmūt, ii. 107—108) according to Yaḥyā on the other hand by Hubayra b. ʿAbd Yaqūth b. al-Makhrūj, the latter's son Kāisas seems to have been one of the most powerful chiefs of the Murād at the time of the rise of Islam.

The Murād had just then suffered a disastrous defeat, which had considerably weakened them at the hands of the Hamdān, as the result of a quarter which had arisen in connection with the control of the worship of the god Yagūth (cf. Wellhausen, Rote arab. Heidentum, p. 10—12 and the sources mentioned by him). It is probably this defeat (Yawm al-ʿAzīm), which tradition places in the same year as the battle of Badr, which made a section of the Murād think it advisable to seek an alliance with Muhammad; but Kāisas, b. al-Makhrūj, refused to join in it. It was therefore another Murād chief, Farwa b. Musulik, who went to al-Madina in the year 10 H. and concluded a treaty there with the Prophet (cf. Caetani, Annali dell' Islam, ii. 332). To what extent tradition is right in saying that Farwa was given authority to levy zakāt on all the tribes of the Yemen, is very difficult to ascertain. In any case, the policy of the Murād was not oriented towards Muhammad under the leadership of Kāisas b. al-Makhrūj, in the great rising of al-ʿAṣrī against Tarsian hegemony in the Yemen, the Murād were against him. But if, as tradition has it, Muhammad used his connections with some chiefs of the Yemen to prevent al-ʿAṣrī's success, after the death of the Prophet these same chiefs refused obedience to Abū Bakr and resolutely threw themselves into the struggle against Islam. It is again Kāisas, b. al-Makhrūj, who plays the chief part in these events. Taken prisoner, Abū Bakr granted him his life and henceforth the chief of the Murād and his tribe played their part bravely in the conquests. We find them sometimes in Syria, sometimes in the ʿIrāq, and Kāisas himself, everywhere distinguishing himself by his exploits. He lost an ore at the battle of Yarmūk (cf. Caetani, Annali dell' Islam, i.—v., index s. v. Ṭayy b. Hubayrayh). But the account of his death in the civil war between 'Alī and Muṭawiya at the battle of Siffin is based on confusion with another man of the same name of the tribe of Ḍajīla (this fact which is clearly indicated by Ibn al-Kalbi, Dīmūt and Tabari, i. 3301—3302, has already been noted by Ibn Ḥadīr, Ṭabī, ed. Sharafāya, v. 281; Annali dell' Islam, i. 638 should be corrected). We also find the Murād in the conquest of Egypt (Annali, iv. 573. 21 A.H.; § 101 b 26) but it was at al-Kafa that they settled in the largest numbers. It was there that one of them, ʿAbd al-ʿAẓīm b. Malūd, assassinated the caliph 'Abd al-Malik, but it was there also that in 60 (679) (Ḥṣ. 41) the ʿTurīb al-Murād was executed by ordeers of the governor ʿUbayd Allah b. Ziyād after being found guilty of conspiring with Muslim b. ʿĀkīl in favour of al-Husain (Tabari, ii. 227 sq.). He was a descendant of the poet Amr b. Kīrās (R. S. O., xii. 58, 327f.), one of the very few poets
of this tribe, which does not seem to have produced many individuals of note either during the Djehshy or under Islam. We may however mention Uwaïs al-Kahani (of the Banu Kahani b. Rukmâm b. Nâdiyya b. Murâd; Wustenfeld, Gesetz. Tal. p. 7, 280) one of the prototypes of Muslim asceticism.

(M. LEVI DELLA VIDA)

MURAD I, according to the common tradition the third ruler of the Ottoman state, was a son of Orkhan and the Byzantine lady Nilüfer. Although some Ottoman sources profess to know the year of his birth (Süfîlî-i evlânî, i. 74 gives the year 726 = 1326), this date, like all dates given by Turkish sources relating to this period, is far from certain. The name Murâd (Greeck sources such as Phrantzes have Açavârçî, from which later Latin sources make Amurat, while contemporary Latin sources from Italy have Moratubeli) must have originated in mystical circles and hardly occurs in earlier times. Abâd Murâd lived in Orkhan's time (cf. Süfîlî-i evlânî, iv. 354; 'Ashîk Pasha Zâde, ed. Giese, p. 200: photographs of his tomb in R. Hartmann, Im neuen Anatolien, Leipzig 1928, plates 9 and 10). The ancient Turkish chronicles often call Murâd Hâzî Khân Kûnikâr, later Turkish historians Khudâwendikâr [q. v.].

During his father's lifetime Murâd had already been entrusted with the governorship of In Ohu and later of Brusa. His brother Sulaimân Pasha had held the more important sânjaks and was destined to become Orkhan's successor. Sulaimân's untimely death, shortly before that of Orkhan himself, placed Murâd unexpectedly at the head of the Ottoman principality. This happened about 1360; the date of Orkhan's death is uncertain.

Murâd I became the first great Ottoman conqueror on European soil. In this he followed the footsteps of his brother Sulaimân Pasha and of other Turkish emirs before him.

It is not yet possible to gain a clear idea of the succession of the military achievements by which the Ottomans succeeded in establishing themselves firmly on the Balkan Peninsula. Even the outstanding victories are confounded with each other in the Ottoman and Western sources, and the exact dating of even important events is subject to great difficulties. The Byzantine sources, the most reliable of all, are mainly concerned with the tortuous policy of the Byzantine rulers. On the other hand, many tales of a legendary character have entered the historical accounts of later times.

The impetus on the whole, that the Ottoman successes were mainly due to the mutual rivalry between the then existing Balkan states, Byzantium, and the Bulgarian and Serbian kingdoms, complicated by the struggle of Venice and Genoa for an advantageous position in the Levant, and the zeal of the popes for bringing the Greek church back to Rome. This secured the Ottomans at all times allies in the Christian camp itself. Nor is it possible to ascertain which Ottoman expeditions were really planned by Murâd and his councillors and which were merely successful raids by Turkish bands. All this makes it extremely difficult to form an adequate judgment of Murâd's personality as a warrior and as a statesman.

Provisionally three periods can be distinguished. The first begins shortly after Murâd's accession with the conquest of Western Thrace, in which were taken Čorîn, Demotika (if this town had not already been taken under Orkhan), Gümul-ğina, Adrianople (about 1362; cf. EDIRNE and Philippopolis, mainly through the activity of the beglerbeg Lala Shâhi and Erenos Beg). These conquests provoked a coalition of Servians, Bosnians and Hungarians, who were beaten on the river Maritsa by Hâdjidji Iblek. The western part of Bulgaria was raised up to the Balkan Mountains and the Byzantine Emperor John Palaeologus made his first submission as vassal to Murâd. Murâd himself had been on a campaign in Anatolia, which brought him as far as Tokat [q. v.] during which he consolidated the Ottoman hold on Angora (already taken by Sulaimân Pasha in 1354; cf. Wittek, Festchrift Jâco, 1932, p. 347, 351 sqq.). He then came to Râm-îli and took up his residence in Demotika, to change this town in 1366 for Adrianople, from this time on the European capital of the Ottomans. The story about a treaty between Ragusa and Murâd concluded in 1365 has a legendary character (cf. Giese, Festchrift Jâco, 1932, p. 42, after Jiriček). In the meantime the hostility between Byzantines and Bulgarians gave Murâd the opportunity of taking Iâhebol (Sosopolis) near Burgas, and the same hostility led to the failure, about 1366, of a crusade undertaken at the instigation of Pope Urban V by count Amadèo of Savoy in order to come to the rescue of the Byzantine Emperor; the expedition only drove the Turks from Gallipoli for a short time.

A second period of Murâd's reign may be said to begin with the crushing of a Serbian advance on the Maritsa near Cirmen, probably in 1371. This Serbian defeat is known to the Turkish sources [girîgî] and gave the Turks during the following years the important Macedonian towns of Seres, Drama and Kavalla, and at the same time the possibility of advancing west of the Vardar. These conquests were made by Erenos and Djandîl Khalîl Pasha, while Lala Shâhi obtained about the same time successes in eastern Bulgaria (battle of Samakow). Then followed again some years of comparative tranquillity, in which the newly won regions were partly colonized with Ottomans; the still unsubdued northern parts of Serbia and Bulgaria were governed by the local rulers as vassals of Murâd. The latter had more than once to interfere with the dynastic affairs of the Palaeologoi. After John Palaeologus had sold in 1375 the island of Tenedos to Venice, this led to an action of Genoa in combination with the Turks, in course of which John lost his throne and was imprisoned, until, by the favour of Murâd, he became Emperor again in 1379; his dependency went so far as to help the Turks, together with his son Manuel, in the conquest of Philadelphia (Aü Shehir), the only remaining Greek fortress in Asia Minor. The end of this second period is marked by an increased activity in Anatolia. A part of the territory of the Germiyân-Oghlu [q.v.] was acquired as a wedding gift to Prince Bâyazid when he married the daughter of that ruler (probably in 1381); this territorial accession was followed by the sale of the greater part of the lands of the Hamd-Oghlu to Murâd, and by the conquest of a part of the principality of Tekke.

About 1385 there followed new conquests in Europe. Turkish troops intervened in Epirus and Albania (under Khalîl Pasha), but decisive for the establishment of Ottoman power in the Balkans...
was the taking of Sofia (1385?) and Nish (1386?). About the same time, the Italian republics, Genoa and Venice, obtained by treaties with Murad, concluded respectively in 1385 and 1388, commercial privileges in Turkish territory. Immediately after the successes in Serbia, probably also in 1386, Murad went to war with the Karaman-Oghlu 'Ali al-Din, his son-in-law; this conflict had long been threatening [cf. Karaman-Oghlu]; now the Ottoman power had grown so far as to destroy the political equilibrium in Anatolia. Murad was victorious in the battle of Könya, but left 'Ali al-Din in his possessions and set the example, henceforward traditional, of leniency in dealing with the Anatolian population. This caused a lively discontent amongst the Serbian troops who had taken part in the battle of Könya. These Serbians are said to have contributed to the anti-Turkish feeling among the Serbians in general, who, under the leadership of Lazar Greslanjowsich, and with the Bosnian king Tvrtko as a powerful ally, were preparing a last effort to free themselves from Turkish vassalage. They succeeded in defeating an Ottoman army at Plochnik (1385). The results were meagre, however, for at the same time the Turks made new conquests in Bulgaria (Shumla and Tarnovo) and even raided Morea. In 1389 Murad himself marched against the Serbians and their allies and fought the famous battle of Kossovo Polje (Turkish: Kosaova), where he himself lost his life, although the Serbians, partly owing to treachery in their own ranks, were defeated. The most probable date is June 20, 1389 (Gibbons, cf. also Giese, in Ephemerides Orientales, N. S. Apr. 1928, p. 2 sq.). The way in which Murad was killed, during or after the battle, is not clear from the early sources; the later Serbian epic tradition has the well-known tale that Murad i. was murdered by Miloš Obrenovitch, Lazar's son-in-law, who, claiming to be a deserter, had obtained an audience with Murad after the battle, was admitted to his presence and killed him with a dagger. Murad's body was transported to Brusa and buried in a muck near the mosque which he had built at Çekirge in Brusa (cf. Ahmed Tewfik in T. O. E. M., vol. V., il.).

Murad i. was the first ruler under whom the state founded by 'Oguzin rose to be more than one of the existing Turkoman principalities in Asia Minor. This development is symbolised in the successive change of titles given to him in different building inscriptions dated in his reign (cf. Taeschner, in Id., xx., 131 sqq.). While the oldest inscription calls him simply bey, like his father 'Orkhan, and gives him a title ('Shihih al-Dunya wa l-Tdin) after the Seldjuk fashion, he is already called Sultan [v. 6 in] in 1385 (1387), while in the inscription from 790 (1388) on the Timar built by him in Iznik, we find the style which afterwards became a tradition with the Ottoman sultans (al-melik al-mustasam al-hajdan al-mustasam al-sultan ibn al-sultan). It was a time when both the Seldjuk traditional institutions, no longer held and new forms of government and administration were being to which the example of Byzantine institutions, and also those of Mamluk Egypt may have contributed. Even if it is not true that Djandarli Khair al-Din Khalil Pasha — who was appointed Murad's vizier at the beginning of his reign and died about 789 (1387) — was the first Ottoman grand vizier, it cannot be denied that the activity of this man — who by his origin belonged to a higher culture than the Ottoman — as Murad's councillor as well as his military deputy and administrator in Macedonia, makes him a true prototype of the grand viziers of the empire (cf. Taeschner and Wiet, in Id., xviii. 66 sqq.). His son 'Ali Pasha began also to play an important military part during the later years of Murad's reign. It is also with Khalil Pasha that the old Turkish sources connect the institution of the Janissaries as troops formed from converted Christian prisoners of war. In the administration of the timars [v. 7] a Khania of Murad i. is said to have brought improvements. Some of these measures were closely connected with the problem of acquiring a quiet and loyal population in the newly conquered Christian territories; this was not possible by Turkish colonisation only but succeeded mainly through a humane treatment of the original inhabitants, after the region had once been conquered.*

The more important buildings of Murad i. are all in Asa Minor. The best known are the Khuda evendiklar Djami in Çekirge, near Brusa, where Murad himself is buried, and the Ulu Djami in Brusa; further a mosque in Bilecik, the Nilufer Imaret in Iznik (recently described by Taeschner, in Id., xx., 127 sqq.). There is also a mosque of Murad in Serres. The old Ottoman chronicles enumerate his foundations. — On Murad i.'s coins cf. 'Ali, in T. E. M., xiv. 224.

Bibliography: The information given by the old Turkish chronicles (Ashik Pascha Zade, Anonymus, ed. Giese, Urdj, the translations of Lenselautus, also Doctur-namii Einverli, ed. Mukrime, Khalil, Istanbul 1928 and the Mededel, Istanbul 1930) is sometimes supplemented by the later historiographers (Sa'd al-Din, 'Ali, Munedijdin-Bask). The Byzantine historians (Phrantzes, Ducas, Chalceodones), however, give a far clearer survey of this period so far as it came under their attention, while documents from Venice, Genoa and Rome throw light on the diplomatic activities provoked by the advance of the Turks in Europe. Ibn Haidar al-'Askalani, Ibn al-Ghum fi Anba'al'um, contains also a biography of Murad i. Further the historical works of von Hammer, Zinkeisen and Jorga, and H. A. Gibbons, The Foundation of the Ottoman Empire, Oxford 1916, p. 110 sqq., C. Jirecek, Geschichte der Seldschuc, Gotha 1918, (J. H. Kramers)

MURAD II, sixth ruler of the Ottoman Empire, was born in 806 (1403-1404) and ascended the throne in May 1421, when he arrived in Adrianople some days after his father Muhammed I's death; his decease had been kept secret on the advice of the vizier 'Ismail Pasha until the new sultan's arrival. As crown prince he had resided at Baghni. Acha, and he had taken part in the suppression of the revolt of Simawga Oghlu Badi al-Din. Immediately after his accession he had to face the pretender known in Turkish history as the Iskender of Mustafa [v. 8] and his ally Djunaid [v. 8]. Both were supported by the Byzantine emperor Manuel and at first were successful in the European part of the empire. Bayazid Pasha, sent from Brusa, was defeated and killed in the battle of Shaff Dure (between Seres and Adrianople) and the allied Greek forces took Gallipoli. Then Murad himself had to face them in Asia; he suc-
ceeded in sowing discord between Musafà and Djnain and defeated the first in the battle of the bridge of Ulubad. Then Murad went over, with the help of ships from the Genoese colony of New Phoca (Yeni Foça), recovered Gallipoli, after which he entered Adrianople and killed the pretender. In 1422 he became a siege of Constantinople; this siege was raised, either by the effect of Byzantine gold (through the intermediary of the graceophil vizier İbrahim Paşa) or as a result of the rise of a new pretender in İznik in the person of Murad's younger brother Musafà. The latter was at last betrayed by his former supporter İlyas Paşa and killed. Then followed a struggle with Djnain, who had established himself again at Aidin, but surrendered at last in 1425, after which he was killed. Murad was now at peace with all his European neighbours and vassals; the Emperor Manuel had died in 1424 and was followed by John Palaeologos, with whom peace was concluded. Several towns had been taken in the meantime in Morea, and Wallachia paid tribute. In Anatolia the Turks had taken the Thebes in 1423, and the whole of Sinılı, ending with the acquisition of a part of his territory by Murad; after 1425 the Ottoman power was confirmed in Teke and Menteşe and the Karahan Oghul İbrahim, who tried to take the already Ottoman Adalia, had to retire and make peace. In eastern Anatolia Turkeş Paşa subdued the Turkomans round Tokat and Amasia and of the region of Djamik. In 1428 there began difficulties on the Hungarian frontier. The most noteworthy exploit of this period was however the capture of Saloniki (Selanik; q.v.) in March 1430: after the Greeks had sold this town to Venice in 1427; Murad had never given up the plan of avenging that transaction. Peace with Venice soon followed.

Occasionally the Turks had taken several fortresses in Epirus and Albania, but their interest began more and more to concentrate on the north-western regions, where George Brankovitch ruled as vassal over Serbia. With the latter peace was renewed in 1432 and his daughter Mara was given to Murad, but the Turkish raids continued in Serbia as well as far into Hungarian territory. In 1438 the Turks made, together with Serbians and Wallachians, incursions in Hungary (capture of Semendra); in 1440 they beleaguered Belgrad in vain and in 1442 Turkish troops under Meşid Bey laid siege to Hermannstadt. Here they suffered a heavy defeat by John Hunyadi, who in the coming years was to act as champion of Hungary and Christian Europe. He was the leader, in 1443, of a big crusading army including Serbians, Polob and Garamotes. The Turks were thrown back at Nish, after which Sofo was taken. The campaign ended with a heavy defeat of the Turks at Jalowaz, between Sofia and Philippopolis. In the same year Murad had to oppose again the Karahan Oghlu, who supported the Christian allies. But the peace with Hungary, concluded in July 1444 at Szeged, though advantageous to Hungary, maintained the former frontiers of the Ottoman political influence; only Wallachia became tributary to Hungary.

After this peace, which was to last ten years and seemed to Murad a guarantee for the future, he abdicated in favour of his son Muhammad, leaving with him Khalil Paşa, son of İbrahim Paşa (who had died of the plague in 1429) and Khosraw Molla (q.v.) as councillors. He retired himself to Maghisa, but had to come back when, in September of the same year, the Hungarians, flouting the peace treaty, were preparing a new crusade. They marched south of the Danube to Varna; here the army of Murad inflicted on them a crushing defeat, in which King Ladislav of Hungary was killed. Again Murad II went back to Maghisa, but in the following year a Janissary revolt broke out in Adrianople and it was the vizier Khalil who invited Murad to return a second time, as the young Muhammad did not seem to be able to face the situation.

During the last six years of his reign Murad led again several campaigns in the Balkan peninsula. In 1446 an action was undertaken against the Palaeologoi in the Morea (destruction of the Hexamillion, capture of Corinth and Patras); in 1447 against Albania, where the activity of Skander Beg [q. v.] had begun in 1443; in 1448 he faced again a Hungarian invading army, which was beaten on the plain of Kossoway; and in 1450 he was again in Albania (siege of Croja). In that year, because of the peace of Murad II, the last Byzantine Emperor, after the death of John. Shortly afterwards, in the first days of February 1451, Murad died at Adrianople. He was buried in Brusa at the side of his mosque (cf. Ahmad Tewhid, in TOE M., iii. 1856).

His reign was of extraordinary importance for the future political and cultural development of the Ottoman Empire. After the first critical years he continued his father's work of consolidation. His aim was mainly to live on peaceful terms with the vassal princes, of whom the ruler of Sinılı and the despot of Serbia gave their daughters to Murad. This peaceful policy was in concordance with his character; the Byzantine historians and other Christian sources describe him as a truthful, mild and humane ruler. His most influential viziers were not yet the renegades of later times; they belonged to the old families that had supported the cause of Murad's forefathers and were becoming a kind of hereditary nobility: İbrahim Paşa and Khauli Paşa of the Djandarli Oghullari (F. Taeschner and P. Witte, in ISL. xviii. 92 sqq., Hadijdi Iwuad Paşa (Taeschner, in ISL. xx. 154 sqq.), the sons of Tumurtash, of Evrenos and others.

The mystical tradition was strong in his surroundings, as is proved by the great influence of a man like the Şafak Amir Bağşah; other scholars came to his court from Persia and Mesopotamia. This determined also the direction which the classical Ottoman literature was to take in following centuries. Murad II was the first Ottoman prince whose court became a brilliant centre of poets, literary men and Muslim scholars (see TüRKs, B. iii.). But also to non-Islamic envoys and visitors Murad's court seemed a centre of culture (cf. Jorga, i. 464 sqq., which description applies principally to Murad II). Amongst the sultan's buildings a mosque in Brusa (cf. H. Willco, Brusa, p. 54) and one in Adrianople (the Cē Sherifli Djamî), are notable and some large bridges. His army organisation is well known from a full description by Chalcondylas.

Bibliography: The older Turkish sources: Neżhri (Haniwaldanus), Aslıq Paşa Zade, Uşuj, Kuḫu, Anonymus Giese, are completed by the Byzantine historians樊贤苑 (who himself played a part in the diplomatic history of the time), Ducus and Chalcondylas, and also by
the later Ottoman authors Sa’d al-Din, ‘Alî and Muneşbudbaşı Bahşî. A curious contemporary
description is that of an unknown captive from Mahlenbach in Transylvania (captured 1438) in
his Tractatus de molibus conditionis et negotiis
(Tractatus (cf. K. Poy, in M.S.C.S., iv. v.).
General later descriptions of Murâd II’s reign in the works of von Hammer, G. O. R., i: 1: 
Ziakensien, i. and Jorga, i.

(J. H. KRAMER)

MURÂD III, twelfth ruler of the Ottoman
Empire, was born on the 5th of Dümâda I
955 (4th July 1546: Siqîîlî Şevâîânî, i. 76) as
son of the later sultan Selim II and the
Khânî Bâbî. He arrived at Constantinople on
Dec. 21st, 1574, after Selim II’s death and reigned
until his death on January 16, 1595 or a few days
later. His reign is not characterized by great con-
quests in Europe. The peaceful relations with
Austria were officially maintained; peace was
sometimes confirmed (1575 and 1584) by a new
peace and by extraordinary Austrian embassies.
Nevertheless, there were Turkish raids into
Austrian territory, especially in Croatia in
1578 — where even a new sandjak was formed —
followed by triumphal processions in the capital,
which the Austrian envoys were forced to witness.
It was only in 1593 that a formal war broke out,
in which the then grand vizier Sinân Paşa took
the town of Raab (1594). The relations with Venice
were of the same kind as with Austria: notwith-
standing several serious naval collisions peace
was maintained, mainly through the influence of Murâd’s
Khânî Şafîye (of the family of Baffa) and
the Kapudan Pašas, who were Italian renegades.
In the Danube principalities the never ending dy-
nastic disputes went on; this was also the case in
Transylvania. Even Poland was considered more or
less as an Ottoman tributary vassal state; the
Polish king, Stephen Bathory, owed his crown to the
sultan’s protection and after his death (1587)
the new king Sigismund began to reign by
the grace of Murâd. The Forte had to intervene several
times in the disturbances caused by Polish cossacks
in Moldavia and the Tatar Khânate and by Tatar
incursions in Poland. In the Crimea the Ottoman
intervention was even stronger, because the Persian
war necessitated in 1581 and 1583 expeditions by
the way of Kaffa and the Crimea against Dîghîstan
and Transcaucasia.

The most outstanding military exploit of the
Ottoman Empire during Murâd III’s reign was the
war with Persia, which lasted from 1577 to
1590. Persia passed, after Şîh Tahmâs’p’s death in
1576, through serious inner troubles. This gave the
Turks a favourable opportunity of enlarging their
territory. Between 1577 and 1583 the chief
theatre of the war was Georgia: Tala Muştafa
Paşa won the battle of Lake Caldir (August 9,
1578), after which the princes of the small Geor-
gian kingdoms became nominally Ottoman vassals,
while several towns, like Tellis and Shaki, came
under direct military occupation. In 1579 the town
of Kastoria was fortified. That same year Sinân Paşa
became sersashker on the Georgian front. The
completion of the conquests confronted the Ottoman
armies with serious difficulties, especially after Simarî, the
former king of Kârtli, had come back from exile in
Persia. They made necessary the already mentioned expedition by the way of
the Crimea in 1581 under Osman Paşa
who was joined in 1583, by the same way, by
Dîjafer Paşa; they came back to Constantinople
again via the Crimea and 'Othmân Paşa was
received with great honour by the sultan after
his return, although it would seem that the real
aim of this expedition — prolonged junction with the
Turkish forces of the south — was not reached,
owing to the combined efforts of the people of
Georgia and Shirvan (cf. W. E. D. Allen, A
History of the Georgian People, London 1932,
p. 157). The second phase of the Persian war
began with the taking of Tabriz in 1585 by
Othmân Paşa, followed by other successes on
Persian territory (Gandja in Transcaucasia and
Nîâsând). In 1587 Şîh Abdâbîllah ascended the
throne: soon afterwards there began peace
negotiations, ending in a peace treaty (March 21,
1590) which left Georgia, Shirvan, Karabagh,
Tabriz and Luristan to the Ottoman Empire. One
of the peace conditions was that the Persians
should give up most of their anti-Sunnîte
religious practices.

During Murâd III’s first years Muhammad Paşa
Sokollu [q.v.] had continued to administer the
huge Empire as grand vizier, but his once
unquestioned authority began to wane under the
influence of the sultan’s courtiers like Şems Paşa
and the defterdîr Uweis; an influential personality
also was the Khâdja Sa’d al-Din — the historian —
and the counsellor Ghasanfer Agha. Home and foreign
politics were influenced also by Murâd’s mother
Nur Bâbî and the already mentioned Khânî Şafîye (Baffa), who used as a powerful agent outside
the palace the Jewess Kira (Chierazaar in the
Italian sources). Sokollu’s confidants were relegated
from the capital (as the nizîngîî फरदिन) or executed
(like Michael Cantacuzenus). But he was still grand
vizier, when he was murdered on October 11, 1579.
After him the grand vizierate was changed no less
than ten times under Murâd III. Sinân Paşa,
already mentioned, held the office three times:
‘Othmân Paşa, appointed in 1585, after his return
from Dîghîstan, died eight months afterwards.
As the sultan, though well-intentioned, was too weak
himself to direct a consistent policy, — as he
acknowledged himself according to ‘Alî (cf. Hammer,
G. O. R., ii, 567) — all kinds of abuses gradu-
ally began in this epoch, especially in the admin-
istration of the fiefs [cf. تخت] and the enrolment of
the Janissaries; they are summed up in Kocî Bey’s
Risâla. This sultan’s reign witnessed for the first
time revolts of the Janissaries directed against the
imperial diwan itself. The first mutiny, in April
1559, was caused by deprivation of the coinage
and could be appeased only — as so often after-
wars — by the sacrifice of the lives of high
officials. In 1502 there was a similar Sipahî
revolt. More than one provincial rebellion had
to be subdued by force: the most celebrated expedi-
tion was that of Ibrahim Paşa, the later Şîh
and favourite of Muhammad III, to Egypt and Syria
in 1585; in Syria he persecuted severely the Banû
Ma‘ân, the leaders of the Druses, but very soon
afterwards the successful career of Fakhr al-Din
[q.v.] began.

Murâd’s reign can be characterized as the be-
ginning of the internal weakening of the Ottoman
power. The sultan did not possess the strong
personality of his grand father; his amorous tenen-
cies were much encouraged by his mother and his
wife Şafîye, and he had far more than a hundred
forced him to surrender, after which Abaza played a part as governor of Bosnia and of Silistria. In the meantime several vain efforts were made to recover Baghdad, by Hafiz Ahmad Pasha in 1626, and by Khoresew Pasha [q. v.] in 1629.

From 1632 Murad IV's position was even more precarious, for with incredible energy the mobilisation of all the country's resources for the war against Persia, where Shah 'Abbas I had died in 1627. He suppressed with great cruelty the rebellious movements among the Janissaries and reduced their number by not applying the dekhi-me for twelve years. New and more reliable troops were formed from the glicedjis, bestandjis and especially the segbans (seymens). The necessary funds were procured by drastic financial measures. Amongst them the confiscation of large fortunes. Every attempt at opposition was cruelly suppressed; in 1633 even the Shaikh al-Islam Aghi-Zade Husein was executed. In October 1635 an army under the grand vizier Taban Yu:b Muhammad Pasha left Constantinople, and that year and the following year no important military operations took place. The Kapudan Pasha Djasfar, however, was successful in suppressing the power of the Druze Amir Fakhr al-Din [q. v.] and bringing him alive to Constantinople. In 1635 Murad himself left the capital, joined the grand vizier's army in Erzerum and conquered Erivan (August 1635). Then the undefended Tabriz was taken and destroyed, after which the sultan returned. In the following year the Persians recaptured Erivan. Finally, in 1638, Murad took the field for the second time with the grand vizier Talyar Muhammad Pasha; Baghdad was taken by them in December 1638, and thousands of Sufis were massacred. This was the end of the Persian war; in 1639 a peace was concluded, which left Baghdad to Turkey and Erivan to Persia.

In comparison with the events in Asia, European affairs were of secondary importance. The peace with Austria was several times renewed (1625 at Gyarmath and 1627 at Szon) although predatory raids from both sides never ceased. Serious trouble was caused in 1624 by the appearance of Corsack ships in the Bosporus; they were defeated only in 1626. Another hothed of unrest was the Crimea, where from 1624 till 1628 the Porte had to suffer against its will the Khan Muhammad Giray and his brother Sighin Giray, who even took Kaffa for a time. After 1628 the Tatai Murad Kanteem (or Kanteem), chief of the Nogays, became the most powerful man in the khante; his continual incursions caused serious conflicts with Poland (peace restored in 1634) and in Moldavia. At last Kanteem was executed at Constantinople in 1637.

The peaceful relations with Venice and the western sea powers continued; in 1624 the capitulation had been renewed, but as the Porte was without authority over the Barbary states of Algiers and Tunis. England, Holland and France concluded separate treaties with their rulers in order to avert as much as possible the damage done to their trade by the ships of the corsairs. In 1638 a more serious battle took place that the Adriatic between the Venetian fleet and Barbary corsairs; at first Murad ordered the massacre of all Venetians in his Empire, but in 1639 peace was restored. In Constantinople the ministers of Holland (Haga) and England (Roe) intervened successfully in the
troubles between the Porte and the Greek Patriarchate.

Murad IV died on February 9, 1640 and was buried in the turbe of the mosque of his father Ahmed; he was the last Murad with a suffix of the Karaman by his energy he restored for some time its military authority, but his reforms did not last after him. Still a separate khanın-nâme bears Murad IV's name. He was a man of considerable physical strength and of high personal erudition and he liked the company of poets. His attachment to the poet Tîst [Q. v.] is famous in literary tradition. The poet Nefît [Q. v.] on the other hand was executed by his order. On verses written by Murad cf. Glibb, H. O. P., iii. 248 sqq.

He had four sons, all of whom died young; at his death there was only his brother Ibrahim to take the succession. His brothers Bâyazid and Sulaimân were killed by his order during the Erivan campaign, and later also his brother Kâsim. In course of time Murad had become ever more ferocious, and he is said to have sworn in 1639 that he would subdue all his Christian neighbours (Jorga, iv. 1).

Bibliography: The chief Turkish sources are Naṣîma, Pecwî and Kara Čelebi Zâde's Rawdat al-Abhr. Further the continuation of Āṭüsi's biographical work by Čâshki-Zâde (G. O. W., p. 239); Eşviyâ Čelebi's Sivâhat-nâme is also particularly rich in information about the reign of Murad IV. Of Western contemporaneous sources must be mentioned the Venetian Relazioni and the correspondence of Sir Thomas Roe and Cornelius Haga (Rijks geschiedkundige Publicaties, x.; Bronnen tot de Geschiedenis van den Levantse Handel, 1590—1660, ii, 39 Abreu 111). Later treatments of this period in the general works of von Hammer (v.), Zinkeisen (iv.) and Jorga (iii.).

(M. J. KAMERS)

MURAD V, Ottoman Sultan from May 31 till Sept. 7, 1876. He was born on Sept. 21, 1840 as son of Sultan 'Abd al-Madjid and was deprived of all influence on public affairs during the reign of his elder brother 'Abd al-'Aziz, who had the plan of altering the succession in favour of his own de-cendants, so as to deprive Murad of his rights. Murad was called to the throne by the coup d'état of the recently established cabinet, of which Midhat Pasha [Q. v.], Muhammad Rashed and Hüsam 'Awni were the leading members. By deposing Sultan 'Abd al-'Aziz they hoped to eliminate the influence of reactionary elements who were opposed to their schemes of reform and they expected to find an ally in Murad. In the night from 30th to 31st May 1876 Murad was induced with some difficulty to proceed to the Seraskerate in Constantinople, where he received the homage of the troops and the high dignitaries. He confirmed the cabinet in office. Very soon afterwards he received the suicide of the deposed sultan (June 5) and the murder of the ministers Husain 'Awni and Rashid Pasha during a cabinet meeting in Midhat's house (June 15). These events seem to have been fatal to the mental equilibrium of the new sultan, who, already in the night of his accession, had shown signs of abnormal nervous excitement. He was unable to appear before his people at the selemâlık, nor could the sword-girding ceremony (kilîgh a'âşaf) be applied to him. Midhat Pasha and his friends, although fearing that a new change of ruler might endanger their plans, had to arrange another deposition; they had the sultan's health examined by a number of physicians and, on their report, obtained a fetâwâ from the Shaikh-î Isâm Hasan Khair Allah Efendi, authorising Murad's deposition (September 1). His younger brother 'Abd al-Hamid II became sultan and Murad went to live in the Ciraghan Palace, where he died on August 29, 1904. His confinement during 'Abd al-Hamid's reign continued to excite speculation as a yet unsolved mystery and was occasionally represented as one of the crimes of the Hamidian regime.

(J. H. KAMERS)

MURAD PASHA, Turkish grand vizier under Ahmed I, was a Croatian by birth and was born about 1520. He served the empire as military commander and later as wâli in different provinces (Egypt, Yaman, Anatolia) and was made prisoner by the Persians in the battle of Tabriz (Sept. 1585), where Chîhâl's army was defeated. In 1601 he was pasha of Budin and in 1603 commander-in-chief on the Hungarian front. In these posts he repeatedly conducted for the Porte peace negotiations with Austria. He was the chief negotiator of the peace of Zsitvatorok (Nov. 11, 1606). A month afterwards (Dec. 11, 1666) after the execution of Derwish Pasha in Constantinople, he was appointed grand vizier, being then already about 80 years of age.

As grand vizier Murad Pasha became particularly famous by his relentless persecution and repression of the many rebellions in the Asiatic provinces. In 1607 he defeated the Kurd Dânubîlîd [Q. v.] in North Syria (battle of Urdj Owasi in Oct. 1607). After having passed the winter in Aleppo, he succeeded in crushing the forces of the arch-rebel Kalenderoghlu at the pass of Goksun in Cappadocia (July 1908), where he decided the battle by his personal courage. Then he pursued from Siwas the rebel Maimûn and defeated him near Baiburt. His habit of throwing the captured rebels into pris de dôg for that purpose brought him the name of Koyucu Murad Pasha. Notwithstanding the sultan's order — provoked by his enemies in the capital — that he should proceed immediately against Persia, he returned in December to Constantinople, where he was received with great honours. Poets celebrated his achievements against the rebels. In 1609 Murad Pasha went to Scutari for the Persian campaign, but he went no further that year, because he wished first to deal with two remaining dangerous rebels: Muselli-Cauchî in Iî İli and Yüsuf Pasha in Adîn. By false propositions of reconciliation these two were at last induced to surrender and afterwards killed. Murad Pasha had to make use more than once of his personal influence with the sultan to restrain the latter's impatience before his plans had succeeded.
On the other hand, the sultan had to protect several dignitaries against the personal hatred of the terrible old man. In 1610 the grand vizier at last marched to Persia and destroyed Tabriz; then he went to Erzerum, from where he began long and extended negotiations with Şâh Šźābīs. Before the following year's campaign had begun, he died (August 5, 1611). He was buried in a türbe near the mevlevi he had founded in the quarter Zemnedjer in Constantinople.

By his successes in restoring the internal order of the empire Murâd Paşa is considered as one of the most able grand viziers; the historians give ample proofs of his sound judgment of persons and situations. To his initiative is due a compilation of the kanûns regulating the timăr administration (G. O. W., p. 141).

MURÂDABAĐ. [See MOKÂDABAĐ.]

MURÂDÎ, takallūh of Murâd III [q. v.] and Murâd IV [q. v.].

MURCIA (Ar. Mursiya), a town in the S.E. of Spain, 140 feet above sea level in the centre of the famous huerta de Murcia ("gardens of Murcia") watered by the river Segura (Ar. Wâdî Shuqârā [q. v.], or Wâdî al-\-ahwâd, "the white river"). The area of Murcia has a large population; over 150,000, although the town in the strict sense has barely 30,000. Murcia is the capital of the province of the same name and the see of a bishop; it has also a university. Its port, 40 miles to the south on the Mediterranean coast, is Cartagena, the Karfağganma or Karfağganmânt al-\-Khulaṣât of the Arabs.

The situation of Murcia in the centre of very fertile gardens, forming an island of vegetation in a bare country poorly endowed by nature, had been noticed already by the Arab geographers who give more or less long accounts of it. Abu 'l-Fidā', for example, says that it was like Seville for the number of its groves and parks (munzâbasîr), among which he mentions the famous al-Rusâhâ.

Murcia in the Umayyad period was the capital of a province or kîra which bore the name of Todmir [q. v., iv. 805]. This name which is connected with the name of Theodemir, a Visigothic chief of the region at the time of the Muslim conquest, was also applied to the town of Murcia itself, from the time it supplanted Orihuela [q. v.] as the chief town of the region. Indeed almost all the Arab authors who speak of Murcia agree in saying that it was a comparatively recent foundation; it was built by order of the Umayyad emir 'Abd al-Râhmân II al-Hâkam about the year 210 (825), according to the al-\-Râwâl al-mîrâj in 216 by the governor Dzâhir b. Malik b. Labîd.

The land of Todmir and with it of course Murcia was most involved in the civil wars provoked by the rivalry of the Yamanis and the Muwafis of Spain in the period of the independent emirs of Cordova. In the reign of 'Abd Allah (275-300 = 885-912), a rebel, the renegade Dâisam b. Işâb, rose there with the connivance of the famous agitator Ibn Hâfsûn [cf. UMAYYADS II]. He ruled independently all the province of Todmir until the emir of Cordova sent to suppress him in 283 (896) an army led by his uncle Hishâm b. 'Abd al-Râkhmân b. al-Hâkam and the general Aḥmâd b. Muhammad Ibn Abî Abda. Dâisam was defeated between Aledo and Lorca and the latter town besieged. The country was only definitely pacified and restored to the central power in Cordova in the reign of the caliph 'Abd al-Râkhmân III and his successor al-\-Hâkam II.

During the events which ended in the break up of Umayyad Spain, Murcia became, like the majority of the great towns of the Peninsula, the capital of a little independent state. At first in the hands of the "Slavs" [cf. ŠAKÂLÎBA] Khârîrîn and Zuhairîn, along with Almeria and Jaen, the principality of Murcia was then for some time attached to the kingdom of Valencia, in the reigns of 'Abd al-\-Azîz al-\-Manṣûr Ibn Abî 'Amir and his son 'Abd al-\-Malik al-\-Muqâflar. The governor who then ruled Murcia was Abû Bakr Aḥmâd b. Ishaq Ibn Tâhir; when he died in 455 (1063) after amassing a considerable fortune, he was succeeded by his son Abû 'Abd al-Râkhmân Muhammad who soon proclaimed himself independent and repudiated the authority of the Valencian dynasty.

The principality of Ibn Tâhir soon aroused the covetousness of the minister of al-\-Mu'tamid [q. v.] Ibn 'Abîbâd, king of Seville, and an expedition was sent against Murcia with the help of an independent lord of the district, Ibn Rashîk. Ibn Tâhir was taken a prisoner and shut up in Montegudo, but escaping, he reached Valencia where after acting as adviser to al-\-Kâdîr Ibn Uthîl-\-Nun [q. v.] and having almost succeeded him, he finally died in 508 (1119). The conquest of the kingdom of Murcia by Ibn 'Ammâr in the name of the 'Abâdîs took place in 471 (1078), but it was only nominal and it was Ibn Rashîk who exercised the real power instead of Ibn Tâhir.

The kingdom of Murcia was one of the first districts of the Peninsula to be conquered by the Almoravids. Murcia was taken for Yusuf b. Tashîfîn [q. v.] in Shawwal 484 (Nov.-Dec. 1091) by the Lautamitân general Ibn 'Asha who next took Dênia and Jáîtiva. Ibn 'Asha remained governor of Murcia; he was replaced later by Abû Bakr b. Ibrâhîm Ibn Tihîlît, then by a brother of the sultan 'Ali b. Yusuf, Abû 'Ishaq Ibrâhîm.

A general rising against the Almoravids took place in Spain in the beginning of the 11th century and gave rise to the formation of a new series of kingdoms of "taifs". Murcia therefore between 1145 and 1147 was in the hands of two rival leaders, 'Abd Allah b. Iyâd and 'Abd Allah b. Farâdî, until the Valencian ruler Muhammad b. Aḥmâd b. Sa'dî Ibn Mardâniús seized it and took up his residence there. This individual, who was of Spanish origin (cf. above, ii., p. 403), soon became the powerful ruler of all S. E. Spain, between Valencia and Almeria, and instituted a series of fruitful alliances with the Christian rulers of Catalonia, Aragon and Castile. He was for long able to resist the attacks of the first Almohads 'Abd al-\-Mu'tamid [q. v.] and Yusuf [q. v.], and it was only after his death in 567 (1173) during the siege of his capital Murcia that his kingdom passed finally to the Mu'âmidît sovereigns.

From the fall of the Almohad empire in Spain until its conquest by the Christians Murcia had
a very troubled existence. It was in turn the residence (from the beginning of the 8th century) of princes of the family of the Banū Hiṣād of Saragossa: Muhammad b. Yusuf al-Mutawakkilī, the latter's uncle, Muhammad, Abū Bakr Muhammad al-Walikhi, then it passed to the Nasrids of Granada to 'Abd Allāh b. Abī Ikhshidī. For details of the obscure history of this period see the monograph by Gaspar Remiro quoted below. According to Ibn al-Abbār (cf. M. Benchenchi, Notes chonomématiques sur la conquête de l'Espagne, in Mélanges René Basset, Paris 1923, n. 73), Murcia was surrendered to the Christians by 'Abd al-Malik b. Muhammad b. Hiṣād, son of the governor, on Thursday 10th Shawwal 640 (April 2, 1243). But if we may believe the Chronicle it was in February 1266 that Don Jaime of Aragon took definite possession of Murcia.

belonged neither to the adherents of the doctrine of free will nor to those of predetermination; the latter group belonged the followers of Vānas pa 'Awn, Ghassān, Abū Thawā ibn Abū Murdī j.努 Tel (q.v.). The followers of Ghassān reckoned Abū Hanīfa as one of their friends, not, however, quite rightly, according to al-Baghdādī. That Abū Hanīfa shared the general views of the Murdījī, appears from his (unedited) letter to al-Battī, which is preserved in a MS. in the library of Cairo.

Although al-Baghdādī mentions a hadīth in which the Murdījī are cursed, the high esteem in which Abū Hanīfa stood as a doctor and as a doctor of the law would be in itself sufficient proof of the fact that the sect was too eccentric. As a matter of fact, their political quietism was largely practised by orthodoxy itself. As regards ecclesiastical punishment, the Fikh Akbar, ii. (art. 14) rejects the Murdījī doctrine of our good deeds being accepted and of our sins being forgiven, Allah being free to punish the sinner or to grant him forgiveness. The same hadīth, however, shares the Murdījī doctrine of the confluence of faith (art. 15).

A. J. WENSINCK

MURGHĀB. See MERW AL-MAHDIJAN.

MURID, novice, the term applied during his period of preparation to one who wishes to enter a derwaish order [TARIKA; q. v.]; cf. also DERWISH or a guild [SIND; q. v.]. The task of the murid and his obligations to his master (shakīk, pir) and to his ideal and their mystic and erotic foundations have been often and fully discussed, so that it is here sufficient to give a reference to the most important literature of modern times, which will guide one to the sources themselves. In the wider application of the word murid has become a term for mystic in general.

M. PLESSNER

AL-MURIYYĀNĪ, ABU AYŪB SULAIMĀN AL-MAṢṣĪR, vizier of the caliph al-Mansūr. When the governor of Fars Sulaiman b. Ḩabib al-Muhammad in the Umayyad period had the future caliph al-Mansūr, who was accused of embezzling state funds, fuged and intended to treat him with still greater indignity, the latter was saved by Abu Ayūb al-Murriyānī who was Sulaiman's secretary. According to another story, al-Mansūr purchased him as a young boy and sent him in some capacity to his brother, the caliph al-Saffāh, who was so pleased with him that he at once took him into his service and later appointed him vizier. After his manumission, Al-Murriyānī was in any case appointed vizier by al-Mansūr in succession to Khaul ibn Barmak. He had a great influence over the caliph in 153 (770); however, he was arrested with his brother and the latter's sons and deprived of all his property. According to some, his crime was that he had embezzled a large sum received from al-Mansūr to make a district in Khuzistān arable and deceived the caliph when he came to inspect it by making the place look as if it were cultivated. According to others, he had a son of al-Mansūr murdered. He died in prison in 154 (770), the title al-Murriyānī comes from Murriyān, a town in Khuzistān.

K. V. ZETTER-FLEX

MURSALAT, title of a sura lxxviii, after the first verse: "By those which are sent by Allah, following one another in a continual series." According to some interpreters a certain group of angels is meant here; according to others, however, the mursalalat are the verses of the Korān. See the commentaries on the Korān on sura lxviii i.

MURSHIDABAD, district in the Division of Bengal; area 145 sq. m.; pop. 1,372,274, of whom 710,152 are Muslims. The public offices are at Bahāmpāt, but the old capital is at Murshidābād, which before Murshid Kuli's appointment was known as Malhābād or Maḥshidābād. The district is mainly agricultural, and produces much rice, jute, etc., and is famous for its mangoes. The silk industry was formerly of great importance, but has now much declined. The district played a very prominent part in the history of Bengal, and is full of historical sites though Passey is now outside its borders. The history of Calcutta and the English in Bengal is intimately connected with Murshidābād. But the Nawabs are no longer of political importance.

(H. BEVERIDGE)

While the authorship of the Nahīj al–Balāgha must remain open the anthology Ta‘īf al–Khāṣṣā is to be ascribed to our author and not with Denkovich, Cat. Estor., ii, No. 348 to his brother, as in the preface he quotes his own work mentioned under No. 7. He and not his brother as in the article SHARĪF PASHA is to be credited with the Maṣūṣat al–Khurān, which Ḥādījī Khātīfā No. 11377 ascribes to al–Masā’il al–Raḍī and he is probably also the author of the Kitāb al–Muṣṣīr al–Nabūṣyā, also ascribed to al–Raḍī and extant in a manuscript in the British Museum (s. Oriental Studies, p. 137, No. 2) and was printed at Baghdād in 1328. This also holds of the Kitāb Mu‘āmī al–Khurān, in that quote but now lost. The Turkish commentary on the Dīwān ascribed to ‘Alī also credits him with the authorship.

MURTADDDD (A.), “one who turns back”, especially from Iṣlam, an apostate. Apostasy is calledītābī or riddīa; it may be committed verbally by denying a principle of belief or by an action, for example treating a copy of the Kur’ān with disrespect.

1. In the Kur’ān the apostate is threatened with punishment in the next world only; the “wrath of God” will fall upon him according to a Sūra of the latest Meccan period (xvi. 108 sq.) and severe punishment (ṣālaḥ) “except he did it under compulsion and his heart is steadfast in belief”. Similarly it is written in the Medina Sūra iii. So sqq.: “... This is the punishment for them, that the curse of Allah, the Angels and of men is upon them for all time (82); the punishment shall not be lightened for them and they shall not be granted allevation, (83) except for those who later repent and make good their fault, for Allah is forgiving and merciful. (84) Those who disbelieve after believing and increase in unbelief, shall not have their repentance accepted; they are the erring ones. (85) Those who are unbelievers and die as unbelievers, from none of them shall they be accepted the earth-fall of gold even if he should wish to ransom himself with it; this is a painful punishment for them and there will be no helpers for them” (cf. also iv. 136; v. 59; ix. 67). Sūra ii. 214 is to be interpreted in the same way although it is adduced by Shāfī as the main evidence for the death penalty: “... He among you who falls away from his belief and dies an unbeliever—these, their works are fruitless in this world and ever afterwards in the next, and they are the companions for the fire ever after”.

2. There is little echo of these punishments in the next world in the Traditions (cf. Ibn Mādja, Ḥudūdī, bāb 2; Ibn Hanbal, i. 409, 430, 404 sq.; v. 4, 5). Instead we have in many traditions a new element, the death penalty. Thus Ibn ‘Abbās transmits an utterance of the Prophet: “Slay him, who changes his religion” or “behead him” (Ibn Mādja, Ḥudūdī, bāb 2; Nasīrī, Tahārim al–Din,
báb 14; Ṭayālīṣ, N. 2689; Mālik, Ahṣāra, tr. 15; cf. also Ḳubhārī, Ḳirṭīṣānāt al-Murattadīn, báb 2; Tirmīḏī, Ḥudūd, báb 25; Ābū Dāwūd, Ḥudūd, báb 1; Ibn Ḥanbal, i. 217, 282, 322). According to another tradition of Ibn Ḳubhārī, Ḳirṭīṣānāt al-Murattadīn, báb 2; Tirmīḏī, Ḥudūd, báb 25; Ābū Dāwūd, Ḥudūd, báb 1; Ibn Ḥanbal, i. 217; according to a variant the reference is to Zīnīḏās or Zūqī who served idols; (Nasā’ī, Tāhīm al-Dām, báb 14; Ibn Ḥanbal, i. 282, 322). According to a tradition of Aḥṣārī’s apostates to be slain, crucified or hanged (Nasā’ī, Tāhīm al-Dām, báb 15; Kāfī, Ḥudūd, báb 1; Ibn Ḥanbal, v. 231). In the same tradition in Ābū Dāwūd however, it is added that they had tried in vain for 20 nights to convert the apostate. The caliph Ṭūrān is also represented as disapproving of this proceeding with the words: “Did you then not shut him up for three days and give him a round loaf (ragāf) daily and try to induce him to repent? Perhaps repentance was then suggested and returned to obedience to God. O God! I was not there, I did not order it and I do not approve; see, it was thus reported to me” (Mālik, Ahṣāra, tr. 15). There are also traditions according to which God does not accept the repentance of an apostate (Ibn Ḥanbal, v. 2 sqq.) and others according to which even the Prophet forgave apostates (Nasā’ī, Tāhīm al-Dām, báb 14, 15; Ābū Dāwūd, Ḥudūd, báb 1; Ibn Ḥanbal, i. 247; Ṭabarī, Tafsīr, iii. 223).

3. a. In the Fīkh there is unanimity that the male apostate must be put to death, but only if he is grown up (ḥāṣmī) and composes mentis (ṣāḥīf) and has not acted under compulsion (mustahfīr).

A woman on the other hand is imprisoned, according to Ḥanafī and Ṭūrānī teaching. Until she again adopts Islam, while according to Aḥṣārī’s, Ibn Ḥanbal (Tirmīḏī, Ḥudūd, báb 25), the Ṣāḥīfīs and .scrollTop 3.3333333333333335; Šī‘īs (cf. ʿUmm, i. 131, where Šī‘īs vigorously attack Abū Yūsuf who is not mentioned by name) she also is put to death. Although this punishment is not properly ḥadd (cf. thereon Šī‘ī, ʿUmm, vii. 330, 30–8) it is regarded as such by some jurists, as it is a question of a ḥāṣm al-Aḥlāf (cf. e.g. Sarakhsī, Siyās, ir. 162); therefore the execution of the punishment lies with the imām; in the case of a slave however, the mawālī can carry it out, as with any other ḥadd punishment. Execution should be by the sword. According to the above traditions, apostates must sometimes have been tortured to death. The caliph Ṭūrān had them tied to a post and a lance thrust into their hearts (Abū Yūsuf, Ḳurāyq, p. 112). BāḏĀrī expressly forbids any form of torture, like burning, drowning, strangling, impaling, flaying; according to him, Sūltān Bālibār (708–709, 1367–9) was the first to introduce torture to Snick (Hudūd, Tahr. Gesch., ii. 198). Lane (Manners and Customs, ch. iii., near the end) records the case of a woman who had apostatised and was led through the streets of Cairo on an ass, then strangled in a boat in the middle of the Nile and thrown into the river. [The throwing of the corpse into the Nile was already usual in Cairo in the Fāṭimid period; cf. Mez, Renaissance d. Isl., p. 29]. In quite recent times followers of the ʿAlīyān or Ahmādiyā sect in Afghanistan were stoned to death (O. M., v. [1925], 138). In former Turkish territory and Egypt as well as in Muslim lands under European rule since the middle of the sixteenth century, under European influence the execution of an apostate on a ʿābd’s sentence has been abolished; but we still have imprisonment and deportation (cf. Isabel Burton, The Inner Life of Syria, London 1875, i. 180 sqq.); but nevertheless renegades are not sure of their lives as their Muslim relatives endeavour secretly to dispose of them by poison or otherwise. Occasionally modern Islamic writers (Ahmādiyā movement) endeavour to prove that Islam knows no death penalty for apostasy; the Indian apologist Muḥammad ʿAlī lays great stress on the fact there is not once an indication of the death penalty in the Qurān (Zwemer, The Law of Apostasy, in Islam, p. 17, 37 sqq., London 1924; O. M., v. [1925], 262).

I should like here to call attention to an agreement which is probably not accidental. As in Islam, in addition to apostasy, unchastity and unnatural vice (even by stoning are punished by death) according to both Šī‘ī and Mālikīs, as well as by al-Mawgūl of God or a prophet and magic, we find in Islam all crimes punished by death which in the Mitha (Sniedoer, vii. 4) are threatened with stoning.

b. Whether attempts at conversion must be made is a question of Ḳubhāf. A number of jurists of the first and second (viiith and viiith centuries) dissent this (as do the Zāhirīs) or like ʿĀṣa (d. 115 = 733) make a distinction between the apostate born in Islam and one converted to Islam; the former is to be put to death at once (so also the Ṣāḥīfs). Others insist on three attempts at conversion (relying on Sūra iv. 136; cf. Šī‘ī, Tafsīr, v. 193 sq.) or have them in the first place imprisoned for those days (cf. above 2). According to others again one should wait the round of the five times of prayer and ask him to perform the ṣalāt at each; only when he has refused at each is the death punishment to be enforced. If however he repents and professes Islam once more, he is released (cf. thereon Šī‘ī, ʿUmm, i. 228; Abū Yūsuf, Ḳurāyq, p. 109). In later times Ḳurāyq was always applied.

c. Apart from the fact that apostasy deprives the murtadh of burial with Muslim rites it has certain civil consequences. The property of the murtadh is fitāḥ according to Šī‘ī and the Mālikīs; if the fugitive murtadh returns penitent, he is given back what remains (cf. ʿUmm, i. 231 sqq., where Šī‘ī opposes the contrary Ḥanafī view). Others, especially later Šī‘īs, regard the rights
of ownership of the apostate as suspended (mawzū'ā) and regard him as one who is under guardianship (madhīr); only if the fugitive apostate dies in the dār al-ḥarb, does his property become faiḍ (Shurārī, Mukhātulbāb, Cairo 1345, ii. 240; cf. Shāfi‘ī, Umm, vii. 355). Among the Hanafis and Shāfi‘ī the estate is allotted by the kādā to the legal heirs (cf. above the preamble in Dārūmī, Fūrū‘, kāb 40). The madhīr and umm wālīd are set free, even when the apostate escapes into the dār al-ḥarb, for this is equivalent to his death. If he comes back penitent, however, he receives of his property what still exists; the heirs however are not liable for compensation. — The marriage of the murtadd is void (ḥāfīl). Of his legal undertakings the istilā‘ is effective (nāfšū‘), i.e. the umm wālīd becomes free; the kīla‘ also continues. Other legal activities, like manumission, endowment, testament, sale are suspended (mawzū‘) according to Abū ʿUmar; according to Abū Yusuf they are effective as in the case of a person in good health, according to Muhammad al-Shafī‘ī however only as in the case of an invalid, i.e. they cannot deal with more than one third of the estate. In the case of the female apostate however they are always effective. If the apostate makes such legal arrangements after his flight into the dār al-ḥarb, they are invalid (Sarakhsh, Siyāh, iv. 153; cf. also Abū Yusuf, Kulliyāt, p. 111). But since according to Shāfi‘ī and Malik his whole estate becomes faiḍ, such legal arrangements are invalid; only the manumission of a slave remains suspended until his possible return penitent; in the case of his death also this slave becomes faiḍ (cf. however above the view of later Shafī‘ī).

He is punished for crimes committed before apostasy, if he returns penitent: for crimes committed during ṭalā‘a, no notice is taken of the ṭalā‘a Allāh (i.e. no hadd) but only of the ṭalā‘a al-ḥarb, and he must for example pay the diya (Sarakhsh, Siyāh, iv. 163, 208 sq.; cf. Shāfi‘ī, Umm, i. 237).

(Helfen)
says that Kornh found a hidden Egyptian treasure; 300 mules carried the keys of his treasury (Per-
achin, 119; Sankinorin, 1109; Pal. Sank., x. 279;
Gimzerg, Legendr, vi. 99, 566). — The Kuranic story
believed at the court of Pharaoh which he says to
save Mūsā is not quite clear (xl. 29). Ought we to compare Jethro in the Haggada who
advises clemency at Pharaoh’s court? (Sīfa, 112;
Sankinorin, 1069; Gimzerg, v. 392, 21; v. 412,
101).

The story of Mūsā accompanying a wise man on a journey seems without parallel (xxviii.
59–61). The attempt is often made to distinguish this Mūsā of Kādir as Mūsā b. Manasse from
Mūsā b. Idris [cf. the article Kūdir].

2. Mūsā in post-Kūranic legend. The histories of the prophet (especially Thalibi’s) sup-
plement the Kuranic story with much from the
Bible, Haggada and folklore.

Much is added from Haggada. Pharaoh’s sick
daurers are cured as soon as they touch Moses’
cradle, Exodus Rabba, 1. 23, male: Pharah’s daughter
cured of leprosy. — The infant Mūsā
scratches Pharaoh’s chin. Pharaoh wants to slay
him. On the intercession of Asiya he tests him by
putting gold and jewels on one side and
burning coals on the other. Mūsā reaches for the
gold but Gabriel directs his hand to the burning
coal. Mūsā puts his burned hand on his tongue
and therefore becomes a stammerer (Gimzerg, v.
402, 65); Hamilton, Zeitschr. für romanische Philo-
sophie, xxxvi. 125–159).

Elements of other legends are woven into the
legend of Mūsā. The Ibrāhim-Namūsī legend sup-
plies the following features: Pharaoh frightened
by dreams persecutes the infants; Mūsā is hidden
from the assassins in the burning oven but the
fire becomes hot and does him no harm. Pharaoh
orders prayers to be offered to himself as to a
god, has a tower built, shoots an arrow against
heaven; the arrow comes back blood-stained and
Pharaoh boasts he has slain God (Tabari, i. 469).
— From the story of Jacob and Laban come the
following: Mūsā serves 8–10 years for his wife
(xxvii. 27). His father-in-law offers him the spotted
lamb born in his flock and the ewes for the
watertroughs bear spotted lambs (Thalibi, p.
112). There are frequent references to a pious
Egyptian woman who is martyred by Pharaoh
with her seven children, the younger of whom is
still at its mother’s breast (in Thalibi, p. 118,
139); this is of course modelled on the
martyr mother of the Maccabees.

There are many fanciful embellishments, e.g.
the miracle of the snakes, the plague of the scene
on the Red Sea; Moses’ rod in particular plays a
fairy part. It came from Paradise; Adam, Hābīl,
Shīth, Idris, Nūh, Hūd, Sālih, Ibrāhim, Ismā’īl,
Isḥāk and Ya’qūb had previously used it (Kādir.
p. 208). In Tabari (p. 460 sq.) an angel brought
the rod; Mūsā obtained it from his wife; his
father-in-law quarrels with him about its ownership and
an angel decides in favour of Mūsā. It is a
miraculous rod and Thalibi (p. 111–116) in
particular relates the wonders it performs. It shines
in the darkness; it gives water in a drought, and
placed in the ground it becomes a tree bearing
fruit; it produces milk and honey and fragrant
scent; against an enemy it becomes a double
dragon. It pierces mountains and rocks; it heads
over rivers and sea; it is also a shepherd’s staff
and keeps beasts of prey from the herds of Moses.
When Mūsā was asleep on one occasion the rod
swallowed a dragon, on another occasion seven of
Pharaoh’s assassins.

The varied Biblicall, Haggadic, legendary and
fairy tale features in the Islamic legend of Mūsā
are thus blended into a very full picture and in
Thalibi form a regular romance.

BERNHARD HELLER

al-Lākūmī (or al-Bakrī) was ’Abd al-Rahmān,
Arab governor, conqueror of the western
Maghrīb and of Spain. He was born in 19
(649); his father had been in the immediate
etouage of Mu’āwiya [q. v.]. Mūsā was at first
appointed by the caliph ’Abd al-Malik to collect the
’Abūṣ at-al-Baqr, but having been suspected of
embezzlement, he fled and took refuge with the
caliph’s brother, the governor of Egypt ’Abd
al-’Azīz b. Marwān; the latter took Mūsā to Syria
to the caliph who fined him 100,000 dinars. ’Abd
al-’Azīz provided half of this sum for Mūsā and
brought him to Egypt where he gave him the
governorship of Ifriqiya which had been previously
held by Ḥasan b. al-Nuṣair. The various chron-
iclers are not agreed as to the date of his ap-
nointment to the office but it possibly took place
in 79 (698) or the following year.

Mūsā and his troops theetupon entered on a
career of successfull conquest which ended in
the consolidation of Arab power in Ifriqiya and in
the conquest of the rest of north Africa and of Spain.
Here we give only the most essential details.
Assisted by his son ’Abd Allāh al-Marwān he
sent successful expeditions against Zaghwan and
Suljama and reduced the Hawwara, the Za’atā
and the Kutāma. The Berbers taking refuge in
the west of the Maghrib, Mūsā decided to bring them
to subjection; confirmed in his office by ’Abd
al-Malik’s successor al-Walid, he continued his
advance to Tangier and Sīs [q. v.] and returned to
Ifriqiya leaving as his deputy in the Maghrib
his freedman Tārīq [q. v.]. The latter in 92
(710–711) invaded Spain and Mūsā anxious about
and at the same time jealous of the progress made
by his lieutenant crossed himself in the following
year leaving his son ’Abd Allāh as governor of
Ifriqiya. Landing at Algeciras in Ramzān 93
(June–July 712) with his other son ’Abd al-’Azīz,
he refused to take the same route as Tārīq and
taking the towns of Sidon (Shāfi’in; q. v.), Car-
mona, Sevilla and Merida, he was on his way
to Toledo when Tārīq came up with him and was
bitterly reproached by his master. Mūsā b. Nuṣair
then continued his march and completely subja-
guted the north of Spain from Sangossa to Na-
varre. In 95, he left Spain with immense booty, leaving his son 'Abd al-'Aziz as governor; he reached Kairouân at the end of the year, and continued by land to Syria in a triumphal procession of Arab chiefs and Berber and Spanish prisoners. The caliph al-Walid then near his end urged him to hurry while his brother and heir presumptive Sulaimân, eager to appropriate the vast wealth brought by Mūsā, tried to delay him. He arrived in Damascas shortly before the death of al-Walid and when Sulaimân assumed power he at once displayed his hatred of the conqueror. Regarding Mūsā b. Nuṣair's stay in Syria before his death in 98 (710–717), the Arab historians give a number of details which are obviously of quite a legendary character.

MŪSĀ CELEBI, one of the younger sons of the Ottoman sultan Bāyāzīd. According to some sources he was younger than his brother Muhammad I [q.v.], who is generally considered as the youngest. Mūsā had been taken prisoner in the battle of Angora (1402) and was left by Timūr in custody with the Gümîyân Oğlu Yağkû Beg. The latter sent him afterwards to his brother Muhammad in Amassia, and for some time he became Muhammad's helper in the re-establishment of Ottoman power in Anatolia; he is even said to have driven their brother İsa from Brusa, though the current opinion is that Muhammad went there himself. When, in 1404, their eldest brother Sulaimân Celebi appeared in his turn in Brusa, Mūsā first opposed him in the name of Muhammad and went afterwards, with the latter's consent, to Europe, where he hoped to make an end of Sulaimân's reign with the aid of Mirce of Walachia and Stephen of Serbia. At first this enterprise failed through a defeat inflicted on Mūsā near the walls of Constantinople. Sulaimân resided in Adrianople. Here Mūsā appeared suddenly in 1411 (or 1410); Sulaimân had to flee and was killed on his way to Constantinople, after which Mūsā took his place as ruler of the Ottoman territory in Europe, surrounded by the military and political councilors of Sulaimân, as Ewrēnos Beg and the Djandarîf Oğlu İrâsîm Paşa. Mūsā began his short reign with great energy, recovering nearly all the Ottoman possessions in Serbia and Thessaly, and sending raiding expeditions as far as Carinthia. At the same time he adopted a despotic attitude which displeased his entourage and prepared the final victory of his brother Muhammed. İbrahim Paşa, sent to Constantinople to exact tribute, went from there to Muhammed's court (cf. Taeschner and Wittek, in Ist., xviii. 94) and, when Mūsā soon afterwards began a siege of Constantinople, Muhammed came to the rescue of the emperor. In this he failed for the moment and he was obliged to return to Anatolia. But in 1413 Muhammed appeared again in Europe, having found allies in the Serbians. Meanwhile, the Turkish commanders in Serbia and Thessaly were drawn to Muhammed's side and even the old Ewen prepared to leave Mūsā's cause; his son and other military chiefs went over openly to Muhammed. The latter approached Adrianople from the north and followed from here Mūsā's army beyond Philippi; then he joined his allies in Serbia and met Mūsā's army on the plain of Camurlu, east of Sofia. Mūsā's army was defeated (July 1413), and Mūsā himself perished in the flight. His corpse was found and buried in the Burke of Mūsā I in Brusa.

MŪSĀ, ABU MUHAMMAD AL-HĀDI, an Abū Bakr caliph. After the death of his father on Mehemmed 22, 169 (Aug. 4, 785) al-Hādi ascended the throne and at once put an end to the influence of his mother al-Khażairūn, by forbidding her to interfere in the slightest in matters of state. When he was supposed to exclude her from the succession in favour of his son Djiyar, he met with vigorous opposition from the Barmağid Yahya b. Khâlid [q.v.]. When the latter boldly persisted in his opposition, he was arrested; but the caliph's plan came to nothing for he died suddenly in Rabî' I 170 (Sept. 786) in Tâshkend near Baghdad. According to the usual but not at all certain story, he was poisoned or stabbed by his mother's orders. Al-Hādi who was only 26 when he died is described as brave, just, liberal and full of joie-de-vivre. The most important event of his brief reign was an 'Alid rising in Mecca and Medina. Omar b. 'Abd al-'Aziz, the governor of Medina, had punished an 'Alid along with some other citizens of the town for drinking wine. As a result the 'Alids rebelled and denounced their allegiance to the caliph. After several days fighting the ringleader of the movements, a descendant of Ali called al-Husain b. 'Ali, marched on Mecca where he obtained a number of additional followers. Soon afterwards the pilgrims arrived; at Fâkhkhir near Mecca, a battle took place and al-Husain was killed (Ubu 'l-Hildija 169 = June 786). As regards the fighting with the Byzantines, the Muslims under Ma'ârif b. Yahya invaded Asia Minor where they took much booty.

MUSÄ AL-KÄŻİM the seventh Imâm of the Twelver Shi‘a, son of Dâjâr b. Muham-
mad al-Sâdik [q. v.], was born about 128 (745) at al-Abbîr [q. v.], the traditional burial-place of Āmîna, mother of the Prophet. He grew to manhood in his father’s house in Medina and remained there as Imâm after the latter’s death in 148 (765) without playing any part in politics. In par-
ticular he took no share in the great rising of the Ḥashedî ‘Alîs which collapsed at Fâshkhî in 169 (786). Nevertheless the caliph was suspicious of him. He was perhaps already imprisoned by al-Mahdi. In 179 (795) Hârûn had him brought first to Basra and then to Baghdad; he is said to have been released for a time but he died in prison in Baghdât, according to the usual story in Ra’dîb 183 (Aug.–Sept. 799).

Little attention was paid to Mûsä outside the Shi‘a, but we find him occasionally, as the Shi‘a point out, quoted as an authority, for example for a strongly pro-ʿAlî tradition in Ahmad b. Hanbal, Musnad, l. 77 infra (cf. al-Dhabhî, Mûsâ al-Sâdîq, NP. 1835). The Shi‘a records are more voluminous. He is said to have had the honorific al-Kâţam “he who restrains his anger” because he returned kindness for injury to an opponent so that the latter came over to him. As evidence of his fitness for the imâmate he is reputed to have had a great knowledge of šîkh and is thus brought into connection with Âbû Ḥanîfè. The chapters on miracles, usual in all biographies of the imâms, credit him with being born with a knowledge of languages, e.g. Ethiopic and the language of birds, in later stories also of “Frankish” to fit a story, modelled on a later Kerbelâ’ motif, that Hârûn could not find a Muslim to assassinate him and therefore brought Franks, who were so impressed by his nobility that they refused to kill him. Prayers by Mûsä have been handed down; a letter of warning to al-Husain b. ʿAlî b. al-Hassan, the leader of the Fâshkhî rising; letters from prison; a statement of his claims to the imâmate against Hârûn through relationship with the Prophet, not through ‘Alî like the ‘Abbasîs through ‘Abbas but through Fâṭîma, whom he compares with the mother of Jesus. Considerable portions of the bi-
ography are the result of the disputes within the Shi‘a, even the account of his conception and birth. That his mother was bought from a slave dealer is not disputed; but great pains are devoted to proving she was a virgin. When at the death of his father a group of the Nâwusiya “remained” steadfast to him, the Ismâ‘iliya [q. v.] and the Fâṭîya branched off, the claims of Mûsä had to be based on a will of Dâjâr, the authenticity of which is as doubtful as that of Mûsä in favour of his son ʿAlî al-Rida; this was used against the followers of another son Ahmad, as well as against the Mâmûra who “remained” by Mûsä himself and a similar party in the Mûsawiya (Mûsâ‘iyya; for details see the writers on heresy, especially al-Āshšîn, Maḥâlik, ed. Ritter, Constantinople 1930, p. 25 sqq.). The dispute with the latter groups also explains the very detailed stories of witnesses who had seen Mûsä’s corpse. Bitter differ-
ces of opinion within the family are revealed by the fact that even Mûsä’s son ʿIbrâhem for a long time denied his father’s death, and also by the fact that Mûsä’s brother ʿIbrâhim or a nephew ʿAlî b. Ismâ‘îl played the traitor with Hârûn, in-
citing him by pointing out the great sums which were given to Mûsä as the true caliph by his followers; on the other hand, the incautious acknow-
ledgment of Mûsä’s imâmate by the theologian Hîshâm b. al-Ḥakâm is made responsible for his capture. — The kunya of Mûsä is Âbû ʿIbâhím or Abu ‘l-Ḥasan, also Âbû ʿAlî; the statements regarding the number of his children vary between 30 and 60; 37 is the usual figure. Besides his successor ʿAlî al-Rida some prominence was attained by the partial imâm Ahmad, but more by Zaid, who at the time of the great rising of Abu ʿl-Sarâḥî in Basra, by burning the houses and followers of the ‘Abbasîs acquired the name Zaid al-Nâr, “Zaid of the fire” (Tabari, ii. 986), and ʿIbrâhem, who on account of similar activities in Sarâh was called al-Djazzâr, “the butcher” (Tabari, ii. 987); his daughter Fâṭîma, who died in Kâmîn, has given to this city in her tomb its most important sanctuary. Mûsä himself was buried in the cemetery of the Kûrâshî in Baghdât, where his grandson, the ninth imâm Muḥammad al-Djâwâd [q. v.], was in time intersed beside him: thus arose the twin sanctuaries al-Kâ‘imân [q. v.]

Biography: Mufîd, al-ʾIrâhâd (Teheran without date or pagination arranged in the order of the imâms); Ibn Bâbîya, ʾLi’ân al-ʾAbîbîr al-ʾRida (MS. Berl. NP. 9663), esp. fol. 103b–104a; comprehensive collection of Shi‘i accounts with references to the sources in Muḥammad Bâkîr al-Mudallîs, Bîhâr al-ʾInwâr, xi. (Teheran 1329, p. 230–317; Abu ʿl-Faraj al-Iṣbâhâni, Maḥâlik al-Tâhkîm, Teheran 1307, p. 172–176; Ibn Khîlîkîn. Wâṣfât, Bûlût 1299, ii. 172 sqq. (cf. al-Khâtîb, Tāʾirîkh Baghdât); Mas‘üdî, Manâfi‘î (ed. Barbier de Meynard), vi. 309 sqq., 329 sqq.; E. de Zambräu, Manuel de géologie et de chronologie, Hanover 1927, table D. —

As the importance of imâm like Mûsä lies less in their own personality than in the views of the dogmaticians upon them, their vitae should also be compared: cf. in Kashshâ, Muḥâfîz Abîbûr al-Ridâl, Bombay 1317, section Abûbûr Mûsä b. Dâjâr wa-ʿAlî b. Mûsâ, p. 344 sqq. and the vitae of Hîshâm b. al-Ḥakâm, Highân b. al-Dhâwâlîkî, Ammâr b. Mûsâ al-Sâbîtî, etc.; and the same names in the alphabetically arranged works of Nadîbî, al-ʾIrâhâd, Bombay 1917; Tûsî, Fihrist, Calcutta 1853–1855; Astarbâdî, Maḥâlik al-ʾAbîbîr, Teheran 1306.

(R. STROTHEMANN)

BANÜ MÜSÄ, more precisely BANÜ MÜSÄ f. SHAKIR, the usual name for the three brothers Abu ʾl-Kâṣîm Ahmad and al-Ḥasan b. Mûsâ b. Šâkir, who made a reputation under the ‘Abbasîs from al-Ma‘mûn to al-Mutawakkil as mathematicians, astronomers and technicians and also at times played a part in politics. The father is said
to have begun life as a bandit in Khūrāsān, then to have become an astronomer and geometer. We have no means of testing such stories or learning how a bandit could become an astronomer. If we assume however that Mūsā b. Shākir like Muhammad b. Mūsā al-Khwārizmi joined al-Ma'mūn's train in Khūrāsān as astronomer and astrologist and then came with him to Baghdad, we can understand that al-Ma'mūn took his three sons, still young, into his service on Mūsā's death, and had them educated in medical sciences by the astronomer Yalqūz b. Abī Manṣūr. The Band Mūsā thus had a comparatively favorable age were admitted to that circle of scholars who, by their thorough and expert translations, introduced Greek science to Islam and by their own researches laid the foundation for the glorious development of the sciences in the 9th (ixth) and 10th (xth) centuries. Attaining fame and fortune, they used their wealth to purchase Greek manuscripts and sent agents into the Byzantine provinces to seek for and purchase books. Of Muhammad b. Mūsā it is related that he met Thūbit b. Kūra in Harrān while on a journey and induced him to settle at the caliph's court. It may be assumed they these scientific expeditions to seek books and scholars did not take place without the caliph's support.

History also records political and literary feuds. A particular enmity is said to have existed between al-Kindī and the three brothers, because the caliph al-Mu'tašāin did not entrust them but al-Kindī with the education of his son Alīmād. The feud went so far that the Band Mūsā are later said to have intrigued against the choice of Alīmād as caliph. This story can only be understood in connection with court intrigues, in which the ambitions of the brothers and the jealousy of the courtiers played the same parts as elsewhere. If all is true that is recorded of the malevolent attitude of the brothers to recognised scholars, little praise can be bestowed on their character. The stories of the huge incomes, especially that of Muhammad b. Mūsā — his is said to have had for a time an annual income of £300,000 — exceed all that even the most liberal caliph could hope to pay a scholar.

The works of the Band Mūsā include translations and original works on geometry, astronomy and mechanics. Many of their works are written jointly by two or three brothers, others only by one. Muhammad b. Mūsā is regarded as the most versatile, al-Ḥasan the best mathematician, Alīmād especially interested in mechanical and technical problems. The astronomical and meteological observations of the brothers were probably made mainly in Sāmarra; their tables of observations of the sun are mentioned by Ibn Yanūs, M. Curzur, E. Wiedemann and F. Hauser have devoted special attention to the editing and elucidation of these works that have survived in Arabic or Latin.

ment which bordered on barbarity. He began his military career at the beginning of the caliphate of Marwân I by a badly planned invasion of Palestine. Later, as governor to Basra by his brother Abd Allah, he soon found himself called to the help of the people of Kūfah, tired of the yoke of Muhkṭār b. Abī 'Uqāid [q. v.]. He began by putting the army brought against him by the redoubtable Thaqāfī agitator and then besieged him for four months in the citadel of Kūfah. On the death of Muhkṭār, Muḥṣab ordered several thousands of his followers to be executed and by this savage act made as many enemies as he had relatives. He was less successful against 'Uqāid Allāh b. al-Ḥurr [q. v.] who had been sent into the Ḳurāṣ to stir up a counter-revolution in favour of the Marwānīs. A similar attempt at Basra by the Umayyad Khalīl b. Asid failed. But by proceeding with great severity against Khālid's followers Muḥṣab alienated the most influential personages in the city.

Soon he found he had to defend the Ḳurāṣ which was directly threatened by the Caliph 'Abd al-Malik; troops were massed at Būdajmāra. Muḥṣab awaited the Syrian army here and then retired to Dair al-Djāthīlīk [q. v.]. His position soon became critical for the Basran troops refused to follow him. The best troops of the province were far away with Muhāllāh, engaged in an inextricable campaign against the Khāridjīs. The Zubairī's troops displayed only moderate enthusiasm. His officers tired of his iron hand were prepared to betray him and entered into negotiations with 'Abd al-Malik. The Marwānī was not stingy in his promises. He also tried to negotiate with Muḥṣab, who learning of the perfidy of his followers rejected all offers and decided to die like a brave man. Among his followers Ibrāhīm b. al-Aṣhtar alone fought vigorously in the battle; the others folded their arms during the fighting or went over to the Syrian ranks. 'Abd al-Malik offered Muḥṣab his life for the last time with the government of the Ḳurāṣ, but in vain. Taking flight from his horse, the Zubairī received the coup-de-grâce which was dealing to him by Abī 'Uqāid b. al-Ḫubayrī a blade called by family name Muhkṭār. This took place about the middle of Djuḥādā I (October) of 72 (691). 'Abd al-Malik wept for him and ordered his poets to commemorate his heroic end. Muḥṣab's great generosity earned him numerous eulogies from poets. He is also famous for the fact that he had in his harem the two most independent and haughtiest women of the time, belonging to the most undoubted aristocracy of Islam, Zaypha bint Tanha [q. v.], the second hū.§āri of the Prophet, and Sukaina, granddaughter of 'Alī; feminine types, remarkable in spitting their frivolity for having bravely tried to fight against the degeneration of their sex in Muslim society.

AL-MUSABBĪḤAT, name of stūra's lvit, līx, lxi, lxxvi, as a group, after the first word of each of them, zabbaḥa or yasabbūḥa. The name is old, cf. Muslim. Zakāt, trad. 119.

MUSĀFĪRĪS (Kangari or Sālabīs), a dynasty of Dalīlamī origin which came from Tārom [q. v.] and reigned in the fourth and fifth centuries of the Hijriya in Aḥzārānd, Arrān and Armenia. Its coming to power was one of the manifestations of the great movement of Iranian liberation which formed a kind of interlude between the end of Arab domination and the first Turkish invasions. While in Khurasān and Transoxania this movement culminated in the rule of the Sāmānīds [q. v.], in western Persia and Mesopotamia its standard-bearers were the Dalīlamīs and to a smaller extent the Kurds (cf. V. Minorsky, La domination des Dailamites, Paris 1932).

The Musāfīrīs and the Djūstānīs. According to a genuine document quoted in Yākīt (iii. 148—50), the Kangari family only comes into history after seizing the famous stronghold of Shamrūn in the district of Tārom [q. v.] which was under Kāzīm. The Kangarīs have therefore to be distinguished from the ruling family of Dalīlam, i.e. the Djūstānīs of Kūffād, of whom seven are known from between 319 and 316 (907—920), while members of the family can be traced till 434 (1042). We know that Mūhammad, son of Muṣīr, the eponym of the dynasty (whose real Iranian name must have been Aswār; cf. Mūṣulm, Qurān, ix. 16), had married Khaṭṭāṣyūn, daughter of the Djūstānī Djūstān III (from 250 until after 300). From such alliances the names peculiar to the ruling family of Dalīlam (Djūstān, Wāḥsādān, Mūṣulmān) became popular among the Musāfīrīs. In 307 (919) Mūhammad killed his wife's uncle 'Āli b. Wāḥsādān to avenge the death of his father-in-law Djūstān b. Wāḥsādān. Henceforth there was a breach between the two families. The last Djūstānī took refuge with the Dalīlamī chief Aswār (lord of Ray and Kāzīm) who sent the Ziyārīd Mūwāwījah against Mūhammad but instead of fighting they joined forces and Mūwāwījah slew Aswār. Mūhammad was an important ruler and Muṣīr b. Mūhāllāh speaks with praise of his buildings at Shamrūn (1500 houses) on which 500 workmen were employed (the ruins of Shamrūn have been described in Brugsch, Reise d. pers. Gesellschaft, 1862, ii. 471—472) but he was a difficult character and did not agree even with the members of his own family.

The two branches of Musāfīrīs. In 330 (941) his sons Marzūbān and Wāḥsādān by arrangement with Khaṭṭāṣyūn, seized Shamrūn and shut their father up in a fortress, after which the dynasty broke up into two branches: Wāḥsādān remained in the hereditary fief of Tārom, while Marzūbān extended his power over Aḥzārānd, eastern Transcaucasia and some districts of Armenia. The fourth generation of the Musāfīrīs consisted of the sons of Marzūbān: Djūstān, Ibrāhīm, Nāṣīr and Kay Khusraw, and of the sons of Wāḥsādān (330—355): Ismā'īl, Nāḥ and Ḫaydar (?). Marzūbān. This ruler (330—346 = 941—957) is the most important figure which came into the dynasty. After the death in 314 (926) of the Sādādī [q. v.] Yūsuf, Aḥzārānd became the scene of the struggle between the Khāridjī Kurd Daisam b. Ibrāhīm and Lāshkari b. Mardi, a native of Gilān, whom the Ziyārīd Wūṣhānīr supported alternately.
Laškari died in Armenia and Daisam was betrayed by his vizier Abu 'l-Kāsim 'Alī b. Dja'far who had come to an arrangement with Marzubān for both were būtinī ( Ibn Miskawayh, ii. 32). Marzubān occupied Ardabil and Tabriz and finally Daisam surrendered to Marzubān and received from him a castle in Tārōm. Marzubān extended his territory northward as far as Darband. In 332 (943-944) the Russians (Arbī) came by the Caspian and the river Kur and took the capital of Arān [q. v.], Bārdā' [q. v.] in spite of the resistance of the subjects of Marzubān. At the same time, the Hamānids of Mawsīl had observed designs on Ādharbājījīn and Marzubān had to deal with a force under Abū 'Abd Allah Husain b. Sa'd b. Ibrāhīm and the Hadīthānī Kurdi Dja'far b. Shāhīyūn which had reached Salmās [q. v.] but was soon recalled to Mawsīl by Nāṣīr al-Dawla. On the other hand, the Russians, defeated by the Muslims, beat a retreat (cf. the sources on the Russian invasion including the Armenian historian of the tenth century, Moses Kahanakvatzli, in Dōr, Capit. St. Peters burg 1876; the text of Ibn Miskawayh, ii. 62-67, was translated with commentary by Yakubowski in the Tājīt. Frenenmād, Leningrad 1926, xxiv., p. 63-92).

A new danger arose in the south-east of the lands of Marzubān when in 335 (946) the Būyid Rukn al-Dawla occupied Rāy (disputed by the Sāmānids and Ziyāfrīds). Marzubān filled with wrath at the Būyids decided to attack them in 336. But Rukn had time to get reinforcements from his brothers. In 338 (949) Marzubān, defeated near Kāzwin, was besieged in the castle of Sunnamir (in Fārs).

The fugitives from his army gathered round his father Muḥammad and occupied Ardabil while Wahsūdān remained in Tārōm. Muḥammad even gave dissatisfaction to his captains and was shown up by Wahsūdān in his castle at Shisāgān (?). Rukn al-Dawla sent to Ādharbājījīn Muḥammad b. 'Abd al-Razzāk, the former governor of Tūs [q. v.], who had deserted the Sāmānids, Wahsūdān released Daisam in the hope that he would be able to organize resistance. Daisam who had time to take Ardabil, was defeated by Ibn 'Abd al-Razzāk but the latter dispersed by the intrigues around him returned to Rāy in 339 (950). Daisam recaptured Ardabil but the advance of 'Ali b. Mīshkī, a supporter of Marzubān, forced him to seek shelter with the Artūrsads of Waṣṣārun (cf. wān).

In the meanwhile by an ingeniously planned coup Marzubān escaped from Sunnamir and recovered all his strongholds and treasuries (in 342). After a long series of adventures which brought him to Maw-jil, Baghdād and Aleppo, Daisam in 344 (955) collected a force and read the Khutba at Salmās in the name of the Hamānīd of Aleppo, Saif al-Dawla, Marzubān quickly put down a rising in Darband and later drove Daisam back, who once again sought refuge with the Artūrsads who handed him over to Marzubān under threats from the latter.

In an important passage, Ibn Hawkal, p. 251-255, gives the list of the tributaries of Marzubān compiled by his minister Abu 'l-Kāsim (in 344). The names include those of the lords of Shirwān, Abkāh (i uncertain name of a district north of Shirwān; cf. Marqāt, Streifzüge, p. 174: "Abkāh"), of Shakkī [q. v.], of Dujarrān wa-Saghiyān (Guzrīwān and Saghiyān to the west of Shirwān), of Vayots-dzor (district of Siunie), of Ahar and Warzakān (N. E. of Tabriz), of Khorāsān (N. of Bakū), as well as the Artūrsads, Baghdād, and the princes of Khaṭān (west of Bārdā'ā).

Wahsūdān and his nephews Marzubān died in Ramādān 346 (Dec. 957) and while bequeathing the power to his brother Wahsūdān forgot to cancel his first will by which his sons Djuṭān, Ibrāhīm and Nāṣīr were to succeed him in succession.

The commanderies of the fortresses would not surrender them to Wahsūdān who returned to Tārōm in disgust. Djuṭān b. Marzubān was recognised by his brothers but was only interested in his harems. Marzubān's old general Djuṭān b. Sharmazān set up in Urmīya [q. v.] and won to his side Ibrāhīm, with whom he occupied Maragha. In 349 (960) the grandson of the caliph Muḥammad Ishāk b. Ibrāhīm rebelled in Gīlān and took the name of Mustādīj bi 'l-lāh. Djuṭān and Ibrāhīm became reconciled and defeated the rebels at Mākān [q. v.].

Wahsūdān began intriguing against the Kūrds and detached Nāṣīr from Djuṭān but the quarrel was of short duration. Under assurances from Wahsūdān, Djuṭān with his mother and Nāṣīr came to Tārōm but were thrown into prison. Wahsūdān sent his son Ismā'īl to Ādharbājījīn, Ibrāhīm who was ruling Armenia (Dvīn) made a move in 349 or 350 which gave Wahsūdān an excuse to massacre his prisoners. Ismā'īl soon afterwards died at Ardabil after which Ibrāhīm reoccupied Ādharbājījīn and laid Tārōm waste while Wahsūdān sought refuge in Daisam. Meanwhile Wahsūdān's general Sharmazān b. Mīshkī, however, succeeded in defeating Ibrāhīm and the latter, abandoned by all his soldiers, sought refuge with his brother-in-law Rukn al-Dawla, who had married a daughter of Marzubān (355 = 966).

Rukn al-Dawla, with his usual chivalry heaped favours on Ibrāhīm and sent to Ādharbājījīn his famous minister Ibn al-'Āmid (Usṭād Ra'is) who reinstated Ibrāhīm and subjected Djuṭān and Djuṭān b. Sharmazān to him. Ibn al-'Āmid who was much impressed by the wealth of Ādharbājījīn proposed to Rukn al-Dawla to annex this province but his master recalled him to Rāy, saying that he did not wish to be accused of coveting the inheritance of one who had sought his protection. After the return of Ibn al-'Āmid matters went badly and from the illusions in Ibn Miskawayh we know only that Ibrāhīm was deposed and imprisoned (probably about 369 = 979, the year in which the Taqīyīrī al-Imām stops).

The end of the Musafīrīdīs. In the Muslim sources the situation in Ādharbājījīn till 420 is obscure but the statements of the Armenian historian Sargis Asotik, Hist. Universelle, part ii, book iii, travel by Macler, Paris 1917, ch. 11, 12, 18, 19, 29, 38 and 41, enable us to fill the gaps. According to Kasrawi, in 369 (979) Ibrāhīm b. Marzubān was dispossessed of his lands in Ādharbājījīn by the Rawāsdād family (on which see the articles MARĀKHĪN, MARĀKHĪN, TAREZĪ and Kasrawi, op. cit., ii.). The son of Ibrāhīm Abu 'l-Haḍījīya (the "Alhādjel Delmestania" of Asotik) retained Dvīn [q. v.] and on the invitation of king Mūshel of Kars in 982-983 made an expedition into Armenia where he desecrated the churches. This Alhādjel later lost all his lands to his neighbour Abū al-Shāhīd of Gobān (i.e. Abū Dulfā Shāhīd, lord of Ordūbd). He later wandered in Georgia and Armenia and even visited the Byzantine emperor
Basil II; he was killed by his servants at Uqdatikb (Olti). Finally another Ablahadd, son of Rovd, amir of Atrapatakan (Abu l-Haidja b. Rawwad of Adhar-balaqin), took from Abu Dulaf the towns of Salar and after seeking Godwin marched on Dvin, seized this town and demanded from the Armenians the annuities of tribute (Asolik, ch. xxvi). King Subat II hastened to accede to the demand. This VArawiids thus gained possession of the remainder of the possessions of the Musafrids of whom they claimed to be the successors. There is no reason to connect the Arab-Kurd Rawwids with the Musafrids, who were of Dailami origin, although there may have been intermarriage between the two families. The Tarom branch. After the disappearance of the descendants of Marzuban, Tarom, the original see of the dynasty, alone remained in their hands. Wahsudan had extended his power over the adjacent districts of Zanjja, Abhar and Suhraward (the latter name is usually mutilated in the sources). A hajja of Mutanabbi (Kasrawi, op. cit., i 45) dated probably in 807 (July 14) drove Wahsudan from Tarom for a time, but his family had remained there, for from Vakht, iii. 148–150 we learn that in 379 (989) the layyid Fakhr al-Dawla took Shamirian from the young son of Nuh b. Wahsudan, whose mother he married. The child's name was probably Djusitan; cf. Vakht, Shirkat al-Ash, ii. 308.

In 387 (997) after the death of Fakhr al-Dawla, Ibrahim b. Marzuban b. Isma'il b. Wahsudan seized the fortress of Sardjihan and Tarom. In 411 (1020) even Kazwin was in his hands (cf. Nasiri al-Mulk, in G. M. S., p. 58). When Mahmod of Qazwin, taken by lands, sent him against the Dailami Khurran, Ibrahim, overpowered by Mahmod, determined to make a new effort, and this latter the Dailami Khurran (420), his son Mas'ud attacked Ibrahim but only captured him by stratagem. Sardjihan, however, remained in the hands of Ibrahim's son. In 427 (1037) we find the "salat of Tarom" in his fief again.

Nasiri Khusraw who was in this region in 437 (1045), speaks in high terms of the lord of Shamirin Djusitan (b.) Ibrahim whose title was "Marzuban al-Dailam Djiti al-Djitan Abu Salihi, Mawli Amir al-Muminin." Under 454 (1062) Ibn al-Athir records the visit of Tughri to Tarom, where he imposed a tribute of 100,000 dirhams on Musafrir, who is the last Musafrid known. From Vakht's words we may conclude that the Isma'ilis of Alamut put an end to the rule of the family when they dismantled Shamirin.

colouring. According to Saif's account, he must have been considerably influenced by Christianity for he speaks of the kingdom of heaven and of him who will come from heaven. Like several other men of the time in Arabia of deep religious feelings he favoured asceticism. He forbade wine and marital intercourse after the birth of a son. It is interesting that Falgrava, a large number of sayings still current under Musailima's name; unfortunately he did not trouble to record them so that we cannot compare them with what is recorded of his utterances in literature. This rival community in the heart of Arabia meant a serious danger to the young faith of Islam. Therefore when the first attempts to repress it had failed, Abu Bakr sent his ablest leader Khaled b. al-Walid against Musailima and the Banu Hanifa. A battle was fought at 'Akbara' [q.v.] in 12 A.H. which at first went against the Muslims, but Khaled's superior strategy finally prevailed and Musailima and many of his followers fell martyrs for their faith. The battle was unusually fierce and the Muslims also suffered heavily, among the fallen being a number of the best authorities on the revelations of Muhammad.

MUSSALLA (A.), part. pass. II of salat, place where the salat is performed on certain occasions. When Muhammad had fixed his abode in Madina, he performed the ordinary salat in his dīr, which was also his masjid (not in the sense of temple). The extraordinary salat, however, were performed on a place situated south-west of the city in the territory of the Banu Salima, out-side the wall, northeast of the bridge on the way, where at present the street from the suburb al-Anbariya reaches the market-place Ban al-Masjida (cf. Burton, Personal Narrative, plan opp. i. 256; picture of the musalla as well as of the gate of Ban) situated on the place, opp. ii. 129; al-Bakri, al-Rihla al-Hijaziya, 2nd ed., plan of Madina opp. p. 252; part of the Ban al-Masjida, ibid., opp. p. 264; Caetani, Annali, vol. ii. 6, opp. p. 72).

On this spot the salat was performed on the 1st Shawwāl and on the 10th Dhu'l-Hijja (Tabari, i. 1281, 1362). On the latter day the salat was combined with the slaughter of two spotted rams (Bukhari, Asaf, b. b. 6). On the two days of festival Muhammad and his followers on their way to the musalla were preceded by Bilal who bore the spear (Tanweer, q.v.).

It is also said that the salat for rain was held on the musalla (copious data in Tradition, cf. Wensinck, Handbook, s. v. Rain; and do., Moham.
MUSH — MUSHAF

(as spelled by Yâ-kit, iv. 534) is sometimes used for the town itself as in Tabari, iii. 1408 (cf. J. Markwart, Süd-Armenien und die Tigrisquellen, Vienna 1930, p. 354). The tradition of the Armenian historians connects the foundation of Mùsh with Mésheh Manikonean, the ancestor of the powerful, originally non-Armenian family of the Manikoneans, who lived in the 6th century A.D. To him is ascribed the construction of a castle, the ruins of which are still visible; on the is situated at the mouth of a mountain gorge and before it extends, as far as the river, a large fertile plain, the "plain of Mùsh". During the first centuries, after the Muslim conquest, Mùsh remained a centre of Armenian national life; from 825-851 it was the residence of the Bagratid Bagrat. After the abduction of this prince to Baghdad in 851, the inhabitants revolted and killed the Muslim governor Yâsuf b. Abi Safîd al-Marwanî (Tabari, iii. 1408 sg.). Later on it was part of the vassal kingdom of the Bagratids. Occasionally it was occupied by Muslim till the 6th century (Ibn al-Arthî, v. 408) in 533 (966). Al-Muqaddasi, who the name of Mùsh appears for the first time in Islamic geographical literature (al-Muqaddasi, p. 150). In Saljuq times the influence of Islam became stronger; the atabegs of the Artsamanid dynasty disputed the territory of Khîlah and Mùsh with the Shûkîs, and even the Ayyubid Nadîm al-Dîn laid siege to Mùsh in 604 (1207) (Ibn al-Arthî, xii. 169, 170), and in 625 (1228) Djalîl al-Dîn Khwârimshâh was master of the country; in that year a battle was fought by him and lost on the plain of Mùsh against the Saljuq ruler of Erzurum (Ibn al-Arthî, xii. 314; Djawwâl, Târîkh-i Djîhân-i-qâbî, ii. 151). This account for the ruined state of the town in the middle of the 6th century (Hamd Allah Mustawî). After the Mongol period Mùsh was ruined by Timur in 1396, when he invaded the possessions of the Kara Koyunlu (Skaaf al-Dîn, lix. 419). In 1473 the power of the Agh Koyunlu ruler Uzun Hasan was definitely broken in Armenia and from that time on Mùsh belonged to the Ottoman Empire. At that time the population of its surroundings was already strongly mixed with Kurds and Turcomans. The direct authority was exercised by Kurdish local chieftains, who, in the ruling system of the Empire, were subdivided, as sandjak beghs, either to the shâha of Bîtûs or to that of Van. At the beginning of the 19th century the Kurdish wîmân (Emîn Paşa), who was deposed in 1828-1829 (Ritter, s. 676 and Siyâsî-ê Şehnûrî, i. 426). In the middle of that century, Mùsh became the chief town in the merkez: mazâ Mùsh, in the sandjak Mùsh in the wilîyêt of Bîtûs, and in the Turkish republic it is a mazâ in the wilîyêt of Bîtûs. The population of the town (some 5,000 inhabitants) was, until the Great War, half Armenian and half Muslim; one of the Armenian churches had been converted in 979 (1571) into a mosque, according to the inscription (Ritter). The exact registration of the population had also been a problem; where, however, ancient Christian sanctuaries had long continued to exist, such as the monastery of Surb Karapet, called by the Turks Çeşîf Kilise and described by Ewliya Celebi.

During the Armenian troubles in the last years of Abîl-Hamîd the's reign, in 1905, there began in Mùsh a revolutionary movement of Armenian tashnakists, which brought about an intervention of the Kurds and a suppression by government troops, in which the population suffered much. In the Great War the Russian advance in Armenia had gone as far as Mùsh, when, in accordance with the treaty of Brest-Litovsk (1917), the Russian troops retired in 1918, leaving this part of Armenia again in Turkish possession.

AL-MUSHABBÎHA. [see TASHIN]

MUSHAF (m.), Ethiopic loanword (cf. Nobdeke, New Beiträg., p. 49 sg); the forms mîshaf and mas'îf occur also; according to some grammarians they are less correct, especially the latter), c. o. e., or, according to the definition of Arabic lexicographers, leaves (mâshîf, plural of mashaîf). When they are bound together, they form the tradition on the reduct of the Kur'an [v. y. v.] by Hujjâfa b. Ya'âbîn during 'Uthmân's caliphate, it is said indeed, that the collection of leaves that had been made by Zâd b. 'Abîtâbî at 'Umar's instigation, was copied and arranged into mas'îf. These were sent to all regions (as standard copies); the mashaîf were restored to 'Umar's daughter Hafsâ, in whose possession they had been ever since her father's death. Other mashaîf were annihiliated as often as occasion offered itself (Bukhârî, Faso'ul al-Kur'ân, bâb 3: "Abîl-Hâmid b. Qur'ân, bâb 12; Tâfshîr, sûra 9, bâb 20, Ahlîf, bâb 37; Tirmidhî, Tâfshîr, sûra 9, trad. 19).

From the time of the reduct of the Kur'an under 'Uthmân mas'îf are frequently mentioned in Arabic literature. In a tradition on 'Amr b. Abî'âzî's well-known stratagem during the battle of Siyam it is said that a huge mashaîf from Damascus was tied to the points of three lances (al-Dinawî, Khûtâb al-'Akbâr al-tâbîî, ed. Girgass, p. 201 sg.; Naşr b. Muzâhid, Wâ'fât al Siyam, Bairût 1921, p. 350; cf. p. 353) in other traditions "copies of the Kur'an" in several numbers are mentioned (e. g. Tabari, i. 3329).

In a tradition on the siyam it is assumed that in the mosque of Madina the mashaîf had a fixed place (Bukhârî, Siyam, bâb 95: Muslim, Sinât, trad. 263, 264); nowadays this place is by the siyâm (cf. Lane, Manners and Customs of the Modern Egyptians, chap Religion and Laws; and supra, art. MASHAF, i. D. f. j.).

It is said that 'Abî'a had a mashaîf copied for her private use by her mawla Abû Yûnus (Tirmidhî, Tâfshîr, sûra 2, trad. 29: cf. Bukhârî, Faso'ul al-Kur'ân, bâb 6).

Mashaîf were taken into the field by Muslim soldiers (cf. Tirmidhî, Hadîthî, bâb 281; Abû Dâwa'id, Dhâ'im, bâb 133: this practice met, however, with objections (cf. Bukhârî, Dhâ'im, bâb 129; Muslim, Imãm, trad. 92, 93), founded on the fear that they might come into impure hands. For a similar reason persons impure in a ritual sense were prohibited from touching mashaîf, save in a special cover (alâlîs; Bukhârî, Hâid, bâb 3).

Bibliography: The lexicons, s. v.

(A. J. WENSINK)
MUSHRIR (A.), councelor, Turkish pronunciation mushir and mishur (modern orthography müşir) with meaning "Marshall". "Mishur literally means "one who points out, advises". Cf. also the article MUSHRIR.

According to some authorities, mushir was at first (before the Abbâdsids) the title of the mini-tens (later wasir; q.v.) or secretaries of state (Êstêh). So at least we are told by Ibn al-Tîkârî (ed. Derenbourg, p. 206; transl. Amar, p. 244). Khâllî al-Zâhirî (ed. Ravaisse, p. 106 and 114) says that "formerly an official to whom he gives fourth rank in the hierarchy, which shows he clearly distinguishes him from the wasir, bore the title of mushir. We seem however to have very little other information about this dignity. On the other hand, the word mushir in a non-technical sense is often found along with wasir of which it sometimes seems to be a doublet or synonym (cf. Maqżaf, ed. Wiet, i., fasc. i., p. 20 and 74; Noldeke, Die Erzählungen von Meinckmond und seinen Ministern, Göttingen 1879, p. 53: mushir mûșîr, wasir mûșîr)."

We may note however that this older and broader conception did not survive. According to Ibn Khaldûn, the wasir is, it is true, an "assistant" to the sovereign, but to his predecessor Mûwârîd (Lis statuts gouvernements, transl. Fagnan, p. 43 sqq.) the wasir is not the adviser of the imâm but his delegate.

If Ibn al-Tîkârî's statement is correct we must see a survival of this older state of affairs in the usage of the Mamlûk chancellery where we find among the honorific lehâb of the wasir that of mushir al-dacca (or al-sâlihâna or al-mulûk wa l-sâlihâna). Cf. Kalkashandi, vi, 70.

The same usage, which perhaps came from the Sâlîdîs, is still more clearly established in the Ottoman chancellery. We actually find the word mushir among the alâb of the Turkish wasir (wasir) and almost at the head of the formula, which shows its importance: dûstîr-i mûsîrûn, mûshir-i mûsîrûn, mûsîr-i êlî, etc. Whence in the epitaphic style the epithets mûshir and mûshirî are used along with dûstûn and dûstûnî or êlîcî and êlîcî to designate all that belongs to an official of the rank of wasir.

Mahmûd II in creating the principal ministries naturally thought of again giving a real value to this title of mushir, which he gave to the principal ministers, and in the reign of his successor 'Abd al-Madîd "the privy council (musfîr-i hîzât, a regular council of ministers) consisted of the grand vizier, the bâb-i al-sâlih, eleven mushir and three officials of the first rank" (Bianchi, Le premier annaire impérial de l'Empire ottoman, Paris 1848, p. 7; Bianchi translates mushir by "counselor or under-secretary of state" and has been followed by Darbier de Meynard in his Supplement, the references in which should be taken with this reservation). In 1250 (1834–1835) the title of mushir was given to the new mûshir of the Interior (mûshir-i hîzât = the former kîhîlî) and of Foreign Affairs (khârîjî, hîzât-i mûshir = the former rîsê al-khattâb); cf. Lutfî, v. 209. The sâlihî mushirîyi was created in 1262 (1846) (Lutfî, viii, 87).

Mahmûd II also created the post of beylerbîy wasir or chief of the imperial guard, who bore the title mushir-i ûsîkî-i bâbîs (pasha), an officer who took rank after the ser'asker or War Minister (Hammer, Hist. de l'Emp. Ott., xvii. 188 and 189). This title was soon to be contrasted with that of mûshir-i ûsîkî-i sâlihâna by the other troops (Lutfî, v. 28).

The ministers did not long bear the title of mushir which gave place to nîzîr, but the former of these titles, perhaps under the influence of the word "marshall", which it more or less resembles, became a special military title. It became the highest rank in the army, corresponding to vizier in the civil service and of ûsîker in the religious hierarchy. At first the title redîf-i mûshirî was given (cf. Lutfî, v. 68, 74) to the ûsîker of certain provinces, or simply mushir of such and such a province (ibid., p. 165 sqq.; vi. 102, 103; vii. 70). This corresponded to the demarcation of the army corps.

The number of ûsîker or "marshals" soon increased and in the reign of 'Abd al-Hamîd II, there were 39 in 1890 and in 1895, 31 (see the Sâlihâna-i ûsîkerî of the years 1306 and 1311). Those who had the right to this title were the ser'asker, the abdulhâmî-i ûsîkerî or "grand master of artillery", the ûsîkerî or "grand master of the Palace" (replacing the old ca].bahâ, according to Âhmed Râsim, Tarîkhî, i. 156 and 186), the ûsîkerî mûshirî (as under Mahmûd II), the commanders of the seven army corps (âzîndeh), the heads of the army services, the aides de camp to the sultân (jâfer-i êtemî). The only duty of five of the ûsîkerîs was to superintend the ceremony of the Selâmîk (selâmîk-râmî ûsîkerî me'mûrî). The officer in charge of the police station (mûşkâz) of Beshkesh, near the Vilîz Kiosk, was also a ûsîkerî (M.S.O.S., vii., 1908, part 2, p. 40). Instead of ûsîkerî the more usual phrase was mûshirî-ye ûsîkerî (Lutfî, vii. 62).

The honorific form of address for a ûsîkerî was devletî (devletî) efendim hazretleri. In the plural the Persian form mûshirîn or with epithet mûshirîn-î ûsîkerî. The name of the office is mûshirîyet or mûshirîkî, more rarely mûshirî (Lutfî, v. 91).

The title of ûsîkerî, which has been borne by Mu'âd'lâ Kâmil Pâsha himself, has survived in the Turkish republic but there is at present only one ûsîkerî in office, the Chief of the General Staff, Fawzi Pâsha.

In Khedivial Egypt they stopped at a stage where the influence of the reforms of Mahmûd II was still felt. The ûsîkerî was there down to the present reign exclusively the highest grade of officers but without distinction between military and civil offices. It was also in theory a civil rank (ruthûa mûshîrî) to which all the princes of the khedivial house had a claim.

In Persia the title ûsîkerî has been rarely used. Cf. however the case of the ûsîkerî-êd-dowle (cf. the similar title above) borne by an aide-de-camp of Naṣr al-Dîn Shâh (Feuvierr, Trois ans à la Cour de Perse, p. 135–136).

(M. DEH. DENY)

MUSHRIR. [See SHIRK.]
The Arab astronomers, like Pythagoras and Ptolemy, put Jupiter in the sixth sphere (jālak) from within the third without. On the interior it joins the outer surface of the sphere of Mars and on the exterior the inner surface of the sphere of Saturn. The following table gives the least, mean and greatest distances of Jupiter from the centre of the earth, expressed in radii of the earth, as given by al-Battâni (Opus astronomiacum, ed. Nallino, ch. 50), al-Farghani (Compendio, ch. 21), Ibn Rustâ (Kitâb al-Astrâk, ed. de Goeje, p. 18-20) and Abû Râhâm bar Hîyâ (Sphaere mundi, ch. 9), as well as the Hindu values given by al-Birûnî from the compilation by Yaḳûb b. Ṭârik of the year 161 A.H., and the modern figures for these distances:

<table>
<thead>
<tr>
<th></th>
<th>Least Distance (perigee)</th>
<th>Mean Distance</th>
<th>Greatest Distance (apogee)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Al-Battâni</td>
<td>8,022 rad. of the earth</td>
<td>10,473 rad. of the earth</td>
<td>12,924 rad. of the earth</td>
</tr>
<tr>
<td>Al-Farghani</td>
<td>8,776</td>
<td>11,640(\frac{1}{2})</td>
<td>14,405</td>
</tr>
<tr>
<td>Ibn Rustâ</td>
<td>8,820</td>
<td>11,503(\frac{1}{2})</td>
<td>14,187</td>
</tr>
<tr>
<td>Bar Hîyâ</td>
<td>8,000</td>
<td>10,200</td>
<td>12,400</td>
</tr>
<tr>
<td>Hindu</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(al-Birûnî)</td>
<td>8,019(\frac{1}{2})</td>
<td>10,866(\frac{2}{3})</td>
<td>13,714(\frac{1}{7})</td>
</tr>
<tr>
<td>Modern</td>
<td>92,500</td>
<td>122,250</td>
<td>152,000</td>
</tr>
</tbody>
</table>

The radius of the earth is here estimated at 3,450 (al-Battâni, al-Farghani and Bar Hîyâ) and 3,818 Arab miles respectively (Ibn Rustâ) while, according to al-Birûnî, the Hindus give it as 4,850 faršâh = 3,310 Arab miles (1 Ar. m. = 1,477.3 metres; cf. Nallino, Il valore metrico del grado di meridiano). The true geocentric distances of the planet Jupiter are actually about 11\(\frac{1}{2}\) times greater than given by al-Battâni for example. It should however be pointed out that the relation of 37:23 \(\approx 11\frac{1}{2}\) for the greatest and least observed apparent diameter taken by this scholar, with the help of which the distance of the apogee was calculated from the estimated distance of the perigee at 8,022 radii of the earth agrees remarkably well with the modern estimate. The apparent diameter of Jupiter at its mean distance is given by Al-Battâni as 1\(\frac{1}{2}\) of the diameter of the sun. From this and the mean distance he calculates the true diameter of Jupiter at 4\(\frac{1}{2}\) diameters of the earth \(= 82\frac{1}{2}\) radii), and its volume at 81 times that of the earth (i.e. \(4\frac{1}{3}\) ).

The true values are 2.56 \(\times 170\) times larger: diameter of Jupiter = 11.14 diameters of the earth, volume = 1,380 times the volume of the earth.

Following Ptolemy (Almagest) al-Battâni gives the greatest observed northern (geocentric) latitude as 2° 4', the greatest southern as 2° 8'. On the other hand, he points out (ch. 31 and 45) that he found the length of the apogee of the eccentric circle from his observations to be about 8° smaller (in 879 A.D., 164° 28') than was to be expected from the Almagest, taking into account the precession.

The movement of Jupiter is as in the Almagest represented to be through four circles ("spheres", γύροι) (cf. al-Battâni, Op. astr., ch. 31). The astronomical tables take for its mean daily sidereal motion the value of 5'. Its period of sidereal revolution is given by al-Kazwînî (Abû al-Rayḥân, ed. Wüstefeld, i. 26) at 11 years, 10 months, 15 days.

Al-Mushtari in astrology. Al-Mushtari is the ruler (rabî) of the Buṣayî al-Ḫâmi (Sagittarius, night-house) and al-Ḫîṣî (Pisces, day-house), also night-ruler of the 1. Mithâlaththâ (Triquetrum), which consist of al-Ḫuṣmal (Aries), al-Ḫasad (Leo) and al-Ḫâmi (Sagittarius), whose ruler by day is the sun, and finally companion (raṣīf) of the 3. Mithâlaththâ. It has its Šarâf (exaltation) in the 15th of al-Saṣâfîn (Cancer), its Ḥabîb in the 15th of al-Ḫwâs (Capricornus). According to al-Kazwînî (i. 22), "the astrologers call al-Mushtari the greater star of fortune", al-Sâlîd al-râbîbar, because its good influence surpasses that of Venus; they attribute to it numerous happy states and the greatest good fortune. The idea that the planet Jupiter is a star of good fortune is general among other peoples also; we also find it in Babylonia, India and China. For further details of the part played by Jupiter in Arab astrology see the works of Abû Ḫâsr.

Bibliography: See that of the articles Ǧuršâd and Miḥrâb (W. Hartner).

The modern title Mûsîkî or موسیقی or Ṭaṣâfîkî, as it was written in the West (al-Fâbî, Ṭāfî al-Khîlâm; Schiaparelli, Vocalistica in Arabico = Latin musica), is the name given to the science of music. It is a post-classical word derived from the Greek μουσική, and was already current at the time of Ḥabîb al-Mawṣûlî (d. 236 = 580 g. v.). In the Mûsîkî al-Khîlâm (ivth = xth century) mûsîkî is one of the four mathematical sciences. Its author says: "As for mûsîkî, its meaning is the science of the composing of melodies (alḥām). It is a Greek word, and it is named the mûsîkî. And the composer of the melodies is the mûsîkî or ūlũfâr (p. 239)." The contemporary Ḥâwâlîn al-Šâfiî say (i. 87): "Mûṣîkî is the ghānî, and the mûṣîkî is the muḵẖanî, and the mûṣûḏî (mûṣûḏîyâ in Dieterici) is the instrument of music (ghānî)." *'Ibm al-mûṣûḏî was the name given by the Arabs to the Greek or mathematical theory of music as distinct from ilm al-ghānî which was the Arabian practical theory, as we know from the Kitâb al-Aṣâhîn and Yaḥyâ b. 'Ali b. Yahyâ b. Abî Maṣûrî (d. 500 = 912). The latter tells us (Brit. Mus. MS., Or. 236v, fol. 236v) of the "disagreement between the masters of Arabian ghânî and the masters of [Greek] mûṣûḏî." Of course, the Arabs and Persians possessed a theory of music long before they became influenced by the translations made from the Greek.
The Pre-Islamic System. The source of both Persian and Arabian theory of music was an
older Semitic one which had influenced, if it had not been the actual foundation of Greek
teaory (for Farm, Hist. Part., p. 123). No Persian or
Arabic technical nomenclature of a theory of mukki (i.e. speculative theory) has come down to us
from pre-Islamic times, although it must have existed.

Al-Fazāb (d. 339 = 950) describes a musical instru-
mment, still used in his day, called the tambur al-lahzādī or al-mukki (the frets (تاریک), a
Persian word) of which gave a "pre-Islamic scale"
(Kosegarten, Lib. cont., p. 80; Musāfīr al-Ṣūrīn).
It was a quarter-tone scale which was arrived at
by dividing a string into forty equal parts. The
idea could be traced to Eratosthenes (Plutemmy,
Harm., ed. Wallis, ii. 14) but probably was for
greater antiquity (Farmer, Influence of Music,
Although al-Fazāb’s instrument did not actually
give the following scale, yet the theoretical division
mentioned above would produce a scale which,
expressed in cyclic cents, would register:

<table>
<thead>
<tr>
<th>Frets</th>
<th>Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>498</td>
</tr>
<tr>
<td>100</td>
<td>1000</td>
</tr>
</tbody>
</table>

J. P. N. Land was of opinion that the later
Pythagorean lute scale of the Old Arabian School
was derived from the system of the faṣār al-
lahzādī. It is more likely however, that there
was an earlier lute scale than that of the Old
Arabian School. As has been hinted elsewhere
(Farmer, Hist. of Arabian Music, p. 70). This
was a one-octave scale fixed by the accordance
(tarkiya) CD-Ga, the frets of which gave the
following scale:

Cents 0 204 408 498 702 906 1100 1200

For a discussion of this scale see Farmer, An
Old Mornish Lute Tutor, p. 27; id., Hist. Facts, ...

p. 310.

The Old Arabian System. In the eleventh century
we get definite glimpses of a theory in
the music of the Arabs and Persians. We read of a
certain Ibn Mis'ah (q.v.) (d. ca. 97 = 715) who
had learned Persian music (ṣiṣwā) and accomplishments
in playing (ṣarb), and had received instruction from
Lyziantine (ṣūr) barilin players (ṣarbijīa) and
theorists (ṣarbijīyya = šīrjabīn). These
borrowings from abroad he incorporated into a
system which came to be recognized throughout the
peninsula (Kitāb al-Ṣūrīn, iii. 84). We are told
however, that Ibn Mis'ah rejected from Persian and
Lyziantine methods but what he found to be "alien
to Arabic music" (ṣiṣwā). This would appear to show,
that when a student pointed out (Remarks, p. 156),
that these foreign introductions "did not supplant
the national music, but were grafted upon an Arabic
root with a character of its own". We know that
about the same time, or perhaps slightly later (Kitāb
al-Ṣūrīn, i. 98), that the Arabs adopted the Persian
lute in the place of their own instrument. This latter,
as we have seen, gave a one-octave scale based
on the accoduttura C-D-G-a, whilst the Persian
lute was tuned in fourths thus: A-D-G-c, which
enabled the performer to attain (with a shift) the
doable octave. Yet only the highest and the lowest
strings of their old lute needed to be altered, and
these were given the Persian names of ẓū and
himm, whilst the second and third strings retained
their old Arabic names of muṣīrī and maṭāḥā.
The new accoduttura of the lute brought about a
change in the scale (ṣabātīrī) as the following
distribution of the frets shows (Brit. Mus. MS.,
Or. 2546, fol. 237). The lute with the Arabs was
the basis of all "theory"; just as the lyre was
with the Greeks.

Nevertheless, this scale did not satisfy everyone,
and we find that the Persians introduced a new
ṣawātī fret at 393 cents, whilst later a famous
musician at Hārūn’s court named Zalzal (q. v.)
(d. 175 = 791) adopted a fret at 355 cents, half-way
between the new Persian ṣawātī fret and the ānāfī
fret. By the time of Ishāq al-Mawsili (d. 236 = 850)
these Persian and Zalzalian frets seem to have
created such confusion that this musician attempted
to recast the lute scale in its old Pythagorean
mould, which, we are told, he did without recourse
to Euclid or a solitary book of the "Ancients" as
the Greeks of old were called (Kitāb al-Aghānī, v.
52–53; Ḥudā al-farīd, ii. 188). His reform appears
to have been successful in Ṭirm and lasted there
until the sixteenth century (Kitāb al-Aghānī, v. 2:
Mansūr ibn Ḥasan al-Ṣufī, i. 98). Elsewhere however,
the Persian and Zalzalian notes continued in favour,
as we know from al-Fazāb (Kosegarten, Lib. cont.,
p. 85) and the Musāfīr al-Ṣūrīn, p. 239. A century
later, whilst the Persian note of 393 cents
had disappeared, that of Zalzal was still popular
(Ṭarn Sinā, Shīfā, India Office MS., fol. 173).

There is but little preserved of the writings
of the theorists of the Old Arabian School. Whether
the books of Yūnās al-Kītīb (d. ca. 148 = 765) [q. v.]
and the more famous al-Khālid (d. 175 = 791) [q. v.]
on music (ṣawātī and ūqū) dealt with these theories
we know not since they have perished (Fikrist, p.
43; 143). A similar fate appears to have overtaken
the music-books of al-Balāb Allah b. Abd Allah b.
Ṭahr (d. ca. 300 = 912), Alt b. Ḥārūn b. Alt b.
Yahyā b. Alt Mansūr (d. 352 = 962) and
13); Fikrist, p. 144; 145). Beyond the sparse
information given in the Kitāb al-Aghānī and the
Mushāf of al-Mas'ādī (viii. 89 sq.), we have only the
Kitāb al-Lawwār wa 'l-Muṣīrī of Ibn Khur-
dājābih (d. ca. 300 = 912) [q. v.], in private
hands (Hilāl, xxvii. 204).

Although we read that Ishāq al-Mawsili made
his calculations by ṣhāb (Yahyā b. Alt, fol. 237),
yet the Old Arabian School, so far as we know
from Yahyā b., Alt b. Yahyā, did not adjust the
frets of the lute (χύτος) or pandore (πανδώριον) by this method. Their rule for fixing the frets
was based on tuning a note with its octave or, as they termed it, its σύμφωνον or δισθό, although the
taller term shows that they recognized the interval ratio 1:2. When the Greek scholars came
to deal with the theory of music all this was changed.

The Greek music at the time of the middle of the
19th century, the effects of the writings of the
ancient Greeks on music, which had been translated
into Arabic, began to be felt. Among these treatises
were Aristotle’s Proclus and De Anima, the,
comparatives of Themistius and Alexander
diæisis of the latter, two works by Aristoxenus—
including the στοιχεῖα it would seem, the two
books on music attributed to Euclid, a treatise
by Nicomachus, presumably the lost book, and the
Harmonika of Ptolemy, all or most of which had
been translated by the first half of the 19th
century at least, as we know from al-
Fārābī (Fihrist, p. 266, 269, 270; Ibn al-
Kūṭṭī, s.v. al-Maṣūṣ, maṣūṣ, n. 186; B. G. A., vi. 128; ‘Abd al-
Bārī al-
Ṣafā, i. 102; and Farmer, Greek Theory of Music
in Arabic Transmission, in Isit., iii., p. 325).

The ʿilm al-maṣūṣ now became one of the
courses of the ʿilm al-niyāḥ or quṣādir, and
was studied by most savants at this period although
later a few sought the subject primarily, as
in Western Europe (Farmer, Hist. Facts..., p. 184), because it was too abstruse (Ibn Khallikan,
ii. 471). The early scholars dealt with the theory
of sound (qawṣ), intervals (al-adāb), genres (al-nuṣr),
species (al-kāyāb), systems (qumās, qumāṣ),
motion (al-taṣawwur), and)&quot; composition (al-
ṣawāṣ), after the manner of the Greeks, and from the above out
we see that Euclid influenced them in this respect.

To this was added rhythm (iqdā). All this was
of immense value to Arab theorists and their later
copists, the Persians and Turks. Instead of the
old method of describing intervals according to
to their frets they were now given definite names
and recognized by ratios. The octave became al-
kull (“the whole”), whilst the fifth, fourth, and
ditone were given identical names in Arabic.
The tone was variously known as the faṣūḥ, al-
waṣṭ, or madda. The semitone or waṣṭ faṣūḥ was recognized
in its various forms, the ḥaṣāl orapses, and
the baḥaṣa or faṣūḥ. In modern notation
the quarter-tone was the ḥaṣāl. In some way
the Scholastics were slavish and diffuse in what they
borrowed, although in others they were eclectic.

On the question of the physical bases of sound
however. and their treatment of musical instruments.

The first to take advantage of the newly founded
of the “Ancients” was al-Kīnādi (d. 260 =
874) (q.v.). Seven treatises on music theory appear
under his name (Fihrist, p. 255—257; Ibn al-
Kīnādi, p. 570; Ibn Abī Uṣābīa, i. 210) and
four of them would seem to have survived (Farmer.
Hist. of Arab. Mus., p. 127, 45). Some musical
MSs. identified (Ibn Khallikan, ii. 441).

Three of them are at Berlin (Allwardt, Vers., Nrs. 5503, 5530, 5531): Riḍāla fi ṭaḥaṣa ḫākariya al-
Maṣūṣi, Riḍāla fi l-
Lūḥān, and another without title. The fourth,
Riḍāla fi ʿaṣāṣa Taʿăf al-
Alḥān, is in the British Museum (Or. 2361), and is probably later than the
others. In the latter we see the author’s indebtedness
to Euclid and Ptolemy. He had written a Riḍāla
fi ḫaṣṣar al-
Kūṭṭī, presumably Euclid’s Sched

 canonisi. He uses a one-acte alphabetie (abjad)
notation which was an improvement on Greek
methods, but his pointing the way to a reform
of the scale was probably of greater import to the

Arabs. By introducing a fifth string on the lute,
so as to reach the double octave without recourse
to the shift, he obtained the Complete System
(ṣaḥāfa al-
Ṭūmān: Ptolemy’s στρογγυλή τείχος).
To accomplish this a fret called the muqaddamāt had
to be introduced at 114 cents between the muqaddam
and the ṭabbība fret, which in itself created another
problem, and eventually led to frets being tried
between the ṭabbība and the above muqaddamāt.
At 90 cents and between the ṭabbība and ṭaṣāṣa frets
at 354 cents. Here was the germ of the ṭaṣāṣa,
the comma scale of the later ṭaṣāṣa al-
Lūḥān-
āt, the forerunner of the Systematist scale.

After al-
Kīnādi, we have a gap of a century in actual
documents. There are names of theorists in
abundance but their works have not survived.

Al-
Kīnādi’s two disciples, Abūn b. Muhammad
al-
Faraqāśī (d. 285, 896) and Muṣṭafā b. Ṣaḥiḥ b.
Tāhir, contributed works on the theory of music,
the former writing six (Fihrist, p. 117, 149, 261).

More important perhaps, were the three books of
Thālab b. Ṣhiḥ (d. 288 = 901) (q.v.), as well
as those of Muḥammad b. Ṣakānīya al-
Kūṭī (d. 320 = 932) (q.v.) and Ṣaḥib b. Lākūd (d.
c. 320 = 932) (q.v.) (Fihrist, p. 270, 295; Ibn Abī
Usābīa, i. 509; Ṣaḥib al-
Nawawī, vii. 54; Hāshimi
Khallakan, v. 161). The greatest of all the scholars
however was al-
Fārābī (d. 339 = 950) (q.v.) (Ibn
al-
Kūṭī, p. 277; Ibn Abī Uṣābīa, i. 234; Stein-
seünder, al-
Faraqāśī). Although he had books on music,
Kāmil al-
Lūḥān and the Ṣaḥib fi ṭaṣāṣa al-
Ṭūmān, yet his greatest work, the Ṣaḥib al-
Maṣūṣi al-
Lūḥān, has been preserved.

This treatise, so he tells us, was written because
he found an “incompleteness” in what had been
drowned down from the Greeks. It has been called
“the most important treatise on the theory of
Oriental music” (cf. vol. ii. 54), but it probably
deserved to rank as one of the greatest works
that had been written on music. His treatment of
the physical and physiological principles of
sound and mū-sīc is certainly an advance on the
Greeks, whilst he was the first to devote a detailed
study to musical instruments, a subject in which
nothing has come down to us from the Greeks.

Al-
Fārābī was a good mathematician and physicist,
and that enabled him to do justice to what the
Arabs called the ʿilm al-
naṣāri or speculative
theory, even to not repeating the errors of the
Greeks (Farmer, Hist. Facts..., p. 292—293). Yet
he was something more. He was a practical musician
and could appreciate the art as well as the science,
which was more than Themistius could do, as
al-
Fārābī himself mentions. As a performer with
a reputation (Ibn Khallikan, iii. 309; Rāzī al-
Bārī al-
Ṣafā, i. 85) he could bring the ʿilm al-
Maṣūṣ
or practical art to bear upon the discussions.

So whilst he was more thorough than the Greeks in
handling the physical bases of sound, he could
also make valuable contributions to physiological
acoustics, i.e. the sensations of tone, a question
which the Greeks left practically untouched.

By the time of al-
Fārābī further additions had
been made to the scale. The principle by which
the Persian and Zaldjalian ṭaṣāṣa frets
at 303 and 355 cents had been determined, was also
applied to the insertion of corresponding muqaddamāt frets,
between the muʕāb and the rabbāh, at 145 and 168 cents, with the result that there were now three muʕajarrāb frets known respectively as the Ancient, Persian and Zalzalian, whilst the one at 114 cents had disappeared. Here is the fretting of the late in Al-Fārābī's day:

Al-Fārābī also noted the scale of the ḫūddar al-khuṣaṣṣi proceeding by a lāmmam, lāmmam, lāmmam, which doubtless was prompted by al-Kindī's speculations. It became the patent of the later century of the Systematist School. In describing the scales of the rabbāh or rēbi, he shows one of the just minor third (316) and just major third (356).

The next great writer after al-Fārābī was Abū 'l-Wafā' al-Buzjānī (d. 388 = 998) [q.v.], the most eminent of the Arabic writers on mathematics. His book on rhythm (ḫūd) has unfortunately disappeared, although its importance has been testified to (Pibl. Ind., 1849, p. 93). The contemporary encyclopedists, the Ikhwān al-Safā' in their Rasīs' al-Maḥmūd b. Ahmad al-Khwārizimi in his Maṣāḥeth al-tūn, also deal with the theory of music. The latter does not break fresh ground although his work is helpful in controlling others. The former, however, are of considerable import because of their able and lucid treatment of acoustics. Here is an instance. According to Helmholz (op. cit., p. 10), musical tones are distinguished by their force, pitch and quality, and the force of a musical tone, he says, increases and diminishes with the extent or so-called amplitude of the oscillations of the particles of the sounding body. Preece and Stroh refused to accept this definition and pointed out that loudness does not depend upon amplitude of vibration only, but upon the quantity of air put in vibration (P. R. S., xxviii., p. 356). The Ikhwān al-Safā' had already enunciated this opinion. "Hollow bodies" they say, "like vessels, will resound for a long time after they are struck, because the air within them reverberates time after time until it becomes still. Consequently, the wider the vessels are, the greater the sound, because more air is put in vibration" (i. 89). They also recognized the spherical propagation of sound (i. 88), which was an improvement on the Aristotelian De aërialibus (802, a) which said that "the direction of sound follows a straight line" (cf. Vitruvius, De arch., v. 3).

The next writers whose works have been spared were Abū Sinā (d. 428 = 1037) [q.v.] and Ibn Zaila (d. 440 = 1048). Two treatises on music stand to the credit of Avicenna, as he was known in Europe, and they are contained in the Shīfā (India Office MS., 1811) and the Naǧāt (Bodleian MS. Marsh., 521) (Ibn al-Kīfī, p. 415; Ibn Abī Čaṣībī, ii. 2; cf. Casiri, i. 271). Unlike al-Fārābī, the Ḫūšar al-ẓāri is not a practical musician, yet his biographers claim that he dealt with the question on the theory of music which were neglected by the Greeks. He is scientific and philosophic in his approach, and even critical at times, but he displays little of that originality that is so apparent in his other writings. Ibn Zaila was his disciple and echoed his opinions, although some fresh details emerge when dealing with the practical art. He quotes from al-Kindī on the question of rhythm, and is useful on that account.

Egypt also contributed its quota of music theorists, two outstanding writers being Ibn al-Haṭīyah (d. 430 = 1039) [q.v.] and Abū 'l-Sālih Umayr (d. 528 = 1134). Ibn al-Haṭīyah appears however to have written commentaries on both the Ḫūṣar and the Ḫūṣar al-ẓāri. The Kitāb al-Ṭūn of Euclid (Ibn al-Kīfī, p. 168; Ibn Abī Čaṣībī, ii. 90). Although there were several Arabic commentaries on Euclid's Cavern, not one appears to have survived. Yet we have two at least in Hebrew whose authors-probably depended on Arabic works. One of these was Moses N. Levy (Haaley) who quotes Şhâb Qon Tob b. Isaac Shafrūštū and the other was Isḥāq b. Isaac (Bede erq bazyb Ŧīrū, Year i., xxix. xcm). The Kitāb al-Ṭūn of Abū 'l-Sālih was probably of some importance since it is quoted by Jewish writers (Ibn Abī Čaṣībī, ii. 52; Alkhwāz, Fers., No. 5536 [5]; P. Duran, Gram., Vienna, 1863, p. 37). In Syria we have Ibn al-Nakṣāzī (d. 574 = 1178), Abū 'l-Hakam al-Bahlī and his son Abū 'l-Maḏāj Muḥammad (d. 576 = 1180), and Abī Amān al-Dīn Kāzīr (d. 649 = 1251), all of whom were interested in the theory of music (Ibn Abī Čaṣībī, i. 144, 155, 162, 164, 181; Ibn Khallīkān, iii. 477), whilst further East we have such names as Ibn Ma'ān (d. 551 = 1156), Abī al-Mu'tamin b. Şafi al-Dīn (with thirteenth century); Fakhr al-Dīn al-Rāzī (d. 606 = 1209) [q.v.], and Nasīr al-Dīn al-Tūnī (d. 673 = 1274) [q.v.] (Ibn Khallīkān, iii. 467; Bodleian MS. Ouseley, No. 117: Brit. Mus. MS. Or. 2972; Paris Bibli. Nat. MS. Arabe No. 2466). In the West, the two theorists of consequence are Ibn Bābījīya (d. 532 = 1138) [q.v.] whose book on music enjoyed the same reputation in the West as that of al-Fārābī in the East (al-Maṣṣārī, Anāfī, i. 125); and Ibn Ruṣūḍ (d. 594 = 1198) [q.v.] whose commentary on Aristotle's De anima reveals that lucidity of treatment in the section dealing with the phenomena of sound that made him so famous on other questions.

The Systematist School. After Ibn Sinā and Ibn Zaila, the most thorough exposition of the theory of music, so far as existing documents show, was made by a musician in the service of the last Caliph of Baghdaḏ, named Şafī al-Dīn Abī al-Mu'min b. Fākhrī (d. 692 = 1294) [q.v.], the author of two estimable works, the Kitāb al-Shu'rafiya and the Kitāb al-Adwar, which almost every subsequent writer in music uses as his principal authorities. A later theorist, Abī al-Kādir b. Ġabīlī, frankly admitted that Şafī al-Dīn was the fountain head in music theory, whilst a modern has called him "the Zalzino of the Orient" (Kiesewetter, p. 13), and many commentaries have been penned on his theories. Şafī al-Dīn was no mean physicist, and he attacks both al-Fārābī and Ibn Sinā when
he finds that their terms and definitions are inexact. Much of it may be mere quibbling over verbal niceties, but it redounds to his credit that he realized that in a science we must start off with terminological exactitudes. Like al-Fārábī, he was a practical musician, and the reform of the scale, which must be attributed to him (cf. Helmholz, p. 286), was possibly due to this fact. The Greek scholars had done much to stabilize Arabian music theory, yet anomalies still existed. The most notable was the Zalzalian wusūfī note at 355 cents together with its attendant sixth at 533 cents. These did not conform to the scholastic scale which produced a succession of fourths (cf. Helmholz, p. 281). It was to remedy this defect, it would seem, that Saḥī al-Dīn laid down a new theory of the scale in which the octave was divided into seventeen intervals in the succession of ḥamma, ḥanna and ḥonna, which enabled him to embrace the fractional Zalzalian notes of 355 and 533 cents by close approximations which worked out at 384 and 882 cents. This scale, which has been considered “the most perfect ever devised” (PARRY, ART OF MUSIC, 1st ed., p. 29), gave consonances purer than our scale of equal temperament an affront (RIEMANN, CATECHISM OF MUSICAL HISTORY, p. 63). It is no wonder therefore that Helmholz has considered the theory of the Systematist School so “noteworthy in the history of the development of music” (p. 283). Here is the scale of Saḥī al-Dīn:

After the fall of Baghdad (654 = 1256), the hub of culture moved farther East, and the writings of the Systematist School have to be sought as much in Persian as in Arabic. Most of this literature has been preserved. Kūṭ al-Dīn al-Shirāzī (d. 710 = 1310) [q. v.], who devoted a valuable treatise to the “science of music” in his Dōrrat al-Tadh (Brit. Mus., MS. Add. 7694), was the first of these writers in Persian. He was followed by Muḥammad b. Muḥammad al-ʿAlī (viith = xith century), whose Nūfāṣ al-Funūn also has a section on music (Brit. Mus., MS. Add. 16827). Another xith century Persian work deserving of mention is the Ḥanūs al-Thāqaf (Brit. Mus. MS., Or. 2361). More important were the four works of ʿAbd al-Kādir b. Ghābī (d. 839 = 1435) [q. v.], entitled the Dāmī ṣalt al-ʿĀkīn, with its two epitomes the Dāmīṣ al-ʿĀkīn and the Dāmīṣ al-ʿĀkīn, the most famous of all since it contained noted music, has disappeared. Ibn Ghābī depends on al-Fārābī, Ibn Sinā, and Saḥī al-Dīn, but is by no means servile. What he adds to our knowledge of the music of his day concerns the practical art. Both his son and his grandson were theorists, and their works still exist, the Naḥwāt al-Azhwār and the Mikhāṣ al-Aḥwāl (Nūrī ʿUṭmānīyā Library, Nrs. 3646, 3649). They were in the service of the Turkish sultāns, who were now patronizing this class of savants, and we find two theorists, Khādir b. ʿAbd Allāh and Ahmad Uḥūl Shukrullāh, writing in Turkish, the latter transcribing the Kitāb al-Azhwār of Saḥī al-Dīn (LAVESCA, No. 2978). They were eclipsed, however, by two Arabic writers, the author (f. 855 = 1431) of the Muḥammad b. Murād Treatise (BRIT. MUS., MS. OR. 2361), and Muḥammad b. ʿAbd al-Ḥamīd al-Lāḏīkī (f. 886 = 918 – 1431 = 1512), the author of the Rīḍāt al-Futūḥīya (BRIT. MUS., MS. OR. 6629). Al-Lāḏīkī is the last writer to deal in an appreciable way with the speculative theory of music which had been suscitiated by the Scholastics (cf. KIESWETTER, p. 88). As for the author of the Muḥammad b. Murād Treatise, we have in him an able mathematician who places the Arīqīnsī of Nicomachus and Ibn Sinā under contribution. He is replete with argument and carefully examines the statements of his predecessors on questions of acoustics. We find him saying that he had put certain theories to practical test and found them wanting. He gives divisions of the string other than those laid down by Saḥī al-Dīn.

The contemporary encyclopaedias also contain a section on music, the most noteworthy being the Dāʾer al-Naẓīm (Vienna MS., NF., No. 4) or Ḥirāz al-Raʿīzī (BIBL. IND., 1839) of Muḥammad b. Ibrahim al-Ḫafṣ (d. 749 = 1348), the Māḥād al-Qanūn (BRIT. MUS., MS. OR. 3143) attributed to Ṭālib b. Muḥammad al-Djurdjānī (d. 871 = 1431), and the Qanūn al-Qanūn (Vienna MS., NF., No. 7) of Muḥammad Shāh Ṣanībān b. Muḥammad al-Ṣanībān (d. 839 = 1435). To al-Djurdjānī may also be ascribed the Shāfiʿī ʿAbās b. Ḥusayn, the most thorough and illuminating commentary on the theories of Saḥī al-Dīn ʿAbd al-Muʿīn, and the most strikingly original treatment of the physical and physiological rudiments of sound (BRIT. MUS., MS. OR. 2861). After the close of the xith (xith) century, treatises on the ʿilm al-maḥfūzī are rare. Writers abound who profess to deal with it, but actually they are only concerned with the practical art. If any ʿilm is displayed in these later books it is the ʿilm al-maḥfūzī, and authors fill their pages with astrological tables linking up the twelve ḥanūs of the heavens with the twelve musāḥā, and so forth. Many treatises are written in verse, a form which, however much it may attract the pure aṣbāb lover, is scarcely suitable in dealing with a science. The author of one of these however, Shams al-ʿIm al-Saʿdī, al-Dhāshābī (or al-Dinshābī), is worthy of attention by reason of his use of a device for the purpose of a musical notation, a device which may be traced to the year 1200 at least (BODELEAN MS., MARSH., NO. 82; PARIS BIBL. NAT. MS., ARABE, NO. 2480). In the West, treatises on the theory of music are scarcer still. Ibn Khaldūn (d. 809 = 1406) [q. v.] gives a glimpse of what was taught under this heading in his day (FRAT SC., IV, 410), but actual works are rare. A certain ʿAbd al-Rahmān al-Fāṣī wrote a treatise in 1650 entitled the Kitāb al-Ḍāmīṣ fi ʿilm al-Maḥfūz bi-L-Qanūn (AHLWART, FERN., NO. 5521), but its author borrows his theory from older authorities (FARMER, AN OLD MOROCCAN TUTE TUTE, p. 14).
The Modern School. The chief feature of this school is the so-called quarter-tone system, which is the most important theorist is Mishk close to Shugārān. (d. 888) [q.v.]. The system was not invented or introduced by him as Parrot supposed (Rappert, p. 21) because Shugārān himself tells us that it existed before his day (M. F. O. W. 52, 165). Nor can we say that the xiiith century was the period of its origin (cf. Lachmann, *Greek Dict. of Music*, i. 576), since we know that it was practiced in the xviith century as Baron de Tott (La Borde, l. 439-439), Todeschini (l. 243) and Murat (Festis, ii. 365) have shown. Nor can it be traced in a MS. mentioned by Vitielloe, as Land suggested (*Recherches*, p. 77-78), because this work can be identified with a MS. entitled *Shafrar* *d*ār Al-Abnam (Brit. Mus., MS Or. 1535) in which there is no mention of the quarter-tone system. How did the system originate? Dr. Lachmann holds that it was due to the needs of transposition (*Greek Dict. of Music*, i. 576). On the other hand, Collanettes avers that in actual practice (for the lute is no longer fisted) it is simply the Systematist scale to which several smaller intervals have been added (p. 449). Some of the technical terms used in the system are of Persian origin; such as those for the quarter-tone, three quarter-tone, and tone, *nim wa'at, tik wa'at*, and *baras*. Further, as early as the xiiith century, as we know from Ibn Shāhi, Shihāb al-Dīn al-Adāmī, and the author of the Muhammad b. Murād Treatise, intervals finer even than those of the Systematist School were being used in the newly-adopted *‘alabs* on modal extensions, which were not used in the time of Šāfi al-Dīn *‘Abd al-Mumīn, although they are part of the earlier* (2) Persian system as reflected in the *Rahqat al-Rūḥ* by *‘Abd al-Mumīn b. Šāfi al-Dīn (Boelean MS., Ouseley, No. 117). A Persian origin of the quarter-tone system is, therefore, not unlikely, although Mahmūd Rāghīb, a well-known writer on Turkish music, argues in favour of a Greek origin (see the Turkish journal *Mīlī Mūzīmā*; May-Oct., 1927, and the *Turkische Zeit.*, June and Aug., 1928). In the xvith century we have evidence (La Borde, l. 436) that the octave was divided into twenty-four equal parts of 50 cents each producing a scale comprising three major tones of 200 cents, each divided into four quarter-tones, and four minor tones of 150 cents, each divided into three quarter-tones:

| CENTS | 200 | 150 | 150 | 200 | 150 | 150 | 150 | Total 1200 |

Mūshā’kā ātells us that he was dissatisfied with the theories of his day in regard to their division of the octave (cf. Murat’s division of the octave into 55 commas). There was certainly a difference so far as Egypt was concerned, since one theorist divided even the minor tones into four parts as well as the major tones, thus giving twenty-eight intervals to the octave (Muhammad b. ʿīnāl Shihāb al-Dīn). At any rate, Mūshā’kā attempted to lay down a principle that would establish the quarter-tone system on a proper basis. His method is by no means clear (Land, *Recherches*, p. 75; Collanettes, p. 447, 418), but Ellis (J. S. A., p. 497) and Parrot (*Mus. orient*, p. 15-16) believe that he was aiming at a quarter-tone system of equal temperament, twenty-four to the octave, which was actually the scale (see La Borde, p. 132) that he found in use (cf. Collanettes, p. 419).

This is the same scale as the preceding with the exception that the base has been given a lower note in the system, i.e. *‘akāb* instead of *raa*. The system of the quarter-tone scale generally accepted to-day throughout the Islamic Near East (Collanettes, p. 415), and even in Middle East (Ali Naqā Khan Wazir).

Although in the Maghribi poetry little is written about the theory of music nowadays, yet in Egypt, Persia, and Turkey, there is no lack of books on the subject, as the *Bibliography* shows, although many of the treatises are only manuals for practitioners. Even in Turkestan, where the half-epochs of the Soviet works are being published, during the last decade a great fillip has been given to the study of the theory of music by the establishment of conservatories of music in the great Omer capital and chief cities, notably the Dār al-‘Ilm at Constantinople and the Nād al-Mu‘āthn at Cairo.

MUSIKI — MUSLIM

(H. G. Farmer)

MUSLIM (A.), part. IV of S-LM), denotes the adherent of Islam [i.e.]. The term has become current in some European languages (also in the forms musulm, muslime), as a noun or as an

General works on Arabic, Persian, and Turkish music theory. A., 1873; Barliour de Meynard, Ibrahim fili de Mehdie, in J. A., 1869; Land, Recherches sur l'histoire de...
adjective as well as both, side by side with Muslim, m (in different forms). It has replaced Musulmān (in different forms), except in French, where the latter term is used as a noun and as an adjective. The origin of musulmān is probably muslim with the ending ʿan of the adjective in Persian. In some countries, e.g. Germany and the Netherlands, popular etymology has taken man for the vernacular “Mann, man,” whence the plural forms Musulman, Musulmān etc. These forms have, however, become antiquated — in Arabic literature the term Muslim is and has always been used to denote the adherents of Islam. See further the art. IMĀM, AMIR AL-MUSLIMIN.

MUSLIM b. 'A ṬIL, cousin of 'Usain b. Abi. The latter, taking refuge in Mecca after the death of Muʿāwiyah I, sent him to study the situation in Kūfa where the partisans of 'Abi were meeting to come and proclaim himself caliph. Muslim there made peace with the descendants of Shīʿa. He went to Nejran and joined them there and took command of the movement in person. In the meanwhile, the energetic 'Utaīd Allāh b. Ziyād had replaced the irresolve Nuʿmān b. Baghīṣ [q.v.]. Realising the seriousness of this change Muslim took refuge with Hani b. 'Uzwa [q.v.]. A stratagem devised by the new governor soon revealed his hiding place. Hani having been captured, Muslim, abandoned by all his followers, wandered from one place to concealment to another. The descendants of Asjāḥ b. Kais [q.v.] revealed the secret of his last hiding-place — a deed which earned the family the hatred of the Shīʿa. The unfortunate 'Abi when discovered surrendered to the Shīʿa and was killed with the rest of the descendants of 'Utaīd Allāh. His head was sent to the caliph Yazid I.

(M. LAMMENS)

MUSLIM b. AL-HADJJDĀ'A b. 'UḥSAIN AL-KUṢAI`I AL-NABARĀ'I was born at Nisābūr in 202 (875) or in 206 (881). He died in 261 (875) and was buried at Nayarābād, a suburb of Nisābūr. An anecdote regarding the cause of his death is related by Ibn Ḥadjas (see Bibliography). His fame is based upon his Shāfīʿī, which, along with Bukhārī's book of the same name, enjoys the highest fame among the collections of traditions. Muslim travelled widely to collect traditions, in Arabia, Egypt, Syria and 'Iraq, where he heard famous authorities such as 'Abd al-Basir al-Hanbal, Haraḥ, a pupil of Shafiʿī, and Isḥāq b. Kāhitya. His Shafiʿī is said to have been composed out of 300,000 traditions collected by himself. He wrote a large number of other books, on Shafiʿī, traditions and biography, none of which seems to have survived.

The Shafiʿī differs from the other collections of canonical hadith in that the books are not sub-divided into chapters, whereas in Bukhārī's work the traditions act as examples of the tarāqama. Still, it is not difficult to trace in the order of the traditions in Muslim's Shafiʿī a close connection with corresponding ideas of Ḥārām. As a matter of fact the groups of traditions have been provided with superscriptions which may be compared with Bukhārī's tarāqama; this was not, however, done by Muslim himself, as appears from the fact that the headings are not uniform in the different sections of the Shafiʿī.

A second difference between Muslim and the other collections consists in the fact that he has peculiar attention to the 'isnad's, to such an extent that a tradition in his work is often followed by several different 'isnad's which serve as an introduction to either the same or to a slightly different tradition. Such a new 'isnad is indicated in the text by ʿ (taḥili or ḥuwa ila “change”). Muslim is praised for his accuracy regarding this point: in other respects, however, Bukhārī is superior to him, as is even recognised by a man so devoted to him as al-Nawawi, who wrote upon the Shafiʿī a commentary, which in itself is a work of immense value for our knowledge of Muslim theology and Ḥārām.

Muslim has prefixed to his work an introduction to the science of tradition. The work itself consists of 52 books which deal with the common subjects of hadith: the five pillars, marriage, slavery, banner, hereditary law, war, sacrifice, manners and customs, the Prophets and the Companions, proscription and other theological and eschatological subjects. The book closes with a chapter on the Kūfa (Ṭaḥṣīl), the shortness of which is several times outweighed by the value of the ʿIstād al-Imām, which opens the work, and which is a complete survey of the early theology of Islam.

MUSLIM b. KUṢAI`I, b. MAKARIM OF THE ARAB FAMILY OF THE ČAHLĪS [See ʿORFĪH] was the most important ruler of the last great Arab dynasty in the Naher East; during his reign the struggle between Fāṭimids and 'Abbāsids for supremacy in Syria and Mesopotamia was decided in favour of the latter. In the year 432 (1042) the 20 year old Muslim was chosen chief of the tribe after the death of his father Kuṣai`i b. Badrān and succeeded him as ruler of Mūsul. Like most Arab rulers of the lands of the Euphrates he recognised the Fāṭimid caliph in Cairo as his suzerain partly because he was himself a Shiʿite. Quite early in his reign he began to cherish the ambitious plan of gradually extending the rule of his tribe over Mesopotamia. Every means of extending his power was taken by him. The first opportunity occurred
when in 458 (1066) the Saldjik Suljan Alp Arslan [q.v.] after conquering the Khazarimans was proceeding to establish his supremacy in Syria. For this he had to entice the Arab chiefs from the sphere of influence of the Fatimid caliph and win them over to an alliance with him and to a recognition of the Abbassid caliph. He therefore concluded an alliance with Malik Shab, he turned in 477 (1084) against a Saldjik prince of Asia Minor, Sulaiman b. Kutalmish, who had taken Antioch from the Byzantines and demanded from him the same tribute as the Byzantines had paid. When Sulaiman refused to pay, he advanced against him with a force of Arabs and Turkomans. In the neighbourhood of Antioch in Safr 478 (May 1085) the forces met, unexpectedly for Sharaf al-Daula; his troops, who hated Malik, went over to Sulaiman. Malik was defeated and slain along with 400 of his Arabs (cf. Ibn al-Adim, fol. 68b). With his death the power of the Uqaisids was at an end. They lost Aleppo on Muslim's death and only survived a few years longer (till 489 = 1090) as governors of Mopsul [see Organi].

Muslim is described as an able and just man and his tolerance of Christians was remarkable. His rule is said to have been able and orderly and indeed he did bring the finances of Aleppo into order in a very short time after taking it. In any case he had wide vision and successfully endeavoured to maintain the power of the Arab tribes in Syria and Mesopotamia. It ceased with him; Turkish generals became the rulers of Syria and Mesopotamia.

Muslim b. U'kba of the tribe of the band Murra, a famous leader in the armies of the Sufyanid caliphs. We know very little about the early stages of his career. We find him early established in Syria to which he probably came with the first conquerors. Completely devoted to the Umayyads and of great personal value, he led a division of Syrian infantry at the battle of Si'lim. But he failed in an attempt to take the oasis of Dumat al-Djamal [q.v.] from 'All. The caliph Mu'awiyah appointed him to take charge of the khurajj, the finances, of Palestine, a lucrative office in which he refused to enrich himself. Muslim was prominent at the death-bed of Mu'awiyah. The caliph had charged him and Daghheb b. Kais [q.v.] with the regency until the return of Yazid who was in Anatolia at the head of his troops. The confidence which the great Sufyanid had in his loyalty is seen in his advice to his heir. "If you ever have trouble with the Hi'djat, just send the one-eyed man of the tribe of Murra there" (Muslim had only one eye). This time had now come.

Muslim had been a member of the embassy sent to Medina to bring the Aṣ'ar back to obedience. All other efforts at conciliation having failed, Yazid I decided to resort to force. In spite of Muslim's age and infirmities, Yazid felt he was the man to command the expedition. He was obliged to travel in a litter so infirm was he. At Wadi l'Kurain, Muslim met some Umayyads who had been driven out of Medina; these exiles informed him of the military situation of the town. When he reached the oasis of Medina, Muslim encouraged on the barra of Wäkim and for three days awaited the result of the negotiations begun with the rebels, Anšar and descendants of the muhajirun of the Kuraih. On the fourth day, all veterans
having been rejected, he made his plans for battle. It was a Wednesday, the third last day of Dha 'l-Hijja 63 (Aug. 26, 27, 683). After a slight initial advantage for the Anṣār, the battle ended at midday in the complete rout of the rebels. The Syrians followed them into Medina and began to plunder the city. Anti-Umayyad legend has much exaggerated the horrors and the duration of this pillaging which it extends to three days. On the day after the battle, Muslim's intervention restored order and he used the next few days in drawing up the case against and trying the principal leaders of the rebellion who had fallen into his power.

Having established order in the town, which he left in charge of Rawḥ b. Zimāḥ, in spite of the aggravation of his malady, he resumed his march on Mecca to deal with 'Abd Allāh b. al-Zubair [q.v.] who had rebelled against the Umayyads. Arriving at Mushqalāl [q.v.] he became so ill that he had to stop. In obedience to the caliph Yazid's instructions, he appointed him in command of the army Husain b. al-Numair [q.v.], his second in command. He died at Mushqalāl, where his tomb long continued to be stoned by the passers-by. Writers with Shi'a sympathies are fond of twisting the name Muslim into Mūsirf (criminal: an allusion to Īrān, v. 36: vīt 79: nl. 24, 26, 36 and passim). One statement which must be a ridiculous exaggeration puts his age at 90. Every thing, however, points to his having been born before the Hijra. He died a poor man. This disinterestedness is not the only feature in his character which makes us take him as one of the most representative of the types of this generation of soldiers and statesmen, whose talents contributed so much to establish the power of the Umayyads. Duyi described him as "un Hé-min d'indifférente". Muslim, it is true, retained all the proverbial uncouthness (qīfūf) of the Banū Murra. But his whole career reveals the Murri general as a convinced Muslim of a rectitude rare in this period of unsettlement, which saw so many extraordinary vicissitudes of fortune and wavering loyalties.

**Bibliography:** Tabari, ed. de Goeje, i. 338; ii. 198, 409-425, 427. Other references are given in the writer's *Califat de Yazid lère*, p. 223 sqq., reprint from M.F.O.B., v. 225 sqq., and in his *Etude sur le règne du calife omeyyade M/ḥāsir lère, in M.F.O.B., l. sqq., p. 19, 45, 265, 373.

**MUSLIM B. AL-WALĪD AL-ANŚARI (called Sādir al-Ghājūnī = "he who is laid low by the fair ones", as was al-Kūthāmi [q.v.] before him), an Arabian poet of the early 'Abbasid period, born in Kufa c. 130-140 (747-757), d. 208 (823) in Dijrādān. His father, a weaver [q.v.] of the Anṣār [q.v.], was a weaver. Nothing is known of the poet's education. He probably got his literary training not from particular teachers or from books but in the busy life of the Mesopotamian cities, the intellectual life of which had risen to a still higher level with the advent of the 'Abbasids. Like most of his contemporaries he earned his living as a poet by writing panegyrics and was acquainted with many statesmen and emirs. Among the former were the general Yazīd b. Maz yard al-Šaybānī (see Dīwān, No. 1, 60, 16, 49), Dāwūd b. Yazīd al-Muhallabī (No. 20), Ma'ṣūr b. Yazīd al-Ḥimārī (No. 31) and many others. He gradually

won the favour of the influential Barmakids (cf. No. 17, 40, 45) and of the caliph Harūn al-Rašīd (No. 14, 41, 57); according to one story, he received his nickname from the latter on account of a verse of his (No. 3, 35; cf. also No. 23, 39). He even mentions the caliph's sister Aḥṣā in an ode (No. 57, 10). The fall of the Barmakids about 803 (803) did not affect his career; he dedicated some of his odes to al-Amin (No. 7, 28, 30) but his principal patron in later times was al-Ma'mūn. His most famous work was written to the order of Caliph 'Abd al-Malik [q.v.]. Through his intervention he received from al-Ma'mūn an official post (probably gāḥub al-burād) in Dijrādān. He remained faithful to Faḍl b. Sahl until his death in 802 (818), and out of grief for him he wrote no more. There is a story told by his rawi according to which he destroyed a considerable part of his poems before his death.

As regards the matter and style of his poems he was on quite traditional ground. In addition to his old-fashioned odes and elegies his satires are particularly interesting in this respect; in his polities with the otherwise little known p. 155 al-Ḵanbar on the merits of the Anṣār and Karājah. His second work revived the polities of al-Farāḍāz [q.v.] or an al-Tirmidh [q.v.] on a similar subject. The two hundred years of development of Arabic poetry were naturally not without influence on him; in his nasīhs we frequently find the style of an Ummah b. Abī Rāfī or al-Abbas b. al-Aḥsan [see Dīwān al-Aḥsan], Muslim's contemporaries. His drinking songs deserve special mention. Although Nodkheš only very rarely finds in them "the natural effusion of Bacchantic joy as so frequently in Abū Naṣr [q.v.}", Arab critics are of another opinion. These two poets are to them practically the same in this respect and we must confess they are right.

His drinking-songs are not only of great value for the descriptions of society and social life in the cities but from the point of view of poetry they are among the best of Muslim's work. If we must, as regards subject matter, number Muslim among the imitators of the old poets, in style he belongs to the more modern period. The historian of Arabic literature frequently mentions him as the first to introduce the "new style", al-khafīf, with its tropes and figures. This is however not quite such a simple point; the "new style" arose only gradually in Arabic poetry, although Muslim with his contemporaries, Baḥšābūr b. Burd [q.v.], Abī Naṣr et al., was one of the first who definitely struck out on the new path. The younger generation, especially Abū Tammān [q.v.], drove this new style to banality.

Muslim was on terms of friendliness or enmity with many contemporary poets, e.g. Abū Naṣr, Abū ʿAṭāyya [q.v.], al-Abbas b. al-Aḥsan (who maliciously called him Sādir al-Ghājūnī or Sādir al-Kāfī; see Dīwān, No. 44), Abū ʿIṣr [q.v.], al-Husain al-Khāli [q.v.]. His literary influence was however considerable: Dīwān [q.v.] was his pupil (which did not prevent him exchanging satire in the manner of the Abū Tammān) and al-Tammān was particularly fond of studying his poems. His Dīwān has been transmitted in very unsatisfactory fashion; it was collected in alphabetical order by al-Suh [q.v.], but this edition has not come down to us there are a few traces of it in the Kullāṭ al-Ǧāmi`); another story speaks of the collection made by the philologist al-Mubarrad. The only known European manuscript (Leyden)
on which de Goeje's edition is based, contains a portion of his poems (including a few sonnets); see Barber de Meyers, op. cit., p. 117 sq.). It represents an unknown edition and is of little importance for the criticism of the text.

**Bibliography:** Deacon Poetae Arabo-Malab. Milit. Libri, Al-Walid Al-Malab, ed. C. C. Bartoli, de Goeje, Leyden 1875 (unfortunately without an index of rhymes); the Cairo edition of 1325 (Matha'at Madrasat Wahdat Abūs-Salāw, 8, p. 97) although called 'Taḥdīth al-Maṣūma, repeats de Goeje's text in an alphabetical arrangement; the Bombay lithograph of 1503 (1856) is not accessible to me (see Recoser, op. cit.; it claims to give a better text than the Leyden edition; see Sarkis, op. cit.). Most of the sources are given by de Goeje in his edition (p. 225–310); the most important is of course the Kitāb al-Āqāmî (p. 225–271).

IGN. KRATSKOVSKY

**MUSNAD.** [See HADITH, IV.]

**AL-MUSTAṬFĀ IBN AMR AL-SIYĀS.** Abu Muḥamnad Al-Hasan, 'Abbās b. 'Alā', born on 23rd Sha'bān 536 (March 23, 1142), son of al-Mustaṭfā and an Armenian slave named Ghadda. After his father's death on 9th Rabi' II 566 (Dec. 20, 1170) al-Mustaṭfā succeeded him and at the beginning of the following year was formally recognised as caliph in Egypt also, which passed into the hands of the Ayyūbids at this time [see the article FAṬMĪS, ii, 96]. The assassins of al-Mustaṭfā soon quarrelled among themselves. 'Aṣṣāl al-Dīn [q. v.] whom al-Mustaṭfā had been forced to make vizier was dismissed by 567 (1171–1172) at the instigation of the emir Kaimaz. In Dhu 'l-Ka'ba, 568 (May 1175) the latter was about to attack the treasurer Zahir al-Dīn b. al-'Aṭār, but the latter fled to the caliph whereupon Kaimaz began to besiege the palace of the latter. Al-Mustaṭfā appealed to the people to help him; the house of Kaimaz was pillaged and he himself fled but died soon afterwards and 'Aṣṣāl al-Dīn again became vizier. Al-Mustaṭfā already had quarrelled with Shīmūr, lord of Khūṭātān. In 569 (1173–1174) a war broke out between the latter's nephew Ibn Shānḳā and al-Mustaṭfā; Ibn Shānḳā was soon taken prisoner and put to death. The insignificant al-Mustaṭfā died on the 2nd Dhu 'l-Ka'ba or, according to another statement, at the end of Shawwāl 575 (end of March 1180).

(KE. V. ZETTERSTEEN)

**MUSTADJĀB-KHĀN BAHĀDŪR (NĀWĀB),** thirteenth son of the celebrated Rohilla leader Ḥāfiz al-Mulk Ḥāfiz Rahmat-Khān (1707–1774) and author of a biography of his father, which he wrote in Persian under the title Gūšistān-i Raḥmat. Ḥāfiz Rahmat-Khān, who was an Afgāni of the tribe of Yūsufzān by descent, had been since 1748 a chief in Rohilkhand (Kateh) and throughout his life waged a bitter warfare with the Māhīūrān. He fell in 1774 in a fight at Mīrānpir Kūta where he was fighting against the combined forces of the Nāwāb of Oudh Shajī al-Mulk and the English. Warren Hastings in supporting the Nāwāb with English troops became the subject of a judicial investigat ion. Mustadjāb-Khān's book describes Ḥāfiz Rahmat-Khān as a fine representative of Afgāni chivalry and contains much of value for studying the relations between the individual Afgāni tribes.

(E. BERTHELS)

**MUṢṬAFĀ I.** the fifteenth Ottoman Sultan, was born in the year 1000 (1591) as son of Muḥammad III. He owed his life to the relaxation of the.=fānī= authorising the killing of all the brothers of a new sultan and was called to succeed his brother Ahmad I at the latter's death on November 22, 1617. But his weak-mindedness—which is said to have made him escape from account of superstitious fear of Ahmad—made him absolutely incapable of ruling. Ahmad's son Othmān, who felt himself entitled to the succession, had little difficulty in procuring Muṣṭafā's deposition in a meeting of the Imperial Divan, by the Ḵālīṣah, the muftis and the kāfīmāḥān, the grand-vizier Ẕālī Pāsha [q. v.] being absent. This happened on February 26, 1618. Unexpectedly Muṣṭafā I was again called to the throne when, on May 19, 1622, the rebellion of the Janissaries broke out against Othmān II. He was taken by force from his seclusion in the hareem and the Janissaries forced the =alāmī= to acknowledge him as sultan. The next day Othmān was killed and until June the grand-vizier Ẕālī Pāsha, the man responsible for the murder, remained in power. Then he was deposed by the caliphate. The real masters were the Janissaries and Sipahî's; several grand-viziers were nominated and deposed again at their pleasure. The Sipahî
party began, after some time, to exact vengeance for Oğmân and in January 1623, when Guruji Muhammad Pasha [q. v.] was grand-vizier, Dəniẓ Pasha was killed. Soon the Janissary party came again to influence under the grand-vizier Meḥammad Pasha (Feb. 3). The latter succeeded in maintaining himself until August 20; then the general feeling amongst the 'ulama' and the people, combined with the steadily growing opposition in the provinces against the tyranny of the militar in the capital, as manifested by the action of Saif al-Dîn 'Oğlî in Tripolis and still more by the revolt of Abâzeh Pasha [q. v.] in Erzurûm, brought about Meḥammad's deposition. The new grand-vizier, Kemâneş Kâli Pasha, together with the muftî, deposed the sultan on Sept. 10, 1623 and called Alîmdâr's son Murâd to the throne.

During all his reign Muṣṭafâ continued to give signs of his complete mental aberration; he died in 1635 and was buried in the Aya Sofâ. The only important international act that took place during his reign was the peace concluded with Poland in February 1623.

Bibliography: The Turkish sources for this period are the historical works of Na'imî, Hâddîrî Khâla'î (Fetaleh), Pecêweh, Ḥasan Bey Zâde and Tüçî. Contemporary reports in in the Memoirs of the English envoy Sir Thomas Roe. Further the general historical works of von Hammer, Zinkeln and Jorga. (J. H. Kramer)

MUŞTAFÂ II, the twenty-second Ottoman sultan, was a son of Muḥammad IV. Born in 1604, he succeeded to his uncle Ahmad II on February 6, 1695, at a time when the empire was at war with Austria, Poland, Russia and Venice. The new sultan in a remarkable khalîfî cheirîf proclaimed a Holy War and carried out, against the decision of the Divân, his desire to take part in the campaign against Austria. Before his departure a mutiny of the Janissaries had cost the grand vizier Defterdar 'Ali Pasha his life (April 24, 1693) and the campaign was led by the new grand vizier Elīmâs Muḥammad Pasha [q. v.]. The Turkish army operated not without success in the region of Temesvár, taking Lâmpa, Lugov and Seljes. The Venetians had been beaten in February near Chios and were beaten again in September. In October Azof was delivered from the Russian siege next year the sultan and his army were again successful in raising the siege of Temesvár, but no part of the lost territory could be recovered from the Austrian. That year, however, the Russians took Azof. The campaign of 1696 is memorable for the heavy defeat inflicted on the Turks near Zenia on the Therîs (Sept. 11), where Elnmâs Muḥammad lost his life, while the sultan, who had already crossed the river, had to fly to Temesvár. The imperial seal fell into the hands of the Austrians. From Temesvár Muṣṭafâ nominated 'Amâdâ Jâde Hûsain [q. v.], of the Kopru family, his grand vizier. Under this very able statesman peace was at last concluded. In 1698 the grand vizier went to the frontier, while the sultan stayed at Adrianople, but the peace negotiations were pursued more earnestly than the war. In October of that year began the peace negotiations at Karlovitz (Turk. Karlova, see Karlovitz) on the Danube, where on February 26, 1699 peace was concluded with Austria, Poland and Venice. With Russia only an armistice was concluded to be followed in 1700 by a definite peace. The English and Dutch ministers took part in the negotiations as intermediaries. The peace treaty meant the loss of Hungary and Transylvania, with the exception of the district of Temesvár; Poland recovered Kamianets, while Venice had to cede Lepanto and some other towns in Morea. With Russia the Dniepr became the frontier.

The peace enabled the grand vizier to bring order into the affairs of state, which had suffered by the long and disastrous war. The Keïs Eferî Kâmi and the muftî Feizullah, who had great influence with the sultan, were his collaborators. Some interior troubles were easily appeased; only in 1701 a campaign in 'Irak was needed to take Baṣra from the hands of a local party that had submitted to Persia. Fortresses were put in a better state of defence and a new âmilân-nâmeh was issued for the next. Ḥusain Pasha resigned his office in Sept. 1702 and died soon afterwards. His deposition was partly the work of the muftî Feizullah, who made the sultan appoint in his place Dâlcbâtan Muḥammad Pasha. When the latter showed himself of too warlike a disposition and caused at the same time unrest in the capital by flattering the claims of the Tatar Khân, the influence of the muftî caused his deposition and execution (Jan. 1703). Râmi [q. v.] became grand-vizier. Râmi's measures to enforce the authority of the central government were salutary but made him many enemies: moreover the Janissaries were not contented with a grand-vizier who was not a military man. The general unrest was increased by the permanent residence of sultan Muṣṭafâ in Adrianople. All these circumstances brought about in July 1703 a Janissary revolt in Constantinople, directed at first against Râmi Pasha and against the muftî. The latter's deposition was obtained without much difficulty, but the rebellion continued under the leadership and organisation of a certain Ḥasan Aghâ. A deputation of the rebels to Adrianople was imprisoned and treated in an insolent way. Too late the sultan promised to come himself to Constantinople; the 'ulama were constrained to give a fatwâ authorising the sultan's deposition. In August 1703 a rebel army went on its way to Adrianople, after having agreed on Muṣṭafâ's brother Ahmad as successor to the throne. When Muṣṭafâ saw himself at last abandoned by his own Janissaries he resigned on August 21. He died soon afterwards on Dec. 31, 1703 and was buried in the Aya Sofâ. He is rightly considered as wise and good ruler, as is proved by the successful choice of able statesmen. He wrote poems under the tâsilât of Meftûbî and Ikbâlî. Under him the imperial tâshân appeared for the first time on the Ottoman coins.

Bibliography: The chief source is the Ta'rîkh of Kâşiî, besides an anonymous historical work, used by von Hammer and only mentioned in a note by Babinger, G. O. W., p. 247 and 248. Useful information also in the history of the Crimea by Mehmed Gûlî (G. O. W., p. 255) and Sayîdî Muḥemed Rîdî (G. O. W., p. 281). Theîbâğa of the grand-vizier Râmi Pasha (not mentioned in G. O. W.) has importance as containing contemporary documents. Further the general histories of von Hammer, Zinkeln and Jorga. (J. H. Kramer)
MUŞTAFA III, the twenty-sixth ruler of the Ottoman Empire, was one of the younger sons of Ahmed III and was born on Sultan 1129 = January 28, 1717 (Subat-i Qa‘idah 1, 80). When he succeeded to the throne, after 'Othman III’s death on October 30, 1737, his much more popular brother and heir to the throne, Muhammad, had recently died, in December 1736. Turkey enjoyed at that time, since the peace of Belgrad of 1739, a period of peace with her neighbours. Since December 1756 the very able Râghib Pasha [q. v.] was grand vizier and remained the real administrator of the empire until his death in 1763. Râghib had removed from the capital all those who might have counteracted his influence, taking at the same time wise financial measures and endeavouring to keep the military forces in good condition. The sultan meanwhile, who was of a vivid and active temperament, busied himself, like his predecessor, with regulations concerning the clothes of his non-Muslim subjects and the appearance in public of Muhammadan women; at this time there was also taken up again the never-realised plan of linking the gulf of Iznik with the Black Sea [see ŞABANDJA]. The Seven Years’ War in Europe (1756—1763) had not remained without influence on the policy of the Porte; after long hesitation Turkey agreed at last to conclude a treaty of friendship with Prussia (March 20, 1761). Râghib himself was inclined to conclude even an alliance, but the sultan and the influential ‘alamâ’ were peacefully minded.

After Râghib’s death Muṣṭafâ began to reign himself and different grand viziers succeeded one another at short intervals. From 1765 to 1768 the grand vizierate was held by Muhammad Pasha, under whom the disastrous war with Russia broke out. Difficulties with Russia had already commenced in 1762, when Russia had supported the ruler of Georgia against the Turkish Pasha of Akhî-kha (Çaldîr); here, as well as in Montenegro, Russian emissaries worked in secret against the Turkish rule. Moreover the Khân of the Crimea repeatedly complained about Russian military measures on his northern frontier, while the party of the Confederates in Poland urgently appealed for the intervention of the Porte against the aggression of Catherine’s government on Polish liberty. In these circumstances the Porte had no more interest in seeking the alliance of Prussia, whose, in 1764, Ahyud Rasmi Efendi had gone as envoy, which embassy he afterwards wrote his well-known Sefâret-râmâ’ı. The sultan himself was decidedly anti-Russian, but the diplomacy of the Russian minister Obreskov and the pacifism of the ‘alamâ’ delayed the war, until, in August 1768, Muṣṭafâ obtained from the then mufti Wâli al-Din a fatwa authorising the war with Russia. War was declared only on October 6, after the dismissal of the grand vizier Muḥsin Zâde, who had advised delay until the spring. Obreskov was imprisoned in Yedî Kule.

The war began in January with destructive raids of the Crimean Tatars in southern Russia under their newly appointed Khân Khûrîn Girây; at that time de Tott was an eye-witness with the Tatar army. In March 1769 the then grand-vizier Muhammad Efendi Pasha left Constantinople with the Holy Banner; on this occasion there was an outbreak of Muhammadan fanaticism against the Austrian internuncio and his party, who had come to witness the procession. While the grand vizier went to the Dobruja, the Russians made an attack on Chotin (Turk. Khoêin), which they were able to take only in August. In the meantime the grand-vizier had been deposed and executed; his place was taken by Moldowandji ‘Ali Pasha, who had encounters with the Russians on both sides of the Dniestr. Other Russian armies took Jassy and Bucarest and advanced into Transcaucasia. The year 1770 was still more disastrous for Turkey. The Russians reached, through Rumania, the Danube and in the autumn they took Kilia, Bender and Braila, in the immediate neighbourhood of the Turkish general headquarters in Baba Dagh. In the same year a Russian fleet appeared in the Mediterranean; several towns in Morea were conquered and evacuated again, but the heaviest blow was the burning of the Turkish fleet in the bay of Çeşme (July 1770) Moldowandji ‘Ali — already dispossessed of his grand vizierate — was sent to strengthen, with de Tott, the defences of the Dardanelles. But the Russian fleet had ceased to be a danger and the Danube campaign of the following spring also was rather favourable for the Turks. In the beginning of 1771 the military organisation had been improved. That year, however, the Russians forced the isthmus of Perekop and conquered the entire Crimea. This was a definite loss for Turkey, and a great majority of the Tatars declared their allegiance to the Russian empress. The Turks were able, however, to remain in Otkabow and Kilburna. In Constantinople meanwhile laborious diplomatic negotiations went on with the envoys of the European powers who offered to mediate, notably Austria and Prussia. With Abshin Zâde de Tott and the Porte concluded in July 1771 a secret treaty of subsidy for diplomatic services, while the Porte disinterested herself completely in Polish affairs, going so far as to propose a partition of Poland. The result was an armistice, concluded in June 1772 at Giurgevo, followed by the peace congress of Potâni (August 1772), where Turkey’s chief representative was the arrogant nizâm-i ‘Othman Efendi. After the failure of the negotiations the armistice was prolonged and a new conference began at Bucarest in November. These negotiations were again broken off in March 1773, mainly from lack of agreement on the subject of the Turkish fortresses on the Black Sea; as to the Crimea, Turkey had already agreed to a formula such as was later adopted in the peace of Kusk Kairâb. In Constantinople it was chiefly the ‘alamâ’ who had opposed the Russian peace conditions. The war in 1773 was not very eventful; the general headquarters had been transferred to Şûmen after Muḥsin Zâde had become grand vizier a second time (Dec. 1771). The Russians won a victory at Karaçu in the Dobruja, but attacked Silîtra and Warna in vain. Bârût was bombarded by Russian ships in connection with the rebellion of the Mamlûk ‘Ali Bey [q. v.] in Egypt, who was supported by them. In the summer of 1773 Sultan Muṣṭafâ made known his desire to accompany the army against the Russians, but he was prevented from doing so by his illness and by his pregnancy. He succumbed on December 24, 1773, to be succeeded by his brother ‘Abd al-Ḥamîd I. Muṣṭafâ was buried in his own turbe, connected with the Lâleli Dîâmî-i, which he had begun to build in 1759 (Hadîthat al-Dîvarânî, i. 23).
MUŞTAFA III — MUŞTAFA

Muştafa III is praised in the Turkish sources as a good ruler. He had a special liking for religious disputations in his presence and was particularly interested in astrological calculations. He took an interest in the least important affairs and this prevented him from such a real statesmanlike insight as was much wanted in the later years of his reign. In his way he was an "enlightened despot". But even a more able ruler would probably have failed to save Turkey from her military inferiority against the Russian armies; measures of military organisation were taken with the aid of de Toit, but this could not prevent the desertion of the troops from assuming disastrous dimensions during certain episodes of the war. Besides the Lâleli Dânişâ, Muştafa built the Ayazma Dânişâ at Scurtari for his mother; he caused a new suburb of Istanbul to be built outside the Yeşil Kapu. His reign is further marked by the extremely severe earthquake that laid large parts of the capital in ruins in 1766.

Bibliography: The Tarih of Wâsiâ [q.v.] is the chief historical source for Muştafa's reign. Wâsiâ himself played a prominent part as secretary during the long-drawn-out peace negotiations with Russia. It is completed by the Tarih of Enveri. The Yâkub Efendi of Diyar, son of Haşim Oğlu 'Ali Pasha, seems not to be preserved (G. O. W., p. 300). The well-known Ahmad Kasım Efendi wrote a history of the war with Russia under the title Kâhîyes-i âl-i-tîbar (G. O. W., p. 310). The Talîhsât of the learned grand vizier Râgib Pasha (G. O. W., p. 285) gives documents from the beginning of Muştafa's reign. A contemporary western source is the Mémoires sur les Tours et les Tartares de Baron Fr. de Toit, Maastricht 1785. Further the historical works of von Hammer, Zinkeisen and Jorga.

(J. H. Kramers)

MUŞTAFA IV, twenty-ninth sultan of the Ottoman Empire, was a son of Abd al-Hamîd I and was born on Şebîn 26, 1193 = Sept. 19, 1778 (Meşhed Thrileli, Seyidjîlis-ü 'ısmân, i. 81). When the anti-reform party, headed by the kâhin-mahsûn Musa Pasha and the mufti, and supported by the Janissaries and the auxiliary troops of the Yamaks had dethroned Selim III [q.v.] on May 29, 1807, Muştafa was proclaimed sultan. Immediately afterwards, the unpopular nişan-i jîrdîl corps was dissolved and Kâhîyes-i âl-i-tîbar, the leader of the Yamaks, was made commander of the Bosporus fortresses. Turkey was at that time at war with Russia and England, but peace negotiations had already begun and, moreover, the foreign affairs of the empire were really governed by general European politics. A secret article annexed to the peace treaty of Tilsit (July 7, 1807) had in view — already at that time — a conditional partition of Turkey. Turkey's ally, France, tried to urge a peace with Russia and obtained a Russo-Turkish armistice at Slohio-îa (near Giresun), by the terms of which the Danube principalities were to be evacuated. When in the end Russia was unwilling to put into effect the terms of the armistice, relations with France became strained (departure of Sebastain in April 1808) and new preparations for war followed, while overtures were made to England; the English admiral Codrington had already entered into negotiations with 'Ali Pasha of Vanina.

Meanwhile the kâhin-mahsûn and the mufti were the real rulers in Constantinople; the grand vizier Celebi Muştafa Pasha remained with the army in Adrianople and had no influence. The Janissaries and Yamaks, however, continued to be rebellious; measures had to be taken against them and the sultan himself went so far as to favour secret plans for restoring the nişan-i jîrdîl under another name. In December 1807 Musa Pasha was dismissed from the office of kâhin-mahsûn — on account of dissension with the mufti — and was succeeded by Tayyâr Pasha. The latter, dismissed in his turn, fled to Bâirâdhur Muştafa Pasha [q.v.], an acknowledged friend of the reform party, in Rusçuf. From there began the action against the regime in the capital. Bâirâdhur went first to Adrianople and joined forces with the grand vizier in June 1808. They arrived in July before the gates of Constantinople at Dâwîd Pasha. Sultan Muştafa came there on July 23 to accept their terms, which, for the moment were only the destruction of the ruling party and of the Yamaks. On July 25 Bâirâdhur, after having seized the Sultan's seal from the grand vizier, began to act on his own account. He went with his troops to the palace, where the sultan — who had left shortly before for an excursion — returned in haste. He had only the time to order the execution of Selim III but was deposed immediately afterwards by the intruders, who put his younger brother Mahmûd on the throne. After having passed some months in confinement, he was killed by order of the new sultan on November 16, in the days of the general revolt against Bâirâdhur's régime, when the existence of the former sultan had become a real danger for Mahmîd's position. Muştafa was buried in the turbe of his father 'Abd al-Hamîd I near the Yeşil Dânişâ.

(J. H. Kramers)

MUŞTAFA, name of several princes belonging to the Ottoman dynasty:

1. Muştafa Celebi, eldest son of Bâyazid I; the date of his birth is not recorded. He disappeared in the battle of Angora (July 1402). This Muştafa is the first Ottoman prince to bear this name, which, like such other names as Hâyazid and Murâd, originated in mystical circles in Asia Minor in the fourteenth century. According to the Byzantine sources, this Muştafa is the same as the person called by the majority of the Turkish sources:

Dozme Muştafâ, who came forward in 1419 as pretender to the Ottoman throne against Muhammed I. He was supported by Mirce of Wallachia and by the Imam Oghlu Džiuna [q.v.]. Near Selânik they were beaten by Mahommed and Muştafa took refuge in the town together with Džiuna; the Byzantine commander refused to give them up to the sultan and sent them to Constantinople. In a treaty concluded with the emperor Manuel, the sultan promised to pay a yearly subsidy to provide for the maintenance of the prisoners, while the emperor undertook to keep them in custody. This treaty was observed until Muhammed's
death; Muṣṭafā was relegated to a monastery on the island of Lemnos. After Muḥammad’s death, however, he was released and the emperor supported him against Murād II [q.v.]. In a short time he was master of the Ottoman territories in Europe; the army sent against him by Bāyazīd II went over to his side at Sarfī Deresi between Sivas and Adrianople. He was joined likewise by great feudal lords like the sons of Ewrenos. He soon felt strong enough to break his alliance with the Greeks and expelled them from the recently taken Gallipoli. After having resided some time in Adrianople, he went together with Djnānid to Asia Minor, where they met Murād’s army in a battle near the bridge of Clupad. By the treacherous retreat of Djnānid, Muṣṭafā was beaten and fled to Gallipoli and Adrianople; from there he tried to reach Wallachia, but was taken by Murād’s troops and executed at Adrianople. All this happened in the first year of Murād II’s reign (1412–1413).

**Biography**: Duca and Chalcondylas relate the events before Muḥammad’s death; so does the chronicle of Nestēr, but the other early Turkish chronicles know only of what happened in the beginning of Murād’s reign. On coins struck by Muṣṭafā: T. O. E. J., xv. 387; von Hammer, G.O.R., i.; Mehdī Zeki, Muhīṭ Şehzâde, Constantinople 1332, p. 45 sqq.

2. Muṣṭafā, son of Muḥammad I and younger brother of Murād II, was supported as pretender against the latter in 1423, while Murād besieged Constantinople. This Muṣṭafā was about 13 years of age; he had fled to the Karaman Oghlu with his father Isḥâq. From there they took Izik and marched against Brusa. Muṣṭafā even went for some time to Constantinople, but Murād, raising the siege, returned to Brusa, where Muṣṭafā was delivered to him by the treachery of Isḥâq; he was executed by the sultan’s orders.

**Biography**: The Byzantine writers Duca and Chalcondylas; the old Turkish chronicles and after them the later historians; von Hammer, G.O.R., i.; Mehdī Zeki, Muḥīţ Şehzâde, p. 53 sqq.

3. Muṣṭafā, son of Sulaymān the Magnificent, was born in 921 (1515) (Mehdī Thureya, Sīdīqī Dustūrān, i. 79). He had been made, in 1533, governor of Sarukhānī in Mahnis; later he became governor of Konay, while Sulaymān’s favourite son Muḥammad was given Sarukhān. When Muḥammad died in 1545, Sarukhānī was given to Muṣṭafā’s younger half-brother Selim and he himself was placed in Amasia. This setting aside of the elder, more talented and more brilliant son was the work of Khurrām Sulṭān (Roxelane), mother of Selim, and of her son-in-law, the grand vizier Rastam Pāsha. Already some years before there had been signs of Sulṭān Sulaymān’s lack of confidence in Muṣṭafā’s loyalty. When, in 1553, a new campaign had been planned against Persia, of which Rastam was to be the commander, Sulaymān decided at the last moment to accompany the army himself, being warned again against Muṣṭafā through the intermediary of Selim’s favourite Shamsî Agha. Selim joined him on the way and, when at Esphah near Konay, prince Muṣṭafā came to pay homage to his father, he was killed by order of Sulaymān on October 6, 1553. His corpse was conveyed to Brusa and buried in the turbe of Murād II. This execution of an Ottoman prince is one of those events that made the deepest impression in the empire. It caused immediately the threatening of a Janissary revolt, which could only be appeased by the dismissal of the grand vizier Rastam Pāsha. It is said that his brother Djiḥāṅgir died soon after him of grief; a minor son of his was killed in Brusa shortly after his execution. Muṣṭafā had also made himself beloved as a patron of poets and scholars, amongst whom Sūrī is to be mentioned in the first place. Several poets lamented his death in elegies, in which Rastam and others were openly accused of having caused the murder; best known is the morphil of the poet Yâhîyâ Bey. Muṣṭafā wrote poetry under the takhallus Muḥkilîs. There is further strong evidence for the probability that Muṣṭafā wrote a history of his father’s reign, a Sulaymān-nâme, under the pseudonym Feređ (cf. G.O.W., p. 83).

**Muṣṭafâ Kâmil Pâsha, leader of the second national movement in Egypt** (on the first, see the articles ‘Arâbî Pâsha and Khedive).

The son of an Egyptian engineer, he was born in Cairo on 1st Radjâb 1291 (Aug. 14, 1874), studied at the Khedivial school of law there and after taking his examination went to study in Toulouse where in 1894 he took his “licence en droit”. While still a student of 18 he began his political activity and entered into personal relations with the Khedive ‘Abdul Ilhaq [q.v.]. On his return from France he founded in 1894 the second Egyptian national party (al-Hizb al-asfanî) with the object of inducing England by appeals to justice to abandon the occupation and restore the complete independence of Egypt. Later he also aimed at getting the Sūdân handed back to Egypt and tried to prepare the Egyptians by modern education for parliamentary government. As the representative of his party he spent each year a considerable time in Europe, especially France where he consulted with politicians and journalists and conducted a vigorous propaganda for his object. All his life he was very friendly with the journalist Julîette Adam; he had dealings with Rochefort, Drumont, Col. Marchand, Pierre Loti and in 1896 had a correspondence with Gladstone. Later he visited Berlin, London, Vienna, Budapest, Geneva and Constantinople where he was highly thought of because he insisted on the Sūdân’s suzerainty over Egypt; Sūdân ‘Abd al-Ḥamīd II [q.v.] gave him in 1901 the title of Pāsha. In Cairo he founded in 1898 a school for training the youth in nationalist ideas, and in 1899 started the newspaper al-Lîwâ (The Banner), which appeared early in 1900, had a great success and from 1901 onwards was published in English and French editions. From 1902 he published the nationalist quarterly Ḥāzīlât al-Lîwâ. In his speeches and articles he emphasised his aims with fiery eloquence; at the same time he expressed his approval of the building of the Turkish strategic Hidjar railway and his sympathy with the Japanese.
in their war with Russia (1904–1905). Mustafa Kamil also regularly emphasised the privileged position of Muslims as belonging to the state religion and recognising the sultan as caliph and head of Islam and thus contributed to the pan-Islamic movement which began early in the twentieth century.

The "Entente Cordiale" concluded on April 8, 1904 between England and France was a severe blow to him and the nationalist party; by it France, in return for a free hand in Morocco, dropped its objections to the English occupation of Egypt. The Egyptian nationalists thus lost all hope of open or secret support from the French government and were thrown upon their own resources. This situation caused Mustafa Kamil to redouble his energy and in vigorous speeches and writings against France and England, in travelling and negotiating with statesmen of different lands, he endeavoured to make Egypt's point of view clear. As a result of the intensity of his agitation there was a breach between him and the Khedive Abbas II (Oct. 1904); on the other hand, his influence in Egypt rapidly increased and began to be troublesome to Lord Cromer who had so far treated the new nationalism created by Mustafa Kamil as a "quaint but negligible". The Dishawari (a village near Tanis in the Delta) affair gave the nationalists a great stimulus; on June 13, 1906, some English officers out shooting were said to have wounded an Egyptian woman and were attacked by felahin with clubs and one of the officers was killed. A special court set up by the English government sentenced four felahin to death and 17 to prison or flogging and the sentence was carried out next day. The indignation in Egypt and Europe rose to great heights and even in the House of Commons the authorities were critisised. Mustafa Kamil hurried to London and discussed the matter with the Prime Minister, Sir Henry Campbell-Bannerman, whom he endeavoured to convince of the necessity of recalling Lord Cromer and giving greater freedom to Egyptians. On this occasion he mentioned as suitable representatives in a parliamentary system of government all those Egyptians who in the later political movement after the war played important parts. On his return to Egypt, through the press and mass meetings in which he urged Egyptians to unite against England, he gave a great stimulus to the national movement and soon had the satisfaction of seeing Lord Cromer recalled — although he was not at all the only cause of this — and replaced by Sir Eldon Gorst. The latter adopted a milder tone with the Egyptians, was on good terms with the Khedive and endeavoured to support him with a newly founded party. Mustafa Pasha attacked this representative of England vigorously also, in Oct. 1907 put his national party on a broader basis and summoned it a "national congress", which met on Dec. 7 of the same year in Cairo; 1,017 delegates from all over Egypt appeared and after a speech by Mustafa Kamil which carried them away the latter was elected Life-President of the party. This was however his swan-song — he had been ill since the summer of 1906; he died on Feb. 10, 1908 (8th Muharram 1326) at the age of 34 of a slow internal trouble (intestinal tuberculosis). The rumour spread that he had been poisoned at English instigation. His funeral was an impressive expression of the national grief.

Mustafa's creations did not long survive him and his party, which produced no leader to equal him and was broken up by dissensions, gradually sank into insignificance. Although he obtained no positive results by his agitation, he opened the way for the third and greatest nationalist movement (under Sa'd Zaghlul Pasha from Nov. 13, 1918). It is to his credit that he conducted his whole campaign without any appeal to force, which would have been quite useless against the British Empire, and without bloodshed.

Of his numerous writings only the more important can be mentionend; many of them were only printed after his death, some in the great (never completed) biography by his brother 'Ali Bey Fahmi Kamil al-Mas'ala' l-badriyya (1898 and 1909); Mi'r-r al-l-balili al-mi'ajjaf (collection of speeches and essays, Cairo 1313); Difa' al-Misr' 'an Biladis, Cairo 1324 (1906); al-Sama' al-muslihhah (Cairo 1904, on the Russo-Japanese war); Lettres françoises-égyptiennes (Cairo 1909; also in Arabic and English transl. His letters to Juliette Adam); Egyptiens et Anglois, Paris 1906 (speech of July 4, 1895 in Toulouse); Le péril anglais, Paris 1899; What the National Party wants (Cairo 1907, speech of Oct. 22, 1907).

(Max Meyerhoefer)

AL-MUSTAFA LI-DIN ALLAH. [See Nizar]

MASTAFÁ PASHA BAIRAKDÁR, Turkish grand vizier in 1808, was the son of a wealthy Janissary at Rusçuk, born about 1750. He distinguished himself in the war with Russia under Mustafa III, and acquired in these years the surname of Bairakdar. After the war he lived on his estates near Rusçuk, and acquired the semi-official position of ayân of Hızârgrad and later of Rusçuk. With other ayan he took part in an action against the government at Adrianople, but became finally a reliable supporter of the govern-
MUŞTAFA PASHA BAIKAĐAR — MUŞTAFA PASHA LALA

ment. Having already received the honorary offices of kâbiş-i bashı and of mir ağa, he was, in 1806, promoted to the rank of Paşaa of Silistra and at the same time was appointed sefsâker on the Danube frontier against the advancing Russian army. This made him one of the most influential men in Rûm-îli. He had become a redoubt supporter of Selim III’s reform policy and, after that султан’s deposition, it was to him that the enemies of the new reactionary government turned. In June 1808 he was joined by the dismission fa‘iim-ineşti of the grand vizierate in Constantinople, Тафйр Paşaa; from Rus-скъ they went to Adrianople, where they joined forces with the grand vizier Celebi Muştafa Paşa. So the entire Rumelian army marched against the capital, where they dictated their will to султан Muştafa IV (July 23). On July 26 Bailârâdar (or ‘Alemdâr as he was called officially) was appointed commander-in-chief and on July 28, after having taken by force the султан’s seal from the weak grand vizier, he marched with his troops to the palace of the султан, under the pretext of bringing back the holy standard of the prophet. At first he was allowed only to enter the first court of the serây, while султан Muştafa — who had been absent during the summer retreat — returned in haste from the seaside. As Bailârâdar had made known his intention of restoring Selim III to the throne, Muştafa had just time to take his predecessor. But immediately afterwards he was himself deposed and Bailârâdar now recognized Mahmûd II [g.v.] as султан.

After this began the short personal regime of Bailârâdar Muştafa Paşa as grand vizier. He had a number of the supporters of the former султан executed, arranged a magnificent funeral for Selim III and began to form a corps of troops called this time fa‘ıim-taşker. At the same time he summoned a great imperial conference in the capital, to which all the high-placed officials of the empire were invited. Many of them answered the appeal and subscribed to the extensive programme of reforms which the grand vizier laid before them in a solemn meeting in the first days of October and which was also approved of by a faţvā of the muftis. But the precipitation with which the new measures were taken in hand and the tactless procedure in the abolition of long established abuses, made him ever more unpopular. The influential ‘ulama were also alienated by the exaggerated reforming zeal. His only support were his Rumelian troops and a small number of friends, such as Begdij Efendi and Kâmil Paşa, together with Kâdî Paşa of Karaman who had remained in the capital. Matters came to a head on November 14, 1808, in the last days of Ramađan 1222, by a rebellion of the Janissaries. The night following that day they surrounded the grand vizier’s residence and set the quarter on fire. Bailârâdar, surprised by the fire, saw no way of escape; he hid himself in a tower of his palace, where his body was found three days afterwards, after the fire was quenched. The rumour had been spread that Bailârâdar had escaped, which had caused much uncertainty.

The grand vizier was buried in the fortress of Yeşil Kale, where his bones were dug up in 1911 during railway works; they were transported to the mosque of Zeinab султан.

MUŞTAFA PASHA BUSHTALI, the last hereditary wazir of Scutari (hence often called ‘Işıkkurt), the son of the celebrated Kara Mahmu’d Paşa Bushati [g.v.], succeeded his son Ibrahim Paşa about 1810 and received the rank of wazir in 1812. In 1820 the sandjak of Berat and in 1824 those of Ohrd and Elbasan were put under his government and he received the title of Serfesker. Nevertheless, like his father he aimed at greater independence and when Mahmu’d II’s reforms threatened to deprive him of his hereditary rights and privileges, he became strongly hostile to the султан and maintained friendly relations with the Serbian prince Miloš, the discontented Bosnians (cf. i., p. 757) and the Egyptian Muhamad ‘Ali (cf. J. Deny, Sommaire des archite turques du Caire, p. 264 and 553). He therefore maintained quite a passive attitude in the Turkish war (1837), and did not turn backwards the end of it, in May 1829, did he appear with his Albanians on the Danube (Vidin, Rahovo), then went on to Sofia and Philippopolis, but without taking any active part in the fighting.

On the conclusion of peace the Porte (ieg. of 1831) demanded of Muştafa Paşa that he should hand over the districts previously held by him (Dukakin, Debar, Elbasan, Ohrd and Trgoviste) to the grand vizier Reshid Mehmed Paşa (on cf. Сăджî-i ‘öthmâni, ii. 391) and carry through certain reforms in Scutari itself Muştafa Paşa resisted and with the financial and moral support of prince Miloš, led an army in the middle of March 1831 against the grand vizier. He was joined by the other Pashas of northern Albania and old Serbia who objected to reforms. The rebels had at first certain successes including the occupation of Sofia but they were completely routed at Prilep by the regular troops led by the grand-vizier (beginning of May). Muştafa Paşa hurried back to Scutari via Skopje and Prizen and shut himself up in the fortress. When he surrendered on Nov. 10, 1831 after six months’ siege, he was pardoned on Metternich’s intercession and taken to Constantinople.

Fifteen years later he again held various governorships, chiefly in Anatolia (from 1846), then in the Herzegovina (1853) and lastly in Medîna where he died on May 27, 1860.

MUŞTAFA PASHA KOPRULU. [See KOPRULU.]
same Bosnian locality from which came the grand vizier Sokollı [q.v.], and began his service in the imperial army. He rose in rank under the grand vizier Ahmad (1553–1555), but was not in favour with the latter's successor Rustam Pasha, who made him in 1556 zafer to Prince Selim with the object of running him. The outcome of this nomination was the contrary of what was expected; Mustafa became the chief of the intrigues by which Selim came into conflict with his brother Bayazid and which ended with Bayazid's execution in Persia [cf. p. 63]. After these events Rustam Pasha managed to reconcile the intriguer in administrative function to different parts of the empire; for eight years he was wakil in Damascus. Nor was the grand vizier Sokollı favourably disposed to Mustafa, but in the beginning of 1569 Sultan Selim II called back his former vezir as wakil excisivi in the capital. Very soon afterwards Sokollı appointed him vezü’ü‘ l-

', 'kastır in the Yaman; Mustafa went to Cairo to take charge of his command, but here he became involved in serious disputes with the wakil Sinan Pasha on the equipment of his army. The end was that Sinan was appointed in Mustafa's stead and the latter had to return to Constantinople. Sultan Selim's protection saved him from death and in the beginning of the following year he was appointed again vezü’ü‘ l-

\textit{Cat.,} No. 355; and Elliot-Dawson, \textit{History of India,} viii. 181. (M. Hidâyet Hüsûn, \textit{al-Mustafâ-i Rû’l-‘alâ’,} M. A. Mûhammed, an \textit{Abbâsî d caliph. His father was a son of the caliph al-Mu’tasim, his mother a slave-girl named Mûsharîf of Slav origin. After the death in Kabîr II 248 (June 862) of al-Mun
tasir the pretorian-appointed his cousin Ahmad caliph under the name al-Mustâin. The choice aroused discontent in Sâmârâra and unrest broke out among those who supported al-Mu’tazz [1 v.] which was only put down after much bloodshed by the Turkish soldiers. When al-Mustâin was recognised as caliph he confirmed the governor of Baghdad, Muhammad b. Abd Allah b. Tâ’în [1 v.], in office. He bought all the property of al-Mu’tazz and his brother al-Mu’ayyad and then had them arrested. The Turks wanted to put them to death but they were protected by the vizier Ahmad b. al-Khâsî who soon afterwards fell into disgrace and was banished to Crete. In 249 (865) trouble broke out as a result of a defeat of the army by the Byzantines; the rebels were however scattered by the vizier Usâmid and the two Turkish generals Usâfî and Boghâ Jânrâî. Usâmid was soon afterwards murdered at the instigation of the latter. As the caliph no longer felt safe in Sâmârâra he went to Baghzâd in Muharram 251 (Feb. 865). Al-Mu’tazz was then taken by his supporters out of his prison in Sâmârâra and a war broke out which ended in Dhu’l-Hijja 252 (Jan. 866) in the abduction of al-Mustâin [cf. Baghzâb]. By the arrangement made the latter was to live in Medina in future; but he was detained in Wâsiît and murdered in Shawwâl 252 (Oct. 866) at the age of 35. See also the article MUHAMMAD b. ABD ALLAH B. TÀHÎR.

AL-MUSTAKFI BI L’TĀLĪAH, Abū ‘l-Kāsim Ahmad b. Al-Mustakfi, caliph, son of al-Mustakfi. His wife, 'Abd Allah b. 'Abd Allah b. Abī Shujā‘, was killed by the caliph al-Muttaq. He chose al-Mustakfi's son, Ahmad, as his successor on the same day in *Safr* 334 (Aug. 1034). The new caliph was only a tool in the hands of the Abbasid caliph, and his successor Abū Lāzar šarif, another caliph, Baghdaḏ, began to suffer from a chronic famine and neither food nor money could be raised for the troops. When the Bāyda Thān B. Abī Shujā‘ approached (cf. Mīr al-

Al-tal‘ah), the caliph had to declare himself ready to recognize the Bāyda as the legitimate ruler, in all the provinces conquered by them, and in *Qumād* 534 (Dec. 949) Ahmad entered Baghdaḏ and was given the caliph the title of honour Muẓz al-Dawla and the fullest power in all secular matters. But the new ruler suspected that the caliph was in communication with the enemies of the Bāyda so he had him blinded (on 22nd *Lūlūbi* 2 or *Suhba* 334 = Jan 29 or March 490) and deposed. Al-Mustakfi died in Rabi’ I 538 (Sept–Oct. 949).

AL-MUSTA’LI BI L’ĀLĪAH ABU ‘L-KĀSIM AHMAD b. Al-Mustanṣir, ninth Fātimid Caliph, born 20th Muhaaram, 467 (Sept. 16, 1074) (so in all the best sources and in the Al-Mustanṣir’s letter to Ahmad b. ‘Ali al-Salāhi, quoted in Idīs, viii. 152), the youngest son of his father. At this time it was generally assumed in the Ismā‘ili organization that the eldest son, Nizar (born 437), would, in accordance with custom, succeed his father in the imamate, although no formal investiture with the *alīhyat al-nāfi‘* appears to have been made. The influence of the all-powerful wāzir Badr al-Dīmmālī, however, and of his son al-Afḍal, was thrown into the scale in favour of Abu ‘l-Ḵāsim and al-Mustanṣir’s consent obtained to the marriage of Abu ‘l-Ḵāsim with Sitt al-Mulk, the daughter of Badr (the statement in al-Fārīqī [ap. Ibn al-Kalānī, ed. Amedroz, p. 128] that he was the son of Badr’s daughter is evidently a misunderstanding). According to the tradition of the Mustulān Ismā‘ilīs (see n. 16), Abu ‘l-Ḵāsim was invested with the succession at the time of this marriage in another version Ibn Muyassar, p. 66 sqq.) al-

Mustanṣir confirmed his nomination of Abu ‘l-Ḵāsim to his own sister, who divulged it after his death. On the death of al-Mustanṣir on 18th Dhu ‘l-Hijja,

487 (Jan. 16, 1094), the Šī‘ite *Id al-Ghadr*, al-

Afḍal secured the accession of al-Mustanṣir without serious difficulty. The subsequent revolt of Nizar (see n. 23) at Alexandria failed owing to the opposition of the army, and al-Mustanṣir’s succession was generally recognized, except by the Ismā‘ilīs of Persia (see n. 27). Throughout his reign the actual power was entirely in the hands of al-Afḍal [g.v.]. At first some sucesse were gained in Syria; Fāmīya (Aphanza) made a voluntary submission in 459, and Tyre was recovered from a rebel governor in 490. A project of alliance with the Sāḥib al-Rūyān of Aleppo against Damascus in the same year fell through. On the appearance of the Crusaders in Syria (490–491) an Egyptian embassy was sent to open negotiations with them, and in 491 (July-Aug. 1098) Jerusalem was recaptured from the Orthoḵāk Sūkān and Hī-Ḵārī. The advance of the Crusaders in the following year took al-Afḍal by surprise: Jerusalem was again lost, and the defeat of the Egyptian army near ‘Askalān (14th Ramaḍān, 492 = Aug. 5, 1099) definitely established them in possession. Two years later (17th *Safr*, 495 = Dec. 12, 1101) al-Mustanṣir died and was succeeded by his son al-Manṣūr (Al-Amīr bi-Aḥkām Allāh). The personal character of al-Mustanṣir is highly praised by his Sumī contemporary Ibn al-Kalānī; later writers speak of him as a fanatical Šī‘ite, and it would seem that the Fātimid organization and propaganda was intensified in his reign. Idīs refers especially to his close relations with the *da‘wa* in the Yaman, represented by al-Malik al-Hurra and her da‘ī Yahyā b. Lamāk b. Malik al-Hamadānī. In the capable hands of al-Afḍal, order and good government were maintained, and Egypt continued to enjoy prosperity, except for a famine in 492 or 493, due to the influx of Syrian refugees.

Bibliography: The fullest sources are Ibn al-Kalānī (ed. Amedroz), p. 128–141, and Ibn Taghribirdi (ed. Popper), ii. part 2, p. 298–325; the chronology of the latter is defective; Ibn al-Thān (x. 161–224), Dīmmāl al-Dīn al-

Halabī (Brit. Mus. Or. 3058, foll. 74°–77°), Ibn Muyassar (ed. Māṣē), p. 34–49, and the other sources mentioned under the article al-

Afḍal add little of importance. The Mustulān Ismā‘ili tradition is given in *Qīyā‘ al- politically 1382* of the *al∗ Inīs b. al-Hasan [d. 872] (MS. in possession of H. F. al-Hamadānī), vii. 151–

175. — For relations with the Crusaders: *Descriptio Francorum* (ed. Breher), p. 86, 96, 208–216; *Notker Carontensis*, i. 19; ii. 10–12; Hagen-

Mustanṣir* (H. A. E. G. B.)

AL-MUSTANDJID BI L’ĀLĪAH, ABU ‘L-MUṬAFAR YEṢUT, *Abhāṣiḏ al-}

Caliph, born on 1st Rabi‘ II 510 (Aug. 13, 1116), son of al-Muṭtaḏa and a

Greek slave-girl named Nāṣirī or Tāṣū. After his father’s death on 1st Rabi‘ II 555 (March 12, 1160) al-Mustandjid succeeded him as caliph. While al-Muṭtaḏa was dying and hope of his recovery had been abandoned, the mother of his son Abū ‘Ali endeavoured to dispose of the future caliph who had already been selected heir-apparent in 542 (1147). After winning over several emirs for her plot, she armed her slave-girls with daggers
to murder the heir-apparent when he entered his father's apartment. Al-Mustanṣirī however heard of the plot and had the instigator and his son arrested. A few years after his accession the Mamluks were expelled [q.v.]. The sons of the ʿAbbāsids also fell within his reign although the ʿAbbāsids were only officially recognised as caliphs of Egypt under his successor al-Mustaṣifī. In 562 (1165—1167), Shimal, lord of Khīṣīnān, invaded the Ṭūlā and demanded from the caliph the grant of a portion of the lower Euphrates territory as a fee. The caliph however sent an army against him. Shimal's nephew, ʿAbd Allāh, was routed and Shimal returned home. Al-Mustanṣirī died on 9th Rabī‘ II 560 (Dec. 20, 1170). When he was very ill, his phyician-arranged with his chamberlain Ajud al-Brūnī [q.v.] and the emir ʿAbd al-Brūnī Kainax to give him a bath to hasten his end. The caliph refused to agree; he was nevertheless shut up in the bath until he died.

(K. V. Zettersten)

al-Mustanṣirī bi ʿl-Lāhī, Abu Qayyār al-Maʿmūn bi al-ʿAzhārī, ʿAbbāsī dīlārī: like his father whom he succeeded on the 14th Rājdāb 623 (July 11, 1226), he is described as a just and devout man and was generally liked although he played no great part in politics. He acquired ʿIṣbāl by a legacy in 630 (1233—1234) and eight years later his lands were increased by the acquisition of the town of ʿAnā which he bought from its previous owner. About this time the Mongols began to threaten the lands of ʿĪsāmīn. Shindār Kān [q.v.] had died in Rājdān 624 (Aug. 1227) but his sons continued his campaigns of conquest. In 635 (1237—1238) the Mongols were defeated by the caliph's troops; the strongest defender of ʿĪsāmīn however was Dīlārī al-Dīn, Shihāb al-Khāzīm [q.v.]. Al-Mustanṣirī died on 20th Jumādā I or 10th Jumādā II 640 (Nov. 15 or Dec. 5, 1242). According to Ibn Khaldūn however, he did not die till the following year. The al-Mustanṣirīyya movement was founded by him in Baghdād bears his name.

(A. V. Zettersten)

al-Mustanṣirī bi ʿl-Lāhī, Abu Tamīm Māʿādī b. ʿAlī al-ʿAzhārī, eight Faṭimid Caliph, born 16th Rājdān 420 (July 2, 1029) (according to 13th, on 16th Rājdān — Sept. 29), succeeded his father al-ʿAzhārī [q.v.] in 15th Shābān, 427 (June 13, 1036), and died 12th Rājdān 487 (Jan. 10, 1094), after the longest recorded reign of any Muslim ruler and one which, besides being marked by the most violent fluctuations of fortune, was of critical importance in the history of the Fāṭimid Ismāʿīlī movement.

Internal History. During the childhood of al-Mustanṣirī the authority remained at first in the strong hands of his father's wazir Abu al-ʿAzm al-Dīrājī. On his death (7th Rājdān 430 — March 28, 1035), it fell by the evil genius of al-Mustanṣirī's reign, his mother, who was a Sūmānī slave, and her former master, the Jewish merchant Abū ʿSaʿd al-Tustārī. When Abū ʿSaʿd was assassinated in 439 (1047), after an outbreak of rioting between the Turkish and Berber troops, his place as the queen-mother's agent was taken by his brother Abū Najār Hārūn (see however the documents published by Mann [Bihr]), and the ʿAzm Abū Muḥammad al-Ḥasan al-Yāzūrī, who eventually accepted also the wazirate (7th Muḥarram 442 = June 1, 1050) and held it for eight years [cf. al-Yāzūrī]. Meanwhile there was considerable unrest and perhaps also economic unsettlement in the country. If a statement in al-Muḥarrarīn 82 [99]; ed. Wiet, ii, 4 [67]) is to be believed, the ʿIṣbāl of the Egyptian provinces amounted only to one million dinārs in the time of al-Yāzūrī, but this may have been exceptional, though it is plain from other sources that the government had already been forced to the familiar expedient of confiscations and indemnities. The Delta was disturbed by Arab risings, the most serious of which, that of the Banū Kurra, was put down only with great difficulty by Nāṣīr al-Dawla (see below) with the help of the Ṭūlā and other Arab troops of Kūmr al-Shārīk in 443 (1051) (cf. Ibn al-Ṣairāfī, p. 42 sqq.; Ibn al-ʿArīf, ix, 396 sqq. and for the date Ibn al-Kalānī, p. 85). At the capital there was an increasing state of tension between the Turkish and Berber troops and the enormous bodies of Sūmānī slaves raised by the Caliph's mother (cf. Muḥarrarī, i, 94 [ed. Wiet, ii, 45]); and p. 335; detailed but probably unverifiable figures also in Nāṣīr Khusrāw, ed. Kaviani, p. 66). In striking contrast to this is the success of the court and prosperity of Maḥrūf-Fusṭāṭ as described by Nāṣīr al-Khusrāw [q.v.]. There can be little doubt that the source of much of this prosperity, apart from the manufacture and supply of luxuries to the court, is already to be seen in the commercial relations between Egypt and the Indian Ocean on the one hand (cf. Nāṣīr al-Khusrāw's account of ʿĪsāmīn) and Constantinople on the other. The general insecurity deepened after the execution of al-Yāzūrī, who was the last wazir to attempt to control the situation. He was followed by a rapid succession of pashas in office, many of whom, despite the pompous titles duly recorded by Ibn al-Ṣairāfī, held the position for no more than a few days at a time.

The Fāṭimid Caliphate was now destined to pass in a few shattering years through the same agony as the ʿAbbāsī dīlārī of Baghdād had suffered in the early part of the previous century. The breakdown of the civil administration and subsequent exhaustion of the treasury gave a free hand to the military, and the sinister policy of the Caliph's mother brought matters speedily to a head. In a pitched battle at Kūmr al-Shārīk (close to Cairo) in 454 (1062) (sometimes confused with the previous battle at Kūmr al-Shārīk the Turkish and Berber troops led by Nāṣīr al-Dawla Ibn Ḥamāda, a descendant of the Ḥamādīn of Mustanṣirī, defeated and drove the Sūmānīs into the Sūmān but the struggle continued for some years and the blacks were not finally routed and driven out until 459 (1067); thereafter they were confined to the ʿAwaṣ,
Additions and Corrections

p. 701, l. 66. To be added: Signature was something of a privilege. Of the surviving engravers of Istanbul two only possessed it: Yiannes, the son of a famous father of that name, and 'Ashif. The personal seals in Latin characters, made up to this day (1933), are, with a few exceptions, barbarous.

The ethnographic museum at Ankara possesses a curious collection of metal seals provenient from the shrines of the now dissolved tarika of the Bektashis.

which suffered severely from their plundering and devastations. Nāṣīr al-Dawla in turn quarreled with the Turks, and, defeated in battle by a force commanded by al-Mustaṉṣir in person (461 = 1068–1069), appealed to the Sāljuqids Ḍirḡi-Ārslān [q.v.]. Without waiting for his help, however, he regained control of Cairo and the Delta with the aid of the Ayyubids and of the Berbers and took al-Mustaṉṣir (it is said) to the state of a pensioner on a hundred dinārs a month, assumed the title of Sultan al-Dawla, and attempted, but unsuccessfully, to restore his Abābasid ḫumāt. In Rādjas 465 (March 1073) he and all his house were killed by the rival Turkish faction, led by Iḏhuqa, under whom the Caliph fared little better. Meanwhile the constant anarchy and remorseless plundering of the country by the troops brought agriculture to a standstill (although the Nile floods seem to have been uniformly good). The result was a famine which lasted from 459 to 464 (1067–1072) and became progressively more severe. During these years the country was a prey to the utmost misery; the royal city and palaces were looted, and Fustāt was twice plundered and even burned by Nāṣīr al-Dawla. Large numbers of the population, including even the Abābasid officials, sought refuge in Syria and the Iraŷ (for the depopulation and shrinkage of Fustāt cf. Maṭraḥ, i. 5; ed. Witt, i. 12; on the fate of the royal library see also Olga Pinto, Le Biblioteca degli Arabi, Rome 1928, p. 25–26). The Sunni historians dwell on this famine with some complacency, regarding it as the retribution for the impious attack of al-Bassātīr on the Abābasid Caliphate (see below), and circumstantial stories related to the extreme destitution to which al-Mustaṉṣir himself was reduced. That these must be accepted with some reserve is clear from such passages as Ibn Taghri-bardi, II, 186, 18–19.

At length in 465 (1073) al-Mustaṉṣir, taking courage of despair, secretly invited the governor of Ṭakkā, the Armenian general Badr al-Djamālī, to assume supreme control in Egypt. Badr accepted the commission, by conscripting his own troops with him, and sailing from Ṭakkā in the winter, reached Cairo on 29th Djamād I, 466 (Jan. 29, 1074). His rapid and energetic movements took the Turks by surprise, and he put to death the whole body of their leaders, together with a large number of Egyptian notables and officials. For his further military and administrative measures, by which he restored order and relative prosperity in Egypt (the total revenue of Egypt and its remaining Syrian possessions, which in 466 had amounted to 2,800,000 dinārs, rose by 483 to 3,100,000 dinārs: Majrīṭ, i. 100; ed. Witt, ii. 68; cf. Abū Šayh, fol. 7b–9r) see the article BADR AL-DJAMAİLİ. The alliance between general and caliph was cemented by the marriage of Badr’s daughter to al-Mustaṉṣir’s youngest son Ahmad, the future Caliph al-Mustaṭīr [q.v.]. The Fātimid Caliphate was saved but, like its Abābasid rival, at the cost of abandoning its temporal authority to a series of military commanders, entitled ḫaṭār al-djāymanī, from whose control it never afterwards succeeded in emancipating itself.

al-Mustaṉṣir is described in contemporary sources as upright and amiable in character, and just and equitable in his dealings, but as a ruler his personality is entirely obscured. By the successive wazirs and generals who kept him virtually a prisoner. The statements of the later anti-Fātimid writers must, of course, be entirely discounted; the Fātimid sources, on the other hand, praise his sagacity and infallibility (ṣiyār) as Imam.

External relations. The empire to which al-Mustaṉṣir must succeed was the most powerful Muslim state of its time. It extended from Ḥirṣiyā in Syria to Mecca and Central Syria, and maintained an active propagandist organization in Ḫirṣiyā, Persia and Kūrāsān (see the following section). Within a few years of his accession its territories were still further expanded by Anbāḏgān’s conquest of Aleppo in Shaban 429 (May 1038) (cf. the articles FĀTIMIDS and HALĀH) and extension of his authority across the Euphrates, on the one hand, and on the other by the conquests of ʿAlī al-Sulahī in the Yanan, after establishing himself at Masār in the same year (cf. Sulahī; also H. F. al-Hamādānī, in Journal of the Royal Central-Asian Society, 1931 p. 505 sqq., and in J. Res. A.S., 1932, p. 126 sqq.). After the deaths of Anbāḏgān and the wazīr al-Djamālī, who in spite of their rivalry zealously maintained the interests of the dynasty, the power and prestige of the Egyptian court steadily declined. The Arab tribes in Syria, though defeated in the field, remained unsubdued, and the Caliph had to be content with the little more than nominal allegiance of the Mirdāsids [q.v.] at Aleppo. At Damascus, the rivalries between the Berber and Turkish troops and the hostility of the citizens reduced the governors to impotence. The disturbed state of Syria was the more disastrous as it made it impossible for the Fātimid government to give effective support to the amr al-Bassātīr [q.v.; see the list of war material and subventions sent from Egypt: Ibn Taghri-bardi, p. 177] in his attempt to oppose the advancing Sāljuq power, with the result that his occupation of Baghhdād and proclamation of al-Mustaṉṣir in 459 (1058–1059) was speedily brought to an end. The subsequent military and economic disorders in Egypt allowed a free hand to the Turkmen (Ghazz) bands, who had appeared in Northern Syria as early as 447 (1055), though it was not until 463 (1071) that the first Sāljuq armies entered Northern Syria and the Ghazz bands under Atsiz [q.v.] occupied Palestine and began to harass Damascus. In many of the other towns and districts of Syria the authority was seized by local chiefs, such as the kīdīs Ibn Ḧammar [q.v.]; also G. Witt, in Min. Henri Buet, p. 279 sqq.) at Ta ṣbulus and Ibn Abī Ṭakkīl at Tyre, though both of these acknowledged the spiritual authority of the Fātimid Caliph (cf. also the account of the foundation of the castle of Șarkhad by Ḥassān b. Mu’nār al-Kalbi in 466 [1073–1074], quoted from Sibīb al-Djawa in Ibn Taghri-bardi, p. 253). The menace of the Sāljuqs became most substantial after the arrival of Ṭutūsh [q.v.] in 470 (1077–1078), but the latter never actually organized a full campaign against the Fātimids. On the contrary, the offensive was taken by Badr, who succeeded in restoring Egyptian control on the coast as far as Tyre, Sidon and Tībah in 482 (1089), but not in recovering the interior of Palestine and Damascus (lost in 468), in spite of a certain revival of feeling in Syria in favour of the Fātimids. It is difficult to know how much weight to lay on the story (Ibn Taghri-bardi,

---

**THE ENCYCLOPAEDIA OF ISLAM, III.**
p. 272—273) that Tutush at one time proposed to ally himself in marriage with Badr.

The success of the Saljuqids also affected the position of the Fatimids in Arabia. In 462 (1070) the 'Abbâsid Caliph was acknowledged in the Holy Cities, and after a brief return to the Fatimid obedience between 467 and 473 the Hisâj passed definitely to the 'Abbâsid cause. In the Yaman, the 'ülâis in the interior and the Zârâ'ids in the important commercial centre of 'Aden maintained the suzerainty of the Fatimids, the latter until the Al-Abbâd conquest by Türazîshâh in 569 (1173) [cf. the art. SALAMÂN].

Meanwhile the Fatimid empire had been similarly shorn of its possessions in the West. About 435 (1043–1044) al-Mu'izz b. Bâdis [q. v.], the Zirid lieutenant of the Fatimid Caliph in Kaitawan, began a series of repressive measures against the Shî'ites of Ifriqiya; in 440 he seems to have made the first overt gesture of independence, and in 441 superseded the Fatimid coinage; but it was not until 445 (1051) that he formally renounced the Fatimid suzerainty and obtained an investiture from the 'Abbâsid Caliph. According to the traditional account (already fully developed in Isâq al-Sa'darî), the wazir al-Yâzîrî in revenge launched against him the nomad bands of the Banû Hilâl [q. v.]; the tribes mentioned in the Egyptian sources are Zubîqa, Rîyâh, al-Athbâji, and 'Adîyî, who had been a cause of much trouble to the government in the Sa'îd and were now given a free hand to plunder the territories of the Zirids [cf. TUNISIA, vol. iv. 851]. As Wustenfeld has already indicated (p. 234 n.), the story as it stands is open to serious objections, and there can be little doubt that it has been amplified by popular legend. The westward movement of the Hilâl tribes began as early as 440, and there is no reason to reject the account of Ibn 'Idhârî that it was al-Mu'izz himself who invited the Arab tribes, then in Barka, to enter Ifriqiya as his 'amîdî [since he was not on good terms with the 'Ashâdjâ, and that they, having set out in response to his invitation, began to plunder on their own account and already before the close of 443 had inflicted a severe defeat on his troops. The two traditions are not, however, mutually exclusive and may be reconciled by supposing that the Banû Hilâl were transported in the first instance to Barka (the governor of which had thrown in his lot with al-Mu'izz), and that their advance into Ifriqiya was facilitated, for opposite reasons, by both al-Mu'izz and the wazîr [cf. also Ibn al-Athîr, i. 387—388]. During the first years of his reign, the son and successor of al-Mu'izz, Tamûm (453–501 = 1061—1107), temporarily returned to the Fatimid allegiance (Lan-Pâez, 138 n. 1), but with the conquest of Sicily by the Normans in 463 (1070) Barka became the western limit of the Fatimid state.

The diplomatic relations of al-Mustanîr with non-Muslim states covered a wide field. In 429 (1038) the existing treaty with the Byzantine Emperor was renewed and relatively cordial relations established. If Naşir-i Khurasn (ed. Kaviani, p. 67) is to be trusted, the Egyptian government was in communication in 439 (1047) also with the Georgians, the Daumites, the Kha'îân of Turkhistan and even the râjî of Dîlîh, all of whom shared with Egypt a common hostility to the Saljuqids and the Qânevîs. The friendly relations with Constantiople, however, were broken off in 446 (1054), when the Empress Theodora demanded an offensive alliance against the Saljuqids. Egyptian troops were despatched on an unsuccessful expedition against al-Lâdîkîyûa, the Empress retaliated by opening negotiations with the Saljuqids, and al-Mustanîr seized the treasures of the Church of the Holy Sepulchre (al-Kâmûmâ). This breach with Constantinople had important consequences for the future of Egypt, since it to may perhaps be ascribed the opening up of direct commercial relations with the Italian trading cities, though documentary evidence on the point is lacking (cf. Heyd, Histoire du Commerce du Levant, i. 105, 124).

Religious Conditions. The wide expansion of the Fatimid power under al-Mustanîr is reflected also in the religious situation. Propaganda on behalf of the Fatimids is synonymous with the dissemination of the official state religion of the Fatimids, the Islâmî-Shâ'î faith. Not only in Egypt and other lands in actual submission to the Fatimid authority, but in all quarters of the Islamic world, we learn of missionaries (dâ'î), who during the long reign of al-Mustanîr struggled, in part in vain, to secure recognition of their claim to be the religious Imâm. In the East, in Persia, and especially in Shiraz, at the court of the Buyid prince Abû Kâlidî [q. v.], we can trace the activities at least since 429 (1037—1038) of the dâ'î Abû Naşr Hibât Allâh b. Músâ al-Mu'ayyad fi Dun Allâh [see AL-MU'AYYAD], doubtless the most prominent personality of his time in the Islâmî al-dawa. He endeavoured to win over the court and the Daumite troops to the Fatimid cause, but was forced to leave his post in 439 (1047—1048) as the result of pro-'Abbâsid intrigue. In the first part of his autobiography (see Bâbi), al-Mu'ayyad gives a detailed account of his activity, and in particular publishes his correspondence with an unnamed Sunnî from Khurasân, in which he explains the religious and political principles of his mission. To what an extent the power of the Fatimids and the success of their emissaries in Iran and Persia was feared at Baghâd is shown by the fact that several times and latterly in 444 (1052) there was published a document, to which the 'Alîs also subscribed, with the object of declaring false the claim of the Fatimids to descend from 'Ali. At the same time the Fatimid cause gained also new ground in the Yaman. After the political power of the Fatimids had been reduced to a minimum in the course of the fourth century, it now acquired in the Sulâijî Allî b. Muhammad a powerful supporter. He and his successors regarded themselves not only as political but also as religious representatives of the Fatimid Imâm in the Yaman. The voluminous correspondence between the Sulâijî rulers and al-Mustanîr, which is still preserved, collected in a separate work (Kitâb al-Sidjâ'il wa 'l-Tamâwûs wa 'l-'Anâb li-Musânâ al-Mustanjîr bi 'lîb, MS. Sch. Ot. St.; many of these letters are reproduced in Idrîsî, vol. vii. [see Bâbi]), deals, along with political questions, in the first place with the position of the dâ'îwa in the Yaman and in the Fatimid state.

In Egypt itself, soon after the accession of al-Mustanîr, the doctrines of the moderate official Ismâlîya were threatened by the appearance of extremists related to the Drues [q. v.]. A pretender, al-Sikkînî, together with his associate al-Ânu, gave himself out as the returned Caliph al-Hâkim, but
AL-MUSTA'ANŠİR BI 'LLĀH  AL-MUSTARSHID
was promptly unmasked (Idris, vi. 296) Al-
Ma'ayyad, who came to Cairo in 439 and won
the goodwill of Mustansir, was entrusted with
the leadership of the religious mission as Dā'ī l-Dināt (it
should be remarked, however, that al-Yazīdī
during his wazīrat was known as Dā'ī l-dīnāt; cf. Ibn al-Safarī, p. 40). In the reopened seminary in Cairo, where the Dā'ī of the various
countries received instruction, he gave his lectures and gathered into his hands the strings of the whole Dā'ī's. He appears to have exercised a
special influence over the development of the Dā'ī's in the Yaman, as the future Yamanite Dā'ī Lamak b. Malik was numbered among his pupils.
From Persia the newly-converted Ismā'īlīs Nāṣīrī
Khāsrav [q. v.] came to Egypt, to find his master in
him. At the same time al-Mustansir seems to have
played an important political role. In his autobiography he quotes numerous letters which
he wrote to al-Bāṣrī and other generals of the Fāṭimids in Syria and Mesopotamia. In particular
it was at his instigation that the Khutba for the
Fāṭimid was introduced into the prayer at Bāṣirāt
in 450 (cf. Ibn Mayyās, p. 8, 10–6–7). In his poems he eulogizes the Imām al-Mustansir in a similar manner to Nāṣīrī Khāsrav. Other Ismā'īlīs
authored bythis period include (Husayn b. Mahbūb, the Dā'ī Aḥmad b. ʿAbdallāh al-Nahhār,
and the author of the Kifā al-Mağāzī al-
Mustansiriya (lectures in which the Imāmate of
al-Mustansir is demonstrated with the aid of the Ismā'īli ta'wil), which are ascribed by the Fāṭimid
tradition to Badr al-Dīnālī. — For the Fāṭimid propa-
ganda in Transoxiana see also Barthold, Turke-
stan?, G. M. S., p. 304–305.

(H. A. R. Gibb and P. Kraus)

MUSTARIB(A) (A.), "arabicised", the name of one of the groups into which the Arab
genealogists divide the population of Arabia. The first is the "arab arība, the original Arabs of pure stock; they numbered nine (some say seven) tribes which are regarded as the descendants of Aram b. Sūm b. Nīl [q. v.] and the first settlers in Arabia: Al-Ṭabānī, Umayyim, ʿAbd b. Tasm, ʿAbdallāh, Ismāʿīl, Dāʿī, Ḥabīb and ʿAbdallāh. These are
exempt except for a few remnants incorporated in other tribes. The second group comprises the
munṣūrībā (q. v.) who are not pure blooded Arabs. They are regarded as descendants of Kaffān (the Vokțan of the list of nations in Gen. x. 25 sq.) and live in southern Arabia. The third group is called mustarīb; this name is also applied to tribes who were not originally Arabs; they trace their descent from Māʾadd b. ʿAdnān, a descendant of Ismāʿīl [q. v.]; all the so-called Arabian tribes are included among the mustarībā, so that the Banū Kuraysh to which Muʿāwaṣṣāda belonged is one of them; his genealogy is in this way traced back to Abūrahah and he thus thought he could prove his connection with the Biblical prophets. The old term mustarīb, for tribes not originally of Arab descent, obtained a new meaning after the conquest of Spain. It was applied to the Christian Spaniards who adopted Islam; the word mustarīb was corrupted to Musaara [q. v.].

(ILE HICHETSSTADTER

AL-MUSTARSHID BI 'LLĀH, ABU MAṢṢAR AL-FAYŪT, ʿAbbāsīd caliph, born in 486 (1003–1004), son of al-Mustazhir and a slave-girl. Al-Mustarshid, who was proclaimed his father's successor after the latter's death on 16th Rabi' II
512 (Aug. 6, 1118), was the first caliph since the occupation of Bagdad by the Byzans, who was not content with spiritual supremacy but also endeavoured to revive the caliph's authority in temporal matters. The Šādīk sultan had died before al-Mustazhir (Dhu l-Ḥijja 511 = April 1118) and his son Māḥmūd [q. v.] was appointed his successor. His uncle Šanḍar and his brother Māḥmūd both rebelled against the new sultan and the turbulent Māḥmūd Dalbāsī, b. Sulakā [q. v.], raised trouble in the ʿIrāk and had also quarrelled with the latter. The caliph defeated him in 517 (1123) and after al-Mustarshid had repelled a regular attack on the capital he was able to adopt a more independent attitude to the Šādīk. But as his increasing power aroused the misgivings of the governor of Bagdad, the latter in Kāḏib 520
(July–Aug. 1126) went to Sūlān Māḥmūd and asked him to put an end to the caliph's power. Māḥmūd agreed and attacked the capital, while al-Mustarshid sent an army against Wāṣīt in order to secure this town. The attempt failed however; towards the end of the year Māḥmūd entered Bagdad and al-Mustarshid could not hold out indefinetely but had to make peace, wherein the sultan appointed ʿImād al-Dīn Zangī governor of Bagdad and all the ʿIrāk. But in Dīnālī II 521 (July 1127) the latter was given the governorship of Mawāṣil and after Māḥmūd's death (525 =
1131) the succession was again disputed. In 526 Dalbāsī and Zangī undertook a campaign against Bagdad but were defeated by the caliph at the
end of Radjab (June 1132) and in the same year Masūd [q. v.] had to give him complete control of Baghdād and the surrounding country. At some time he attacked the sūfān but was taken prisoner in Kīmaḍīn 529 (Jan. 1155) and murdered in Dhu‘l-Ka‘da of the same year (Aug. 1155) (cf. the art. DURAS B. SADIK). Bibliography: Ibn al-Athīr, ed. Tornberg, x.—xii., see index; Ibn al-Tīkākā, al-Faqqārī, ed. Derenburg, p. 406—415; Muhammad b. Shākir, Fawā'id al-Waṣayyārī, ii. 124 sqq.; Ibn Khalūdūn, al-Thārī, iii. 495 sqq.; Hamd Allāh Mustawfī-Kazwīni, Tārīḵī-Guzhā, ed. Browne, i. 361 sqq.; Well, Gesch. d. Chalifen, ii. 212—253; Müller, Der Islam im Morgen- und Abendland, ii. 127 sqq.; Muir, The Caliphate, its Rise, Decline, and Fall, new ed., p. 583 sqq.; Houtsma, Recueil de textes relatifs à l’histoire des Seljuques, ii. 104, 120, 152, 160, 174—178; Le Strange, Baghdad during the Abbasid Caliphate, p. 105, 250, 275. (K. V. ZETTERSTEN) MUSTAṢHĀR (A.), cōuncillor, Turkish pronunciation mustaṭhār, meaning “general secretary to a ministry” or “under-secretary of state”. The word which means literally “one who is consulted” comes from the same root as muṣṭār [q. v.] which properly means “he who gives advice”. Sāmī Bay regards the word mustaṭhār as a synonym of the old Turkish istār. The office was called mustaṭhār or more simply mustaṭhārlik.

Like the title muṣṭār, that of mustaṭhār was created by Maḥmūd II. There were at first two mustaṭhārs in the grand-vizierate, one for foreign and the other for home affairs. The latter was later replaced by a Minister of the Interior who had in his turn a mustaṭhār. The number of mustaṭhārs gradually increased but some less important departments had muṭṭāwī “assistant, deputy” (in 1296 for example there were muṭṭāwī in the finance and police departments). The office has been retained under the present republic and each ministry or vakilāt has its mustaṭhār, that of national defence has three (for army, navy and air force).

The chief judge of Istanbul used to have a mustaṭhār. According to Luṭfi Efendi, the post of mustaṭhār of the Navy was created in 1253 (v., p. 91) and that of mustaṭhār of the zdūrūn or of the two katāqer in 1262 (viii., p. 127). On the honorary grades of mustaṭhār cf. the same author, vi., p. 66; cf. also p. 103, line 8 from below. Mustaṭhār is also the name given to the “councillor” of Turkish or foreign embassies or legations. The title of mustaṭhār al-wadā‘īr was borne by the ambassador himself, sent by the Sulṭān of Marākoc to Stambul in 1197, is inexplicable to us (cf. Dżewdet Pasha, ed. Recueil de Mémories Orientaux de l’Es. des Langues Orientales à Paris, 1905, p. 6).

As to the term muḥšāwir, a synonym of the preceding and from the same root, it is applied to technical advisers, whether foreigners or not: ǧlāḥ muḥšāwir “legal adviser”.

Bibliography: Cf. the various Ottoman calendars. The historians Ahmed Dżewdet and Luṭfi, following their predecessors, give no details of the administrative organisation. (J. DINVY)

AL-MUSTA‘ṢIM BI’LLĀH, ABD AL-MMĀDĪ.- AL-MUSTAWFĪ, THE LAST ʿABBĀSĪ caliph of Baghdād, born in 609 (1212/3). After the death of his father in Ḥijmādī I and II 640 (Nov./Dec. 1242) he was raised to the caliph’s throne but he had neither the talent nor the strength to avert the catastrophe threatening from the Mongols; he allowed himself to be guided by bad councillors who were not agreed among themselves but working against one another. In 685 (1255/6) the Mongol Khân Hūlgū [q. v.] demanded that the Mongols be allowed to participate in the war on the Ismā‘īlīs. The caliph did not trouble about this and in 686 (March/April 1257) a Mongol embassy came to Baghdād and demanded that al-Mustaṣim should raise the defences of the city for further negotiations or send a deputy. As the caliph refused to meet these demands, Hūlgū threatened him with war. After another message in which al-Mustaṣim tried to intimidate Hūlgū, the latter set out against the ancient city of the caliphs. On the way he met another embassy, offering him an annual tribute but this effort to appease the cruel foe was useless and by Muḥarrār 656 (Jan. 1258) the Mongols were at the gates of Baghdād. Preparations for the siege advanced rapidly and after all attempts to resume negotiations had failed against the relentless Hūlgū, al-Mustaṣim had to surrender on 4th Safar (10th Feb.) and the city was sacked. Ten days later Hūlgū had the caliph with some of his relations put to death [cf. the art. BHĀGHĀDĀD]. Bibliography: Ibn al-Tīkākā, al-Faqqārī (ed. Derenburg), p. 448—458; Muhammad b. Shākir, Fawā'id al-Waṣayyārī, i. 237—239; Ibn Khalūdūn, al-Thārī, iii. 536 sqq.; Râshīd al-Dīn (ed. Quattrêmère), i. 228 sqq.; Hamd Allāh Mustawfī-Kazwīni, Tārīḵī-Guzhā (ed. Browne), i. 371—373; Well, Gesch. d. Chalifen, iii. 470—478; Le Strange, Baghdad during the Abbasid Caliphate, see index; A. Müller, Der Islam, i. 640; ii. 228 sqq.; Muir, The Caliphate, new ed., p. 590 sqq. (K. V. ZETTERSTEN) MUSTAWFĪ, an official in charge of government accounts. Under the Turkish system, e.g. under the Ghaznavids and Suldāqā, the title was borne by a functionary of high rank who was at the head of the diwan concerned with keeping the tally of public income and expenditure. Under the Nīẓām al-Mulk the office of the mustawfī was second only to that of the vizier (Bandārī, ed. Houtsma, p. 100) and appears to have corresponded to the diwān al-zamār or diwan al-azāmima, the “Bureau of (Financial) Control” of the ‘Abbāsīs (Tabart, i. 532), although the Suldāqā also had a diwan of this name teatable by the mustawfī himself (Bandārī, p. 58). The qualities requisite in him were such as those fit him for the vizierate itself (ibid., p. 96), and indeed there were duties which were common to the two offices so that the same man could act as both (ibid., p. 129, last line). The vizierate might be refused by a powerful mustawfī holding all the reins of government in his hands and reluctant to expose himself to the dangers inherent in the normally more exalted office (ibid., p. 136, 141). But no officer was safe from a capricious or greedy monarch and the mustawfī Saif al-Dīn suffered death and the confiscation of a large part of his property at the hands of Sultan al-Mūsawī (ibid., p. 171). It is probable that the actual title of the State mustawfī was musṭawfī 'l-nāmaṭīrā or something similar (ibid., p. 31), the ordinary mustawfī, or accountant, holding a subordinate position (ibid., p. 31, 3).
Under the Mongols the title was given to the superintendents of provincial finances (e.g. Ḥamd Allāh Mustawfī and his great-grandfather; cf. E. G. Browne, Lit. Hist. of Persia, iii. 87), and under the Æmмонs, Ṣâḥib had and Kīḍjarā, the mastawfī filled the office of a secretary of state in charge of the public treasury accounts while the ordinary mastawfī was one of the lesser officers of the court (R. du Mans, Estat de la Perse en 1660, ed. Schefer, Paris 1890, p. 26, 178 sq.: A. Oleasrius, Voyages et Travels, London 1669, p. 274: Sir J. Malcolm, History of Persia, London 1815, ii. 437: G. W. Watson, History of Persia, London 1866, p. 16 sq.). Mustawfī ‘l-‘amalī might however, under the latter Kīḍjarā, be a title personal to a particular individual, who might be the Minister of the Interior (as in 1890) or even Prime Minister (as in 1910).

In Egypt, under the Fātimids and Mamluks, the mastawfī might be the head of a ḍīwān (as of the ḍīwān al-‘adā‘ī) or hold a less exalted, but still important, position as financial controller in such matters as the kāfīrāt, or military fiefs (cf. Makrizī, Kāfīrāt, Bulaq 1270, i. 193, middle and p. 227, under nāμr al-‘adā‘ī). The ordinary mastawfī was a minor official of the status of a clerk employed under a qā'id, or over seer in land-survey or crop-estimation or else in a government office such as the depot of the government grain monopoly (op. cit., ed. Wiet, ii., ch. 32, p. 23–25).

(Rev.)

MUSTAWFĪ [see ḤAMD ALLĀH, ABU ‘L-‘ABBĀS AHMAD B. AL-MUṬTAQI, ‘ABBĀSĪD CALIPH. After the death of his father in Muḥarram 487 (Feb. 1094) the young al-Mustawfī succeeded him; about this time the power of the Sāmāyids was beginning to be weakened by internal dissensions (cf. Sāmāyids). The Assassins, who had already appeared on the scene in al-Muṭtadi’s reign, were able to take advantage of the situation and fighting this dangerous sect soon became one of the most important tasks of the sultāns and caliphs. The Crusades also began at this time. In Ẓāhīrī 492 (July 1099) Jerusalem was taken and in the following years numerous fugitives reached Baghhdād who urged Sulṭān Muḥammad to take part in the struggle. He therefore sent an army under the emir Mawdūd against the Crusaders in 505 (1111/12). Al-Mustawfī, who is hardly ever mentioned in the political history of this period, died on 16 Rabī‘ II 512 (Aug. 6, 1118) at the age of 41.

(K. V. ZETTERSTEN)
to be a copyist's error for Ma‘āb, while Musil, op. cit., p. 153, identifies it with Kharibat al-Majma, which lies in a broad depression, in order to fall upon the Arabs on a feastday (μάρτυς τῶν εὐδοκο-σίσσων αδiators, which seems to indicate a heathen rather than a Christian population) but the narratives Theodoros there learned of their plans and rapidly collecting the garrisons of the fortresses, fell upon the Muslims at Mu‘āta and defeated them. Three of the leaders and most of the force were killed and Chaledos who was called the “sword of God”, alone escaped. In escaping, the tombs of the martyrs who fell there were requisitioned out at Mu‘āta, where a mausoleum was built over them.

**MUTA (A.), temporary marriage (according to the Arab lexico- graphers “marriage of pleasure”), a marriage which is contracted for a fixed period on rewarding the woman.**

I. Before Islām. According to Ammianus Marcellinus, iv. 4, 4, temporary marriage was in use among the Arabs already in the fourth century A.D., but this can hardly be a reference to muṭa‘a as the woman brings a lance and tent to the man and can leave him if she likes, after the period has elapsed. It is also doubtful if there is a distinct muṭa‘a character in the marriage of 1168HM with Salma bint ‘Amr, whom he married during a temporary stay in Yathrib and left with her family there after the birth of her child (Caetani, i. 111, § 92). From the passage Algānī, xvi. 63 (mati‘i‘ul biha ‘l-‘itala) as well as from Muslim traditions it may be concluded that muṭa‘a was known in the Dāhilīya. If we remember that the same kind of temporary marriage as the muṭa‘a was known in Erythraea (Conti Rossini, Principii di diritto con- stitutionario, Rome 1916, p. 186, 249) it seems to me certain that muṭa‘a is an old Arabian institution. (Temporary marriage is also found among other peoples. cf. Wilken, p. 21 sqq.; Westermark, History of Human Marriage, London 1925, ii. 267 sqq.; cf. also the 234 sa‘ad yā‘ase in Egypt, to which Grifflin, p. 327 calls attention: in a demotic document there is a reference to such a marriage for five months: cf. Mitter-Wilcken, Grundzüge der Papyrologie, i. 11, p. 203 sqq.).

II. In the Kur‘ān there is undoubtedly a reference to this form of marriage in the Medina sūra iv. 28, although the orthodox explanation of this passage as early as the first century refers it to the ordinary nikāḥ, after giving a list of the classes of women with whom marriage is forbidden, it goes on: “and further you are permitted to seek out wives with your wealth, in modest conduct but not in fornication: be给他们 their reward (aldir‘) for what you have enjoyed of them (istamta‘um) in keeping with your promise.” After istamta‘um, Uba‘ b. Ka‘b and Ibn ‘Abbas read the words ilā adil‘in mutamām min for a definite period!” (Tabari, Ta‘afir, v. 9), a reading which naturally has not found its way into Sunni circles but is often added in Shī‘a books.

III. The traditions are contradictory on the question of muṭa‘a. According to some, it was in use in the time of the Prophet and he was even said to have practised it (mattat‘ul‘ab: Tabari, An- nales, i. 1775, 1776; cf. Caetani, ii. 478, No. 17 and 19). In return for a robe or a handful of dates one could take an unmarried woman (nayyām) for a period of cohabitation (Muslim, Nikāḥ, tr. 13, 177; Ta‘lisi, No. 1627). Especially when a man came to a strange town he could marry a woman there for the period of his stay so that she could look after him (Tirmidhī, Nikāḥ, bāb 28).

On the other hand, according to one tradition related by ‘Ali, it was forbidden by the Prophet on the day (or in the year) of Khaibar (Bukhārī, Ma‘marī, bāb 38; Ḍalā‘īlī, bāb 28; Nikāḥ, bāb 31; Muslim, Nikāḥ, tr. 31–34; Naṣā‘ī, Nikāḥ, bāb 71 [“on the day of Hunain” must here be a mistake for Khaibar]: Said, bāb 51: Ibn Mā‘ṣṣa, Nikāḥ, bāb 44; Tirmidhī, Nikāḥ, bāb 28; A‘īma, bāb 6; Mālik, Nikāḥ, tr. 41; Ahmad b. Hanbal, i. 79, 103, 142; Ta‘lisi, No. 111; Zaid, Ma‘marī, No. 718).

According to other traditions, he is said to have permitted it for a short time on particular occasions. In this connection we have a group of traditions which goes back to Sabra b. Mab‘ād; the various accounts of this, some long, some short, which supplement one another, are in part given without date (Muslim, Nikāḥ, tr. 20, 26; Nasā‘ī, Nikāḥ, bāb 71; Abū Dāwūd, Nikāḥ, bāb 13; Ahmad b. Hanbal, ii. 404), in part referred to the conquest of Mecca (Muslim, Nikāḥ, tr. 21, 24, 25, 27, 28; Dārimi, Nikāḥ, bāb 16; Ahmad b. Hanbal, ii. 404, 405), and in part to the farewell pilgrimage (Ibn Mā‘ṣṣa, Nikāḥ, bāb 44; Dārimi, Nikāḥ, bāb 15; Abū Dāwūd, Nikāḥ, bāb 13; Ahmad b. Hanbal, ii. 404 sq). Their substance is as follows: The Prophet permitted muṭa‘a: Sabra therefore went with a companion to a woman and each offered her his cloak. She chose the younger with the shabbier cloak and slept three nights with him; thereafter the Prophet forbade it. According to the stories associated with the farewell pilgrimage, the woman wished muṭa‘a only for a fixed period so that ten days or nights was agreed upon, but the Prophet forbade it after the first night, saying: “Whoever of you has married a woman for a period, shall give her what he promised and ask nothing of it back and he shall separate from her; for God has forbidden this up to the day of resurrection”. (For the conclusion cf. also the fragments of this in Muslim, Nikāḥ, tr. 23, 30).

According to a second group of traditions, which goes back to Gābir b. ‘Abd Allāh and Salama b. al-Akwa‘, the Prophet permitted muṭa‘a for three days on a campaign (Bukhārī, Nikāḥ, bāb 71; Muslim, Nikāḥ, tr. 14, 15; Ahmad b. Hanbal, iv. 47, 51; according to Muslim, Nikāḥ, tr. 19 and Ahmad b. Hanbal, iv. 55, this was in the year of Awtāt, i.e. shortly after the capture of Mecca). In Bukhārī we have at the end: “The partnership of the two parties lasted three nights; and if they agreed to extend it, they did so; and if they wished to separate, they did so”. A prohibition is given only in two versions in the group.
According to other traditions, mut'a was first forbidden by the caliph ʿOmar at the end of his caliphate (Muslim, Nikāḥ, tr. 16–18; Aljad b. Ḥanbal, iii. 304, 380 and iii. 325, 356, 363, where there is allusion to the two kinds of muta', i.e. tamatta' on the pilgrimage and muwa'at or nissā'). ʿOmar threatened the punishment of stoning so that he regarded mut'a as fornication (Ibn Majā‘, Nikāḥ, bāb 44; Mālik, Nikāḥ, tr. 42; Tāyālīsī, No. 1792). Cf. the angry exclamation of Ibn ʿOmar when he was asked about mut'ā: "By Allah, we were not immodest in the time of the Prophet of Allah nor fornicators" (ʿAbd Allāh b. Ḥanbal, ii. 95, 104).

What then is at the bottom of these contradictory traditions? While Wallis, regards mut'a as simply prostitution and not an old Arabian custom, Caetani points out that the traditions agree in connecting mut'a with an entrance of the Prophet into Mecca and sometimes even with the ḍaʿābī and that a three days' duration is a feature of the mut'a; taking account of other considerations, he concludes that mut'a in the pagan period was religious prostitution on the occasion of the Meccan festival. However, tempting this explanation may be, there is a complete lack of evidence for any religious prostitution in Meccan times. With Wilken and Robertson Smith, we must rather regard mut'a as the survival into Islam of an old Arabian custom. The Prophet gives this custom sanction in the Kūrān and also practised it himself. The traditions, if examined carefully, only mention two cases of prohibition by the Prophet: Khaibar and Mecca. As both these are later than the above Kūrānic passage (years 3–5, according to Noldeke-Schwally, i. 198) this prohibition would be quite possible. But since on the other hand the caliph ʿOmar prohibited mut'a, which there is no reason to doubt, we might regard the tradition of prohibition as representing later views, which, as is often the case, are put back to the time of the Prophet.

IV. Attitude of the ʿulamāʾ. ʿIbn Abbās (d. 68) was an aident champion of mut'a (Buḥārī, Nikāḥ, bāb 31; Muslim, Nikāḥ, tr. 18; Tāyālīsī, No. 1792; Rāzī, Mafāštāt al-Qabīb, Cairo 1324, ii. 105). In Mecca and the Yemen, according to Ibn Ḥaḍī (Bidūyā, Cairo 1339, ii. 54), he also had followers; but before his death he seems to have converted to the opposite view (Tirmidhī, Nikāḥ, bāb 28; Rāzī, loc. cit.). In later times, people spoke desisively of a marriage by a fetūdh of Ibn ʿAbbās. In the second century of Mecca, fetūdh were still given permitting mut'a (Muslim, Nikāḥ, tr. 29). The Kūrān commentators Madāghīd (d. 100), Saʿīd b. Ḍabair (d. 95), and ʿAlī al-Saddī (d. 127) also referred the above verse of the Kūrān to mut'a. Saddī says that it is a marriage for a fixed period and that it should be concluded with the permission of the wali and with two witnesses; that after the expiry of this period the man has no longer any claim on the woman and that the two parties cannot inherit from one another (Tabārī, Taṣfiṣ, v. 8). With the second century, the contrary view begins to predominate; although individuals like ʿĀmir b. ʿAbd Allāh b. Ḍanīr (d. 126), Ibn ʿAbbās (d. 150) and the Zaidi sect of the Ḍārūridiya permit mut'a (Ibn Ḥaḍī, loc. cit.;van Andelen, Qiyāṣ, Leyden 1919, p. 72, note 9), al-Thawrī (d. 161), Ibn al-Mubārak (d. 181) (Tirmidhī, Nikāḥ, bāb 28) and all the Sunni schools of law as well as the Zaidīs (al-Naṣīḥī b. Ḥaqqī, Taṣfiṣ, Berlin MS., Glaser 74, fol. 53b) consider mut'a forbidden. Its recognition was now limited to the Ṣaḥ. And if the caliph Maʿmūn tried to introduce mut'a again, this was certainly due to his Shi'i tendencies (Ibn Khaṭṭābih, Waṣf, ii. 218).

At the same time, we still have in the second century the opinions of a period of transition. According to ʿAbdu (d. 158), the marriage concluded under the form of mut'a was valid as a marriage but its limitation in time was invalid (Sarākhīsī, Mabāʾīt, v. 153; cf. also Buḥārī, Ḥṣab, bāb 4). According to al-Ḥasan b. Ziyād al-Ṭuhārī (d. 204), the mut'a was valid if the partners could not survive the time fixed, e.g. 100 years or more (Sarākhīsī, loc. cit.).

But in spite of their refusal to recognise mut'a, the Sunnis made concessions by which mut'a gained a footing in another form. It became the practice not to insert a definite period in the contract; any agreement made outside the contract was not affected by the law. Al-Ṣādiqī (C. m., v. 71) for example, declared a marriage valid when it was concluded with the unuttered resolution (niyya) to observe it only for the period of stay in a place or for a few days only, so long as this was not expressly stipulated in the contract. Similarly if agreement to this effect (mawāṣaqa) had been previously made and even if made on oath; he describes such an agreement as mabrūk. There are also traces in later literature of a decision by Mālik by which he permitted mut'a (Sarākhīsī, v. 152; Buḥrānī, Munawwār al-Tawżīrīkh, ed. Lees, ii. 208 sqq.) although only the contrary is recorded in the Mawiwatī and Mudawwawīn (iv. 46).

A good exposition of the two opposite points of view is given from the Sunni side by Kāsīnī (d. 587), Bādīʾī al-Salāfī, Cairo 1337, ii. 272–274 and in Rāzī, q. cit., iii. 193–195 and from the Shi'i side by ʿAlī al-Hudā al-Maṭbūṭā, Intifār, Teheran 1315, p. 60–65. The Sunnis refer the verse above mentioned from the Kūrān to regular marriage and declare the ʿayr to be mahr, while the Shi'is base their view on this verse and consider the traditions of prohibition not to be abrogatory and do not consider 'Omar authoritative for a prohibition. The Imāmīs even go so far as to say: "The holy letter is said to have been converted to the opposite view (Tirmidhī, Nikāḥ, bāb 28; Rāzī, loc. cit.). In later times, people spoke desisively of a marriage by a fetūdh of Ibn ʿAbbās. In the second century of Mecca, fetūdh were still given permitting mut'a (Muslim, Nikāḥ, tr. 29). The Kūrān commentators Madāghīd (d. 100), Saʿīd b. Ḍabair (d. 95), and ʿAlī al-Saddī (d. 127) also referred the above verse of the Kūrān to mut'a. Saddī says that it is a marriage for a fixed period and that it should be concluded with the permission of the wali and with two witnesses; that after the expiry of this period the man has no longer any claim on the woman and that the two parties cannot inherit from one another (Tabārī, Taṣfiṣ, v. 8). With the second century, the contrary view begins to predominate; although individuals like ʿĀmir b. ʿAbd Allāh b. Ḍanīr (d. 126), Ibn ʿAbbās (d. 150) and the Zaidi sect of the Ḍārūridiya permit mut'a (Ibn Ḥaḍī, loc. cit.;van Andelen, Qiyāṣ, Leyden 1919, p. 72, note 9), al-Thawrī (d. 161), Ibn al-Mubārak (d. 181) (Tirmidhī, Nikāḥ, bāb 28)
and chaste ('āṣfa) and if possible ought to know about muth'a, i.e. be a Shi'i, and can only contract a temporary marriage with a Muslim. According to Ibn Hisham (d. 785) and al-Mufid (d. 443), muth'a with an unbeliever is forbidden, even with a member of the possessors of a scripture (ši'ā'yah). The nāyāfī (extreme Khāridji) are included among the unbelievers. According to most Imāmīs (and Tālī also) however, mut'a with a Christian or Jewish woman is permitted but nāyāfī with a māqūfīya. Mut'a with a slave-girl is only permitted with the consent of her master. Usually the woman contracts the marriage without a wāli; only a virgin (bikr), according to some, requires her father’s consent (Abu l-Salāḥ, d. 82; Ibn Ḥabīb, d. 381; Ibn al-Baγarādāj, d. 481; cf. Hihl, iii. 93). The man and in this way take other wives in addition to his four legal wives, especially on journeys. He must not, however, take two sisters at the same time, not even during the 'idda.

3. The muth'a ends on the expiry of the period agreed upon. It cannot be prolonged by arrangement between the two parties: a new temporary marriage with a new māzur must rather be contracted at the end of the period. Divorce is impossible; according to some, however, lī'ān and zīhār are permitted.

4. There is no obligation on the man to provide food and home for the woman. The two partners cannot inherit from one another; but according to some, inheritance may be provided for in the contract. The 'idda after the expiry of the muth'a is two periods or 45 days, i.e. the 'idda of a slave-girl. There is, however, disagreement whether, on the man’s death the period of waiting is the usual one for a wife or that for a slave. The children go with the father.

VI. Modern practice. Although these Shi'ite views have a certain amount of moral support, the muth'a in many cases can only be described as legalized prostitution. It is true that in Persia such marriages are made for very long periods, e.g. 99 years, but the Persian, when on a journey, temporarily marries in any place where he is stopping for some time and in the towns and caravanserais mollahs and other brokers offer a wife to each new arrival. To make this business more profitable, the 'idda period is evaded by concluding a second temporary marriage with the same man after the first, for in the case of such a marriage the 'idda is not necessary. This marriage and a woman of this kind is called in Persia fāhe (lit. "form" i.e. of the contract). Cf. Olearvs [1637], Muscavit. u. pers. Reise, Schlesswig 1856, p. 609; Chardin [1673], Voyages, Paris 1814, 222-223, 225-227; Polak, Persien, Leipzig 1865, i. 207 sq.; E. G. Bouvme, A year amongst the Persians, Cambridge 1827, p. 305 sq.; H. Norden, Persien, Leipzig 1829, p. 148, 167; and the romance of the traveller James Morier, The adventures of Hijzi Baba of Isphahan, 1824, part iii., chap. 6-8.

The constantly quoted story (first in Wilken, p. 19) of Alex. Hamilton (A new account of the East Indies, Edinburgh 1827, i. 51) that at the beginning of the xviith century temporary marriages were publicly negotiated in Souan (= San'a) in South Arabia and concluded before the kāfī, is a very improbable one: for Hamilton knew only the coast-towns from his own observation and wrote his account of his travels later from memory. He seems to be confusing them with conditions in Persian towns, and he makes mistakes on other matters.

In Mecca, in modern as well as ancient times (for the middle ages cf. Liḍān al-ʿArabī; or muth'a al-tawād bi-Makka minh), temporary marriages were concluded among the Sunnīs but nothing is said of this in the marriage contract or this would make it invalid; everything necessary is arranged previously by word of mouth. On the conclusion of the contract, the man utters the qalā'ah formula with a time limit. Such agreements are as a rule kept (Snouck Hurgronje, Mecca, ii. 156; do., Verz. Gesch. W. 150). The same artifice is used in such cases as ʿAṣa'ī indicated long ago (cf. above).

MUTA’ALL. [See Also, II., H.]

MUTA’ARRĪB (A) "made averse", the term applied to the descendants of Kātān (the Biblical Yakūn) who were regarded by the genealogists as "having become Arabs" in contract to the supposed native "pure" Arab tribes like ʿAd, Thamūd, etc. They settled in South Arabia and adopted Arabic from the "pure" Arabs. The latter had learned it through Ḥajar, the only man who spoke Arabic in Noah's ark (all the rest spoke Syriac), and his son-in-law Aḥām b. ʿĀsh b. Nāḥ was the ancestor of the ʿAd and Thamūd etc. From South Arabia, their main centre, tribes of the Banū Kātān migrated to the north, so that there are in Northern Arabia also tribes whose genealogy make them belong to the Banū Kātān (cf. the article Muta’ārib[A] where the literature is given).

MUTADĀRĪK, name of the sixteenth metre in Arabic prosody, added to al-khalīl b. Ahmad’s list by al-Akhfash al-Awṣat [= A]. It is also called nukhṭarī, nukhṭath, khabab, shabik, muntawīl, dāb al-khālī, raqʿ al-khālī, sūr al-nāṣîn. It does not seem to have been used by the poets before Islām or of the first century A.H.
It has four feet to the hemistich and two 'arūd and four darb:

1st 'arūd

Fā'ilūn fā'ilūn fā'ilūn fā'ilūn
fā'ilūn fā'ilūn fā'ilūn fā'ilūn
fā'ilūn fā'ilūn fā'ilūn fā'ilūn
fā'ilūn fā'ilūn fā'ilūn fā'ilūn

2nd 'arūd

fā'ilūn fā'ilūn fā'ilūn fā'ilūn
fā'ilūn fā'ilūn fā'ilūn fā'ilūn
fā'ilūn fā'ilūn fā'ilūn fā'ilūn
fā'ilūn fā'ilūn fā'ilūn fā'ilūn

Fā'ilūn may change to fā'ilūn (fā'ilūn ≡ fā'ilūn).

(Moh. Ben Cheker)

AL-MUṬAḌID B‘ILLĀH, Aḥū ’l-Aṣṣās Aḥmād b. Ta‘lim, Aḥḥāsid caliph, son of al-Muwaṣṣak, co-regent with the caliph al-Muṭaḍid [q.v.], and a Greek slave named Dārār. Al-Muṭaḍid was already the real ruler in the two last years of al-Muwaṣṣak’s life and after the death of al-Muṭaṣid in Rājdāb 279 (Oct. 592) he ascended the throne. The new caliph who had inherited his father’s gifts as a ruler and was distinguished alike for his economy and military ability is one of the greatest of the Aḥḥāsid in spite of his strictness and cruelty. On the accession of al-Muṭaḍid the Ṭulūnids Khûnārāwah [q.v.], wearied of the long war, concluded peace and gave the caliph his daughter in marriage. While the Khâridjīs in Mesopotamia were weakened by internal dissensions, al-Muṭaḍid in 280 (893–894) undertook an expedition against the rebel Banū Ṣa‘ībān and brought them to obedience. In the next two years the allies of the Khâridjī chief Hârūn b. ʿAbd Allāh were defeated and in 283 (696) the latter fell into the hands of Husain b. Hamdān, and was sent to Baghdad where the caliph had him crucified. The influence of the Ḥamānids now began to increase in Baghdat. The Dulfānids [q.v.] who had given the caliphs much trouble were soon finally conquered. After al-Hârūn b. ʿAbd al-Azza' called Abū Lailik had been defeated and slain in Dhu ’l-Hijjah 284 (Jan. 898) near Isfahān, al-Muṭaḍid had the other Dulfānids imprisoned and the family now disappears from history. The Šāmānids increased their power at the expense of the Ṣaffārīds and the Aṣlid. In 287 (900) the Šaffārī ʿAmr b. al-Laith [q.v.] was captured and brought to Baghdat. In the same year the Šālīd Muḥammad b. Zayd, lord of Ṭabaristan, occupied Dūjdīr marched against Ṣa‘ībān but defeated by the Šāfārīs. The latter then drew towards the Ḥurūnī b. Ḥarūn and died of his wounds while Ibn Ḥarūn took possession of Dūjdīr and Ṭabaristan in the name of the Šāmānids. About the same time the governor of Armenia and Aḥḥārābidnād Muḥammad b. Abī ʾl-Sāda endeavoured in combination with his freedman Wāṣīf to conquer Egypt. The latter however was taken prisoner by the caliph’s troops and as the most influential men in Tarsus had promised their help, al-Muṭaḍid had them arrested and the fleet there burned. Muḥammad was however allowed to retain his post but died soon afterwards of the plague. The Karmājīn [q.v.] now appeared on the scene and in the same year the Karmājīn leader al-Djamāḥī [q.v.], inquired a complete defeat on the caliph’s troops. Al-Muṭaḍid died in Baghdat on 22 Rābi’ II, 289 (April 5, 902) at the age of 40 or 47. According to some he was poisoned. — Cf. also the art. ʾIRĀB, B. BULŪL.

AL-MUṬAḌID B‘ILLĀH, Aḥū ’l-Aṣṣās Aḥmād b. Muḥammad b. ʾAbī ʾl-Aṣṣās, the most important and most powerful sovereign of the Abbāsid dynasty [q.v.] who reigned over the little kingdom formed by his father Abuʾl-Kāsim Muḥammad b. ʾAbībād, with Seville [q.v.] as his capital, at the time of the break up of the Umayyad caliphate of Spain and the rise of the rey es de taifas (muṭābīk al-faṭwāf); in the course of a reign of nearly 30 years (433–460 a.H. = 1042–1069 a.d.), he very considerably increased his territory by making himself the champion of the Spanish Arabs against the Berbers in Spain whose numbers, already very large in the tenth century, had been much increased since the period of the Ša‘īdīs. When he succeeded his father, the new king of Seville, who was then 26, following the usual practice of the period, assumed the title of ṣaḥīb, and a little later the taḥāb of al-Muṭaḍid b‘Ilāh by which he is best known. Gifted with real political ability, he was not long in revealing his character, that of an autocratic ruler, ambitious and cruel and little scrupulous in the means which he used to achieve his ends. As soon as he came to the throne he continued the war begun by his father against the petty Berber ruler of Carmona [q.v.], Muḥammad b. ʾAbī ʾl-Bīrzālī, who, with the help of Seville and successor ʾĪsā b. ʾĪsā. At the same time, al-Muṭaḍid was extending his kingdom in the west between Seville and the Atlantic Ocean. It was with this object that he attacked and defeated successively Ibn ʾṬa‘īf, lord (ṣaḥīb) of Mertola, and Muḥammad b. ʾAbī ʾl-Ŷābīna b. ʾAbī ʾl-Ŷābīna b. ʾAbī ʾl-Ŷābīna, lord of Niebla (Ar. Laḥāḍa) [q.v.] who in spite of his Arab descent had had the audacity to ally himself with the Berber chiefs. In face of these successes of the king of Seville, the other muṭābīk al-faṭwāf who distrusted him formed a kind of league into which entered the princes of Badajos [q.v.], Algeciras [q.v.], Granada [q.v.] and Malaga [q.v.]. This soon became a war between the Abbāsid of Seville and the Aḥḥāsid [q.v.] of Badajos al-Muẓaffar [q.v.]; it was to last for many years in spite of the efforts at mediation by the Djahward ruler of Cordova which only achieved their end in 1051. Down to this year, while harassing the frontiers of the kingdom of Seville, al-Muṭaḍid displayed other activities: in succession he defeated Muḥammad b. Ṣa‘īb al-Bakrī, lord of Huelva [q.v.] and of Saltes [q.v.] (whose son was the famous geographer), the Banū Muzain, lords of Silves [q.v.], and Muḥammad b. ʾĀṣāb ʾĪb n Ḥarūn, lord of Santa María de Algarve [q.v.], and annexed their territories. To justify these annexations, al-Muṭaḍid used a very crude pretext: he alleged that he had found the unfortunate ʾĪbīn ʿĪsā, who had really died in obscurity a few hours before, and would go on till he had restored to him his former empire subdued and
pacified in its integrity. In order not to be exposed to the cruelty of the king of Seville, the majority of the petty Berber chiefs settled in the mountains of the south of Andalusia acquired in this make-believe and paid homage to the 'Abbâdíd and to the Commander of the Faithful miraculously restored to aid the cause of al-Mu'tâjîd but at the same time got his name concealed by him. It was laboriously lost for them. One day the 'Abbâdíd invited to his palace in Seville all these petty chiefs with their suites and put them to death by asphyxiating them in baths the openings of which he walled up. In this way he took Arcos [q. v.], the capital of the principality of the Banû Khîzûrûn, Moron [q. v.] defended by the Banû Dâmmâr, and Ronda [q. v.], capital of the Banû Ifran (1053).

This aroused the wrath of the most powerful Berber ruler in Spain, Bûdîs b. Ḥabâbûs the Zirid [q. v.], who ruled in Granada and who alone seemed able to resist al-Mu'tâjîd. The latter however found that fortune favoured him in this war and a little later took Algeciras from the Ḥamûdîd al-Kâsim b. Ḥamûdû, he next tried to seize Cordova and sent an expedition against it in charge of his son Ismâ'îl; the latter tried to profit by the occasion to rebel and create for himself a kingdom with Algeciras as capital. This rash plan cost him his life, which his father took with his own hand, just as before him 'Abd al-Rahmân III and al-Mansûr b. Abû Amîr had inflicted the supreme penalty on their unworthy sons. This was the beginning of the political career of al-Mu'tâjîd's other son Muḥammad al-Mu'tâmâd [q. v.] who was to succeed him on his death: by his father’s orders he went with an army to support the Arabs of Malaga, who had rebelled against the tyrannical ruler of Bûdîs, the despotic Berber of Granada. But the latter routed the Sevillian army and al-Mu'tâmâd in sorrow state reached Ronda from which he sought and received the pardon of his terrible father. The latter had long before repudiated the fiction of the pseudo-Ḥâlîm which he no longer needed. He was now by far the most redoubtable and the most feared of the Spanish rulers. He had no enemies but the Berbers, Muslims like himself but much further removed from his social ideal of a Spaniard than his Christian neighbours in the north. In another land he might have been called “Berberoktones”. But the bitterness of his hatred cast a shadow over his last days: it was not without fear that he followed events in the western Maghrib, hitherto the fief of Muslim Spain; at least in the sub-Mediterranean zone. The irresistible advance of the Almoravids [q. v.] following Yûnûb b. Tâṣîhîr through all Morocco would not find the straits of Gibraltar an insurmountable obstacle for long. Al-Mu'tâjîd realised this very well. Death at least prevented him from seeing his kingdom, entirely built up by his own energy and bold initiative, pass in a few weeks into the hands of invaders, brethren of the Berbers of Spain whom he had detested and in part destroyed.

**MUTAFARRIKA (A.), name of a corps of guards**, who were especially attached to the person of the Ottoman Sultan in the ancient Turkish court. The name is also applied to a member of the guard. Their occupations were similar to those of the Cârâîm [q. v.], not of military character, nor for court service only, but they were used for more or less important public or political missions. Like the Cârâîm, the Mutafarrîka were a mounted guard. In later times there were two classes, the gêkûl or zîmâtîl Mutafarrîka, and the fileless. Their chief was the Mutafarrîka Aghâî. In course of time their number constantly increased; at the end of the xvth century the maximum was fixed at 120 (G.O.R. 3, ii. 890, after Râşîdîd), but in the beginning of the xvith century von Hammer gives the number 500 for the total. The Porte needed sometimes to lay stress on the importance of the office to make them acceptable as extraordinary envoys by foreign governments (G.O.R. 3, ii. 929, after Râşîhîd).

Among those who have occupied this rank was the well-known first Turkish printer İbrahim Mutafarrîka. Although different explanations of the title mutafarrîka are given, the most probable interpretation is, that these functionaries were not given a special duty but formed originally a corps used for “different matters”. This is still the use of the word in modern Turkish.

**AL-MUTAKABBIR. [See AL-HÀLI.]**

**MUTAKALLIM. [See KÂLÎM.]**

**MUTAKÂRIB, name of the fifteenth metric in Arabic prosody:** it contains four feet to the hemistich. There are two 'arîd and six ārîb:

| 1st 'arîd | tā'âl-fâl-un | fâl-un | fâl-un | fâl-un |
| 2nd 'arîd | fâl-un | fâl-un | fâl-un |

Outside of the ārîb, the foot fâl-un often loses its t and becomes fâl-un; used as the first 'arîd, it further undergoes the following changes: fâl-un and (fâl-un) fâl-un. According to al-Khallî, the foot which precedes the ārîb cannot suffer any change. The first foot of the first hemistich of the first line of a piece of verse may become (fâl-un) fâl-un and (fâl-un) fâl-un. (Moh. Ben Chenêb)

**MUTAKÂWIS, term in prosody; cf. the art. KÂFIYA.
MU'TAMAD KHAN, Muhammad Sharīf, was born in an obscure family in Persia, but coming to India, he attained high honours in the reigns of Dījāhāngīr and Shāh Dījāhān. He received in the third year of Dījāhāngīr a military command and the title of Mu'tamad Khān (the trustworthy Lord). Subsequently he joined prince Shāh Dījāhān in his campaign in the Deccau as a bakhšī (paymaster). On his return to court, in the 17th year of Dījāhāngīr's reign, he was entrusted with the duty of writing the Emperor's memoirs. He attained a higher rank in the service of Shāh Dījāhān and was appointed as bakhšī (adjutant-general) in the 10th year of the new reign. He died in 1049 (1639). He is the author of a history called Ikhāl Nūna'd Dījāhāngīrī, in three volumes: 1. the history of Akbar's ancestors; 2. Akbar's reign (MSS. in the India Office Library and in the Bankruptcy Library); 3. the reign of Dījāhāngīr (printed in the Bibliotheca Indica, Calcutta 1865 and in Lucknow, A. II. 1286).

(M. Hidayet Hosain)

AL-MU'TAMID ʿAlāʾ al-Islām, Abū l-ʿAbbas Ahmad b. Dījāf, Abūl-Bābāsīl, caliph, son of al-Mutawakkil and a slave-girl named Fīṭān from Kūfa. He ascended the throne on the deposition of al-Muhtad in Rabīʿ II (670). He had no ability as a ruler, but relied on the vizier Ṭūla ʿAllāh b. Vahy b. Khēkān and left most of the affairs of government in the hands of his brother Abū Ahmad al-Muwaṣṣal in Shawwal 261 (July 875) he designated his son Dījāf al-Mufawwād as his successor and governor of the western provinces and al-Muwaffaḵ as his successor and governor of the east. The able al-Muwaffaḵ soon became the real ruler and gradually restored order in the empire again while the caliph himself exercised no influence. Already in the reign of al-Muhtadī a dangerous rising had broken out among the Zanjī, the negro slaves in the lower Euphrates valley, but it was not till 270 (882) that its leader ʿAbbās b. Muhammad [q.v.] was overthrown by al-Muwaffaḵ. Some time after the accession of al-Mu'tamīd, according to the usual statement in 259 (873) — the dynasty of the Tahirīds was overthrown by Yaqūb b. al-Layth [q.v.] and soon afterwards the Sāmānīs appeared in Transoxania. On the death of Yaqūb in 265 (879) his brother ʿAmr [q.v.] submitted to the caliph and received the eastern provinces as a fief. About the same time Ahmad b. Ṭūlūn [q.v.] made himself independent in Egypt and after his death (270 = 884) his son Khwārāwsh waged a desperate struggle against the ʿAbbāsīd caliphate. In al-Mawṣil and the surrounding country the Khārījīs continued their destructive career, but were finally subdued. Peace was also often disturbed by ʿAlīd rebels and there was also the war with the Byzantines. The Punicans who had stood by the Muslims faithfully were repeatedly defeated by the emperor Basilius and in 263 (876) the latter retook the fortress of Luṭu' near Tarsus which al-Mu'tamīd had taken. It was not till 270 (883) that the Muslims were able to inflict a complete defeat on the Byzantines. The war was however continued. After the death of al-Muwaffaḵ in 278 (891) the caliph had to proclaim the latter's son al-Mu'tamīd [q.v.] as his successor instead of Dījāf al-Mufawwād. In the following year al-Mu'tamīd left Sāmānī and moved the capital to Baghdaḏ again. Here he died in Rajab 279 (Oct. 892) at the age of 48 or 50. According to some he was poisoned by al-Mu'tamīd. (K. V. Zetterstæen)

AL-MU'TAMID ʿAlāʾ al-Islām, the leader of the dynasty of the ʿAbābādīs [q.v.] of Seville in the 11th century is best known; his real name was MUḤAMMAD B. ʿABĀRĀD AL-MUṬAMĪD [q.v.]. B. MUḤAMMAD B. ISMĀʿĪL IBN ʿABĀRĀD. While still a boy — barely 13, having been born in 431 (1039) — he was placed by his father in nominal command of an expedition against Silves (Ar., ʿĪṣāb [q.v.]), then in the possession of Ibn Muzain, and this town was taken as assault as was Santa Maria d'Algarve soon after (Ar., ʿAbūtamarīyat al-ḡārī, now Faro [q.v.]) which was held by Muhammad b. Saʿīd Ibn Ḥarām [q.v.] (444 = 1053). Young ʿAbābādī prince was then appointed by his father governor of these two towns. His elder brother Ismāʿīl having been executed in punishment for his rebellion (455 = 1063; cf. AL-MUṬAMĪD). Muhammad al-Mu'tamīd became heir-presumptive to the throne of Seville. A little later, the army which he was leading to the help of the Arabs of Malaga, who had rebelled against the tyranny of Bāṭūs b. Ḥabhūs, the Berber ruler of Granada of the Zirid [q.v.] dynasty, was routed by the latter and al-Mu'tamīd had to take refuge in Rock, on which his father, at first very angry at his failure, finally sent him his forgiveness. When the powerful ruler of Seville died in 461 (1069), his son succeeded to a considerably extended kingdom which included the greater part of the southwest of the Iberian peninsula.

A whole series of more or less romantic episodes is associated with the reign and life of al-Mu'tamīd. If we may believe several authors of the Muslim west, an individual called Ibn ʿAmrār, vizier and poet, exerted a very considerable influence during the greater part of the career of this prince from his governance of Silves. Al-Mu'tamīd's relations with a young slave girl al-Ruʾmāʾiyya, gifted with considerable poetic talent, has also been the subject of much literary embellishment. It was from the name of this young woman ʿUmāma, that al-Mu'tamīd is said to have adopted his which comes from the same root. She became his favourite wife and presented him with several sons. As to Ibn ʿAmrār, exiled by al-Mu'tamīd, he was recalled on the accession of his patron to Seville from which he went at his own request
to be governor of Silves before being appointed grand vizier.

In the second year of his reign, al-Mutamid was able to annex to his kingdom the principality of Cordova [q.v.], over which the Dhaharids had been ruling, in spite of the efforts of the king of Toledo, al-Ma'mun [q.v.]. The young prince 'Abd al-Malik was appointed governor of the old capital of the Umayyads. But at the instigation of the king of Toledo, an adventurer named Ibn 'Ukasha was able in 468 (1075) to take Cordova by surprise and put to death the young 'Abd al-Malik prince and his general Muhammad b. Martin. Al-Ma'mun took to flight in the town of the same name. Five months later, al-Mutamid whose paternal affection had been wounded and pride insulted tried for three years vainly to reconquer Cordova. He was not successful until 471 (1078); Ibn 'Ukasha was put to death and the part of the kingdom of Toledo between the Guadalquivir and the Guadarrama conquered by the armies of Seville. Nevertheless at this time it took all the skill of the vizier Ibn 'Ammar to conclude peace by paying double tribute with Alfonso VI of Castile when he sent an expedition against Seville.

This was just the time when through the energy and tenacity of the Christian princes taking advantage of the feuds which were setting the Muslim rulers of the taifas against one another, the reconquista, which had received a check and then a setback from the last Umayyads, resumed its advance on the south of the Peninsula. In spite of their successes, of which the Muslim chroniclers make a great deal, it must not be forgotten that by the middle of the 11th century, many Muslim dynasties of Spain were being forced to seek on payment of heavy tribute the temporary neutrality of their Christian neighbors. Shortly before the taking of Toledo, which had far-reaching effects, by Alfonso VI in 478 (1085), al-Mutamid began to be involved in serious difficulties. On the imprudent advice of his vizier Ibn 'Ammar, al-Mutamid tried to add to his kingdom, after the principality of Cordova, that of Murcia [q.v.], which was ruled by a prince of Arab origin, Muhammad b. Ahmad Ibn Tahir. In 471 (1078), Ibn 'Ammar went to the Count of Barcelona, Ramon Berenguer II, and asked him for assistance to conquer Murcia in return for a payment of 10,000 dinars; until this sum was paid al-Kasim, a son of al-Mutamid, was to remain his hostage. After animated negotiations which ended in the payment of a sum three times as large to the Count of Barcelona, Ibn 'Ammar resumed his plan of conquering Murcia and soon succeeded in doing so with the help of the lord of the castle of Bilbil (now Vilches), Ibn Kasim. In Murcia however, Ibn 'Ammar soon rendered himself obnoxious to his master by assuming the attitude of an independent ruler and in al-Mutamid's reproaching him he replied by insults to the king of Seville, his wife and his sons. Betrayed by Ibn Kasim, he had to take refuge in Murcia and then successively in Leon, Saragossa and Lereda. Returning to Saragossa, he endeavored to assist its ruler Al-Ma'mun Ibn Hud [cf. Saragossa] on his expedition against over to al-Mutamid, who in spite of the bonds which had so long linked them together, slew him with his own hand.

In the meanwhile, Alfonso VI was no longer

concealing his designs on Toledo, the siege of which he began in 473 (1080). Two years later, when he sent a mission to enforce payment of the annual tribute due to him from al-Mutamid, its members were insulted and the Jewish treasurer Ibn Shalib who accompanied it was put to death because he had refused to accept debased money. He therefore invaded the kingdom of Seville, sacked the flourishing towns of Aljarrafa (Al-ar-ran [q.v.] advanced through the district of Sidonia (Ar. Shadhduna; q.v.) as far as Tarifa [q.v.] where he uttered his celebrated remark expressing his pride at having reached the utmost limits of Spain, where he died some months later. Al-Mutamid whose paternal affection had been wounded and pride insulted tried for three years vainly to reconquer Cordova. He was not successful until 471 (1078); Ibn 'Ukasha was put to death and the part of the kingdom of Toledo between the Guadalquivir and the Guadarrama conquered by the armies of Seville. Nevertheless at this time it took all the skill of the vizier Ibn 'Ammar to conclude peace by paying double tribute with Alfonso VI of Castile when he sent an expedition against Seville.

This was just the time when through the energy and tenacity of the Christian princes taking advantage of the feuds which were setting the Muslim rulers of the taifas against one another, the reconquista, which had received a check and then a setback from the last Umayyads, resumed its advance on the south of the Peninsula. In spite of their successes, of which the Muslim chroniclers make a great deal, it must not be forgotten that by the middle of the 11th century, many Muslim dynasties of Spain were being forced to seek on payment of heavy tribute the temporary neutrality of their Christian neighbors. Shortly before the taking of Toledo, which had far-reaching effects, by Alfonso VI in 478 (1085), al-Mutamid began to be involved in serious difficulties. On the imprudent advice of his vizier Ibn 'Ammar, al-Mutamid tried to add to his kingdom, after the principality of Cordova, that of Murcia [q.v.], which was ruled by a prince of Arab origin, Muhammad b. Ahmad Ibn Tahir. In 471 (1078), Ibn 'Ammar went to the Count of Barcelona, Ramon Berenguer II, and asked him for assistance to conquer Murcia in return for a payment of 10,000 dinars; until this sum was paid al-Kasim, a son of al-Mutamid, was to remain his hostage. After animated negotiations which ended in the payment of a sum three times as large to the Count of Barcelona, Ibn 'Ammar resumed his plan of conquering Murcia and soon succeeded in doing so with the help of the lord of the castle of Bilbil (now Vilches), Ibn Kasim. In Murcia however, Ibn 'Ammar soon rendered himself obnoxious to his master by assuming the attitude of an independent ruler and in al-Mutamid's reproaching him he replied by insults to the king of Seville, his wife and his sons. Betrayed by Ibn Kasim, he had to take refuge in Murcia and then successively in Leon, Saragossa and Lereda. Returning to Saragossa, he endeavored to assist its ruler Al-Ma'mun Ibn Hud [cf. Saragossa] on his expedition against over to al-Mutamid, who in spite of the bonds which had so long linked them together, slew him with his own hand.

In the meanwhile, Alfonso VI was no longer
and scholarship, liberal and tolerant, but living in an atmosphere of luxury and ease little compatible with the care of a kingdom with frontiers open to envious neighbours on all sides. Not so great a ruler as his father al-Mu'tadid, al-Mutamid is however a much more attractive figure, perhaps just on account of his misfortunes. He is entitled to a place among the great figures of Spanish Islam, alongside of Abd al-Rahman III, al-Hakam II, al-Ma'nûri b. Abi 'Amir and at a later date Liûân al-Dîn b. al-Qa'ithîb.

E. Lévi-Provençal

MUTAMMIM b. NUWAIRA, a poet, contemporary with the Prophet. He was the brother of Malik b. Nuwaira [q. v.], chief of the Banû 'Yarbî, a large clan of the Banû Tamâm. Mutamim owes his fame to the elegies in which he lamented the tragic death of his brother Malik and these poems have made the latter's name immortal. The Arabs said there was nothing comparable to these elegies, overflowing with animation. They regarded their author as the type of brotherly devotion.

Mutamim does not seem to have played any prominent part before the Hijra. He was eclipsed by the striking personality of his brother, to whose qualities he never hesitated to pay homage. He is represented as having been of unprepossessing appearance, one-eyed and short in stature. The Bakrî chief al-Hashâfin eulogized the humanity with which he treated his captives during his months of captivity. Falling in his turn into the hands of the Banû Taghlib, Mutamim was delivered by a stratagem devised by his brother. He seems to have adopted 'Isâm al the same time as his brother. Like the latter, he is numbered among the "Companions" although we never find him in direct relations with the Prophet. He escaped from the disaster in which Malik was overwhelmed; a few fragments of other poems suggest he did not write elegies exclusively.

But after the death of Malik he devoted himself to celebrating his memory and demanding vengeance for his death. Refused by the Caliph Abu Bakr, he thought he might have more success on the accession of 'Omar. He hurried to Madina where he was very well received by 'Omar. The latter listened with delight to his elegies, regretted that he himself had not the gift of poetry so that he might worthily celebrate his brother Zaid who had fallen in the wars of al-Yamâmâ, but he refused to reverse Abu Bakr's decision and limited himself to dismissing Kulli'd b. al-Walid, a step which probably owed something to the poetical exortations of Mutamim.

After this, tradition says that the poet became almost blind through weeping, and that he wandered over the many routes of Arabia, uttering his complaints everywhere. He found himself abandoned by his wife who became tired of his incurable sadness and wandering life. He left two sons, 'Adî and Ibrâhîm, also poets. He survived 'Omar if, as Ibn Khallîkân says (ed. Wustenfeld, No. 792), he is really the author of an elegy on the death of this caliph.

(H. L. M.)

AL-MUTANABBI, "he who professes to be a prophet", the surname by which the Arab poet Abu 'l-Tayyib Aymâd b. al-Husain al-Dirî is usually known (cf. in Ibn Khallîkân, Hâfîzîyât [Cairo 1310], i. 36, two genealogies, which do not agree, going back to his great-grandfather). Abu 'l-Tayyib was born in Kûfâ in 303 (915) in the Kinda quarter whence the ethnic al-Kâdiri sometimes gave him. His family in very humble circumstances claimed descent from the Yamani clan of the Dâ'î and he himself all his life was convinced of the superiority of the Arabs of the south over those of the north (cf. al-Wâhidî, Murâth Dîvân al-Mutanabbi, i. 49; al-Yâzîdî, al-'Urûf al-tayyibîyî, p. 29 [these two works will be quoted as Wâhî and Yâzî]). The boy received his early education in his native town and soon distinguished himself by his intelligence, his prodigious memory and his precocity as a poet. He now passed under Shî' influences, perhaps Zâdi (cf. 'Abd al-Kâdir al-Iraghdâdî, Kâmîmâ, i. 382, 12) which affected the development of his philosophy, a subject to which we shall return. Circumstances were however too accursed to accelerate the speed of Abu 'l-Tayyib's religious development. Towards the end of 312 (924), undoubtedly under pressure from the Kârma'îans [q.v.] who had just taken and sacked Kûfâ, Abu 'l-Tayyib and his family made a first stay of two years (cf. al-Sâmâni, Ausûb, 506 b244; al-Bâdî, al-Sâbî al-mu'mînî, i. 6) in Samâwî, the region lying between the Sawâd of Kûfâ in the east and Palmirene in the west. The Benû Kalb who led a nomadic life in these desert steppes had been more cultivated by the Kârma'îans dâ'îs. It is possible that the young poet at this time came into contact with some of these heretics. It is however not very probable,
in view of his youth, that this first contact had any definite effect upon him. On the other hand, this stay among the Beduins certainly gave Abu 'l-Taiyib that profound knowledge of the Arabic language of which he was later so very proud.

On returning to Kufa, at the beginning of 315 (927), Abu 'l-Taiyib seems to have decided to devote himself entirely to poetry. At this time he most admired the great panegyристs of the preceding century, Abu Tammam and al-Buhturi [q. v.]. Like them and like the majority of his contemporaries, he sees in poetry a sure means of attaining wealth and power. He at once attached himself to a certain 'Abd al-Karim, a leader of the well-known family who had dedicated a short piece (Wahh., p. 17—21; Yaza, p. 10—11). Perhaps a convert to Karmānṣah, in any case a complete agnostic — the praises which he allows to be offered him show this —, this individual seems to have exercised a considerable influence on the religious and philosophical development of al-Mutanabbi (cf. also Khāṣṣa, i. 352 below). Prepared by the Shi'a atmosphere in which he had passed his childhood and by the relations he had had with the Karmānṣah in Samawa, Abu 'l-Taiyib, in a certain patron cast off religious dogmas which he regarded as spiritual instruments of oppression. He then adopted a stoic and pessimistic philosophy, echoes of which are found throughout his work. The world is made up of seductions which death destroys (cf. Wahh., p. 39, l. 8—13; p. 162, l. 12—13; Yaza, p. 23 and 97); stupidity and evil alone triumph there (cf. Wahh., p. 104, l. 8—10; Yaza, p. 97); the Arabs — representatives of a superior race in his eyes — are overwhelmed in it by cowardly and barbarous foreigners (cf. Wahh., p. 148, l. 1—51; p. 160, l. 2—5; Yaza, p. 87 and 92). His contact with the world, with which he was out of harmony, the consciousness of his talent, which Abu 'l-Taiyib had, developed rapidly; his vanity increased to a degree which is almost inconceivable (cf. Wahh., p. 60; Yaza., p. 34). His Arab particularism, as with all anti-Shu'ūbīs (cf. Muhba,): incited him to attack foreign oppressors (Wahh., p. 58, l. 30—31; Yaza, p. 33).

This is why, by a contradiction from which he is only ever free, al-Mutanabbi coveted all his life those riches and power which he scorned in his heart, while he stands out from the mass of his contemporaries by his rigid morality and austerity (cf. al-Badi', op. cit., l. 78—81).

At first however, Abu 'l-Taiyib thought only of conquering the world by his poetic gifts, and to find a more favourable field for his activity he left Kufa towards the end of 316 (928), probably as a result of the town being again sacked by the Karmānṣahs. He was naturally attracted to Bagdad (cf. al-Badi', op. cit., l. 82—85) and thus became the panegyrist of the protege of a companion of his, Muhammad b. 'Ubad Allah al-Mawli (cf. Wahh., p. 6—7; Yaza, p. 3—4). From there he went to Syria. For two years he led the life of a wandering troubadour of the period (cf. Mza, Renaisserce des Islams, p. 256). It is impossible to follow him in his wanderings for his Divān, our only guide, does not present his poems in a satisfactory chronological order. Some pieces of the period are addressed to Beduin chiefs of the region of Mawālid [q. v.] (cf. Wahh., p. 24—25, 38—39, 66—67; Yaza, p. 12—13, 22—23, 29—30); others are dedicated to men of letters of Tripolis (Wahh., p. 88—89; Yaza, p. 19—20), al-Ladhkiya (Latakia) (cf. Wahh., p. 116—135; Yaza, p. 66—78). The poems of this period are hurriedly written and mediocre in quality, but traces of his real genius are already apparent. With the exception of a marthīya (lament) and some impromptu pieces they are all hājilim on neo-classical lines. The influence of Abu Tammam and al-Buhturi preponderates.

In the course of this period of experiment, Abu 'l-Taiyib was irritated at not finding his merit recognised. Gradually he looks forward to his dreams of domination being realised by violence (cf. Wahh., p. 138, l. 3—7; Yaza, p. 79). Finally he abandoned the work of a paid panegyrist and, on returning to Baghdad, led a revolutionary propaganda, the nature of which has long been misunderstood. According to Oriental writers (al-Badi', op. cit., l. 25—30; Ibn al-Anbari, Nushah al-Allābi, p. 369), Abu 'l-Taiyib proclaimed himself a prophet in al-Sanawa, was taken prisoner by al-Hāthīd [q. v.] troops and then received his epistle of al-Mutanabbi. Kratschewsky (Mutanabbi i Abu l-Abu, St. Petersburg 1909, p. 9—11) does justice to these traditions, without however taking full account of some clear allusions in the Divān. The latter contains pieces of all possible types that a rebellion was led by al-Mutanabbi (cf. Wahh., p. 49—58, 86; Yaza, p. 28—33, 50). This rising, as usual at this period, must have been political as well as religious. The rising began in al-Ladhkiya and then extended to the western borders of Samawa where the Banū Kalb constituted an element always ready to rebel. Without adhering to Karmānṣah, al-Mutanabbi exploited its principles which found only too ready an echo among the marauding Beduins (cf. Wahh., p. 57, l. 22—23; Yaza, p. 32; allusion to the massacre of priests in Syria by Aḥmad b. Tur during 317 = 930). The ambiguity of the utterances of the rebel, the opportunism of his doctrines and his conception of the Imāmate on Karmānṣah lines, may have caused some misunderstanding of his preaching, since at this time any agitator was regarded as a Karmānṣah. After some initial successes, al-Mutanabbi and his Beduins were defeated; he was captured and imprisoned at Ḥims (towards the end of 322 = 933). After a trial and appeal to the governor in Bagdad (Divān, Paris MS. No. 3092, fol. 16a), Abu 'l-Taiyib was condemned to retract his errors and set free. From this adventure he gained only the epithet of al-Mutanabbi and the conviction that poetry alone would lead him to the realisation of his ambitious dreams.

The poems composed by Abu 'l-Taiyib immediately before and during his rebellion are distinguished by spontaneity of inspiration, by the liberty which the poet takes with poetic forms, by the vigour of the style, which has a much more personal character than in his first manner.

As soon as al-Mutanabbi had returned to his profession of panegyrist, he naturally resumed his wandering life (beginning of 325 = 937). For several years he led a precarious existence and had to be content to sing the praises of citizens and minor officials of Antioch, Damascus, Aleppo etc. who paid him very badly (cf. Wahh., p. 93—206; Yaza, p. 51—131; Yaruh, Irgād, v. 203). Little by little however, his fame grew. At the beginning of 328 (939), we find him becoming court poet to the emir Badr al-Khārisi (the Badr b. 'Amir of the Divān), governor of Damascus for the ex-emir al-ummar' Ibn Ka'īk [q. v.,
who had just taken possession of Syria. Of Arab origin, Badr was regarded by al-Mutanabbi as the Maecenas for whom he had been waiting so long. The panegyrics and occasional poems which are dedicated to this emir reveal a sincere admiration for him and possess a sustained inspiration (cf. Wāḥ., p. 206–245; Yāz., p. 132–163). These pieces and those that precede them, after Abu l-'Tayyib's return to literature, constitute what might be called the third manner of the poet. With the exception of a poem on hunting in the style of Abū Nuwarāq [q. v.] (cf. Wāḥ., p. 201–202; Yāz., p. 128–129) and a number of impromptu poems of no particular interest, al-Mutanabbi wrote only ḍāštās during this period. He would seem then to have returned to his first manner, if the work of this period did not show considerable progress in form.

The friendship between Badr and al-Mutanabbi lasted only about a year and a half and as a result of intrigues of jealous rivals (cf. Wāḥ., p. 253; lines 13–16; Yāz., p. 169), Abu l-'Tayyib feeling no longer safe took refuge in the Byzantine desert (cf. Wāḥ., p. 251–252; Yāz., p. 168–169). There the idea of rebelling again took possession of him (cf. Wāḥ., p. 253–254; Yāz., p. 170–171). Fortunately the departure of Badr for the Ḥirāq enabled him to leave his hiding-place and resume his profession of panegyrist. He now sang the praises of several individuals of second rank (cf. Wāḥ., p. 107–108, 208–248; Yāz., p. 60–61, 194–241). Lastly he succeeded in establishing himself at the Ḥamdānī court in Aleppo where he became the official poet of the emir Saif al-Dawla [q. v.] at the beginning of 337 (948).

Not to be missed is the literary point of view; the work of this period which ran from the middle of 329 (940), date of the quarrel with Badr, to the beginning of 337 (948), marks his fourth manner, to which he remained faithful till his death. It is characterized by a compromise between the pure neo-classical tradition and a freer form which the poet had adopted in the poems of the period of his rebellion. Without rejecting the framework of the neo-classical ḍāštā, he reduces the erotic prologue to a minimum, sometimes even replacing it by a philosophical and lyrical opening which breathes his dreams, disillusionments and angers.

Al-Mutanabbi stayed nine years with Saif al-Dawla. He was genuinely attached to this patron, who was in his eyes the personification of the ideal Arab chief, brave, magnanimous and generous. Saif al-Dawla in his turn recognized the worth of his panegyrist whom he overawed with gifts and never treated with arrogance Al-Mutanabbi accompanied him on his expeditions and on returning to Aleppo sang of his exploits against the Byzantines and the Beduins of the desert. In the brief intervals of leisure between the campaigns of the Ḥamdānī, the poet shared in the leisure of the court of Aleppo, devoting himself to improvement and writing panegyrics as occasion arose (cf. Wāḥ., p. 522–537; Yāz., p. 376–395) or lampoons (marāzīn) on the wise.' Saif al-Dawla [cf. Wāḥ., p. 388–389, 408–409, 577–578; Yāz., p. 271–272, 286–287, 427–428].

The difficult character of al-Mutanabbi and the repute which he enjoyed did not fail to gain him implacable enemies. A few devoted friends like the poet al-Balḥagāhā (q. v.) tried, it is true, to defend him but their zeal could do nothing against the enmity of the hostile group led by the famous Abū Firās [q. v.]. Saif al-Dawla at first paid no attention to the attacks made upon his favourite. When he grew weary and his protection ceased, Abu l-'Tayyib no longer felt his life safe, fled secretly from Aleppo with all his family and sought refuge in Damascus (end of 346 = 957).

Eastern critics generally agree that the poems composed by al-Mutanabbi during his stay with Saif al-Dawla mark the highest point in his work. Although there is a certain degree of exaggeration in this, it is certain that the poet, while continuing his fourth manner, reveals in the highest degree the mastery which he had acquired in this part of his art. Much more than Abū Firās, with whom he is often contrasted, he was able to depict the glories of Saif al-Dawla's campaigns against the Byzantines. His verse, it is true, has not the charm of that of Abū Firās but it is fuller and more epic in style.

From Damascus, Abu l-'Tayyib went to Egypt to al-Fusārī [q. v.] where he obtained the patronage of the Ikhshīdī l-Kāfūr [q. v.]. Al-Mutanabbi's career now reveals the necessities to which poets in the fourth (tenth) century had to submit. Deprived of moral and material independence Abu l-'Tayyib was forced to sing the praises of a patron for whom in his heart he felt only contempt. The panegyrics which he devoted to him barely conceal his regret at losing the favour of Saif al-Dawla. They are somewhat forced and contain points against Kāfūr (cf. al-Badi', op. cit., i. 125–126). The poet perhaps only agreed to celebrate this patron because the latter had promised him the governorship of Sūdān (Sudan) (cf. ibid., i. 115). When he saw that these promises were not fulfilled, he tried to regain the favour of another Ikhshīdī general Abū Sulqāfā Fātīk (ibid., i. 131–132), but the latter dying in 350 (960) and relations with Kāfūr still being strained, al-Mutanabbi had once more to decide to fly. On the day of the feast of sacrifice of this year, after writing a satire on Kāfūr, he left al-Fusārī secretly and crossing Arabia after great trials (cf. al-Badi', op. cit., i. 139–140), he reached the Ḥirāq, spent some time in Kūf, then settled in Baghdad. He perhaps thought of attaching himself to the famous Būyid vizier al-Muḥallabī who had gathered a very brilliant court around him. He had however to abandon hope of this in face of the hostility to him evinced by poets and scholars established at the court of al-Muḥallabī, such as Ibn al-Haddāĝā (q. v.) and Abu l-Farajī al-Isfahānī, author of the Kāfū al-ʾAṣāḥīnī. During his stay here, as he had already begun to do in Egypt (cf. Ibn al-Faraj, Tarīkh al-Anfūsīs, No. 453), al-Mutanabbi gave lectures in which he expounded to a group of friends the work he had done till that date (cf. Dhibāh, Tarīkh al-Islām, Paris, No. 1581, fol. 265v).

The year 353 (964) was spent in this fashion. The poet perhaps also visited Kūf about this time (cf. F. Gabrieli, Vita di al-Mutanabbi, p. 60, note 4). At the beginning of 354 (965) in any case, he left the Ḥirāq and went to visit Arrādān [q. v.] in Susiana where he received the patronage of the Būyid vizier Ibn al-ʾAṣīm [q. v.]. Al-Mutanabbi devoted some panegyrics to him (cf. Wāḥ., p. 740–741; Yāz., p. 564–565), then he left him to go to Shiraz in Fārs where he rejoined the Būyid Sulṭān ʿAdud al-Dawla [q. v.] who had expressed a desire to have him at his court. After
addressing to the Būyid Ṣulṭān several panegyrics which are among his best work, Abu l-Tayyib left Shīrāz for reasons not clearly known, perhaps simply out of nostalgia (cf. Wāḥ, p. 7,66, line 1–3; Yez., p. 5,89). He was returning by short stages from Persia to Baghādār when he was attacked by marauding Beduins near Dair al-‘Aqilī [q. v.] at the end of Ramadān 554 (Aug. 955) and his son were killed in the fighting and all his baggage, including the autograph MSS. of his Divān, was scattered (cf. al-Baḍī‘, op. cit., p. 227–239).

Even in his lifetime, al-Mutanabbi had been sustainability by ardent admirers who defended his work in its entirety against the attacks of detractors no less eager to run him down. Among the latter however, the majority only criticised him as a poet because they objected to his character as a man. The criticism was therefore not distinguished by impartiality and only reflects the opinions of a coteries. It required the death of Abu l-Tayyib to produce a third class of admirers who were more clear-sighted than the first and sufficiently impartial not to fall into the exaggerations of the second (cf. al-Djadrānī, al-Wadīṣa, p. 11–12, 45–46). It was the opinion of this new category that prevailed and when Abu l-Tayyib’s death had all died down, the literary public remained decidedly favourable to Saif al-Dawla’s bard (except al-‘Askari [q. v.] and Ibn Khaldūn). From the fifth (eleventh) century the name of al-Mutanabbi became a synonym for “great poet”. His literary influence became one of the most considerable ever exercised on Arabic poetry. Annotated by Ibn Djinni [q. v.] and later by Abu l-Alā‘ [q. v.], by al-Wāḥidi, al-Ṭabrīzī, al-Ukbarī and Ibn Sīdā [q. v.], to mention only the most eminent, the Divān of Abu l-Tayyib throughout the middle ages and in modern times has been made accessible to scholars and literary men from Persia to Spain by learned men, often more zealous than intelligent. Space does not permit us to estimate what later poetry owes to al-Mutanabbi. We are content to point out that in different ways all Arab panegyристs have been influenced by Abu l-Tayyib. At the present day he is still one of the most read in North Africa; Syria and Egypt also hold him in very high esteem and many critics have devoted studies full of praise to him. It seems however that in the last named country al-Mutanabbi attracts at least as much by the boldness of his philosophy and the ardour of his pro-islam feelings as by his purely literary qualities.

Bibliography: Numerous biographies of al-Mutanabbi have been written by eastern authors; only five of these contain original matter. These are: 1. Abd Allah al-Iṣṭā‘, Tāhī al-Munītītī l-Ṣāḥī al-Mutanabbi, in the Khāṣāṣet al-Alab of Abd al-Kādir al-Baghdādi (Cairo 1299), i. 358–398; 2. al-Thalāšī, Sīrat al-Dāhir (Damascus 1304), i. 75–162, passim; 3. al-Khitīb al-Baghdādi, Tarīkh Baghdādi (Paris MS., No. 2129), fol. 105–106, reproduced in the Nihāt al-Aḥbāb of Ibn al-Anbārī (Cairo 1924), p. 366–374 and in the Abbāb of al-Samī‘ī (Leiden 1912), fol. 506; 4. Ibn Khālidīn, Wafāt al-Dāhir (Cairo 1310), i. 36–8; 5. al-Baḍī‘, al-Sīhī al-mu‘āšī ‘an Ḥabībatī al-Mutanabbi (on the margin of the commentary of al-Ukbarī on the Divān of al-Mutanabbi, Cairo 1308), i. 5–245. — Al-Mutanabbi’s work has been studied in the east, in addition to

MUṬʿARIZĪ, Abu ʾl-Faṭḥ Ṣaḥīr b. Abī al-Sa‘īdī b. ʾAṭlī al-Muṭʿarizī, grammaticus, a dei a iuris, was born in Khwārizm in Kairāb 538 (1144). He was a pupil of Mawīκ b. Ahmad known as Alḥāb Khwārizmī. As he was born in the same province and in the year in which al-Zamakhshāri died, he was called Khaṣaf al-Zamakhshāri; al-Suyūtī’s assumption that he was a pupil of Zamakhshāri was deduced from this epithet and is of course wrong. Al-Muṭʿarizī was an adherent of the Mu’tazila. As a jurist of the Ḥanafī school he enjoyed particular prestige and his work al-Muẓāhir fī l-ILMAYHA, a dictionary, arranged alphabetically, of terms used in tradition and of the legal terms of the jurists of the Ḥanafī school, was regarded by the scholars of the madhhab with the same respect as the Gāzīb al-Fīfī of al-Azhārī by the Shāfī’īs. For his son he compiled a lexicon of synonyms entitled al-Thayār l-Awnaṭt al-Khind, which the latter was to study after he had learned the Kūfān by heart. It is a kind of text-book giving a comprehensive survey of the subject. In al-Muṭʿarizī’s opinion the existing works on this subject were either too big or not full enough. The work deals only with “good and usual” words, omitting the “bad and unusual” ones. Modern and ancient linguistic usage are distinguished and verses often quoted in illustration. His al-Muḥāfīz fī al-Nahw, which deals with the grammar of the Arabic language, was also written for his son. It was much used by students and often commented upon. Super-commentaries were added to the commentaries; one of the latter was even translated into Turkish. Al-Muṭʿarizī was also an expositor and prepared a commentary on the Masūmat of Ḥarrī. He also was a poet, among his efforts being a poem in which he set himself to use nothing but synonyms. In 601 (1204) he was in Baghādār where he had
disputations with the scholars of that city. In Djumâda I of 610 (1215) he died in his native town.

Mutâṣârī [See Sanâjî]

Al-Mu'tāṣīm al-Înâm, Abî Ísâkh Muhammad, an 'Abîbîsîd caliph, born in 793-796 or 790-793, the son of Farîd al-Kalâbî and a slave-girl named Mârida, in the reign of his brother al-Ma'mûn [q.v.] he took part in the fighting against the Byzantines in Asia Minor and received the governorship of Egypt. After the death of al-Ma'mûn in Rajab 218 (Aug. 833) he ascended the throne and was soon afterwards acknowledged even by his nephew al-'Abbâs b. al-Ma'mûn [q.v.] whom the troops had proclaimed caliph and the army also then paid him homage. An 'Ahd pretend, Muhammad b. al-Êsânî, was disposed of by the governor of Korâshân Abî 'Allâh b. Tâhir [q.v.]. After concluding a truce with the Byzantine emperor Theophilius, al-Mu'tâṣīm sent an army commanded by the Arab general Élisîf b. Bashâr against the Zenîs [q.v.] who had migrated from India in the second half and settled in the swamps between Başâ and Wâsî. They had been frequently used in their wars by the Muslims. After the death of al-Ma'mûn however, they began to ravage and lay waste the country round as if it were hostile territory. They submitted after seven months fighting at the turn of the year 210-220 (854-855) and in Muharram 220 (Jan. 855) they were brought in ships to Baghîdâd and banished by al-Mu'tâṣīm to 'Ain Zarba [q.v.]. In the same year he appointed Hâdîr b. Kâ'ûs, usually called al-Êlîshîn [q.v.], commander-in-chief in the war against Babêk [q.v.], but it was only after two years that he was victorious. The insubordination of the caliph against all those who would not share crack of the Mu'tazîla made him unpopular with the people and in addition there was the dissatisfaction of the citizens of the capital with the undisciplined Berber and Turkish mercenaries whom al-Mu'tâṣim took into his service. At the end of 220 (855) he therefore resolved to move his residence to a smaller place. While his son Írân al-Wâhîk remained in Baghîdâd as governor, the caliph established himself first on the al-Kâtîl canal and then in Sûmâmra three days journey up the river. Here in the course of the year 221 (856) there arose a palace with numerous buildings for the troops [cf. the art. Baghîdâd]. Very soon afterwards the war with the Byzantines blazed up again. The emperor Theophilius invaded Muslim territory on the Upper Tigris, captured Zibâtrâ and wrought tremendous havoc in northern Syria and Mesopotamia. In Djumâda I 223 (April 858) al-Mu'tâṣim himself took the field, accompanied by his ablest generals. The huge force advanced in three columns: the eastern army was commanded by al-Êlîshîn, the two divisions of the western one by al-Mu'tâṣim and Írânshâh. Al-Êlîshîn very soon put the emperor to flight and in Shawwâl (Sept.) of the same year Amorium after 55 days siege passed through treachery into the hands of the caliph who had the town destroyed. But the victory had no permanent results. As winter was coming on, al-Mu'tâṣim had to retire, particularly as a conspiracy in favour of his nephew al-'Abbâs b. al-Ma'mûn [q.v.] demanded urgent measures. About the same time the ispahbad of Tabaristan Mârijyân b. Kârim rebelled, but the rising was suppressed by 'Abî Ísâkh b. Tâhir [q.v.]. In 226 (850-851) or 227 troubles again broke out in Palestine where the 'Umayyads still had many supporters. The leader, Abî Írân al-Mu'âbaraštâ', claimed to be a descendant of the 'Umayyads and everywhere preached rebellion against the caliph until Rajab b. Ayâyb al-Êlîshîn, whom al-Mu'tâṣim sent against him, took him prisoner and brought him to Sûmâmra. Al-Mu'tâṣim died on 18th Kadhî I 227 (Jan. 5 842) in Sûmâmra. By favouring the Turks and suppressing the Arab element he hastened the decline of the 'Abîbîsîd empire. Unlike al-Ma'mûn, he was comparatively uneducated. That learning was not allowed to fall into oblivion in his reign is rather due to the chief kâdi Ahûmad b. Abî Írân [q.v.].

Al-Mu'tâṣâm, Muhammad, R. Ma'nî, Muhammad Ibn Êümâm al-Fûghiyan, second ruler of the dynasty of Fudhîbids [q.v.] of the kingdom of Almeria [q.v.], reigned from 443 to 484 (1051-1091). Gifted like his contemporary Al-Mu'tamid [q.v.] of Sevilla with a certain amount of poetic talent, he made his capital during his long reign one of the great centres of culture in the Peninsula. But like the other mu'dâk al-Êisâkh of Spain, he was for the most of his time at war with one or other of his neighbours. He was without doubt influenced by the Jews Êisâf against his master Badis, king of Granada [cf. ibid.]. Later his forces took part with those of Êisâf b. Êasîn in the famous battle of Zallâka [q.v.]. Like the other Muslim rulers of Spain he felt in the following year the weight of the Almoravids suñan's arm. After unsuccessfully besieging the fortress ofledo and meeting Êisâf to act harshly against Al-Mu'tamid, whom he hated personally, he realised on his death-bed that his capital would be besieged by the Almoravids as Sevilla had been. This is why he advised his son and successor Êumam Mu'izz al-Dawla to seek an asylum with the lords of

AL-MUTA'AWKIL AL-AI LĀGH, ABD AL-FAḌL IBN ISLĀM B. MUHAMMAD, an abū bāṣrād al-Ḥāfiẓ, born in Shawrūl 206 (Feb.–March 522), son of the caliph al-Mutawakkil and slav-ugul from Khandān named Shūfātī. He ascended the throne in Dhu l-Hijja 123 (Aug. 847) on the death of his brother al-Walīkh. His old opponent, the vizier Ibn al-Zayyāt, soon fell a victim to the cruelty of the new caliph and a similar fate befell the Turkish general Ṭāṣīr, although the latter along with Wāṣif had helped him to the throne. The caliph dreaded his influence and had him thrown into prison where he died of thirst: (Iltīsāl 235 = Dec. 849–Jan. 850). From the religious point of view al-Mutawakkil was thoroughly orthodox. Soon after his accession he forbade any discussion about the Qūrānic. Those who had been arrested because they would not recognise the teachings of the Mu'tazilī were released and in 235 (849–850) he released and intensified the regulations for special dress for Jews and Christians which went back to the caliph Ṭāṣīr. The synagogues and churches recently built in Baghda were taken down and the Mu'tazilī chief Āḥmad b. Abū Dārād [q. v.] with his sons dismissed and the office of chief Āḥmad given to the Sunni Umayyad b. Āktham. The Ālīs also fell under his ban. In 236 (850–851) he had the ma'ūl-ume of al-Husain in Kishīfī de-troyed and pilgrimage to this place forbidden. The provinces were frequently ravaged by rebels and foreign foes. In Adhārābād in 234 (848–849) Muhammad b. al-Bāthī reticulated; he had earlier been taken prisoner and brought to Samara but had escaped; he established himself in the strong town of Marand. The caliph's troops could do nothing against him until Boghā al-Sharābī [q. v.] took command. After a long siege the latter offered him a pardon; but when Ibn al-Bāthī tried to escape he was seized and brought to Samara. In 237 (851–852), which was suppressed in the following year, but only with difficulty, by Boghā al-Katār. About the same time (238), the Byzantines landed in Egypt and plundered Damiq in Asia Minor the war went on in the traditional fashion against the Byzantines. When the Paulician sect was persecuted by the emperor Theodoros they went over to the Muslims in masses. The Byzantines, however, succeeded in taking many prisoners. Those who would not become converted were massacred; but when al-Mutawakkil who had moved his residence in 244 (May–June 858) to Damascus but left it after only two months, sent Boghā with the Turkish cavalry against the Almoravids, the Byzantines, the fortune of war turned. Boghā fought with success against the enemy and in the following year the emperor Michael himself was defeated at Samosata. In 246 (860–861) the Muslim generals took a considerable number of prisoners; but no permanent change in the situation was produced. In Syria also trouble broke out. Two governors in succession were driven out of Ḥims and only with the help of the troops from Damascus and al-Qalamān it was restored (241 = 855–856). About the same time al-Mutawakkil sent an army under command of Muhammad b. Abī Allāh al-Ku Religion the rebel Boghā. The latter were completely defeated but their leader Abī Bāṣrād was pardoned. In the reign of al-Mutawakkil the dynasty of the Ma'āfīs [q. v.] was established in Baghda. To keep the people of Baghda in check, he sent for the governor of Kufa, Muhammad b. Abī Allāh b. Tāhir [q. v.], and when the turbulent province made trouble he built a new residence at Ḥālīfī in 245 (859–860) outside of Samara, which swallowed up enormous sums. Poets and scholars were rewarded with princely munificence by the caliph. The extravagance, capriciousness and cruelty of the caliph, however, made him hated, and finally he quarrelled with the commander of the Turkish bodyguard. In Dhu l-Ḥijja 235 (July 859) he had arranged that his eldest son Muhammad al-Munṣūr should succeed him and the two other sons Abī Abī Allāh al-Muṭazz and Bihāt al-Mu'tayyad were each to receive a governorship with a claim to the throne after al-Munṣūr. He began to favour al-Mu'tazz however, and thus aroused al-Munṣūr's discontent. The latter contrived with a few others of the same sentiments and in Shawrūl 247 (861) al-Mutawakkil was murdered [see al-'Arabī B. Khādījah].

K. V. Zellweger

MUTAWĀṬIR (A.), part. act. vi. from māwātārih, that becomes successively'. It is used as a technical term in two senses:

a. In the theory of cognition it is applied to historical knowledge (qāḥar), if the latter is generally acknowledged: e.g. the knowledge that there is a city called Makka and that there existed a king called Alexander.

Definitions of the term show slight differences: According to al-Ṭabarī the knowledge is mutawāṭir if it is supplied by so many persons that either their number or their trustworthiness excludes doubt of its truth (Zulffīdī, ed. Flugel, p. 210. cf. Springer, Dictionary of Technical Terms, p. 1471).

According to Abī Hāf, 'Umar al-Nasaff (f 537 = 1142) reports are mutawāṭir when handed down without deviation by persons who cannot be supposed to have plotted a lie. Taftāzānī in his
commentary (p. 33 sq.) mentions two objections. The first is, that Jews and Christians accept as mutawwi reports that are rejected by Muslims. To this Tafsīr al-Manzil replies that the possibility that these reports should be mutawwi is excluded. The second objection is, that the reports of every single reporter (āḥad, q. v.) represent an opinion only and that an accumulation of opinions cannot be said to afford certainty. To this Tafsīr al-Manzil replies that often plurality has a power of which singleness is devoid, e.g. a cord made of hair.

For the place of this source of knowledge within the theory of cognition, cf. the Supplement, s.v. "ilm.

b. In prosody the term is applied to the rhyme in which one moving letter intervenes between the quiescents.

The word literally means one who leads the āṣāf (q.v.). The task of the muṭawwiṣ is however by no means limited to assisting pilgrims from foreign lands, who entrust themselves to their guidance, to go through the ceremonies required at the circumambulation of the Ka'ba. On the contrary they act as guides at the āṣāf also and at all other ceremonies which are prescribed or only recommended for the āṣāf or 'umra (q.v.). The muṭawwiṣ also cater very completely for the physical welfare of the pilgrims. As soon as the pilgrims arrive in Ḥijād, their agents are ready on the arrival of the steamers to provide all the services they require from disembarkment to departure for Mecca. In Mecca the muṭawwiṣ or members of their families and servants take charge of the pilgrims. During the whole of their stay they provide the pilgrims with lodging, service, food, purchases (necessary and unnecessary), attend them, if they fall ill and in case of death take charge of what is left behind them.

The muṭawwiṣ of course do not all do this for nothing. They are appropriately paid for their trouble and see, that if the pilgrim is rich, their friends and relations also make something out of him. Of the money which they themselves receive, they have to hand over a considerable part in the form of fees, presents etc. to the shāhīl of the gild and to the treasury, another reason for getting as much as possible out of those entrusted to their care. It is therefore no wonder that many pilgrims have complained bitterly about the profligacy of these particularly prominent representatives of the Meccan pilgrim industry. Recently the fees for guidance have been fixed by a legal enactment of the Hijāz government (O. M., xii. [1932], 249).

Reference has already been made to the fact that the muṭawwiṣ are organised in gilds; they are divided up into separate groups who sometimes have the right to exploit the pilgrims from a definite area only (e.g. Lower Egypt). All these groups together form the gild with a chief, shāhīl officially recognised at their head. The gild is also very extensive. "Wild" (i.e. independent) guides (jarrūr) have to be content with the scanty pickings left over for them by the organised muṭawwiṣ.

(R. Paret)

AL-MUTA'ZILA is the name of the great theological school which created the speculative dogmatics of Islam. The meaning of the name is clear from al-Maṣūdi, Murūj, vi. 22: the Mu'tazilis are those who profess the doctrine of 'Išārāt, i.e. the doctrine of the mutasilla bāna 'lamanzillātu or the state intermediate between belief and scepticism, the fundamental doctrine of the school (see below). A tradition which emanates from the abū al-hāshim derives the name Mu'tazila from a slumber which took place in the circle of abū Anas al-Baṣrī after laying down their doctrine of the mutasilla bāna 'lamanzillātu, Wāṣīl b. 'Abbās and 'Amr b. 'Ubayd are said to have separated (Ṣawā'ila) from al-'Hasan's circle to found an independent school or rather to have been expelled from it by the latter. These traditions are not entirely without historical foundation but the interpretation of the name deduced from them is certainly wrong. The Mu'tazilis were proud of their name, which they certainly would not have been if it had been a nickname invented by their enemies. We have here, as the variety of versions also shows, a tendentious invention of the abū al-'urūn wa al-ḥawāfi'ī an-Nabūsī to rehabilitate al-'Hasan and brand the Mu'tazilis as heretics.

Origin and Political History. There are quite definite indications that the Mu'tazila was of political origin and that it arose under the same constellation as the Shī'īs and Khārijis movements. The accession of al-Ḥāfaṣ (Dhū l-Hijja 35) is the great watershed in the currents of the history of Islam. It is well known that several notable Companions of the Prophet refused to pay 'Ali the homage which he demanded or offered it reluctantly. The most frequently mentioned were Bāḥiṣa and al-Zubair but the names of many others have been preserved: Sa'd b. Abī Ṭallāh, 'Abd Allāh b. 'Omar, Muhammad b. Maslama, Usama b. Zaid, Sa'd b. al-Mārī and Zaid b. Thabit (al-Ṭabarī, i. 3072). Of these Tāhira and al-Zubair openly rebelled against 'Ali but the majority remained neutral. The Medine in general followed the example of the latter and in Baṣra al-A'inī b. Kaṣṣ with 6,000 Tamīmīs and a group of Azdīs under Šubra b. Sha'mān also stood aside from the quarrel (al-Ṭabarī, i. 3169, 3178). In
speaking of the latter the text uses the verb ṭūṣaṭa, which still has its proper sense of "to separate from", but which is already on the way to become a political term meaning "to take up a neutral attitude in the quarrel between 'Ali and his adversaries". Now al-Nawawī mentions (Kitāb Fī ḥaq al-ṣāliḥ, ed. 'Amr, p. 5) a parallel emphasis on the accession of 'Ali separated and followed Sa'd b. Abi Waqqās, 'Abd Allāh b. 'Omar, Muḥammad b. Maslama and Uṣāma b. Zaid. These separated (ḍīṭašāla) from 'Ali and refused either to fight against him or to take his side although they had paid homage to him and had received him favourably; they were called al-Muṭāzila and are the ancestors of all the later Muṭāzila'. The Muṭāzila as a theological school must therefore have been preceded by a political Muṭāzila, which determined its structure.

This hypothesis seems to be confirmed if we analyze carefully what is recorded of the founders of the theological school. According to a unanimous tradition, this school originated with two natives of Baṣra, Wāṣil b. 'Abī [q.v.] and 'Amr b. 'Ubayd [q.v.]. The period of their activity covers practically the reign of the caliph Ḥiṣam and his Umayyad successors, i.e. the years 105-131 (723-48). We have a good deal of quite early information about them, not always free from lacunae, but sufficient to enable us to grasp the leading ideas in their theological work (see Bibl.). It is clear from all these traditions that the doctrine of ṭīzāz formed the starting point for the creation of the school, that Wāṣil was the first to formulate it and that he later won over 'Amr to his cause. Thus is how al-Khayrīyyāt reports the origin of the idea of ṭīzāz. Muslims were agreed that he who committed a grave sin deserved the name of ṭīzāz and of ṭādūr, but opinions varied as to the character of the individual who received these epithets. Khāridjīs said he was an infidel. The Murjdīs said he was a believer in spite of his fīṣık and his ṭādūr; al-Ḥasan al-Baṣrī and his circle described him as a hypocrite (mānašīḥ). Wāṣil demonstrates that the description given in the Ḥurān of a believer and an infidel cannot be applied to a believer who has committed a grave sin. The latter is therefore neither believer nor infidel. Now it is impossible to regard him as a hypocrite as al-Ḥasan wants to do, for a hypocrite must pass as a believer until his hypocrisy is brought to light. The only possible course then is to put the ṭādūr in a special category of those who are in an intermediate state (mantsa biša 'l-munṣišilatāt). These same ideas are found in the conversation by which Wāṣil is said to have won 'Amr over to the doctrine of ṭīzāz (al-Sayyid al-Murtuẓā, Amāli, i. 114 sq. = Ibn al-Murtuẓā, al-Muṭāzila, p. 22 sq.; source probably al-Khayrīyyāt).

There are political problems concealed behind these speculations. The doctrine of mantsa biša 'l-munṣišilatāt is not the result of interest in pure speculation, but arose out of an clearly defined opinion on the individuals who took part in the quarrels that raged round the caliphate of 'Ali. It is striking how much space is occupied by the question of 'Ali, of Ṭāhla, of al-Zubair and of Ṭa'īṣa in the rather scanty information which we possess regarding the theology of Wāṣil and 'Amr; we cannot doubt that here they were dealing with a central problem. Wāṣil and 'Amr took neither side in the dispute (Kitāb al-Imtiṣār, p. 97-98). According to them, 'Ali, Ṭāhla, al-Zubair and Ṭa'īṣa were originally true and pious believers. But the war which broke out among them divided them into two parties who could not both be right; one of these parties committed a sin but we do not know what. 'Amr therefore leaves his cause to Him who knows it but in their relations with one another we cannot regard them as true believers in the strict sense of the word. As a result if one of these individuals bears witness against another of the opposite party, we cannot accept this evidence; relatively to the one, the other is ṭādūr and vice-versa (cf. also Baghdādī, Kitāb al-Farh, p. 100). If we may believe the aḥl al-baḥrīyyīn, 'Amr showed himself more severe than Wāṣil; he is said to have refused to accept the deposition made by any member of these parties against any member of the community on any matter whatever (Ṭārīkh Baghdādī, xii. 178; al-Baghdaḍī, Kitāb al-Farh, p. 100); for he declared guilty (ḍūḥātā) for sc both the parties engaged in the battle of the Camel. It is therefore not surprising that Wāṣil and 'Amr have sometimes been confused with the Khāridjīs (verse of İṣāḥā b. Suwaid al-Adwān, al-Iṣāḥā, Bayān, i. 13).

However, the opinion of the leaders of the Muṭāzila on 'Ali is based on quite a different foundation. To understand the position correctly it is important to note that 1. Wāṣil and the whole Muṭāzila were definitely enemies of the Umayyads and that 2. Wāṣil adopted a somewhat ambiguous attitude regarding 'Othāmān and his murderers. In his creed (Ṭīzīzī) this tacitly implies a declaration in favour of the 'Abdīs, the first actors in the drama played at Mecca in the year 35. Indeed Wāṣil was on somewhat intimate terms with the 'Abdīs of Medina ( Ibn al-Murtuẓā, al-Muṭāzila, p. 20); the Zaidīya revere him as one of their leaders, and Zaidī theology is essentially based on that of Wāṣil. This is true not only of the speculative theology; there is agreement also on political doctrines. The Zaidīs do not say that the first caliphs Abī Bakr and 'Omar were usurpers as the extreme Shi'īs do; Wāṣil treated the caliphate of Abī Bakr as legitimate (commentary of Ibn Abī Ḥadīd on Nabdī al-Balūqā, Caro 1329, i. 3); he left undecided the question of knowing who had the superior claim, Abī Bakr, 'Omar or 'Ali, but he credited 'Ali with a superior claim to 'Othāmān. This attitude, a little complicated as regards 'Ali, and therefore prudent towards the extreme Shi'īs, at the same time unreservedly hostile to the Umayyads, can in my opinion only be interpreted in one way. All these apparently dissimilar lines converge on a common centre: the 'Abbasīd movement. It is precisely Wāṣil's attitude which we must regard as characteristic of the partisans of the 'Abbasīs. The latter regarding themselves as the true aḥl al-baḥrī, it was evidently in their interest to lower somewhat the preponderating position attributed to 'Ali by the extreme Shi'īs in order themselves to profit by the prestige enjoyed by the family of the Prophet; but on the other hand, they had every reason not to cut the links with the Shi'īs who were indispensable as allies to them. It is obvious that in these circumstances it was particularly important for them to win over the relatively moderate Zaidī faction to their cause. In a general
The teaching of Wāṣil on al-mansūla can only be perfectly understood if we see in it the theoretical crystallisation of the political programme of the 'Abbāsids before their accession to power. Everything leads us to believe that the theology of Wāṣil and of the early Mutazila represents the official theology of the 'Abbāsids movement. This gives an unforced explanation of the fact that it was the official doctrine of the 'Abbāsids court for at least a century. It seems even probable that Wāṣil and his disciples took direct part in the 'Abbāsids propaganda. In his farā'is, mentioned below, Safwān al-Anṣārī tells us that Wāṣil had emissaries (qarāt) in all parts of the Muslim world. Safwān describes the chief agents of the 'Abbāsids as typecasters (wāṣil) who were distinguished from other men in physiognomy and dress; they were the supporters (ṣiṣyāt) of God in all lands and centres in which his commandments were made manifest and in which the art of dispute (with the enemies of the faith) flourished. The period of this activity coincides exactly with that of the most intense 'Abbāsids propaganda, in which all the forces working for the ruin of the Umayyads were operating; it is impossible not to believe there was a connection between the two. That Wāṣil did actually extend his propaganda very far to the west is proved by the fact that there existed long after him, as agents of the 'Umayyad dynasty, a Wāṣili community at Tāhert (Yākūt, i. 815) numbering about 3,000 members who had allied themselves with the 'Abbasīs. They had rebelled against Mansūr under 'Abd Allāh al-Hāsani (al-Shahristānī, p. 311; on these happenings see Tabari, iii. 561); they were therefore reckoned among the enemies of the first 'Abbāsids caliphs. It is interesting to note that the connection between Wāṣil and the Khāridjīs, supposed by Ishaq b. Suwaid al-Adawī to exist (see above) was here an actuality.

The quarrels of Wāṣil and his followers with Dāhīm b. Safwān (q.v.) form a difficult problem which has not yet been solved. On the one hand, Dāhīm's theology left distinct traces on that of the Mu'tazila; the doctrine of the necessity of God, which was later to become a fundamental Mu'tazila thesis was probably formulated by Dāhīm and in the doctrine of the divine attributes there are coincidences on both sides which cannot be accidental. On the other hand, there are many serious differences which are practically and political in their nature. Dāhīm professed in the most extreme form of the doctrine of predestination (djab). All the actions of man are involuntary; Wāṣil maintained the opposite thesis of free will. Now once again we have political problems hidden behind these theological controversies; the Umayyads in general preferred the dogma of predestination while the opposition accepted the dogma of free will in its widest interpretation; in Damascus, Ghailān al-Dināshī, who figures among the fathers of the Mu'tazila (Ibn al-Murtaḍā, al-Mu'tazilāt, p. 15—17), was put to death by the caliph Hishām for holding the doctrine of free will (al-Tabari, iii. 1733).

Once the hypothesis of a definite connection between the Mu'tazila and the 'Abbāsids is admitted, the question of the relations between the Mu'tazila founded by Wāṣil and the early Mu'tazila of the period of 'Ali presents itself in a new aspect. It will be admitted that there is a striking resemblance

between the attitude of these former companions of the Prophet and that of the 'Abbāsids. It is true that 'Abbās b. al-'Abbās entered the service of 'Ali after the death of ʿOthmān but his true sentiments were somewhat ambiguous; he was a great friend of 'Othmān but a rather lukewarm partisan of 'Ali and after the latter's death he placed himself at the service of the Umayyads. His descendants did not remain at Medina, probably because the 'Alids were their rivals there; after a stay in Damascus, his son went to Hama and here a formal rapprochement took place in 98 between the 'Abbāsids and the 'Alids (Wellhausen, Das arabisch-keil, p. 312 sqq.). Before this event, we may regard the 'Abbāsids as a kind of Mu'tazila in the old sense of the word. With 'Amr b. ʿAbdī a new element enters the Mu'tazila as founded by Wāṣil. 'Amr originally was one of the al-ḥalādīs; brought up in the circle of al-Hasan al-ʿBaṣrī, he transmitted a large number of hadiths from his master and he is remembered as one of the mubāḥadātān. His conversion to the doctrine of fitāḥi brought about a rupture between him and these circles; but with him a considerable section of the Kādāris of the al-ḥalādīs joined the Mu'tazila, thus reinforcing the more politically inclined Kādāriya, of which Wāṣil was the champion. Kādāri and mutazilī were soon to become synonymous terms. 'Amr seems to have been decidedly anti-ʿAlī (see above), in any case he called Abū Bakr ʿAli (Ibn Abī Ḥārām on Naḥj al-Balaghā, i. 3). This attitude implies a certain predilection for ʿOthmān, which is foreign to Wāṣil; indeed, a section of the old Baṣrīs, among them al-Djāhīs, is said to have belonged to the party called al-ʿOthmānīya. 'Amr's point of view was of great importance for the development of the Mu'tazila. After their final triumph, the 'Abbāsids immediately dissolved the alliance with the Shīʿa, which had only been a political instrument for them. As regards the extreme Shīʿa, the Rawāfīd, the Mu'tazila unhesitatingly followed the direction of their new masters; but it is fairly evident that some of them did not decide to break so abruptly with the moderate Shīʿa. It resulted in a schism. One section remained faithful to the alliance with the moderate Shīʿa; this section was later to form a special Mu'tazila school in Baghdād. But the Mu'tazila of Baṣra with 'Amr at their head seem to have attached themselves without protest to the 'Abbāsids cause. 'Amr even became the intimate friend of Mansūr and so to speak his spiritual father. In the west, the Mu'tazilīs allied with the Khāridjīs before the 'Abbāsids (see above). Let us sum up the characteristic features of the Mu'tazila at the beginning of the 'Abbāsids period. The Mu'tazila was no longer a political party, the cause of the 'Abbāsids caliphs, only a faction being opposed to them; 2 decidedly hostile to the extreme Shīʿa, the Rāfīḍa; 3 hostile to the Djahmiya, by which however it was a little influenced; 4. Kādāri in repeating severely of the old factions of this name: 5. In serious disagreement with the al-ḥalādīs who soon declared it heretical. This position had a decisive influence in determining the structure of the Mu'tazila theology. The beginnings of this theology go back to Wāṣil and 'Amr and are connected with the fight against the Rāfīḍa. The extreme Shīʿa had quite early assimilated a good number of
non-Muslim beliefs; we need not doubt that Manichaism played a part in them; in any case certain gnostic and dualistic ideas had found a way into Islam through the intermediary of these Shi'i. These tendencies, very marked in Kûfa, were also represented at Baṣra; in the house of an Azdî who was a samani or Buddhist, Wâsil and Amr had frequent meetings with Abu al-Kamil b. Abû 'I-l-Awâdî and Sâlih b. Abâ al-Kadhîm, who pro-

posed dualist doctrines (al-thawriyya; we should probably understand by this Manichean views) and the poet Bashshâr b. Hurî (q. v., Kitâb al-âlamîn, iii. 24). A serious schism broke up this curious mudd'â. This event decided the whole future of the Mu'tazila. Henceforth the fight against savaqa and thawriyya is a cardinal point in the programme of the Mu'tazila. Wâsil himself composed a refutation of Manicheanism which al-Bûhîlî (c. 300 A. H.) was still able to peruse (al-Mu'ta-
zilih, p. 21). But they also found themselves compelled to combat these heresies in a positive fashion; to the doctrine of fire professed by Bashshâr they offered a theology of earth, so to speak, a theology based on the natural philosophy of the time. The poems of Sa'îdân an-Ansârî (al-Dhâhîc, Kitâb al-Bâyânîn, i. 16—19) afford us a specimen of this theology; here we have one of the funda-
damental documents for the history of Mu'tazila dogmatics. It is not yet clear whence came the philosophy put at the service of theology but its general character is apparent; it is the philosophy of the alchemists, physicists of late antiquity, a kind of summa of the scientific principles which seem to have been accepted everywhere in Asiatic Hellenism. Sa'îdân perhaps gives us a hint as to the circles from which it came to the Mu'tazila, when he tells us that Bashshâr called Wâsil and his friends Da'iqâsîs: this is in any case worth noting. In a general way those who handed on this natural philosophy seem to have been the school called daqiriyâ by Muslims. The Mu'tazila fought these Dahiris with a vigour which reveals the dependence on this heretical philosophy of which they were conscious. The true founder of the dogmatic system of the Mu'tazila was Abu 'I-l-Hudhâ'îl Mu'âammad b. al-Hudhâ'îl al-

'Allâf (q. v.). Abu 'I-l-Hudhâ'îl, his friends and pupils, continued on a large scale the polemic against Manicheism, a polemic which is certainly not unconnected with the persecution begun by the Abâshâds against the open or secret adherents of this religion. On the other hand, he fought the Râfîdî most vigorously, then represented by the very remarkable theologian Hisâ'mân b. al-Ha-
kâm (q. v.), and it was through his disputes with the latter that he was led to study the books of the philosophers, which furnished him with a system of dogmatics, a little bold, but full of fertile new ideas. Alongside of him there was a crowd of important theologians at Baṣra: Mu'âmmar, an independent mind whose ideas have not yet been sufficiently analysed; Hisâ'mân b. Amr al-Fawâqî and al-Asâmm, adversaries of Abu 'I-l-Hudhâ'îl and several others. Among the pupils of Abu 'I-l-Hudhâ'îl mention must first be made of Ibrahim b. Saiyâr al-Nâzîm (q. v.). These theologians gave Mu'tazila dogmatics its essential character. This theology is: 1. apologetic: it aims at defending the revelation of the Prophet; as a result it is 2. strictly Kur'ânî: the sacred book is the only source of the theological denomina-
tions (asma'û) and of the precepts of religion (aâhâm); it is 3. polemical: it vigorously invaded the domains of other religions and other Muslim parties to fight them on their own ground; it is 4. speculative: it has recourse to philosophical means to refute its adversaries and formulate its dogmas; consequently it is 5. intellectualist: it envisages the problem of religion under the purely intellectual aspect. Nothing could then be less justifiable than to regard the Mu'tazila as philo-

sophers, free thinkers or liberals. On the contrary, they are theologians of the strictest school; their ideal is dogmatic orthodoxy; philosophy for them is only an ancilla fide; they are nothing less than tolerant. What they created was Muslim scholasticism.

Parallel to the school of Baṣra, a Mu'tazila school was founded in Baghâd by Bishr b. al-Mu'tamir (q. v.; d. 210 = 825—826). This school was pro-'Alîd ('Alî preferable to Abû Bakr), and Bishr was persecuted by Hârûn al-Rashîd. But under Mâ'mûn (q. v.; 198—218 = 813—833), a decidedly pro-'Alîd caliph, the school of Bishr gained a preponderating influence mainly through the theologians Thumâma b. Ashâras (d. 210 = 825—826) and Ibn Abû Du'dâ (d. in 230 = 854—

855). This school particularly attacked those who held the doctrine of the uncreated Kur'ân (q. v.). This attack however had disastrous consequences for the Mu'tazila. Abandoned by the caliph al-

Mutawakkil (232—247) who adopted the doctrine of the uncreated Kur'ân, it rapidly fell from its influential position and soon found itself surrounded by implacable enemies. In the second half of the third century, Ibn al-Rawandî, a partisan of the Baghâd school, made a stir when he left the Mu'tazila for the most advanced Râfîdî; a man of violent temperament, he criticised the Mu'tazila in a scathing way which did it much damage. Towards the end of the third century, the Kar-

mânîan movement came on the scene, reinforcing the extreme Râfîdî and causing trouble in every secular and spiritual sphere. In the struggle against the Karmaîn it is no longer the Mu'tazila who appear at the head of the defenders of orthodoxy but the abî al-hudâ'îh. In the year 300, al-Asbâ'î broke with the Mu'tazila of Baṣra, of which he had been a convinced supporter, to introduce speculative dogmatics among the abî al-hudâ'îh, who were soon to give its character to Sunni theology.

Among the Mu'tazila theologians of the third century we may mention the following. At Baṣra the tradition of Abu 'I-l-Hudhâ'îl al-'Allâf was pro-

pagated by a flouri-ling school represented by Yâsuf b. 'Abd Allâh al-Shâhîh, Abû 'Alî al-

Aswâ'î and others. Abû b. Su-

laimân was the pupil of Hisâ'mân al-Fawâqî. Ibrâhîm b. Ismâ'il known as Ibn Ulaya (d. 218) was the pupil of al-Asâmm. The school of al-Nâzîm developed certain special doctrines which the later Mu'tazila rejected (Fadl al-Hadâ'îh and Ahmad b. Hâjî; Kitâb al-lattîsâr, p. 222—

223); and among the disciples of al-Nâzîm, we also find al-Dîjâhîz (q. v.). In the second half of the century, the most important Baṣra theologian was undoubtedly Abû 'Alî Mu'mâmad b. Abû al-Walâhâb al-Dîjâhîz (q. v.). In Baghâd we find in addition to the theologians already mentioned Tâ b. Su'hî al-Murîdî, contemporary of Bishr b. al-Mu'tamir; then "the two Dijâ'ars": Dijâ'ar b. Mubashshîr (d. 234) and Dijâ'ar
formed the subject of Mu'tazila activity. Their part in the history of the exegesis of the Qur'an is a very considerable one: it was they who introduced the strictly grammatical method. There is a very close connection between them and the philological school of Basan, the representatives of which in general taught Mu'tazila doctrines (e.g. al-Asma'i). The exegetical works of the Mu'tazila, for the most part now lost, were utilized to a large extent by their adversaries, e.g. Fakhr al-Din al-Razi. — All questions of ُال is vigorously discussed in the Mu'tazila schools; the influence of the Mu'tazila on the ُال is still to be examined. — Lastly the science of ُا certainty received various stimuli in the Mu'tazila criticism of the ُا ُا ُا.

M. : Mu'tazila theology is summed up under five principles (ُا) or fundamental doctrines which one must accept in their integrity to be recognized as a Mu'tazili (al-Mas'udi, ُا، वि. 22). As these were probably in origin the principal points in the programme of Mu'tazili propaganda, these ُا later became a kind of framework of speculative dogmatics.

1. ُا: the strictest profession of monothelism (against any kind of dualism); denial of all resemblance between Allāh and his creatures (against the anthropomorphisms of the ُا ُا on the one hand and those of the Rāifa and Manichaens on the other); the divine attributes recognized (against the Dāhiyya) but deprived of their real existence: they are not entities added to the divine being (this would be ُا: against the ُا among the ُا ُا but identical with the being (ُا, Abū 'l-Hudhai); allegorical interpretation of the anthropomorphisms of the Qur'an; denial of the beatific vision; vigorous affirmation of a personal God and creator (against the Dāhiyya); integral affirmation of the Revelation of the Prophet but distinction between a natural theology and a revealed theology. Problems discussed here: 1. The nature of God and his attributes: a. omnipresence: God is in all places, in the sense that he directs everything (Abū 'l-Hudhai); he is not in any place (general thesis); b. perceptibility: he is not perceived by the senses (thesis generally adopted) — he is perceived by the heart (Abū 'l-Hudhai) — he has a hidden ُا which will be perceived in another world with the help of a sixth sense which God will then create (Hāf al-Fard and others; thesis declared heretical); c. the attributes (eternal; names of the essence): identical with the essence (Abū 'l-Hudhai; thesis generally adopted) — inherent in the essence through ُا (Mu'ammār) — through ُا (Abū 'l-Hudhai); expressing positive aspects (Abū 'l-Hudhai and generally) — negative (knowledge: negation of ignorance etc.); 2. The structure of the created world: a. starting-point anthropology treated in a positive way (exact definition of religious duties) and negative (refutation of ُा ُा ُा ُा) man is the empirical phenomenon which we see, the body (ُا) which is composed of a certain number of indivisible entities (atoms) and which supports the accidents: life, the senses, colours etc.; ُا is ُा and distinct from ُا (Abū 'l-Hudhai) — man is composed of body (ُا) and ُا (identical with ُا) which are mutually interpenetrant (ُا ُا); the colours, senses, sensations, forms and spirits form different categories of ُا.
accidents; not atoms); all that is living forms a single category (muğdżanà) — man is an indivisible entity (gürvar) characterised by ḍawā, ḍam, ḍuṣra; the body is the instrument of this gürvar; the accidents (movement, rest, colours etc.) are inherent in it through muṣānî which are inherent in other muṣānî etc. in infinitum (Mu'âmr) — man is bâhî (Abûd b. Sulaiman) — the mîs is an instrument which the body uses; the râh is an accident (Dâ'far b. Hârîb) — the râh is a body and distinct from the life which is an accident (Dâ'far b. Hârîb); b. the physical world: dead nature is distinct from that which is living in as much as nature acts through ḍârâra while living beings act through their free will (iğhtîyaq); for the rest, the one and the other category are of the same structure, the problems of physics being those of anthropology (substance, accidents, bodies, atoms etc.); theory of suḥûr and kurnûn formulated by al-Nâzâmî and which correspond to his theory of penetration (mugdżahala); things are hidden one in the other, physical development consists in the hidden things becoming manifest (e.g. the fire hidden in the stone). 3. The relation between God and the created world: a. la'âla kâmuḏâgh bâhî: a rigorous distinction between bâhî and mugdżahî (no kurnû); b. the activities of God, the powers of his attributes, have for their objects the things of the created world. If these activities are eternal, the things ought to be so also; now these things are created i.e. put into existence after having been non-existent; several solutions of the problem: “thing” is only what exists and before the reaction the thing was not thing which implies that divine knowledge is born with the things (Dâ'far's thesis adopted by Hâshî al-Fuwâfî) — before the creation things were posited (iğhtîyaq) as non-existent in God’s eternal knowledge but without the accidents which characterise them in existence (al-kâmuḏâgh and others) — with these accidents (al-Kâluḏ, al-Kâluž and several theologians of Baghâtî [school of mugdżahî-miyyâ]), God created all things at one time, one in the other and these things are manifested in the created world one after the other (al-Nâzâmî); c. are the objects of divine knowledge and power limited? Yes (Abû 'l-Hudhairî) — no (the others); d. divine power does not extend to the accidents (Mu'âmr) — to the phenomena resulting spontaneously from human action (tawâlîdîd, see under asl al-âlî). 4. Revelation: prophecy: a prophet is muṣâmî, i.e. free from grave sins; b. the Kûlât; created; God creates the word in a substratum (la'âla al-umur al-fâzil; the Prophet; the hush etc.). The Kûlân is miraculous in composition and style — denied by al-Nâzâmî; distinction (which goes back to Wâsîl) between mugdżahî, the precepts of the Kûlân which are clear and without ambiguity and mugdżahî, the precepts which are not immediately clear and evident; distinction between mishîh and manisîh. 11. Aṣl al-âlî: God is just; all that he does aims at what is best for his creation (āṣlây); he does not desire evil and does not ordain it (umr and irřa identical). He has nothing to do with man’s evil deeds; all human actions result from man’s free will; man has a kâdiya and an istî')â kâba 'l-ḥâfiz; man will be rewarded for his good deeds and punished for his evil ones. Problems discussed here: 1. Divine power: a. can God commit an injustice? No: al-Nâzâmî — yes, but he does not: general thesis; b. theology: could God prevent evil? Yes, for he possesses a store of hidden grace (lîf) which would be sufficient to destroy evil completely at once: Bîhâr b. Al-Mu'âmrî and several Baghâtî theologians — no, for he always does what is best and wisest for his creation: general thesis. 2. Human power: created by God: physical evils, diseases etc. are not subject to the human will; man’s actions are movements; distinction between al-'âlî al-kâluḏî and al-'âlî al-gâsti; problem of tawâlîd stated by Abû 'l-Hudhairî and particularly discussed in the school of Baghâtî: the effects of an action are attributed to him who performs it, and even after his death he remains responsible for it. 3. Aṣl al-âlî wa 'l-tawâlîd (or al-rahîm wa 'l-râhîm): practical theology. Problems here discussed: a. belief and unbeliever: belief consists in all the acts of obedience, obligatory or supererogatory: sins (muṣâmî) are divided into grave (kâluḏî) and petty (mugdżahî); the following are kâluḏî: ṭâzâhî bî ṭâlêhî; taqâwun bî fi šūrûhû and taqâwun bî fi šūrûhû, ra'dâl al-adwa' al-umar al-rahîm; God of his grace may forgive (mugdżahî); he who is not a Muslim obeys God if he does something which God has commanded in the Kûlân (la'âla la yurāda 'l-nâhî bâhî); Abû 'l-Hudhairî’s thesis rejected by his school (al-adwa' or al-kâmuḏâgh school); distinction between among 'l-nâhî and imân it 'l-nâhî from Hâshî al-Fuwâfî onwards; belief consists in avoiding (kâluḏî) i.e. acts regarding which God has laid down a threat (tawâlîd); al-Nâzâmî; b. al-rahîm wa 'l-râhîm: the good (al-hâzanî) is what God has ordained in the Kûlân, evil (al-kâluḏî) what he has forbidden. Questions of fâkîh in general; c. Tradition: the authenticity of a tradition is only guaranteed by 20 believers one of whom is destined to Paradise; there are in each generation 20 believers who are free from grave sins (muṣâmî): Abû 'l-Hudhairî and Hâshî al-Fuwâfî: the tawâlîd does not necessarily presuppose believers: the Muslim community can agree upon what is an error or a mistake: al-Nâzâmî and others. 4. Aṣl al-manzila bâhî: 'l-manzilatîl;i. Problems of theocracy: a. the caliphate of Abû Bakr was legitimate but not based on a divine revelation: general thesis; b. superiority of Abû Bakr over 'Ali (Abû Bakr superior to O'mar, the latter to O'mâna, the latter to 'Ali): the old Başris and Thumâma; superiority of 'Ali to Abû Bakr: the Baghâtîs and some later Başris (al-Dâ'far) towards the end of his life; Abû Dâ'far; neutral attitude (tawaqîfî) on all that concerns the question of knowing who was entitled to the supremacy: Abû Bakr, O'mar or 'Ali: 'Ali superior to O'mâna: Wâsîl, Abû 'l-Hudhairî, Abû Hâshîm. 2. The problems of fâsîk: the old problem being no longer a live one, petty sins (al-nâhî bâhî) were discussed under this head. V. Aṣl al-âlî bî 'l-nâhî bâhî bî 'l-nâhî bâhî: programme of Mu'tazila activity before the coming of the 'Abbasids; the faith must be spread by the tongue, the hand and the sword; later this al-âlî is little discussed: al-Asâmî denies its obligatory character. **AL-MUTAZILA** bi ‘Ilâm, ‘Abî ‘Abd al-Muhammad bi ‘Ilâm, (or al-Zubair) b. Di‘far, a ‘Abbâsid caliph, son of al-Mutawakkil and a slave-girl named Khâbi‘a. After al-Mustâ‘îb had been forced to abdicate, al-Mu‘az was proclaimed caliph on 4th Mu‘arram 252 (Jan. 25, 866). When he wanted to get rid of the two Turkish generals Waṣîf and Bâqî the younger, they got wind of his intentions and went back to Sîmarra. On the other hand, he succeeded in putting his brother and successor designate al-Mu‘ayyad to death and throwing the third brother Abd ‘Abd al-Muhammad into prison. In the following year Waṣîf was killed by the troops when they mutinied for their pay and he attempted to suppress them. After the death in Dhu ‘l-Kâdâ of 253 (Nov. 867) of the governor Muhammad b. ‘Abd al-Mu‘izz (q.v.), troubles broke out in Baghda and in the following year Baghî was murdered at the caliph’s instigation. As the latter could not pay the troops they mutinied. Al-Mu‘az applied to his mother who possessed immense wealth, but she refused to help him and at the end of Radjab 255 (July 869) the cruel and faithless caliph was deposed. He was put in a subterranean dungeon where he died of starvation in 3 days at the age of 24. In his reign the dynasty of the Tâhîlîs was founded and Ya‘qûb b. Lâ‘î (q.v.) was recognised as governor of Siqîlî. The Khârijis were defeated by the Byzantines. Cf. also the article **AL-MUTAWAKKIL**. [Bibliography: Ibn Ktaba, Kitâb al-Ma‘ârîf, ed. Wustenfeld, p. 200; Ya‘qûbî, ed. Houtsm, ii. 593, 595, 605, 610–616; Tubart, ed. de Goede, iii. 1388 sqq.; Mas‘ûdî, Murîbî, ed. Paris, vii. 103, 273, 304, 346 sqq.; ix. 46, 52; Kitâb al-Ashârî, see Guidi, Tables alphabétiques; Ibn al-Ashîrî, ed. Tornberg, vii. 32 sqq.; Ibn al-Tikâkî, al-‘Askîrî, ed. In the equilateral triangle the base is called al-khâlî, the apex ad-dâ‘î, the sides al-dîlîn (see above), in the right-angled triangle the hypotenuse is called al-khîrî, i.e. “diameter” because the hypotenuse represents the diameter of the circle described around the right-angled triangle; for the two sides the term al-dîlîn is generally used. Muwadha‘alhâd al-muthallathât as a technical term
means trigonometry (cf. Dozy, Supplement, i. 163). 

MUTHALLATH (always with the feminine ending) is a technical term in astrology. Astrology divides the zodiacal circle (만주역 [q. v.]) into four muthallat (Gr. ἡ τρίγωνα, Lat. trigonon, trîgônon), each of which includes three signs 120° apart. These “are situated together in the trigonal plane” (tathlit, Gr. τριγωνικός, Lat. aspectus trirris); the word tathlit itself is frequently found as a synonym of muthallat, which comes from the same root (θη-θη) (cf. Dozy, op. cit., p. 162). 

In star nomenclature Krokobahal-muthallath is the constellation of the (northern) Triangle (in Estothenes Δεσμιά, in Ptolemy Τρίγωνον) which is adjoined in the east by Perseus, in the north by Andromeda. In the west by Pisces and in the south by Aries. According to Ptolemy (Almagest) and al-Saffi (ed. Schjellerup, p. 123 sq.), it consists of three stars of the third magnitude and one of the fifth. The star at the apex (a Trianguli) is an asteroidal star and is called Râ's al-muthallath. The latter name is found in Libros del sabedor de astronomia svo y D. Alfonso X de Castilla in the corrupted form a-selaedal. 

AL-MUṬI. [See ALLKH, ii.]

AL-MUṬI is the caliph, son of al-Mukhdhir (q. v.), brother of al-Râdi and of al-Muttaqi (q. v.). Al-Muṭi wrote a bitter enmity of al-Mustafâ (q. v.), and therefore went into hiding on the latter’s accession and after Mu’tuzz al-Dawla (q. v.) had become the real ruler, al-Muṭi is said to have taken refuge with him and incited him against al-Mustafâ. After the deposition of the latter in Djiinâd II or Shâhâdan 334 (Jan. or March 946) al-Muṭi was recognised as caliph. His reign marks a very unfortunate period in the history of the ’Abbasids. The caliph himself had not the slightest authority; the power was in the hands of Mu’tuzz al-Dawla and after his death (356 = 967) in those of his son Bahktyâr. The Fâtimids were growing more and more powerful and the Sâmânis also declined to recognise al-Muṭi as the legitimate suzerain. The Hamdânis were weakened by their wars with the Bâyids and the Fâtimids. In Bahgâd the Sumânis and Shîfs were fighting one another, and several Shia usages were introduced by the Bâyids who had ’Alid sympathies. At last the weak and sickly caliph was forced by the Turks to abdicate in favour of his son Abd al-Karim al-Târî (13th Dhu ’l-Ka‘b 363 = August 5, 974). Al-Muṭi died in Muharram 364 (September–October 974) in Darî al-Ṣâlit. 

MUTLAK (a.), pāt. pass. IV from l-lk, “to loose the bond (liad) of an animal, so as to let it free” (e.g. Muslim, Dhîhâd, trad. 46; Abû Dawûd, Dhîhâd, bâb 100). The term is also applied to the loosening of the bowstring (Bukhrî, Dhîhâd, b. 170), of the garments, the hair etc. Thence the common meaning absolute, as opposed to restricted (muktafiyad), and further the accusative muktâlah “absolutely”. The use of the term is so widely diffused, that a few examples only can be given. 

In grammar the term muktafî al-muṭâlak denotes the absolute object (cognate accusative), i.e. the objectivized verb of the sentence, such as a sitting in the sentence: he sat a sitting. 

In dogmatics the term is applied to existence. So al-muktafî al-muṭâlak denotes Allah, as opposed to His creation, which does not possess existence in the deepest sense. 

In ontology the term is also applied to existence (muktafî) in connection with the question of the nature of the latter. Here al-muktafî al-muṭâlak is opposed to al-muktafî al-muṣâlâh li-l-muṣâlâh. See the art. MANTIK, supra p. 259. 

In other surrounding terms the term has the meaning “general” as opposed to khâtî (cf. the definition in Aljârân’s Tûrûfî: Muṭâlak denotes the one without specification. Cf. further the Dictionary of the Technical Terms. 

AL-MUTTAKI is the caliph, son of al-Mukhdhir (q. v.) and a slave-girl named Khâlîbû. In Rabî‘ I 329 (Dec. 940) he succeeded his brother al-Râdi (q. v.); by this time the caliphate had sunk so low that five days passed after the death of al-Râdi before steps were taken to choose his successor. Al-Muttaqi at once confirmed the Amir al-Umarî Bîdjeck (q. v.) in office; after his death however, the Turks and Duluam in the army began to quarrel with one another. Abu ‘Abd Allâh al-Bardî (see AL-BARDI) seized the capital but could only hold it a few weeks. He was driven out by the Duluam chief Kûrtgein who however was soon overthrown by Ibn Râkî (q. v.). When Abu ‘Abd Allâh sent his brother, Abu ‘Husam with an army against Bahgâd, the caliph and Ibn Râkî escaped to al-Mawsîl to the Hamdânis (Djiinâd II 330 = Feb.—March 942). After the assassination of Ibn Râkî the Hamdânis Abu Muhammad al-Hasan was appointed Amir al-Umarî and received the honorific title of Nâsîr al-Dawla. The occu-
pation of Baghdad offered him no difficulty; the Turkish general Tuzun rebelled a little later and Nasir al-Dawla had to evacuate the capital which was entered by Tuzun in Ramadán 331 (June 943) as Amīr al-Umnā. Al-Muttaqi soon found himself forced to seek the protection of the Ḥanjūlūn again and at the beginning of the following year (autumn 943) he fled to al-Mawsil. Then he settled in al-Rakka but when Tuzun made peace with Nasir al-Dawla, al-Muttaqi appealed for help to the Ishshīdī of Egypt; the latter came to al-Rakka in Rashīb 332 (March 944); the negotiations however were unsuccessful and finally the caliph put his trust in Tuzun, who after a few days of his loyalty by the most sacred oaths had him blinded (Ṣafar 333 = Oct. 944). Al-Muttaqi was then declared to have been deposed. He died in Shādhān 357 (July 696).

Dermen, p. 385–388; Ibn Ḥalūdīn, al-Fahštī, i. 349 sqq.; Well, Gesch. d. Chasitan, ii. 680 sqq.; Muller, Der Islam im Morgen- und Abendland, i. 566 sqq.; Muir, The Caliphate in its Rise, Decline, and Fall, II, p. 575 sqq.; Le Strange, Baghdad during the Abasid Caliphate, p. 263 in the series of Muslims only paid a tenth of the yield. The muwalladin were of special importance in Muslim Spain, especially from the time of Abd al-Rahmān II, when conversions to Islam became more and more numerous. Some even retained their old family names (Banū Angelino, Banū Sabancio). This section of the population among whom were often crypto-christians (Christiani occulti) played the largest part in the frequent revolutions against Muslim authority in Spain.

The post-classical poets were called muwalladin in contrast to the Isalmīn, their language was no longer considered a model of grammar, lexicography and prosody. The boundary between the two lies about the end of the first century. Among the best known muwalladin were al-Buṭāri, al-Mutnabhait and, according to some, also al-Farazdak and Djiyari.

MUWASHSHAḤ, Muwaṣṣiḥa or Tawshih, an ode or poem intended to be sung, is so called by comparison with the ṣāḥibī, which is a double belt ornamented with pearls and rubies or a band of leather studded with pearls which a woman wears across her body from the shoulder to the opposite hip, thus going round the body. The muwaṣṣiḥa is composed of two parts one of which contains complete lines and the other hemistiches.

The muwaṣṣiḥa, which belongs to the “seven kinds or branches” (ja‘alin) considered to be post-classical, is composed according to the rules of the purest syntax.

The muwaṣṣiḥa is divided into “stanzas”, the technical name of which is not exactly settled; they are usually called ḥusn or hatt. In its most perfect form, it usually begins with one or two lines, a sort of prelude to the actual poem; this prelude is called muwaṣṣiḥ, ḥusn or muflā;
also sometimes find the taqfi', if it is a distich, the first hemistiches of each verse rhyme together and the two second hemistiches also. If A be the rhyme of the first hemistich and B that of the second, the madḥhab or ḡunṣn is of the following form:

2 lines
A   A   B
A   A   B

1 line
A   A   B

After the madḥhab or ḡunṣn come the stanzas proper called: ḏū' or ḥāṣt.

The ḏū' or ḥāṣt contains two parts: the first consisting of a varying number of hemistiches with the same or alternate rhymes, which however are never those of the madḥhab or ḡunṣn. This first part is called dawr or simṭ. The second part which is exactly like the madḥhab or ḡunṣn, both as regards number of lines and rhymes, is called ḵāfa or ḥūṣṭ. The stanza therefore presents the following form:

First type
C   C
C   C
A   B

Second type
C   D
C   C
D   D
C   D
A   B
A   B

The rhyme or rhymes of the dawr or simṭ vary from one stanza to another; but those of the ḵāfa are always as those of the madḥhab or ḡunṣn. The ḵāfa is a sort of refrain which does not fail to make an impression on the listeners by the repetition of the same sounds and rhythms.

These are the most usual models of the muwaṣṣelah, but the poets, not being bound by hard and inflexible rules, have, each according to his temperament, exercised their imagination considerably in this genre.

Thus Ibn Sanā’ al-Mulk composed a poem in which the first foot of each hemistich is ʃūlūn and has the same rhyme as the hemistich of which it forms part. This is the scheme:

madḥhab
or ḡunṣn
A   A   A
A   A   A

dawr
or simṭ
B   B   B
B   B   B

ḵāfa
A   A   A
C   C   C
C   C   C
A   A   A

etc.

The blind poet of Tūdelā shortened the hemistiches which gives a more lively rhythm:

A   A   B
A   C   B
A   A   B
A   C   B

It would be wearisome to give all the forms of stanzas which are found in the muwaṣṣelah. From the point of view of metre, very great variety is found. Martin Hartmann recognised 146 which may go back to the 16 classical metres. Three other types which are found do not seem to be derived from any well defined form:

muṣarrat new type
muṣarrat new type approaching the ḵhalab
muṣarrat new type approaching ʿal-faṣnad
a type which might be connected with ḍū'at.

From the historical point of view, Freytag thinks that the muwaṣṣelah belongs to an old type which has now disappeared. There is certainly no doubt that the pre-Islamic poets composed poems similar to the muwaṣṣelah; these are known as muṣarrat; we find here again the word simṭ applied to the longest part of the stanza or couplet of the muwaṣṣelah.

The muṣarrat began with an opening line with taqfi’; then came four hemistiches rhyming together on a different rhyme from the first line; next came a fifth hemistich rhyming with the first and completing the stanza. A new stanza followed with four hemistiches not rhyming with those of the first stanza; it ended with a hemistich rhyming with the opening line. Here is the scheme:

A   A   A
B   B   B
C   C   C
C   C   C
A

Imrū ʿl-Ḵais is said to have composed a piece of this nature but it does not seem to be genuine. The inventor of the muwaṣṣelah is said to have been Muḥammad b. Muʿāṣar, a poet at the court of ʿAbd Allāh b. Muḥammad al-Mawṣūm who ruled in Spain (275–300 = 888–913). He was followed by Ibn ʿAbd Rabbīḥī, author of al-ʿlād al-ṣawīn. Their muwaṣṣelah are however believed to be lost.

The first to shine in this genre was ʿUḥdāt al-Karzāz, a poet of al-Muṭāz-im b. ʿṢumāḥ, prince of Almeria. Al-ʿAṣam al-Ḫataywāsī records that he heard Abū Bakr b. Zuhri say: "All the composers of muwaṣṣelah are simply children beside ʿUḥdāt al-Karzāz". In the opinion of all men of letters no contemporary writer could rival ʿUḥdāt al-Karzāz in the days of the muwaṣṣelah al-faṣnad.

After him comes Abū ʿAbd Allāh Ibrāhīm Ṣaṣāh, the court poet of al-Maʿmūn b. Ḍhūʾ l-ʿNān, prince of Toledo. In the time of the Almoravid dynasty there flourished a group of poets among whom may be mentioned the blind poet of Tūdelā, Ibn Baṣṭī, Abū Bakr b. al-Abyād, Abū Bakr b. Bāḥja.

In the time of the Almohads the most famous
composers of muwashshah were Muhammad b. Abu l-Fadl and Ibn Ha'if. At a later period we have Ibrahim b. Salih al-Isra'ili, a poet of Seville and of Cordoba, Ibn Khalaf al-Djazaerti (of Algiers), Ibn Khazar of Bougie, the viceroy and celebrated man of letters, Lisân al-Dîn b. al-Khâtib.

Eastern poets have followed those of Spain. One of them, Ibn Sanâ' al-Mulk al-Miṣrî (525–608 = 1156–1212), acquired a reputation in both east and west.

As to the subjects of the muwashshah they are the same as those of the traditional ḥâfīzāt: but as they are composed with the definite object of being sung to the accompaniment of stringed instruments they are usually love-poems.

On the musical origins of the muwashshah see the article TIK.

(MOI: BENNET)

AL-MUZAFFAR, the honorific laṣūbi by which the second of the ʿAmirid dictators of Muslim Spain is best known, was the son of the celebrated al-Maṣāfair and the grandson of the famous Al-Maṣâfair. He was invested with the office of ḥâfîz by the caliph Hishâm II, on the death of his father, on 25th Ramadan 392 (Aug. 10, 1002) and ruled as absolute master of the territory of al-Andalus until his death of angina as he was setting out on an expedition against Castile on 16th Safar 399 (Oct. 20, 1008).

The relatively short period of the ḥâfīzate of ʿAbd al-Malik al-Muṣaffar was untill quite recently almost unknown for lack of documents and in his

History, Dory had to pass it over almost in silence in spite of its importance in the history of the early xith century in Spain. I have been able in the course of recent years to fill this gap, thanks to the discovery of accounts of the ḥâfīzate of al-Muṣaffar in the Dhakhîra of Ibn Bassûm and the Bayân of Ibn ʿIdhârī and the unpublished chapter devoted to him by Ibn al-Khâṭib in his Fâmil al-Islâm. The result is the discovery that the septennial of ʿAbd al-Malik was for Muslim Spain a period of peace and prosperity, a regular golden age, just on the eve of the first upheavals which preceded the collapse of the Umayyad caliphate; the chroniclers compare this period to the first week of a marriage (ṣâbî al-ʿawârî; cf. Dory, Suppl. Dict. Ar., i. 629–627).

Al-Muṣaffar had actually left his son and successor an empire not only completely pacified and solidly organised but also enjoying an economic prosperity hitherto unprecedented. ʿAbd al-Malik aimed at following scrupulously the line of conduct laid down for him in father's last wishes: to preserve and justify the popularity of the ʿAmirid regime by peace at home and the continual harassing of the Christian foe beyond the marches (layâkîr). Every year of Muṣaffar's rule was therefore marked by a summer expedition (ṣâfâa) or a winter one (ṣâfîya); in 393 (1003) he led his armies against Catalonia (Bidâd al-Ifrâqîyà), laid waste the country round Barcelona and destroyed 35 strongholds before returning to Cordova; in 395 (1005) an expedition was led against Castile by the ḥâfīz; in the following year his objective was the town of Pampeluna [q. v.], which he seems to have approached but not reached; in 397 (1007) took place, against Catalonia, the expedition known as the "victorious" (qāṣīt al-ṣāyār): ʿAbd al-Malik forced his way into Clunia and carried off a vast booty. This triumph earned for him from the nominal sovereign the title of "Victrix" (al-Muṣaffar) which henceforth replaced his previous laṣûbe of Saff al-Dawla. In the course of the winter of 398 (1007–1008) there was an expedition which ended in the capture of a castle of San Martin which has not been identified. The last expedition undertaken by him as mentioned above came to nothing and at least enabled him to judge his father on the way to wage war on the infidel.

At home al-Muṣaffar maintained intact the strong administrative organisation which dated from the reign of ʿAbd al-Râhmân III [cf. UMAYYADS, ii.] which al-Muṣâbî had maintained intact, while removing from it the representatives of the Arab aristocracy. On his accession to office, he won the good graces of the Cordovans by reducing taxes by a sixth. He was easily able to dispose of several conspiracies against him. He left to his brother ʿAbd al-Râhmân Sancho a heritage which the latter might easily have preserved if he had not at once exacerbated his subjects against him by displaying a hateful partiality and attempting to arrogate to himself the caliphate completely.

MUZAFFAR B. 'ALI. [See 'IMRÂN B. SHIHAB.]

MUZAFFAR AL-DIN, fifth Sháh of Persia of the Kádjar [q.v.] dynasty, was born on March 25, 1853. He was Sháh Náṣir Al-Din's second son, the eldest son Zul al-Sultán being of lower birth by his mother. As crown prince Muẓaffar al-Din had been some time governor of Ardabil, and (a description of him as crown prince in Coat of Persia and the Persian Question, l. 413). After his father's assassination Muẓaffar al-Din was enthroned on June 5, 1896. With this new reign the rivalry between England and Russia for commercial and political influence in Persia became ever more apparent. The sympathy of the high officials, which was divided between the two powers, and the economic and military strength of the country was since long too weak to enable Persia to follow an independent policy. Under the relatively strong rule of Náṣir Al-Din popular discontent with the increasing misery had been suppressed; the new Sháh, however, though well-intentioned, did not possess the character of a strong ruler and, besides, did nothing to check the extravagancy of the court. His financial difficulties made Persia the debtor of Russia; in 1898, 1900 and 1901 considerable loans were given by Russia, guaranteed by large parts of the custom receipts, the collecting of the custom duties being administered by Belgian officials. A good deal of the borrowed money was used for the expensive journeys to Europe undertaken by the Sháh in 1900, 1902 and 1905. In the meantime, the condition of the people became more and more miserable; headed by some influential merchants and some high ecclesiastics they protested against the heavy taxes and the tariffs as fixed in the commercial agreements with Russia and England of 1893. The growing discontent took several forms; some wished to call in the Turkish Sultan as Caliph and at other times there were outbreaks against the Brits in Yazd and Iyābāh. Besides there were special grievances against several high officials, amongst them the chief Belgian inspector of taxes. In December 1905 a popular movement took place in Ìrān Al-Dawla (since 1903). An ever increasing number of merchants, mulla's and citizens took refuge (harr) in the shrine of Sháh 'Abd al-'Azm. At last the Sháh promised 'Ain al-Dawla's dismissal and some reforms, but in the course of the following year none of these promises were fulfilled. So in 1906 the discontentment reached again a culminating point, directed this time by some more or less secret patriotic associations. In July large crowds of the people of the capital went with the mullahs to Ìrmán, to take refuge in the sanctuary there; at the same time the British Legation accorded asylum to a considerable number of merchants and citizens. The results were that on July 30 'Ain al-Dawla was dismissed and that on August 5, all the demands of the protesting people were granted, including a constitution. The ecclesiastical leaders returned from Ìrmán. There followed some friction with the government about the elections and other matters, but at last, on October 7, 1906, the first Persian Majles or National Assembly was opened by the Sháh. The new Majles had to face immediately some difficult problems and showed from the beginning its determination not to be a mere toy in the hands of the court party. Progress was hampered, however, by dissensions amongst clerical and non-clerical members of the popular party, while there were disturbances, in Tabrīz, owing to the tyranny of the crown prince Muḥammad 'Ali. The Constitution (Kānānā-ı Âbâ; q.v.) was ratified by the Sháh only on December 30, 1906. Muẓaffar al-Din himself died on January 8, 1907 after a long illness, leaving his country to the eventual reign of Muḥammad 'Ali Sháh.

(J. H. KRAMERS)

MUZAFFARIDS, a Persian dynasty. Their ancestors came from Araba and had settled in Khurásán at the time of the Muslim conquest, where they lived for several centuries. On the approach of the Mongols, the emir Ghiyáth al-Din Hāджdji, with his three sons 'Abd Bârî Muhammad and Manṣūr, retired to Yazd. The two first named entered the service of the Atabeg of Yazd, 'Alâ al-Dawla, and when Hulâgū [q.v.] marched on Baghdad, 'Abd Bârî followed him with 300 horse. After the capture of Baghdad he was sent with an army to the Egyptian frontier. Here he fell in an encounter with the Arab tribe of Khafadja whereupon his brother Muhammad succeeded him as a vassal of the Atabeg of Yazd while Manṣūr remained with his father in the little town of Ma'bûdî near Yazd. Manṣūr had three sons, Ma'bûrî al-Din Muhammad, Zain al-Din 'Ali and Shâraf al-Din Muẓaffar, the latter of whom became the ancestor of the dynasty of the Muẓaffarids. Appointed governor of Ma'bûdî by Yüsuf Sháh, 'Alâ al-Dawla's son and successor, he cleared the hills of the robber bands from Shirāz and when Yüsuf Sháh, who had put to death the envoys of the Ikhân Arghûd had to take to flight and went to Sīstân, Muhammad followed him but left him on the way and went on to Kirmân where he was kindly received by Sultan Djalâl al-Din Sûrgâhatshîn Kâra Khâdî (685 = 1285—1287). After some time he returned to Yazd and was presented to Arghûn who took him into his service. He was also on good terms with Arghûn's successors Gaikhihound and 4îshâh. The latter appointed him amûr-ı hâzâra "commander of a thousand", and after the accession of Ulujjâli (703 = 1303—1304) he was given custody of the roads from Ardistan to Kirmân-shâh and from Herât and Marw to Aâbakûh. Ma'bûzaffar died on 13th Dhu l-Ka'b 713 (March 1, 1314). He was succeeded by his 13 year old son Ma'bûriz al-Din Muhammad who is described as brave and devout but at the same time cruel, bloodthirsty and treacherous. He continued to live at the court of Ulujjâli; opened the latter's death in Shiwal 716 (Dec. 3136) and the accession of his son 'Abî Sâ'îd he returned to Ma'bûdî. Along with the lord of the southern coast of Persia, the emir Kâhihsar b. Maḥmûd Shâh Indîj, he very soon fell upon the Atabeg of Yazd, Hâджdji Shâh, and succeeded in taking
the town from him (718 or 719 = 1318 or 1319). A short time after this event the people of Si-tan, the Nikádars, arose in rebellion; Muhammad attacked them and their leader Nawroz was defeated and slain. The rebels however gathered together again and Muhammad had to fight no less than 21 battles before they were finally suppressed. After the death of Abu Sa`id (730 = 1335-1336), complete chaos began and pretenders arose in different parts of the wide empire. The emir Abú Isfahán b. Muhammad Sháh Ilyásh endeavored to take the town of Yazd but was driven back. After some time Muhammad took this province from the Mongol governor in Kirmán, Malik Kuthb al-Din. In the end however, Abú Isfahán succeeded in taking Shiraz and had the khánqah read and coins struck in his name. In Sárat 748 (May—June 1347) he set out to subjugate Kirmán and laid waste Singán, but returned when he heard that Muhammad was ready to offer vigorous resistance to his advance. One of the wipers of Abú Isfahán then undertook a campaign against Kirmán but was defeated, whereupon Abú Isfahán put himself at the head of a new army and marched on Kirmán to take vengeance on Muhammad. But this effort also failed; Abú Isfahán was completely defeated and had to take to flight. In 751 (1350—1351) he went to Yazd and began to besiege the town but, returned, having achieved nothing. In spite of all his failures however, Abú Isfahán never lost heart. In the following year he sent a new army under the emir Beg Dálatz to Kirmán and when the latter met Muhammed on the plain of Pandj Angusht in Dálamát 753 (June—July 1352) a battle resulted. Dálatz was defeated. Muhammad followed up his victory, went to Shiraz and laid siege to it. On the 3rd Shawwal 754 (Nov. 1, 1353), the governor had to surrender and Abú Isfahán fled to Isfahán. In the following year Muhammad took the oath of homage to the Abbásíd caliph in Egypt. Isfahán was now besieged. But as Muhammad had also to deal with other rebels, the siege was somewhat prolonged. Resistance was in the end overcome and the town had to surrender. At the same time Abú Isfahán fell into his hands and was at once executed (21st Dálamát 757 or 758 = May 22, 1356 or May II, 1357). After Muhammad had defeated all his enemies and become undisputed lord of Fárs and the ʻIrák, an envoy appeared from the ruler of the Golden Horde, Dájján Beg Khán b. Uzbek Khán, who announced that the Khán had taken Tabriz and wanted Muhammad to send a representative to the ʻIrák. Muhammad therefore sent Abú Dálatz to Tabriz and he decided to take the town. Soon afterwards the news of Dájján Beg’s death arrived; Muhammad at once set out and met Abú Dálatz at Muşána in Ablharbadán. The latter was defeated and Muhammed entered Tabriz. But as a large army was approaching from Baghdad he dared not remain but decided to begin to retreat. In Kamal 759 (Aug. 1359) he was surprised and taken prisoner by his own son Sháh Shuljá, who believed he was supported and ill-treated by his father, in concert with some other relatives. Muhammad was blinded and kept in prison for several years until his death at the end of Kabr 765 (Jan. 1364) at the age of 65. He was succeeded, by Sháh Shuljá, who shortly before his death appointed his son Zain al-ʻÁbidín ʻAli his successor in Shirāz and gave his brother ʻImád al-Dín Aḥmad b. Muḥammad the governorship of Kirmán. As soon as Zain al-ʻÁbidín had begun to reign his cousin Sháh Yáhýá b. Sháraf al-Din Muṣafar set out from Isfahán to attack him. Fortunately however, the threatened war was averted by a friendly agreement; but Sháh Yáhýá could not stay long in Isfahán; he was driven out by the turbulent andickle inhabitants and fled to Yazd whereupon Zain al-ʻÁbidín appointed his paternal uncle Muṣafar-i Káshi governor of Isfahán. In 789 (1385-1386) an envoy from Timúr arrived in Kirmán bringing assurances of his peaceful and friendly intentions and Sultan Aḥmad hastened to offer his humble homage to the powerful conqueror. In Shawwal 789 (Oct.—Nov. 1387) it was reported that Timúr had invaded the ʻIrák and that Muṣafar-i Káshi had given him the keys of the towns and fortresses whereupon Zain al-ʻÁbidín left Shirāz and went to Baghdad while Sháh Yáhýá endeavoured to procure suitable gifts to pacify Timúr and ordered that a sufficient sum should be paid out to maintain his army. But when Timúr’s officials appeared in Isfahán to take the money, they were attacked and killed by the citizens. In consequence the Mongols carried out a dreadful massacre among the people of ʻIsfahán, in which 200,000 were said to have perished. Timúr then went to Fârs and confirmed Sultan Aḥmad as lord of Fârs, the ʻIrák and Kirmán, whereupon he returned to Samarkand. When Zain al-ʻÁbidín had left Shirāz, he met his cousin Sháh Manṣúr b. Sháraf al-Din Muṣafar at Shâstâ and was at first welcomed, then suddenly attacked and imprisoned. Sháh Manṣúr was now able to occupy Shirāz without opposition, while Sháh Yáhýá retired to Yazd. After the former had established himself securely in Shirāz Zain al-ʻÁbidín was released by his jâles and brought to Isfahán. The people welcomed him. In the meanwhile he had been persuaded by Sháh Yáhýá to combine with Sultan Aḥmad to take vengeance on Sháh Manṣúr. The plan failed however, the allies were defeated and Sháh Manṣúr seized the whole of the ʻIrák. When Zain al-ʻÁbidín wanted to escape to Khorāsán, he was treacherously seized by the governor of al-Kayr and brought to Shâstâ of which at once he had himself blinded. The latter then tried to form a coalition against Timúr. In 795 (1392) however, Timúr left his winter quarters in Mazendaran and marched on Shâstâ. After storming Kâlār Sefid which was considered impregnable he marched on Shâh Manṣúr’s capital and a battle was fought near Shirāz. Although Sháh Manṣúr’s chief emir abandoned him with most of his troops, the battle lasted till far into the night. The undismayed Mongolf had fought with desperate courage, but finally fell in the melee, after fighting his way to Timúr and giving him two cuts with his sword which however the strong helmet of the Mongol leader averted; nevertheless Timúr a week later (Rajab 795 = May 1393) had all the Mongolards executed.

MUZÀWADJÀ, a term in rhetoric (bàşî) which means the association of two things in the relation of condition (çarkî) and result (çâzî) and then employing the same combination for two things in the same conditions. Here is an example from the Dîwân of al-Buḫṭûrî (Cairo 1329, p. 317):

Ilti ' hazırâb yâcuman ja-fâjût dinûbuta taqâkkâbr al-turâb fâ-jâfût damât alâh.

"When they (the horsemen) are one day fighting and their blood flows in profusion, they remember then bonds of kinship and their tears flow abundantly". The poet associates fighting with recalling bonds of kinship in the two parts of the conditional statement, then he completes the first by adding their blood flows in profusion and the second by saying their tears flow abundantly.

(Al-MuHDînî)

MUZÀDÎFîA, a place roughly halfway between Mi'nâ and Arafât where the pilgrims returning from Arafât spend the night between the 9th and 10th of the Hajj, after performing the two evening salâts. On the next morning they set off before sunrise and climb up through the valley of Muḥassar to Mi'nâ. Other names for this place are al-Mâṣîâr al-kârâmîn, from Sûra ii. 194 and Dâ'ân' (cf. Lâlît Dâ'ân: Ibn Sâd, ii. 129, 6); but Dâ'ân', according to another statement, comprises the whole stretch between Arafât and Mi'nâ, both included, so that Yawm Dâ'ân (Kühânîn al-Ṭâlîbîn, vi. 30, 11) is explained as the day of Arafât and Yawm Dâ'ân as the days of Mi'nâ. The rites associated with the night of Muždîfîa go back to the old pagan period, which the Arabs themselves recognise when they introduce the kindling of the sacred fire in this night and say that guiding of the departure for Mi'nâ is a privilege of the family of Adâwîn.

The sacred place in Muždîfîa was the hill of Kûzâ [q.v.]. Even after Muḥammad in deliberate contrast to the pagan practice had declared all Muždîfîa to be muwafîq [cf. ʾâqî, ʾi., ʾa.], this hill retained its ancient sanctity. According to Azaḳî, there was a thick round tower upon it on which the Muždîfîa fire was kindled; in the time of Hârûn al-Rashîd it was a fire of wood; later it was illuminated with wax-candles. In the Muṣlîm period a mosque was built about 400 yards from the tower, of which Azaḳî gives a detailed description while Muḥkaddas speaks of a place of prayer, a public fountain and a minaret. Burton also mentions a high isolated tower at Muždîfîa but the illumination in the night of Muždîfîa now takes place on the mosque.

**Bibliography:** Ibn Hûdîjât, ed. Wustenfeld, p. 77; Ibn Sâd, ed. Sachau, i/1. 41; ii/1. 125, 129; Taβârî, ed. de Goeje, i. 1105, 1755:

(Al-MuHDînî)

MUZÀDÎFÎ means among philologists the use of two terms in which the form of one is changed to make it resemble that of the other. For example in this hadîth (Ibn Madâja, Sunan, Cairo 1313, ii. 240): inâ'îna muṣâârat âshir muṣâârat, "return home laden with sin and not with rewards", the word muṣâârat from the root wa-w-r has been changed into muṣâârat to give it the same form as muṣâârat.

It is similar in the phrases (cf. Lišûn, xiii. 353):女性朋友 wa-aš'îyâh, khâlîdayînât wa-'aš'îyâhânt, bi-šâ'ârâyâ wa-'aš'îyâh "mornings and evenings" in which the form of the first word has been adapted to that of the second.

The Muždîfî, among rhetoricians, consists in establishing a kind of alliteration between two adjacent words having the same form, the same metrical quantity and the same rhyme (rasûs); e.g. in this verse of the Kurâ' (xxvi. 22): wâjûtuka min Sâbîn bi-naba'ta'T "I have brought thee news from Sabâ' where we have the resemblance between Sâbîn and naba'ta'. We may give as another example this hadîth (Ibn al-İbrâhîm al-Nabîyû, Cairo 1111, iv. 291 under 'a.-y.): al-muninnînâ hâlinâna laînînâ "Believers are peaceable and mild in character" and the phrase (cf. Lišûn, xvii. 280, 331): ha'mân laînà, hâyînîn laîyînà.

The object of the muždîfî among poets is to make the hemistichs of a poem rhyme together two by two. As a rule, it is only used in didactic urðîsas (like the Alfiya of Ibn Mâlik); al-'Amîlî, however, in his Kâfîkîl (Cairo 1302) has used it with the waqîf and ramâl metres (p. 76, 78, 83). In Persian and Turkish, it is called maṭbûwâni (maṭbou), and composed in the metres ramâl, hâjasî and muta-kârîb. In this kind of composition, it is necessary that the last foot of the two hemistichs should be alike. Among the Arabs there is a kind of poem in the waqîf metre (and sometimes some verses follow strictly the sârî metre) called muždîfîyyât (a collection of them was published in Cairo in 1299); they consist of strophes of five hemistichs in which the first four hemistichs rhyme together and the fifth have a common rhyme. Sometimes the strophes have only four hemistichs, the first three rhyming together and the fourth rhyming jointly as in al-Fîlâm bi-Muṣâârât al-Kâlûm of Ibn Mâlik (Cairo 1329) and Nâlî al-'Arab fi Muṣâârât al-arab of Ḥasan Kowâdir al-Khâtîbî (Bâbâk 1301).

(Al-MuHDînî)
AL-MUZZAMMIL, title of sūra lxviii., taken from the first verse: “O thou wrapped up,” viz. Muḥammad, who wrapped himself up in his garment or was wrapped up by others. For explanations of the allusion cf. Sale’s note as well as the commentaries on the Qurān. Variants of al-muzzamīl, which stands for al-muttaṣamīl, are al-muzzamīl, al-muzzamīl (Baidawi).

NABATAEANS, an Arab people who lived in ancient times in Arabia Petraea. — As early as the seventh century B. C. the Nabataeans are mentioned by Assurbanipal (Keiltreue, Bibl., ii. 216 sqq.). Whether the Nebayoth of the Old Testament are to be identified with them is uncertain (against the identification: Noldeke in Schenkel’s Bibellexicon, s. v. Nabatae; for it amongst others: Musil, Arabia Deserta, New York 1927, p. 492). The Nabataeans were never completely subjected either by the Assyrians, or by the Medes, Persians or the Macedonian kings (Diodor. ii. 48). In 312 B.C. Antigonus sent two expeditions against them without success. They were then a nomadic people of shepherds and traders, with a few natural fortresses like Petra, Boṣra, Salkhad, al-Hijr which served as depots for their arms and riches. Living round the Dead Sea they exploited from time to time the remunerative asphalt deposits on its eastern shore. They were often on friendly terms with their neighbours; e.g. with the Jews under the Maccabees and especially with the Salamians (Arab. Salaim, cf. Yaqṣīt, Mālḫum, ed. Wustenfeld, ii. 594, s. v. Birma), with whom according to Stephanus Byzantios and the testimony of the Nabataean inscriptions, they were in close alliance (cf. Sulaim b. Mansur and B. Moiher, Salamit, in Pauly-Wissowa’s Realencyk., vol. i. A. col. 1524 sqq.). The capital of the kingdom, called Nabāṭa in the inscriptions, was Petra on the Draṣáh (Hāram, according to Noldeke (Z. D. M. G. xxv. 259 sq.) Hebrew Selā, Arab. Ḥan Salā in the Wadi Māṣā in the hills of al-Shārā (Yaṣīt, Mālḫum, iii. 117; 13; Mughṭarik, p. 525 sq.,) while Musil (Arabia Petraea, ii/i. 337, note 2, on p. 318) identifies this with Ḳāṣir es-Selā. The ruins reveal a peculiar mixture of Nabataean and Hellenistic architecture while they have yielded remarkably few Nabataean inscriptions (on these see Dalman, Petra und seine Nachbarn, 1908; do., Neue Petra-Forschungen, 1912; Bachmann, Watzinger, Wiegand, Petra, 1921; A. B. W. Kennedy, Petra, its History and Monuments, 1925).

The Nabataean kingdom comprised the lands of southern and eastern Palestine as well as Idumaea and Petraea, from 88 B.C. also Ḥawārā; twice (85 B.C. and c. 34—62 A.D., perhaps also in the interval, cf. Mommsen, Rom. Gesch., v. 476, note 3), Damascus also belonged to it [cf. i., p. 903]. In the southwest it stretched over the ancient Median as far as the coast of the Red Sea where Ḫobodat I founded the town of Ḥawārā (Steph. Byz., s. v. Ḫawārā, probably = Ḫawārā, now perhaps al-Ḥawārā), in the interior as far as al-Ula (Dedan) and al-Hijr [q. v.] on the frontier of the Ḫijāz. The Nabataeans also penetrated into the nome of Arabia in the eastern Nile delta as an inscription from Tell el-Sughāfītā in the Wādī Tūmīlāt shows (Clermont-Ganneau, Les Nababtains en Egypte, in Recueil d’Arch. Or., viii. [1924], p. 229—257). A number of their kings can be dated with approximate exactness: Ḥārīḥat (Aretas) I 169 b.c., Ḥārīḥat II c. 110—96, Ḫobodat (Obodas) I c. 90, Ṭababbal (Rabilos) I c. 57, Ḥārīḥat III (Māḥruṣ [Philellus]) c. 86—62, Ḫobodat II (110—67), Malḵu (Mālku) c. 17—70, 106 A.D.; cf. Clermont-Ganneau, Recueil, viii. 247). The real founder of their power is said to have been king Erotimos, who is probably the same as Ḥārīḥat III whose reign fell in the period of decline of the Seleucid empire (E. Taubler, in Klio, x. 251—253). As “allies,” the Nabataeans were able to maintain to some extent their independence of the Romans. At a very early date, like the Palmyrans, they attained through their trade the position of monopolists in Neaer Asia. At the beginning of the Roman empire they dropped their nomadic life and became peacefully settled. Just as in the east they have left their inscriptions particularly on the trade-routes followed by their caravans, e.g. from Petra to Damascus and Tadmor, to Forat at the mouth of the Euphrates, to Gerga (Arab. al-Djarīṭa near al-Katīf), to the Sinai peninsula and Egypt and to Gaza, so we find in the Roman empire epigraphic traces of Nabataean merchants as far as Upper Egypt (Dendera), in Mileitus, Rome and Puteoli. In 106 A.D. the emperor Trajan conquered Petra and made the most important part of the Nabataean kingdom the Roman Provincia Arabia. The remainder of the territory left to the Nabataeans in the desert suffered economic ruin about 200 A.D. when the Palmyrans gradually obtained control of the remunerative carrying trade.

The Encyclopaedia of Islam, III.
The king, who was assisted by a vizier, the highest official (Greek ἱεράτης), with the title "brother" had under him a number of shāhks (σαχάκια) of the separate tribes (κοιλά). We also find the titles eparchs and strategos. The high social position of women is noteworthy; they could possess property independently and dispose of it as they liked (Noldeke in Euting, Nabat. Inschr., p. 79 sq.); the coins often bear portraits of the queens (Kammerer, Petra et la Nabatène, Paris 1929, p. 377; Brit. Mus. Cat. of Greek Coins: Arabia etc., London 1922, Plates I and II).

Our only source for Nabataean la w is their epitaphs, the threats of punishment in which are based on a formula of the Greek law of property and contract which elsewhere is only found in tomb-inscriptions in Asia Minor (B. Keil, Hermes, xiii. [1898], p. 507-514).

As nomads, simple in their customs and rarely owning slaves, the Nabataeans, as a trading people, had a great respect for wealth. The mention in inscriptions of physicians, wise men and poets, shows a certain level of intellectual culture. Whether circumcision was practiced among them is uncertain (Kammerer, op. cit., p. 375 sq.).

The Nabataean pantheon is known to us mainly from tomb and votive inscriptions. The principal god was Dīshār [cf. Ḍiḥra ʾ-l-šarḥā], the principal goddess Allāt [cf. Altāt]; the goddesses Manāṭhha (= Aram. Ma'nawata; cf. Manātā), Kāțā, Mutabā and Hubal [q.v.] are also mentioned. Their kings were perhaps worshipped as gods after their deaths (cf. C. I. S., ill. 334).

As Noldeke was the first to emphasize, the Nabataeans were pure Arabs as their names show; but in written intercourse they used Aramaic, the usual written and business language of Nearer Asia. Many aramaisms thus entered their language in the north of the country (like ʾabārā, nāfshā, arnā). Arab writers therefore even used the term "Nabataean" for "Aramaic"; in the southern Ḥīrā (al-Hilāj) on the other hand, the Nabataean Arabic retained its greatest purity; the Arabic script developed out of the Nabataean cursive at the close of the ancient period (cf. Arabia, d.).

In the Muslim period the Arabs called those inhabitants of Syria and of the Ḥraj, who were neither shepherds nor soldiers, "Nabataeans" (ibn al-Kaṭib in Wāṣṭ, Muẓaffar, i. 534), a term also applied in a somewhat contemptuous tone to the Aramaic-speaking peasants (Noldeke, in Z.D.M.G., xxv. 124). When then we find "Nabataeans" (Nabīt, Nabāt etc.) mentioned in Malaya as well as on the Ḥilāj, in Syria, on the Ḥaṣār and in the Ḥraj, in Ḫūmān and Ḫafārah, the name is not to be taken in the etymological sense (Noldeke, op. cit., p. 123). As the grammarians of the Ḥraj paid special attention to the "Nabataean" language of the Aramaiic country people, by "Nabataeans" was frequently meant the inhabitants of the Ḥraj and especially of the Baṭānī (Noldeke, op. cit., p. 127).

The inhabitants of the district of Ḫiṣmā in the most northern part of the Ḥilāj, once the Dūṣhmān [q.v.], now known as the Ḥuṣayt [q.v.], are regarded as the descendants of the Nabataeans (cf. Arabia, a.).

NABĪ (אֲבִי), a prophet, borrowed from Hebr. נָבִי or Aram. نَبِيّاً, is found in the Kurān from the second Meccan period in the singular and plural nabiyyin; in the Medina period we find also the broken plural anbiyya'. Lists of the nabiyyin are given in Sūr vi. 83 sqq.; iii. 34; iv. 161 sqq.; further information about them is given in several passages of Sūr xix. and xvi. 57. The list consists exclusively of names from the Old and New Testaments (if we leave out Idris in Sūr xix. 57, whose name Muḥammad had however also learned from a Christian source; see above ii., p. 442-450; Horovitz, Korān. Citeri., p. 88 sq.); while messengers of God (rāṣūl [q.v.]; plur. raṣūla; mansūla) had also been sent to other peoples of the past — e.g. Hīd or Sālih — according to the Kurānic idea "prophets" had appeared only among the Aḥl al-Kītāb [q.v.]. Only a minority of the individuals called prophets in the Kurān are so described in the Bible, and Vānūs b. Mattai [q.v.] is the only one of the anbiyya' of the Kurān who appears among the literary prophets of the Bible. Muḥammad himself did not claim the name nabi until he was in Medina when he was addressed as the Prophet (yā ayyukha l-ḥādiqā' and, as finally closing the series of prophets, is called their "seal" (ēḥādiqā'). When Muḥammad in Sūr vii. 156 and 158 is called al-nabi al-ummi, this is to distinguish him as the prophet who has arisen among the heathen; the Jews called the heathen ummiyy hā-šām ("peoples of the world") and also recognised prophets who had arisen among them; among these they included e.g. Balāam. This Jewish name for the heathen became the al-ummiyin of the Kurān (Sūr lxii. 2; iii. 19, 69); that
NABI — NABIDH

803

unnīyyūn refers to the heathen is quite clear from Sūra iii. 19, where they are contrasted with those who have received the scripture. When Sūra ii. 73 refers to the unnīyyūn min Allâ al-Kamīl, the reference is most probably (with Wellhausen, Sīratun, iv. 13, note 2) to originally pagan Arabs who had adopted Judaism. The derivation of unnīyāt from Hebrew ummāt hā-Ṣawm therefore fits all the Qur'ānic passages, while that most generally adopted from Hebrew 'ummāt hā-ṣawm "people of the country", a term for Jews who did not know the Jewish law, would at best fit only Sūra ii. 73, but even for this passage is not absolutely essential.

The post-Qur'ānic ideas about the prophethood of Muḥammad are discussed in the article Muḥammād (cf. also Tor Andréa, Die Person Muḥammads in Lehre und Glaube seiner Gemeinde, Stockholm 1918). The accounts of the other prophets which found a way into Islam in the post-Qur'ānic period are collected in the works of the Kifās al-ʿAbīyīn. These, however, are not confined to the prophets proper who appear in the Qur'ān by name or anonymously, and to other figures of Jewish and Christian Biblical and post-Biblical tradition, but deal also with the history of such personalities as Dīnjūs and Bulaqīyā to whom there is not the slightest reference in the Qur'ān.

(J. Horovitz)

NĀBĪ, YESUF, an Ottoman poet; Vasut Nābī came from Urfa (Rûhā, hence Rûhā, not Rûhān as one often finds). From there he came in the reign of Muḥammad IV to Stambul and became a favourite of the grand vizier Kârâ Muṣṭafâ. He held a post as kaya, made the pilgrimage after Kârâ Muṣṭafâ's death and later settled in Aleppo. When the governor there, Muḥammad Baṭṭādī [q. v.], became grand vizier, he took Nābī to Stambul and gave him the post of superintendent of the department of the Anatolian chief accountant (Amaṭan muḥāżabešt). Later he gave him this office for another and died aged ninety on 3rd Rabi‘ I 1124 (April 10, 1712). He was buried in Stambul in the Kârâbaṣh cemetery near the Muḥtār mosque. His inscription on his tombstone is given by Sa‘d al-Dīn Nūḥet, Meṣâr Kātibešī, Stambul 1932, p. 11.

Nābī wrote several historical works in a florid style which was considered classical in his time and even later, such as an account of the conquest of Kameneic in Podolia (1053 = 1672) called Ta’rikhī Wāḥ/script. Kâmna, Mateen Kâμma or simply Ta’rikhī Kâmna. He also wrote in prose and verse a description of his pilgrimage to the holy places (1089 = 1678; the work was written only in 1093 = 1682) entitled Ta’ṣífāt al-Harāmah. His very popular Dīwān with supplement earned him the title of "king of poets". In his Khaṣṣāt-nâmeh, in the same book, he gives his son Abu l-Khaṭīr moral admonitions and advice. His letters (Munša‘āt) were at one time highly esteemed and are of some historical value. He continued Waṣī’s Sīyār in a Dīwān Sīyār al-Wâṣi. Printed works: Dīwān, Bulāk 1257 and Stambul 1292; Dīwān Sīyār al-Wâṣi, Bulāk 1248; Khāṣṣāt in: Consuls de Nābī Esfinj à son fils Abû l-Khaṭīr, publiés en turc avec la traduction française et des notes par M. Pavet de Courteille, Paris 1857; Ta’rikhī Kâmna, Stambul 1281; Sīyār al-Huḍāiat i Tawārīx, s.l. (= Stambul, about 1870), deals with questions of pedagogics; Taḥfīz, Stambul 1288; Taḥfīz al-Harāmah, s.l. [Stambul] 1205. For further information see F. Babinger, G.O.W., p. 237—239.

NABIY YUNUS. [See NESAWK.]

NABIDH (n.), a comprehensive designation for intoxicating drinks, several kinds of which were produced in early Arabia, such as mir (from barley), bit (from honey: Bukhārī, Maṣāhīr, bāb 60; Aṣḥībā, bāb 4; Aḥad, bāb 80; or from spelt: Aḥmad b. Hanbal, iv. 402), fidāq (from different kinds of dates: Bukhārī, Aṣḥībā, bāb 3, 21).

Grapes being scarce in Arabia, it is said that in al-Madina “wine” was usually prepared from kinds of grapes, exceptionally from grapes (Bukhārī, Aṣḥībā, bāb 21, 3; Muslim, Aṣḥībā, trad. 3, 6).

This may be true. Yet even then there is a tendency connected with the question whether the prohibition of wine included that of intoxicating drinks. Generally speaking baṭṭāt favours the affirmative answer and is consequently anxious to point out that the khamr which was prohibited by Muḥammad included nabidh.

The question was difficult, so far as these kinds of drinks were intoxicating to degrees which partly depended upon the duration of the process of fermentation. This appears e.g. from the copious traditions in which ʿAisha relates how nabidh was prepared for Muḥammad and at what time the beverage was made away with [cf. Khamr], as well as from the traditions in which the previous prohibition of certain vessels (qināṭ, musqalat, etc.) was abrogated and all kinds of vessels declared allowed, provided the drinks prepared in them were not intoxicating (Muslim, Dīqān, trad. 106; Aṣḥībā, trad. 63—65, 67—75 etc.).

A series of traditions which could be added by the Ĥanafites in favour of their view, according to which nabidh is not included in the prohibition of wine, is to be found in al-Nasāʾi’s collection, Aṣḥībā, bāb 48. Cf. further the art. KHAMR.

Side by side with milk and honey nabidh was also the beverage that was offered to the pilgrims in Makka. The institution, abāsāt (also the name of the building, close to Zamzam, where the distribution took place), was an office held by the Āḥāsids (Aḥmad b. Hanbal, Muṣnad, i. 372; Muslim, Maḥṣūṣ, trad. 347; Abū Dāwūd, Manāshik, bāb 90). The descriptions by Ibn Saʿd († 230 = 845) and al-Azraqi († 244 = 858) give the impression of referring to the present state of things; in the time of al-Muṣṭaddîs († about 1000 A. D.) the institution had already passed into desuetude. For details, cf. the work of Gaudeyrem-Dembombyes.
NABİDH — NÂBİGHÂ AL-DHUBYÂNÎ

NÂBİGHÂ AL-DHUBYÂNÎ, a famous poet of the pre-Muhammadan period. His real name was Ziyâd b. Mu‘awiyâ and he belonged to the tribe of Dhubyân. He probably flourished in the second half of the century which preceded Muhammad and died shortly before the beginning of Islam. Caussin de Perceval (Histoire des Arabes, 2nd ed., ii, 502) puts the date of his birth in 535 A.D. and Father Cheikho (Poêtes arabes chrétiens, p. 640) dates his death in 604 A.D. These dates however can only be conjectural.

The surname Nâbîgha has been variously interpreted by Arab writers. According to some, our poet was so called because in one of his verses he uses the verb nābâga: “She stopped among the Banû Ka‘bin and they felt the edge of our attacks”. But this verse is apocryphal and the process recalls that used to justify the etymologies of Muḥâṣibî and of Muṭalammîn (q.v.). According to others, he was so called because he did not write poetry until he reached manhood or more simply because in Nâbîgha poetry “flows from the spring”.

We know nothing about his family; his noble birth asserted by the Kitâb al-Aṣgârî (ix, 162a) and Ibn ‘Utâiba (ed. de Goeye, p. 74) is doubtful and we know nothing definite about his childhood and youth.

At some date which it is impossible to ascertain definitely, Nâbîgha was admitted to the court of the Lakhmîd princes [cf. LAKHM] of al-Ḥira, vassals of Persia; in the reigns of the kings al-Mundhir III and al-Mundhir IV in particular this Christian semi-Persian, semi-Arab city had become an important literary centre and the focus of a brilliant culture. Our poet sang the praises of these two sovereigns and received gifts from them but his fortunes reached their zenith in the reign of Nu‘mân Abû Kaḥîl’s whose boon companion and favourite singer he became. The poet lived on intimate terms with the king in the lap of luxury and opulence. Such favours could not fail to excite the envy and jealousy of the other courtiers: hence his enemies, notably Murra b. Samîl, who plotted to break the king’s attachment to him. The trick attempted by his enemies was a crude one and the king was not deceived by it: the attack on the poet failed.

Far from being discouraged, Murra patiently awaited another opportunity to avenge himself: this soon appeared. According to the Kitâb al-Aṣgârî, Nâbîgha, who had free access to the palace of Nu‘mân, one day unexpectedly entered the apartments of queen Mutadjirî, famous for her beauty. Taken by surprise, she dropped her veil, showing to the delighted eyes of the poet “a part of her statue-like body”. By the time she could replace it, it was too late. Struck to the heart, Nâbîgha composed in honour of this “beauty” his famous poem which begins with the line “soothe and leave Maiya in all haste...”. (Derenbourg, ii, 402 sqq.; ‘Umarî, Litt., xiv, 222 sqq.) It was imprudent enough to recite it to his enemy Murra who hastened to report it to Nu‘mân. The latter in his anger decided on the poet’s ruin.

According to another tradition, one evening when Nâbîgha was seated beside the queen in company of the king and another poet, Munâkkhâl al-Yaṣqūrî, Nu‘mân asked Nâbîgha to describe Mutadjirî to him. Nâbîgha at once obeyed and recited the poem which he had composed shortly before. Munâkkhâl, who was said to be the queen’s lover, exclaimed: “Sir, this description is that of an eye-witness”; and the poet’s days were now numbered. Warned by his friend, the chamberlain Ḥisham, the poet hurriedly fled and sought refuge with the princes of Ghassân.

These stories, on the whole little probable, seem to have been invented to explain Nâbîgha’s disgrace. In his book Fi ‘l-‘Ādâb al-dîjâlî (Cairo 1927, p. 332), Tâhâ Ḥusayn disputes their authenticity and acutely points out that nothing in poem vii.: “It has reached me, mayest thou avoid the censure etc.” supports these stories. He supposes on the other hand, relying on this qaṣīda, that the princes of Ghassân won the good graces of Nâbîgha at a time by their largesse and the poet showed his gratitude by singing their praises; this having come to the ears of Nu‘mân, the latter took umbrage and decided on the ruin of his favourite.

Nâbîgha was by no means unknown to the Ghassânîs, phylarchs of Byzantium and rivals of al-Ḥira. He had been very well received by the princes al-Ḥârîth b. Abî Šâmârî and al-Ḥârîth al-Asgharî. The former at the poet’s request had released a large number of the Banû Asad taken prisoner at the battle of Ḥašma; the latter, also at Nâbîgha’s request, had released a number of the Banû Asad and Banû Ḥazârî after the battle of ‘Ain Ubâgh. This leads us to say a word about Nâbîgha’s political activities.

The poet in the course of his wars the tribe never lost interest in his fellow tribesmen and their allies; we have mentioned his interventions on their behalf with the Ghassânîs; during the celebrated war of Dâbihs between ‘Abs and Dhubyân, it was his constant care to maintain the alliances contracted with the Banû Asad and Banû Tanîm. In the reign of the Ghassânî Nu‘mân b. Ḥârîth Abî Karîb, he had once more to intercede on behalf of the Banû Dhubyân defeated in the battle of Dhu ‘Ukâr; later, in view of his devotion to his patron and his love for his poet, he appeased Nu‘mân to abandon his war on the Banû Dhubyân allied with the Banû Ḥumā. As a result of refusing to listen to him, the king was defeated.

At the court of Ghassân, Nâbîgha was overwhelmed with favours by ‘Amr b. Ḥârîth and later by his successor Nu‘mân. He celebrates the former’s generosity in a qaṣīda full of gratitude (Derenbourg, iii, 297) and his elegy on the death of Nu‘mân (Derenbourg, xxiv), is characterized by deep emotion.
In spite of his luxurious life, Nābigha felt his heart and his thoughts turning towards al-Hira and its king. Therefore on the death of Nu'man b. Ḥārīṯ Abū Karīb he decided to return to al-Hira to attempt to regain the favour of the son of al-Mundhir.

Learning that Nu'man was ill, he set out accompanied by two Fazāris, Manṭhir b. Zābta and Sāyār b. 'Amr, friends of the prince; when they arrived at al-Hira, Nu'man had recovered. Hearing of the arrival of his two friends, he had a tent of leather pitched for them and sent them a woman singer to entertain them. He himself often came to visit them. One evening at a party the singer sang Nābigha's poem “O abode of Malay” (Dīwān, I); the prince delighted exclaimed: “That is an excellent poem”. The Fazāris thereupon seized the opportunity to intercede on behalf of Nābigha and the generous prince forgave the poet. A little later Nu'man was put to death by order of the Sāsānian king Khusraw Parviz for having refused to give him one of his relatives as a wife. Nābigha lamented his patron and retired to his tribe. We do not know when he died.

Before giving an estimate of Nābigha as a poet, we have still to discuss his religion. Derenbourg makes him a monotheist, and in support of his opinion quotes a number of verses in which the poet speaks of God, of the feast of palms, of the cross of Zawār. On the other hand, Cheikho thinks he was a Christian. We find, he says (Christianisme Arabe avant l'Islam, Bairût 1923, p. 420—439) in the poems of Nābigha evidence of his belief in God, of his religious piètre, but the arguments are not numerous or of great cogency: a vague mention of God, of David and his son Solomon, of priests present at the obsequies of Mundhir, of the cross of Zawār. As a matter of fact, Nābigha was a pagan and there is nothing Christian in his poems. The allusions in his poems, even if we accept them as authentic, are in reality only rather faded memories of the Christian ceremonies which the poet had witnessed at al-Hira, and Ghassan and a distant echo of the religious ideas current in the peninsula at this period. As to the word Allāh, it is undoubtedly the result of a substitution for al-Lāt [q.v.] made at a later date by some Muslim poet. Nābigha al-Dhubbāni holds a high position among the poets of ancient Arabia; he is unanimously placed “in the first rank of poets”.

In our opinion he possesses in a high degree the two qualities which make a great poet: sensitiveness and imagination. To sincerity of feeling, he adds splendour of imagery and freshness of expression. In him ideas and words, feeling and turn of phrase, matter and form are in perfect harmony. His satires are often bitter, ironical and scathing.

He is also an artist who skilfully uses all resources, all effects and all artifices. His verse is compact, solid and uniform and readily impresses itself on the memory with the idea which it expresses. Of course it is not without its faults: we find a few weaknesses and examples of lack of care.

Ṭāḥih Husain (al-Sh'r al-Ghūḥil, Cairo 1926) has recently raised the question once more of the authenticity of the poems of Nābigha and other pre-Islamic poets. Rejecting all that has been handed down about it he regards the old poetry as apocryphal. The discussion of this question however, as can readily be understood, lies outside the scope of this article.

Maurice CHEMOLU

NABOB. [See XXvi.]

NABULUS, A TOWA IN CENTRAL PALESTINE, the name of which is derived from that of Flavia Neapolis built in honour of Vespasian. Its Old Testament predecessor was Shechem, which however lay more to the east, on the site of the present village of Ballān (the name is explained by S. Klein, in Z. D. P. V., xxxv. 38 sq.; cf. R. Hartmann, ibid., xxxiii. 175 sq., as “palatum”, from the evidence of the pilgrimage of Bordeaux and the Mithraic Gen. rb., c. 81, § 3). According to Eusebius, the place where the old town stood was pointed out in a suburb of Neapolis. The correctness of this identification of the site of Shechem has now been completely proved by Sellin's excavations; and this also explains how the old name did not as usual drive out the late Greek one. In the time of the Arab writers, the name Shechem was long forgotten and what they tell us refers to Neapolis-Nabulus.

Nabulus is in a long valley (running from east to west) formed by two chains of hills, on the south side Garizim, Arabic Djabal al-Tur or al-Kibīl (2,900 feet high), on the north side Ebal, Arabic Djabal Eslemiyah or al-Samālī (3,140 feet high). G. Holscher (Z. D. P. V., xxxii. 98) refers the older name of Neapolis: Mabartha (Mamortha) in Pliny and Josephus (i.e. “crossing”, mabharta) to the low saddle running right across the valley. The town with its 22 springs is unusually rich in water, which is heard running everywhere and produces a very luxuriant vegetation. Where the road from the south turns westwards into the valley there is a well with the old unanimous tradition since the fourth century A.D. locates here Jacob's well and it is undoubtedly the same as is mentioned in John iv. 5. About a thousand yards to the north is a building where tradition locates Joseph's grave.

In the post-exilic period Shechem belonged to the territory of the mixed people of the Samaritans whose capital it became after they had built on the hill of Garizim (the Samaritan text of Deut. xxvii. 5 has this name instead of Ebal) a temple as a rival to that of Jerusalem. They were continually at strife with the Jews and in the end John Hycanus
in 129 B.C. destroyed Shechem and its temple. At a later date this always turbulent people was equally hostile to the Romans, which caused Vespasian to attack them on Garizim when a large number were slain. Christianity gradually spread in the country and Nazareth became a bishopric. The result was that the Samaritans now turned their arms against the Christians and treated them with great cruelty. After a deadly raid by them, the Byzantine emperor Zeno (474–491) had them driven from Garizim and built a church there. They wrought still greater havoc in the time of Justinian who punished them with great severity and destroyed their synagogues while he rebuilt the churches. This finally broke their spirit; many of them fled to Persia while others became Christians. Their part had been played by the time when Nabisul with many other towns fell into the hands of the Muslims.

The notices of the Arab authors about the town are very scanty. They knew that it was inhabited by Samaritans [cf. AL-SAMIR] and some add that, according to the Jews, they are found nowhere else, but it should be noted that Baladhuri (ed. de Goeje, p. 158) speaks of Samaritans in Filasfn and Urdum. Yakut mentions (p. 328), Nabisul a town near two sacred hills with a population of Jews, foreigners and Samaritans. Below the town is a subterranean city, hewn out of the rock. Muhaddasi says "Nabisul lies in a valley between two hills, is rich in olive-trees and a stream flows through it. The houses are of stone and there are mills there; the mosque in the centre has a beautiful paved courtyard". In the Crusading period Nabisul is mentioned as unfortified. On Jan. 23, 1120, an earthquake occurred and a datestone and several houses was destroyed by the object of improving the morals of the Christians. Idrisi mentions the well of Jacob where Christ had the conversation with the woman of Samaria; a fine church had then been built on the spot. The Jewish traveller Benjamin of Tudela (1160–1173) records that there were no Jews in Nabisul, but about 100 Kutaeans (Samaritans) who offered burned offerings on the altar on Garizim at the passover and on other feast-days. His contemporary 'Ali al-Harawi says the Samaritans are very numerous. He, as does Yakut, always writes Garizim as Kazirin, a corruption which we already have in the "Agazaren" of the pilgrim of Bordeaux. A terrible earthquake in 1202 added to the miseries inflicted on the town; by the continual wars between Franks and Muslims. Under the great Mamluk Sulthan Baibars (q.v.) it finally passed into possession of the Muslims. Yakut remarks on the wealth of water and fertility of the district; here he says, is the hill on which according to the Jews, Abraham wanted to sacrifice Isaac (not Ismael as the Muslims say). When praying, the Samaritans turn towards Garizim. Dimashki says that Nabisul is like a palace surrounded by gardens; he mentions the pilgrimages of the Samaritans to Garizim where they sacrificed lambs. The Muslims had a fine mosque in the town; while the Kufrn was recited day and night. According to Khalil al-Zahrari (d. 872 = 1467), the area included 300 villages.

The people of Nabisul retained their unfriendly character and fondness for rebellion so that the town was less visited by pilgrims. Only the modern period has brought order and greater security, but even now the dislike of the Samaritans to strangers as spectators during their passover sacrifices may give rise to trouble.

NABULUSI. [See 'ABD AL-GHANI.]

NADHR, plural nadhur; Sura lxxv. 57, used as a noun agentis from m-adh-r, with the meaning of warner; sometimes also as an infinitive, e.g. Sura lxxvi. 17. The plural nadhur is also found in the sense of an infinitive, e.g. Sura lxxvii. 6. The term occurs frequently in the Kur'an; it is even said to be synonymous with rasid; its opposite is basdir, mulabahsir. Nadhr as well as basdir are applied to the prophets, the former when they are represented as warlers, the latter as announcers of good tidings (cf. Sura xvii. 106; xxxv. 58; xxxvii. 44; xlviii. 8; mubadhahin wa-nadhirun). As an epithet it is used especially in connection with Noah, the great warner before the Deluge. Nadhr, the Warner, who thereby receives the stamp of a second Noah (cf. Sura xxvi. 115; l. 51; lxxvi. 2 with Sura xxiii. 49; xxxv. 21; xxxvii. 70; lxxvi. 26). Sometimes Muhammed emphasizes his being only a warner (Sura xlvii. 8), or his being the first warner who was sent to his people (Sura xxviii. 46; xxxiv. 43).

The term is found in hadith apart from the common use, known from the Kur'an, in the curious expression nadhir 'urjan (Bukhari, Nisai, bab 26; Tirmidhi, bab 2; Muslim, Fadail, trad. 16) with which Muhammad denotes himself. The tradition runs as follows: "Myself and my mission are like a man who went to some people saying: I have seen the army (of the enemy) with my eyes and I am the naked warner". Several anecdote stories are told by the commentators in explanation of this expression. It is also said by some of them, that in early Arabia a man who saw an approaching danger, stripped himself of his clothes and wound them around his head in order to warn his tribespeople. — The meaning Nazrite which in several dictionaries is given to the term nadhir in the first place does not occur in the Kur'an, nor in hadith, nor in Li'an al-'Arab nor in Tady al-'Arab; it is, however, used in translations of the Bible.

Bibliography: Li'an al-'Arab, vii. 54 sqq.; Tady al-'Arab, iii. 561 sqq.; Ibn al-Athir, Nihaya, iv. 136; Kasallani, ix. 305; Navawi's commentary on Muslim's Sahih, Cairo 1283, v. 71. (A. J. Wensinck).

NADHR, v.o., was taken over into Islam from the pre-Muhammadan Arabs and underwent modification by the new religion. The idea of dedication is associated with the root n-d-hr which is also found in South Arabic, Hebrew and Aramaic and to some extent in Assyrian. An animal could
be the object of dedication among the Arabs. For example, they dedicated by nahr a certain of their sheep etc., for the 'idda feast in Ka'bah (La'nah al-Mā'Arab and Dhawār, s.v.): the dedication which was expressed in solemn formulae signified that the animals were removed from the mundane sphere and placed in the sacred one. As a rule, a sacrifice was dedicated in order to obtain good fortune in a particular respect. The promise to dedicate an animal when the herd had reached the number of a hundred (op. cit.) had an effect on the prosperity of the animals because the word anticipated the fact. According to the story, 'Abd al-Muttaqīb similarly dedicated a son to be slain beside the Ka'bah if he should have ten sons and they grew up. Ibn Hishām, p. 97 sqq.) but for his nahr 100 camels were substituted. — A childless woman could also vow if she had a son to dedicate him to the sanctuary (ib. ib., p. 76; perhaps this story is a literary borrowing). According to the Kābulīh of Ma'mūna bint Khalīl, her father had resolved to sacrifice 50 sheep if he had a son. (YāBD, vii, 754, bāb 19; Ibn Mas'ūd, Kābulīh, bāb 18.) If a child was sick, its mother could dedicate it by a vow as 'omān (from ḫann) if it recovered (Aṣa'ī, p. 123, sqq.). Escape from every difficulty was sought by a nahrū. During a battle a camel used to be dedicated as a sacrifice (Wāḍū'l-Wellhausen, p. 59). The traveller in the desert used to make a vow on account of the danger (see the verse in Lane and Lišān al-'Arab, s.v.). In distress at sea one promised offerings to God or a saint or vowed to do something oneself, such as fasting (Sūra x. 243; xxix. 65; Abū Dāwūd, Aṣa'ī, bāb 20; see also Goldziher, Mah. Stu., i, 311). During a drought 'Omar vowed to taste neither samarn nor milk nor meat till the rain fell (Tabari, ed. de Goeje, i. 2573, sqq.).

Even if a sacrifice were promised, the vow also affected the person concerned, as we see from the fact that he had his hair shorn not only on the ḫādīj but also, for example, when sacrificing after a journey (ib. ib., p. 15, 749; Wāḍū'l-Wellhausen, p. 324, 351, 429 sqq.; Bukhārī, ḫādīj, bāb 125); for the cutting of the hair ended, as in the case of the Israelite Nazirite, the state of consecration. The vow therefore had always more or less the character of a self-dedication. This aspect was often quite prominent. Ordinary sacred duties such as participation in the ḫādīj were assumed as a consecration by nahrū (Sūra xxii. 39) at which special obligations were assumed e.g. to go to the sanctuary on foot, or barefooted (Bukhārī, Q-dir al-Sanā', bāb 27; Tirmidhī, al-Nūdūr wa'l-Aimān, bāb 17). The sacred condition of ṣīkāf was assumed as a nahrū: thus before his conversion 'Omar vowed to make a nightly ṣīkāf in the Meccan sanctuary (Bukhārī, Ma'āmī, bāb 54; Aṣa'ī, bāb 29). Such a vow to separate oneself from everyday life in some special way was very frequent among the ancient Arabs; for Labīl (p. 17, 18) compares an antelope buck alone among the bushes to one fulfilling his vow (ḥašīl 'la-nahrū').

This isolation had the definite object of spiritual consecration and strengthening the soul and thereby influencing the deity. Abstinence was therefore also practised in preparation for great deeds, especially in war. The Arabs "touched no perfume, married no woman, drank no wine and avoided all pleasures when they were seeking vengeance, until they attained it" (Hamāsī, p. 447; v. 5 schol.); avoidance of wine (Hamāsī, p. 237, v. 4 sqq.) and women (Kasāb al-Jahān, xv. 161: 2nd ed., p. 154) is specially mentioned. These abstentions like the ḫādīj rites and the ṣīkāf are also the objects of a naḥrū. The form of this vow is for example "wine and women naḥrū to me until I have slain 100 Aidences" (Aṣa'ī, viii. 68; 2nd ed., p. 65). A definite term may be fixed, such as drinking no wine for 30 days in order to obtain vengeance (Kais b. al-Khaṭṭām, ed. Kowalski, iv. 28). Forms of abstinence are not to eat meat, not to wash the head, so that the ḥamā is not removed (Aṣa'ī, i. 149; 2nd ed., p. 141: xii. 69; 2nd ed., p. 66; Ibn Hishām, p. 543, 980: Ḥusayn ibn Ahmad, ed. Wellhausen, N°. 159), not to anoint oneself (Wāḍū'l-Wellhausen, p. 201). Refraining from meat, wine, ointment, washing and sexual intercourse are mentioned together (Aṣa'ī, vii. 99: 2nd ed., p. 97; viii. 68; 2nd ed., p. 66; Ibn Hishām, p. 543; Wāḍū'l-Wellhausen, p. 75, 94). There is also evidence of complete fasting (Wāḍū'l-Wellhausen, p. 105, 102). The abstentions, the offering and the deed to be done form the content of the naḥrū. It is said: naḥrūn nā man nāfūt maṣaṣṣ (Aṣa'ī, ed. de Goeje, p. 257, 3 sqq.), "After a wish has been fulfilled a vow of gratitude may also be taken (Wāḍū'd, p. 290).

The consecration placed the person making the vow in connection with the divine powers, the naḥrū was an ḫādīj (Sūra ix. 76; xxii. 27: xviii. 10), whereby he pledged himself. A neglect of the Ḫādīj was a sin against the deity (Inna al-Ka's, p. 51, 10). The sacred obligation of living made this a naḥrū (or synonymous) naḥrū, which one should fulfill (ṣīkāf), instead of wandering aimlessly (Sūra xxxiii. 25; Wāḍū'd, p. 120; Labīl, p. 41, 1; Kumait, Ḥusayn, ed. Horovitz, p. 4, 48). The importance of the binding pledge gradually becomes more prominent (cf. Lišān al-'Arab, where naḥrū is explained by ṣīkāf, or synonymously naḥrū, which one should fulfill); instead of wandering aimlessly (Sūra xxxiii. 25; Wāḍū'd, p. 120; Labīl, p. 41, 1; Kumait, Ḥusayn, ed. Horovitz, p. 4, 48). The emphasis on the material dedication gradually became less. The abstentions mentioned receive their importance on the one hand from works meritorious to the deity, on the other from the unpleasant deprivations, by which the person taking the vow disciplines himself. Both points of view are seen in the examples quoted. The releasing of slaves or divorcing of wives often form the subject of a kind of vow by which a man pledges himself under certain conditions. A man may also vow to sacrifice all his camels if he is not living (Hamāsī, p. 667, v. 3). The strict obligation inherent in the naḥrū makes it closely related to the oath [see ḪAṣA'M].

One can also bind one's family by a vow. A mother swears not to comb her hair or to seek shade until her son or daughter fulfills her wish (Aṣa'ī, xviii. 205; 2nd ed., p. 205; Ibn Hishām, p. 319; ii. 90). The strength of this kind of "conjunction" is based on the relationship between the two partners. If a dying man vows that his tribe shall slay 50 to avenge him, this binds the tribe (Hamāsī, p. 442 sqq.). Thus a vow in the problem of horse-robbery of two unfulfilled vows had to be fulfilled by the descendants (Muslim, Naḥār, trad. i.; Bukhārī, Wāḍū'd, bāb 19; cf. Goldziher, Zāhirīten, p. 50).
In Islam the vow and the oath are treated together. In the Qur'an it is prescribed that unconscious expressions (zakhuw) in an oath may be broken and acquitted (Sura ii. 226; v. 94). The context shows that the reference is to vows of abstinence, especially relating to food and women. Sura ii. 226-227 in continuation says that those who bind themselves by 'id' not to touch a woman should either break the vow after 4 months or pronounce the formula of divorce. The breach of the oath then requires the kaffara. The zāhūr formula is absolutely forbidden (Sura liv. 1-5; cf. xxi. 4); it is a great sin in the eyes of the law, while the 'id' is not a sin (see Juyuboll, "Handbuch", p. 284 sqq.; Sachau, "Muh. Recht", p. 13, 68 sqg.). The "release from the oath" promised in Sura lixi. 2 refers to a vow of continence. The same kaffara holds for a broken vow as for an oath. It is probable in this case that we have Jewish influence (cf. Mishna, Nid'urim) but the principle of releasing oneself from a vow by doing something else is certainly also originally Arab. But with Islam comes the view that malā' in are useless because they cannot influence God (Ikhkhar, A'mūn, bāb 26; Kisdār, bāb 6; Muslim, Nadār, trad. 2). Thus we find hadiths which urge the fulfillment of vows as well as those that forbid them. Following hints in the hadiths, we find a systematic division into vows of piety (nadhar al-tabarrur), which are intended to acquire merit by a pious deed (pā'a), and vows by oaths which, since they are conditioned, serve to incite, prevent or strengthen. The latter are called nadhar al-la'jdāl wa-l-ghadāb. They are deprecated but must be treated like oaths. Their matter must not be sin, and according to some a vow of this kind is valid, according to others, it is valid but must be broken. Their matter must not already be an individual duty (wādā'ī a'mūn). The person taking the vow must, like him taking an oath, be mukalaf and be acting of his own free-will.

JOHNS. PEDERSEN.

AL-NADIM, ABU'L-FARAJ MUHAMMAD B. ABI Y'A'KUB ISH'AK AL-WARRAQ AL-NADIM AL-BAGHDADE, Arabic bibliographer, compiled the Fihrist in 377 (987-988). Little is known about his life. According to a statement which goes back to Ibn al-Nadīmid (d. 643 = 1245) Dhā'ī Turīkh Baghdādī (see Flügel's edition, p. xii, note 2), he died in 385; according to another statement (see Ibn Ḥadjar al-Asqalānī, Liʾām al-Misām, v. 72) probably 388 (the figure is damaged in the Haidarābād edition). Both dates are in contradiction to the fact that in the Fihrist events of 392 (p. 87, 6) and "after 400" (p. 169, 11) are mentioned, unless these are additions by another hand. A clue to the date of his birth is given from his account (p. 237, 6) of a meeting with a learned man in the year 340; this suggests 325 as the latest date for his birth. Nothing is known of his family. There is no reason to connect him with Ibn b. Ibrāhīm al-Mas'ūdī al-Nadim (d. 235 = 849) or with Yahyā b. al-Nadim, a pupil of Al-Baladhuri (d. 279 = 892). His father was a bookseller (warrāq) (p. 303, 24, 318, 6, 351, 14). Whether the epithet al-Nadīmid "table companion", i.e. member of the circle of a caliph or other great man, refers to the father or to a remoter ancestor is unknown. It is not impossible that it refers to the author of the Fihrist himself; against this however is the fact that he is usually addressed as Ibn al-Nadim. That Baghdād, if not his birthplace, was at least his place of abode is evident from passages, like p. 337, 26, 349,irst (see below) and the frequent mention of Baghdādī in his acquaintances (p. 132, 6, 219, 253, 12, 260, 2). He several times mentions a stay in Mōsul (p. 86, 12, 160, 21, 190, 21, 265, 25; cf. also p. 285, 9). We know nothing of other journeys of al-Nadim (Dār al-Rūm, p. 349, 23, the name of the Latin quarter in Baghdād as V. v. Rosen has shown it). His teachers and authorities also point to Baghdād. He most frequently quotes the authority of the grammarian al-Sirāfī (d. 368) (all the quotations can be found in the latter's Aʿdāb al-Maʿnīyīn al-Baṣrīyīn). Personal relations are indicated by p. 56, 13 and the mention of his sons (p. 31, 45, 61, 22, 3). Al-Nadīmid also studied under Ibn al-Munādīlīm (p. 144, 11). He gives traditions heard from Muḥammad b. Yusuf al-Nāṣīkh (p. 24, 14, 25, 27). He also gives traditions from Abu al-Faraj al-Iṣfahānī (p. 141, 17, 21, 25, 4), i. e. from Abu al-Faraj 'Abd al-Samad al-Khārijī (p. 145, 3); he is celebrated for the reliability of his tradition (p. 145, 25). He also mentions his teacher Abu Sulaimān al-Maṇīkī (p. 241, 14) whom we know from Abū Ḥayyān's Muḥāṣṣīl. He was friendly also with the logician Ibn al-Dajārī (p. 244, 6, 245, 12) and with the Christian philosopher Ibn al-Khāmmār (p. 245, 19) and with Yahyā b. 'Adī (p. 264, 2). This circle of friends is very much in keeping with al-Nadīmid's friendly nature, the breadth of his intellectual interests, his intelligent interest in other religions and his tolerance, which finds expression in Maḥāfaḍa's 5 and 9 of his work. That he was a Shift and Muʿarrid did not escape his biographers (cf. Golzieder, in Z.D.M.G., xxxvi. 278 sqq.); thus he uses ʿaṣaṣī and ṣuna in the sense of Shift and Sunni respectively, calls the Sunni traditionalists al-Ḥadīthiyīn (p. 231, 23), claims many of their leaders for the Zaidīya (p. 178, 9, 22), says that al-Shift was a man of deeply Shift outlook (p. 209, 22), and praises al-Shift (p. 168, 28) as a Shift. Shifts were numerous among his friends (p. 139, 27 and p. 154, 25) and acquaintances (p. 178, 6, 190, 21, 197, 119, 198, 4). Al-Nadīmid like his father was a bookseller. This is nowhere expressly stated but is evident from the whole plan of his work in which he faithfully records not only scientific literature but also the numerous diwāns of contemporary poets and the vast mass of anonymous light literature, love stories, fairy tales and books of adventure, indeed even works of a popular nature neglected alike by scholars and bibliophiles, books on good manners, cookery books, books on poison, books dealing with hunting and sport, down to collections of fables, books on magic and on prophecy, in brief everything that was on the Baghdād book market in the fourth
(tenth) century. That he was a bookseller is also indicated by the frequent particulars about the size of the books dealt with (cf. especially, p. 159, 19), about copies in the hand of famous scholars, about the demand for books (p. 70, 5; 77; 14; 79, 29) and about the book trade (p. 271, 5; 359, 29). He several times mentions other booksellers (p. 204, 299; 4; 355; 13).

The Fihrist exists in two recensions (on the manuscripts, see Z.D.M.G., lxxiv. 111 sqq. and the literature there given; this may now be added a fragment in Tonk and a private manuscript in Medina). Both were made in the year 377 (987). The longer recension contains ten maṣāḥif, of which the first six deal with the literature of Islam (1. ḳuṭān, 2. grammar, 3. history etc., 4. poetry, 5. dogmatics, 6. law), while the last four deal with non-Islamic literature (7. philosophy and ‘ancient science’, 8. light literature, 9. history of religion, 10. alchemy). The shorter version contains only the four last maṣāḥif of the longer one, i.e. the Arabic translations from the Greek, Syriac, Persian and Sanskrit and the other literature based on these models. It is mentioned by Ḥāḏijī Qhalīfa (Stambul, ii. 211) under the title Fīwā zu al-‘Utrīm. The two recensions have in common an introductory section on the various forms of writing. —

A survey of the contents of the Fihrist follows the preface (see also Flügel, in Z. D. M. G., xiii. 190 sqq.). The arrangement there given is strictly adhered to in the book. The special quality of the book and its value lies in the fact that it gives the Arabic literature of the first four centuries in a bibliographical arrangement while the biographical method is the only one used in other contemporary sources. Al-Nādim, it is true, hasindexOf his subjects in biographical sketches but it is the list of works of the author that is the main thing. Sometimes a branch of literature is treated purely bibliographically under its various branches (e.g. the literature of Kūtān exegesis, P. 33; 20—37; 111; also p. 87, 88, 170, 171). This arrangement was necessary with the anonymous literature, especially in the eighth maṣāḥif (p. 395 sqq.). A further step towards treatment from the point of view of the literary historian is found in the brief introductions and surveys (e.g. on the pre-ʿOthmānic recensions of the Kūṭān, p. 26 sqq., on the beginnings of Arabic grammar, p. 40 sqq.). In the last four maṣāḥif, such sections (e.g. on the origins of philosophy, of medicine, of alchemy, the beginning of the translated literature, the origin of the #1000 tales) are so extensive that they have the character of a regular history of literature to a much greater degree than the more bibliographical first six maṣāḥif. The ninth maṣāḥif occupies a special position: it is a treatise on the history of religion in which the bibliographical element is not at all prominent. — The sources used by al-Nādim are mainly of a literary nature. He prefers to use works in copies from the hand of reliable copyists. He comparatively rarely quotes personal authority. — Although a younger contemporary of al-Nādim’s, al-Wazīr al-Maghribī (d. 418 = 1027), prepared an improved edition of the work, it seems at first to have had only slight influence. The earliest author to make considerable use of the first four maṣāḥif (in al-Maghribī’s edition) was Yākūt (d. 626 = 1225) (see Bergsträsser, in Z.S., ii. 185). He claims to have consulted a copy in al-Nādim’s own hand, as does the lexicographer

al-Saghānī, d. 650 (1252) (see Khāṭān al-Adab, iii. 83 pu). Ibn al-Kīsīf (d. 624 = 1226) and Ibn Abī Ṭalḥa (d. 668 = 1269) copied much from the Fihrist. In later times it is only occasionally quoted, e.g. by al-Dhahabī (d. 748 = 1347) and Ibn Ḥāḍir al-ʿAṣkalānī (d. 852 = 1484) and lastly by Ḥāḏijī Qhalīfa (d. 1067 = 1656) and al-Khāḍījī (d. 960 = 1561). — Al-Nādim also wrote a Kitāb al-Aṣwāf wa l-Taqāṣīm (Fihrist, p. 12), which has not come down to us.

NADIM, Ağmaid, an Ottoman poet, born in Stambul, the son of a judge named Muḥammad Bey who had come from Merzifun. His grandfather (according to Gibb, H. O. P., iv. 30) was a military judge named Muṣṭaṣa. Ağmaid Rāfīḳ mentions as his great-grandfather Kara-Celebi-xâde [q. v.] Muḥammad Efendi who also was a military judge. The genealogy given by Ağmaid Rafig is however wrong because he confuse Karaman Muḥammad Pašha [q. v.] with Kūm Muḥammad Paša. The statement that Ağmaid Nadim is descended from Dājāl al-Dīn is therefore simply the result of confusion. Little is known of his life. He was a nidérūr, later on intimate terms with Ağmaid III and his grandvizier Dāmād İbrahim Paša [q. v.]. He probably got his laḳāb al-Nādim from his friendship. Latterly he held the office of librarian in the library founded by his patron Dāmād İbrahim Paša. On hearing of the end of İbrahim Paša and the deposition of the sultān, Nadim lost his life at the beginning of October 1730 (Rabi‘ I, 1143) in a horrible way; while escaping from the mob leaving the grandvizier’s palace he fell from the roof and was killed. He was buried in Ayâs Paša in Perä beside the historian Fndīlülf Silâhâr Muḥammad Agha.

 Ağmaid Nadim is regarded as one of the greatest of Ottoman poets, who is still appreciated for his pure language, free from foreign additions. Many literary historians have discussed his merits as a poet (cf. the specimens collected by Gibb, H. O. P., iv. 30 sqq.). His collected poems (Pisâr; printed Bâlûk, n. d.; a more recent critical edition with introductions by Ağmaid Rāfīḳ Bey and Muḥammad Fu‘ād Bey appeared in 1338—1340 in Stambul; there are manuscripts of the
NADIR SHAH, king of Persia (1417-1602 = 1736-1747).

Origins. Nadir b. Imām-kuli b. Nadhir-kuli belonged to the Kīrākū clan of the Turkoman tribe of the Afghāns, of which a section had settled in northern Khurāsān, and was born on the 28th Muḥarram 1100 (Oct. 22, 1688) at Kīrkān. Entering the service of Tahmāsp II, he was called Tahmāsp-kuli Khān but after his coronation his original name was improved to Nādir, “the rare one”. At an early date Nādir distinguished himself in the incessant fighting with the Turkomans of Naṣī, the Čamīhḡazā Kurt of Khábūshān (Kūṭān), the Özbek, the Tatars of Marv and even against his Afghān fellow tribesmen. The little nucleus around Nādir, the nucleus of his Afghan relatives, some Kurds of Daragāz and Abīward, and 300-400 families of Džayyr Turkomans with their chief Tahmāsp-kuli Waklī.

Fighting in Khurāsān. During the Afghān invasion of Persia, Mashhad was occupied by Malik Maḥmūd, a scion of the Sīstān family. Nādir fought against Malik Maḥmūd at first on his own initiative. When the Ṣafawīd Tahmāsp II, driven from his other lands, arrived in Khurāsān, Nādir very cleverly supplanted the commander-in-chief Fath ʿAli Khān Kādlār and on 16th Rabīʿ I (Dec. 22) captured Mashhad with the help of treachery. Henceforth it became his headquarters. There were already signs of a breach between Nādir and Tahmāsp II at this time.

The Shah urged Nādir to set out against his enemies the Ghilzāi Afghāns but Nādir wished first of all to dispose of the nearest enemy, the Abdāl Afghāns of Herāt, but the campaigns of 1728 (against the Abdāl and the Turkomans) had no success. Nādir however was able to extend the sphere of his activities; he ousted from Astarābād and Māzandarān the governors appointed by Tahmāsp and came into conflict with the Russians and the Ghilzāi Afghāns.

The Abdāl. In the meanwhile trouble had broken out in Herāt between Ālī-yār Khān and Dūr ʿl-Fikār Khān. Nādir re-established Ālī-yār Khān but transplanted many tribes to Khurāsān (1141 = 1747).

The Ghilzāi. At this time Ashraf Ghilzāi signed peace with Simnān while his general Saydāh had gone to Bistān. On the 8th Rabīʿ I (Nov. 27, 1729), Nādir defeated the Ghilzāi on the banks of the river Mīhmāndūst. This victory he followed up by others.

Nādir in S.W. Persia. Tahmāsp appealed to Nādir to complete the deliverance of the country. Leaving Ṣafavīz and crossing Ṣūrīstān, Nādir arrived in Burūdārā where the Shah sent him a crown set with precious stones and a commission (ṣūrūm) as vassal of all Khurāsān along with Māzandarān, Yazd, Kirmān and Sīstān (cf. also ʿAlī Ḥazīn, p. 189). Tahmāsp also gave his sister Gahwārshād to Nādir and betrothed his other sister Fāṭimah-sultan to Rūs-kuli Mirzā.

The Ottomans who then occupied the whole of western Persia and the greater part of Transcaucasia were reluctant to leave Persia. Nādir occupied Nihaḵwād, defeated the Turks at Mālīḵīy, took Hamadān and on the 27th Muḥarram 1143 (Aug. 13, 1730) Tabriz was retaken.

Nādir returns to the east. Nādir learned in Tabriz that Dūr ʿl-Fikār Abdūlī having driven Ālī-yār Khān from Herāt was fighting Nādir’s brother ʿAbdullāh Khān under the walls of Mashhad. Nādir at once set out for Khurāsān, crossing the tribe of the Yomut Turkomans and towards the end of Rabīʿ II (Nov. 1730) was at Mashhad where he received 56,000 families of the tribes transplanted from other provinces.

On the 4th Shawwāl (April 12, 1731) Nādir was 3 farsakhs from Herāt. In the month of August the Abdāl restored Nādir’s candidate Ālī-yār Khān but the latter regaining contact with his tribe now rebelled. It was not till Ramaḍān 1, 1144 (Feb. 27, 1732) that Herāt was taken.

Failure of Tahmāsp II. Taking advantage of the absence of his commander-in-chief, the Shah resumed the initiative in the military operations and in Djamādā II 1143 (end of Dec. 1730) set out against Māzandarān where the return of Nādir the Ottomans on Jan. 10, 1732 signed a preliminary treaty at Baghdād by which the Persians retained only the lands south of the Araxes. Later on Jan. 21-Feb. 1, 1732 the Shah’s representatives signed at Raṣht a treaty with the Russians by which the latter bound themselves to evacuate the lands south of Sāliyān (on the Kur) while the return of Bākū and Darband was made dependent on the reconquest of Transcaucasia by the Persians.

Deposition of Tahmāsp II. Nādir was indignant at the peace with the Turks signed after a defeat. Setting aside the Shah’s authority, Nādir Shah denounced the treaty and appointed his own governors everywhere. Tahmāsp was deported to Khurāsān and his son ʿAbbas III, an infant in the cradle, proclaimed king on the 17th Rabīʿ I 1145 (July 7, 1732).

First campaign against the Ottomans. Having punished the Bakhtiyarīs and the Kurds, Nādir occupied Zahbāb and besieged Baghdad (Jan. 1733). Āqabād Pāšā made the negotiations drag on until the army commanded by Topal ʿOthmān Pāšā had time to come to Mesopotamia. On 6th Safar 1146 (July 19, 1733) Nādir Shah lost the battle fought on the Tigris and returned to Hamadān via Bāzīr and Mandaljīn (Mandali).

Arriving there on 22nd Safar (Aug. 4) Nādir set out again for Zahbāb on the 22nd Rabīʿ II (Oct. 2) and then attacked Memiş Pāšā who had occupied the pass of Aqghdarbānd (1st Djamādā II = Nov. 9, 1733). Then Topal ʿOthmān Pāšā with the bulk of his army intervened in the battle but lost it and had his head cut off. The Ottomans hastened to abandon Aqghdarbānd. By the 15th Rabīʿ (Dec. 22) Nādir was already on his way.
to Persia via Baghsay (B-a-kusay), Rajay, Rayan and Shaghsha.

Mahmyd Bally. The reason of this hurried move was the rebellion raised by Mahmyd Khan Bahadu in S. W. Persia. Mahmyd Khan was quickly driven from the pass of Shihl-tan and on 27th Shabran (Feb. 1, 1734) Nader reoccupied Shiraz.

Campaign in Transcaucasia. In Isfahan Nader received the Turkish ambassador Abd al-Karim Efendi and informed him that the retrocession of Transcaucasia was a sine qua non of peace. On the other hand, prince S. D. Golistsine was received at Isfahan on May 20-31, 1734 and thereafter by Nader's order accompanied him everywhere (his itinerary in Leich-Schmene). On the 12th Maharram 1147 (June 17, 1734) Nader left Isfahan for Ashkar-Bahadu and as the Turks did not reply, Nader began by attacking the Daghestan chief (Khaja Khamid) Surchay whom the Porte had appointed governor of Shirvan. Tahmuss Kali Djiltayr defeated the Daghestanins near Dava-Batan (in the district of Kabala) while Nader cut off the retreat penetrated into the heart of the extremely difficult region of Ghazi-Kumut. In spite of the exploits of the Abdali the success gained in Daghestan was only partial for Surchay had escaped to the north.

On 6th Diumaadd II (Nov. 3, 1734) Nader was before the walls of Gandja, which was defended by Zitessa. The siege necessitated considerable works and prince Golistsine procured Russian engineers for Nader. On March 21, 1735 a treaty was signed at Gandja by which Russia and Persia became practically allies.

On 1st Maharram 1148 (May 26, 1735) Nader went to Kars but the encounter with Abd Allah Pashu Kopruzade took place near Erewan on the plain of Baghshadwad. On 26th Maharram (June 18, 1735) the Ottomans were defeated. Gandja therefore capitulated on the 17th Safar (July 8) and Tiflis on 22nd Rabii I (Aug. 13).

Nader returns to Daghestan. Via Tiflis (q.v.), from which 6,000 families were transferred to Khorasan, Nader attacked the Legzi of Djer and Tala (north of the Alazan) The Khan of the Crimean Kapun Giray, who had in the meanwhile advanced as far as Darlant and had placed his nominees everywhere, withdrew to the Crimea and Nader endeavoured to pacify Daghestan but Surchay still evaded capture.

Nader proclaimed king. On 13th Ramadhan (Jan. 27, 1736) Nader came to Mughan (q.v.) where in the meanwhile the governors and notables of the province had assembled. It was explained to them that Nader having liberated Persia wished to retire to Khurasan and that the delegates were free to put the government in the hands of Tahmasp II or Abdullah III "who were alive". Nader finally accepted the crown but on condition that the Persians abandoned the Shah's practices introduced by Isma'il I which were "contrary to the beliefs of Nader's ancestors". The Persians were to form a fifth orthodox madhab, placed under the patronage of the Imam Djafar Sadik. A document to this effect was sealed by the assembly. The five clauses of the treaty to be proposed to Turkey were next drawn up: 1. the Turks were to recognise the new Dafarite rite; 2. the latter was to be given a place of prayer (tnk) at Mecca; 3. Persia was to send an amir al-lajtdidj every year through Syria; 4. prisoners should be exchanged and 5. ambassadors were to be exchanged after mutual approval of the appointments. The formal coronation of Nader took place on Thursday, 24th Shawwal 1148.

Kandahar. This principality in which Husain Khan, brother of Mahmyd, still asserted himself remained the only black spot on the horizon. Leaving Isfahan on 22nd Shawwal (Feb. 3, 1737), Nader was before Kandahar before Nawroz 1149 (March 1737) and had a new town built on the site of his camp (Surtka-Shur) which was called Nairabad.

Kandahar capitulated on the 2nd Dhu 'l-Ka'da 1150 (March 23, 1738). The citadel was dismantled. Expedition into India. So far Nader's military expeditions had been dictated by a desire to rec establish the old frontiers of the Safavid empire. The expedition to India was provoked solely by the attraction of ill-guarded provinces and by the desire to replenish the treasury exhausted by repeated campaigns. Ghazni was occupied on the 22nd Safar 1151 (June 11, 1738), Kabul on 12th Rabii I (June 30), Djalilabad on 8th Djuumada II (Sept. 17). From the neighbourhood of the latter town, the prince Kala-Kali was sent back to Persia to act as regent; he and his brother Na'ir Allah were given crowns.

Going via Sarvola Nader avoided the Khabar Pass and took prisoner Na'ir Khan, governor of Fashawar. On 15th Ramadhan (Dec. 27) Nader left this town. He next took Lahore and reappointed the local governor Zakariya Khan (a Khurasanian). (Na'ir Khan was restored to his post). Leaving Lahore on 26th Shawwal (Feb. 6, 1739) Nader learned that Muhammad Shah had reached Kandahar and was in a place between the jungle and the river. He succeeded in getting Muhammad Shah off from his capital and hastened to attack the reinforcements which Sa'adat Khan (a Khurasanian) was bringing from the province of Oudh. Thus began the decisive battle of 15th Dhu 'l-Ka'da 1151 (Feb. 24, 1739) in which the commander-in-chief Khan Davaani was mortally wounded and Sa'adat Khan captured. Nader and Muhammad Shah entered the capital where Nader's name was inserted in the Khntba and coins struck in his name. On the 15th Dhu 'l-Hijja (March 26, 1739) a rumour spread that Nader had been assassinated and the populace massacred 3,000-7,000 of his soldiers. Next morning Nader went to the mosque and gave the signal for the massacre of the inhabitants. On 26th Dhu 'l-Hijja (April 6) Na'ir Allah Mirza was married to a Mughal princess. On 3rd Safar 1152 (May 12, 1739) a grand council was held in Dhihi in the course of which Nader replaced the crown on the head of Muhammad Shah but the latter had in return to cede to Nader all the provinces north of the Indus. The amount levied by Nader cannot be estimated. According to Anandram, who was attached to the vizier's office, it amounted to 6,000,000 rupees in specie and 500,000,000 in jewels and precious stones, including the Koh-i Nurr diamond and the Peacock throne. Large sums were distributed among the soldiers and the people of Persia exempted from taxation for three years.

Nader left Dhihi and reached Kabul on 1st Ramadhan (Dec. 12). Now took place one of the most important of his expeditions. He suddenly turned back to reduce the land of Sind Khuday-yar Khan 'Ubaidi (a native of Siwi, cf. Malcolm, op. cit., liii, 89) and going via Bangash, Larkana and Shaheedpurn penetrated into the desert south of
the Indus and took Khuday-yar prisoner; he had shut himself up in ‘Umār, (north of Thar and Pukar in the province of Bombay). Having organised his Indian possessions in three provinces Nādir returned to Nādir-abād (via Swati and Shāh) on 7th Safar (May 5, 1740).

Nādir in Turkestan. Nādir returned to Herat on 10th Rabi‘ II (June 5) and after a fortnight devoted to festivities set out for Balkh which he reached on 7th Djamādā I (July 31). Arriving before Bukhāra on 10th Djamādā II (Sept. 22), Nādir treated Khān Abū l-Fādil kindly and renewed his investiture by crowning him with his own hands. The Oxus was proclaimed the frontier and the Khān had to supply Nādir with 20,000 Ozbeqs and Turkomans, which indirectly left in the hands of the conqueror the control of the internal affairs of Bukhāra.

On the 16th Rādjab (Oct. 7), Nādir had set out for Khwārizm. The fleet followed the army. The Khān II-Bars of Hazārāsp retired to his fortress of Khankhel which surrendered on 24th Shab‘ān after bombardment. Finally Khiva, the capital of the kingdom, also capitulated. By 4th Shawwāl (Dec. 23) Nādir had returned to Čārdzjī and entered Mahabad at the end of Shawwāl.

Nādir sets out again for Transcaucasia. While in India, Nādir had learned of the death of his brother Ibārahīm Khān who had been killed by the Lāzī rebels of Džār and Tala. To punish them, Nādir left Mahabad and on his way learned that the Abdālī troops who had been sent in advance had already ravaged Dżār, Dżawwāl (7) and Akhūzir, but the pacification of Daghestān was by no means complete.

An incident that followed marks the turning-point in the career of Nādir Shāh. On the 28th Šafar (May 15, 1741) near Kaft-i Awdād (Māzandarān) an unknown man concealed in the brush wood shot at Nādir, wounding him slightly. Connecting this with events in Daghestān Mahdī Khān says that the crime was committed by a slave of the son of Džawar Khān Tātimānī [q. v.] but suspicion very soon turned upon the prince Ribāt-Kuli who had besides not behaved well during his regency. He was sent for the time to Tihrān while Nādir continued his march via Kašwīn, Kaft-i Awdād and Kaft-i Darā and Khudāyat.

In June 1741, for the third time, Nādir entered Daghestān and remained there a year and a half. The shahkhal of Tarkhā, the nāmī of the Karakaytak and Surkhāy Khān of the Ghāzi Kamūk came over to Nādir but new difficulties kept cropping up. Relations with Russia became somewhat strained for the Russian representatives suspected Nādir of designs on the northern Caucasus. As a precaution the Russians in May 1742 concentrated 42,000 men at Čīzlar (s. Butbow, i. 220). Cares were undermining the health and character of Nādir. At the beginning of Dec. 1742 when the camp was at Bāshlu the heir to the throne Ribāt-Kuli, denounced by the author of the attempt on Nādir in Māzandarān, was blinded after form of trial. Nādir himself was thoroughly upset by this incident. Rebellion was now threatening everywhere (in Khwārizm and in Balkh).

Third Campaign against the Turks. In Dhu l-Ka‘da I 1742, the Turkish ambassador brought from Constantinople a letter from the Sultan refusing to recognise the fifth madkhāb. Nādir then reminded the Sultan that the whole of Persian territory had not been regained from Turkey and added that he soon would take the field to make his own terms.

Nādir left Daghestān on the 16th Dhu l-Hijja (Feb. 7, 1742) and came to Kirkūk (14th Djamādā II = Aug. 5, 1742) which capitulated as did Irahill. On the 26th Rādjab (Oct. 5) Nādir arrived near Mawsil but the siege of this fortress was unsuccessful and on 2nd Ramaḍān (Oct. 20) he retreated to Kirkūk and Khānaqānī. Friendly relations were established with Ahmad Pasha of Baghdad. Nādir with his wives made the pilgrimage the Shāfī and Sunnite sanctuaries of Mesopotamia and on the 24th Shawwāl 1156 (Dec. 12, 1743) summoned a great assembly of ecclesiastics at Nadjafl. The document drawn up by Mahdī Khān summing up the discussions confirmed the renunciation by the Persians of the ‘heresy of Shīh Isma’il’, while the ‘ulama’ of Mesopotamia and Transcaucasia recognised the claims of Dja‘far al-Sadiq and declared the special features (furū‘ār) of the Persian beliefs compatible with Islam. The Sunnite theologian Abd Allāh b. Husain al-Suwaydī, Kitāb al-Mu‘jam al-‘asbusa li-l-Muhammad bn-Muhammad bn-Ilī, (Istanbul, Cairo, 1324), also gives a very interesting summary of this dispute; cf. Ritter, Isl., xv, 1926, i. 106 and the detailed account by Prof. A. E. Schmidt, Istoria minunsko-sihištščikh otnešeniiy v ‘Ile al-Djumān (Barthold Festschrift, Tashkent 1927, p. 69–107).

Rebellions. The strange abandonment of the campaign in Mesopotamia is to be explained by the new risings in the east. Much more important was the rising in Fārs led by the beglerbegi Taṭā Khān, a great favourite of Nādir. He was ultimately captured and castrated. In Astarābād the Kādżārs rose against the oppression of the governor’s son (Ianway, Hist. Account, i. 192). Nādir had to send his nephew ‘Ali Kuli to Khwārizm. Finally the Ottomans of Kars disseminated in Aḏharbāḏjān letters from the new pretender Şāft Mirzā (Muḥammad ‘Ali Rāsfandjānī) and then refused to begin an exchange of prisoners.

Fourth Campaign against the Turks. In the meanwhile the Porte equipped a new army (150,000 horse and 40,000 janissaries) which advanced on Erzerum and Kars under the command of the former viceroy Yegīn Muḥammad Pasha while ‘Abd Allāh Pasha of Edirne’s army went via Dijārakur and Mawsil. On the 21st Rādjab (Aug. 20) came the news of the victory won by Naṣr Allāh Mirzā over ‘Abd Allāh Pasha’s army (near Mawsil) and at the same time Yegīn Muḥammad Pasha died leaving his army in complete disorder. Nādir again won a brilliant victory (on the very scene of his first victory in 1735) but then, quite unexpectedly, wrote to the Sultan saying he was abandoning the first two clauses of Mughān. Personal fatigue may explain why Nādir could not exploit his success.

On Sept. 4, 1746, peace was signed with the Turkish envoys and on 10th Muḥarram 1160 (Jan. 22, 1747) the Shāh’s representatives (Muṣṭaфа Khān Shamī and the historian Mahdī Khān) set out for Constantinople with the şalāt-nāma. Nādir denounced his famous religious clauses in favour of the Sultan, “the Khalifa of the people of Islam and the glory of the Turkoman race”. By the treaty the frontier was restored to that of the time of Mūrād IV (cf. Tārīkh) but in a platonical fashion, Nādir expressed the wish to receive one
of the provinces which had belonged to the "Turkoman Sultanate".

On the 10th Muharram, Nadir left for Kirman marking his route by piles of skulls erected everywhere. After the Nawruz, Nadir returned to Mashhad and devoted himself to "spilling the blood of the innocents". His conduct was now clearly abnormal. In an epilogue to his history written after the death of Nadir, Mahdi Khan records the denunciations, executions and extortions carried out by the agents of the treasury and the ruin of the country, which had however begun before the Indian expedition (Otter, Réseaux russes, Hanway, i. 230). The Shi'ite opposition must also have been intensified in view of the frankly Sunni turn which Nadir's "Khurra-Aanian" policy had taken. The rising in Sistan, which brought matters to a head was provoked by the activities of the tax collectors who were demanding a contribution of 300,000 tumans from the province. Ali Kuli Mirza, nephew of Nadir, put himself at the head of the rebels. Even Tahmasp Kuli Khan Djalayeri, the most faithful support of the throne, wanted to proclaim one of Nadir's sons as king. The troubles spread to Khorasan and the Kurds of Khabushan raided the royal stables at Rrudkan. Nadir marched on them but on the eve of 11th Djamad II 1160 (June 20, 1147) he was assassinated in his camp near Fathabad by the Kajjar and Asfahni chiefs in conspiracy with the bodyguard. Father Bazin was a witness of the disorder which broke out in the camp after the assassination. On the 27th Djamad II (July 5, 1152) Ali Kuli Mirza came from Herat and was proclaimed king. All the royal princes were massacred.

The treasure amassed by Nadir was soon scattered to the winds; the country, utterly exhausted, was in the throes of crisis. Nadir's attempts to compose religious difficulties had failed completely; but Persian territory and its periphery were cleared of enemies. But for Nadir Shah, Persia would probably not exist, even in its present bounds.

Bibliography: Muhammad Muhsin, mustawfi of Nadir, Zobtalet al-Taravirizti, Brit. Mus., Or. 3498, fol. 184a (where Nadir is mentioned as Nābī Bin kātir Aha'm). — fol. 190; Mahdi Khan Astarabad, Tarikh-i Nādiri, a valuable work by the official historiographer (numerous MSS., and oriental lithographs uncritically edited); the French translation Histoire de Nadir Shah, by W. Jones, London 1770 — source of the majority of the later works — completely out of date; Mahdi Khan Astarabad, Durara-i Nādira, lithographed at Bombay 1280 (1863); Muhammad Kajim (waqir of Marw), Nādiri-namā; of this recently discovered work only volumes ii. (327 pages folio: years 1736-1743) and iii. (251 pages folio: end of the reign to the retreat of the Persians from Turkestan) are in the Asiatic Museum of Leningrad, cf. Barthold, Jgg. Akad. Nauk, 1910, p. 927, and Zap., xxv., p. 85 (according to Barthold, this work: *by the wealth of its far surpasses... all the other sources not even excepting Mirza Mahdi; it will undoubtedly become the fundamental source for the study of the reign").

NADIR SHAH - NADIR

Contemporary European sources [the works which have not been accessible to me are marked]: Voyages de Basile l'Alberte en Europe et en Asie (rhymed narrative in modern Greek ed. and transl. by Legrand) in Nouveaux mélanges orientaux, Ecole des Langues Orientales, Paris 1886, p. 185 - 295; Vatace also wrote a 'Istorija tvojih Nadei of which there is a synopsis in [Αναγνώστες Φιλάρτωμα: Ιστορία των Πολιτικών, Λευκάδα, 1858, Leipzig 1816, as an appendix to vol. ii, p. 3 - 22 (of no importance); Vouton, Vrădăvere e exacta Notícia de Thamaz Koulī Khan da Persa no Império de Gran Mogor, escrita na língua Persiana em Delhi em 21. IV. 1739 e mandada a Roma por Mons. Vouton, Lisbon 1740, transl. into English by L. Lockhart, in Bull. of the School of Oriental Studies, iv., 1926, p. 223 - 245; "Le Margne, Vida de Thamas Koulī-Khan, Madrid 1741 (probably a translation); J. Spilman, A journey through Russia into Persia in 1739, to which is annexed a summary account [p. 51 - 60] of the rise of the famous Koulī Khan, L. 1742; [Anonymous], The compleat History of Thamos Koulī-Khan, 1 (Persian Empire), II (Indostan), 1742; J. Fraser, The History of Nadir Shah, London 1742; [Le P. du Cerceau, Histoire de Thamas Koulī Khan Sopihi de Perse, Amsterdam (Arkscée and Merkus) 1740, 2 vol.; (Barbier, Dictionnaire des ouvrages anonymes, 1783, ii. 736, attributes this work to the Jesuit du Cerceau, author of the Histoire de la dernière révolution de Perse, Paris 1728, based on the narrative of Krusinski); [Anonymous], A genuine history of Nadir Cha... with a particular account of his conquest of the Mogul's country, translated from the original Persian MS. into Dutch by a Mr. J. S. Stichelman, president of the Dutch factory at Bengaal, and now done into English (this comes down to 1739 and differs from the preceding work); [A. de Clastre], Histoire de Thamos Koulī Khan, nouveau roï de Perse, ou histoire de la dernière révolution de Perse arrivée en 1732, Paris 1742, republ. in 1758 (this compilation by the Lyons priest de Clastre is quite different from the work of du Cerceau, cf. Barbier, o. l., ii. 736). The accounts of the Jesuit fathers are collected in vol. iv. of the Lettres édifiantes et utiles des Missions Étrangères, new ed., Paris 1780 (the arrangement of this edition is different from that of the original edition): Relation historique des révolutions de Perse sous Thamas Koulī-khan, jusqu'à son expédition dans l'Inde, tirée de différentes lettres écrites de Perse par des Missionnaires jaunes, p. 169 - 230 (= 1st ed., vol. 25, p. 311); lettre du P. Sainct (Chandernagon), Feb. 10, 1740, on the invasion by Nadir, p. 230 - 264 (1st ed., vol. 25, p. 402); Frère Bazi, Mémoires sur les dernieres années du règne de Thamas Koulī Khan, p. 277 - 322 (= 1st ed., vol. 9, p. 14); do., Les révolutions qui suivirent la mort de Thamas Koulī-Khan, p. 322 - 353 (= 1st ed., vol. 9, p. 83); [Anonymous], Histoire de Thamas Koulī-Khan, roi de Perse, new ed. with supplement, Milan 1747 (reissue of Clastre's work ?); Otter, Voyage en Turquie et en Perse (1734 - 1739), Paris 1748; La Mamye-Clairac, Histoire de Perse depuis le commencement de ce siècle, 3 vol., Paris 1750; J. Hanway, A historical account of the British trade on the Caspian sea, 1753, s. index; do., The revolutions of Persia, London 1753, ii., p. 1 - 103, containing the history of the celebrated usurper Nadir Koulī from his birth in 1689 till his death in 1747; L. de Santo Cecilia, carmelitana scalzo, Palestina, Persia, Mesopotamia, Rome 1753, ii. 152, 157, 161 - 162, 217; iii. 39; Col. Genet-Abrégé historique des souverains de l'Indostan, 1772 (MS. of the Bibl. Nat., Fr. 24219).

General surveys: Sir J. Malcolm, History of Persia, 1815, p. 33 - 108; C. R. Markham, A general Sketch of the History of Persia, L. 1874, p. 298 - 318; Müller, Der Islam im Morgen- und Abendlande, 1887, ii. 379 - 382; C. Horn in the Grundriss d. Iran. Philologie, ii. 587 - 592; Sir P. Sykes, A History of Persia, 1915, ii. 331 - 369; E. G. Browne, A Literary History of Persia, iv. 132 - 138 (following Hanway). All these are obsolete or defective. A thesis on Nadir for a doctorate of London is in preparation by J. Lockhart. Cf. also R. Stuart Poole, The Coins of the Shahs of Persia, Brit. Mus., 1887, p. xix, ixix, 73 - 84 (60 pieces described); R. B. Whitehead, The Coins of the Durrani and of Nādīr Shāh, Oxford 1933; General Kishmushye, Pokhodi Nadir Shāh v Herat, Kandschar, Indijsy sobitya v Persii posle yego smerti, Tislis 1889 (Nadir's campaigns from the soldier's point of view; cf. Zaf, vii., 1892, p. 351); Sir Mortimer Durand, Nadir Shah, London 1908 (a novel, with several contemporary illustrations); do., Nādir Shāh, in J. R. A. S., 1908, i. 286 - 298 (general sketch); Sa'id Nafisi, Ashirin yaddār-i Nādir-shāh, Tihran, Madjalla-yi Sharq, 1300, 31 pages (story in dramatic form). The career of Nādir Shāh impressed the imaginations of the peoples whom he conquered. In addition to Indian and Persian panegyrics there is a poem in the Gheit dialect (spoken in Kurdistan); on Nūrān Shāh and Topāl Ōtāhmān Pāshā and a Daghstānī song collected in the district of Ghibūn: on the highlanders' fight against Nādir (cf. Daghstānīskī qorob, Makhāḵ-Kal’ā, 1927, iii. p. 51 - 53). In Europe of the xviiith century it was seriously discussed whether Nādir Shāh was a European adventurer: there are also several contemporary works in French, German and Portuguese, the subjects of which are the deeds real or imaginary of Nādir Shāh like L'expédition de Thamos Koulī Khan dans les cours de l'Europe by the Abbé Rochelbrun, Cologne 1746 etc.

(V. MINORSKY)

NADIR (NAẒIR AL-SAṬIY ʿAL-NAẒĪR MĀʾ, .translatesAutoresizingMaskIntoConstraints), the bottom, the pole of the horizon (invisible) under the observer in the direction of the vertical, also the deepest (lowest) point in the sphere of heaven. The nadir is the opposite pole to the zenith [q. v.].

The word 'nadīr (from nāpārā, "to see", "to observe") originally (and generally) means the
of their maintenance: part of it the Prophet kept for himself.

Sūrat al-Hāshā (lxix.) was revealed upon the expulsion of the Banu 'l-Nadīr.

From Khairāb the exiles planned to occupy the Kurashii the siege of Madīna in Dhub l-Kaḍa'a 3 A.H. The treasure of the Banu 'l-Nadīr was captured by Muḥammad in Khairāb in 7 A.H.

AL-NADĪR (Masūdī 'Alli), an area and place of pilgrimage in the 'Irāq 6 miles west of al-Kūfa. It lies on the edge of the desert on a flat barren eminence from which the name al-Nadīr has been transferred to it (A. Musil, The Middle Ephramites, p. 35).

According to the usual tradition, the Imām al-Mu'āmmīn ʿAllī b. Abd Tālib [q. v.] was buried near Kūfa, not far from the dam which protected the city from flooding by the Ephramites at the place where the town of al-Nadīr later arose (Vāḳīt, Muḥṣam, ed. Wustenfeld, iv. 760), also called Nadīr al-Kūfa (Zamakhshari, Lexicon geographicum, ed. Salverda de Grae, p. 153). Under ʿUmayyad the site of the grave near al-Kūfa had to be concealed. As a result it was later sought in different places, by many in al-Kūfa itself in a corner above the hidda of the mosque, by others again 2 farsakhs from al-Kūfa (al-Ṭāhārī, ed. de Goeje, B.G.A., i. 82 et.; Ibn Ḥawkal, ibid., ii. 163). According to a third story, ʿAli was buried in al-Madīna near Fāṭima's grave (al-Masūdī, Muḥṣam al-Dhahab, ed. Barbier de Meynard, vii. 289), according to a fourth, at Kaṣr al-Imāra (Caetani, Annali dell' Islam, x. 1926, p. 967 sqq.; A. H. 40, § 99). Perhaps the sanctuary of al-Nadīr is not the real burial-place but a tomb held in reverence in the pre-Islamic period. especially as the graves of Adam and Noah were also shown there (Ibn Batṭūta, Tuhfa, ed. Defrémery and Sanguineti, i. 416; G. Jacob in A. Noldke, Das Heiligum al-Husayn zu Kerbila, Berlin 1909, p. 38, note 1). It was not till the time of the Hamālīn of al-Masūdī ʿAbd 'l-Hādī [see also ALLAH B. HAMĀDI] that a large ẓiyāra was built by him over ʿAli's grave, adorned with precious carpets and curtains and a citadel built there (Ibn Ḥawkal, op. cit., p. 165). The Shīʿī Büyūd Ḥad-Dawla [q. v.] in 369 (979–980) built a mausoleum, which was still in existence in the time of Ḥamāl Allāh Mustawfī, and was buried there, as were his sons Sharīf and Bahāʾ al-Dawla. Al-Nadīr was already a small town with a circumference of 2,500 paces (Ibn al-Athīr, ed. Tornberg, viii. 518; Ḥamāl Allāh Mustawfī, Niežat al-Kullīb, ed. Le Strange, p. 32: in the year 356 = 976–977). Ḥasan b. al-Faḍlī, who died about 414 (1023–24) built the defensive walls of Masihhīd ʿAllī (Ibn al-Athīr, ix. 154). The Māhād was burned in 443 (1051–52) by the fanatical populace of Baghdaḍ but must have been soon rebuilt. The Sālājūt sulṭān Malikshāh and his vizier Nīẓām al-Mulk who were in Baghdaḍ in 479 (1086–87) visited the sanctuaries of ʿAllī and Ḥusayn (Ibn al-Athīr, x. 103). The Ikhčān Gharābīn (1295–1304),

NADIR — AL-NADJAF

point diametrically opposite a point on the circumference of a circle or the surface of a sphere; we find mukābal as a synonym of naẓīr in this general meaning [cf. also Muqābalā].

(Willy Harinner)

NADIR (Banu 'l-), one of the two main Jewish tribes of Madīna, settled in Yathrib from Palestine at an unknown date, as a consequence of Roman pressure after the Jewish wars. Al-Yaḍīq (i. 49) says they were a section of the Qāshān Arabs, converted to Judaism and first settled on Mount al-Nadīr, whence their name: according to the Sira Haddāy (Cairo, i. 2) they were a truly Jewish tribe, connected with the Jews of Khairāb. This seems the more probable, but a certain admixture of Arab blood is possible: they were the other Jews of Madīna they bore Arabic names, but kept aloof from the Arabs, spoke a peculiar dialect, and had enriched themselves with agriculture, money-lending, business in armours and jewels.

They were clients of the Aws, siding with them in their conflicts with the Khazzardj, and entering with them into the compact with Muḥammad known as the Constitution of Madīna in 1 A.H. Their most important chief at this time was Ḥuyayy bi. Akhṭāb, whose daughter Sāfiya became Muḥammad's wife in 7 A.H. For a list of Muḥammad's worst enemies among the Banu 'l-Nadīr see Ibn Ḥ臂ṣam, Sīra, p. 351–352.

Their forresses were half a day's march from Madīna, and they owned land in Wālī Buṭḥān and Buwaira; their dwelling places were south of the city.

The Banu 'l-Nadīr seem to have been in (commercial?) relations with Abū Sufyān before the battle of Uhud. In 4 A.H., in Rabī I, owing to difficulties about the Banu 'l-Nadīr's contribution to certain blood-money which was being collected from the whole Muslim community in Madīna, Muḥammad, who had personally negotiated the matter with their chiefs, became convinced of their enmity towards himself and suspected them of intending to kill him. He decided to get rid of such dangerous neighbours, and ordered them through Muḥammad b. Maslama al-Awsi to leave the city within ten days, under penalty of death, allowing them to take with them all their movable goods, and to return each year to gather the produce of their palm-groves.

The tribe, having no hope of help from the Aws, agreed to leave, but ʿAbd Allāh b. Ūbāy al-Khazzardj, chief of the mukābal, persuaded them to resist in their forresses, promising to send 2,000 men to their aid. Ḥuyayy bi. Akhṭāb, hoping the Banū Kurayja would also help them, prepared to resist, in the face of opposition from moderate elements in the tribe.

The siege lasted about a fortnight, help from the mukābal was not forthcoming, and when the Muslims began to cut down their palms the Banu 'l-Nadīr surrendered. Muḥammad's conditions were much harder than formerly; their immovable property was forfeited, and nothing left them but what they could take away on camels, arms alone excepted. After two days' bargaining the tribe departed with a caravan of 600 camels; some went to Syria, others to Khairāb.

The Banu 'l-Nadīr's booty Muḥammad did not divide in the usual manner; the land was distributed among the mukābalīr, so as to relieve the Anjūr
according to Ḥamd Allāh Mustawfī, built in al-
Nadaf a Dār al-Siyāda and a dervish monastery (khanāqāh). The Mongol governor of Baghdād in 1263 led a canal from the Euphrates to al-Nadaf but it soon became silted up and was only cleared out again in 1508 by order of Shāh Ismā‘īl. This canal was originally called Nahr al-Shāh (now al-Ḳabā‘) (Lūghat al-‘Arab, Baghdād, ii., 1930–
1931, p. 458). This Shī‘a Šafawī himself made a pilgrimage to the masjid al-Ṣan‘ā of Kerbela‘ al-
Nadaf. Sulaimān the Magnificent visited the holy places in 941 (1534–1535). A new canal made in 1793 also soon became silted up, as did the Ţerī al-Shāhī and al-Ḥajāndīrīya canals, the latter of which was made by order of ‘Abd al-Ḥamīd II.
In 1912 iron pipes were laid to bring water from the Euphrates to al-Nadaf (Lūghat al-‘Arab, ii., 458 sq.; 491). A considerable part of the ‘irāq with al-Nadaf and Kerbela‘ was temporarily conquered by the Persians in 1624.
Nadaf, while Musil (The Middle Euphrates, p. 35, note 26) places the centre of the ruins of al-Ḥira S. E. of the tell of Knēdēr which lies halfway between al-Kīla and al-Khawanāk. Ibn Batūṭa entered Maḥdāf ‘Alī which he visited in 726 (1326) through the Bāb al-Ḥadra gate which led straight to the Maḥdāf. He describes the town and sanctuary very fully. According to al-Ya‘ḳūbī (loc. cit.), the ridge on which al-Nadaf stands once formed the shore of the sea which in ancient times came up to here. For the number of its inhabitants and its architectural beauty, Ibn Batūṭa reckoned the town among the most important in the ‘Irāq. It has now about 20,000 inhabitants (Persians and Arabs), has a Shī‘a college and celebrated cemetery in the Wādī al-Salām. Near al-Nadaf were the monasteries of Dair Mār Fāṭihyūn (Ya‘ḳūt, Mu‘īdīm, ii. 691) and Dair Hind al-Kubrā‘ (Ya‘ḳūt, ii. 709), also al-Rūba‘a (5 hours S. W. of the town; Ya‘ḳūt, ii. 762; Musil, The Middle Euphrates, p. 110, note 61) and Kāsh Gā‘ (Ya‘ḳūt, iv. 107). The lake of al-Nadaf marked on many older maps has long since completely dried up (Nolde, Reise nach Innerasien, p. 105).

Bibliography:
Ibn al-Athir, Kāmil, ed. Tornberg, index, vol. ii., p. 808 (Maḥdāf ‘Alī), 817 (al-Nadaf); al-Ṭabarī, ed. de Goeje, Indicae, p. 784; Abu l-Faraj al-Iṣfahānī, Kitāb al-

BAND NADJAF, A DYNASTY OF ABYSSINIAN MANLÜKS AT ZABİĐ [q.v.] FROM 412 TO 553 (1022–1158). When the last Ziyādī [q.v.] had been put to death in the vizierate of the Abyssinian Manlūk by one of his Manlūk governors Naftis, the other Nadja‘ī came forward to avenge him. After desperate fighting, Naftis was slain and Nadja‘ī in Dhu ‘l-‘Qa‘da 412 (Feb. 1022) entered Zabīd where he had the vizier built alive into a wall in exact revenge for the Ziyādī. As his rival Naftis had already done, Nadja‘ī assumed the insignia of royalty, struck his own coins and inserted his own name in the knāfī after that of the ‘Abbāsid caliph. The latter had himself forced to recognise him under the title of al-Mu‘āfiyad Nāṣīr al-Dīn. His kingdom extended over al-Tihāma, while the highlands beyond remained divided up among petty chiefs. When among the latter the Sulaiḥī [q.v.] came to considerable power, their relationships with the Banū Nadja‘ī decisively affected the history of the latter. The first Sulaiḥī ‘Alī is said to have had this first Nadja‘ī poisoned about 452 (1060) through a slave girl sent him as a present. In the confusion that followed, ‘Alī occupied Zabīd itself and Nadja‘ī’s sons fled to the island of Dahlak [q.v.]. While the eldest Mu‘āfiq committed suicide, the other two resolved to regain their lands: Sa‘īd al-Aḥwāl and Abu l-Tāmī Djiyiṣ, whose lost work al-Maṣfī‘ fi Akhbar Zabīd was the foundation for ʿUmāra’s work (in Kay, see Bibli.) Sa‘īd made his preparations in a place of concealment in Zabīd and had Djiyiṣ come later the two then came out openly, fell upon and killed ‘Alī al-Sulaiḥī, who was on a campaign against Mecca, probably in 473 (1081). Zabīd at once recognised Sa‘īd as its lord; he had appealed less to the Sunnis against the Shī‘a than to the racial feeling of the numerous Abyssinian soldier-slaves (anā ṣa‘ālun mínka wa l‘izzuna laṣṣakum: Djiyiṣ in ʿUmāra, p. 63, sq.); but Asmā‘, the widow of ‘Alī al-Sulaiḥī who was kept a prisoner in Zabīd, persuaded her son al-Mukarramm to relieve the town (475 = 1082–1083). The Nadja‘ī again escaped to Dahlak. In 479 (1086) Sa‘īd again returned as ruler but in 481 (1088) was put to death at the instigation of the Sulaiḥi queen al-Saiyida, the wife of al-Mukarramm. Djiyiṣ escaped to India with his vizier Khafāl b. Thāhir, said to have been an Umayyad, returned to Zabīd disguised as an Indian, plotted with his compatriots and easily
regained power in 482 (1089). With his death in 498 or 500 (1105-1106) disputation set in. He himself had had domestic difficulties. He executed the šāliḥ Ibn Abī Akāma who-e ancestor had come to the country with the first Ziyādī; his former helper Khalaf had to seek refuge in flight. A certain degree of strain in his relations with his brother Saʿīd is already evident from Fātīkh's account and there were fierce family feuds among his descendants. His son Fātīk I, the son of a girl brought in India, had to defend himself against his half-brothers Ibnīshīm and ʿAbd al-Walīd and died young in 503 (1109-1110). The latter's infant son al-Manṣūr was set aside by his uncles, who were quarrelling with one another, and fled to Saʿīdīya, whose favourite al-Maṣṭar bar. Abī ʿl-Barakāt brought him back in 504 (1110-1111) as vassal of the ʿUthūlīs.

On account of the new ruler's minority, events repeated their course under the Ziyādīs. The Mamlūk Ants was Manṣūr's vizier and he even assumed royal honours. When he attained his majority Manṣūr disposed of him by murdering him with his own hand in 517 (1123) and inviting him to the palace. Manṣūr however was at once poisoned at the instigation of the next vizier Mann Allāh. In the following year, the latter defeated under the walls of Zabīd Nadījā al-Dawlā, whom the Fātimīs had sent as the ʿUthūlīs power was weakening to restore their suzerainty in the land. Mann Allāh had made the boy Fātīk II nominal king, the son of Manṣūr and a slave girl singer ʿAlām who had been purchased from Anis's estate. This woman (id. 545 = 1150) endeavoured with great skill to preserve the rights of her house against the encroachments of the viziers and played among the Nadījā a part similar to that of Saʿīdīya among the ʿUthūlīs. In particular she equipped and led regular caravans of pilgrims and thus unconsciously furthered the rise of ʿAlī b. Mahdī who was finally to drive her own family from power. Mann Allāh in 524 (1130) was killed in his hareem through a plot of ʿAlām's. His successors were the Mamlūk Ruzāī and then al-Muḥammad. Against the latter the vizier Surūr and Ikhāl, who were however not on good terms. In their quarrels the various parties several times brought the petty Arab princes who lived around it against Zabīd. Ikhāl had Fātīk II poisoned (531 = 1137). As he had no heirs, he was followed by his cousin Fātīk III b. Muḥammad b. Fātīk I b. Dajjāsh. The government had been in the hands of Surūr since 529 (1135). His career of indefatigable activity was ended in a mosque in Zabīd on the 12th Rajjab 531 (Sept. I, 1136) by an assassin, a "Khwārishī"; envoy of "Alī b. Mahdī. When the Zabīd Imām Muḥammad al-Mutawakkil Aḥmad b. Sulaymān was summoned to help them by the Abyssinians, he made it a first condition that Fātīk should be deposed and he himself recognised as lord of Zabīd. The troops agreed to this but the victory lay with "Alī b. Mahdī [q.v. and the article MAHDĪ]. On 14th Rajjab 534 (Aug. 2, 1139) he entered Zabīd.

The Banū Ziyād and the Banū Nadījā continually brought over shiploads of Abyssinian slaves to recruit their troops and thus continued that mixture of races, which already existed before Islam and is still very marked in the Yaman plains. These Mamlūks however became a great danger for the Ziyādīs and also for the Nadījā themselves. Dajjāsh had attempted to counteract them with a bodyguard of Turkī-ḵ Oguz [cf. GHIZI]. But they were not suited to the climate: in particular it was impossible to establish a colony of them there permanently as their children, if they did not die, remained weaklings. The Abyssinian admixture was still further increased by the many slave-girls, who, particularly when they became mothers, exerted some political influence. The enormous harem s of the notables created the most complicated family relationships. For example the settlement of the estate of the vizier Ruzāī became a notoriously difficult case in the law of inheritance which occupied the ablest faqāḥs for years until finally a very aged ʿAḍālamawī found a solution in accordance with the Sharīʿa.

**Al-NADĪJĀH, designation in Arabic of the king of Abyssinia. It is a loanword from Aethiopic Ḥawla "king, prince" etc. In Arabic it is sometimes used as a proper noun, sometimes as a nomen appellativum. The word is also genuine Arabic, but as such it has the meaning of driver of game. It does not occur in the Ḥaḍīth. In Ḥaḍīth it is the designation of the king of Abyssinia, just as Kaisar [q.v.], Kisrā [q.v.] and al-Muḥākās [q.v.] are the designations of the rulers of Rūm, Fāris and Miṣr. In their totality they represent the Great Powers which in the time of Muḥammad surrounded the territory of Islam. On the fresco in the hall of the castle of Kūsair ʿAmra [cf. AMRA], dating from the middle of the viith century A.D., al-Nadījāh appears as the fourth of these Powers, the place of the Muḥākās being taken by Roderick the Visigoth. In the Sirā the Nadījāh occupies a place of some importance, his relations in coming to two bidrās to Abyssinia, with Muḥammad's letter persuading him to embrace Islam, with his conversion from Christianity to Islam and with his equipping two ships in behalf of the return of the emigrants to Arabia, amongst whom was Umm Ḥabīb, who was to marry Muḥammad (A.H. 7).

These traditions have been critically examined by Grimm, Caetani and Mrs. Vaceca. Grimm denied the historical foundation of the traditions concerning Muḥammad's letters to the Great Powers. Caetani submitted the question to an elaborate enquiry. Mrs. Vaceca reduces the traditions to the following historical facts: a. the return of Ḥaṣaf b. Abī Ťalib from Abyssinia in 7 a.h., when Muḥammad was besieging Ḥaḥib; b. the expedition of Ṭmar b. ʿUmayya in A.H. 6 in order to reconduct the emigrants from Abyssinia to al-Madinah; c. vague traditions concerning the emigration from Makka to Abyssinia. To these groups several episodes agglomerated, viz. to a. the story that Umm Ḥabīb, Abī Sufyān's daughter and widow of ʿUthayb b. ʿUmayya, was asked in marriage by Muḥammad and provided with a marriage-gift of 400 dinars by the Nadījāh; to b. the story of Muḥammad's letter to the Nadījāh; his embracing Islam and his becoming
the intermediary of the conversion of 'Amr b. al-\'A\'.

In Ḥadīth the Nadājštī is also mentioned in connection with the story that his death in 9 a. h. was proclaimed, without previous intimation, by Muḥammad, who held on the musalla [q.v.] a funeral service in behalf of this fellow Muslim. As his proper name is given Aḍšama or Aḍšama b. Abībar.

The title al-Nadājštī is also given in Arabic literature to later kings of Abyssinia, as may be seen from this article.

(Chain. J. Wensinck)

AL-NADĀJŠTĪ, KĀSĪ B. ʿAMR AL-ḤABĪB, an Arab poet of the seventh century a. d., lived at first in Nadājštī [q.v.] and quarrelled with ʿAbd al-Raḥmān, son of Ḥaṭīb [q.v.], because the latter had addressed in song a married female relative of Nadājštī in Medina. After an exchange of lampoons with his opponent from his nativity place, he met him at the annual fair in Ḫuṭ ʿAbdul-Jāzīz and again in Mecca when ʿAbd al-Raḥmān not only proved inferior to a poet but suffered bodily injury, so that his aged father had to interfere on his behalf. Nadājštī had a second conflict with Ibn Muḥīlī, the poet of the Banū ʿAddān; he was so unbridled in his defence that the caliph ʿOmar punished him with imprisonment after procuring an opinion on his verses from Ḥaṣān and al-Ḥujara. After ʿOmar's assassination, al-Nadājštī appeared in Kīfa as one of the leading political lampoonists in Muʿāwiya's poet's at the battle of Siffin. But his disorderly life lost him the favour of ʿAḥ and after a drinking-bout in Ḫaṣān he was thrown thrashing prescribed by law and put in the pillory. After a conflict with Kīfān notables, in which he expressed his wrath at this punishment in satirical verses, he was expelled by ʿAḥ and went over to Muʿāwiya. He then went back to his native county Yaman and died in Lābdīj in the year 49 (669), in which year he wrote a lament on the death of Ḥaṣān.

(C. Brockelmann)

MIR ʿABD AL-ʿAṬ, NADĀJŠTĪ, a Persian poet, born about 1046 (1636–1637), the son of a Husain Sāiyid Muḥammad Muṣmin of Ḩaṣānī. He is known of his life. Only much is certain, that he, like many other Persian poets of this time, worked in the offices of different Persian dignitaries. For example he was a mustawfi [q.v.] with Sādi Mīrzā Ḥabīb Allāh, later occupied the same office in Astārābād and ended his career in 1126 (1714) after being for many years mustāfi with the Ṣafawī princes Shāh Sulaimān (1667–1694) and Shāh Sulṭān Ḥusain (1694–1722). He owes his fame mainly to a long poem Gul u-Khānīr ("Wrestling") which he finished in 1112 (1700–1701) and which deals with the theme of the ẓūrāmān [q.v.] still very popular in Persia. As the Persian athletes still form a special closed corporation they use a special language (a kind of slang) which is full of the technical terms of their art and is not intelligible to the outsider.

Nadājštī used these technical terms very skilfully in his poem which makes it very difficult for laymen to understand. This produced several commentaries on his work, of which those of ʿArūz, Rātnī Ṣahkhī (printed Lucknow 1258) and Gobind-rān (lith. Morādābād 1884) are the best known. Of Nadājštī's contemporaries some did not approve of his peculiar style and thought his poem degraded the poet's art with its vulgar expressions and low humour. As a matter of fact, Nadājštī's tone differs considerably from the traditional lofty style of Persian court poetry and approaches the language of the Persian middle classes; this makes his work of considerable importance for the history of the Persian language. Besides the poem, we only know of a collection of lyrics by Nadājštī of which there are manuscripts in several libraries (see below).

(E. BERTHELIS)

NADĀJŠTĪ BEY, properly ʿAṬ (Nūh, also given, is not certain), the first great Turkish lyric poet of the pre-classical period, one of the founders of the classical Ottoman poetry. Born in Adrianople (Amasia and ʿAṭāmān are also given), the son of a slave, obviously a Christian prisoner of war for which reason he is called ʿAbd Allāh, the name given to every one, he was adopted by a well-to-do lady of Adrianople, received a good education and was trained by the poet Sālī. In spite of the fact that his non-Turkish origin was generally known, he was regarded as their equal in every way by the Turks in keeping with their democratic attitude.

He early came to ʿAṭāmān and there began his literary career and soon gained a great reputation. His poems are said here and there to bear traces of the ʿAṭāmān dialect. Coming to Constantinople, he at once gained the favour of Sultan Mehmed II by a şārīda on winter; in 886 (1481)
he celebrated the accession of Bāyazīd II in a ḵaṣṣa and was rewarded by an appointment as secretary in the Diwan. He gained such favour with the Sultan that he was appointed secretary to his eldest son 'Abd Allāh and was given the title of ḥāfiz when the prince went to Karahana as governor (mevkine). After the prince’s early death (888 = 1483) Nadjātī returned to Constantinople with an elegance on the death of the prince which showed deep emotion. After a long interval in which he wrote a great deal but was in continual need, through the influence of Ma’ayyad-Zade [q. v.] he became Ṽikandarī to Bāyazīd’s younger son Mahmūd when the latter went to Šārūkhān in 910 (1504). Nadjātī wrote his finest verse while on the staff of this prince; this was the happiest period of his life. Mahmūd also died; prematurely in 913 (1507) in Manissa, the capital of Šārūkhān, and Nadjātī again lost his patron. He returned with a beautiful elegy to Constantinople and finally retired from the service of the court on a modest pension. He took a house on the Wefā Maidenlari where many friends gathered round him, especially his pupils, the poet and texerезда Edirne Sebi and the poet Sun‘ī. Nadjātī died on the 25th Dhu ‘l-Ḵaṣṣa 914 (March 17, 1509). He was buried near his own house, at the monastery of Şahük Wefā and a tombstone was put up by Sebi for him.

He left a Diwan which he had collected on the advice of Ma’ayyad-Zade and dedicated to prince Mahmūd. There is also attributed to him a mesnevi, which is not otherwise known, entitled Ma‘mūr-i Ǧalā‘-ullāh, also quoted as Laila u-Majdūn and Mīr u-Maḥ. Even more uncertain seems to be the existence of the mesnevi mentioned by Sebi: Ǧalā‘ u-Sabā‘. Nadjātī is also mentioned as a translater of Persian works but his pupil Sebi says nothing of this. He is said to have translated for prince Mahmūd the Kiamyā-i Se‘ādet of Imām Ghażālī (the Persian version of the Arabic Ifyā) and the Ḫāyānat of Imām Ghażālī (the Persian version of the Arabic Ḫayānat and the Ḫayānat al-Ḫayāyat (properly Ḫayānat al-Ḫayāyat wa-Lawātān al-Rivāyāt) from the Persian of Djamāl al-Dīn al-Afwa‘ī.

His Diwan which is still unprinted, gives Nadjātī a very prominent place in Ottoman literature; the Diwan was regarded as a model for all Ottoman poets. Nadjātī, whom İdris Bišīsī in his Ḥaṣṣ Bīḵtīrī calls khosrow-i Şī‘ār-i Rūm and others Malik al-Şī‘ār and Tā‘ī-i Rūm (= the mådawi of Asia Minor), was regarded as the best poet of Rūm. He does not, it is true, reach the heights that Nesimi does but he surpasses all his predecessors, of whom Aḥmad Pasha and Zātī were the greatest, in originality and creative power. Only Bāşi and Fuzūlī have surpassed him. The problem to be solved by Aḥmad Pasha, Nadjātī and Zātī was to incorporate completely into Turkish the matter borrowed and translated from Persian literature, which was still felt to be foreign, to adapt Turkish to Perso-Arabic metres and to domesticate fully the Arabic and Persian vocabulary. This was a great achievement for the time. Nadjātī brought about a great change in the literature as regards outlook, feeling and language. In him the age of Sultan Bāyazīd was most clearly reflected. Although he is not to be claimed as a very great poet, he was the king of the gild of poets of his time, who started a great literary movement. Nadjātī combined a thorough knowledge of Persian with a masterly command of Turkish. In the use of his ghazals he far surpasses Bāşi. His work as a poet of ḵaṣṣas was original and stimulating. He was specially celebrated for his skill in the use of the proper nouns.

(Thx. Menzel)

Nadjī. [See Ṭukba.] Nadjī, B. ʿAmir. [See Kharadijtes.] al-Nadjījār, al-Husain b. Muḥammad Abu ‘Abd Allāh, a Murūji and Dżabari theologian of the period of al-Ma‘mūn, a pupil of Bīghr al-Marīfī whose views were combated by Abu ʿl-Hadhā’ll al-ʿAllīf and al-Naẓmām. He probably lived in Bamm where he was a weaver. According to him, the divine attributes are identical with the essence and express its negative aspects. Vision of God is only possible through a divine act which transforms the eye into the heart by giving it the power of recognition. The word of God is created, accident when it is read, body when it is written. God who knows from all eternity all worldly things, wills them all, good as well as evil, faith as well as unbelief. God has a hidden essence (theory of ma‘ṣīya); there is in him a hidden fund of grace (ṣa‘īf) which would suffice to bring all the inadels back to their problem. Problems of the body and accidents: atom = accident; the body then consists of a conglomerate of accidents (= Dīnār) which are in juxtaposition without interfering with each other (against the mu‘ārabal of al-Naẓmām); momentariness of the accidents. This orientation of the problem is due to the theocentric tendencies of al-Nadjījār. All that takes place in the world comes from the incessant and unrestrained activity of God beside whom there is neither reality nor agent. God creates the actions of man. He gives his assistance to every good action and shows his desertion of every bad one; this assistance and desertion constitute the faculty of doing which accompanies the action (al-issīša al-ma‘lif against the Mu‘tazila). The activity of man consists in his appropriation of the divine will (ṣa‘īf). Man carries out one action only by one ʿissīša: the secondary effects (al-muvaṣṣalat) do not depend on man but on God (against the Mu‘tazila theory of tawallud). Faith consists in the knowledge of God, of his apostles and his commandments and in the profession of this knowledge by the mouth. Faith consists of several qualities (khišf) each of which
is an act of obedience (\textit{illa}); complete faith is the sum of all \textit{illa}. Faith may increase but not diminish: it can be completely lost only through unbelief. He who commits a heinous sin and dies impenitent is doomed to hell from which he will emerge however, unlike the complete infidel. Al-Nadjidjär denied the punishment of the tomb (\textit{ki\={a}b\={a} al\={a}\={c}h\={a}b\={a}}), probably as a result of his determinism. — Al-Nadjidjär like his master Bishr represents the reformed and modified Djahmiyya. The influence of Mu'tazila theology on this school is manifest; on the other hand, the Mu'tazila itself, especially that of Baghdād, seems to have received certain quite important stimuli from his school in spite of its opposition to it. Several of Al-Nadjidjär's doctrines are found at a later date in al-Aš'ārī. — The Nadjidjariya flourished in Rāy and Gurgān. It was divided into three schools: 1. the Burūghūtiyya, the followers of Muhammād b. 'Isā Burūghū; 2. the Za'farānīya, the followers of a certain Aḥāb 'Abd Allāh b. al-Za'farānī; 3. the Mustadrikā, a reforming party which sought paradoxical doctrines on the divine word.

(H. S. Nyberg)

Mū\={a}līm Nādīj, properly 'Onur, an important Ottoman author, poet, critic and man of letters, who occupies a special and somewhat hybrid position in the history of the Turkish moderns and has given his name to a whole literary period. Born in 1266 (1850) in Constantinople, the third son of a master saddler 'Alī Agha (not Bey, as some literary historians say), he lost his father at the age of seven. The widow Fatme al-Zehra, who was descended from a mahājīr who had come to Constantinople from Rumi, went to Varna to her brother, the Kalâydhī Ahmad Agha. The latter in spite of his limited means, made it possible for 'Onur to be educated at the Ämâne and 'Onur's elder brother Sâlan gave him considerable assistance. 'Onur devoted himself at first to calligraphy and for his teacher used the makhārī Juhūlī. A certain Khādiy Juhūlī aroused in him a fondness for poetry and he took the makhārī Nadjī for his poems (from a passage in the \textit{Mukhtārat} of 'Ali Giritli). He also tried to obtain the title of hājī. His training in the medrese left a permanent influence on him. It was long before he decided to put off the turban and the \textit{djū\={a}b}. The spirit of the \textit{mela\={a}} and a certain tolerant fanaticism however never left him.

In 1284 (1867) Nadjī received an appointment as second master in the Kudsiye school in Varna. At an inspection the then mu\={a}ṣṣadārî of Varna, Kari̇b Sâl Sal̇hȧşi Pasha (later Foreign Minister, President of the Council of State and several times an ambassador), made the acquaintance of the intelligent young teacher. He took him into his service as secretary, when he was moved to Tulca just before the outbreak of the Russo-Turkish war in 1877; thence he was moved to Tarsowo and later to Əsmān Pazař. Nadjī accompanied the much travelled Pasha on his moves and journeys. After a brief stay in Constantinople, he went to Veli Şehir Fənər (=- Larissa in Thessaly) where Nadjī made the acquaintance of the poet and Mewlevi Əawī Bey, who had a very good knowledge of Persian. Nadjī who, as acting secretary, went to the court and judge of investigation had here finally to lay aside the turban. When Sâl̇hȧşi Pasha set out on a nine months' tour of inspection in Asia Minor, the Euphrates and Erzurum, Nadjī again accompanied him. He recorded his impressions in the poem \textit{Sāma\={a}r}-\textit{Gharbān}, he had abandoned himself with other congenial wits to a life of dissipation at Tawk Pazař, both earlier and after his return to Constantinople. The transfer of the Pasha as våli of the Aegean islands to Chios, where Nadjī acted as mu\={a}mīlīyā, saved him from this. Here he was able fully to develop his literary leanings. Already in 1292 he had published poems and articles in Varna in the \textit{Tuna} newspaper of which some were even reprinted from the Constantinople paper \textit{Büşire}, such as his \textit{Bi\={a} Mu\={a}līmîn Şaqiq-\={a}t\={a}nîm Akhārî}. From Chios he began his association with Ahmad Midjah Efendi who was then editing the \textit{Terdjumān\={i} Hāşâṣ; from his contributions in poetry and prose, which appeared in the \textit{Terdjumān} over the pseudonym Ahmad Mustā'ıd and Mustā'ıd-i K̇̈ḣ̄zâ, a close friendship arose which proved of decisive influence on his future career. When Sâl̇hȧşi Pasha went as ambassador to Berlin, Nadjī declined to go with him, which was much to be regretted in the interests of his literary development. He therefore resigned his post in the Foreign Ministry and devoted himself entirely to authorship. Midjah gave him the editorship of the newly formed literary section of his paper. At the suggestion of Midjah, whose son-in-law he had become, he learned French although he was now over 30. When he left the \textit{Terdjumān} for literary reasons, he undertook the editorship of the \textit{Şèâdî} newspaper.

By his great literary and critical activity, he gained an influence which can hardly be estimated high enough on the intellectual life of Turkey in his time, not least through his position as lecturer on Turkish literature at the Mektetb-I Şulhānî in Galata Serai and in the law school. He became celebrated under the name Mūlîm (teacher) of which he was particularly proud. In 1307 (1889) he was appointed by imperial \textit{vād}e Turkish historiographer, \textit{Terdjumān\={i} Əli Əsmān}, as a reward for his historical poem \textit{Ertgâr-ı Şahā}. But he did not live to do anything serious in this field except an introduction which survives in MS. He died on 27th Ramadan 1310 (April 14, 1893), at the age of 43 from heart failure and was buried in the garden of the \textit{tubbe} of Sultan Mahmûd.

As a literary figure, Nadjī revealed two aspects. On the one hand, he was a fanatical admirer of the old literature out of which he had developed and for which he endeavoured to revive the taste of his milieu by every means, by his modest poetic talent and considerable skill in versification; on the other hand, he seemed in sympathy with the moderns but in view of his convinced belief in the decadence of western culture he had little real understanding of them.

Nadjī's services to Turkish prose are undeniable. Over 50 years ago he was already writing the prose of the future, a model, clear, simple, style in the
language of a master who could not be surpassed. Two years before Ševčí's celebrated Kūtk Štejler (1309) with its complicated prose, Nádji gave a classic specimen of simple prose, in his Omeri bin Cudžikłąghun (1307) which was only properly appreciated and imitated at a much later date. In it we find the first suggestions of Turkish realism.

The forms not cultivated by the old writer, the story and the drama, he did not, it is true, entirely omit, but apart from autobiographical sketches and a translation from Zola, he wrote no stories and he was a failure as a dramatist. In theory, it seemed sufficient to him and his followers to put French stories of crime into the orta eyamın form in order to produce regular Turkish "dramas". Here also he approximated to the moderns but did not reach their level or ability.

As a poet and artist he is weak. He lacks favour and creative fancy. He lacks that depth of feeling which carries one away; with him everything is trivial and superficial, and he never feels or expresses anything deeply. His prose style is simple and easy, the sentences short, the mode of expression concise and clear.

His main importance lies in his wide influence as a teacher, which he exercised not so much in the actual class-room as through his whole literary activity.

As a critic he confines himself to externals and goes no further.

Nádji's prolific versatility is best shown by a list of his works. He wrote on many subjects and frequently lacked the time for adequate preparation.

Of his poetical works, the most celebrated is the collection Atekh-pärre (1300, 2nd edition 1305), which contains 52 poems in the new western manner. The best in it are: Teshi, Kebiter, Kizzu, Šam-ī Gharibian, Nasibin jöbvograndi bit Wātā, Trasvār, Saghādā, Avečč. — Next come two collections of ghazals in the old style: Şevqār, 1301 and Turklan; then the three historical poems: Hamyey jukduh Mulkāb Ebi l-Gharibian, a description of heroical deeds in Granada in the time of the last king Abū Aball Allah al-Saghīr; Zāt al-Nīfān, the heroic conduct of Esmā', daughter of Abī Bakr, at the siege of Mecca with regard to her son ʿAbd Allah b. Zubair; Gūsī Etefog Hok Be, cf. above, first printed after his death in Khażān-i Fāmān, 1310, ii, No. 10, 12. On the Fākhīr-i Shākānī's œuvres written in conjunction with A. Midhat cf. ʿAlī Emīr, in T. O. E., V., 27, 1330, p. 131; other poetical works are: Teshi Bend or Turkī Bend, an imitation of Şevqī Bin Baghdadī and Ziyā Pasha; Teshi jukduh Arūn Namīensus, Monevār-i Muallīn Nādji and a collection of fugitive pieces edited by Shaikh Wâfi after Nādji's death: Yūsuf-i Nādji, 1314.

Of his prose works the best known and most important is Šumbale (1299 and 1307). The first part contains poems like Kūtk bin Muckhān, which is very important for the development of the Turkish poem, and translations from the French. The second part: Omeri bin Cudžikłąghun, gives in a very artificial style intimate memories of his childhood up to the age of eight and has several times been translated: into German by A. Merx, Aus Muallīn Nādji's Šumbale: Die Geschichte seiner Kindheit, Berlin 1898; into Russian: VI. Gordenlevskij, Dētstvo Omara. Afbeeldingsbijdragen oer, Moscow 1914; and into Czech: Ján Rypka, Oumarové Dětství a do jeho osnut a roku, in Bíbl. Slověců Knihovce, Praž., Memories of his student days were published in the Tedgumān-i Hadīkhudat and entitled Memure Khāñtīrler, 1302; to the same year belongs Şemvenuz Nādji's (Mujāmā-i ʿEin l-Zīyā, No. 41): also Yazmīn būrman, 1301 (lettres and verses in simple language); ʿAhrār Farīn (verses and sayings of Arab and Persian men of letters, 2 parts). — A strongly personal note marks his Dewnyme (the title is chosen in allusion to Ekrem's Zezmeme), a criticism of Memunen-Žade Tahir's Tāfīr-i Eōlān, but it is primarily directed against Ekrem and his pronouncements on the stupidity of writing ghażal: it was so personal that its continuation was officially forbidden.

Equally vigorous is the criticism of the newspaper Mi'ran and its owner Muṣīd Bey in Nādji's Muğfār-i-nâmeh. — Translations and commentaries are found in Miğrāb, 1303 (first published in Mundūl-El-S̱hid; verses of the Persian poet Ṣāḥib-i Tebrizī with commentary); Şinābēt el-Arab (over 1,000 Arabic maxims with notes); Miğrāb el-3ādeem (Persian maxims). — Religious in content are: Ḥaši l-ʿEin, 2nd ed., 1308 (translation of the treatise by Fakhr al-Dīn al-Rāzi on the Fākhīr: Līwā-i ṣekhēne in the Miğrāb el-Ghażl, first appeared in the Teğjumān; Tālim-i Ḥaram, Muḥāmmed-i ʿIškī (on the Ḥaši-ye mutlaqā at the beginning of certain Surā); Khażān-i Ṣidāy, 1304, the commentary on Surà cxxii. (Fēkāh translated from the Tefṣīr-i Ṣadr, Emdār-i ʿAhrār, sayings of the caliph ʿAli (Khitān-šāh-i Ebn l-Zīyā, No. 1); Ḥikem al-Rifāʿi (sayings of Şaytān Aḥmad al-Rifāʿi): Zāvār l-Fākāhr (wise sayings of Muslim celebrities): Usūl-i, 1305 (Persian originals and translations); Mutābākim, 1304: translations from Arabic; Persian and French; Muḥāmmed Muṣ̱īd Miğrāb, 1305: literary essays based on a collected volume in MS. by an otherwise unknown Muṣ̱īd, 1312, 1314, 1317; Nāmāvak-i Bāshān (an able selection from celebrated authors).

— His correspondence: Muṣ̱īd, 1305 and 1311 (with correspondence with friends and pupils); Miğrāb-i ʿAṭā, 1311 (with correspondence with A. Midhat); Ṣalāh buke (with correspondence with Shaikh Wāfi): ʿAhrār, 1304 (with correspondence with ʿAbd Sāle V. Hūgo). — Works on literary criticism: Muğālīn; a collection of expositions of his critical theory which had appeared in the Tedgumān and were regarded in their days as of fundamental importance; Mujāmā-i Muğālīn, 1305–1306; a collection of the literary lectures which he had given in the Sultan and the Law School (58 in number, No. 1–5 even reached a third edition); Iṣṭafa-šāh-i celebī, 1307 and 1314, his celebrated masterpiece on literary history, really only concerned with style; also Mekeṭeb-El-Bek, 1320.

— His important lexicographical works include: Kānā-3awwāl, 1308, only 5 parts; first appeared in the Muwarak: Luğāt-i Nādji = Luğāt-i mensār. — "Nādji in the light of art. Fecres, 1837, the remainder p. 837. 1426 was prepared by his friend Mustedjāf-ṣādē Ismael Bey. — The biographical works: Ovmunṭāğa Şıvârler, 1307, 2 parts (biographies of 13 Ottoman poets): Eṣāmi, 1308, about 850 somewhat arbitrarily chosen biographies in the style of the old Teckere's — His only drama Ḥašim Bey vābād Ḥodā, 1326; Tūre Kukun, the translation of Zola's Thérèse Raquin; a promised
translation of Fénelon: *Terēsii-Benāt* never appeared.

The four parts of his much used *Ta'lim-i Kīr̤āt* (or *Kīr̤āt-i-Shāhīb*) were largely responsible for the development and spread of Naḍījī's style in the widest circles. The first part reached the 31st edition by 1320.

Announced but never published were the following: *Aḥer-i mīlāt*, *Mudhakkār-i Rāghūb* (on Ḍiḍhā, Rāghūb), *Fārābī-i tiriqāyā*, *Terēsii-i-Tendēs*, etc.

Naḍījī was a contributor to a number of papers and magazines: the *Terēsii-i-Hašāt*; the *Šeχāh*, *Wālij*, the periodicals *Afā', Gungūl Suhrā*, *Maqām-e-Qalb*, *Gungūl-e-Bahār*, etc.

With Naḍījī neo-classicism came to an end although his followers, especially Ālī Kermānī, made several attempts to revive it again in the *Iḥlās* against Ḍīḍhā and in the *Ṣafāḥ* against Dānjāb Shāhībāb Dīḍhā. The movement did not yet get beyond these efforts, for his followers were as little able as Naḍījī himself to produce works of permanent value. The present generation has advanced quite out of Naḍījī's world.

(Th. Menzel)

**NAĐIJE** (A.), impure, opp. *fähig*, cf. *Ṭahrār*. According to the *Shafi'i* doctrine, as systematised by al-Nawāri (Minābād, i. 36 sqq.; cf. Ghāzālī, al-Maqām, i. 6 sqq.), the following are the things impure in themselves (*maqūlāt*): wine and other spiritual drinks, dogs, wine, ma'dallim, and excreta; milk of animals whose flesh is not eaten.

Regarding these groups the following may be remarked. On *wine* and other spiritual drinks, cf. the art. *Khandār* and *Xabīr*. — *Dogs* are not declared impure in the *Kurān*; on the contrary, in the description of the sleepers in *Kurān* xvi. 116: *vi. 146; v. 4; ii. 168*. — As to *ma'dallim*, cf. the article. — *Blood* is mentioned in the *Kurān* (Sūra xvi. 116; *vi. 146; v. 4; ii. 168*) as prohibited food. As to the religious background of this prohibition cf. the art. *Ma'dallim*. — *As for excreta* and several kinds of *secretions* of the body, the theory and practice of Jews and Christians sufficiently explain the attitude of *Islam* in this respect. It must also be admitted, though data are very scarce, that in early Arabia religious impurity included some of these things. — Details are to be found in the large legal works of each of the madhhab (cf. *Bibl.*).

Of the differences of the schools regarding this subject the most important only may be mentioned. Spiritual drinks are not impure according to the *Hanafīs* (cf. *Ma'dallim*). Living swine are not impure according to the *Mālikīs*. — The *Ṣafar* adds to the things mentioned above the human corpse and the infeḍāl. The human corpse was one of the chief sources of impurity according to *Jewish* ideas (cf. already *Numbers*, ch. xix.). A current in early *Islam* tending to follow the *Jewish* customs in ceremonial law was very strong; the *Ṣafar* view regarding the human corpse may be a residuum of it. — The impurity of infeḍāls is based upon Sūra ix. 28, where the polytheists are declared to be *filth* (*nāṣur*). The Sunni schools do not follow the *Ṣafar* in the exegesis of this verse.

The *nāṣur* enumerated above cannot be purified, in contradiction to things which are defiled only (*mašwād-fuṭrāt*), with the exception of wine, which becomes pure when made into vinegar, and of hides, which are purified by tanning. On purification cf. the art. *Ṭahrār* *dust*, *wudū*.

**NAJDĪM AL-DIN KURBAK**, the founder of the order of the Kubrawiya or *Dhahabiya*. One of the most striking personalities among the Persian *Sūfis* of the xiliith—xiiith century A.D. A large number of popular legends are associated with his name, many of which are not yet forgotten at the present day in Central Asia. His importance for the development of *Sūfism* is very considerable and in the long series of his pupils we find many distinguished representatives of *Sūf*
teaching. Nadjm al-Din, whose full name was Aḥmad b. ʿUmar Abu l-Diḥānāb Nadjm al-Din al-Kubrā al-Khwāṣṭ al-Khwarīzmi with the honorific title al-Tāmitt al-Ḳubrā (the “greatest visitation”; Sura lxxix. 34) and Shāhīkh Wālī tāʾrāq (the Shāhīkh who prepares saint) was born in the town of Khwāzīr in 540 (1145), spent his youth in travel during which he met in Egypt the famous Shāhīkh Rūzbinān al-Wazzān al-Musīṭ. He became his murād and under the supervision of the Shāhīkh went through a course of most rigid ascetic discipline. The youth won the favour of his teacher who gave him his daughter to wife and adopted him as a son. Nadjm al-Din spent some time in Cairo where he was known to him. One day he heard the lectures on the sunna given by İmām Abū Naṣr Ḥafṣa in Tabriz highly praised. He at once went off to Tabriz and studied there under the direction of this theologian who lived in the Khāṇkhā’ī Ḥadīth in the Sannādī quarter. There Nadjm wrote his first theological treatise, a kind of inaugural dissertation entitled Shīrāz al-Sunnah wa l-Maṣūbī. During a disputation which arose out of this work he made the acquaintance of the Shāhīkh Bābā Fāraḥ Tabrīzī under whose influence he decided to give up the study of theology and devote himself entirely to the contemplative life of the mystic. Bābā Fāraḥ regarded all learning as something superfluous; in his view true knowledge could only be obtained through divine illumination. Nadjm al-Din soon recognised that he could hardly come any nearer his goal by this route. He turned to Shāhīkh Aḥmad b. Yāsīr who advised him to train as a complete Sufī in the school of ʿUmar ibn ʿAbd al-Qādir. Nadjm al-Din received his second ḥikma at the hands of the famous Shāhīkh avowedly called Ḫikra-i tabarruk ("ḥikra of blessing"). After his return to his first teacher Shāhīkh Rūzbinān the latter found that he had thoroughly grasped all the depths of Sufism and recommended him to transfer his activities to his native land of Khwarizm. Nadjm al-Din settled there with his family, built a khāṇkhā’ī and founded the order of the Kubriwīya or Ḥabibīya. His teaching met with great success and he soon found himself surrounded by pupils among whom were the most distinguished Sufis of the xth—xiith century such as Māḏḏ al-Din Baqhdāḏī (the Shāhīkh of the famous poet Farīd al-Din ʿAṭār), Saʿd al-Din Ḥamawī, Bābā Kamāl Djanī, Shāhīkh Rādī al-Din ʿAlī Lālī, Saʿd al-Din Baḵtarzī, Nadjm al-Din Rāzī and many others. Bābā al-Din Walad, the father of the great Diḏal al-Din Rūmī, is also said to have been his pupil, but this is hardly possible. Nadjm al-Din met his death on 10th Djamād I 618 (July 13, 1226) at the taking of Khwarizm by the Mongols. All his biographers are agreed that the Shāhīkh had gone out to meet the enemy in the open field and met a martyr’s death, with weapon in hand. The Institute for Oriental Research in Lenningrad possesses a manuscript in Eastern Turki entitled Shāhīkh Nadjm al-Din Kubrā al-Naj Shāhīkh filib Shāhīkh l-Khwarizm-ni Khārāb il-Khānkhā’ī Bāyūn (How Shāhīkh Nadjm al-Din was martyred and the town of Khwarizm destroyed). It is a kind of historical novel dealing with the last days of Khwarizm and its fall. Nadjm al-Din appears in it as the protector of the city against the Mongols. By his power he makes Khwarizm invisible to the enemy and it only falls into the hands of the conquerors after the Shāhīkh decides to surrender it. It is possible that this book is a version of a Persian biography of Nadjm al-Din called Taĥfīṣ al-Fuhrū and mentioned by Hādhdīj Khālīfa (i. 234).

Nadjm al-Din was a prolific writer and left a number of valuable treatises on different questions of Sufism. The greater part of his works are written in Arabic. Hādhdīj Khālīfa gives the following list of his works: 1. al-Tāḥīṣ al-Fuhrū (i. 339) — a brief exposition of the ten fundamental principles of Sufism (printed in transliterations in 1256 with a Turkish commentary); 2. Risāla b. l-Sulahf (ii. 401—411) — or more correctly fi l-Im al-Sulkh, described in Ahward: N. 3546; 3. Risāla al-Taḥīṣ (iii. 418) — in Ahward: N. 3272; 3273; 4. l-Taḥīṣ (possibly only the xth N. 1); 4. Taḥīṣ al-Taḥīṣ (iv. 171) — unknown to me; 5. Fawā’id al-Dimnāl in Persian — a treatise with this title is given in Fliegel, Wörter Katalog, iii. 532, except that the latter is described as in Arabic; 6. Lūmat al-Lām — or with the full title al-Khāṣī al-lūm min Lūmat al-Lām in Ahward: N. 3087; 7. Hikayat al-Tībīn — unknown; 8. Tāfīr — probably the great commentary on the ʿUmar entitled Aḥī al-Dīnābī, whose first volume I discovered in the Public Library in Lenningrad (see Islamica, vol. 1, fasc. 2—3, p. 272). Nadjm al-Din is also known as a composer of Persian quatrains; but it is still very difficult to decide whether the quatrains attributed to him are really his. Twenty-five of these poems were published in the Comptes-rendus de l’Académie des Sciences de Russie (1924, p. 36).

The Sufī writings of Nadjm al-Din form a transition from the older Sufism of the first theorists (the Nishapūr school of the 9th—10th centuries) to the later Sufism of Ibn al-ʿArabī and his successors (Sad al-Din Kunāwī, Fakhīr al-Din ʿIrākī). Like the earlier theorists Nadjm al-Din likes to deal especially with the practice of Sufism, the stations on the way to true knowledge. Metaphysical questions however are also considered by him and his works with the writings of Ibn al-ʿArabī form the basis for the further development of philosophical theory in the xith century. This is not the place to go fully into his conception of Sufism; but it is not to be doubted that his teaching can hardly be neglected in a careful investigation of the history of the development of Sufism.

NADJRĀN, a dis trict (Wādi) and town in northern Yemen, according to others (Ibn Khuradābīb, R. G. A., vi. 133, 248) in southern Najd or in the Ḥijāz (Bakrī, Mirjamān, p. 575). The position and course of the Wādi has not been exactly ascertained. It rises on the eastern slopes of the Yemen highlands, probably between 45°
and 44° East Long., and runs, perhaps turning north at first, mainly in a southeasterly direction behind 18° and 17° N. Lat. finally disappearing in the great sand desert. The distance from Satā ṭ [q.v.] is put at 6—7 days’ journey (E. Glaeser, Sçisse der Geschicchte und Geographic Arabiens, ii. 50); according to Philly’s investigations (The Heart of Arabia, ii. 166 sq.), it is seven days’ reasonable caravan journey south of Sulayilī. The older idea that the course of the Wādī Nadīrān ran N. E. (or that there was a more northerly track of Wādī Ḥabūn) arose out of the erroneous idea first finally corrected by Philly (op. cit., p. 165, 222) that the Wādī Da‘wāṣir, with which the Wādī Nadīrān was wrongly thought to be connected, runs from S. W. to N. E. or vice versa.

The Wādī Nadīrān drains a wide area of northern Yaman and ‘Alīr (Hamdān, Sī‘at ‘Arab al-‘Arab, p. 83, 110, 114, 247). It is, if not entirely, in ancient times, cultivated for its fertility. Of European travellers only Joseph Hallevy visited it in the spring of 1870. He describes (Burh. de la Soc. de Gèogr., series vi, vol. xii, p. 478) the valley, some 2 miles broad, as exceedingly fertile and well cultivated with villages concealed in thick palm-groves. Stabo (xvi. 781) calls it a peaceful and rich country. To Muslim writers it is a miracle of fertility and wealth, even more so than the Yemen in general: its cereals, vegetables, and fruits are univalued (Hamdān, p. 109 sqq.); there were also mines there (Baladhā, Kīnā ‘Abbād al-‘Abbād, p. 14) and the staple products of the Yemen, leather and cloth, were also made there. To this day in less favoured parts of Arabia, they talk of the prosperity of this Wādī (Philly, op. cit., ii 220).

The population of the Wādī Nadīrān, according to Philly, is comparatively large; the majority belong to the tribe of Yam. But several unrelated tribes, often at enmity with one another, share in the possession of this rich country. It was so in the early Muslim period. The Banu ‘l-Ḥārīth b. Kāb, who appear in Ḥadīth as lords of Nadīrān, were not really such. They belong to the large group of tribes Madīnī, which was represented by other tribes also. Their rivals were and are Hamdān tribes (Hamdān, p. 115, 9) among them al-Ḥārīth, important at the present day. (subdivisions Yam, etc.) and Bakil (subdivisions al-Shākīr, etc.) and other tribes like al-Azd, al-Afṣā, etc. should also be mentioned. We have no reliable information about places with a settled population. In the eastern part of the Wādī, Hallevy visited a village of Makkah which was afterwards put on the maps at hazard. In the immediate vicinity was another village Riddā, and an hour to the west Madīnat al-Khudūd (see below). The Arab geographers mention villages (zurā) of Nadīrān and the names of some of them are given as well as those of districts, tributary wādīs, hills, springs.

Through Nadīrān runs the very old caravan road from Hadramawt through the Ḥidjāz to the eastern Mediterranean (cf. Makht). Nadīrān was of some importance as the last station in the Yemen on a caravan route from the Yemen to al-Yamāmāh and thence to Bahra‘ and the ‘Irāq. During Persian rule in the Yemen and later in the Abābīd period this road must have been of no less importance than the one just mentioned to Syria, which latter however owing to its importance in the early period of Islam is almost alone mentioned in Muslim literature (A. Moberg, The Book of the Himyarites, p. 1xii.; cf. also M. Hartmann, Die sudarab. Frage, p. 496, 509). On the station on the road see Ibn Khududibb (B. G. A., vi. p. 152 sq. and 193; A. Sprenger, Post- und Reisereisen, p. 134—139). A series of forts served to keep it safe (Sprenger, op. cit., p. 138; Hamadhānī, B. G. A., p. 28; Ya‘qūb, Muṣjam, iv., p. 541 s.v. Māshā’kūsh and thereon Lyall, Mysafāḍiyūn. ii. p. 105). On the present importance of the road and of Nadīrān, see Philly, op. cit., ii. 226. The road in those days probably went several days’ journey across the desert to the Wādī Da‘wāṣir, which was the first station on the other side; at the present day Sulayilī (q.v.) corresponds to this.

This road via Nadīrān was certainly that which connected the Yam at different times with the ancient Babylonia in the east, with Syriac Christianity and as well as with Iranian culture.

Little is known of the town of Nadīrān. Ptolemy mentions it as a metropolis. Aelius Gallus attacked it and destroyed it (Strabo, loc. cit., Pliny, vi. 28 [321]). From this Glaeser (loc. cit., ii. 50; cf. p. 224) concludes that there was no town of Nadīrān after this but the existence of the town is proved in many ways for various later periods (see below). Now however, no town seems to bear the name. Hallevy thought he had found the ruins of the old town in Madīnat al-Khudūd (see below), which he describes as considerable ruins on the south bank of the river bed. Of the city wall roughly built of granite the south and west sides were less destroyed than the others. A mosque, which still stood among the ruins, belonged, according to local tradition, to the early Muslim or even pre-Islamic period (p. 90, 40.). In remarkable agreement with this, Bakir, Muṣjam, p. 80 says: "Al-Ukhudāt, which is mentioned in the Kurān, was in one of the towns of Nadīrān. This city however is now in ruins and nothing is left of it but the mosque which 'Omar b. al-Khaṭṭāb built'.

On the history of Nadīrān we have only scanty and mainly legendary notes. The name occurs several times in the South Arabian inscriptions: there is one (C. I. S. iv., Ñ. 365) reference to the "towns" of Nadīrān (al-khurā N.; cf. above N. 269) to the south of Yaman. In the oldest inscriptions of South Arabia, the Nabataean inscription of the year 328, the name is also found.

In the tradition of the introduction of Christianity into the Yemen, Nadīrān plays a part in keeping with its importance for the communications between Yemen and Mesopotamia (see above). According to one reference (Histories Neronic, ed. Addai Scher, i. 218 sq. = Petrol. Orientis, iv. 330), it was a merchant of Nadīrān who first spread Christianity there after he had been converted in al-Kafūra. Christianity is said to have received a fudder impetus in the time of Justinian from monophysite Christians who, expelled from Byzantine territory, came to al-Nadīrān also via al-Hara (op. cit., i. 51 sq.)

The Christian tradition of later persecutions of the Christians in South Arabia connected with Abyssinian invasions of the Yemen is widely denominated; Nadīrān was the principal scene of these, first perhaps under Shahabūl Vakseke in the last third of the fifth century, notably under Dār Nūwās, who died in 525. On this tradition
which exists in many forms, Greek, Syriac and Ethiopic, see A. Moberg, *The Book of the Himyarites*, p. xxiv.—lxiii., where the sources and other literature to be consulted are given.

Arabic literature has also something to say about these happenings, especially in the annotations of the *Kurānic* exegetists on *Sūra* lxxvi. 4 sqq. on the *Aṣḥāb al-Ŷuḥyd* but what there is of historical value in this Muslim tradition comes from Christian sources; only it is usually so distorted as to be almost unrecognisable. What it records regarding the introduction of Christianity into Nadjrān by a certain Fāmilyr or ʿAbd Allāh b. al-Thāmir is on the other hand a distortion of certain episodes in a Syriac Christian cycle of legends about the Persian martyrs Pethion and Yazdān and has really nothing to do with Nadjrān or Arabia (A. Moberg, *Über einige christliche Legenden in der islamischen Tradition*, p. 50 sqq., 22, 30 and the references given). The latter may, it seems, be much distended from the ancient Nadjrān is of course the result of the localisation of the *Aṣḥāb al-Yuḥyd* in Nadjrān. Hamdānī (op. cit., p. 67, 169) mentions in the same region a Balad or town of al-Yuḥyd; C. van Arendonk mentions a hill Yuḥyd (*De opkomst van het zaïditeïsche Ismaïlisme in Yemen*, p. 168).

It is not till the time of Muhammad and the early Caliphs that we have really historical references to the Yaman and even these have to be critically used. We are told that Khalid was sent with 400 horsemen to the Banu ʿl-Ḥarīrī b. Kaʿb (and the Banū ʿAbd al-Madīn: Ibn Saʿd, ii/1, 112, 3) in Nadjrān and made them adopt Ismaʿil and send an embassy in homage to the Prophet (Ibn Ḥishām, p. 958: Ibn Saʿd, ii/1, 72). Ḍār Ḥamr was appointed ʿamīl in Nadjrān and Ali was ordered to collect the zakāt there (Wāsīlī, Wellhausen, p. 417 sqq.; Ibn Saʿd, ii/1, 122). In addition to pagans and Jews there were many Christians there who from that time onwards constituted a separate community. Muhammad received an embassy from them also and concluded a treaty with them which guaranteed the possession of their property and the free exercise of their religion in return for a fixed contribution on their part (Ibn Ḥishām, p. 401 sqq.); Ibn Saʿd, ii/1, 84 sq., 35 sq.). This treaty was confirmed by Abū Bakr and ʿOmar. ʿOmar however at a later date drove the Christians and Jews out of the Arabian peninsula whereupon the Christians founded a new Nadjrān in the Ḫaḍrat, two days' journey south of Kūfah. The details are variously recorded and it is not quite clear to what extent ʿOmar's orders were actually enforced. Bakr (op. cit.) says that the Jews and Christians in Nadjrān were not at all affected by the measure. In any case, at a much later date (see just below) there were not a few Christians in Nadjrān and there are of course still many Jews in the Yemen.

In the 4th/10th century. Nadjrān was burned by Djahrya, ʿAli's general (Tabari, i, 3452). The scantiness of the historical tradition, fantastic accounts of the wealth of the region and the remarkable liberty enjoyed by Christians in Nadjrān gave rise to legends and inspired poets. The *material* which thus arose is very fully detailed and utilised in H. Lammens, *Le Califat de Yezid l'îer*, p. 327—369.

In the end we find Nadjrān an important fortified town, often simply called al-Ḥadjar (cf. Hamdānī, p. 86), mentioned in the accounts of the fighting which led to the creation of the Zaidī imāmate in the Yemen in the third century A.H. At this period there were still Christians and Jews there, who were obviously still an important element and enjoyed considerable consideration from their Muslim neighbours (van Arendonk, *op. cit.*, p. 128 sqq.). On bishops of the Nadjrānīs or in the Yemen in the 6th and 7th century from Syriac sources see Moberg, *The Book of the Himyarites*, p. 4iv.

The tithe of Nadjrān submitted to Turkish rule as little as those of eastern and northern Yemen generally, Nadjrān now belongs to the kingdom of ʿIbn Saʿūd.

*Biography*: given in the article and in some of the works quoted above; on the history cf. especially Balāḏurī, *Fatḥih*, p. 64—68; Caetani, *Annali dell' Islam*, ii., p. 312 sqq., 317 sqq., 521 sqq., 549—553; iv. 359—359.

(2) MOBERG)

NAFAKA. [See NIKIŠ Ĭ ĖL.]

AL-NAFĪ. [See AL-ĂLĀH, ii.]

NAFĪ, b. AL-ĂZRAḲ AL-HANAFĪ AL-MALIKI, Abū Kâhid, according to some sources, the son of a freed blacksmith of Greek origin (Balāḏurī, ed. de Goeye, p. 56), chief of the extreme Khāridjīs *[q.v.]*, who after him are called Azraḳīs *[q.v.]*. At first, after his accession to Ahwâz, Nafī joined ʿAbd Allāh b. al-Zubair *[q.v.]* in Makka. Soon however, he and his followers turned their backs on the holy city and arrived before Bâṣra, where they spread terror among the inhabitants, who left the town in multitudes. Al-Muhallab however, succeeded in driving them back to Persia. They made a halt in Ahwâz, where they practised *ṣinīfād*, in accord with their doctrine. The bloody battle of Dâlab, fought against Muslim b. ʿUbaīs put an end to his life (64 or 65 = 683—684).

His special doctrine comprised the following points: 1. secession (bārūša) from the quietists (al-Ŷarāla); 2. examination (mizṣā) of those who wanted to join his encampment; 3. declaring infidels those who did not perform *ḥidjra* to him; 4. declaring it allowed to kill the wives and children of opponents. This is al-Asḫārī's enumeration, which differs slightly from that of al-Shāhristānī (p. 90).

(1) WENSINK)
NÁFILA (A.), plur. nawāfī’, part. art. fem. I from n-f-f, supererogatory work.

1. The word occurs in the Kur’ān in two places, Sūra xxi. 72 runs: “And we bestowed on him [viz. Ibrāhīm] Isaac and Jacob as additional gift” (nīlāhsa‘). In Sūra xvii. 5 it is used in combination with the vigils, thus: “And perform vigils during a part of the night, reciting the Kur’ān, as a nāfīla for thee.”

In hadith it is frequently used in this sense. “Forgiveness of sins past and future was granted him [Muḥammad] and his works were to him as supererogatory works” (Ahmad b. Ḣanbal, vi. 250). — In another tradition it is said with reference to the month of Ṭaḥa ṭah, that Allah “withdrawing it” wages and its nawāfīl even before [its] beginning” (Ahmad b. Ḣanbal, ii. 524). Of peculiar importance, also in a different respect, is the following hadith kuth: “When My servant seeks to approach Me through supererogatory works, I finally love him. And when I love him I become the hearing through which he heareth, the sight through which he seeth, the hand with which he graspeth, the foot with which he walketh” etc. (al-Bukhārī, Kāfābh, bāb 38).

Finally the following tradition may be translated: “Whoso performs the nawāfīl [q.v.] in this way [viz. in the way described in the foregoing part of the tradition], receives forgiveness of past sins and his salāt and his walking to the mosque are for him as a nāfīla” (Muslim, Ṣahih, trad. 8; Malik, Ṣahih, trad. 30). In the parallel tradition (Muslim, loc. cit., trad. 7), the term is kaffāra “expiation”. — This parallelism is an indication of the effect ascribed to supererogatory works in Muslim theology, viz. the expiation of light sins (cf. al-Nawawi on Muslim, Cairo 1283, i. 308).

Nawāfīl (Fatīmī ‘Alamgiriya, i. 156, Ḥanafī)

Sunan

(Fagman, Additions, p. 23, Maliki)

Further it must be observed that in theological terminology nāfīla is often applied to those works which are supererogatory in the plain sense, in contradistinction to other works which have become a regular practice. The latter are called sunna mu‘akkada, the former nāfīla or sunna nīlāhsa‘ (cf. infra, sub 2).

The place of supererogatory works in theology is further accurately defined in the Waṣṣiyat Abī ʿAbd Allāh, art. 7: “We confess that works are of three kinds, obligatory, supererogatory and sinful. The first category is in accordance with Allāh’s will, desire, good pleasure, decision, decree, creation, judgment, knowledge, guidance and writing on the preserved table. The second category is not in accordance with Allāh’s commandment yet according to His will, desire” etc.

The term for supererogatory works used here is not nāfīla, but fādīla.

2. Nāfīla is used in hadith especially as a designation of the supererogatory salāt (Bukhārī, Ḥasanī, bāb 11; Tāḥādīqud, bāb 5, 27). Sometimes it appears in the combinations salāt al-nawāfīla (Ibn Ṣādir, Ḥassanī, bāb 203) and salāt al-nawāfīl (Bukhārī, Tāḥādīqud, bāb 36).

In fādīla this terminology is often, but not always followed, the other term for the supererogatory salāt being salāt al-taṣawwur (e.g. Abū ʿĪsā al-Shā’rāzī, Kitāb al-Tanbih, ed. A. W. T. Juyboll, p. 26), a term that goes back to the Kur’ān (Sūra ii. 153, 180; ix. 80), and which occurs also in canonical hadith (Abū Dāwūd has a Kitāb al-Taṣawwur in his Sunan). The whole class of supererogatory salāt is called nawāfīl as well as suṣur. Nawāfīl as a general designation of supererogatory salāts, covers three subdivisions. The following juxta-positions may give a survey of the terminology:

<table>
<thead>
<tr>
<th>Nawāfīl</th>
<th>Sunna</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Khalīf, transl., Gūdī, p. 95, Mālikī)</td>
<td>mu‘akkada</td>
</tr>
<tr>
<td>(Ghazālī, Iḥyā‘, i. 174, Shāfi‘)</td>
<td>mukhtābah</td>
</tr>
</tbody>
</table>

It may be added that the term rawāṣib is used especially for the supererogatory salāts preceding or following the makbūra; they belong to the first subdivision.

In Shī‘ī ṣaḥr nawāfīl is the widest term; by muṣṭashāḥbā the daily and non-daily supererogatory prayers are designated.

Al-Sayyida NAFTÅSÅ, a mausoleum outside Cairo, south of the Mosque of Abī ʿAlām b. Ṭulūn in the direction of the sepulchral mosque of al-Shā‘rāzī. Among the female saints [cf. waṣṣi] in Cairo next to Sayyida Zarānah bint Muḥammad [q.v.] and “Sīt Sēkima” (Sukainā) “Sīt Nefṣa” takes a very prominent place. In the official recitations of the Kur’ān, al-Sayyida Nafṣa, where the reading is held on Sundays, takes third place among them all, immediately after ʿImām al-Shā‘rāzī and ʿImām al-Ḥusaynī (see Bergsträsser, in L., xxi. (1932), 110 sqq.). The sanctuary is visited by both men and women, especially, in the evening. The door leading to the sarcophagus itself is only opened once a year. The foundation contains a number of other buildings besides a mosque, including a library and Sūfī cells. The land around it is a much sought after place of interment.

Nafṣa was a daughter of al-Ḥasan b. Zaid b. al-Ḥasan [q.v.]. She came to Egypt with her husband ʿĪsā al-Muṭamīn, a son of Diāsār al-Sāṭik [q.v.]. She had a reputation for learning and piety. Shā‘rāzī frequently visited her to collect traditions; on his death, his body was brought to her house so that she might say the prayer for the dead over him. She had children but her descendants soon died out. She herself died in
Rämādān 208 (beg. of 824). Legend credits her with great ṭūrānīa [q.v.]; for example is as is told of several Egyptian, and not only Muslim saints, it is said that her prayers produced a great rising of the Nile in a single night. In contradiction of a story that her husband wanted to take her to the family burial place in the al-Baṣṣirī [q.v.] cemetery in Medina but was prevented by her devotees, is the general opinion that this is her tomb which she built with her own hands and in which she read the Qurān long before her death. — Several rulers took part in the development of the sanctuary, ‘Abbasids and later Fāṭimids and Ottoman governors. The cupola over the grave was restored by the caliph al-Hārūn in 532 (1138) and the mosque in 693–694 (1294–1295) by the Mamlūk al-Malik al-Nāṣir Muḥammad b. Kāfīrān.

(R. Strothmann)

NAFS! (A.), soul. Nafs, in the early Arabic poetry, meant the self or person, while ṭūrān meant breath and wind. Beginning with the Qurān nafs also means soul, and ṭūrān means a special angel messenger and a special divine quality. Only in post-Qurānic literature are nafs and ṭūrān equated and both applied to the human spirit, angels and ḥīmakān. I. The Qurānic uses. A. Nafs and its plurals anfas and nafās have five uses: 1. In most cases they mean the human self or person, e.g., iii. 54: “Let us call... ourselves and yourselves”; also xii. 54; li. 20, 21. In six verses nafs refers to Allāh: v. 116b: “Thou [Allāh] dost know what is in me myself [says ‘Īsā], but I do not know what is in Thyself (nafṣikā)”2; also iii. 27, 28; vi. 12, 54 and xx. 43–4. One reference, xx. 4 (cf. xiv. 17), is to gods: “They [thea] do not provide themselves (anfasikām) any harm or benefit at all!” 4 In iv. 150 the plural is used twice to refer to the company of men and ḥīmakān: “We have witnessed against ourselves (anfasinā)”5. It means the human soul: vi. 93: “While the angels stretch forth their hands [saying], Send forth your souls (anfasu)”6; also l. 15; lxiv. 16; lxix. 40, etc. This soul has three characteristics: a. It is amūmira, commanding to evil (xii. 53). Like the Hebrew nēṣeṭ the basal idea is the “physical appetite”, in Pauline usage ṣawṭi, and in the English New Testament flesh”. It whispers (l. 15), and is associated with al-harīṣa, which, in the sense of desire, is always evil. It must be restrained (lxix. 40) and made patient (xvii. 27) and its greed must be feared (lx. 96). b. The nafs is lawwāna, i.e., it upbrādīs (lxv. 27); the souls (anfasu) of deserters are straitened (xv. 103). The soul is addressed as nafsīnā ina, tranquīlī (lxv. 27). These three terms form the basis of much of the later Muslim ethics and psychology. It is noted worthly that nafs is not used in connection with the angels.

B. ṭūrān has five uses: 1. Allāh blew (nafṣākha) of His ṭūrān, u, into Adam, giving life to Adam’s body (xv. 29; xxxviii. 72; xxiii. 8), and b. into Maryam for the conception of ‘Īsā (xxi. 91 and lxvi. 12). Here ṭūrān equates with ṭūrān and means the “breath of life” (cf. Gen. ii. 7), the creation of which belongs to Allāh. 2. Four verses connect ṭūrān with the amr of Allāh, and the meanings of both ṭūrān and amr are disputed. a. In xvii. 87, it is stated: “They ask thee [O Muhammad] about ṭūrān; say: ṭūrān is the name of amr, and ye are brought but little knowledge”. b. In xvi. 2, Allāh sends down the angels with ṭūrān min ‘a‘irīhī upon whosoever He wills of His creatures to say: “Warn that the fact is, There is no God but Me, so fear”. c. In xi. 15, Allāh “cast ṭūrān min ‘a‘irīhī upon whosoever He wills of His creatures to give warning”. d. In xlii. 52: “We revealed (wa‘alainā) to thee [O Muhammad] ṭūrān min ‘a‘irīhī: thou knowest not what the book was, nor the faith, but We made it to be a light by which We guide whosoever We will of Our creatures”. Whatever meanings amr and ṭūrān may have, the contexts connect ṭūrān in a. with knowledge; in b. with angels and creatures, to give warning; in c. with creatures, for warning, and in d. with Muhammad, for knowledge, faith, light and guidance. Therefore this ṭūrān is special equipment from Allāh for prophetic service. It reminds forcibly of Bezdol, who was “filled with the spirit of God in wisdom, in understanding and in knowledge” (Exodus xxxv. 30, 31). In iv. 169, ‘Īsā is called a ṭūrān from Allāh. 4. In xvii. 4; lxviii. 38 and lxx. 4, ṭūrān is an associate of the angels. 5. In xvi. 193, al-ṭūrān al-amīn, the faithful ṭūrān, comes down upon Muhammad’s heart to reveal the Qurān. In xix. 17, Allāh sends to Maryam “Our ṭūrān”, who appears to her as a well-made man. In xvi. 104, ṭūrān al-kudus sent the Qurān to establish believers. Three other passages state that Allāh helps ‘Īsā with ṭūrān al-kudus (lii. 81: ii. 254 and v. 109). This interrelation of service and title imply the identity of this angelic messenger, who may be also the ṭūrān of 4. Thus in the Qurān ṭūrān does not mean angels in general, nor man’s self or person, nor his soul or spirit. The plural does not occur.

C. Nafs, breath and wind, cognate to nafs in root and to ṭūrān in some of its meanings, does not occur in the Qurān, but is used in the early poetry (F. Krenkow, The Poems of Tūslīf and al-Tīrīmādh. London 1927, p. 32). The verb ṭafīlah (Ṣūra lxxxi. 15) is derived from that meaning, while the only other Qurānic forms from the same radicals are fātalāyānā and ṭafīlahānānā (lxviii. 26) and are derived in al-Tabarī, Ḥīmān al-Bayān, Cairo 1921, xxx. 57, probably correctly, from nafsīnā, “the desired”.

II. The Umayyad poetry first uses ṭūrān for the human soul (Kīthār al-Aṣbahānī, ed. 1285, xvi. 126, last line; Cheikho, Le Christianisme, Bârût 1923, p. 338) where the Qurān had used nafs as in No. 5 above.

III. Of the early collections of traditions, Malik’s al-Muwatta, Cairo 1339, i. 126 uses nasama, which does not occur in the Qurān, and nafs (ii. 262) for the soul or spirit, while Ibn Ḥanbal’s Masāmud uses nasam (vi. 424), nafs (i. 297; ii. 364; vi. 140) and ṭūrān (iv. 287, 296).

---

1) For the sake of convenience in this article ṭūrān is treated as well.
Muslim's al-Sabih (Constantinople 1331), viii. 44, 162 sq. and el-Duha's al-Sabih, Cairo 1314, iv. 153; both use rih and arwah for the human spirit.

IV. The Tahd al-‘Arus (v. 260) lists 15 meanings for nafs and adds two others from the Li ‘inan al-‘Arab, as follows: spirit, blood, body, evil eye, presence, specific reality, self, tan, heightness, self-magnification, purpose, disdain, the absent, desire, punishment, brother, man. It states that most of these meanings are metaphorical. The Li ‘inan (viii. 119—126) finds examples of these meanings in the poetry and the Qur’an. Lane’s Arabic Lexicon faithfully reproduces the material (p. 28276).

The lexical treatments of nafs disclose these facts: 1. Any attribution to Allah of nafs as “soul” or “spirit” is avoided. 2. In man, a. nafs and rih are identified, or b. nafs applies to the mind and rih to life, or c. man has nafsi, two souls, one vital and the other discriminative, or d. the discriminative soul is double, sometimes commanding and sometimes forbidding.

V. The influences that affected the post-Qur’anic uses of both nafs and rih were the Christian and Neo-Platonic ideas of rih with human, angelic and divine applications, and the more specifically Aristotelian psychological analysis of nafs. These influences are clearly shown in the records of the religious controversies.

A. Al-Ash‘ari [q. v.] (H. Ritter, Die dogmatischen Lehren der Anhänger des Islam von Abu l-Hasan ‘Ali bin Imad’al-Din al-‘Arabi, Istanbul 1929) reports the Rāfidiya doctrines of the incarnation of rih Allāh in Adam and its transmission through the prophets and others (p. 6, 45), as well as the conflicting positions that man is body (tā‘īm) only, body and spirit, and spirit (rīh) only (p. 61, 329 sqq.). His creed of the orthodox (p. 290—297) omits any statement about the nature of man.

B. Al-Baghdadi [q. v.] (al-Fakhr bai al-Firaq, Cairo 1328) records the same heretical doctrines about man’s nature (p. 28, 117 sqq., 241 sqq.), says the transmigration theories were held by Plato and the Jews (p. 254) and describes the incarnation beliefs of the Hulūliya sects [cf. HUL] among whom he includes the Hallādiya (p. 247). His position is “The life of Allāh is without rih and nourishment and all the arwah are created, in opposition to the Christian doctrine of the eternity of the Father, Son and Spirit” (p. 235).

C. Ibn Hazm [q. v.] uses nafs and rih interchangeably of man’s soul (Kitāb al-Fiqāḥ ‘ilā Mila‘ 5 parts, Cairo 1317—1321; v. 66). He excludes from Islam all who hold metempsychos, views, among whom he includes the physician-philosopher Muhammad b. Zakariyya al-Kazzi (i. 90 sqq.; iv. 187 sqq.). He rejects absolutely the doctrine of some of the Alauyya of the continual re-creation of the rih (iv. 60). He taught that Allāh created the spirits of all Adam’s progeny before the angels were commanded to prostrate to him (Sūra vii. 171), and that these spirits exist in al-Barrāh [q. v.] in the nearest heaven until the angel blows them into embryos (iv. 70).

D. Al-Shahrastāni [q. v.] (Kitāb al-Milāl wa l-Nihāl, ed. Careton, part i, London 1842) in his description of the belief of the pagan Arabs concerning survival after death does not use the terms nafs or rih, but says the blood becomes a wa‘h, bird that visits the grave every hundred years. One of his most important sections (p. 203—240) deals with the orthodox and heterodox doctrines of rih. Al-Hunaf‘a’, or true believers, debate with al-Sabī‘a [q. v.], who are dualists, emanationists and gnostics. His account of the views of the Sabī‘a faithfully reflects the doctrines of the Ikhwān al-Safā’ (Rasā’il, 4 vols., Bombay 1305), who taught that man is a whole compounded of a corporeal body and a spiritual nafs (i.ii. 14), and that the substance (dawwar) of the nafs descended from the spheres (al-rajā‘). But al-Shahrastāni rejects the Neo-Platonic idea that human souls (nafs) are dependent upon the souls of the superhuman spirit world (al-nafs al-rajā‘iyya) (p. 210, 224 sqq.), and the Hermetic doctrines that the nafs is essentially evil (p. 216) and that salvation consists in the release of the rih from material bodies (p. 226 sqq.). He applies the term rihāni to all spirits, good and evil (p. 213). His description of the nature of man (p. 216 sqq.) with three souls, vegetative, animal and human, each with its own source, need, place and powers, resembles that of the Ikhwān al-Safā’ (Rasā’il, 4, 48 sqq.). Indeed, the nature of the human soul as given in De Anima, and handed on by Alexander of Aphrodisias and Porphyry, had been adopted with little modification by the Muslim philosophers, such as al-Kindi [q. v.], al-Fārābī [q. v.] each of whom wrote a Kitāb al-Nafs, Ibn Sina [q. v.] who wrote two, and Ibn Miskawayh [q. v.], whose Tuhdīb al-Akhbār has the same inmaterial (p. 1) and functional (p. 7) psychology for its ethical basis. Al-Shahrastāni achieved the long needed interpretation of the conflicting usages of nafs and rih in the Greek and Christian heritage, and in the Qur’an and Muslim tradition. But the philosophers, even with his support, were not able to force the Greek psychology upon orthodox Islam. The Mutakallimin [s. art. KALIM] and the great majority of Muslims broadened the Kur’ānic terminology, but retained the traditional views of the nature of the soul as a direct creation of Allāh having various qualities.

VI. Aristotel’s principle of the incorporeal character of spirit had nevertheless found a permanent place in Muslim doctrine through the influence of Islam’s greatest theologian, al-Ghazāli [q. v.]. In al-Tahānawi’s Dictionary of the Technical Terms (ed. Spranger, Calcutta 1862) are extracts of the doctrines of al-Ghazāli on man’s rih and nafs. He defines man as a spiritual substance (dawwar rihāni), not confined in a body, nor imprinted on it, nor joined to it, nor separated from it, just as Allāh is neither without nor within the world, and likewise the angels. It possesses knowledge and perception, and is therefore not an accident (p. 547 at top; cf. Tahānū ‘ilā-Falā’ūniya, Cairo 1302, p. 72). He devotes the second section of al-Risāla al-Laduniyya (Cairo 1327, p. 7—14) to explain the words nafs, rih and ḥād (heart), which are names for this simple substance that is the seat of the intellectual processes. It differs from the animal rih, a refined but mortal body in which reside the senses. He identifies the incorporeal rih with al-nafs al-mu‘āmal ‘alā-rih al-awal of the Kur‘ān. He then uses the term nafs also for the “flesh” or lower nature, which must be disciplined in the interests of ethics.

VII. This position of al-Ghazāli’s was that of the theistic philosophers in general, as well as some of the Mu‘tazila and the Shi‘a, but it has never dominated Islam. The great analytical philosopher
and theologian, Fākhūr al-Dīn al-Rūzī, could not bring himself to accept it. In his Mafāthī al-Qāhīb, v. 435; commenting on Sūra xvii. 85, he quotes as the opinion of al-Ghazālī the statement that is in the latter’s Tashrīf (p. 72; cf. also al-Rūzī’s Muhazzāl, Cairo 1323, p. 164), but on p. 434 (l. 9 and 8 from below) of the Mafāthī he acknowledges the strength of the corporeal doctrine, and in his Ma‘ānī ṣubl al-asbāb, on the margin of the Muhazzāl, 137 sq., he definitely rejects as baseless (ībti) the view of the philosophers that the nafs is a substance (ḏayʾwār) which is not a body (ḏayṃ) and not corporeal.

VIII. Al-Baidāwī’s [q. v.] system of cosmogony and psychology is ed. in his Tawālīl al-Anwār (lithograph ed. with commentary Abu ʿl-Thānā al-Iṣhahānī and gloss by al-Djardjānī, Stambul 1305, p. 285 sqq.; Brockelmann, G. A. L., i. 418, ii. 111, printed Cairo 1323). He discusses 1. The classes of incorporeal substances, 2. the heavenly intelligences, 3. the souls of the spheres, 4. the incorporeality of human souls, 5. their creation 6. their connection with bodies and 7. their survival. His cosmogony follows: Allāh, because of his unity, created only one Intelligence (ʾalāʾ). This Second Intelligence, that emanated first (al-qādir) from Allāh, is the cause (ʾalāʾ) of all other potentialities and is not body (ʾalāʾ), nor original matter (ḥuṣūṣ) nor form (ṣūrā). It is this Second Cause (ʾalāʾ) of another intelligence with soul (nafs) and sphere (ṣulāt). There emanates from the second a third intelligence and so on to the tenth (p. 288) who is the rūḥ of Sūra lxxviii. 38 (cf. al-Baidāwī’s Antwār al-Tawālīl, ed. Fleischer, ii. 353, l. 4) whose effective influence is in the world of the elements and who is the producer of the spirits (ʾarwāl) of mankind. Below these intelligences are the high or heavenly angels, which the philosophers call al-nafs al-falsafīs and the low nafs, which are in two classes: earthly angels, in control of the simple elements and the earthly souls, such as the reasoning souls (nafsīs nāṭāh) controlling particular persons. In addition (p. 285) there are the incorporeal substances, without effect or control, who are angels, some good (al-kurāʾīyān) and some evil (al-qādirīyān) and the ḥalām, who are ready for both good and evil. This is the first in line he refers to in his comment on Sūra ii. 28 (ed. Fleischer, i. 47, 23). His psychology resembles that of al-Ghazālī, whom he mentions (p. 294). For the incorporeality of the soul (nafṣ al-nafs) he presents five arguments from reason, four Qur’ān verses and one tradition. His commentator remarks (p. 300) that these prove only that the soul differs from the body. He then argues that all nafs are created when their bodies are completed. The nafs (p. 303) is not embodied in and is not close to the body, but is attached as the lover to the beloved. It is connected with that rūḥ which comes from the heart and is generated of the finest nutritive particles. The reasoning nafs produces a force that flows with that rūḥ through the body, producing in every organ its proper functions. These functional powers are perceptive, which are the five external senses, and the five internal faculties of the senses communis, imagination, apprehension, memory and reason, and the active (al-nuḥār ika) which are voluntary (īḥtiyyāʾa) and natural (tābīʿiyya, p. 308).

IX. The dominant Muslim doctrine concerning the origin, nature and future of al-rūḥ and al-

nafs is most fully given in the Kitāb al-Rūḥ of Ibn Kāyīm [q. v.] (Haidarābād, 2nd ed., 1324). Of his 21 chapters Ibn Kāyīm devotes the 19th to the problem of the specific nature of the nafs (p. 279—342). He quotes the summaries given by al-Ḥašrī (op. cit., p. 331—335), and by al-Rūzī (Mafāthī al-Qāhīb, v. 431—434). He denies al-Rūzī’s statement that the Maw眩alims consider the nafs to be simply the sensible body, and says all intelligent people hold man to be both body and spirit. The rūḥ is identified with the nafs, and is itself a body, different in quiddity (al-nafṣ) from this sensible body, of the nature of light, high, light in weight, living, moving, interpenetrating the bodily members as water in the rose. It is created, but everlasting; it departs temporarily from the body in sleep; when the body dies it departs for the first judgement, returns to the body for the questioning of Munkar and Nakīr, and, except in the cases of prophets and martyrs, remains in the grave awaiting bliss or punishment until the Resurrection. He rejects (p. 256) Ibn Ḥaẓrī’s doctrine that Adam’s progeny are in al-Barakāh awaiting their time to be blown into embryos. He presents 116 evidences for the incorporeality of the nafs, 22 refutations of opposing arguments and 22 rebuts of objections. He represents traditional Islam.

X. Earlier Sufis had accepted the materiality of the nafs. Both al-Kujūbī, with commentary of Zakariyya’ al-Anṣārī and gloss of al-Arusī, Būlāl 1290, ii. 105 sqq.) and al-Hudjīwī (op. cit. [q. v.] [Kāshf al-Mahjūb, ed. Nicholson, London 1911, p. 196, 262] call the rūḥ a fine, created substance (ʿūn) or body (ʾalāʾ), placed in the sensible body like sap in green wood. The nafs (al-Risāla, p. 103 sqq.; Kāshf al-Mahjūb, p. 196) is the seat of the blameworthy characteristics. All together make the man.

In addition to the philosophical position of the immateriality of al-rūḥ that all-Ghazālī had made orthodox, another interpretation of spirit developed which is essentially theosophical. Ibn al-ʿArabī [q. v.] (H. S. Nyberg, Kleine Schriften des Ibn al-ʿArabī, Leyden 1919, p. 15, 11, 1 sqq.) divides “spirits” into three classes: Allāh, Who is Absolute Existence and Creation, the world, and an undefinable tertium quid of contingent existence, God in the Eternal Reality, and is the source of the substance and the specific nature of the world. It is the universal and common reality of all realities. Man likewise is an intermediate creation, a barakāh (p. 22, 42) between Allāh and the world, bringing together the Divine Reality and the created world (p. 21, 42) and a vicegerent connecting the eternal names and the originated forms (p. 96). His animal spirit (rūḥ) is from the blowing of the divine breath (p. 95) and his reasoning soul (nafs nāṭāh) is from the universal soul (al-nafs al-kulliyā), while his body is from the earthly elements (p. 95 sqq.). Man’s position as vicegerent (p. 45 sqq.) and his resemblance to the divine presence (p. 21) come from this universal soul, who has various other names, holy spirit (rūḥ al-kulliyā), the first intelligence (p. 51), vicegerent (khalīfa), the perfect man (p. 45) and the rūḥ of the world of command (ʿālam al-amr), which al-Ghazālī held to be Allāh’s direct creation (p. 122, 1). In his Fugāʾ (lithograph ed. with commentary by al-Kashānī, Cairo 1509, p. 12 sqq.) he says that Allāh appears to Himself in a form which thus becomes the place of
manifestation of the Divine essence. This place receives a ṭāḥ, who is Adam, the ḥāšīya and the perfect man. He discusses (Nyberg, op. cit., p. 129 sqq.) the essence and properties of the ṭāḥ, quoting among others the view he says is "attributed" to al-Ḍazāli, which is in al-Taḥāfat (as above). He finds the differences of doctrine harmless since all agree that the ṭāḥ is primordial. In his tractate on the ṭāḥs and ṭāḥs (M. Asim Alpacios, Tratado Acerca del Congruimiento del Alma y del Espíritu, in Actes du XIVe Congrés international des Orientalistes, Paris 1906, iii. 167–191) he describes how men may reach the distinction of "the perfect man" through the cultivation of the qualities of the ṭāḥ and the suppression of the ṭāḥs.

Ibn al-ʿArabi's contemporary, the poet Ibn al-ʿFarāḥ (Nicholson, Studies in Islamic Mysticism, Cambridge 1921, chap. iii.), at times identifies his own ṭāḥ with that from which all good emanates (al-Taťya al-kubrā, on margin of Divān Ibn al-ʿFarāḥ, Cairo 1319, ii. 4 sq.) and with the "pole" (ṣuḥūd) upon which the heavens revolve (p. 113, 115). Al-Khāshānī, the commentator of al-Taťya, explains that this identity is with the greatest spirit (ṭāḥ al-arwāb) and the greatest "pole". The compiler of the commentaries on the Divān states (i. 196) that incarnation (ṣuḥūd) and union (ṣiḥāb) with Allāh are impossible, but there is real "passing away" (fana) and attainment (waṣīf) of the ṭāḥ and the ṭāḥs of Allāh, for His ṭāḥs is their ṭāḥs.

Abū al-Karim al-Dīlānī carries this position of existential monism on to a more ascetic plane. In al-Inān al-kāmin [q.v.] (Cairo 1343) the terms rūḥ al-kudūs, ṭāḥ al-arwāb and ṭāḥ Allāh stand for a special one of the aspects of the Divine Reality (al-Ḥaqq), not to be embraced under the command "be" nor created. This spirit is the divine aspect in which stand the created spirits of all existences, sensible and intelligible (p. 94). Existence itself subsists in the ṭāḥs of Allāh, and His is the name of the ṭāḥs. More than one thing has a created spirit (rūḥ). One of the aspects of the angel of Sūrā xi. 52, who is named the command (amīr) of Allāh, and who is an aspect of Allāh as above, is given to the ṭāḥ of Muhammad, which is identified as the ṭāḥ mentioned in the verse. That angelic and divine ṭāḥ thereby becomes the Idea (ḥaška) of Muhammad (p. 95 sq.) and he thereby becomes the "perfect man" (p. 96, 131 sqq.). The rūḥ which is the specific nature of the human ṭāḥs has five names: animal, commanding to evil, instinctive (al-mulhamah), reproving, and tranquil. When the divine qualities actually describe the ṭāḥs, then the names, qualities and essences of the gnostic (ʿarīf) are those of the One Known (Maʿrif) (p. 150 sq.).

XI. In geomancy (ʿin al-rain) the first "house" (ṣaḥā) of the ummašaḥ (cf. MADAGASCAR, supra, iii. 73) is called ṭāḥs because it guides to problems concerning soul and spirit of the inquirer, and to the beginning of affairs (Muhammad al-Ẓanātī, Kitāb al-ʿAsk fī ʿin al-rain, Cairo n.d., p. 7; cf. Henr. Corn. Agrippae, Opera, Leyden, n. d., but early xvith cent., p. 412: Nam primum domus personam tentu quadrennii).

E. E. Calverley

AL-NAFUSA, in Berber INFESÂN, name of a Berber tribe. According to the common genealogical scheme (cf. Ibn Khaldūn, Kitāb al-ʿIlār, i. 107–117 of the text), the Nafusa are one of the four branches of the large body of the Botr, whose name derives from their chief Mailgīh al-Abtar. At present the dwelling place of the Nafusa is south-west of Tripoli, on the plateau of the same name which from the frontier between Tunisia and Tripolitania tends eastward, and if taken in the largest sense, comprises the regions of Nalūt, Fassāf and Yefren. The inhabitants of these regions are generally called Nafusa, although, in a genealogical sense, this name can be applied to some groups only. Probably the name Djabal Nafusa (in Berber Drān n Ifesān), which originally belonged to a part of the plateau, was extended to the large area between Wāzen and Yefren on account of the fact that of the tribes inhabiting it, the Nafusa were of prominent importance. This use of the name in its widest sense is also to be found in the book by Ibrāhīm b. Slīman al-Shamākhī "Castles and Ways of the Nafusa plateau" (1302 = 1884–1885), in which all the territories of Yefren, Fassāf and Nalūt are indicated.

The scarce data on the history of the Nafusa, which we possess, are to be found, for the largest part, in Arabic sources. In the Greek and Latin authors of pre-Islamic times there is no single sure allusion to them. The name occurring in Corippus' Johannis (second song, i. 146: Quaeque nefanda colunt tristis montana Navusi), does not refer, in all probability, to a place or a tribe of Tripolitania, but rather of the Auros (Awrās), its plateau or its neighbourhood. The fact that Navus represents a form closely connected with Nafusa, its plateau, proves only that the name was widely spread among the Berbers, that it is old and may be probably connected with such words as cuneus, fem. cuneus "right, to the right hand" in Auglin.

In Islamic times the name is recorded for the first time in connection with the capture of the town of Tripoli by ʿAmr b. al-ʿĀṣ (22 or 23). According to Ibn Ḥadīrī (i. 2 sq., text between the siege the inhabitants called to their aid the Nafusa, who came to their aid. At that time they were residing also in the vast plain of Djarāf, situated between the Djabal and the Sea; one of their chief towns, if not their capital, was Sābāra on the coast (Roman Sabratha, formerly Phoenician), west of Tripoli, which by Ibn Khaldūn (Ilār, i. 181, l. 8, text) is called "the city of the Nafusa". This town was taken
by surprise and plundered by a body of cavalry sent by 'Amar. This raid was probably undertaken not only to continue the conquest farther westward, but also to punish the Nafusa, whose territory 'Amar had invaded in order to conquer it (cf. al-Bakri, p. 9, 10, text), and which he had to abandon by order of the Caliph.

According to some sources, the Nafusa at that time were Christians; according to other reports, however, they were Jews. Our latest local information makes it probable that Christianity had spread widely among them; though the conversion of single groups to Judaism is not excluded. In fact traces of Byzantine basilicas have been found on the plateau, e.g. at Temezda, Iramis etc., which are also mentioned in some sources and which must have been used by large numbers of the indigenous population.

When the Arab had conquered North Africa, the Nafusa of Sabra and of the coastal region retired, according to the common opinion, to the plateau, where they remained hostile towards the conqueror. At first this situation was not very serious, population, however, makes it clear that a part of them must have stayed in their old dwelling-places where they intermarried with other tribes and, in course of time, became arabised. In fact there are tribes in the Western Dafara and in Tripoli, the town and its surroundings (the regions of al-Sâlih, Tagjura, etc.), that, according to the local genealogy, derive from the Nafusa. Apart from this ethnic tradition, there is the fact, recorded in several sources, that after the first case of intervention of the Nafusa in the affairs of the town of Tripoli — which may have been partly due to a Christian opposition to the Muhammadan invasion — they wanted, under successive dominations, to make their presence felt and their influence preponderant in the northwestern region of Tripolitania, so that the outlines of the history of the small, but strong and civilized Berber unit may be summed to be the following. Having its centre in the plateau, it intended to make felt, as often as possible, its dominion in the coastal region and thus keep the control of the main way of communication between Egypt and Ifriqiya, which ran along the coast and which was followed by the various expeditions to the Maghrib. Even at present such aspirations may be stirred in the minds of the most cultivated of these populations, to such an extent that even some of them have reckoned with an eventual reoccupation of their old territories in Western Dafara.

The period in which the Nafusa, according to the sources available to us, vigorous were most active and took a part in the events happening in North Africa, was that of the great Kharijji [q. v.] revolts, which began in 122 (739—740) and did not cease before the 13th (xth) century, i.e. before the era of the Fatimids. When the Wahabi doctrines began to spread among the North African populations in the second century A. H., they embraced them and so joined the rebellious movement of the Berbers against the Arab conquerors, a movement which, prepared by several other causes, found also some support in the Kharijji heterodoxy. The Nafusa embraced the Ibbi, i.e. the more moderate form of the Kharijji doctrine, and remained ever faithful to it with heroic attachment. In alliance with other Berber tribes, either Ibbi or other branches of the sect, they repeatedly made war upon the Arab governors of Ifriqiya.

In 140 (757—758), they elected as their imam, probably with the intention of founding an Ibadite principality — an intention which manifests itself also at other times — an Arab called Abu l-Khaṭṭāb ‘Abd al-Aʿlī b. al-Samḥ al-Munṣīr [q. v.], one of the missionaries of Ibbidism in North Africa. Under his command and in conjunction with other Berber groups, they occupied Tripolis, fought against the Šufite [cf. al-Sufiyya] Wafarjuma, who had sacked Cairo and where they had settled, and against the armies sent by the ‘Abbāsids to reconquer Ifriqiya. Finally, in 144 (761—762), Abu l-Khaṭṭāb and a large number of his followers perished near Taurgha (Tawurgha) in a great battle against the general Muhammad b. al-Ashʿāb al-Khuṭayfī, the governor of Ifriqiya.

Another notorious imam of the Nafusa was a Berber Abū Ḥatim Yaʿkūb [q. v.], whose enterprises survive in oral tradition on the plateau, who speaks of his literary activity, and the wares of the Arabs. He was killed in battle in 155 (771—772).

When the Ibbi dynasty of the Rustamids [cf. Rustam], which had Tahert as its centre, had been founded, the Nafusa did not elect an imam of their own any more, but formed a part of this kingdom under a governor who depended upon it. Some of these governors, e.g. Abū ʿUbayda ‘Abd al-Ḥāmid al-Damāwni (of Ighmāwen), Abū Manṣūr Iyās (of Tenejmura), are often praised by the Berbers of the Djabal, for their importance and ability in maintaining the interests of Ibbidism, and also for their learning and piety.

The Nafusa were a valuable support of the kingdom of the Rustamids, of which they formed the eastern bulwark. Being near the territory of the Aghlabides [q. v.], they shared to some extent the vicissitudes of this state which had arisen in Ifriqiya in the beginning of the 10th century A.D. The town of Tripoli was in the possession of these princes; Western Dafara, on the other hand, till near the Sea, and probably also part of Eastern Dafara, was in the power or under the influence of the Nafusa. When Tripoli was beleaguered in 267 (880—881) by the Tūlūn prince al-ʿAbbās, who, having revolted against his father Ahmad, sought to conquer Ifriqiya at his own risks, the Nafusa were called to aid, and, appearing without delay, they defeated the army of the invaders (according to other sources, their help was invoked by the inhabitants of Lebeda). This fact, which reminds of the first siege of Tripoli by the Muslims, proves clearly the influence the Nafusa possessed in northwestern Tripolitania and it accounts also for the severe blow dealt to them in 283 (996—997) by the Aghlabides, when Ibrahim II b. Ahmad, who led an expedition from Tunis to Egypt, found his passage through the coastal region of Tripolitania barred by the Nafusa. The bloody battle of Mānū, which was followed by acts of terrible cruelty inflicted upon hundreds of Nafusa prisoners, and which is narrated in a more or less anecdotal form in the Sunni as well as in the Ibbi sources, is ascribed, ultimately, to the desire of the Caliph to punish the Nafusa who were the principal support of the heretical state of Tāheṭ; or to the resentment of the Aghlabides at acts of enmity committed
by the Berbers, as well as in the humiliation they had suffered when the expedition of the Tulunid al-Abbas, which was directed against them, had been averted by the Nafusa, to whom this exploit became a point of glory.

In reality, however, taking into account the whole political situation as well as the historical antecedents, it is evident that that battle, which is still mentioned in the oral tradition of the Ibadites as the most terrible disaster they ever suffered, was the inevitable encounter between the Aglabide power and the supremacy of the Nafusa exercised in the former’s immediate vicinity and even in its own territory.

The power of the Aglabides as well as that of the Rustamids had been destroyed by the Fatimidis [q.v.], the Nafusa found themselves face to face with those new masters of Eastern Barbary. There exist reports of an instance of their strenuous opposition to Fatimid power which endeavoured to subdue them in 920 (922—923), and which defeated them in the following year.

There were, however, reports concerning the part taken by the Nafusa, or at least by tribes from the plateau, in the great Kharidj rebellion, which was led by Abi Yazid and which ended with the victory of the Fatimidis. Probably the Ibadite populations of the Djabal, although having given the idea of forming one large autonomous state, endeavour to avoid any dependence upon the various kingdoms and empires which successively held the supremacy in North Africa, while the latter, on the other hand, endeavoured, as far as possible, to obtain a footing also in the mountainous region which forms the strategic key to the plain stretching towards the coast.

When the Almohades [q.v.] undertook the conquest of Eastern Ifriqiya under Abd al-Mumin (554—555 = 1119—1160), the Nafusa were also subdued by his army. Their territory became the scene of violent struggles and massacres, of raids and partial conquests during the long period of the revolt of the Banu Ghaniya who attempted to restore the Almoravid empire and who, from 580 (1184—1185) onwards, for nearly half a century and with varying success, fought chiefly in Oriental Barbary. In these fights Arabs of the tribe of Debbâb (belonging to the Banu Sulaim) took part who had come to Tripolitania during the well-known invasion of the Banu Hilal and Sulaim. Some clans of the Debbâb, especially the Mahâmid and the Djuwâri, settled in the coastal region west of Tripoli, where the Nafusa had exercised their power before. Yet the great mass of the latter must have retired to the plateau not at the time of the conquest, but in consequence of the Arab invasion.

The Nafusa remained in nearly the same attitude of dependence of their independence, during the supremacy in Ifriqiya of the Hafsidis [q.v.], and, afterwards, of the Turks. While other populations in the neighbourhood gave up their Ibadism in order to embrace Sunnism, and consequently became arabised, the Nafusa stuck to their faith and to their Berber vernacular, withdrawing themselves to the rough cists of their mountains, and from time to time taking part in the acts of hostility and in the rebellions which the interior opposed to the efforts of the government of Tripoli to maintain its own authority and, chiefly, to levy taxes.

In the nineteenth century, the Turks, after having retaken in 1251 (1835—1836) the direct administration of Tripoli, had to fight long and bitterly for the conquest of the plateau of the Nafusa also. The struggle lasted, with varying success, till 1274 (1857—1858); in this period the shahk Ghâma b. Khâlifa distinguished himself by courage and endurance; he is usually represented as the hero of Berber independence defended against the Turks. In reality, however, he was an Arab and the Arab tribe of the Mahâmid had the largest share in the wars, while the Berbers, according to all appearance, did not take part in them on a large scale. During the Italian occupation of Tripolitania in 1911, the Nafusa were at first hostile in accordance with their old aspiration to found an independent Ibadite kingdom which should extend up to the Sea and include the region of Sabratha. Defeated in 1913 by the valiant general Lequio near al-Aslûna they offered their submission to the Italian authorities and ever since have proved very faithful subjects. When inner Tripolitania, in consequence of the effects of the Great War, was troubled by rebels, they showed an heroic attachment to Italy, fighting her enemies under great sacrifices. When in 1922 the reconquest of the inland had begun, they voluntarily took part in it, side by side with the regular troops, with perfect loyalty.

Additions and Corrections

p. 692a, l. 29, to be added: He has been buried at the feet of the poet Niyāzī Miṣrī at Kastro (Lemnos), where his tomb was still shown in 1916 (cf. L. Massignon, Recueil, p. 164).
many other works of Berber Ibâdîtes; yet perhaps parts of it may be recovered by further search in the Mâb, at Gerba and among the Nafûsâ. At any rate, Abû Sahîl has an important place in the literary history of the Berbers, especially the Ibâdîtes, who composed books on theology and law, chronicles, poetry and biographies.

Such a literary movement is usually explained by the need which the heretics felt of making clear their doctrine, especially the points in which it differed from the sunna, to the inhabitants of the interior of the Central and Eastern Maghrib, who did not know Arabic, and who must have been numerous about 1000 A.D. Yet another thing, which can be seen to-day, must not be forgotten, viz. the attachment of these peoples to their own tongue as a symbol of opposition to the Arabic speaking world in general and Muslim orthodoxy in particular. At the end of the nineteenth century, some Berber groups in the neighbourhood of Véren in Tripolitania were led by Sandi propaganda to give up their old Ibâdite faith and embrace orthodoxy. This change in its turn caused the Berber dialect to be less used; as if heresy were bound up with the national language, and the giving up of the heresy removed the last obstacle to complete arabisation. This assumption is confirmed by some religious poems (they deserve to be called literature) in the region of Fassâât, where the love of the national language is still strong. In them the author says explicitly that he uses Berber to uphold and strengthen the Ibâdite faith, which once flourished gloriously, but afterwards decreased, and is now well nigh disappeared. In past times also, the Berber literature of the Ibâdîtes was partly a symbol of non-conformity and nationalism; so when Abû Sahîl, who was rooted in Arabic civilisation by his origin, devoted himself to the study of Berber so as to become the best Berber scholar of his time and to compose in it his works. He must have felt in his deeply religious mind the connection between that language and the faith he professed.

**Nâgpûr**, a city, tahsil, district, and division of the Central Provinces of British India. The modern Central Provinces and Berar, which formed part of the eighteenth century Bhonsâl kingdom of Nâgpûr, lie between 17° 47' and 24° 27' N. and 75° 37' and 84° 24' E., with an area of 113,285 square miles, and an actual population of 17,951,147. Nâgpûr division contains a population of 5,595,578; Nâgpûr district 933,168; and the city 215,003 (1931 Census Report).

The history of this area, which roughly corresponds to Goudwâna, has been profoundly influenced by the long range of the Satpura hills through which the Bâhrânâpur—Asâlgâr gap provided the chief route from Hindustan to the Dakhan. When the Muhammadan invaders first came into contact with Goudwâna, it contained four independent
Gond kingdoms: the northern kingdom of Garha-Mandla; two central kingdoms with their capitals at Deogarh and Khelwa respectively; and a southern state with its capital at Canda. In the reign of Akbar the imperial forces overran the northern kingdom forcing it to pay tribute, despite the heroic efforts of the Dowager Rani Durgavati. After this the political predominance of the Gond chiefs shifted to Deogarh which, in its turn also suffered from the aggressive schemes of the Mughal emperors. Early in the reign of Awrangzib a punitive force under Dilir Khan entered both Canda and Deogarh, with the result that, in 1670, the ruler of Deogarh embraced Islam as the price of the restoration of his kingdom ('Alamgir-nama, p. 1022—27). Both these states paid tribute to the emperor through a Muslim agent stationed at Nagpur. This however is not the earliest reference to Nagpur in the Mughal period, for the 'Padshah-nama of Lihawri describes its capture by Khan Dawain, in 1537 (for a still earlier identification see Hira Lal, p. 16).

The most famous ruler of Deogarh was the converted Gond chief, Bakht Buland, who visited the court of Awrangzib ('A'lamgir, p. 273). Because of his contumacious attitude he was replaced by another Muslim Gond named Dinlar ('ibid., p. 340). For some years after this Bakht Buland remained in imperial service, until, escaping from imperial control, he once more raised the standard of revolt in Deogarh ('Manmakhab al-Lubab of Khaft Khan, p. 461). Although Deogarh was recaptured for a time by Awrangzib's forces, Bakht Buland remained in open rebellion and was never really subdued. Eventually under this able ruler the Deogarh state comprised the modern districts of Chandwara and Betul, together with portions of Nagpur, Seoni, Bhandara and Ballarhat. The last important Gond ruler was Cand Jalban who died in 1739. It was he who fixed the capital at Nagpur which he converted into a walled town.

Internal dissensions led to the intervention of Raghuji Bhonsla, who was governing Berar on behalf of the Maratha Peshwa. Eventually, in 1743, the Maratha leader took over the administration of the country. By granting a nominal authority to the Gond Raja, Burhan Shah, and his descendants, the Bhonsla possessed a useful pretex for disavowing, when expedient, the rights of the Peishwa, but in practice reference was usually made to Pusa on important matters, such as the succession. Burhan Shah's descendants have continued to occupy the position of state pensioners, and the representative of the family resides at Nagpur with the title of Raja or Sanadhan. Raghuji's reign witnessed a great influx of Kunbis and other Marathas into Nagpur. The treacherous attitude of his successor Jangoji led to his defeat by the combined forces of the Nizam and the Peishwa, and to his acknowledgement of the latter's supremacy.

It was under Raghuji II that the Nagpur kingdom attained its greatest extent and included practically the whole of the modern Central Provinces and Berar, together with Orissa and certain of the Cuttack Nagpur states. Unfortunately for the solidarity of his kingdom he joined forces with Simhia against the British, and, in 1803, after the battles of Assaye and Angloon, was compelled to subscribe to the treaty of Deoglan, by which he was deprived of a third of his dominions (Altichison, i. 415—417). He was succeeded in 1816 by his son, Parsodji, an imbecile, who was murdered in the following year by the notorious Appa Sahib. On the outbreak of war between the British and the Nizam in 1817, Appa Sahib attacked the British Residency but his troops were defeated in the brilliant action at Sitabuldi. This resulted in the deposition of Appa Sahib, who was succeeded by Raghuji III, on whose death, in 1853, without heirs, natural or adopted, this dependent principality was declared by Dalhouse to have lapsed to the Paramount Power.

The British administered Nagpur by means of a Commission until the formation of the Central Provinces in 1861. Today, the city of Nagpur supports a flourishing Muhammadan community, in the suburb of Madhabbagh, the members of which are Daudi Bohras of the Shia sect [Brooke 1911]. The members of this community live together in the buildings of the institution, where their children are educated and their women taught suitable accomplishments.

"AL-NAH'I, "the Bee", Sûra xvi. of the Kur'ân. The title is taken from verse 70: "Thy Lord has made this revelation to the Bee". Khâfîn (iii. 155) says that it was also called "Sûra of the Honey" because there are references in several passages to cattle. As to its date, it is reckoned among the later Meccan Sûras and includes several verses of Medinese origin; the commentators however are not agreed on this point.

The Sûra of the "Bee" contains four abrogated verses: verse 69 is annulled by v. 92; verse 84 by ix. 5; verse 108, part 1, annulled by the end of the same verse and by ix. 5.

(MAURICE CHEMOLI)

AL-NAHR, the constellation of the River (Eridanus). It corresponds to the Πετάωσα, Flamen, Amnis of the ancients (cf. Aratos, Pharnakos, l. 358; Geminus, Ερημών Tepolemy, Αμανιδός). Aratos observes (l. 360) — probably one of the first to do so — that the river of heaven represents Eridanus (Hîrîâxos, river of the morning; or river of darkness, of the west?) turned into stars, into which Phaëton, son of Helios, fell, struck by the thunderbolt of Zeus, after his unsuccessful attempt to ride to heaven. (The opinions of the Greek authors varied regarding the identity of the earthly Eridanus. It is often identified as the Po (Padus), in later times however sometimes with the Rhone (Rhodanus, probably on account of the similarity of sound with "Eridanus") or even with the Rhine (Rhenus) while Strabo denies there was such a river for he calls it θ'ηολόγος γένειος "the nowhere existing"). According to another view (Eratothenes, c. 37), the constellation of the river represents the Nile since "this alone flows from the south". Just as the river of heaven at the time of its culmination seems to flow from the south point of the horizon to the north; a third group of authors see in it the figure of Oceanos.

While Aratos clearly names only that portion of the river of heaven which lies between Orion and Cetus (the Whale), Eratothenes and Hyginus continue it in a southeasterly direction as far as the neighbourhood of Canopus (α Carinae); on the other hand, Tepolemy, like all later writers, gives it its southwesterly direction and already calls the star of the first magnitude at its southern point (α Eridani, Achernar; cf. below) θηολόγος τοῦ Πεταώσα, the position of which however he gives incorrectly as he could not himself observe it in Alexandria on account of its great southern declination (θ +100 = −67° 25').

AL-Nahr is one of the constellations of the southern heavens. In the north it is joined by the Bull (al-Thauwar), in the east by Orion (al-Dhâbîbîr, the Giant, or al-Dhawwâl, the Bride), the Hare (al-Arnab) and the most western subsidiary stars (khârîd al-sûra) of the Great Dog (al-Kâbîr al-shahar), which are now included in the constellation of the Dove and the Sculptor's Tool, in the west by the Whale (Kittâs or Kâitûs). The constellation of al-Nahr contains, according to Abd al-Ra'âmân al-Sûfî (210 aqqa), primary stars (i.e. those which form the figure, kawâbîn mi‘n al-sûra) — there are no subsidiary stars included in it. It begins with ζ Eridani on the left foot of Orion (β Orionis, Rigil), winds westwards to γ Eridani, then southwards to α Eridani and proceeds via τ Eridani and finally in a southwesterly direction via ι, γ, h Eridani to α Eridani.

The fresco in the dome of Kûsâr Amra shows in the surviving portion the constellation of al-Nahr as a narrow ribbon, which runs directly westwards from the raised foot of Orion, a little below the equator and parallel with the latter in the direction of the Whale.

The Arabs give to the inverted quadrilateral formed by τ Orionis, λ, β and γ Eridani, which appears to support the left foot of Orion (Rigel) the name "fore throne (foot-stool) of Orion", Kursî al-Dhawwâl al-mu’taddâm, in contrast to his "back throne", Kursî al-Dhawwâl al-mu’âbbâkar or A’rah al-Dhawwâl. The stars ζ, ρ, ι and τ Eridani together with ξ and ζ Eridani, which enclose an area with very few stars in it, are called Ushā al-Nâ’sîn, "Ostrich Nest", the numerous small stars surrounding it are called al-Bâdî, "the eggs", or al-Kâlîd, "the egg-shells". The most southerly star in Eridanus, also the brightest (ζ Eridani, first magnitude), is called al-Dhâlîm, the "male ostrich", or Aḥsîr al-Nahr, the "last of the river" (in the Alfonse Tables) whence comes the name still used at the present day Achernar or Acrornar.

Between Achernar and Tophalât (i.e. from [Final Al-Hût, "mouth of the fish", α Pisces Austrini] in the region of the present Phoenix) are a considerable number of stars which the Arabs called al-Riyâd, "the ostrich chucks". Al-Sûfî states that in Shîrûz he observed a series of stars near the horizon which had the shape of a ship (zourâq) (α, β, μ, ν, γ Phoenixis). The brightest among them (α, according to Sûfî, of third, in reality of second magnitude) forms with α Pisces Austrini and β Eridani [Δenc (Dhanâb) Kûlats, "tail of the whale"] an approximately right-angled isosceles triangle with a line from α Pisces Austrini to β Eridani as base, the stream of water, according to al-Sûfî are also to be included in al-Riyâd. The star α Phoenixis is called al-Dirṣâd al-thâذîni "the Second Frog", in contrast to the "First Frog", al-Dirṣâd al-a’awwâl, which is represented by α Piscis.

NAHRAWÂLÎ (NAHRVAHUNI), Arab his- torian. Kûrîn al-Dîn Muhammad b. ‘Alî al- Damn Ahmad b. Shams al-Dîn Muhammad b. Kâfî Khan Mahmûd al-Makrî al- Kâdirî al-Khârjâni al-Hâfîn was born in 917 (1511) in Mecca, to which his father, a member of a scholarly Indian family, had migrated from Nahrawâlî in Gujrat. To complete his studies which had been
begun under his father, he went in 943 (1530) to Cairo, where he was taught by al-Suyūṭī’s pupils, and to Stambul. On his return home he received a teaching appointment in the Madrasa al-Ashrafīya. In 965 (1557) he again went to Stambul via Asia Minor and afterwards was appointed to the Kanbāyatīya in Mecca. When in 975 (1567) the al-Sulīmānyā Madrasa was founded for all four orthodox rites, he went to it and later became Mufti of Mecca. He died in 990 (1582; according to witnesses in 988 or 991).

His first literary effort seems to have been a description of his second journey to Stambul, which has not survived. His other works cannot be chronologically arranged with certainty. These are the poetical anthologies, intended to supply quotations for letter-writers which in the Leyden (Cat. cod. ar., i. 356) MS. is called Timgm al-‘Amalāḥ al-sūrā fi ‘l-‘ābād al-farāza al-rādāsra, in the Cairo (Fihris, iv. 220: ii. 68) al-Timgm wal-‘l-Mudhdhara bi ‘l-‘Abād al-mufrada al-nūdira, and a collection of riddles entitled Kunz al-‘Asmā’ fi Fann al-Mu’amma, which is preserved in Berlin No. 7348, in the Escorial (Cat. Derenburg, No. 555), in Stambul (‘Aṣḥā‘ Ef., iii. 107, 290) and Cairo (Fihris, iv. 307), which is quoted by ‘Abd al-Kādhār al-Baghdādi (Mukaddasat al-Aṣbāb, ii. 115), and on which Mu‘in al-Dīn ‘Abd al-Mu‘in b. ‘Abūl-Muṣā al-Bakrī in 993 (1585) wrote a commentary entitled Ṭawārīkh al-aswāf (MSS. in Upsala, No. 63; Paris, No. 3417, 5; Escorial, op. cit., No. 536, 2; extracts in Leyden, op. cit., No. 522). It is not possible also to date his collection of biographical matter of which there only survives the synopsis Mumtazgab al-Tūrīṣ in Leyden (op. cit., No. 1045).

His two principal historical works date from the last decade of his life. On 10 Ramaḍān 981 (May 4, 1573) he finished his history of Turkish rule in the Yaman entitled al-Burj al-Yamānī fi ‘l-Fath al-Othmāni; it begins with the year 900 (1494), describes the first Turkish conquest under the vizier Sulaimān Pasha, the return of the Zaidids and the second conquest by the grand vizier Sinān Pasha, to whom the work is dedicated; an appendix describes his conquest of Tunis and Goletta. He prepared a second edition after the accession of Sultan Murād III in 982 (1574); cf. S. de Sacy, in N.E., iv. (1787), p. 412—521 and to the MSS., in G.A.L., ii. 382 add Leyden, op. cit., No. 944; Paris (Buchet, Cat. des Miss. Ar. des nouvelles acquisitions, No. 5927), Escorial (Lévi-Provençal, No. 1720), Cairo, Fihris, v. 56), also D. Lopes, Exa myths da historia da conquista da Kampan pelos Othmamos texto ar. trad. e notas, Lisbon 1892. In 985 (1577) he finished his history of Mecca dedicated to Sultan Murad, entitled al-Burj bi‘l-Hamad Balad (‘Aṣzāl) Allāh al-fāriq, which Wustenfeld published in the Chroniken der Stadt Mekka, vol. i., Leipzig 1857, and is printed Cairo 1503, 1505 (on the margin of Ahmad b. Zainal Dālah’s Khuṭbāt al-Kāmil li Bayān Ummār al-Balad al-‘arṣīm), 1516; to the MSS. given in G. A. L., ii. 382 may be added Tübingen, No. 23; Paris, No. 1637—1642, 4924, 5932, 5999; Leyden (Cat. i., i. 926—930); Cambridge (Browne, No. 4—44); Ambrosiana, H., No. 116 (Z. D. M. G., lxix. 777); Vaticana, No. 284; Sulamīnaya, Stambul No. 815; ‘Alā‘ Oğqmāniya, No. 3047; Cairo (Fihris, v. 32); Cat. Bankiopore, xx. 1085; Åṣafya, p. 178. This work was translated into Turkish by the famous poet Bāqī (q. v.) (MSS. in Goa, No. 158; Vienna, No. 895; Or. Ak., Krafti, No. 260; Cambridge, Suppl., No. 72; ed. by Gottwald, Kusan 1286). A synopsis entitled Fīlm al-Camāl al-A‘lam bi-Binā‘ al-Masjid al-Harām, MSS. Leyden, op. cit., No. 931; Cairo, Fihris, v. 32; Bankiopore, xx. 1089. was made by his nephew Bāhā‘ al-Dīn ‘Abd al-Karīm b. Muḥibb al-Dīn b. ‘Alī al-Dīn, b. 29th Shawwāl 961 (Sept. 26, 1554) at Ahmadābād in Gujarāt, brought up in Mecca by his uncle, then teacher in the Madrasa al-Mu‘ādšā, 978 (1575) Mufti of Mecca, 990 (1582) Imām al-Haram, d. 15th Dhu l-Hijjah 1014 (Aug. 14, 1606) (al-Muhibb, Khālidāt al-‘Athār, ill. 8).

His son Muḥammad in 1905 (1596) wrote a history of Mecca and Medina and of the exploits of Hasan Pasha who became vassal of Yaman, entitled līhādāj al-Inān wa-l-Zaman fi l-Baṣīr al-aswāf li l-‘Arman min al-Yaman bi-Mawālīna l-‘Adil al-Baṣīr, which is preserved in Leyden, op. cit., No. 937; Cairo, Fihris, v. 2; v. 3.

(C. Brockelmann)

NAHRAWĀN, or, according to the popular pronunciation, Nahrawān (Yatsī, iv. 846 sqq.), name of a large territory between Bağdād [q. v.] and Wāṣīt [q. v.], known through the battle between ‘Alī and the Khāridjītes [q. v.] in 35 (658).

NAHW (Ar.), lit. direction, path, also intention, but gradually acquired the special meaning of grammar. The Arab philologists divide it into two branches: accidence, ‘ilm al-‘ārāf or tarqif, comprising the theory of verbal stems and their conjugation, the formation of nouns and adjectives, the formation of the plural and of the feminine, etc., i.e. with individual word-forms only, and syntax, ‘ilm al-naḥw in the narrower sense. The fundamental grammatical conceptions of the Arab philologists are taken from Aristotelian logic, which came via S. ruan scholars to the Arabs (on the dependence of the Arabic phonetic system on the Indian, cf. Brockelmann, G. A. L., i. 97). As the beginnings of Arabic learning in general are lost in obscurity, so also is the origin of the appellation naḥw uncertain even to the Arabs themselves. The caliph ‘Alī is said to have instructed Abu ‘l-Aswad al-Du‘all, who is regarded as the founder of the ‘ilm al-naḥw, how he should divide up the subject and to have ended by saying: ‘naḥw, “take this path”, whence the new science received the name of naḥw. According to another story, Abu ‘l-Aswad himself laid down the principles of Arabic grammar and said to the people: anākhun, “follow this”, from this name naḥw is said to be derived. The stimulus to deal with the problem of language is said to have come from the caliph ‘Alī; he, the story goes, taught Abu ‘l-Aswad the fundamental principles of naḥw and expounded to him the division of all language into three categories: ism, fi’il and harf. Another explanation as to how Abu ‘l-Aswad came to lay down the principles of Arabic grammar seems to
be nearer the actual facts. Ziyād b. Abühi [q.v.] asked him to put on record the principles of grammar which 'Ālī had taught him; but he was reluctant to do this and asked the governor to excuse him this task. When however on one occasion he heard a Kurān reader make a mistake, which destroyed the sense, in reading the sacred book, he declared himself ready to carry out the task. He therefore had a clerk come to him, to whom he dictated and said: "When you see me in pronouncing a letter open the mouth completely (fataha), put a point above the letter; when I close it completely (damma), put a point in front of it, and when I half close it (hamza), put the point below the letter". In this way the invention of vowel signs is traced back to Abu 'l-Aswad.

Another story, which deals with the same question, tells how a newly converted mawlā made a grammatical error in the hearing of Abu 'l-Aswad; one of the latter's household laughed at this but Abu 'l-Aswad said: "These are mawlās who long for Islam, who accepted it and thereby have become our brethren. How would it do if we were to draw up the laws of language for them? He thereupon prepared the chapter on subject and object". There must certainly be an element of at least probability in these anecdotes. By the accession of non-Arabs to Islam the danger arose that the Arab language might be corrupted by foreign elements; there was further the demand that the sacred text of the Qurān should be read aloud without error and its meaning accurately interpreted; there thus arose the necessity for a systematic investigation of the language of the sacred book and the laying down of the rules of its language, so that those ignorant of the language could guide themselves. Other anecdotes which relate to the problem of the origin of nāfās and all of which, of course, like those already given, are to be regarded as sa'īdī, also describe Abu 'l-Aswad as its founder, so that he may with justice be called the earliest Arabic philologist (nāfāsi). None of his writings has, however, come down to us. He is regarded as the founder of the philological school of Baṣra, the origin of which must therefore go back to a very early period (Abu 'l-Aswad died about the end of the first century A.H.). Only to mention some of the most important, to this school also belonged Abū 'Amr b. al-'Alā'ī and his pupils Abū 'Ubayda and al-Aswā'ī, to whom we owe much of our knowledge of the Dhähiliyya, Shbāwā'ī, whose great work on grammar became "the book" par excellence, Khaṭā'ī, who is regarded as the inventor of the system of prosody, and many others. Very early there arose the dispute of the Kutāb al-Akhāribīya, to which the name of Khatā'ī is attached. He is regarded as the founder of the philological school of Baṣra. There also learned men began to deal with linguistic problems. While at first ideas were exchanged between the two schools, and students went from Kūfa to Baṣra to study, and well known Baṣra scholars came to Kūfa; gradually a considerable rivalry arose between the two. The Baṣraans laid greater stress on grammatical principles than the Kūfāns and were in general regarded as more faithful and more accurate transmitters. The questions disputed and the differences between the two schools are dealt with in a work by 'Abd al-Rahmān b. Muhammad b. 'Ubayd Allah b. Abī Sa'id b. al-Abhārī. To the time of that work belong al-Kisā'ī and al-Mufadżal b. Dabbī. After the third century the centre of Arab learning was transferred to the capital of the Islamic empire, Baghdad. In the new Baṣra school which arose there the differences in point of view between the Kūfāns and Baṣraans schools gradually disappeared.

**Nābī (Nābī)**, literally "substitute, delegate" (nomen agentis from n-a-bī to take the place of another), the term applied generally to any person appointed as deputy of another in an official position, and more especially, in the Mamlik and Dihli Sulṭānates, to designate a. the deputy or lieutenant of the Sulṭān and b. the governors of the chief provinces (see also the article EGYP, above, vol. ii., p. 165). In the Mamlik system the former, entitled nābī al-salṭana al-mu'aẓẓama wa-khāṣṣ al-mumālik al-gharīfa al-islāmiyya, was the Vice-Sulṭān proper, who administered all the territories and affairs of the empire on behalf of the Sulṭān. This was, however, only an occasional office, and its holder is to be distinguished from the nābī al-Qaitba, the temporary governor of Cairo (or Egypt) during the absence of the Sulṭān or of Damascus during the absence of the nābī al-salṭana. The six nābīs of Syria which replaced the Ayyūbīs mamlikas—Damascus, Ḥalab, Tāripollī, Ḥamā, Ṣafeet and al-Karak (their number was from time to time increased by the erection of Ghaza and other districts into separate provinces)—were each administered by a nābī al-salṭana (also entitled khāṣṣ al-mumālik), who was an "amir of a thousand", the nābīs of Damascus being superior to the others. At the end of the viiiith (xth) century Egypt also was divided into three similar nābīs: Alexandria (from 767), Upper Egypt (al-wadī al-harīb b. al-khiṭbi) and Lower Egypt (al-wadī al-maḥrūbi). The plain title of nābī was held by the commandants of the citadels of Cairo, Damascus, Ḥalab, etc., who were not under the jurisdiction of their respective governors, and by various amirs of lesser rank holding subordinate commands. (For an instance of more recent use, see art. ṢAMHUL.)

In the Dihli Sulṭānate the nābī was the powerful minister who was the deputy of the king himself. The earliest known to the West seems to be the appointment of the Khān of the Coφunj in the 11th century. In November 1225 (1003), the feudal chief was appointed as a special deputy on the accession of Sulṭān Muṣīz al-Din Bāhār Shāh in 637 (1240) (Mīnādī al-Din, *Tābakāt-i Nāţīrī*, in *Bld. Ind.*, p. 191) In fact, the support of the nobles was conditional upon the appointment of this person to the deputyship. Although this was a separate office from that of the wazir, nevertheless under powerful nābīs, like Malik Kafūr in the reign of 'Ālī al-Din Khālidī and Khusraw in the reign of Mūbrāk Shāh, its existence was not conducive to the growth of the powers of the wazir. In its most common acceptance, in Persian and Turkish as well as later Arabic, nābī signified a judge-substitute, or delegate of the kaḍī in the administration of law. In modern Arabic it
 means usually a Parliamentary deputy, while al-nāʾīb al-ʾumūmi is the Public Prosecutor, the head of the Paqret (al-nīyāba al-ʾumūmiya).

Nāʾīb [for nawāb, intensum of nāʾib (but not employed in Arabic), a puristic correction for nawāb, shortened from nawābkh, the Arabic plural of nāʾib, employed as plur. dignitatis], the term used under the Mughal rulers of India to designate a viceroy or governor of a province. It is not known when the title first became current. It is sometimes found in combination with other titles, e.g. the Nawāb-Wazir of Oudh, the Nawāb-Nājm of Bengal. The Nawāb of Arcot (Carnatic) was a governor under the authority of the Nizām of Haidarābād.

Nawāb (Nawāb) is used also in Persia as a title of royal princes, and in India as an honorific, without necessarily having any office attached to it.

Nābob is an English corruption of Nawāb, which was also applied in a derogatory sense to wealthy Anglo-Indians who had returned from the east. It has been suggested that the term first became familiar to Englishmen in the second half of the eighteenth century.

(H. A. R. Gibb) (C. Collin Davies)

Nāʾīla. [See Iṣk.]

Nāʾīli, properly Yeni-Zade Muṣṭafā Čelebi, called after his father Piri Khalifa Piri-Zade, a celebrated Ottoman poet. He is usually described as Nāʾili-Ḵādīm, "old Nāʾili", to distinguish him from Yeni Nāʾili, young Nāʾili, the poet and mawlawi Nāʾili Ṣahīf Efendi of Monastir, author of several Şīfte works who died in 1293 (1876) in Cairo. Nāʾili was one of the greatest Ottoman poets of the post-classical period, of the period of the weak sultāns (Murad IV, Ibrāhīm and Mehmend IV, 1058–1115 = 1648–1703), of rule by women and eunuchs (Kosam Šultān, Bektaš Agha and Murād Agha) and of the grand vizierate of the Köprülü. He is a link between Nefī and Yahiya and Nābi and Nedim. He and Yahiya are the best poets between Nefī and Nābi, the reviver of Ottoman literature.

Born in Constantinople, on the conclusion of his education he became secretary in the divān-i-hamâya and was ultimately a khalifa in the office of the Department of Mines (maḏen kalami). As his Divān shows, he belonged to the Köprülü order. He was a weak, delicate man of feeble constitution, who died in 1177 (1667–1668) in exile, it is said, into which he had been sent by Fazil Aḥmad Pasha Koprula. Bruself Mehmend Tahir's statement that his tomb was in the cemetery of the Sunbuli monastery in Findilğ and that his remains were removed to the cemetery of Pera, when the road was widened, cannot be quite reconciled with the story of his banishment. Nāʾili is one of the most interesting figures in the history of Turkish poetry. He did not, it is true, contribute anything essential to the actual development of Ottoman literature and gave it no new inspiration. He was an innovator but only in the field of style and language. He steadily worked to break down the rigidity and monotony of the post-classical school. His style is extremely artificial. His language is full of Persicisms but not in quite the same way as in the preceding periods. His diction is full of unusual Persian images and expressions with which he enriched the Turkish language in brilliant verses, somewhat exhausting however through the obscurity of their allusions. The fine new phrases and expressions are however not his own but are simply borrowings. Nāʾili succeeded in clearing away the stagnation of the literary language of the time by dropping the trite and hackneyed metaphors and phrases, which had been found in all divans since Bāki and borrowed new phrases and constructions from the Persian.

Although he wrote in Turkish his diction is purely Persian. He follows his Persian models so slavishly that his language is unintelligible to a Turk who does not know Persian. But the Ottoman poets wrote only for themselves and their equals and not for the people whom they ignored.

Nāʾili is the chief representative of the highly developed and marvelously elaborated literary language in which, as Gibb says, a rich and delicate Persian embroidery is harmoniously sewn upon the Turkish background, while the two languages remain sharply distinguished from one another.

Nāʾili's characteristics are a charming freshness of phraseology, sublimity of imagination, an artificial, individual style, gracefulness, clarity and purity of language, succinctness of expression and polished style such as no poet of his time possessed. According to Muʿallim Nāḏij, no Turk can read him without enthusiastically trying to imitate him, which is however hardly possible. His language is so finished and free from all superfluity that the meaning is often obscure and unintelligible. There is however a great deal that charms the reader, especially as his language is most melodious. As a poet he has not the same powers as he has, as a master of language and style. It is his language and not his poetic conception that is his strong point. He did not seek inspiration from his surroundings, like Yahiya, but from his Persian models.

Nāʾili's literary work consists only of a Divān, which was printed in Balḵ in 1253 (1837) (only about a third of the MSS. was printed however). It consists of four very fine hymns in honour of the Prophet (nāʾi), some 20 Ḍuṣṭas the language of which resembles that of Nefī and shows the same exaggeration. The Ḍuṣṭas are dedicated to Murad IV and Mehmend IV, to the grand viziers Kara Muṣṭafā Pasha (1048–1053, Mehmend Pasha (1053–1055), Śāliḥ Pasha (1055–1057), Şafii Mehmend Pasha (1056–1059), to the Shaikhs al-ʿĀl, Behā Efendi, Yahiya Efendi, Hāfṣ Mehmend Efendi, the Defterdar and others. The Divān also contains a touching merkhis (elegy) written in the terdi-bend manner on the death of his brother who died young, which is almost too extravagant with its effective refrain; also a takhlīm, and some mürüdles in the terdi and terki-bend manners and a terki-bend.

His most important and most characteristic work
Náili — Nakhčiwán

is however over 200 ghazels in which he imitates Fuzuli. In them he continually produces new expressions by new ideas and images and brings about new significances of words. Besides a passion kept within natural bounds and a tenderness of feeling, which reminds one of Nedin and makes a deep impression on any lover, there is an undeniable pessimism, reminiscient of Nābi, in his outlook on life, probably as the result of political conditions and his poor health. Occasionally there is something cold and forced about him. One feels that his spirit is ill and troubled.

Nâîma, Mustaṭif, a Turkish historian. Mustaṭif Naʿīm known as Naʿīm was born in 1065 (1655) in Aleppo. After becoming a tekerîrî (halberdier) in 1100 (beg. Oct. 26, 1688) in the imperial palace, he was promoted to be a secretary in the Divān under the grand vizier Kâzâhlûkhoz Ahmed Pasha. On the 28th Dümâdâ 1116 (Nov. 28, 1704) he became chief accountant of Anatolia and in 1121 (1709) was appointed Nîmetî as master of ceremonies and imperial historian (veʾlî fâm-âsî; q.v.). He later filled several other offices (cf. F. Babinger, G.O.W., p. 245) and during the campaign in the Morea was assistant to the commander-in-chief (veʾlî rešîb). He died at the beginning of 1128 (Jan. 1716) at Old Patras, where he was buried in the outer court of the mosque which has now disappeared. On his tombstone cf. Brusul Mêhemmed Tahir, Osmânlî Muälliffî, iii, 151, and on his death the fârûn of the middle of Shawâl 1128 in Ahmad Râfiq, ḳurîr âlî-i âmîr Istanbul hayâtâ (1100—1200), Istanbul 1930, p. 52 sq. The candid and accurate history of the Ottoman empire, which he wrote in his official capacity and which he based upon earlier histories like the works of Kârâ Cemâl-zâde [q.v.], Wâdiţî [q.v.], Ahmad Şhârîk al-Manâr-zâde, Hâdîdî Khaîfa [q.v.] and the imperial Ottoman history mentioned at the end of his work as begun but not finished by a certain Şiṃî (cf. J. v. Hammer, G. O. K., iii, 326), covers the years 1000 (beg. Oct. 9, 1591) to 1070 (beg. Sept. 8, 1659). The full title of this much esteemed and largely used work is Rawdat al-Husayn fi Khudâzîr Akhâbâr al-Khâş-bân, in Hâdîdî Khâfarî, N. 14525 called simply Tarîkh-i Wâliyya.

Mustaṭif Naʿīm also wrote several political treatises (Reṣâlî-ı siyâsî), which have survived in a collected volume. Naʿīm interpreted his duties as a historian very seriously and his incorruptible love of the truth secured his work a superiority over those of all other Ottoman historians of the time. On Naʿīm's view of the "duties of the historian" cf. his own words in A. W. Duda, Türkische Post, year iii, Istanbul 1928, no. 324, p. 2. The original MS. of his Tarîkh is in Istanbul in the collection of the Erivan-Koshk. On the four editions and their variations cf. F. Babinger, G. O. W., p. 246; on the third edition see also F. A., 1868, i, 468. A French translation (still in MS.) was prepared by Antoine Galland (Fonds Français, N. 12,197 in the Bibliothèque Nationale); specimens of it were published by N. Jorga in the Actes et fragments à l'histoire des Roumains, i. (Bucharest 1895) p. 55.

Bibliography: Cf. F. Babinger, G. O. W., p. 246 and particularly Yení Medjîmû, Istanbul 1918, N. 55, p. 49 sqq.; Ahmad Râfiq, ḳurîr âlî-i Āmîr Istanbul 1924, p. 256 sqq.; Şâlim, Taḥkîrâ, p. 661 sq. (according to whom he also studied chemistry and other arts and sciences and was a carefree jolly boon companion) and Ali Jâlibî, Naʿīm-i Tarîkh, Istanbul 1927.

Nâkhčiwan (Nâkhiwân), a town to the north of the Araxes.

The town Nâkoâva is mentioned in Ptolemy, v., ch. 12. The Armenians explain the name of Nakhchavan (Nakhčuān) by a popular etymology as nakhiwâan ("Noah's first stopping place") although the name is apparently compounded with -awân "place") and locate the town in the province of Waspurakan (cf. Yāḳût, i, 122), or in that of Shiniq. According to Moses of Chorene, l. ch. 30, Nakchewan was in the area peopled by Median prisoners (mar) in whom we should see the ancestors of the Kurds of this region (cf. Babkhan, p. 200; Hâfiz al-ʾAvâd). In the early Arab sources we find the term Nashawâ, Bâlbûrû, p. 105, 200; Ibn Miskawaih, ii, 145; Samâni, p. 560; Nashâwâ. In the Saldjûk and Mongol period the predominant form is Nakdjuwân (as early as Ibn Khurdatibih, p. 122).

The town was conquered under Othmân by Hâbûb b. Maslama It was rebuilt under Muʿawiyâ by ʾAzîz b. ʾHâtim. In 87 (705) the Arabs slashed a large number of Armenian nobles, whereupon the town acquired a Muslim character. For a short time (about 900) the power was in the hands of the Bagratuni, but the town was reconquered by the Saldjûks (q.v.) and belonged henceforth to the domain of their vassal, the amir of Golbâ (Ordûkhan); cf. Markwart, Südarmenien, Vienna 1930, preface, p. 79, 93—101, 115; text, p. 300, 362, 567. It figures in the wars of the Dailami period (Ibn Miskawaih, ii, 148) and in the events of the Saldjûk period (cf. Ibn al-Athir under 514 A.H.).

Nakchewân is more particularly associated with the family of ʾIdrigîz at-ʾAbâs b. ʾAḍârâbâdîjan (531—632 = 1136—1225), cf. Mirzâwând, Rawdat al-Šâbâ, Lucknow 1894, p. 875—876) whose main centre it was, as is shown by the fine buildings a. the tomb (nâshâd) of al-ʿArâs al-ʾAdîjâl Rûhân al-Dîn Dümâl
al-ālam muqaddam al-masākīn Yāsuf b. Kathīr
(1), dated 557 (1162–1163); b. the tomb
built by Shams al-Dīn Nuṣrat al-Īslām Ildīfiz for the matka
Some localities
depending upon N. (Erdjāk) were given in fief to the
Georgian prince Elikum Orbelian by his brother Kīrl Arslan. When the Khwārizmshāh
Djālīl al-Dīn exercised power in Aḥdarbājīan,
N. belonged to the Malikat al-Djālīliya, daughter of Muḥāmmad Palawān, Nasawi, ed. Houdas,
p. 266, 266, 300. Under the Mongols the town
was devastated, as is attested by Rubruck who
visited it in 1253, ed. 1839, p. 358, crude. Howorth,
History of the Mongols, ill., 82. The town suffered
also from the wars between Turkey and Persia (under Murad IV); Ewliya Cebeli, i. 240. Tavernier
(1664), ed. 1713, i. 55–55, and Chardin (1703),
ed. 1872, p. 122, found it in ruins. Nakhchivan was
only rebuilt after 1828 when the khānates of
Erwīn and Nakhchivan were ceded to Russia.
Under the Persians, Nakhchivan (with the district
of Aṣā-Djirān = Ordubād) was directly under
Aḥdarbājīan and not Erwīn. Kāb ʿAlī Khān
of Nakhchivan was blinded by ʿAlī Muḥāmmad,
founder of the ʿĀdīr dynasty. The last chief of
Nakhchivan before the Russian occupation was
Karim Khān Kangārlī. The nūbi appointed by the
Russians were Ilyān Khān and Shāikh ʿAlī Beg.
The mahāl of the khānate were: Nakhchivan,
Alinjā-čay (Armenian Ernił), Mawzā-ḵāṭīn,
Khoj, Daralager, and those of Aṣā-Djirān: Ordubād,
Akuš, Dasta, Bilaw, Cimānāh. Among the
dependencies of Nakhchivan, Džulfa (since 1828) on
the Russian-Persian frontier is very well known (Armenian Djulfā) with the ruins of the old town
and of an old bridge. (Zafar-nāmā, i. 399; puli
āl-Mak and the bridge on the Tabriz-
Džulfa railway (built in 1906).
In 1834, after the Russian occupation (Dubois)
the khānate (the town and 179 villages) numbered
30,325 inhabitants (besides 11,341 inhabitants of
Ordubād and its 52 villages). In 1896 the
town numbered 7,433 inhabitants (4,512 Muslims and
2,376 Armenians) and the district (myed) 86,878.
In 1913 the town had 8946 and the district
121,365. After the Russian revolution of 1917,
the greater part of Nakhchivan was made an
autonomous republic (area 5,988 sq.km with, in
1926, 12,611 urban, 92,345 rural inhabitants). The
republic formed a kind of dependency of the
more important Muslim republic of Aḥdarbājīan (Bāzī), from which it is separated however by
the Armenian lands of the High Karabagh.
Nakhchivan on the Don is the settlement of
Armenian colonists founded in 1780 on the Don
and is at the present day a suburb of Rostov.

the Russian encyclopedic NAKHSHAB, a town in Bakhtrā, also called Nasab by the Arab geographers (cf.
the similar evolution of Nāshāva from Nakhchawan). The town lay in the valley of the Khaskā-Darya, cf. Ibn
Hawkal, p. 376: Kashk-rūd, which runs southwards
parallel to the Zarafshān (river of Samarqand) and runs towards the Amul-Darya [q.v.] but before
joining it disappears in the sands. Nakhshāb lay
on the road joining Bakhtrā to Balkh 4 days' journey from the former and eight from the
latter (cf. Mukdasī, p. 344). In the time of Issākhi
(p. 325) the town consisted only of one quarter
(rabad) and a ruined citadel (bundāndis). The river ran
through the centre of the town (Ibn Hawkal,
p. 378).

The Mongols from the time of Čingis-Khān
(1220) used the region of Nakhshāb for their
summer encampments. The Čaghātāī Kabak (1318–
1326) and Kazān (killed in 1347) had palaces
built there. as a result of which the whole
district was called Karšt (“palace” in Mongol) [q.v.]
Karšt is often mentioned in the time of Timūr
(Zafar-nāmā, i. 111, 244, 259 etc.) but it was
eclipsed by Kish (Shafr-Sabz, q.v.), the birthplace
of Timūr, 3 days' journey above Karšt. The citadel
of Karšt was of considerable strength and valiantly
resisted Shābān Khān (cf. Shafrnāmā, ed.
Meliorans, p. 29) and ‘Abd Allah Khān of Bukhārā
(in 955 = 1558). From the xviiith century onwards
Karšt began to rise at the expense of Kish and
before 1920 was the second town of the khānate of
Bukhārā with a population of 60,000.

The problem of identifying the ruins in the
district of Karšt has been studied on the spot
by L. A. Žimin, who formulates his conclusions
as follows: 1. The ruins of the ancient Nakhshāb
are around the hill of Shulutk-tapa (cf. Mahdi
Khān, Turtški Nadvī on the events of 1149)
which marks the site of the old citadel, already
in ruins in the xth century. 2. As a result of the
erection of the Mongol palaces somewhere to the
south of the river, the town begins to shift southwards,
and at the end of the xivth century when
Timūr built a citadel there it must have occupied
in part the site of the modern Karšt. 3. The
remains of this citadel (which Shābān Khān
and ‘Abd Allah Khān besieged in vain) ought to be
sought near the ruins of Kish’s zalik-i Mūrān (about 2 miles S. W. from Karšt).

( V. Mirovsky)
NAKHSHAB, SHAHSH DIVA'D-DIN (d. 751 = 1330), a famous Persian author (not to be confused with the famous Šafi’i Shahsh Abü Turab Nakhshabi, d. 245 = 860) Very little is known of his career.

His nisba suggests that he came from Nakhshab [q.v.] but he went to India where he became a murid of Shahsh Fauril, a descendant of the celebrated Shahsh Hamid al-Din Nujuri. The Aškār al-Adghūr by Abd al-Haqq Dhillawi (Dhilli 1309, p. 104—107) says that he died in Bad’u‘un after a long and contemplative life and that his tomb is there. Nakhshabi was a prolific writer who used his knowledge of Indian languages to translate Indian books into Persian. His best known work is the Tūfī-nāma (“Book of the Parrot”) very popular in India and Central Asia, based on the Sanskrit Çatakapāti (partly translated into Greek by D. Galanos, Athens 1841). In the preface to this book Nakhshabi tells us that one of his patron showed him an old Persian translation of this work and persuaded him to do it again as the language of the old translation was too simple and artless. Nakhshabi set to work and made a book of 52 chapters (called “nights”) replacing some stories which did not seem to him sufficiently interesting by better ones.

The book, completed in 730 (1330), is in the usual form of a framework with inset stories and is characterised by unusually fine language and bold metaphors and similes. Nakhshabi’s language however seems to have been too difficult and precious for later generations as by command of the Emperor Akbar, Abu ‘l-Faqir b. Mubarak rewrote the book in a simplified version (Rieu, p. 753). This version however was completely supplanted by Muhammad Kādiri (18th century) who reduced it to 35 chapters. Kādiri’s version became the foundation of a large number of translations into Hindi (Awi’i and Ghasawā), Bengali (Capdícara Munshi), Turkish (Sa‘id Abd Allah Efendi, pr. Bülak 1524 and Constantinope 1525) and Kazan Tatar. There is also a metrical version in Persian by Hāmid Lāffir (Bland, in J. R. A. S., ix. 163). The same theme is taken by a number of popular versions which were disseminated in Persia in cheap lithographs under the title Cīl (Sihib) Tūfī (“40 parrots”). The text of one of these was published by V. Zhukovski (St. Petersburg 1901).

Nakhshabi’s work was known in Europe as early as 1792 when M. Gerrans published a free English translation of 12 nights. Kādiri’s version was translated into German by C. I. Iken (Stuttgart 1822); this edition contains an essay on Nakhshabi and specimens of his Tūfī-nāma by Kosegarten. The Turkish version was translated into German by L. Rosen (Leipzig 1858). So far no complete translation of the original work of Nakhshabi has been published although there is a French translation in MSS. in Munich. E. Berthels has translated the book into Russian but this version is also still in manuscript. The eighth night was published in original text and German translation by H. Brockhaus (Leipzig 1843 and in Bücher fur literarische Unterhaltung, 1843, No. 242, 243, p. 969 sqq.). Nakhshabi’s other works never attained anything like the popularity of the Tūfī-nāma, but have almost all come down to us. Among these are: Gubūt “Scattered Roses”, a novel dealing with the loves of A‘ṣūm-shah and Nakhshab (pr. by Agha Muhammad Kāzim Shīrāzī and K. F. Asoe, Calcutta 1912, in Bibl. Ind.); Dīwān u-Kullīvār (“Particulars and Generals”) also called Cīl Nujuri (Rieu, p. 740), an alliteration which deals with the descriptions of the various parts of the human body considered as the noblest work of God and as proof of His greatness; Lāghīūt al-Nisā‘, a Persian version of the Kāba-Sīkra, an Indian work on different temperaments and sexual intercourse; Sīrūr al-Salihī, a collection of sayings of celebrated mystics (Ith. Dillî 1895), and Nāsīhī u-Mawā‘iz, a brief treatise of a Sufi nature (Rieu, p. 738). His treatise Aقārā Mu‘azzahira is only known from its mention in the Aškār al-Adghūr (see above). All the prose works of Nakhshabi are embellished with fā‘as scattered through them, which show that he was also an excellent poet.

E. Berthels

NAKIR, [See MUNKAR.]

NAKIRAND, MUHAMMAD B. MUHAMMAD BAHIR, AL-DIN-AL-BUKHARI (717—791 = 1317—1389), founder of the Nakhshandi Order. His name, which signifies “painter” is interpreted as “drawing incomparable pictures of the Divine Science” (J. P. Brown, The Darvishes, 2nd ed., p. 142) or more mystically as “holding the form of real perfection in the heart” (Mī‘īl al-Ma‘wī quoted by Ahlwardt, Berlin Catalogue, No. 2188). The title al-Sīkha which is given him in a dirge cited in the Raghēbat means “spiritual leader”. The nisba al-Cwa‘īl implies that his system resembled that of Uwaais al-Karani. His A‘la were collected by one of his adherents, Sahl b. Mubarak, in a work called Ma‘qīmat Siyāhima al-Sīkha Nakhshand, which furnished material to the author of Raghēbat ‘Am al-Hayāt (893 = 1488), and from which large citations, apparently in the words of Nakhshandi himself, but translated from Persian into Arabic, are given in the modern work al-Hadhī‘ik al-adwa‘iyya fi Ḥabī‘ Adīlī al-Nakhshandīya by Abú al-Madżīl b. Mu‘izz al-Khānī (Cairo 1306). He was born in a village at the distance of one farsakh from Bukhārā, called Kusht Hinduwaín, but afterwards Kusht ‘Arīfāt. At the age of 18 he was sent to Sammās, a village one mile from Ramitān and three from Bukhārā, to learn Sufism from Muhammad Bābā al-Sammāsī. In this person’s system the dārkir was recited aloud; Nakhshandi preferred that of ‘Alī al-Dawla Abdu al-Khāliq al-Gha‘dājāwī (d. 575 A.H.), who recited it to himself: and this led to ill-feeling between him and the other adherents of al-Sammāsī, who however, it is stated, ultimately confessed that Nakhshandi was right, and on his deathbed appointed him his khalīfa. After this person’s death he went to Şamārang, and thence
to Bukhārā, where he married, and whence he returned to his native village; thence he went to Nafāz, where he commenced his studies under a khalīf of al-Samnāsi, Amir Kulāl. He then lived for a time in villages near Bukhārā given as Zewartūn and Ambūla, then studied with a khalīfa of Amir Kulāl named ʿArif al-Dik-kirānī for seven years; after this he spent twelve years in the service of the Sultan Khalil, whose rise to sovereignty is described by Ibn Battūta (iii. 49), and whose capital appears to have been Samarqand. After this monarch’s fall (747 = 1347) he returned to Zewartūn, where he practised philanthropy and the care of animals for seven years, and road-mending for another seven. The last years of his life appear to have been spent in his native village, where according to the Rashaḥītī he was buried. Vāmhery (Travels in Central Asia, 1864) gives Bawcedir, two leagues from Bukhārā, as the name of the village which contains his tomb, ‘whither pilgrimages are made even from the most remote parts of China, while it was the practice in Bukhārā to go thither every week, intercourse with the metropolis being maintained by means of some 300 asses plying for hire’.

The biographies bring him into connection with various places and persons. At Herāt a banquet was given in his honour by the Amir Husain (b. Ghūyāt al-Dīn al-Ghūrī; cf. Ibn Battūta, loc. cit.), in which instance of the Amir’s assertion that the food had been honestly obtained Nākshband refused it, and it had to be given away in charity. He was with this prince also at Sarkhān. Two or three pilgrimages and visits to Baghādār, Nasībūr and along the Ghurābād are mentioned. His sayings were collected by Muhammad b. Muhammad al-Hāfīzī al-Ghurābānerī in 1903, and although the name of ‘Allī al-Dīn ʿAlīšī al-Bukhārī (d. 802 A.H.) (Brit. Mus. Add. 26, 204.) Persian writings by him are mentioned in the Hadīth.

**Bibliography:** Besides those mentioned above: Nafṣūhāt al-Um, No. 442; al-Ṣaḥīḥ al-Nuḫüzūliyā, transl. Rescher, p. 165.

(D. S. Margoliouth)

### Nakūs (A.), pl. naqūṣis
A kind of rattle used in some places still used by Christians in the east to summon to divine service. It is a board pierced with holes which is beaten with a rod. The name, which comes from the Syriac naqūṣ, is not infrequently found with the verbs ḍorāba or ṣakka in the old Arabic poets, especially when early morning is to be indicated, e.g. ‘Antara, app.; Labid, No. 19, 6; Z.D.M.G., xxix. 15; Metallam, ed. Voldert, p. 17, &c.; al-Luṭūb, No. 6; al-ʿArūs in Noldeke’s Delectus, p. 26; Kīṭūh al-ʿAqūbī, xix. 92. According to tradition, Muḥammad hesitated between this instrument and the Jewish trumpet before deciding on the call to prayer by the muʿadhjin [s. ṣaḥābān].

(Fr. Buhl.)

### Al-Namāra
A place in Syria. It is situated in the district of al-Saṣāf on an eminence in the Wadi ʿI-Shām, which runs from the Dielb al-Darā (Djebel al-Hawārān) to the plain of Ruḥā, at the spot where it joins the Wadi ʿI-Saṣāf. It corresponds to the Roman military post of Namara (Waddington, Inscriptions, No. 270). Less than a mile S.E. of al-Namara, Dussaud found the Nabatean-Arab tomb inscription of the “King of all the Arabs,” Muḥammad ibn ʿAmr, i.e. the Lakhmīd Imru ʿI-Shārīb. Of the 7th Century 223 of the era of Boṣrā = Dec. 7, 328 A.D. (cf. vol. i. p. 328).

Three other places bore the same name in ancient times:

2. Namara, a village in Bataana, probably the modern Namir al-Hawā, N.E. of Derā.

**Bibliography:** Schumacher, in Z.D.P.V., xii. 291; xx. 211; Dussaud, Topographie, p. 341, 359 sq.

3. Namara, Namurance west of Ṣanām, between al-Hāra (Eṣrā) and Djasim (Gaseima), mentioned on an ancient boundary stone.

**Bibliography:** Clermont-Ganneau, in R. A.O., i. 3–5; Dussaud, Topographie, p. 341 (cf. Namr in Noldeke, in Z.D.M.G., xxix. 437).

(E. Hinomann)

### Namik Kamal Bey
[See KEMAL MEHMET NADIR]

### Al-Naml, the Ants, the title of Sūrat xxvii. of the Qūrān, the whole of which was revealed at Mecca. Noldeke puts it among the Sūras of the second period. It contains 95 verses. Its title is taken from verse 18: “When the armies reached the valley of the Ants one of them said: ‘O ye ants, return to your homes lest Solomon and his armies crush you without noticing it’”. It contains one verse that was abrogated (verse 94 annulled by ix. 5).

**Bibliography:** cf. Al-Nahl.

(Maurice Chemoul)

### Namrud, also Namrud, Nimrud, the Nimrod of the Bible, is associated in Muslim legend, as in Haggada, with the story of the childhood of Abraham. The Kurtan, it is true, does not mention him but probably, as in many other cases, only from dislike of mentioning names. That Muḥammad was acquainted with the legend
NAMRūD

843

of Namrūd is evident from the following verses.

"Do you not see how he disputed with Ibrāhīm about the Lord who had granted him dominion? When Ibrāhīm said: It is my Lord who gives life and death, the other replied: I give life and I slay. When Ibrāhīm said: God makes the sun rise in the east; do you make it rise in the west; then the liar was humbled" (ii. 260). The Kur'ān exegists are probably right when they see Namrūd here disputing with Ibrāhīm and also when they refer to Namrūd the verse: "What did Ibrāhīm's people answer? They only said: Kill him, burn him; but God saved him from the fire" (xxix. 23).

The legend is already richly developed in Tabari, but it is at the beginning of the romance of 'Antar in the Abīdīmāḏ which we find its most luxurious development.

Tabari already numbers Namrūd among the three or (with Nebuchadnezzar) four kings who, like Ibrāhīm b. Dawūd and Ibrāhīm b. Kūsh, ruled the whole world. His astrologers told him that a child would be born who would overthrow his kingdom and destroy his idols. Ibrāhīm thus becomes one of those heroes of legend who are persecuted from the moment of birth by a tyrant, to whom they are destined to prove fatal, like Moses, Gilgamish, Semiramis, Sargon, Karpa (in the Mākāḇāhārāt), Trakhān (King of Gilgit), Cyrus, Perseus, Telephus, Aegisthus, Oedipus, Romulus and Remus, Jesus (see Frrazier, Folklore in the Old Testament, ii. 437—455). Ħṣa, the wife of Azūr or of Tārīṣū (Terakh), is able to deceive Namrūd and his searchers. Ibrāhīm is born in concealment; maturing rapidly, he engages in a religious dispute with Namrūd; Namrūd cannot be God for God gives life and death. Namrūd replies that he can do this also for he can execute or pardon a man condemned to death. Namrūd has Ibrāhīm thrown into the fire; it becomes a cool health-resort. An angel keeps Ibrāhīm cool at which Namrūd marvels like Nebuchadnezzar at the preservation of the three young men in the fiery furnace (Daniel iii. 24 sg.). Namrūd resolves to attack the God of Ibrāhīm in his heaven. He feeds four young eagles on meat and wine till they are of a great size, ties them to the four corners of a chest, fastens a spear at each corner with a piece of meat on the point and sits in the chest; the eagles, trying to reach the meat, fly higher and higher. The mountains appear like anthills and later the whole world looks like a ship in the water. It is in vain however for he falls to earth. Next he builds a tower in order to reach the god of Ibrāhīm, then the tongues are confused; in place of one Syriac tongue, 73 arose. God's angels admonish Namrūd. But he equips his armies against God. God sends an army of giants against him, who eat the flesh and drink the blood of Namrūd's men. A gnat enters Namrūd's brain through his nose. For 400 years he had exercised his tyrannical rule and for 400 years he was tortured by the gnat until he died.

Muslim legend derives the name Namrūd from tamarrada: he who rebelled (against God). But there is another derivation, viz. from namra "tigress" in that version of the Namrūd legend in which Namrūd is suckled by a tigress. This version resembles the Romulus and Remus story (Jean de Pours) and culminates in the Oedipus story for Namrūd, brought up unknown, kills his father and marries his mother. Al-Kisā'ī has preserved this version and it is given at greater length in the introduction to the romance of ' Antar.

Namrūd's father Kāna'ān b. Kūsh has a dream which troubles him; it is interpreted to mean that his son will kill him. The child is born, a snake enters his nose, which is an ominous sign. Kāna'ān wants to kill the child, but his mother Sulka' entrusts him secretly to a herdsman; the latter's flocks scatter at the sight of the black flat-nosed infant. The shepherd's wife throws the child into the water; the waves wash him to the bank where he is suckled by a tigress. Already dangerous when quite a boy, as a young man he becomes a robber leader, attacks Kāna'ān with his band, kills him (without knowing that he is killing his father), marries his own mother and becomes king of the country and last lord of the world. Azār (already in the Kur'ān the father of Ibrāhīm) builds him a marvellous palace flowing with milk, oil and honey, with mechanical singing birds].

The medieval epic the wonderful feature of the Chrysto-triklinium in Byzantium. The lore of astrology, the inheritance of Idrs and Hermes he acquires by force from the pupils of Idrs. Iblīs teaches him magic. He has himself worshipped as a god. Then dreams, voices and omens frighten him. In spite of all Namrūd's cruel orders, Ibrāhīm is born, brought up and soon shatters the belief in Namrūd. Namrūd throws those who believe in God to the wild animals but they do not touch them. He denies them food; the sand of the desert becomes corn for them; on every grain of it is written: "gift of God". Namrūd throws Ibrāhīm into the fire but he is unharmed. Namrūd builds up a pile of fuel, the flames of which burn the birds for miles round — it is impossible to approach it. Iblīs then designs a ballista which hurls Ibrāhīm on to the flaming pile. Ibrāhīm spends the finest time of his life there under blooming trees and amid rippling brooks. Namrūd then decides to attack the God of Ibrāhīm in heaven. Starved eagles fly up with his litter, until he hears a voice saying the first heaven is 500 years in width, it is 500 years between heaven and heaven, then comes infinity. Namrūd shoots an arrow against God; the arrow comes back stained with blood. Namrūd suddenly becomes grey and old and falls to the ground. But he plumes himself on having slain God. Then a gnat puts an end to his life.

The history of the Namrūd legend. Very little can have been taken from the Bible. Kurān expositors and collectors of legends call Namrūd qabbār (tyrant) no doubt after the gīḇōr applied to Namrūd in the Bible (Gen. x. 6); Geiger also sees in qabbēr 'anim (xi. 62) an allusion to Namrūd. Tabari (i. 217) also describes Namrūd as a mutādāḏāhī. Muslim legend and Haggada (Targ. Sheni on Esther i. i.; Midr. Haggadah, ed. Schechter, p. 180—181; Gaster, Exempla of the Rabbis, N. 1) make Namrūd ruler of the world. From Haggada comes the association of Namrūd with the Tower of Babel and in particular with the childhood of Abraham, and with the latter's rescue from the fire (Gen. Rabbah, xlix., 1). The death of Namrūd caused by the gnat is also based on Haggada, which makes Titus, the destroyer of the Temple, die in this way. Nebuchadnezzar comes to a similar end (see Grünbaum, Neue Beiträge, p. 97—99). The flight to heaven especially in the romance of ' Antar with the intervals of 500 years recall the ascent of Nebuchadnezzar in
the Talmud (Chaggiga, p. 139). But the flight has far more resemblance to that of Shāh Kai-Kā'ūs as described by Firdawsī (ed. Mohl, ii. 31-34). The Namrud legend borrows from many directions. Tabari mentions that Namrud had been identified as the Persian Dāhījīk (Annales, i. 253) but he refuses this idea (Annales, i. 323, 324). Bible, Haggada and Persian epic were further developed, the marvels increased, an early history invented, Namrud made an Oedipus, and in the Sirat `Antar he becomes the hero of a romance. The Muslim Namrud legend then found its way into the late Jewish legend of Abraham. Bernard Chapira (see below) has pointed out that for the Middle Ages it was a peculiar case of how a word can become a hero and the hero of an entire country. He is certainly wrong in taking seriously the authorship of Kāb al-Abīb, which is one fiction out of many thousands. But the mutual influence of Haggada and Muslim legend is indisputable. The later Mīdrāzī, as M. Grünbaum has clearly shown, Pirke K. Eliezer, Tanna de bi Eliyahu, Mīdrāzī Haggadot, Sifre haAyyār, Shōket Mūṣār of R. Eliyyah Hakkohen from Smyrna, is influenced in the sections on Abraham and Nimrod by Muslim literature.

NAMRŪS (A.) is a word of many meanings. In St. John's Gospel xx. 26, the coming of the paraclete is announced. In the preceding verse a passage from the Psalms referring to the haters is quoted and in vābūh ṣālimūn given as source. The verses in the Gospel from 23 on were already known to Ibn Ṣāliḥ in an Arabic version which came from a Syrian one as the reproduction of "paraclete" by al-ṣālimūnānī shows. In the same source the word ṣālimūn was left untranslated: for we find it in Ibn Ḥīṣām in the form nāmūs. Biographical tradition makes Waraka b. Nawfā express assert the identification of Muhammad with the paraclete promised by Jesus mentioned in the passage from the Gospel. The oldest form of the tradition giving this episode represent a combination of the Gospel passage with Sūra lxi. 6. In later developments of the tradition the idea of a paraclete gradually falls into the background till it was finally interpreted as the name of an individual and even received an epiphiet. Thus we read in Ibn Ḥīṣām, p. 153 that Waraka replied as follows to his cousin who asked him about Muhammad's first vision: "If thou hast reported the truth to me then truly the greatest nāmūs has come to him, who used to come to Mūsā, and then he (Muhammad) is the prophet of this umma e". In Tabari the "greatest nāmūs" is in a gloss expressly said to be Dībrīl.

As the personal interpretation is not sufficiently explained by meanings, known to be really old, of the true Arabic word nāmūs (root n-m-ū-s) which exists alongside of the Greek loanword, and meanings like "the trusted one, confidant of a secret" rather to come from the Greek loanword already known in its reference to Dībrīl (against Dozy, Supplement, s. v.), it was natural to look for a specific use of the word nāmūs which admitted of a personal interpretation and could at the same time have been known to the Arabs. Nyberg was reminded by the nāmūs doctrine of the Ḥuwaṣ al-S safer (see below) of the pseudo-Clementine writings. He derives the nāmūs of the Waraka tradition from the nāmūs ānāwīn of the pseudo-Clementines, which according to the book Ḫawṣukan Pētōn was revealed to Adam and afterwards again appeared to all prophets worthy of such an honour, lastly to Moses and to Jesus. However startling the agreement of the conception of nāmūs ānāwīn with the later forms of the Waraka tradition, the question still remains open, by what way a personal conception of nāmūs could have entered Islam. Baumstark quoted a passage from the liturgy of St. James of Jerusalem: ṣālimūn biw nāmūs, ṣālimūn biw nāmūs, ṣālimūn biw nāmūs and observes that the liturgy was the authoritative one in the East. The Bolognans translated it in an Arabic translation. It is really quite natural to understand nāmūs personally here. No explanation of our Waraka tradition can on the other hand be obtained from Mandaean writings as Lidzbarski has already pointed out in his translation of the Gūzā, p. 247 sq.

That there is a true Arabic word nāmūs has already been mentioned. The dictionaries give such varied meanings for it that we can only consider as old and original those that are confirmed by quotations. This holds for the meanings "hiding place, hunter's hut, monk's cell" probably also for "business, midee" as means agentis from n-ū-s to "buzz". On the other hand, not only the meaning "cunning" and its derivatives must be secondary, but also the already mentioned meanings referred to persons, the latter especially because the word so far as we know, is used also in the later literature predominantly in the material sense and the person connected with the idea is called ẓālīb al-nāmūs etc. (counter-example: Dozy, s. v.). Just as the material meanings predominate generally, so also does the meaning of the Greek loanword predominate, apart from course from the old poetry, from which the meaning "midge" and particularly the word nāmūsīya "mosquito net" have survived into the modern vernacular. Below we shall therefore deal only with the development of meaning of the Greek loanword.

The favourite meaning is divine law, with or without the addition of ʿalā. This law is revealed through the prophets, and only men of prophetic spirit can be wāṣīt al-nāmūsīya in this sense. The double character, political and religious, of the Muslim constitution naturally very much favoured this conception. Thus, for example, al-Kalqashandi, ʿulī al-ʿālīh, i., Cairo 1903, p. 280 gives as the first among the ḫuwaṣ al-daʿwīn, ʿulī al-nāmūsīn al-mutāʿallīn bi l-muḥākima. Ibn Sina expressly observes in his encyclopedia Akīma al-ʿulīm al-ʿaṣīya (in Maḏmūʿ al-Rasāʾil, Cairo 1328, p. 230 sq.) in treating of politics that the pertinent works of Plato and Aristotle understand
by νόμιμον not “cunning” and “deceit”, corresponding to the usage of the vernacular, but μανιά, revelation, etc., for the laws of the community are dependent on prophecy and the divine law; similarly Sprenger, Dict. of Technical Terms, i. 40. Abū al-Ḥayān al-Tawhīdī devotes the fourth of his Muḥâbahāt to the nāmīs ilḥāḥī (new ed., Cairo 1929).

Here we may mention Miskawāḥ’s (Ibn Miskawāḥ) definition which is also of literary interest. In connection with his discussion of the function of the dinār as a measure of the equivalence (q̲aṣīdā) of service and reward (tawḥīd) to the maqāla, e.g., Cairo, Kǎfiyya, 1322, p. 38), he quotes an alleged saying of Aristotle according to which the dinār is a just nāmīs. Nāmīs, he adds, in striking contrast to Ibn Sīna, means in Greek, σύνεσις and τάδιρ [q.v.}; Aristotle says in the En. Nic., the greatest nāmīs proceeds from God, the second is the judge, the third the dinār; the first, as a condition for just settlement between the claims of men, is the example which the two others follow. The well-known citation of the Muslim books on Hellenistic ethics has resulted in this explanation finding a place in later derivatives from the angels and the divine al-Dīn (Allāh). Al-Būhārī, X, 2, 7 (e.g. Tabūz 1320, p. 152), also Kāmilīzâde ‘Ali b. ‘Amr Allāh al-Hānī, Al-Būhārī, 1348, i., p. 78) and each more fully than the preceding. As a result of these expositions al-Ṭūsī in the economic part of his book (ii, 2, p. 254) calls briefly the smallest nāmīs (translation in Fleser, Der abnorme des Neuplatonikers Bryson, 1928, p. 63) and Kāmilīzâde also follows him (ii, p. 7).

The nāmīs doctrine of the Ikhwān al-Ṣafā’ can only be briefly outlined here. In part i., p. 56 (Bombay ed.), the nāmīs is defined as a spiritual kingdom (nāmīs, rūḥānīya) which is upheld by 8 kinds of men. God appears as the wāqī‘ al-nāmīs. Ṣāḥib al-nāmīs is from the context Muhammad, in so far as one can identify from the context any individuals in the pages of the Ikhwān al-Ṣafā’. A few pages later Muhammad is described as the wāqī‘ al-nāmīs. In part iv., p. 57, the angels appear as teachers of the aṣḥāb al-nawāmīs. Any one who does not guide his life according to the commands and prohibitions of the latter, has no share in divine nāmīs (iv, 47). This spiritual kingdom is the element of the Ikhwān al-Ṣafā’; they sleep in the cave of their father Adam [q.v.] for a long period until the fore-ordained time (mawṣūd) came under the Lord of the Great of the nāmīs (Muḥammad) and they perceived their spiritual state (muḥāṣṣa) which was raised in the air and from which Adam and his wife had been banished (iv, 107). If the Ikhwān al-Ṣafā’ by common effort and uniform self-instruction succeed in building a perfect spiritual state (fāḍilah, cf. al-Fārābī), this state will belong to the kingdom of the Lord of the greatest nāmīs, who has dominion over souls and bodies (iv, 211). The nāmīs thus even becomes a kind of divine being, where there is a discussion of the “philosophic service of God”, which represents the higher stage in comparison with that of the Muslim teaching regarding obligations and duties. This philosophic service of God had been, they say, practised by the ancient Greeks on the first, middle, and last day of the month. The night of the first day was divided into three parts. The first was spent in worship of nāmīs, the second in meditation on the malakāt, the third in humble prostration before the Creator, confession of sins and repetition of prayers by Plato, Idris and Aristotle until the break of day (iv, 273 sqq.). Nevertheless the nāmīs here has not exactly taken the place of God. But in several passages of the encyclopaedia he is represented as giving names. Thus he calls the spirits of the planets angels (ii, 97; cf. iv, 244); he does the same with the natural forces (ii, 102) and (iii, 10) with the nature of origination and decay, Above the spheres (dāwār) of the three kingdoms of nature and of man is the sphere of the divine nāmīs, whose members deal with the affairs of the nasāmīs and the divine revelations and which corresponds to the “surrounding” (ninth) sphere of the astronomers (iv, 251). As the nāmīs and the ability to become creative in him involves a special organisation of man, he has found an allegorical place in the physiology and psychology of the Ikhwān al-Ṣafā’; here indeed the conception changes from page to page. Thus in the first part of the work (2nd half, p. 48) five kinds of soul are described, two above and two below that of man. The former two are the soul of the angels (fāḍilah) soul of which is the stage of the soul of wisdom, the second that of nāmīs-prophethood. On the very next page the one is the intellectual soul of wisdom and the other the nāmīs-like angel soul. On p. 54 we find the following gradation: nature, soul, intellect, nāmīs. Nature receives through the soul free-will, through the intellect the power of thought and through the nāmīs commands and prohibitions. The parts of the soul are as follows: vegetable, animal, logical (human), intellectual (wise), nāmīs, angelic, which latter serves the nāmīs. Here again there is the tendency to personification. It is in keeping with this when in iv, 119 (cf. also iv, 146) the story of Socrates in prison (in agreement with the Greek tradition and mentioning the Phaedo) it is related that Socrates will not escape from prison for fear of the nāmīs; he justifies his attitude with the words: “He who does not respect the nāmīs is slain by it.” When immediately afterwards the nāmīs is identified with the ghotā’s, it is difficult to say whether this is serious or only done out of caution. It is nevertheless remarkable that the sixth essay of the fourth part which treats of the nature of divine nāmīs (iv, 217) in which the qualifications for prophethood and the qualities of a prophet, does not contain the word nāmīs at all but instead of it always has ghotā’s. The Ikhwān have spiritual powers of their own; these form a series of four stages, the third of which is the kuwās nāmīsā; man attains it at 40 and it is the special characteristic of kings and rulers. Possessors of this power are called the distinguished and noble (fāḍilah, kāri’m) brethren. Above it is only the kuwās malakīya (iv, 134 sqq.).

The origin of the meaning “cunning” cannot be given with certainty; it possibly comes from the Arabic meaning “place of concealment”. That it was particularly common in the spoken language is evident from the quotation given above from Ibn Sīna. In any case this meaning has undergone a remarkable amalgamation with the Greek law in the literature of magic for the word is there used for magical formulae, particularly those which are based on illusions of the senses. The pupil of al-Anṣārī [q.v.] in his
Dhail on the latter's Tadkhira, s.v. simiyā (iii., Cairo 1924, p. 56), gives the nanāsīs as the first section of the science known by this name. But the meaning of the word is not limited to this kind of magic formulae.

Through translations from the Arabic the word entered the Hebrew literature of the middle ages with the meaning “law, religious law (of other peoples), moral, propriety”; in the latter meaning it has survived in the modern Hebrew vernacular. It is interesting to note that in the modern dialect of Mecca a similar change of meaning is found; according to Snouch Hurgonje, Mekkanische Sprichwoerter, N°. 10, nanāsī means the “spotsless, honourable name” which one has among men; its opposite is ʿal, “shame”.

The word nanāsī also plays a considerable part as the title of books. The “greatest nanāsī” also occurs as the title of a book; cf. Ivanow, Catalogue, i. 335 sq.

(M. Pleišner)

NĀR. [See Dahhaman.]

NARSHAKHI, Abu Baka Muhammad b. Djafar (d. 348=959), author of the "History of Bukhara," the original Arabic version of which he presented to the Sāmānids Nār b. Nasr in 332 (943–944). In 522 (1128–1129) the book was translated into Persian by Abu Nasr Ahmad b. Muhammad al-Kubwā who omitted several "tedious" passages. Then in 574 (1178–1179) Muhammad b. Zafar prepared a new abbreviated edition of the book which he presented to ʿAbd al-ʿAzzī b. Burhān al-Din, governor of Bukhāra. Finally an unknown author continued it down to the Mongol conquest. It was in the last form that the book was published by Schefer. The book contains many interesting notes on the situation in Central Asia before Islam and details not found elsewhere of the Arab conquest (from Mādānī). The Persian translator added further details of the works of ʿAbū ʿl-Ḥasan ʿAbd al-Raḥman b. Muhammad al-Nāḥṣūrī and probably from ʿAbū ʿl-Ishāq Ibrāhīm [b. al-ʿAbbās al-Ṣūlī], d. in 243 (857). The information about the townships of the district of Bukhāra, their monuments, their products, their old customs (such as the ceremony of Siyāwush, p. 21) is very interesting.

Bibliography: Description topographique et historique de Boukhara par Muhammad Nermachki suivie de textes relatifs à la Transoxiane, publ. by Ch. Schefer, Paris 1892 (Publ. de l’École des Langues Orientales Vivantes, ii. série, vol. xii., p. 1–97). There is also an edition lithogr. in Bukhāra. The only translation so far is that into Russian by N. Lykoglyin, Tashkent 1897 (ed. by Barthold). Cfr. Lerch, Sur les monnaies des Boukhar-Khwâdah, in the Travaille de la 3ème session du congrès international des orientalistes, St. Petersbourg 1879, ii. 424; Barthold, Turkestân, Eng. transl., G. M.S., p. 14; Marquart, Erânslâr, s. index; Marquart, Werhôt und Arang, [1907], p. 139 and passim.

(V. Minorsky)

NASĀ (often Nasī), the name of several places in Persia: in Khurāsān, Fārs, Kirmān and Hamadān; cf. Yaḵūt, iv. 775. (According to Bartholomaeus, nisya means “settlement”)

1. Nasī in Khurāsān was situated in the cultivated zone which lies north of the range separating Khurāsān from the Turkoman steppes. It corresponds to the Nisā, Nisā in the classical authors, celebrated for its breed of horses (Herodotos, ii. 106; cf. Strabo, xi., ch. xiv., § 7). Alexander the Great is said to have built an Alexandropolis at Nisa. According to Isidore of Charax, ed. W. Schoff, Philadelphia 1914, p. 8, the tombs of the Parthian kings were in the town of Nisā, in the neighborhood of the village of Tārās. In 1839, p. 106, he believed he saw in the stock of Turkoman horses descendents of the Ṭā☑nasi Nisā (Avesta, Vendidāt, i. 7 seems to have a different locality in view).

According to Iṣṭakhri, the town of Nasī was very like Sarakhs (i.e. like the half of Marw) and had much water, many gardens and green places and the country round was very fertile. Muḥaddasi, p. 320, 331–332 says that the ten gates of the town were buried in verdure. He confirms the abundance of springs but says the water was not of good quality. Muhammad Nasawi,Strat Djalâl al-Dīn, ed. Houdas, p. 22, says that the place was very unhealthy on account of its very warm climate and that the Turks could only live a short time there. According to Nasawi, p. 50, the town had a strong citadel. The number of tombs of shaikhs and famous men was so great that the Persians called Nasī “little Damascus”; cf. the biography of Shaḵīd Sa’d (d. 1297) in Badrī’s Zavānī; ed. Žukowsky, p. 45) written in the 13th century.

Yaḵūt, iv. 776–778 places Nasī 5 days’ journey from Marw, one day from Abiward and 6–7 days from Nisāpur. Of its dependencies he mentions: i. 480: Bālūz (≔Fruza); i. 857: Taftāzan; ii. 343: Shahristān; iii. 866: Farāwa (=Kizil-Arwat); iv. 328: Kauk. Dūrān, with the fortress Tak (afterwards Yariz) also belonged to Nasā, cf. Barthold, A istorii orosjenyia Turkestana, p. 37–41. Cf. also the Tarīkh-i Nādirī of Mahdi Khān (Nādir’s study) was at Khuramābād, cf. under the year 1044. The ruins of the capital of Nasā are near the little town of Bagir about 12 miles from Ashkhabād and 8 from the station of Basma on the Transcaspian railway.

2. The Nasā in Hamadān perhaps cor-
responds to the Nisāya placed by the inscription of Darius (Behistun, i. 13) in Media. It is possible that the reference is to the plains of northern Luristan [q. v.] (Alištar, Khāwā) where the well-known bronzes of Luristan were found; cf. Minorsky, in Apollo, London, Feb. 1931.

(V. Minorsky)

**NASĀ** — **AL-NASAFĪ**

**NASAFĪ, nisba** [cf. NASAFI] of several eminent persons of whom the following may be mentioned:

1. jābu 'l-Ma'ānī Mā'mūn b. Muḥammad b. Muḥammad. 2. 'Abd al-Khār al-Baghdādi [q. v.], who still is endeavouring to find a convenient arrangement and an adequate formulation of the contents of hulām, and the younger mutakallimīn who have at hand the necessary formulæ for ready use. Of his works the following are known to be:

1. Tamhīd li-ḥawā'id al-Tawhīd (Cairo, MS. 2417, fol. i—30; cf. Fīhīr ... Miṣr, ii. 51), a treatise in which the contents of the creed are proved according to the scholastic method. The first chapter consists of an exposition of the doctrine of cognition, the last of the doctrine of the immaterial. The work closes with a summarīya which contains the doctrina de Deo in an abridged form;
2. Tāshīrat al-Adlīya (Cairo, MSS. 2287, 6673; cf. Fīhīr ... Miṣr, ii. 8), an elaborate work on dogmatics of nearly the same scheme as the Tamhīd; 3. Bājr al-Kalām, printed at Cairo 1329 (1911), differs from the two foregoing works in so far as it deals with heresies and is polemical. It is identical with Muḥāfaẓat al-Sunna wa 'l-Dīrāmīa ma' wa 'l-Furūq al-Dallāla wa 'l-Mufradāt (Leyden, cod. or. 862) as well as with 'Aḥā'īt (Berlin, No. 1941; cf. Ahlwardt, Verszeichniss, ii. 409). The work is preserved in several libraries under one of these titles (Broekelmann, G.A.L., i. 426, where the number of five works must be reduced to three).

**Bibliography:** in the art.; cf. also Ḥāḍirī Khālia, ed. Flugel, index, No. 6453.

II. Aḥū Ḥāfiz ʿUmār Nāṣīd al-Dīn (d. 537 = 1142), jurist and theologian. Of his works the only one edited is the 'Aḥā'īt, which has the form of a catechism. It became popular and was much commented, probably because it was the first abridged form of the creed according to the scholastic method of the new orthodoxy. In Europe it became known early as 1843 through the edition by Cureton (The Pillar of the Creed, No. 2). For editions of commentaries on this text as well as for the other works of this scholar that have come down to us, cf. G.A.L., i. 427 sqq.

**Bibliography:** Broekelmann, G.A.L., i. 428 and the references given there.

(A. J. Wensink)

**AL-NASAFĪ, Ḥāfiz al-Dīn Aḥū ʿUmrākāt ʿAbd Allāh b. ʿAbd Allāh b. Ṭāhā b. Maḥmūd, an important Ḥanafī legist and theologian, born in Nasaf in Sogdiana, was a pupil of ʿAllāmā al-Aṣma al-Kardarī (642 = 1244—1245), ʿĀlim al-Dīn al-Fārī (d. 666 = 1267—1268) and Bād al-Dīn Khwāhārādī (d. 651 = 1252). He taught in the Madrasa al-Kūṭīya al-Sulṭānīya in Kirmān came in 710 to Baghdād and died in Rabi I 710 (August 1310); according to ʿUṣūrī and Ibn Ta-ghrībirdī: 701) apparently on his way back to Idād (in Ḥāzīrzān), where he was buried. His pupils were ʿAbd allah al-Dīn Ibn al-Ṣaʿīd, author of the Maʿṣūma al-Burāq (d. 694 = 1294—1295), and Husām al-Dīn al-Signākī, a commentator on the Ḥīdāya (d. 714 = 1314—1315) [cf. AL-MARGHĀNĪ].

The best of his works is thought to be the Kitāb al-Manār fī ʿUṣūl al-Fiqh, a concise account of the foundations of law (Dehī 1270, Constantinople 1326 and often later); there are numerous later commentaries but he himself wrote two, one of which is entitled Kitāb al-ʿAwar (2 vols., Iṣlāq 1316). Out of his original plan of writing a commentary on the Ḥīdāya of al-Marghānī [q. v.] there came the lawbook modelled on it Kitāb al-Wāfī, on which he composed in 684 a special commentary, the Kitāb al-Kāfī (delivered in lectures in Kirmān in 689). He had previously prepared a synopsis of the Wāfī entitled Kunz al-Duṣākī (Cairo 1311, Lucknow 1294, 1312, etc.) which Ibn al-Ṣaʿīd in 685 (this is no doubt the correct reading for 653 in Kaffawi) heard him deliver in Kirmān. This synopsis was used as late as the sixteenth century in Damsacus and at the al-Āzhār in Cairo (v. Kremer, Mittel-Syrien u. Damaskus, Vienna 1853, p. 136; do., Ägypten, Leipzig 1895, p. 51). The best known printed commentary on the Kunz are: a. Ṭabīyīn al-Ḥaṣibik of al-Zanjī (d. 743 = 1342—1343) in 6 vols., Būlāq 1313—1315; b. Kunz al-Ḥaṣibik of ʿAlī ʻAmmī (d. 855 = 1451) in 2 vols. Būlāq 1285 and 1299; c. Ṭabīyīn al-Ḥaṣibik of Mollā Miṣkīn al-Ḥaṣawī (written in 811 = 1408—1409), Cairo 1294, 1303, 1312, d. Tawfīq al-Raḥmānī of al-Tāfī (d. 1192 = 1775), Cairo 1307 etc.; e. the most important: al-Bayhārī al-Raḥīq of Ibn Ḥudāmī (d. 970 = 1562—1563) in 8 vols., Cairo 1334.

He also wrote a series of commentaries, e.g. two on the Kitāb al-Naqīṣ of Naṣīr al-Dīn al-Samarkandī (d. 656 = 1258) entitled al-Mustaqfī and al-Manār; on the Maʿṣūma of Naṣīr al-Dīn al-Bādi ʿAbū Ḥafīz al-Nasāfi (d. 537 = 1142—1143) on the differences of opinion between ʿAbū ʿAmīr and his two pupils, and al-Saḥārī and Mālik entitled al-Mustaqfī, as well as a synopsis entitled al-Muṣafī (finished on 20th ʿAṣāda 670); cf. Broekelmann, G.A.L., i. 428; also on the Muṣafīkh fī ʿUṣūl al-Dīn of Akhkātī (d. 644 = 1246—1247; Ibn Taḥrībirdī, Ḥāḍirī Khālia, No. 13095). On the other hand, he did not write a commentary on the Ḥīdāya, as Ibn ʿUṭūbīghā and Ḥāḍirī Khālia, vi. 484 say (cf. the story of the origin of his Wāfī according to al-Īkānī [d. 758 = 1357] in Ḥāḍirī Khālia, vi. 191). He wrote a commentary on the Karaḵ, Ṭarīqī al-Tawīl wa-Ḥaṣibik al-Tawīl (printed in 2 vols., Bombay 1279, Cairo 1306, 1326).

His confession of faith al-ʿUṣūr fī ʿUṣūl al-Dīn (apparently also called al-Manār fī ʿUṣūl al-Dīn: ʿUṣūrī, Ibn ʿUṣūrī, became known quite early in Europe from Cureton's edition (Pillar of the Creed, London 1843). In it he closely follows the Aḥūrī of Naṣīr al-Dīn al-Nasāfi (see above) and also wrote a special commentary on it: al-ʿUṣūrātāt fī ʿUṣūrāt.

**Bibliography:** The following borrow from the same unknown source: al-ʿUṣūrī, al-Qurāshī ʿAbd al-Naṣīr, Ḥāḍirī Khālia, i. 270; Ibn ʿUṣūrī, Naṣīr al-Dīnānī fī Tabāfīt Aḥāʾī al-Muṣafī, MS. Berlin, Pet, ii. 24, fol.
may be said to begin with the conversion of Qassan [q.v.]; the chief al-Harīth b. Djabala was an ardent monophysite and in A.D. 542 or 543 he persuaded the emperor Theodora to appoint Jacob Baradaeus as bishop of Edessa with a wandering commission, and Theodore as bishop of Buṣra in the monophysite cause. Nestorian Christianity came to Ḥira [q.v.] at an early date. Its bishops are often mentioned from A.D. 410 till c. 1000 and a monastery was built there by 410. Three Nestorian patriarchs were buried there. Al-Mundhir III (d. 554) [cf. LAKMES] was a pagan though he had a Christian wife, who built the Nestorian church at (HAWRAN) (HAWRAN). Al-NASĂ‘I, Abu ‘Arab al-Ra‘imān Ahmad b. Shu‘ayb, ‘Ali b. Bahr b. Sinān, author of one of the six canonical collections of traditions [cf. HADĪTH], d. 303 (915). Very little is known about him. He is said to have made extensive travels in order to hear traditions, to have settled in Egypt, afterwards in Damascus, and to have died in consequence of ill-treatment to which he was exposed at Damascus or, according to others, at Ramla, in consequence of his feelings in favour of ‘Ali and against the Umayyads. On account of this unnatural death he is called a martyr. His tomb is at Ma‘kka. Al-Nasā‘ī’s collection of traditions is divided into 51 chapters, each of which is subdivided into ba‘āb. As to the sources, considerable space is given to traditions dealing with the ceremonial duties (tahāf): the chapters ʿiḥrāb, ṣuḥr, ṣuḥrāb and ṣuḥrāb (forms of bequest, donation etc.) do not occur in any of the other collections, although a part of the materials contained in them appears under different heads. In the other chapters, on eschatology (jihām, ḥiya‘ān, etc.), on hero-worship (manāẓib etc.), on the Kur‘ān are lacking.

NASĀ‘AR. Christians, more especially the adherents of the Oriental churches living under Muslim rule (differentiated from Ḥām ‘Greek Christians’, Ḫrant ‘Western Christians’). The word is derived from the Syriac Nisā‘ar (Horovitz, Koran Untersuchungen, p. 144 sqq.); the Arabic singular is Nisā‘ar.

A. Before Islam.

A complete investigation of the materials for the history of Christianity in Arabia and among the Arabs before the rise of Islam has not yet been made, and only the principal facts can be summarily given here.

Christianity naturally spread into Arabia from Syria and al-Ṭā‘a though no date can be given for the earliest infiltration. Bishops of the encampments are early mentioned but they should probably be assigned to Syria. Arab Christian history was

B. Under Islam (medieval period).

I. History. It is generally recognised that the attitude of Muhammad towards the Christians, which had at first been favourable, changed towards the end of his life: probably when the expanding boundaries of the Muslim state brought him into contact with Christian tribes [cf. art. MUHAMMAD, iii. 735]. The problem of subject Christians scarcely arose during his lifetime, since his relations with Christian tribes and settlements (e.g. Aila, Dūma) were generally regulated by
treaties, the best known of which is that concluded with the Christians of Nadjrān [q.v.]. By the terms of the treaty, the latter had to submit to the Christians their religion and manage their own affairs, if they paid a fixed tribute, entertained the Prophet's representatives for a month, gave certain supplies in the event of a war in the Yemen, and abstained from usury. To the same period belongs the general command given in the Kurān (ix. 29) to fight against those who have received a book until they pay tribute (here called al-dîfizya, q.v.) and are humiliated.

The conquests of Khalid b. al-Walid suddenly made the problem acute. During the reign of 'Umar it was solved, like all the problems of the state, in a hand-to-mouth way, usually by applying the precedent of the Nadjrān treaty. Hirra, the cities of Syria and Mesopotamia made individual treaties with the Muslim commanders; the terms differ in detail, but all include a fixed tribute. Muslim governors were set over the provinces and big towns, but the minor officials were not changed. The people paid much the same taxes as before and there was little interference with their social and religious life. Sometimes a church or part of one was taken and turned into a mosque; more often, probably, churches and monasteries were also left alone, provided the names were changed. On the occupation of al-İrāk there was a movement among the tribes to seize the conquered lands, and it would seem that a district was for a time assigned to the tribe Badījā (cf. Baladhuri, p. 267 sz.; Kitab al-Umm, iv. 192), but in the end 'Umar applied the precedent established by Muḥammad on the conquest of Khaybar and left the conquered lands to their owners, to be administered as a trust for the benefit of the conquerors [see art. Fāt'j]. On the other hand, he exiled the Christians of Nadjrān to al-İrāk so that "there might be but one religion in Arabia", though isolated Christians lived in al-Madina itself. 'Umar had a Christian slave who was set free at his death ( Ibn Sa'īd, vi. 110), and Abū Māṣa had a Christian secretary who accompanied him to al-Madina. 'Umar is represented, even in Christian sources, as friendly towards Christians, and in his last charge he recommended the dhimmitis to the care of his successor as "the support of your families".

During the following decades the treatment and status of Christians shows many contradictions. They were often determined apparently by individual caprice. While new churches were built even in towns founded by the Arabs, such as Fustat and Baṣra, and the caliph even helped to restore the church at Edessa (Corp. Script. Chr. Or., ser. iii., xiv. 288), in many other places churches were destroyed, and both Muʿawiyah and 'Abd al-Malik tried to seize the cathedral at Damascus before al-Walid finally incorporated it in the mosque. Christians continued to hold high offices in the administration: Muʿawiyah had a Christian secretary, Sayfūn, who was succeeded by his son, and 'Abd al-Asiz had as his treasurer a wealthy Christian, Athanasius, though 'Abd al-Malik despooled him of much of his wealth. State accounts in Syria and Egypt were kept in Greek until the reign of 'Abd al-Malik, and local accounts in Egypt were still kept in Greek for long afterwards. There were Christians in the Muslim armies, and some gave military service instead of tribute. When the Dhārādjiya of Mount Lebanon were defeated, a clause in the treaty stipulated that they should wear Arab dress (Baladhuri, p. 163). Yet there was some persecution related to keeping up the Christian version. Jews were settled in some of the conquered towns because they were enemies of the Christians (Baladhuri, p. 127). The Jacobites paid a special tax to Muʿawiyah (Corp. Script. Chr. Or., ser. iii., iv. 70), and the government sometimes prevented the election of a patriarch. The Christian Arabs of Mesopotamia formed a special category; these paid double zakār instead of tribute, but a chief of Tagḥhāb was savagely tortured because he would not renounce his faith. Personal relations between Muslims and Christians were often friendly. It is said of a poet that he "sang a song about the wife of a Muslim or a dhimmī" (Kitab al-Agānī, iii. 294). 'Umayr showed great honour to Abū b. Zuba'id, and the relations of 'Abd al-Malik with the poet al-Athīr are notorious [see art. Al-Athīr].

From this time, however, the condition of the subject Christians began to deteriorate. 'Abd al-Malik changed the system of taxation in Egypt, Syria and Mesopotamia (Dionysius of Tell Mahrē, ed. Chabot, p. 10; Abū Yūsuf, p. 23 sz.), and introduced the personal tax on non-Muslims. In many districts the form of receipt was a leaden seal fastened round the neck or wrist. 'Umar II gave orders to dismiss all dhimmitis from government service, but such confusion resulted that the order was soon afterwards ignored. He was also the author of the famous "ordinances", in later times attributed to 'Umar I (cf. Abū Yūsuf, p. 73), which prescribed the restrictions to be placed on dhimmitis and the wearing of the sunnaḳ (q.v.) as their distinctive badge. (According to the Nestorian Chronicle [Patr. Or., xiii. 630], this had earlier been the badge of Christian scholars.)

By the end of the second century, as may be seen from the works of Abū Yūsuf and al-Shāfiʿī, the customs governing the dhimmitis were more or less fixed, but insistence on them depended on the whim of the governor and the temper of the populace. It was now accepted that no new churches might be built in towns where Muslims lived, though the old might be repaired. A governor's fancy or a riot might destroy churches and there was no redress; the cathedral at Ṣanʿa', for example, was destroyed for its wealth. At least six rebellions of dhimmitis took place during this century. Ḥarrūn al-Rashīd reenacted the "ordinances" forbidding Christians to be like Muslims in dress and style of riding; but during the reign of Ma'mūn, the Christian headman of Būra in Egypt wore black on a Friday and rode in state to the door of the mosque, when his deputy entered and led the prayers. Their use of horses and riding saddles began to raise objection, and restrictions were placed on religious processions; crosses were sometimes tolerated though banners were forbidden. Taxation became heavier and cases of extortion are recorded. The caliph kept a careful eye on the Church and a patriarch had to get his approval and do him homage, often at a price. A discontented Christian found it easy to get government help in making trouble for his opponents. At this time Christian doctors became prominent as favourites of the caliph and they did not always use their influence in a Christian manner. Discussions on religion took place; at one, when Ma'mūn was present, the Catholics, the Head...
of the Dispersion, the heads of the Şābians, the chief priest of the fire temple and Muslim theologians took part. Many Christians were in government service or were secretaries to public men, and even the fanatical al-Mutawakkil had a Christian secretary. In 236 (850) this caliph intensified the repressive laws. A Christian had to wear a yellow jallāmūn and the zunnār and a woman had to wear a yellow wrap out of doors. If he rode he must have wooden stirrups and two balls on the back of the saddle. Men (or slaves) had to wear the gāšār [q.v.]. They were to be dismissed from the civil service. All new churches were to be pulled down and the cross might not be displayed at festivals. Their graves had to be flush with the ground. The title was levied on their houses and wooden devils fixed to them. Four years later they were forbidden to ride horses and were told to wear two yellow durūs. These laws are the limit of legal persecution and continued to govern in theory though not always observed in practice.

Christians were always to be found in the civil service; some even were connected with the army. In Egypt it was enacted that they should be present on Fridays when the Muslims were absent (Mašrī, Khatīf, ii. 227). One was called wazir in the time of al-Mu'tamid; it seems, however, that the title had become cheap and he was only a high official (Yaqūt, Irshād, i. 130, 259). The first rulers to promote Christians to the highest rank were the Bu'yids [see 'Aḍud al-Dawla] and the Faṭimid(s). This was quite exceptional, but their strength and influence in the administration at all times can be seen from the constant complaints of the dishonesty of Christian secretaries. Moreover, in the finance department they possessed a quasi-monopoly, which lasted in Egypt down to the nineteenth century.

That Muslim intolerance did grow more bitter is shown by comparing the accounts of al-Aḍḥāl in the Kitāb al-Aḍīmāl with the remarks of Ibn Raḍīkh ('Umda, i. 21). In later times the rulers were often more tolerant or far-sighted than the populace; nevertheless, additional taxes were sometimes laid on the dhimmis. In Egypt an extra dinār was exacted from them between 1260 and 1280, in addition to the poll-tax, which was then called gāšiyā (Mašrī, i. 106). At intervals fresh attempts were made to impose a distinctive dress upon them. Their request to wear white turbans with a badge was refused at the instance of Ibn Tāmiyya [q.v.] and in Egypt blue became their distinctive colour. On the whole, they were worse off than their Muslim fellow-subjects, for, while both suffered from oppression by the ruler, they were liable in addition to be attacked by their fellow citizens. Cases of mass conversion still occurred, but the disappearance of the large Christian population of northern Mesopotamia, which continued down to the late middle ages to be the chief centre of Christianity in the Muslim dominions, is probably to be connected with the general decay of agriculture there.

2. Legal status. Here as elsewhere the facts of history do not fit the systems of the theorists, who condemned the laxity of the people on the one hand and the highhandedness of the rulers on the other. The general legal position and the legal view of taxation are outlined in the articles DHIMMA, DIZAYA and KHARĀB. To this outline some details may be added from the system of Mālik, which is less liberal than that of Abū Hanīfa. Mālik taught that a treaty once made with dhimmis cannot be changed. They may not enter mosques or Mecca and the blood money for them is half that for a Muslim. New churches may not be built in or near the towns of Islam though the old may be repaired. Mālik, when consulted, said that a Christian, who had blasphemed the Prophet, should be put to death, and this was done. A Muslim may not borrow from them, nor become a partner with them in business unless he is present at all transactions. Another opinion would let them be sleeping partners. A Muslim should not rent land from them as a méiayer, but it is not illegal, and one who is part owner of a house with a Muslim has the right of pre-emption. One, who is trading in his own town, pays no tax beyond the general tribute; if he goes to another town and buys goods with money brought with him, he pays the trade tax (tithe), but there is no tax on the sale of these goods. Dhimmis must not kill sacrifices for Muslims; if they do, the sacrifices must be repeated. A Muslim woman should kill a beast rather than ask them to do so. If one marries a Muslim woman with the consent of her guardians, they shall all be punished, but if he pretended to be a Muslim, the marriage is invalid. They may not arrange a marriage for a Muslim woman nor a Muslim that of his dhimmīs sister. Married dhimmis are divorced by the conversion of the woman. Mālik did not approve of dhimmis foster-mothers for Muslim children. If a Muslim commits adultery with a dhimmī, he is punished according to his own law; his co-religionists are to be dealt with according to their law. The evidence of a dhimmī is not accepted. Should he turn Muslim, his evidence is still not accepted (i.e. about things that happened while he was a dhimmī), consequently dhimmīs women cannot give evidence about a birth. If a Christian buys or is given a Muslim slave, the transaction is valid, but the slave must be sold to a Muslim. Muslim law applies to all business dealings between dhimmis, except usury, though they may practise this among themselves. They may not be taught the Qur'ān. A Muslim may not prevent his Christian slave from drinking wine, eating pork and going to church. It may be noted that Māwardī admits the possibility of a dhimmī becoming wazir (wazir al-tanfīdā). One authority says that eight acts put a dhimmī outside the law: an agreement to fight the Muslims, fornication with a Muslim woman, an attempt to marry one, an attempt she is handed over from his religion, robbery of a Muslim on the highway, acting as a spy or guide for unbelievers, or the killing of any Muslim.

3. Social Status. The fact that Christians, like other dhimmis, were citizens as it were at second remove, was of course reflected in their social position. The full consequences of this disability were to some extent mitigated by their numbers and influence in the public administration, and by their monopoly or quasi-monopoly of important professions. Christians were distinguished more especially as doctors (the family of Buḥṭišī, Ibn Buṣlān [q.v.] etc.) and druggists. A Muslim complained that he could get no patients in an unhealthy year because he spoke good Arabic and not the dialect of Dāndīšābār [q.v.] and
were cotton instead of silk (Dāhāzi, Kität al-
Buğlāhī, p. 85) and al-Ghazālī says that in many
towns the only doctor was a dhīmūnī, who was
rich, and it was often their immodest display
which provoked the mob to violence. The pro-
hibition of usury in Muslim law operated in favour
of the dhīmūnīs as merchants and money-changers,
and gave them the monopoly of such trades as
those of goldsmiths and jewellers.

Apart from numerous instances of friendly per-
sonal relations between individuals, the generally
good relations between the Muslims and Christians
is shown by the universal celebration of the great
festivals of the Christian year, and the holidays
and feasts which accompanied the feasts of the
patron saints at the principal monasteries (cf. A.
took part in the intellectual life of the commu-
nity, and the books they wrote are named with
approval by the Muslim historians. The strict letter
of the law regarding non-Muslims was not always
applied. While marriage to a Muslim was always
forbidden, fornication with one was not always
punished with death. At times the Muslim murderer
of a dhīmūn was executed. Even the apostate
sometime found mercy, on the ground that forced
conversions were not valid. Christians kept Muslim
slaves, both male and female, and acted for Muslims
in business.

In spite of all this, the stigma of inferiority
remained. The humiliating regulations, the need
for constant watchfulness, the constant recourse
to intrigue and influence to circumvent the law,
the segregation of dhīmūnīs in many cities, in-
evitably warped their morale. Still more serious
were their legal disabilities; there could be no
true justice for the dhīmūn when his evidence
was excluded from the Muslim courts, even though
kādis were enjoined not to discriminate against
them in other respects, nor could there be any
permanent social relationship in the absence of
intermarriage. It is not surprising therefore that
the Christian communities of the East gradually
dwindled not only in numbers, but also in vitality
and moral tone.

C. The Ottoman Empire.

Since the period of the Tānūsīnī [q.v.] the Otto-
man Empire has gradually abandoned the govern-
mental traditions of Muhammadan states, and this
change has fundamentally affected the treatment
of its Christian subjects. On the other hand, this
change was actually brought about by the very
problems with which the Ottoman government
became confronted through the existence of a large
Christian population in its territory.

Up to the beginning of the sixteenth century the
optimism of Christians in the Empire was, on the
whole, in accordance with the prescriptions of the
sharī'a after the Ḥanafī madīkhāb as to the
restitution of dhīmūnīs, the chief authority on these
questions being the Multaqa 'l-Āhur of
Ibrahim al-Halabi (cf. the Constantinople edition
of 1309, p. 90). Christians were subject to the
payment of the ḥārāṣa gēbērēn, more often called
ṣarāis in Turkey (cf. these two articles), whence the
expression ṣarāis-gēbērē. This tax was levied in
three classes, according to the financial capacity of
the payers. D'OSSOHN (Tableau, iii. 4 sqq.) says that
in his time (about 1860) each year 1,600,000
tax-forms were issued for the non-Muslims, of
which 60,000 were in the capital. The regulations
as to the building and restoration of Christian
churches were observed in principle; the Ḥanafī
madīkhāb allows the restoration of decayed churches
but not of churches deliberately demolished; SHEIKH
Zāde, however, in his commentary on the Multaqa
(Multaqa 'l-Āhur, quoted Constantinople 1276,
p. 415) complains that this distinction was not duly
observed in his time (1666). From the sixteenth
century indeed the building and rebuilding of churches
was a subject of frequent intervention by the
representatives of foreign Christian powers. The
turning of churches into mosques by the Ottoman
conquerors — such as the case of the Aya Sofya —
was generally in concordance with Islamic laws
of war. Likewise the prescriptions about clothing,
which were observed and from time to time reinforced;
as late as the nineteenth century certain sultans such as
Ottomans III and Musafar III are known to have
given special attention to this point.

We also find in the ḳānūn-nāma — the contents
of which were declared in accordance with the
sharī'a by the Sheikh al-Islām — some special
clauses about non-Muslims (ṣāfīra). A ḳānūn-name
of the time of Süleimān I prescribes that, in the
case of certain crimes that are punished by
fines, the fines of non-Muslims shall amount to
only half the sum inflicted on a Muslim in each
case (cf. the second ḳānūn-nāma, published as
appendix to T.O.E.M., iii. 3, 4, 6). The same
ḳānūn-nāma gives directions with regard to the
inheritance of non-Muslims.

The Christians thus constituted in the Ottoman
Empire, just as in other Muhammadan states, a
section of the population which, so far as their
relations with the Government went, had minor
rights compared to Muhammadans and to which
the high functionaries of the state never belonged.
They were improperly designated by the term
ra'īyā, which word originally means all subjects of
a Muhammadan ruler, in allusion to a well-
known tradition which compares the ruler with a
shepherd and his subjects with a flock (ra'īyā,
cf. al-Bukhārī, Qūn'a, bāb 11). Hence the use
of the term ra'īy in European works when
speaking of the Christian subjects of the sultan.
ḲSense [q.v.] was a more or less contemptuous
expression in the idiom of Muslim circles.

There had been, however, since the coming into
existence of the Ottoman Empire, several circum-
stances that presented the problem of the Christian
subjects in forms quite different from those pre-
vailing in contemporary Muhammadan states. The
begunnings of the Ottoman state itself had been anything but orthodox. Erzurum, according to most sources, was only a converted Muslim and Omeyyad and Orkhân, the founders of the state, had many dealings with the Christian aristocracy of Bithynia, some of whom joined readily the cause and the creed of the new conquerors. Christianity was at that time still widely spread in Asia Minor and was at first adapted to the rather unorthodox mystic form in which the Turcomans of Ruğhad made acquaintance with Islam. Large parts of the population adhered for centuries to a Christian-Islamic mixture of religious convictions, such as appeared in the derwish revolt of Simawa Oghlu Badr al-Din (cf. Babinger, in *İslam*, xi.), and as survived in the beliefs and practices of the Bektâşis and the mixed worship of certain saints by both the Islamic and the Christian population. Survivals of this mixed creed were also observed among the so-called Crypto-Christians of Trebizond (cf. Hasluck, in *Journal of Hellenic Studies*, xli. 199 sqq.). It was only after the restoration of the Empire in the xvth century that the orthodox Islamic attitude prevailed in the government of the sultans, which repeatedly had to take strong measures against the heterodox elements.

During this same period it was of no less importance that the Ottoman Empire came to incorporate more and more territories in Europe exclusively inhabited by Christians. With the exception of eastern Thrace, northern Macedonia, Bosnia and Crete, the new subjects were never Islamized in great numbers; in the Empire they came to form a very considerable minority, which was counterbalanced only by the large Muhammedan population of the Asiatic territories. So long as the government and the Muhammedan ruling class were strong, this did not affect the political system. But this ruling class itself, as well as their powerful military instrument, the Janissaries, were recruited in a large measure from the Greek and Slavonic Christian population of the European provinces and often kept up friendly relations with their non-converts kinsmen (one of the many instances is that of Lysandros Khalil Pascha under Muhammed II). Accordingly much consideration was shown to large parts of the Christian population, and the more so as many Christians served on minor posts in the state chanceries, where they performed important administrative duties (Crassius, *Turco-græcia*, p. 14). Besides, many high-placed persons, including the sultans themselves, had, through their harems, many Christian relations without and within the Empire. So the domestic and foreign policy of the state often brought about measures of toleration, which were not altogether in accordance with the strict demands of Muhammedan law. An outstanding example is the way in which Constantine and its Christian inhabitants were treated after the excesses of the first days of the conquest were over. Muhammed II did all that he could to re-populate his new capital, even with Greeks, when the Muhammedan element proved insufficient; he even had a new Ecumenical Patriarch chosen not long after the conquest (cf. Fr. Giese, *Die Stellung der christlichen Untertanen im Osmanischen Reich*, *İslam*, xix., 1931, p. 264 sqq.). Only afterwards, in the first half of the xvth century, when Muhammedan fanaticism had increased, there was a party which invoking the fact that the town had been taken by force (*'antwār*), claimed the destruction of all churches that were left to the Christians, and only with great difficulty was evidence constructed to prove that Constantinople was really taken by a capitulation (cf. J. H. Mordtmann, *Die Kapitulation von Konstantinopel im Jahre 1453*, in Byzantinische Zeitschrift, xxii., 1912, p. 129 sqq.). Other signs of fanaticism in the same period are i. a. the intention attributed to Selim I to convert all Christians to Islam, the wish of Murad III to turn all churches into mosques and the alleged oath of Murad IV to exterminate all Christians. Still, apart from these occasional outbreaks, tolerance prevailed. In the capital a Greek Christian aristocracy and plutocracy was permitted to live in the quarter of Phanar; from their midst came influential persons such as Michael Kantakuzenos, the "pillar of the Christians" (Jorga, iii. 211) in the xvth century, and the well-known Phanariote families who later supplied dragomans to the Porte and the princes of the Danube principalities.

The official attitude towards the Christians was complete abstinence from their domestic religious and secular affairs so long as this did not affect the public order. This explains also the tolerance towards the activities of the Roman Catholic missionaries who were sent from the xviith century onwards to convert the eastern Christians. The government took no interest in the different denominations of Christians, while their internal divisions reinforced its authority. R. Gragger in his article "Türkisch-Ungarische Kulturbeziehungen (Litteraturdenkmaler aus Ungarns Türkenzeit", in Ungarische Bibliothek, i., No. 14 (Berlin 1927) depicts the tolerant attitude and the sometimes amused interest of the Turkish Pashas in Hungary in the religious disputes between Roman Catholics and Protestants. On the other hand, the serious domestic troubles amongst the Greeks belonging to the much decayed Ecumenical Patriarchate, as the result of which the party of the patriarch Cyrilus Lucaris took, in the first half of the xviith century, a definite anti-Roman Catholic attitude, could not be wholly indifferent to the Porte, because from that time on the only political protector of the Greeks was the Ottoman government. Arbitrary measures, such as occasional executions of the patriarch (for the first time in 1657; v. Hammer, *G. O. K.* 2, i. 474) and excesses in war time are not sufficient to refute the statement that the attitude of the government was on the whole tolerant.

What, at length, came to influence most deeply this attitude was the interest shown in the lot of the Christians by the governments of the Christian powers with whom the Porte began to enter into peaceful relations. In the first centuries those foreign Christians who were allowed to reside in the seaport towns fell within the category of *musta'min*. Legal conceptions of that time did not distinguish sharply between religious denomination and nationality, both being designated by the word *millet*; therefore a foreigner who embraced Islam was entirely assimilated to the Muhammedan subjects of the sultan. In course of time *millet* came to be used also for the different "national" denominations of the Christians within the Empire. The first foreign power to be interested in the Christians of Turkey was the Vatican, as was manifested several times by the inevitable participation of the Popes in the preparation of anti-Turkish crusades. The Cardinal Protettore di Levante in Rome exercised, through his vicar, considerable influence
on the Latin Roman Catholic community of Pera, which, since the conquest of Constantinople, had enjoyed, like the other Christian communities, administrative independence. This "religious protection" was not altogether in conformance with the wishes of the Christians themselves (G. Young, *Corps de Droit Ottoman*, Oxford 1905, ii. 244), but at those times the Porte followed a policy of non-intervention and did not seize the opportunity of placing these Christian inhabitants of her territory under her more direct control. The same policy made her accept without difficulty the monstrosities of a second, more powerful, protector, the King of France, who already before the conclusion of the treaty of 1535 had begun to act as intermediary between the Catholics in Jerusalem and other places in the Levant and the Porte. This intervention of France—which, in the eyes of Christian Europe, served her as an excuse for her entering into diplomatic relations with the Porte—was tolerated equally in favour of other than French ecclesiastics and missionaries, and of non-French Christian prisoners. Occasionally France's protection was also invoked by other than Roman Catholics; in 1639, the Oecumenical Patriarch himself asked the French King to declare himself protector of the Eastern Church. The French capitulation of 1673 recognized at last the protectorate of the King of France over the Roman Catholic foreign Christians, though a general protectorate over all the Christians in the Empire had been demanded originally; the famous capitulation of 1740 confirmed the dispositions of that of 1673 (cf. G. Pelissier du Rassas, *Le Régime des Capitulations dans l'Empire Ottoman* [Paris, 1860 sqq.]).

A third powerful protector of Christian interests this time of the Greek Orthodox Christians, arose in the xviiith century in the person of the Russian Czar. Shortly after the fall of Constantinople Ivan the Great had begun to regard himself as successor of the Byzantine Emperors and, as the power of Russia increased, the Greek orthodox Christians in the western and eastern parts of the Empire came to look upon the Czar as their natural protector. Especially the Christian institutions in Jerusalem and the much impoverished patriarchate of that town benefited by the Russian religious interest. On the other hand, Russia learnt to use her influence with the Orthodox Christians as a powerful political instrument. The peace treaty of Kückuck Rainardje (1776) recognized at last the right of the Russian diplomatic representatives to interfere in favour of the Christians in the Empire.

With the weakening of the Empire in the xviiith century the so-called "religious protection" became a heavy burden on Turkey's inner political conditions. Especially after the disastrous happenings under Mahmut II's reign, it became clear that the old Muhammadan conception of the state, which left the Muhammadans entirely to themselves, or to others, could no longer be maintained. It was one of the chief stimuli to the introduction of the Tanzimat. In order to retain as much control as possible over her Christian subjects the Porte now had to apply her governmental activity equally to non-Muslims and Muslims. Accordingly the Khatt-i Sherif of Gül-Khâne (1839) declared that perfect security was guaranteed to all subjects, Muslims or ra'dâqâ, as to their lives, their honour and their possessions. Still in the following years no important administrative measures were taken, while on the other hand the intervention of foreign powers in Christian affairs continued and led amongst other incidents to the outbreak of the Crimean War in 1853. An incident of 1843, in the meantime, had made the Porte give a formal assurance to the French and English ambassadors with regard to the non-application of capital punishment to persons who had renounced the Muhammadan creed (Young, op. cit., ii. 11 sqq.).

The law of May 10, 1855 is an important landmark in the history of Ottoman policy towards the Christian subjects; this law abolished the capitation tax for non-Muslims and envisaged the possibility of their service in the army [cf. Djeva and the *Bibliography* of this art.]. This legislative measure was completed by the Khatt-i Humâyûn of February 18, 1856, which may be regarded as the Magna Charta of the rights of the non-Muslim subjects of the Empire; in this memorable edict the rights and privileges of the different religious denominations and their members were proclaimed with more detail; as to their military service the edict laid down the principle that it could be replaced by the payment of an exemption tax, which, under the name of bedel, came to be regularly applied to all non-Muslims. In accordance with the contents of the Khatt-i Humâyûn, the Ottoman legislation now began for the first time to take notice officially of the existence of the great number of Christian communities existing in the Empire. Organic statutes were elaborated for the more important of these communities (called millet): in 1860 for the Armenian Gregorian community and in 1862 for the Greeks and for the Armenians. In 1870 followed the institution, with the cooperation of the Porte, of the Bulgarian Exarchate, while in course of time a host of laws, decrees and regulations were issued, containing more detailed provisions with regard to these and the minor communities: Patriarchates of Antioch and Jerusalem, Mount Athos, the Serbian Church, the Nestorians, the Latin communities, and the different churches united with Rome (Armenians, Chaldeans, Maronites, Melkites). This highly complicated legislation aimed at making these Christians Ottoman subjects in the full sense of the word, but met with great difficulties created by the existence of an aged system of autonomy and by the frequent intervention of the foreign powers. The leading principle of the government was to divest the purely religious authorities as much as possible of their power and to reinforce the power of the lay institutions. This policy led to endless troubles in which new regulations continually tried to restore order. In the constitution of Midhat Pasha (1876) İslam was proclaimed as the State religion, but immediately afterwards there follows the declaration that the profession of all recognized religions in the Empire is free and that all privileges granted to the different religious communities shall be maintained (art. 11). Art. 17 guarantees the personal freedom of all Ottoman subjects and art. 17 their complete equality before the law.

All the time during the period of reforms the Turkish government had to reckon with reactionary feelings against the gaunts in large sections of the Muhammadan population, which in many instances made the application of equal treatment, before the law and elsewhere, illusory. This justified to a certain extent the never ending remonstrances
of the European powers, who lost no opportunity of insisting on new reforms in favour of the Christians. Art. 62 of the treaty of Berlin (July 13, 1878) stipulated again for the equal treatment by the Ottoman government of all non-Muslim subjects, amongst others that every one, without difference of religion, should be admitted as a witness before the law courts.

The effect of the foreign intervention in their favour encouraged on the other hand large sections of the Christian population to disloyal feelings and actions against their legal government. While the latter did what it could do to assimilate the different groups of the population, the factors of dissolution became at the same time ever stronger. Even the peaceful relations that had hitherto characterized on the whole the intercourse between Muhammandans and Christians — especially in the cities — began to make way for religious hatred between group and group, in which the government officials were often unable to observe the required neutral attitude. Amongst many other symptoms the Armenian troubles which began in 1889 in the Armenian vilayets — where a racial antagonism between Muhammadan Kurds and Christian Armenians had existed for centuries — were the most disastrous. They led to repeated Armenian attempts at revolt and to the notorious massacres in Constantinople of 1897.

By this development the treatment of the Christian subjects ceased to be a religious problem; it became a problem of nationality (jillet in the new acceptance of the word) and of race, and at the same time one of the vital problems for the Empire. After the revolution of 1908 and the re-establishment of Midhat's constitution, these facts were not yet fully recognized. The Ottomanization of all subjects of the Empire was seriously attempted; the new representative bodies included a number of Christian members; occasionally there were Christian ministers. Then the world war precipitated the inevitable course of events. This time non-Muslims were for the first time incorporated in the Turkish army, but only for service behind the front. At the same time, the domestic policy of the Young Turks took a pan-Turkish turn, from which religious motives were quite absent. National Turkish feeling prevailed. The measures of deportation of Christian inhabitants from the frontier zones — measures from which the Armenians especially suffered terribly — were inspired by fear of disloyalty towards Turkey, though in their execution remnants of religious fanaticism, notably on the side of the Kurds, certainly played a large part.

The events after the armistice of Mudros have proved that a great part of the Christian population preferred independence or incorporation into a Christian state to remaining with Turkey. And the Turks themselves also were ready to part with their Christian subjects. Under these circumstances were concluded at Lausanne, in 1923, the agreements with Greece for the exchange of the Greek population of the new Turkish state against Turks established in Hellenic territory; only Constantinople and some islands were excluded from this measure. Since by the events of the war the number of Armenians and other Christians in Asiatic Turkey had already been reduced to a very small minority, the result was that the present Turkish republic has only to deal with a Christian population of no numerical importance, most of whom live in Constantinople. The Lausanne treaty of 1923 and its annexes (213 articles 33-45) only the obligation for Turkey to treat the minorities on an equal basis with the Turkish subjects; it provides for their right to live after a personal law statute of their own. Finally the treatment of Christians in Turkey has definitely ceased to be a legal problem in the old sense of the word since, by the alteration of the Constitution on April 5, 1928 the state has been completely secularized (cf. Tarih, Istanbul 1931, iv. 213) by cancelling the article declaring that the state religion is Islam.

J. H. KRAMERS

AL-NASAWI, MUHAMMAD B. AHMAD B. 'ALI B. MUHAMMAD, an Arabic historian, biographer of the last Khwārizmshāh Djālāl al-Dīn Māngulītī (q. v.), was born in Khurāsan (Bakhtiyār, ii. 415), an estate in the district of Nasā (q. v.) in Khurāsan where his family was reputed to have been already settled in the pre-Muhammadan period (Hist., ed. Houdas, p. 53). During his father's lifetime he represented him when the vizier Niẓām al-Mulk, dismissed from office by Sultan Muḥammad, visited the family estates on his journey to Khwārizm and was received by him (ibid., p. 30). He only mentions incidentally that he had stayed in his youth with Inānḵhan in Māzarārān before the latter had risen to power. When the Mongols invaded Khurāsan in 1221 he had already succeeded his father in his ancestral citadel, which he saved from sacking by payment of 10,000 ālīs of cloth. Niẓām al-Dīn al-Samānī was his guest at this time; he enabled him to escape to Khwārizm before the arrival of the enemy and in gratitude Niẓām al-Dīn procured him a rich grant of land from Oẓūlīg Shāh, son of Muḥammad (p. 57 sqq.). When in Nasā, the capital of his district, Nasrāt al-Dīn Ḥamza b. Muhammad, the representative of a local royal family, came to power as successor to his nephew Ikhtiyār al-Dīn (p. 99), he appointed him his nāsīb (p. 104) and in this capacity he took part in a battle fought by Inānḵhan, as governor of Khurāsan, at Nakhdjuwār near Nasā against the Mongols; according to the full story of the battle (p. 66), this was the only occasion on which he personally took part in a battle. When after the death of Sultan Muḥammad (1220) his eldest son Ghiyāth al-Dīn ascended the throne, Nasrāt al-Dīn took the side of his younger brother Djālāl al-Dīn, and for this an expedition was sent against him under Tūlāk, son of Inānḵhan. To save himself he sent Nasawī with 1,000 dinārs to Ghiyāth al-Dīn. After long wanderings and a two months' sojourn in Isfahān, he succeeded in giving the money to Djālāl al-Dīn's minister Sharrāf al-Mulk, who then wrote a despatch to Tūlāk ordering him to abandon the siege of Nasā; but this arrived too late and Nasrāt al-Dīn had already been slain (p. 109). Nasawī did not now dare to return home but went to Djālāl al-Dīn when the latter had entered Marāgā. He was appointed by him Kāthīb al-Iṣṭaḥdār (p. 110) and henceforth accompanied his master on all his campaigns. When Djālāl al-Mulk 'Alā al-Dīn to escape the jealousy of the vizier Sharrāf al-Mulk had himself appointed governor of Nasā he awoke such discontent that the vizier's misgovernment that he was dismissed. Nasawī was appointed in his stead governor of his native town with the title of vizier but had to stay with Djālāl al-Dīn and sent a deputy to his governorship (p. 149).
When Djalal al-Din in 1230 was surrounded by the Mongols at Hant and fought his way out once again, Nasawi became separated from him and was kept a prisoner for two months in Amid but finally made his way to Mayyafarikin where he learned of the sad end of his king who had been murdered by a Kurd on Aug 16, 1231 (p. 245).

Ten years later in 639 (1241), he wrote the history of his sovereign entitled Sirat al-Sultan Djalal al-Din Mankiberti. He opens with a confused and romantic account of the early history of the Mongols and begins his subject with Muhammad’s campaign to the ‘Irak in 614 (1217). He relies for his facts mainly on the stories of high officials of his hero’s court; as a result his interest is mainly in diplomatic documents and administrative measures while military matters, which were his hero’s main occupation, are dealt with rather briefly. His model was apparently the Kitab al-Yamini of al-’Utbi which his master Nasrat al-Din was said to know by heart (p. 104); but he had not al-’Utbi’s sure command of Arabic so that his style is fortunately much simpler and more matter of fact, in spite of all his attempts at rhymed prose and plays upon words. Persian influence on his style, which Houdas claims to notice, is on the other hand nowhere marked.

(C. Brockelmann)

NASHAW B. SA’ID B. NASAWI AL-HIMAYR AL-YAMANI, an Arab philologist. The notices of this individual and his career are exceedingly scanty. In Yaqut’s Irshad and in Suyuti’s Buqayha he is described in laudatory terms in the usual phrases as a great scholar, authority on fah, philology and nask; he was also distinguished as a historian and poet and was equally versed in the other branches of anad. He compiled a dictionary entitled Shama’ al-Ulam wa-Dawad al ’Arab min al-Kulam in eight (according to others eighteen) volumes which his son later revised and condensed into two volumes; he also wrote a treatise on rhyme, Kitab al-Kawashi, and a book of a religious and philosophical nature, Kitab Hur al-In wa-Tanbih al-Samii’. We know neither the year nor the place of his birth, nor with whom he studied nor in what places he lived. Only one story of his life has survived and that sounds improbable. Yaqut says he was a great chief who besieged cities and fortresses and ruled over a hill-tribe in the Sahar range. Al-Suyuti takes this story from Yaqut. According to al-Suyuti, he was a follower of the Mu’tazila. He is said to have died on the 24th Dhu ’l-Hijjah 573 (1117). The importance of Nasawi lies in the fact that he was particularly well acquainted with the South Arabian tradition. He took up the work of his predecessor al-Hamdani [q. v.], the task of rescuing from oblivion the legends of the South Arabian kingdoms. He uses these as the basis of his work and gives long quotations from the writings of his predecessor. His famous so-called Himyarite Kasidah, al-Kasidah al-Himaryah, is based on such traditions of the Himyarite rulers; it celebrates their deeds of the splendid South Arabian kingdom. In the commentary on this poem the annotator gives very full notes, in which he narrates legends of South Arabian princes and their history. Von Kremer supposes, relying on internal evidence, that the author of the Kasidah and the commentator are the same person i.e. that Nasawi himself wrote the commentary on his Kasidah. The commentator, whose name is not given, must at any rate have been very well acquainted with Himyarite tradition. In the already mentioned dictionary Shama’ al-Ulam, Nasawi also uses his knowledge of South Arabian history. Whether all the facts given by him are historical cannot be discussed here; many of them are certainly based on tradition, since Nasawi himself, as his nida shows, was of South Arabian blood. His works played a part in the struggle of the tribes of the south Arabian origin against the northern Arabs for predominance in the Muslim world.

NASHWÂN — NASIB

(ILLE LICHENSTADTER)

NAST (A.), intercalary month, intercalation, or man on whose authority an intercalation is undertaken, a word of uncertain meaning in Sûra ix. 37 and in Muham- mad’s sermon at the farewell pilgrimage (Ibn Hishâm, p. 698; cf. the article Hâdj). Nastî, nasy and nasî are variants and the word is connected with nasi’ to “postpone” or “add” or with nasiya to “forget”. In any case, it is given in Muslim tradition a meaning which brings it into connection with the method of reckoning time among the pagan Arabs. The Qur’ânic verse describes nasi’ as “a further expression of unbelief” and is therefore forbidden to the believers.

For the meaning of the word in the calendar we have the context of the above mentioned passages where sometimes the number of months in the year is put at twelve and sometimes the number of “holy” months at four. Kur’ânic exegesis as a rule connects nasi’ with the “holy” months and explains it sometimes, it is true, as the postponement of the hâdjâ from the month fixed by God for it, but sometimes, and preferably, as “transference of the sanctity of one holy month to another, in itself not holy”. The expositors are also able to give the reasons for such a postponement in full detail. As a rule however, these are pure inceptions in which suggestions and perhaps memories of old traditions are freely expanded. A collection of such expositions in the form of regular hâdiths is given in Tabari, Ta’rif, 2nd ed., x. 91—93.

The critical examination of these explanations reveals however traces of an older conception not quite unknown to Tradition, even in the form in which we have it, according to which nasî means either the intercalation of an intercalary month or the month itself. This interpretation of the word is the only one really acceptable in the circumstances. The association of the pre-Islamic hâdjâ with annual markets made it necessary to fix the hâdjâ in a suitable season of the year. For that purpose a prolongation of the lunar year in some way was necessary and nothing contradicts that older tradition according to which it was obtained by the intercalation of an intercalary month. The lunar month was the only unit of time available for the purpose because it was the only one which the Beduins, the customers at the markets, could observe directly. Thus had only to let them know at the hâdjâ of a year whether they had to reckon to the next hâdjâ twelve or thirteen months.

Definite evidence of this intercalation of a month is found in the astronomer Abû Ma’shar al-Balkhi (d. 272) in his Kitâb al-Ulûtî (see F.A., ser. vol. xi. [1858], p. 168 sqq.) and following him in al-Birûnî who also deals at length with this intercalation in his Chronology (ed. Sachau, p. 11 sq., 62 sqq.). According to him, the Arabs took this intercalation from the Jews. How much in what these scholars tell us is really historical knowledge and how much intelligent reconstruction can hardly be decided. It is remarkable however that al-Birûnî when dealing fully with the Jewish intercalation (op. cit., p. 52, 77) connects the Hebrew word for intercalary year, šabbîr, with mîwâhirâth “pregnant woman” and observes: “they compare the addition of a superfluous month to the year to the woman carrying something which does not belong to her body”. In this connection we may recall that Tabari (op. cit., p. 91, 3) explains the Arabic nasî as nasî “pregnant woman” among other interpretations, saying nasî’at al-mar’a, “on account of the increase which the child in her means”. This agreement in the two explanations, which can hardly be accidental, might really indicate that nasî in the sense of intercalation or intercalary month is modelled on the Jewish šabbîr and thus support al-Birûnî’s statement which is in itself not impossible. Cauassou de Perceval (F.A., ser. iv., vol. i., p. 349) even quotes the Hebrew nasi (prince) as a title of honour of the leader of the Sanhedrin, to whom fell the duty of dealing with the intercalation (cf. Rab. Talmud, Sanhedrin, p. 112: “the intercalation of the year may only be done with the approval of the nasi’”). According to one of the meanings of the Arabic nasî given in Tradition, it was really the “name of a man” (see above), a meaning which is all the more remarkable in this connection, as it does not suit the Kur’ânic passage. There is a definite agreement in the fact that in the Jewish intercalation only the month following Adar was an intercalary month while in the Arab system, as the critical examination of Tradition — contradicting the literal interpretation of its text — shows, only the month following Dhu l-Hijja i.e. the intercalated month in both cases was inserted between the normal last month and the normal first of the year, Nisân or al-Muharram.

Nothing certain is known about the process of intercalation among the Arabs. It can only have been periodic and irregular attempts at correction based on observation of nature, particularly vegetation. The technical part must have been exceedingly simple and primitive. The same is true of the Jewish intercalation in the older period (see Bab. Talmud, op. cit., p. 10b—13b). As the Jewish system served to move the feast of Pesâh to a suitable season of the year, the Arab system only at present seems to be the same for the hâdjâ and the fairs associated with it in the vicinity of Mecca. It was not intended to establish a fixed calendar to be generally observed. The Beduins had never had one and they have no use for one. According to Tradition, the management of the nasî was a prerogative of the Banû Kinânà; and indeed fairs were held on the lands of the Kinânà.

Bibliography: A. Möberg, Ana-nasî in der islamischen Tradition, where the most important references are given. (A. MOBERG)

NASîB (A.), the introductory lines of the Arabic kaṣida [q.v.] which are devoted to recalling the memory of a woman whom the poet loved long years before. The nasîb is, so far as we know, the only kind of love-poem which has survived to us from the Arabic literature of the pre- and early Muhammedan period and is almost the only place where women are the subject in the poetry of the Arabs. The essential feature of the subject of the nasîb is always the lament of a man for a lost beloved. Even in the earliest kaṣidas that have survived the nasîb is already
in the stereotyped form. It treats its subject again and again in the same way with only the slightest variations. We can distinguish three constantly recurring principal motives:

I. A Beduin on his wandering through the desert passes a spot where there are the traces of a tent-trench which has fallen in, dried camel dung, sooty stones, which once formed a cooking place, and tent-pegs. From these things he sees that this spot has been the resting-place of wandering Beduins. After some reflection he recalls that his tribe encamped here long before, jointly with another tribe, during the spring grazing and that he himself spent a happy time with his beloved.

The poet usually then gives a description of the deserted camping place, the affal; it can only be traced with difficulty as the wind and the rain which has fallen upon it have obliterated it and made it almost unrecognizable. The rain has produced a rich vegetation and gazelles and antelopes with their young have found shelter there.

II. The poet recalls the day when the two tribes, his own and that of his beloved, struck camp. There had been various signs of the approaching departure. The camels were brought back from the pastures and loaded; the raven, the bird of ill omen, also foretold the separation to the poet. In his mind he again sees the camels with their litters before him and compares them to ships: the women sit in the litters, among them his beloved. They go off and he follows them in spirit.

III. While grief for his lost beloved is keeping the poet awake, she sends him from far away her khatayil, a vision of herself. He is surprised that his delicate beloved has been able to travel so far, as she was never a good walker. The vision arouses painful memories in him and he weeps copiously as he recalls the beauty of his beloved.

Each of these three themes may be followed by a full description of the personality and journey of his beloved; she is a distinguished and modest lady, one of the noblest of her tribe; she is frequently married and sometimes even has children. Her husband is held up to ridicule. She is coquettish and likes to torment her lover. Her physical charms are described very fully and the various parts of her body celebrated in fine similes (in the style of the wasf, cf. the Song of Solomon and the Alit-ägyptischen Liebeslieder, ed. W. Max Müller). Her dress, her perfume and her jewellery are described in laudatory terms. The feelings of the lover are then detailed. Grief has made him old and grey; he is ill with longing for his beloved and after all these years his tears still flow at the thought of her.

Like all early Arabic poetry the nasib in matter and structure follows with considerable strictness a definite chain of ideas so that there is a certain uniformity about it. We constantly find the same or similar comparisons; the ideas of the different poets do not differ essentially from one another but only the form and method of expressing them. The traces of the affal look like writing made by the kalam on parchment. The girl is like a gazelle or an antelope, a simile which continuously recurs with new variations. The tears of the poet run like water from a leaky skin or fall like pearls from a necklace when the string is broken and so on. In consequence of the wealth of the Arabic language in synonyms these similes have an ever-new charm in spite of the many repetitions. Stereotyped metonymies, such as we find in all branches of Arabic poetry, are also common in the nasib. Thus the beloved, the affal, the showers of rain, and parts of the body etc. are designated by metonymy. The nasib usually begins (in so far as it has survived in its entirety) with formal phrases: li-man al-diyr et c.; frequently it ends with dâ' dâa 'leave this', whereupon the poet turns to the description of the camel.

The nasib had already become fixed in form in the pre-Muhammadan period, and no poet could break away from it. Gradually its contents became more and more colourless; it became more and more stereotyped and stiff. In the old Arab poetry there is already no difference between the nasib of a Beduin and that of a townsman. Kais b. al-Khatîm, Hassân b. Thâbit and 'Adi b. Zaid describe the beauty of their beloved in the same way as, for example, Imra' al-Kais, and lament their separation from her just like a Beduin poet. We must remember however that in the pre-Muhammadan period even a townsman knew Beduin life (of 'Adi b. Zaid we know that he spent a part of the year in the desert; cf. Kitâb al-'Aghâni, Cairo 1928, ii. 105). In later times however, the poets no longer knew the life of the desert from their own experience; the nasib thus became more and more stereotyped. In the end it became a matter of ridicule that every kâsid began with the lament at the affal; a critic of the 'Abbâsid period (cf. Goldziher, Abhandlungen, p. 144) asks whether every man with a command of language who would write a good poem must of necessity be lovesick.

From the nasib we learn of amatory relations of a kind which probably played a considerable part in pre-Islamic Arabia. These were unrestricted relations, not contracted in the forms which were already used in pre-Islamic Arabia at a marriage. They were based on natural inclination and spontaneous devotion and ended with this. As is evident from the nasib such unions were usually concluded in the spring grazing season when different tribes were encamping peacefully side by side. When the end of this fine season of the year came these love affairs also came to an end as a rule. The position and the reputation of the kholi (as the beloved is often called) were not affected by this illegitimate relation; she remained in her tribe and went off with them, while a ba'ith did not live with her tribe.

As is the case with all Arab poetry, the question what is the oldest nasib and its origin cannot be answered. Arab tradition records that Muhâllab was the first to put a nasib in front of a kâsid; this does not mean however that he was the first to compose one. In the Kitâb al-'Aghâni (Cairo 1928), ii. 123 sq. we find a parallel to the nasib. Al-Nu'mân sent to King Anushirwân a girl with an accompanying letter which described her merits of mind and body. In the tales of the roos Nights also, nasib-like poems are inserted but these are all of a comparatively late period. Many parallels may be found in the Song of Solomon, and old Egyptian love-poems resemble in spirit and conception and frequently often in phrase the Arabic nasib.

NASIB, a town in Mesoopotamia. The name is derived from Semitic origin and to be derived (with Philon Byblos in Step. Byz.; Muller, F. H. G., iii., 571, fig. 8) from Nasib in (nasib). The idol of Nasib is said to have been called Abul (Assemani, Bibl. Orient. i., Rome 1719, p. 27), i.e. stone or El (according to W. Robertson Smith, Religion of the Semites, London 1887, p. 210, note 1). On coins the usual form of the place-name is NESEB (Urbanus in Step. Byz.; Nesibis; Pinly, Nat. hist., vii., 42; Nesebis); in the Scriptures (Historiae Augustae and elsewhere we find the forms Niti, Niter, Nizibi, etc. (J. Markwart, Sudarmenien u. d. Tigrisquellen, Vienna 1930, p. 259 sq., note 1), in Armenia the town is usually called Mebin (on the form see Markwart, op. cit., p. 166 sq., note 3); Mattéos of Edessa (ed. Watrampat, 2nd ed., 1988, p. 245 = Durlurier's transl., p. 206) calls it "Nesib, also called Mebin or Nesib" (also on p. 62 Nesib). But he also mentions a "Nasib, which is the town of Sitar" (p. 157 = p. 158, ch. xxvi. of Durlurier's translation which (p. 413 wrongly connects these with our Nasib and Sippa) which lies on the left bank of the Euphrates on the road from Severak to Savvarek (Arabic Suwaiyda) to Hsin Mansur (Armen. Harsan Musroy) (Mattéos, p. 157 = 130 Durlurier; 186 sq. = 157 sq. Durlurier). This Nesib corresponds to the "town of Nasib in the bank of the Frat, called Nasib al-Kum, 3-4 days journey from each of Amid and Harran on the road from Harran to the land of Rum" (Yakut, Muqaddim, iv., 789), in Pseudo-Wa'ätz (Fudaij Darab wai-darab Bakr, transl. by B. G. Niebuhr, in Schriften der Akademie von Ham., vol. i., ii., Hamburg 1847, p. 50, 175 sq.) mentioned along with Suwaida, i.e., Suverek, as Nasib al-Saghiri, the name of which is marked on the Turkish General Staff's map of 1333 (1917-1918), scale 1:200,000, sheet Siverak-Kharput, 20 miles almost due west of Siverak and 1/2 miles from Kanjara at a bend of the Euphrates. The Syriac authors usually identify Nasibin with the Sûhâ of the Bible and say that Nunrod founded the town (Michael Syr., Chron., transl. Chabot, i., 20; Barbelaeus, Chron. Syr., ed. Bedjan, p. 8).

The town lay in the plain below the Măsûr oğuz [see Tör Ḍarûn] on the river Mydgonias (Theophil. Simok., ed. de Boor, v., 5, 6; Muqaddim), the Hirma of the Arabs, Nahar Mâshi or Mâshi of the Syrians (Assyr. Kharmish; Noledeke, in Z. D.M.G., xxxii., 328), the modern Diaghjagh. The country between Nasibin and the Tigris was called Bêh Ārabaye by the Syriacs (Theophil. Simok., i., 15, 2: Barlasch, iii., 10, 1: v., 1, 2; 3, 2: A'ubili; G. Hoffmann, Anzeige aus syr. Akten pers., Mart., p. 23, note 170), by the Armenians Arwastan (cf. Arwastan, in J. A., 1869, p. 168; Arwastan-ar

Frömm. Justi, Beiträge, i., 16, 24; Marquart, Eräänahr, p. 162 sq.).

The town is mentioned as early as Assyrian times under the name Nasibin, first, so far as we know, about 900 B.C. in the reign of Adad-nirari II (O. Schroeder, W. V. D. O. G., xxxvii., N° 84, i. 41 sq.) In the period between 852 and 715 B.C. it was the capital of a province whose governors were allowed to hold the eponymy (Forrer, Provinzteilung des assyr. Reiche, p. 32, 106; Schachermeyr, article Nasibine in Reallexikon d. Vorgesch., viii., 1927, p. 449). In the last wars of the Assyrians with the Babylonians Nasibin is mentioned in 612 B.C. (C. J. Gadd, The Fall of Niniveh, London 1923, p. 35, Cuneiform tablet, British Museum 21901, reverse, 1. 48).

Seleucus I is said to have settled Nabibis with Syrians (C.I.G., iv., 6585; Tscherikower, Philologia, suppl.-vol. xix., part i, p. 89 sq.). The Macedonians called the town Αντρεσιμία ἐν τῷ Μεσσαλία (Strabo, xvi., 747). In the reign of Antiochus IV. the Ptolemies struck coins with the legend Αντρεσιμία ἐν τῷ Μεσσαλία (Brit. Mus., Catal. Seleucid. Kings, p. 42, N° 86-88; Head, Historia Numorum, 5, 815). Tigianes of Armenia took the town from the Parthians, who then held it, and put his brother Geras (Gher) in command of it; in the war against him, Lucullus occupied it in 68 B.C. (Plutarch, Luc., p. 32, 4 sqq.). The Armenian historians say that the town was from the middle of the second century B.C. to the beginning of our era the capital of the Arshakund kings and later of king Sasantras (St. Martin, Mémoires sur l'Armenie, i., Paris 1818, p. 161; Marquart in Hersfeld, in Z. D.M.G., lxviii. 659 sq.). About 37 A.D. the Parthian king Artaianus III took it from the Armenians and gave it to king Iazes of Adiabene (Joseph, Ant., xx., 3, 9). In the period of the Parthian war of Corbulus (62 A.D.) it was Parthian or Adiabenian (Tacit., Ann., xx., 5). The emperor Trajan took Nasisin again and Hadrian restored it to the Parthians (Dio Cass., lxviii., 23). In the Parthian war of Lucius Verus, it again suffered a siege by the Romans, as a result of which a pestilence broke out in it (Lucian, De conscrib. hist., p. 15). The Parthians fled across the Tigris and the town then doubtless repassed into the hands of the Romans. After the victory of Septimius Severus over Pescennius Niger, the princes of Osrhoene and Adiabene asked that the emperor should withdraw the Roman troops from Nasisin in return for an acknowledgment of his suzerainty (Dio Cass., lxv. 1, 2 sqq.). The emperor then went to Nasisin in 195 A.D. and made it the capital of a new province; it was now given the name of Septimia Nasisi Colonia Metropolitana (Dio Cassius, lxv. 3-2; Hill, Catal. of Greek Coins, Brit. Mus., Arabia, Mesoopotamia and Persia, London 1922, p. 5, 119-124; MacDonald, Catal. of the Hunterian Collection, iii., 315, pl. lxix.). After the emperor's departure the governor Laetus defended the town against the attacks of the Parthians. After the assassination of Caracalla in 217 A.D. the Parthians again besieged it but then made peace with Maximinus. The first Sassanian Ardashir at once besieged Nasisin (Zonar, xii., 13; Geogr. Synkell, p. 674). It was taken by the Persians in the reign of Maximinus but in 242 regained by Gordian III's son-in-law Timeites; Philip the Arabian, under whom it was given the name of Julia Septimia Colonia Nasisib Metropolis, soon withdrew however from the whole.
of Mesopotamia. Odenathus of Palmyra in 261 again took Nisibis from the Persians and destroyed it (Histor. Aug., Trebellius Popplio, Triginta tyrannis, p. 13; 39). Decius, instead of passing the town, which had become Roman again at the peace of 297 A.D. (Marquart, Erdkunde, p. 169), the sole centre of trade between Persia and the Roman empire (Petr. Patai, frag. 14. in F.H.G., iv. 189 Cod. Just., iv. 63-4 Expositio totius mundi et gentium, p. 22 in Riese, Geoer. lat. min. p. 108) and one of the principal fortresses on the Mesopotamian Imses (on the Imses see Poidebard, Syria, xi. 1930, p. 33-42). In the Persian wars of Constantius, the Nisibin, Orientis primam maximum citatum (Amman Marcel, xxv. 8, 14), was three besieged (326 and 346 and A.D. (Peeters, Anab. Syn., xxxviii, 1920, p. 285-373). During the first siege died the monk Jacob of Nisibis, the teacher of Ephraim, who had built the great church in his native town in 313 A.D. Perhaps he is to be regarded as the founder of "the Persian school" of Nisibis, which Ephraim transferred from there to Edessa in 363 as a result of the persecutions by Shapūr II (on it see I. Guidi, Gli statuti della scuola di Nisibis, in Giornale della Societa Asiatica Italiana, iv., 1890, p. 165-195; J.-B. Chabot, L'Ecole de Nisibis, in Rev. de l'Architecture Islamique, s. v. ii, 1896, p. 43-93; Baumstark, Gesch. d. syr. Literatur, Bonn, 1922, p. 113 sqq.; Th. Herrmann, Die Schule von Nisibis vom 3.-7. Jahrh., in Zeitschr. f. neutestament. Wiss., 1926, p. 89 sqq.).

In the war of 359 Shapūr II at first passed by Nisibis on his way to Tela and Amida, while the Roman army was stationed at Nisibis (Amman, Marc., xxv. 7, 1-9). After the death of Julian, Jovian, and the death of the conquerors of Nisibis, the peace of 363 (Amman, Marc., xxv. 7, 9-11). The inhabitants were allowed to migrate to Amida (Amman, Marc., xxv. 8, 15-9; 6). Zosimus, iii. 33 sqq.; Ps. Dionysius of Tellmahma, Chron. under the year 674; Syr. Vita of Ephraim, ed. Lamy, p. 24 sq., Feustos Byz., Venecia 1832, p. 26; Nau, in R. O. C., ii., 1897, p. 58). They were perhaps sent on from here and settled in the above-mentioned "Little Nisibin." From this time the frontier on the Imses was Sargatho, 70 stadia west of Nisibis, the modern Serdijeb-Khan (Nimkomm, Syria, x. 1929, p. 283 sqq.). The Romans made frequent attacks on the lost town but always without success, for example in 421-422 A.D. after their victory at Sargatho (Socrat., Hitt. Etat. vii. 18), in 503 under their general Areobindos (Josep. Styl., ch. 51, p. 44, ed. Wright; Mich. Syr., transl. Chabot, ii. 159), in 526-527 under the Pus and Strateles Timostratos (Zach. Rhet., ix. 17, 256) and in 572 under Patriarch Marcellus (John of Ephesus, iii. 6, 5). In the sixth century the inhabitants were still inclined to be friendly to the Romans (Ps. Zach. Rhet., vii. 5, p. 211, ed. Land). After the Nestorian academy of Edessa had been transferred to Nisibis in 489 by the Metropolitan Barsawmā as a result of the persecutions of the Nestorians in the Byzantine empire, the town remained for centuries the intellectual centre of Nestorianism (cf. also Mas'ūdi, Kitāb al-Tawhīd, ed. de Goeje, p. 150). In the reign of Khusraw II the Church of St. Sergius in Nisibis was built (Theophyl. Simok., v. 1, 7). Sergius Strateletes was held in particular veneration by the nomadic tribes of this region (Noldeke's Tabari, p. 284, note 1; Peeters, in Huchard, Vienna 1911, p. 187; Herzfeld-Sarras, Archäol. Reise im Euphrat-u. Tigrisgebiet, i., 1911, p. 138, note 2).

Sa'id al-Dawla began his campaign against Armenia in 328 (940) from Nisibin (Freya, in Z.D.M.G., x. 467). Byzantines in 331 (942) under John Kurkutas invaded Mesopotamia and took Mayafārīkūn, Arzan and Na'ilūn (Barhebraeus, op. cit., p. 179; Welt, Gesch. der Chal., ii., 699). Nisibis by this time probably belonged to the Hamdanid Naṣir al-Dawla (Z.D.M.G. x. 185 under the year 547 (1158); Z.D.M.G. x. 482). After his death in 558 (968-969) his son Abu 'l-Muyazzar Ḥamdūn was for a short time governor of Nisibin (Z.D. M.G., x. 485). The Byzantines again attacked the town under the Domestics (the Armenian Mēkh) on the 1st Mahram 362 (Oct. 12, 972) and instituted a dreadful massacre in it (Barhebraeus, p. 192; Z.D. M.G., x. 486; Welt, iii. 19 sqq.; Yahyā b. Sa'd al-Anṣārī ed. Krackowsky-Vasilev, p. 15 = Patrol. Orient., xxiv. Paris 1932, p. 353 wrongly makes the Emperor John Tzimiscē himself conduct the campaign; cf. against this: D. N. Anastasiōv, in Rev. Zeltsch., xxx. 1929-1930, p. 403 sqq.).

Halab in 1171 took the town without opposition and dealt rigorously with the Nestorian Christians there. All their new buildings were destroyed the treasuries plundered and about 1,000 volumes of their writings burned (Mich. Syr., iii. 359 sq.). After his death, his nephew Saif al-Din of al-Mawsil seized the town (Mich. Syr., iii. 360). It surrendered to Salih al-Din in 1182 (Barbareus, Chron. Syr., p. 360). In the following year the latter gave to ʻImād al-Din Sinḍjār, Nasibin and other towns in exchange for Halab (Barbareus, p. 362) and he ruled there until his death in 594 (1198) (Barbareus, p. 398, 402). In the region of Našibin there was fierce fighting in 582 (1186–1187) between Kurds and Turkomans (Barbareus, p. 370). ʻImād al-Din was succeeded in 1198 by his son Kutb al-Din but Nūr al-Din Arsāfnāš h of Mawsil immediately took the town from him. But when a severe epidemic wrought great havoc in his army, he abandoned it and Kutb al-Din returned thither (Barbareus, p. 402). Nūr al-Din in 600 (1203–1204) took part in the siege of Našibin (Barbareus, p. 416 sq.). Malik al-ʻAlī al-Din took the town in 606 (1210–1211) from Kutb al-Din (Barbareus, p. 424). After his death (615 = 1218–1219) it passed to Malik al-ʻAsfahr of Urfa (Barbareus, p. 424, 439).

The Arab geographers placed Našibin in the fourth clime, the southern boundary of which ran about 12 farsakh south of the town on the direction of Šindžar (al-Masḍūdī, Kitāb al-Tamkhī, p. 32 sq., 35, 44). According to Yaḥūṭ, it lay on the upper course of the Hūrūs in the midst of numerous gardens. Ibn Hawšal, in 53 (966–967), visited the town which lay at the foot of Djabal Bašā, speaks of the pleasant life in it, apart from the dangerous scorpios found there. Al-Makdīsī describes the fine houses and baths, the market, the Friday mosque and the citadel. Ibn Djabair also visited it in 580 (1184–1185) and mentions its gardens, the bridge over the Hūrūs inside the town, the hospital (mārzīthān), several schools and other places of interest. In the vilāt (xvth) century it was already for the most part in ruins; but the Friday mosque was still in existence and the gardens around it from which rose-water was exported (Ibn Baṭṭūta). Ḥamd Allāh Mustawfi, according to the words of the author, the circumference of 6,500 paces, praises its fruits and wine but laments the unhealthy moistness of the climate, the large number of scorpios and the plague of midges.

Hūlūgī in 657 (1259) occupied the city, Našibin and Harān (Weil, Gesch, der Chaliften, iv. 10). The Mongol Khan Mangū Timūr (q.v.) died, poisoned in Džarāt b. ʻOmar, on his way from there to Našibin on the 16th of Māḥarram 631 (April 26, 1282; Barbareus, p. 546 sq.). When Timūr Khan in 1395 was on his way to Ṭūr ʻAbdin, the people of Našibin and Maʻarrā hid in caves from the Mongols but were suffocated in them with smoke (App. to Barbareus, Chronographic, ed. Wehde, p. 57; p.xxiv.). The Ḥasanāyīs Kūnids in 1402 pillaged Našibin and the country around (ibid., p. xxiv.).

The town passed into the hands of the Ottomans in 1515 (v. Hammer, G. O. R., ii., Pest 1828, p. 449 sq.). It became the capital of a sandjaq in the pashalik of ʻĀmid (Hādżīḗ Khālīf, Džahan-nūmā, Stambul 1732, p. 438). Later it was placed in the sandjaq of Mardin in the pashalik of Baghdād (St. Martin, Mémories sur l'Arménie, i., Paris 1818, p. 161 sq.). To its position on the southern border of the highlands and on the road from al-Mawsil to Syria it owes its great strategic and commercial importance. The building of the Baghdād railway has brought it new life; it is said now to have about 50,000 inhabitants.

AL-NAŠĪR LI-DIN ALLĀH, ABRU ʻL-ʿABBĀS AHMAD B. AL-MAṬĀṢĪ B. AL-ΜΑṬṢĪ, the 34th Abāsīd caliph (575–622 = 1180–1225), was
the son of a Turkish slave-girl named Zumurrud. He was the only caliph of the later period of the caliphate who was able to pursue a consistent policy. This was entirely directed towards restoring the temporal power of the caliphate. The caliph was assisted by the fact that the Seljuk empire which had previously held the secular power had begun to collapse. In the confusion which brought about its final downfall, the caliph did all he could to hasten its end and did not hesitate to support the Khwarizmshah Takshak as the strongest rival of the dying Seljuk empire in his fight against the last Seljuk Sultan Tughrul II. This struggle finally ended in the defeat of the Seljuk's at Kutay where Tughrul died fighting (Rabi’I, 590 = March 1194).

As a result of the political diversities of the two allies a quarrel broke out between the caliph and the Khwarizmshah as soon as negotiations for the partition of the Seljuk territory were begun. The caliph wished to seize the opportunity to extend his personal estates by incorporating the Persian provinces while the Khwarizmshah in the exercise of the temporal power wished to succeed to the whole inheritance of the Seljuk's. While Takshak was involved in war in the east, Ibn al-Kasab, the caliph's vizier, was able to conquer Khuzistan and other Persian provinces (beg. of 591 = 1195). His troops were however completely routed by Takshak on his return (Shaban 592 = July 1196) so that the caliph had to abandon his conquests. Only Khuzistan was left to him.

In the years following, the caliph had a hand in the intrigues of local rulers in Persian Iran, usually against the Khwarizmshah (from 596 = 1200 'Ala al-Din Muhammad). The disputes with the latter culminated in 613 (1216) when the caliph had a supporter of the Khwarizmshah, Oghalhish, vizier of the governor of Persian Iran, assassinated by Isma'ili envoys. The Khwarizmshah now began to prepare for the decisive struggle against the caliph; he prepared for war and in 614 (1217) invaded Persian Iran. Here, in order to destroy the caliph as a political force also, he had his 'ulama' in a fitna declare the caliph al-Nasir unjust for the caliphate and appointed an 'Ali named 'Ali al-Mulk from Tirmidh as imam. The caliph in vain attempted through negotiations to persuade the Khwarizmshah to retreat. Instead he advanced on Baghda from Hamadhan. But he was unable to deal his blow at the caliph owing to an unexpected circumstance; for in consequence of the early coming of a severe winter, which destroyed his army, the Khwarizmshah was forced to abandon his march and return home with the intention of advancing on Baghda next year.

In order to meet the danger threatening him, the caliph however in the meanwhile began negotiations with the Mongol Qingiz Khan in order to persuade him to attack the Khwarizmshah. In 616 (1219) the latter was attacked and decisively defeated by Qingiz Khan before he could resume his intended campaign against Baghda. He died while fleeing from the Mongols on an island in the Caspian Sea (617 = 1220).

The caliph had thus achieved his immediate aim and rid himself of his most dangerous opponent for the moment. But the Mongols were approaching perilously near him, especially after the conquest of Maragha (618 = 1221) had established them in Ḍhārbārī. At first however, there were only minor complications with the Mongols.

On the other hand, after the temporary withdrawal of the Mongols, the young Khwarizmshah Djalal al-Din Mangubarti, Muḥammad's son and successor, attacked al-Nasir and took Khuzistan from him.

As al-Nasir had concentrated his whole attention on the east where he was fighting to strengthen and increase his private domains, he took no interest in the west where Saladin was waging his great struggle with the Crusaders and gave Saladin very insufficient help in spite of several appeals from him.

Al-Nasir's policy seems also to have aimed at the restoration of the internal unity of Islam in addition to restoring the temporal power of the caliphate. He himself had a leaning to the Shi'a of the Imamite sect (Twelver-Shi'a) and invited Alids to his court; he seems to have wished to reconcile in person the claims of 'Abbasids and 'Alids. He also established an agreement with the extreme Isma'ili sect of the Assassins. In 608 (1211-1212) the Grand Master of the Assassins, Husain III, abandoned his claims to the imamate and paid homage to the 'Abbasid caliph.

Al-Nasir's efforts to centralise round his person the order of chivalry known as the futuwa in a reorganised form are also perhaps connected with his political plans; in 578 (1182-1183) he had himself been admitted by the Shaikh 'Abd al-Lajabbar b. 'Seeb into the futuwa order. He then only allowed those of the organisators of the order to remain in existence which acknowledged his personal control. By admission into the order he was then able to establish connections with the princes of the Muslim world, who now regarded him as the head of their order (the chronicles tell us of this in the year 607 = 1210). Ibn al-Furat gives us a description of the robing of a prince as an external sign of his admission into the order in the presence of the caliph's envoy (the story is reproduced in V. Hammer, in J. A. 3rd ser., vi, 1855, p. 285 sq.). The strict regulations introduced by the caliph into the futuwa order are well illustrated in the blazon of 9th Safar 604 (Sept. 4, 1207), published by P. Kahle in the Oppenheim-Festchrift, which the caliph had issued on the occasion of the murder of a member of the order.

Al-Nasir died on the last night of Ramadān 622 (Oct. 6, 1225) at the age of about 70. Ibn al-Athir describes him as tyrannical towards his subjects and inconsistent in his measures; his fondness for the futuwa and its sporting activities (cross-bow shooting, training carrier pigeons) seems to him a strange caprice. Ibn al-Tikjaši judges him more favourably; he describes him as unceasingly engaged in the duties of a ruler and lays stress on his rich endowments, although he also mentions his fondness for money. When a medieval Muslim ruler is reproached with covetousness it usually only means that he was endeavouring to carry through a sound and cautious financial policy. Al-Nasir is further reproached with having allied himself with the Mongols and thus being the cause of the great disaster which the Mongol hordes later inflicted on the lands of Islam.

Among buildings known from inscriptions to have been built by al-Nasir are the Talisman Gate in Baghda (618 = 1221-1222; blown up in March 1917 on the retreat of the Turks from Baghda) and
the sanctuary of the Mahdi (Chaibat al-Mahdi) in Sāmarrā. Both are interesting and suggestive for his political aims, the latter as a distinctly Shi'a sanctuary for his Shi’a tendencies and the Tallman Gate for the remarkable pictorial representation once visible upon it; the caliph seated between two dragons, the jaws of which he is tearing apart and grasping their tongues. According to M. van Berchem's brilliant interpretation, we have here the caliph represented as victorious over two enemies, who had disputed his spiritual power: the Grand Master of the Assassins Ḥasan III as for a time the representative of the most radical opposition to the orthodox 'Abbasid Caliphat, who had finally paid homage to the caliph on 608 and died in 618; the other, the Khwarizmshāh who had dared in 614 to set up an anti-caliph but was overcome in 617 and died a fugitive. In this connection the inscription is also interesting; in it the caliph uses the expression al-dawr al-hāliyya, which is a name the Assassins gave themselves (cf. M. van Berchem in J.A. ser. 9, vol. ix., 1897, p. 456 and 462), for his own caliphate, his conquest of the world. Bibliography: The chronicles of Ibn al-

AL-NĀṢIR IBN ALENNAS (the last name is also written 'Ālān, 'Āmnās and even Chilin by Ibn Diahārī), fifth ruler of the Ḥammādīd dynasty, succeeded his cousin Bulükkin b. Muhammad in 454 (1062). His reign marks the apogee of the little Berber kingdom founded by Ḥammād [q.v.]. The ephemeral rise of the Ḥammādīds was the immediate result of the downfall of their relations and neighbours, the Zirids of Irikiyya, the first victims of the Hīlāl invasion. On his accession, al-Nāṣir, who lived in the Kal'at Banū Hammād, was already ruler of a little kingdom, the chief towns of which were Ashīr [q.v.], Miliana, Algiers, Hamza (Buira), Naga and Constantine. Shortly afterwards, he regained Biskra whose governor had rebelled against Bulükkin; but his chief hope of extending his territory lay in the decline of the kingdom of Kairawan.

The abandonment of the old capital by the Zirid al-Mu'izz and his flight to al-Mahdiya (1057) had left Irkiyya a prey to anarchy. The country districts were in the hands of the Arabs and the towns had chosen their own rulers; on all sides governors were in rebellion; leaders of the tribes imposed their authority on the threatened citizens; some towns turned to the Ḥammādīds who were able to protect them. The people of Kastiliya [q.v.] for example sent a deputation to al-Nāṣir to convey him their homage; the people of Tunis did the same. At their request the Ḥammādīid sent them as governor 'Abd al-Ḥaʃık of the Ṣanḥādja family of the Banū Khurāsan. The latter worked wonders; he negotiated agreements with the marauding Arabs which secured the safety of the city. Later, after casting off Ḥammādīid suzerainty, he made Tunis the capital of a kingdom.

If the arrival of the invading nomads had meant an immediate accession of strength to al-Nāṣir and an increase of population and economic activity to his capital, they were not without danger as neighbours. The Arabs soon involved him in a dangerous adventure. In 457 (1064) the Athbāʤī, one of their tribes, asked him to help them against their enemies, their brethren the Riyāḥī, who had joined the Zirid ruler Tamīm [q.v.]. Al-Nāṣir agreed, seeing an opportunity to invade and perhaps annex Irikiyya. He put himself at the head of a large army which included Arabs, Ṣanḥādja, and even Zenātā, led by the king of Fās, al-Mu'izz b. 'Atiyā. The Riyāḥī in their turn received subsidies and arms from al-Mahdiya. The armies met at Sība, near the ancient Sufes. From the first the Zenātā of Fās, won over by the enemy, gave way, which resulted in the rout of al-Nāṣir. With great difficulty he reached Constantine with 200 men, then the Kal'a the outskirts of which were systematically sacked by the Arabs.

After this disaster al-Nāṣir tried to make terms with the princes of al-Mahdiya, but the negotiations failed, perhaps through the fault of the ambassador, and al-Nāṣir incited again by the Athbāʤī, resumed hostilities against the unfortunate Zirid kingdom.

He entered Laribus and Kairawān (460 = 1067) but these successes led to nothing; he had to abandon them again as he could not hold his conquests. These adventures, into which he was dragged by the Arabs and which brought him no lasting advantage, lasted for some ten years. In 470 (1077) al-Nāṣir made peace with the Zirid Tamīm and gave him his daughter in marriage.

The Arab scourge which had ruined the kingdom of Irikiyya began now to threaten seriously the Ḥammādīd kingdom. The Zenātā, hereditary enemies of the Ṣanḥādja lords of the Kal'a, found among the immigrant nomads allies always ready to resume the conflict. In 468 (1075), the Zenātā chief Ibn Khurāsan, supported by the Arab Banū 'Adī of Tripolitania seized Msiḥa and Ashīr. Al-Nāṣir succeeded in driving him back to the desert where, drawing into him a trap, he had him murdered. He sent his son al-Mansūr against the Zenātā Banū Tadjīn, who had joined the Banū 'Adī and were laying waste the country districts of the Central Maghrib. The rebels were caught and tortured.

The Athbāʤī Arabs themselves, of whom al-Nāṣir had hoped to make valuable auxiliaries, proved most undesirable neighbours. Although he seems to have put down — not without cruelty — the majority of the revolts, life in his ancestral capital became more and more difficult from year to year. This decided him to select another. Occupying the lands of the Bilāḍī Berbers, he founded there, on the site of the ancient port of Saldae, a town which was first called al-Nāṣiriyah and later became known as Bougie. There he built the splendid Palace of the Pearl (Kaşr al-Luṭlū). "Having peopled his new capital he expelled the inhabitants from the kharādž and in 461 (1068) he settled there himself" (Ibn Khaldūn). The exodus of the Ḥammādīd royal family to the coast was caused by the same event as had led the Zirids of Kairawān to move to al-Mahdiya: the settlement of the nomad Arabs in Barbary and the insecurity which resulted in the interior. This exodus was only completed under al-Nāṣir's successor, his son al-
**AL-NASIR**

The latter assumed power at his father's death in 481 (1088).

**AL-NASIR, the name of two Aiyūbīds.**

I. AL-MALIK AL-NASIR SALAH AL-DIN DAWūD b. AL-MALIK AL-MU'AZZAM, born in Dîjmađâdî 603 (Dec. 1205) in Damascus. After the death of his father at the end of Dhul-Ka'ādî 624 (Nov. 1227) Dâwūd succeeded him on the throne of Damascus and the Mamūlīk *iz al-Asrâb al-Malik* acted as regent. Dâwūd's uncle's however, covetous of territory, did not leave him long in peace. Al-Malik al-Kâmil [q.v.] first of all claimed the fortress of al-Shawbaq [q.v.] and when it was refused him he occupied Jerusalem, Nâbulus and other places (625 = 1228).

In this perilous position, Dâwūd appealed to another uncle al-Malik al-Asrâf, who administered the Aiyūbīd possessions in Mesopotamia. The latter came to Damascus but then took al-Kâmil's side and arranged with him a formal division of the whole kingdom. By the arrangement between the two brothers al-Asrâf was to receive Damascus and Dâwūd Harrân, al-Râka and Hims, while al-Kâmil took southern Syria with Palestine, and Hamât was left to Dâwūd's brother al-Malik al-Muṣaffâr. But when Dâwūd would not consent to this, al-Asrâf began to besiege Damascus. After al-Kâmil had concluded peace with the Emperor Frederick II he joined al-Asrâf and after a three months' siege, forced his nephew to yield (Sha'bân 626 = June-July 1229) whenupon al-Asrâf was recognised as lord of Damascus under al-Kâmil's suzerainty while Dâwūd had to be content with al-Kâmil [q.v.], al-Shawbaq and several other places.

In spite of this unfriendly treatment, Dâwūd remained loyal to al-Kâmil when the other Aiyūbīds [q.v.] combined against him, and entered his service in Egypt. Soon after al-Kâmil accompanied by Dâwūd had taken Damascus, he died in Raqqa 635 (March 1238) and Dâwūd whom al-Kâmil had appointed governor of Damascus had to return to al-Kâmil. In Egypt al-Kâmil's son al-Malik al-'Adîl was recognised as his successor and appointed his cousin al-Malik al-Dâwūd Yâsus governor of Damascus. When Dâwūd tried to assert his claims to Damascus he was defeated at Nâbulus. In the following year Yâsus, who did not feel secure against Sulṭân al-'Adîl, exchanged Damascus with his cousin al-Malik al-Sulṭân Aiyūb for Sindjar, al-Râka and 'Ana. This pleased neither al-Adîl nor Dâwūd so they joined forces for an attack on Aiyūb. The events that followed have already been fully related in the article AL-MALIK AL-SULṬÂN NAṢĪR AL-DĪN AYYŪB so that the reader may be referred to it. After Dâwūd had lost all his possessions except al-Kâmil he appointed his youngest son al-Malik al-Muṣṭaṣsam 'Issa as his deputy and died in Halab (647 = 1249-1250) where he was kindly received by al-Malik al-Nasir Yaṣuf (see below). His private fortune in the form of valuable jewels, valued at least 100,000 dinârs, he entrusted to the care of the caliph al-Mustaṣsim, who acknowledged the receipt of them but never could bring himself to restore the treasure entrusted him. Soon afterwards Dâwūd's two older sons, who had felt themselves neglected, turned to Sulṭân al-Malik al-Sulṭân Aiyūb and offered him al-Kerak in return for fiefs in Egypt which offer the latter gladly accepted. Alleging unfavourable reports about Dâwūd, al-Malik al-Nasir Yaṣuf had brought him to Hims in the beginning of Sha'bân 648 (Oct. 1250) and put under arrest. In 651 (1253-1254) he was released on the intercession of the caliph on condition that he was not to stay in any lands under the rule of al-Malik al-Nasir Yaṣuf. He therefore wanted to go to Bagdad but was not admitted into the city. He then lived for a time very wretchedly in the region of 'Ana and al-Hadîtâa, and in the end he found a place of refuge in al-Anbâr. His appeals to the caliph were not answered; finally however, the caliph obtained him permission to settle in Damascus. After several unsuccessful efforts to get back his property in Bagdad which had been confiscated, he was in the desert when he was taken prisoner by al-Malik al-Muqitī, then lord of al-Kerak and al-Shawbaq and brought to al-Shawbaq. As the caliph thought he could be of use to him in the impending fight with the Mongols, he sent an envoy to al-Shawbaq to fetch him; the envoy was bringing him back to Damascus when he heard of Hûlîgân's capture of Bagdad; when he heard of his capture, al-Kâmil left Dâwūd who went to al-Bâwâdî, a village near Damascus. Here he died of the plague on 27th Dîjmađâdî 1, 657 (May 12, 1259). Abu l-Fida' speaks highly of Dâwūd's eloquence and poetical gifts.

II. AL-MALIK AL-NASIR SALAH AL-DIN AL-MU'AZZAM, born in Halab on 19th Ramâdân 627 (Aug. 1, 1230). His father was al-Malik al-'Azzî, lord of Halab, his mother Fatîma, daughter of Sulṭân al-Kâmil. On 4th Rabî I (Nov. 5, 1236) Yaṣuf succeeded his father under the guardianship of his paternal grandmother Dâ'îfâ Khâtûn bint-al-Malik al-'Adîl [see HALAB]. After her death in Dîjmađâdî 1 640 (Nov. 1242) Yaṣuf himself assumed the reins of government and soon extended his power over most of Syria. When Aiyūb the Sulṭân of Egypt with the help of the Khwārizmians had conquered Palestine and also Damascus Yaṣuf became ultimately involved in the conflict. The Khwārizmians were dissatisfied with Aiyūb, went over to al-Malik al-Sulṭân Ismâîîl, lord of Ba'albek and Bosrâ, and laid siege to Damascus on his behalf. The lords of Hims and Halab then appeared on the scene. The Khwārizmians were completely
routed (644 = 1246) and Isma'il had to flee to Ḥalab and take refuge with Yūsuf [see AL-MALIK AL-S-hash NāṣIR AL-DIN AYYUB]. In 646 (1246—
1249) the latter's general Shams al-Din Lu'lu' al-Arman attacked Ḥims [q.v.] and after a two months' siege forced the emir al-Malik al-Asahrāf to capitulate and cede the town to Yūsuf in return for Tell Bāghir [q.v.]. Two years later, the latter conquered Naṣībin, Dārā and Ḋarākisā' from the Atābeq of al-Mawṣil Bād al-Din Lu'lu' [see LU'LU'].
After the assassination of Tūrisānihāh [see AYYUBIDS] in 648 (1250), Yūsuf was made sultan by the Damascus emirs and Rabi' II (July 1250) he entered Damascus. To avenge the murder of Tūrisānihāh he prepared for war against Egypt and proposed an alliance with Louis IX of France; but these negotiations came to nothing. In Rādjab of this year (Oct. 1250) the Syrians were defeated by the Egyptian emir Fāris al-Din Aṯkāi near Ghazza. Yūsuf did not lose courage however but prepared for a new attack on Egypt. In the vicinity of al-Abbāsā [q.v.] he met the Egyptian army (Dhu 'l-Ka'da 648 = beg. of Feb. 1251); victory was within Yūsuf's grasp when the treachery of his Turkish mamlūkš turned the scale in favour of Egypt. Yūsuf had to take flight, several Syrian princes were taken prisoners and Aṯkāi invaded Syria where he occupied Nābulus and several other important towns until a strong Syrian force finally checked his further advance. After long negotiations, peace was finally concluded at the beginning of the year 651 (1253) by which Yūsuf had to give up any claims on Egypt, but a year or two later war was nearly broke out again. On the advance of the Mongols under Tulagu [q.v.], Yūsuf endeavoured to avert the danger by showing a humble frame of mind and sent envoys with presents to the Mongol camp; but when he began to calculate on getting support from other Muslim rulers and answered a threatening message from Tulagu in a challenging fashion, the latter laid siege to Ḥalab. Yūsuf sees at first to have thought of advancing against him to raise the siege. He encamped in front of Damascus and sent messengers with appeals for help in all directions but as neither Syrians nor Egyptians answered him and Ḥalab fell into the hands of the Mongols (658 = 1260), there was nothing left for him but to abandon Damascus and go south. Ḥamāt, Ba'labek and Damascus were taken and Yūsuf had finally to surrender to Tulagu. The latter had him executed, probably after the defeat of the Mongols at Hīmā towards the end of the year 659 (1261; see also the article ḤALAB). According to Abu 'l-Fida', Yūsuf was distinguished for his scholarship and poetical gifts; he was further kindly and good natured and fond of good living and so lacked the strength to maintain order in his kingdom.

K. V. Zettersten)

AL-NĀŠIR, the name of two Mamlūk sultāns.
1. AL-MALIK AL-NĀŠIR NĀṢIR AL-DIN MUḤAM-

SAD, the ninth sultan of the Bahri Mamluks, son of Sultan Kahlān [q.v.] and a Mongol princess named Aslan (Ašān) Khātān. Born in the middle of Muḥarram 684 (Dec. 1285), he received homage as sultan after the assassination of his brother al-
Malik al-Asahrāf Khaṭīl in Muḥarram 693 (Dec. 1293). After the two emirs Za'in al-Dīn Kethbogha al-Manṣūrī and 'Alam al-Dīn Sandjar al-Shuḍjātī had agreed that the former should hold the office of administrator of the government (niyābat al-
ṣalāfat) and the latter the viceroyate, these appointments were confirmed by the nine-year-old sultan, but the agreement between the two high officials was not long maintained. When al-Shuḍjātī tried to get rid of his rival, he was unsuccessful and was himself killed. In order to get all the power into his own hands, Kethbogha pardoned the two murderers of Sultan Khālīl, who naturally felt it necessary to overthrow Nāṣir in order to escape his vengeance, and when al-Khālīl's old Mamlūkš mutinied out of indignation, they were brought to terms by the loyal troops. Kethbogha then succeeded without much difficulty in persuading the emirs that the political situation required a man and not a child on the throne, whereupon al-Nāṣir was deposed and Kethbogha proclaimed sultan with the title al-Malik al-'Adil (Muḥarram 694 = Dec. 1294). Two years later (Muḥarram 696 = Nov. 1296), Kethbogha shared the fate of his predecessor. He was succeeded by one of al-
Khālīl's murderers, al-Malik al-Manṣūr Ḥūsān al-
Dīn Lāḏīn al-Manṣūrī who was murdered in Rabi' II 698 (Jan. 1299). The emirs in authority then agreed to recall the 14 year old Nāṣir who was in Kerak and in Dāmādā I (Feb. 1299) he entered the capital in order to receive for the second time the diploma of sultan from the caliph and the oath of fealty from the emirs. The actual rulers were now the administrator of the kingdom Salār al-Manṣūrī and the commander-in-chief of the troops, Kukan al-Dīn Bahīr Bahār al-Dījāshnagī. The most important event in the period was the war with the hereditary enemy, the Mongols. In Rabi' I, 699 (Dec. 1299) the Ilkhan Ghāzān [q.v.] crossed the Euphrates and was soon before Ḥalab. In the same month Nāṣir who had left Cairo in Dhu 'l-Hijja 698 (Sept. 1299), because the Egyptians had long been afraid of a Mongol invasion, reached Damascus. The sultan encountered the much superior enemy near Ḥims, his tried emirs were defeated and the army returned to Egypt in great disorder while Ḥims fell into the hands of the Mongols. Damascus met the same fate, except the citadel which was bravely defended by its Egyptian commander Ardajwāshī. In the meanwhile the Egyptians were preparing with desperate energy to resume the struggle and in Rādjab 699 (March–April 1300) a new army left Cairo. But when they arrived in the same area they found they could not take the citadel of Damascus; they withdrew before it came to a battle and the Egyptians reoccupied Damascus, Ḥalab and the whole of Syria. After an unsuccessful campaign against northern Syria in Rabi' II 700 (Jan. 1301) which only resulted in the pillaging of the region visited by the Mongols, Ghāzān sent an embassy to open up peace negotiations; but as these overtures came to nothing, the decision was left to arms for the third time. In Shabān 702 (April 1303) the Mongol general Kūṭūshāh (Kuṭūlghūshā) crossed the Euphrates and at the same time a portion of the Egyptian army under the command
of Baibars al-Dībānī entered Damascus. On 27th Ramaḍān (April 20), a battle was fought on the plain of Mardj al-Suffar after the rest of the Egyptian troops under Sulṭān al-Nāṣir and the caliph al-Mustaʿfī had joined Baibars. Nightfall put a stop to the desperate fighting but it was renewed next day and ended with the total defeat of the Mongols; 10,000 prisoners are said to have fallen into the hands of the victors. Ghazān died soon afterwards and his successor Ulūjātī did not dare to measure his strength with his formidable opponent. For the time being the reign was a fairly peaceful one apart from a few minor military enterprises of slight importance. At the beginning of the year 702 (1302), an expedition was sent against the Templars who had established themselves in the island of Arwād on the Syrian coast and harassed the mainland opposite [see Ṭartūs]. The district of Sīs [q.v.] was also invaded; its ruler had made common cause with the Ilkhan and did not send Egypt the usual tribute promptly. The Egyptian authorities were on the whole on good terms with foreign powers; on the other hand, home affairs gave cause for anxiety. After the defeat at Hims, the Beduins in Upper Egypt rebelled against the authorities and levied taxes on their own account. A large army was therefore equipped to punish the rebels. At the same time, the governor of Kūs advanced from the south and cut off their access to the southern desert. The rebellion was put down with ruthless vigour, the men massacred without mercy, the women and children taken prisoners and property carried off. Many took refuge in caves difficult of access but they were suffocated with smoke in them. The large Christian and Jewish elements in the population had also to suffer a great deal. Several of the Umayyads, Abbāsīd and Fāṭimid caliphs had already issued special regulations affecting non-Muslims and the Abbāsīd al-Mutawakkil had gone furthest in this direction; in general however, such measures were only enforced for a short period and were therefore usually repeated after a time; at least this is true of Egypt. In al-Nāṣir's reign many Christians were holding honoured positions as officials when suddenly from some insignificant cause the secret jealousy of the Muslims flared up and in 701 (1300–1301) an edict was issued which ordered among other things that in future Christians should wear blue and Jews yellow turbans in order to be at once distinguishable from the true believers; nor were they to be allowed to take prisoners or ride horses. Very soon a prohibition was issued against the appointment of Christians and Jews to the offices of the sultān or of the emirs. The immediate consequence of this measure was that several churches were destroyed by the fanatical mob and the others remained closed until the authorities allowed them to be reopened at the demand of the Byzantine emperor and other Christian rulers. On the 23rd Dhu'l-Ḥijja 703 (Aug. 8, 1303) the whole of Egypt was affected by a terrible earthquake in which not only many private houses but also palaces and mosques were destroyed and large numbers of people perished. All traces of the catastrophe were however obliterated with the greatest energy and the emirs and well-to-do citizens vied with one another in spending lavishly to restore the shattered buildings. After an unsuccessful attempt to escape from the tutelage of the two emirs Sallār and Baibars, both of whom aimed at the sole power and regarded each other with suspicion, the sultān, who was prevented from exerting any influence in the government, left the capital on the 24th Ramaḍān 708 (March 7, 1309) under the pretext that he wished to perform the pilgrimage to Mecca but went instead to al-Kerāk. On reaching the citadel, he told the emirs who accompanied him that he was abandoning the pilgrimage and abdicating in order to live in peace in al-Kerāk. Baibars was proclaimed his successor under the title of Ḥusayn al-Mu'azzam. On the 23rd Dhu'l-Ḥijja 709 (April 5, 1309) while Sallār remained in office as administrator Baibars however enjoyed no real popularity; an oppressive rise in prices made him hated among the people who without justice blamed him for the difficult times. Sallār was intriguing secretly and al-Nāṣir was vigorously adding to the number of his followers in Syria. When Baibars heard that al-Nāṣir had entered Damascus and the Syrian emirs had gone over to him, there was nothing left for him but to abdicate and appeal for mercy to his rival. The latter pardoned him and even offered him the lordship of Siyyawm [q.v.]. But after he had made his entry into Cairo al-Nāṣir had Baibars strangled (beg. of Shawwāl 709 = March 1310). Very soon afterwards, Sallār was also disposed of; he died of starvation in prison. The Mongols not long after this resumed hostilities. Two emirs who did not feel safe with the sultān went to the Ilkhan Ulūjātī and urged him to invade Syria. The Mongol expedition did not however go beyond the siege of the town of al-Rahba (Ramaḍān 712 = Jan. 1313). When the Mongols saw that their efforts were unavailing, they abandoned their plan of campaign and retired. At the beginning of the year 715 (1315) a campaign was undertaken against Malāṭiya, on the course of which see the article MALĀṬYA. At the same time, the lord of Sīs had to cede several strongholds and increase his annual tribute. Little Armenia was several times invaded by the Mamlikūs who wrought great havoc there. In Mecca the sons of the Shahīr Abū Numayyār [q.v.] were engaged in a prolonged struggle for supremacy; as the Mamlikū sultāns claimed to exercise a kind of suzerainty over the two holy cities, al-Nāṣir intervened without however playing any very effective part. His authority was recognised in Madīna in 717 (1317) and when he intervened in the domestic troubles of the Yaman and sent troops thither to support al-Muḍjāhid, one of the pretenders to the South Arabian throne, he was assisted by the Maccans (725 = 1325). In the meanwhile, the situation had improved in favour of al-Muḍjāhid so that the troops sent to his help by al-Nāṣir had to return amid great hardships after achieving nothing. Al-Nāṣir also tried to extend his power into Nubia. For this purpose he sent in 716 (1316–1317) a Nubian prince named Abū ʿAllāh, who had been converted to Islam and brought up in Egypt, with an army to put him on the throne. He succeeded in driving out the legitimate heir but the latter was able after a time to return and expel the intruder Abū ʿAllāh whose tyrannical rule had made him generally hated. Al-Nāṣir was more successful in N.W. Africa; in 711–717 (1311–1317) he was mentioned as suḥān in the khūṭba in the pulpits of Tunis, whose ruler, the Ḥafṣīd Abū Zakariyāʾ Yāḥyā, owed his throne to him. In 723 (1325) he finally concluded peace with the Ilkhan.
Abû Saʿīd. After the latter's death in Rabî’ II 736 (Nov. 1335), Hasan Buzurg pledged himself to recognise al-Nâṣir’s suzerainty if the latter would support him with an armed force. Al-Nâṣir, who was a better diplomat than soldier and had not the sułṭān’s decisive element, did not fulfill the condition. Al-Nâṣir had diplomatic relations with most of the rest of the known world and at his court appeared embassies not only from the Golden Horde, the Ilkhan, the Rastûlids of Yaman, the king of Abyssinia, and the Hafsids of Tunisia, but also from the Emperor of Byzantium, the Czar of Bulgaria, the Pope, the King of Aragon, Philip VI of France and Sultan Muhammad b. Tughluq of Dîhil. Al-Nâṣir died in Dhu ’l-Hijja 741 (June 1341); he left eight sons, who reigned one after the other but were themselves ruled by the emirs who were usually quarrelling among themselves. His immediate successor on the throne was al-Malik al-Manṣūr Saif al-Dīn Abû Bakr, who was deposed after only two months in favour of another son of the late sultan. The third reign the position of the Christians improved, and they frequently tried to alleviate their hard lot, although his efforts sometimes failed against the stubborn opposition of the Muslim clergy. The ordinances of the period when Sallār and Baibars were the real rulers were at not enforced to the full extent and we even find that the sultan put Christians, i.e. Copts, into the government offices, presumably simply because they were cleverer and more wily than the Muslims. Men of learning were treated with a benevolent interest, and the Ayyūbid Abû ’l-Fida’ [q.v.], celebrated as a historian and geographer, was the sultan’s trusted friend "perhaps the only one among all the nobles whom al-Nâṣir treated till his death with equal love and respect" (Weil, iv. 400). Al-Nâṣir further abolished many taxes which oppressed the people. He built canals and roads and carried out other public works for the improvement of means of transport. Architecture in particular flourished exceedingly; among the splendid buildings which date from his reign special mention may be made of al-Ḵaṣṣ al-Ablaṣ, al-Madrasa al-Nâṣiriya, and Dîjamī al-Nâṣir. These works however cost large sums of money and there were really no bounds to his extravagance. He was able through his long reign to maintain the Mamluk state in its place among the great powers, and he was also able to make his authority felt at home. In some respects he reminds one of Sultan Baibars I; like the latter he was little scrupulous in his choice of means. To undeniable gifts he added suspicion, covetousness and a sly, even cynical, nature, and it has been observed, undoubtedly with justice, that al-Nâṣir inspired more awe than respect.

II. AL-MALIK AL-NÂṢIR NÂṢIR AL-DIN HÅSAN, the nineteenth sultan of the Bahri Mamluks, son of the preceding. After the murder of his brother al-Malik al-Muzaffar Saif al-Din Hâdjî, Hasan who was then only eleven, or, according to others, thirteen years old was proclaimed sultan on the 14th Ramadân 748 (Dec. 13, 1347). Another son of the sultan al-Malik al-Nâṣir was Ahmad b. Kâliyb, called Hûsain, was also put forward but this plan fell through and he never attained the throne at a later date. More important than the elevation of this minor prince to the throne was of course the distribution of the high offices of state among the emirs; the emir Baibogha Arwas became administrator of the kingdom, his brother Mendjek al-Vâsûfi vizier, and the chief emir Shâhîd, Atâîg of al-Malik al-Ṣâliḥ, was put in charge of the Domains, Saîd al-Din Şâhî, [q.v.], afterwards sultan. Thanks to Baibogha’s adroit policy, al-Nâṣir was able to survive for four years, although, except for the last few months, he exercised no influence worth mentioning on affairs of state. His reign was filled with unedifying quarrels among the ruling emirs and systematic raiding by the Beduins. The most noteworthy event of the period was however the visitation of a great part of the world by the sultan al-Khâlid, which, known in Europe as the “Black Death”, spread from Asia through Egypt and over almost all Europe to England and Scandinavia. In Egypt the plague raged in the second half of the year 749 (1348–1349) being accompanied by a less fatal cattle-plague. In Syria it had appeared a few months earlier. Everywhere countless men fell victims to the angel of death and it is not surprising that the political and economic life of the state was crippled. The plague only died down in the following year. In Shawwâl 751 (Dec. 1350) the sultan succeeded in getting rid of the most powerful emirs and taking the reins of government into his own hands, but after a very few months he was deposed and his brother al-Malik al-Ṣâliḥ, al-Din Şâhî, the eighth of the sons of sultan Muhammad b. Kâliyb, was placed on the throne (Djumâdâ II 752 = Aug. 1351). He ruled only for three years; on the 2nd Shawwâl 755 (Oct. 20, 1354) he was dethroned and his brother al-Nâṣir restored. The real ruler at first was Shâhîb; but in 758 (1357) the latter was waylaid and so severely wounded that he died a few months later. His successor Şârgîmtîsh, who was suspected of having instigated the murder, did not allow the sultan the slightest independence, but was however arrested in Ramadân 759 (Aug.–Sept. 1358). In Muḥarram 761 (Nov.–Dec. 1359) the governor of Ḥalab undertook an expedition against Sis and established Muslim garrisons in Adana and Tarsus. About the same time, the troops who had been sent to Mecca by the Egyptian government to settle the endless family feuds were defeated by the Meccans and those taken prisoners sold in Yanbu‘ to slave traders. On hearing this the sultan is said to have sworn to exterminate the sharifs completely; but before he could carry out this plan, he was himself deposed. For, as he wished to preserve his independence, he quarrelled with the powerful emir Yalavgba, who had reproached him with his extravagance. The latter combined with several other dissatisfied emirs and prepared to fight. Al-Nâṣir was defeated and had to abandon his plan of escaping secretly to Syria. Instead he was taken prisoner and handed over to his enemy Yalavgba (Djumâdâ I 762 = March 1361). His ultimate fate is unknown; according to one, in
itself quite credible, story he was strangled and his body thrown into the Nile. His mosque (Qubūl Sūlān Ḥasan) built in Cairo in the years 1356–1363 is considered the most important example of Egyptian-Arabic architecture.

(K. V. Zettersten)

AL-NAṢIR, honorific of the fourth sōve-
regn of the Māhrībī dynasty of the Muʿminīns or Almohads [q.v.], 'Abd Allāh Muḥam-
mād b. Yaʿqūb al-Manṣūr b. Yūsuf b. 'Abd al-Muʿmin. He was proclaimed on the death of his father on the 22nd Rabi' I 1595 (Jan. 25, 1199). The beginning of his reign was marked by the suppression of a rising led by an agitator in the mountainous country of the Qūmāra and a long stay at Fās during which he rebuilt a part of the wall of the Ṣaḥa of this city. Hearing of the rising of Yahiya b. Iṣaḥīk Ibn Qāhīriya in Ifriqiya, he sent for the eastern part of his empire and laid siege to the town of Mahdīya [v. 1], which was taken on the 27th Dżumādā I 1602 (Jan. 9, 1206). He returned to Morocco in the following year leaving as his deputy in Ifriqiya the shaikh 'Abd Muhammad 'Abd al-Wāhāb b. Abī Ḥassan al-
Hantīq, ancestor of the Ḥafsids [q.v.]. At the same time, he sent from Algiers against Majorca [cf. Balearic Islands], which had belonged to the Banū Qāhīriya since the period of the last Almavids, a fleet which took the island; this remained in Muslim hands till 627 (1230). In 607 (1211) al-Nasīr sent an expedition to Spain which ended in a disaster to the Muslim troops under Ibn al-
Tākh or Idris de Tolosa [q.v.] on 15th Saḥar 609 (July 16, 1212). This severe reverse deeply affected al-Nasīr who returned to Morocco and made his subjects take the oath of allegiance to his son Yūsuf. He then retired to his palace. He died in Riḥāl al-Ṣafī (Rabat, q.v.) on 10th Sha'ban 610 (Dec. 25, 1213). According to some chroniclers, he died a violent death on the same date in Marrākush, his capital, the victim of a conspiracy hatched by his viziers.

**Bibliography:** cf. the article Almohads.

(E. Levi-Provençal)

AL-NAṢIR. [See Uṭrūṣ.]

AL-NAṢIR LI-DIN ALLĀH, official name of se-
veral Zaidī imāms.

I. Among the Caspian Zaidīs this title was borne by 1. AL-NAṢIR AL-KABĪR AL-UṬRŪṢ [q.v.]; and his great-grandson 2. AL-NAṢIR AL-SĀDIR AL-ḤUSAYN b. AL-ḤASAN b. AL-ḤASAN [q.v.]. All the latter gained for himself a dominion beginning in Hāwsan, where he could find associations with the earlier period of Zaidī rule. He laid great emphasis on the religious character of Zaidism; he gave out of the state treasury funds to support people who learned the Kur'ān by heart. He was also a poet. After his death (476 = 1083), his tomb in Hāwsan was a much visited place of pilgrimage.

II. Among the Yaman imāms this title was borne by 1. AL-NAṢIR ĀḤMAD, son of al-Hādī Yahiya and his brother's daughter Fatima. In the heavy fighting which the father had to wage in order to found the new state, Āḥmad had been more distinguished than his elder full brother Muḥammad. Homage was, it is true, paid first to the latter as al-Murtaḍa shortly after the death of al-Hādī (280 = 911); but after 6 months he elucidated as he could make no progress against the Karmātīn 'Ali b. Faḍl, and suggested as his successor the vigorous Āḥmad, whom the Banū Ḥshawān especially favoured. As a poem composed when allegiance was sworn to him in Sa‘dah 301 (Aug.—Sept. 913) challenged him to do, he made war on the Karmātīns his first duty and played a considerable part at least in damming back the threatened Ismā'īlisation of the Yaman. He died at Sa‘dah, probably in 315 (927); his tomb is there. All succeeding bearers of the title except the next one: 2. ĀḤMAD EL-FATIḤ AL-NAṢIR AL-DAILAMI, so called from his first Caspian sphere of activity, were of his family although of different lines. In the Yaman, in contrast to his predecessors, he began operations south of Sa‘nā‘, fell in 447 (1055) fighting 'Ali al-Sulayhi there and was buried near Dhamār. The life of 3. AL-NAṢIR SULAYH AL-DIN was marked by internal strife which ultimately caused his death. In the first half of the viii th (xvth) century, several insurrections disputed the succession. About the middle of the century his father al-Mahdi 'Ali b. Muḥammad attained considerable influence, which was however much reduced in the period before his death at Dhamār in 774 (1372). Sulayh al-Din became sole imām and advanced as far as the Tihāmah against the Rastūls [q.v.]. But when in 793 (1391) he died at Sa‘nā‘, his death was concealed for two months on account of the insecurity and his body was concealed in the castle in a coffin covered with plaster. It was only when rumours of his death reached the Rādī al-Dawwāṛi in Sa‘dah that the latter arranged for his burial in Sa‘nā‘. The son 'Ali b. Sulayh al-Din could only obtain recognition as 'Imām of the Djihād and fell in 840 (1436), one of the many victims of the great plague. When in spite of opposition a Zaidī power was once more built up, it was destroyed by the young dynasty of the Tihrids from the Tihāmah (850–923 = 1446–
1517), especially by its second member 'Abd al-
Wahhāb b. Dāwūd, from 883 (1478), until at the end of the ixth (xvth) century Al-Hādī Ḥiz al-
Din b. al-Ḥasan again reestablished and extended their power. His son 4. AL-NAṢIR AL-ḤASAN b. ḤIZ AL-DIN (c. 900–929 = 1494–1523) who had primarily inherited from his father a love of learning, could only maintain a limited power in the north. He had to put up for a long time with an anti-imām al-Manṣūr Muḥammad b. 'Ali al-
Sarārdī in Sa‘nā‘. 5. AL-NAṢIR AL-ḤASAN b. 'Ali b. Dāwūd at the end of the ixth (xvth) century organised in the north the one of the centres of resistance to the Turks and had been penetrating into the country since 927 (1521) and 943 (1536) but was taken prisoner by them in 1004 (1596–
1597). Among the pretenders within the family of al-Manṣūr b. al-Ḵasim (d. 1029 = 1620), the liber-
rator from the first Turkish conquest, was 6. AL-
NAṢIR MUḤAMMAD b. IṢḥāq b. AL-MAḤDĪ HIJJĀM; he set up first in 1136 (1723–1724) in the north in the hills of Sufyān among the Banū Baktil, then in 1139 (1726–1727) away in the south at Zafār but had finally to submit to his cousin's son al-Manṣūr al-Ḥusayn b. al-Ḵasim b. al-Ḥasan b. al-
Maḥdi Ḥijjām and died in 1167 (1753) as a private individual in Sa‘nā‘. In 1252 (1836) the dissatisfied troops who had been discharged by the very extra-
vagrant imām al-Manṣūr 'Ali b. al-Maḥdi 'Abd Allāh
summoned 7. AL-NAŞİR 'AbD Allāh b. ḤASAN to the imamate. He had inherited strong religious tendencies from his grandfather al-Mutawakkil ʿĀhad and from his great grandfather al-Mahdī ʿAbdās and insisted on the strict observance of the neglected shāriʿa. He had even to appoint teachers to instruct in the divine service. He was ambushed and murdered with 6 followers in 1256 (1820) while on a peaceful excursion to the Wādī Dirḥ northwest of ʿAṣār by people of the Banū ʿHamdān and was succeeded by the brother of his predecessor, al-Ḥādi Muḥammad b. al-Mahdī ʿAbd Allāh, who had been long kept in prison by ʿAbd Allāh b. Ḥasān. — As required of an imām, most of the above wrote a great deal; a number of works, chiefly of a legal nature, have survived, mainly by the earlier Yaman imāms.

(R. STROTMANN)

NAŞİR ʿALI of Sarhind (d. in Dīhil on the 6th Ramaḍān 1108 = March 29, 1697), one of the best of the Pers. poets of India, who were by this time very numerous; their productions however are for the most part of little artistic value. Of his life we know only that he travelled a great deal but finally settled in Sarhind where he enjoyed the favour of the governor Saif Khan Badakhshāi and of the Amir al-ʿUmāri ʿDhu ’l-Fikr Saif Khan. His principal work is a version of the love story of Madhumalt and Manāhar in Persan verse, the original having been written in Hindi by Shālikh Dājamān. The same subject was taken after Naṣīr ʿAli by Mīr ʿAskar ʿAdil Khan Rāzī (d. 1666), one of the governors of Delhi under ʿAlamgir (1659–1707), who called his poem Mīhr-i-uljāh. Besides the poem Naṣīr ʿAli wrote a short maḥmūm, ʿSafi in character, and a description of Kaṣīmīt both of which still survive. His lyrical Divān was collected by his friends after his death; it consisted of the usual ghazals, some ʿSāfī-nāma’s and poems in praise of the Kalendar dervishes (lith. Lucknow 1244 and 1281 and Cawnpore 1892).

(E. BERTHELS)

NAŞİR AL-DAWLA ABU MUḤAMMAD AL-ḤASAN b. ʿAbD Allāh, a prince of the Ḥamdānid dynasty [q.v.]. From the year 308 (920–921) he acted as lieutenant to his father, Abu ʿl-Haḍīd ʿAbd Allāh [q.v.], in the governorship of al-Mawsīl, and on the latter’s death in 317 (929) succeeded to the leadership of the Ḥamdānid family. Owing to the part played by Abu ʿl-Haḍīd in the second temporary deposition of the ʿAbbasid caliph al-ʿUkṭādīr [q.v.], the latter, on his restoration, attempted to put an end to the Ḥamdānids’ control of al-Mawsīl by appointing a governor unconnected with them. Nevertheless when this officer died during the same year, al-Ḥasan was confirmed in all his father’s holdings.

The Ḥamdānids profited by the rapid decline in the power of the ʿAbbasids that set in from this time to extend their rule; and though they remained tributary to the caliphs, by 332 (943–944) they had secured control of most of the Ḳaṣrā and of northern Syria. Al-Ḥasan also made two unsuccessful attempts, in 322 (934) and 326 (938), to add Ḳaṭābārādīn to his dominions. During the early part of this period of expansion al-Ḥasan was much occupied in the suppression of local rebellions. He was anxious also to remain in the caliph’s good graces, and for this reason declined to assist the general Muʿīn [q.v.] in his quarrel with al-ʿUkṭādīr, which ended in the latter’s death. In 323 (935), however, the caliph al-Rāḍī attempted to displace him in the governorship of al-Mawsīl in favour of his uncle Saʿīd. Al-Ḥasan thereupon had Saʿīd murdered; and though al-Rāḍī at first sought to impose his will by force of arms, he was in the end obliged to agree to al-Ḥasan’s restoration in prison by ʿAbd Allāh b. Ḥasan. — As required of an imām, most of the above wrote a great deal; a number of works, chiefly of a legal nature, have survived, mainly by the earlier Yaman imāms.

[The next part of the text is not visible in the image.]
dominions until he should be ready to absorb them. For he now took one of Nāşir's sons as a hostage for his obedience, and two years later led another expedition against al-Mawsil. This again came to nothing, however, since Mu'izz was obliged to make peace before attaining his object, owing to the outbreak of trouble in Persia, where his brother required his assistance. Nāşir now agreed to pay tribute for Diyar Rab'a, the Dijzara and Syria, and to have the names of the three Bayđīs pronounced in the jamā'a after that of the caliph throughout this territory.

It was not till 345 (956–957) that further trouble arose between the rival potentates. In that year Mu'izz was called away from Baghdad to deal with a revolt, whereupon Nāşir sent two of his sons to occupy the capital. Mu'izz, however, succeeded in overcoming the rebel; and on his return the Hamdānids decamped. Yet in spite of this provocation Mu'izz contented himself with exactly an indemnity and a renewal of Nāşir's contract to pay tribute, and it was only when Nāşir withheld the second year's payment that he took further steps against him. He then advanced into his territory, took al-Mawsil and Nišîbin, and finally sent a force to al-Raḩba. Nāşir, who had fled first to Māyâfīrīkūn and then to Aleppo, which was now held independently by Saif, attempted to make peace. But Mu'izz rejected his advances, and came to an agreement only when Saif offered to take his brother's place as tributary for al-Mawsil, Diyar Rab'a and al-Raḩba.

Five years later, in 353 (964), Nāşir opened negotiations to recover his position as tributary for these territories. But he included in his demands one, for the recognition of his son Abū Taghlib al-Ghadanfar, who succeeded, which Mu'izz was unwilling to grant. He again attacked the Hamdānids, occupying both al-Mawsil and Nišîbin. But they were more successful in withstand him on this occasion; and an agreement was arrived at whereby Abū Taghlib undertook the payment of tribute for his father's former holdings.

In 356 (967) both Mu'izz and Saif died. Almost the last action recorded of Nāşir is the advice he then gave his sons to refrain from attacking Mu'izz's son and successor Bahlīyūr till he should have exhausted the resources bequeathed to him. For on the death of Saif, to whom he had been much attached, Nāşir lost all interest in life, and also antagonized his family by his avarice that they resolved to take the control of affairs into their own hands. Abū Taghlib, who had in any case taken his place as tributary, and his mother, Nāşir's Kurdish wife Fāṭima bint Aḥmad, continued to gain possession of all his property and fortresses; and when Nāşir attempted to enlist the help of another son, they imprisoned him in the castle of al-Sālāma in the fortress of Arḏūnāwīt. He died, still in confinement, either the next year, 357 (968), or the year after.

Nāşir al-Dawla's rule was disastrous for the territory over which he had control. The contemporary Ibn Ḥawkal, who refers in several passages to his ruinous exactations and tyrannical seizures of land (see his descriptions of al-Mawsil, Balad, Sīndjār and Nišîbin). And Miskawain notes that by bringing fictitious claims against landowners he would force them to sell to him at low prices, till he became not only the lord, but also the owner, of most of the region of al-Mawsil.

Nāṣir-i Khusrāw, whose full name was Abū Muḥammad Nāṣir b. Khusrāw b Hārūn, one of the most important Persian poets of the 4th century.

Life. Nāṣir was born in 394 (1003) in Kubādiyān in the district of Balkh. The Persian historians usually call him 'Alawi in which case it can hardly mean descent from the caliph 'Alish but simply indicates his adherence to the Šīʼa. His father was probably a small landowner in the vicinity of Balkh. Nāṣir received a good education and was early acquainted with almost all branches of the learning of his day. In the forties of the 4th century we find him as an official in Marw where, according to his own confession, he led a rather dissolute life. In 1045 however, a sudden change came over him, the real reasons for which are unknown, but which Nāṣir himself explained by a prophetic dream. He decided to give up his position and all his pleasures and went on pilgrimage to Mecca on which he visited the Kaʿbah four times. This journey had important results for Nāṣir. He left Persia at a difficult period, when the country was being laid waste by the continued wars between the various princes. He found the same wretched picture in all the other Muslim countries which he had to traverse on his journey. Only Egypt proved a pleasing exception; there he saw prosperity, rich harvests, and peace and tranquility. As the Ismāʿīli dynasty of the Fāṭīms were ruling in Egypt at this time, Nāṣir concluded that Islam had diverged from the true path and that only Ismāʿīlism could save the true believers from inevitable ruin. Nāṣir made the acquaintance of several Ismāʿīlī dignitaries, joined their sect and finally received the blessing of the caliph al-Mustansir (1036–1044) in order to spread the new teaching in his native Kūhūrān. He was consecrated as a kudūfa, a fairly high official in the complicated Ismāʿīli hierarchy. Returning to Balkh he devoted himself with the greatest zeal to his new task. But the Sāḏīqīs who ruled the land soon became convinced that Nāṣir's activity was a serious threat to them. He was persecuted and had to flee from Balkh. He went first to Māzar darān but found that this also was not safe enough and was finally forced as a last resort to take refuge in the Vumgān valley among the inaccessible mountains of Badakhshān. There in these poor and inhospitable highlands the aged poet spent his last years; there his most important works were written and there he died in 1060 or 1061 (452–453). Down to the present
day there has survived in this region a little sect known as the Nāṣiriya, which owes its origin to the “saint Shīr Nosīr” and tells fantastic stories about its founder.

Works. Nāṣir’s works were probably very numerous but have survived only in very imperfect and corrupt form. The most important is the great philosophical Divān, which was composed in the miserable years of his exile. The artistic value of his poems is not especially high, the style is often clumsy and awkward but the philosophical material which still awaits its investigator is of very great importance for the history of Persian literature. It is a complete encyclopedia of Iṣmā’īli teaching but of course unsystematic and disconnected. From the linguistic standpoint also the work is of extraordinary interest. A good edition of the Persian text appeared in Teherān in 1928. Two not very long didactic poems in his Divān, Sāḥbat-nāma, which presents a whole philosophic system having an undeniable similarity with the teaching of Avicenna, and Sa’dat-nāma which sharply criticises the aristocracy of the kingdom and praises the peasant, “the nourisher of every living creature”.

The best known of Nāṣir’s prose works is the Safar-nāma, a description of his pilgrimage to Mecca which is an exceedingly valuable source of the most varied information. Unfortunately this work has come down to us only in a very mutilated form and has probably been edited by a Sunni hand. The other works of Nāṣir are mainly Iṣmā’īli textbooks. Among them first place should be given to the Ẓūd al-Muṣṭafīrīn. It is an encyclopedia of a special character which deals with the most varied questions of a metaphysical and cosmographical nature. A good edition of the Persian text was published in Berlin in 1925 (Kaviani). No less important is the Wadjhi Din, an introduction to Iṣmā’īliism, which gradually initiates the reader into Iṣmā’īli beliefs by means of quotations from the Kūnī slightly put together. A number of other similar pamphlets like Umm al-Kitāb, which were quite recently fairly widely disseminated among Iṣmā’īlis of the Pamirs are credited to our author but so far nothing definite has been ascertained about their authenticity.

Although a considerable portion of Nāṣir’s works is now available in good editions, one cannot yet assert that sufficient light has been thrown upon his striking personality. It would be particularly valuable if his philosophical system could be studied as it is of far reaching importance for the history of thought in Persia.

Schefer, Sefer Nama, (text and transl. with introduction), Paris 1851: this edition is now somewhat obsolete and it is advisable to use for the text the new edition, Berlin 1923 (Kaviani), which also gives as an appendix the text of the Rūqaynā-nāma and of the Sa’dat-nāma. — Translations: Guy Le Strange, Nāṣir-i Khurayru, Diary of a Journey through Syria and Palestine, London 1888; A. P. Fuller, Account of Jerusalem (J. R. A. S., 1872, p. 142–164); E. Berthels, Safar-nāma (Russian), Leningrad 1933. — In addition to the new edition of the Divān, already mentioned there is also an oldest lithographed text, Tabriz 1820. A Tarīqī‘band, the authenticity of which is doubtful, has been published with Russian transl. by V. Zhukovski, in Zapiski (iv. 386–393). Text of the Wadjhi-Din pr. Berlin 1925 (Kaviani). (E. Berthels)

AL-NĀṢIRA, Nazareth, the home of Jesus, lies in a depression sloping to the south surrounded by hills in a fertile district. While the hills to the north and northeast are not very high, in the northwest the Djebel es-Sūkh rises to 1,600 feet above sea-level. The name of the town, which does not occur in the Old Testament, is found in the New and in the Greek fathers of the Church in the varying forms Natsa, Natsar, Naṣīr and Naṣīrə, with ə, but according to Josephus written in Hebrew a əδ, which is confirmed by the Syriac Naṣrat and the Arabic Nāṣira as well as by the Talmudic derivative form Natsirm, while the Christian Arabic has ə. All these forms as well as Natsarão (Mark i. 24) have in the first syllable an a obscured to e in Talmudic. In Christian Aramaic there is a subsidiary form Natsir with o in the second syllable with which is connected the derivative Naṣīrān (Matt. xxvi. 71; John xviii. 5), cf. τὸν Ναζαρανίου ἀνέστη (Acta xxiv. 5). The Mandaean term Naṣarae (e.g. Dalman, Aram. Gram. 2, p. 178; Gressmann, in Z. A. T. W., sibu. 26 sq.) is usually connected with this but Lidzbarski (Nowe Litt. p. xvi. sq.; Z. S., i. 230 sqq.) wants to explain it as “observers”, while Zimmerm (Z. D. M. G., xlviv. 429–477, 76, 66) seeks its origin in the Babylonian Naṣīra. That the Arabic naṣīr, Christians, naṣīrūn and Nāṣīrmiyā come from the name of the town is known to the Arab writers.

Nazareth, which in the time of Jesus was a little town of no importance (cf. John i. 47: “what good can come out of Nazareth”); it is not even mentioned by Josephus), was not in the early Christian period one of the places of the New Testament to which large numbers of pilgrims went. According to Epiphanius, it was inhabited exclusively by Jews till the time of Constantine the Great. The number of Christians however gradually increased and was maintained after the Muslim conquest (636). In the time of Arculf (c. 670) it had two churches, and in 332 (943) Mas‘ūd mentions a church held in great veneration there, no doubt the church of St. Mary. Before Galilee was conquered by Tancred and the Crusades, Nazareth was destroyed by the Saracens; it revived under Christian rule, especially after the bishopric of Scythopolis was transferred thither. The Russian abbot Daniel (1115–1115) has given us a very good picture of the Church of the Annunciation and of the Well of Mary there in the period. In 1187, Saladin took Nazareth and at the peace between him and Richard (1192) it remained in his hands. In 1251, during the last unsuccessful crusade, Louis IX undertook a pilgrimage from ‘Akka to Nazareth. Yâkût (623 (1225) who relies on the Gospel story instead of Muslim legend mentions Nāṣira as a village 13 miles from Šābiriya. In 661 (1263) the Mamlik
Sulṭān Baibars ordered the emir ‘Alāʾ al-Dīn to destroy Nazareth and particularly the Church of St. Mary. Dimāṯkī (c. 1300) calls it a Jewish town belonging to the province of Ǧ safat and inhabited by Yamānis, and Khālid al-Zāḥī (d. 872 = 1468) numbers it among the townlike villages in Ǧ safat. The Christian visitors however describe Nazareth as a wretched village inhabited by very few Christians with a ruined church and complaint of the hostile attitude of the Muḥammadan population. It was not till 1520 that better days dawned when the Druse chief Fāqrī al-Dīn [q.v.] opened the town to the Franciscans. The Roman Catholic monastery with the Church of the Annunciation was rebuilt, although not completed till a century later. There were only a few Christians in addition to the monks in the town, until in the middle of the xviiith century the Shīrkh Zaḥīr al-Amīr of ‘Akka increased its prosperity after which they gradually grew in number. In 1890 according to G. Schumacher, there were 7,419 inhabitants in the town of whom 1,825 were Muslims, 2,870 Greek Catholics and the remainder Christians of other confessions; since then the number has increased. Jews were not allowed to live there. The great monastery with the Church of the Annunciation in the southeast belongs to the Roman Catholics, the Church of the Annunciation in the northeast to the Greek Church. The Muslims have a mosque of considerable size and five serald. The well of Mary which has a dome over it and is open on one side, has its water brought from a spring below the Greek Church of the Annunciation.

NAŠKH (A.), infin. I from n-rih, with the technical sense of "abrogation (of a sacred text)". See Ǧ urān, 3.

NAŠHKĪ. [See ARARĪ, d.]

AL-NAṢR, the vulture. It gets its name from the fact that it tears the dead animals on which it feeds to pieces with its beak and devours them. It can still it can not longer than 1,000 years. Its eyes are so sharp that it can see its prey at a distance of 400 farsakh; its sense of smell is equally sharp but fragrant scents are so deadly to it that they destroy it. It shows great endurance in flying and follows armies and pilgrim caravans in order to fall upon the corpses of man and beast. It also follows flocks because it is particularly fond of stillborn lambs, a statement which is confirmed by Brchm who says it attack lambing sheep. It lays its eggs on high cliffs and is said not to sit on them but to leave them to the heat of the sun. It is however very anxious lest its eggs or young be eaten by bats and therefore covers them with the leaves of the plane-tree. The use of the gall, brain, flesh and bones in mediæval times corresponds to the usage in ancient medicine.

al-Nasar was also the name of a deity in pre-Islamic Arabia (see Wellhausen, Rasse, p. 23).

(For BuHL)

AL-NAṢR, the title of Sīrā ex., taken from its first verse. The word means "help, assistance" and is often used of God's help in war and then with the meaning of "victory". Sīrā lxi. 13 is also associated with al-fāṭ置换, cf. xlvi/ii. 13. The Sīra clearly belongs to a later period and verse 2 in particular recalls the year 9, the Year of the Embassies. It is therefore natural to refer al-fāṭ置换 (verse 1) in keeping with the frequent use of the word to the capture of Mecca, except that it is not mentioned as a fact (as We!, Ibn Hīgūm, p. 933 translates it) but is represented as an assumption, which is also true of verse 2. This is perhaps only a rhetorical figure intended to emphasise the general prevalence of the idea and does not exclude reference to a particular event.

Bibliography: Noldeke-Schwally, Geschichte des Korāns, i. 219 sq. (For BuHL)

NAṢR B. AHMAD B. ISMĀ‘IL called al-Sā’id, a Ǧamānīd. After the murder of his father in Djamāda II, 301 (Jan. 914) the eight year old Naṣr was put on the throne and the able vizier Abū Ǧabdūl Muḥammad b. Ahmad al-Dijāhānī given the regency. Soon afterwards the people of Sītān rebelled against the Ǧamānīds and placed themselves under the rule of the governor Badr al-Kabīr appointed by the caliph al-Muktaṭīr. At the same time the caliph's generals al-Faḍl b. Ḥaṭīrī and Khālid b. Muḥammad al-Marwawī occupied the towns of Ghazna and Bust who were in the possession of the Ǧamānīds. When al-Faḍl fell ill, Khālid rebelled against al-Muktaṭīr, routed the troops sent against him and went to Kirmān where he encountered a force sent against him by Badr. The battle ended in Khālid's defeat; he was himself wounded and taken prisoner; he died soon afterwards of his wounds. In the same year, the uncle of Naṣr's father Ishāq b. Ahmad b. Asad rebelled in Samaḵr and marched on Bukhārā, accompanied by his son (Ramāḏān 301 = April 914) but was driven back by Ḥamūya (Hamūya) b. ‘Ali. A second attempt also failed; Ishāq took to flight again and Ṣamāḵrānd fell into the hands of the government troops. He then tried to hide himself but had finally to come out of his place of concealment and throw himself on Ḥamūya's mercy. The latter took him to Bukhārā where he remained till his death, while his son thus went to Farghāna in the year 302 (914—915) another son of Ishāq, Abū Sāmān Muḥammad, stirred up trouble in Nairābūr in combination with al-Husayn b. ‘All al-Marwawī (al-Marwawrūdī), who had rendered great service to the Ǧamānīds but felt he had been neglected by them. After Muḥammad's sudden death Ḥusayn, who was suspected of having poisoned him, went to Nairābūr and seized the town. In Rabi‘ I 306 (Aug.—Sept. 918) he was taken prisoner by Ahmad b. Sahl, a tried general, who had been long in the service of the Ǧamānīds, and brought to Bukhārā, while Ahmad took up his residence in Nairābūr. Ḥusayn was after some time released and given a position at
the court of Naṣr; for some unknown reason he was again thrown into prison and ended his days there; in the following year, ʿAbd al-Salih deserted the Sāmānid because Naṣr had not kept his promise to him, and recognised only the caliph’s authority. He went from Naṣībulnā and entrenched himself in Marv; in Ṣadja 307 (Dec. 919) however, he shared the fate of Ḥusain. Ḥamūya cunningly succeeded in enticing him out of the town. ʿAbd al-Salih was defeated, and taken prisoner and died a few months later in Bukhāra in prison. In Tabaristan also there was fighting. After the death of the Zaidi imām al-Uṭrūs [q.v.], al-Ḥasan b. al-Kāsim, called al-Dāʾī al-Ṣāhib, was recognised as his successor. In 308 (920–921) the latter sent his general Laila b. al-Naʿmān al-Dalālimi to Dūrdjān. From there he went first to Dāmaghān and then to Naṣībulnā where he had the khafta read for al-Ḥasan b. al-Kāsim (Dhū Ḥijjah 308 = April–May 921), after Karategin had been put to flight. In the neighbourhood of Tūs he encountered Ḥamūya b. ʿAlī whom the government of Bukhāra had sent against him. At first a considerable part of the Sāmānid army took to flight but Ḥamūya himself stood firm and Laila had no further success; he had to take to flight, was captured and beheaded by Ḥamūya’s orders (Rabıʿ 1 309 = July–Aug. 921). Karategin then returned, but when he left Dūrdjān and Abu ʿl-Ḥusain b. al-Ḥasan b. ʿAlī al-Uṭrūs seized the town, Naṣr sent 4,000 horsemen there, led by Simdūr al-Dawātī, who at once laid siege to Abu ʿl-Ḥusain. When the latter made a sortie with a force twice this size, he fell into an ambush but escaped to Astarābādīd and then to Sāriya. Simdūr then went to Astarābādīd; but when his efforts came to naught he bribed Abu ʿl-Ḥusain’s deputy Mākān b. Kākī and persuaded him to pretend to vacate the town for a time and then to reoccupy it. This was done as arranged; Simdūr occupied Astarābādīd but soon returned to Naṣībulnā whereupon his subordinate, only left there as a feint, was driven by Mākān first out of Astarābādīd and soon afterwards out of Dūrdjān. In 310 (922–923) Illūs b. Ishāq rebelled in Farghāna and went to Samarqand; this enterprise came to nothing through the inability of Abū ʿAmr Muḥammad b. Asad, who with 2,500 men prepared an ambush and scattered Illūs’s army, said to have numbered 30,000 men. After some time, the latter joined the governor of al-Shaḡr, Abu ʿl-Fadl b. ʿAbd Yūsuf, but had again to take to flight and went to Kāshghar where he joined the Dihkān Toghitnīnī. After failing in an attempt to invade Farghāna he returned to Kāshghar. He was finally pardoned by Naṣr and settled in Bukhāra. About the same time Abu ʿl-Fadl Muḥammad b. Ṭabīb Allāh al-Balāmī [cf. BALAMI] was appointed vizier in place of Abu ʿAbd Allāh Muḥammad b. ʿAbd al-Dajlamī. In the year 314 (926) Naṣr at the instigation of the caliph al-Muḍṭadī undertook an expedition against al-Raiy where Fāṭk, a freedom of the rebel governor Yūsuf b. Abī ʿl-Sadīq, was ruling. He took the town in Lūmānī II (Aug.—Sept. 926) and returned to Bukhāra after two months’ stay there. Al-Raiy remained in possession of the Sāmānids till the beginning of Shaʿbān 316 (Sept. 928) when the governor appointed by Naṣr fell ill and surrendered the town to the ʿAlī al-Ḥasan al-Dāʾī and his general Mākān b. Kākī. In 317 (929–930) or 318 (930–931) Naṣr’s brothers, Yahyā, ʿĀnsūr and Ibrāhīm, whom he had imprisoned in the citadel of Bukhāra, succeeded in regaining their freedom with the help of their followers among the dissatisfied elements of the citizens and seized the town. When Yahyā claimed the throne, Naṣr who had gone to Naṣībulnā at the head of a large army to assist the caliph against the rebel ʿAsfār b. ʿĪsā had to return as quickly as possible and after several encounters with Yahyā had to able to restore order. Yahyā was pardoned and the governorship of Khorāsān given to the emir of ʿṢaghānīyān ʿAbd b. ʿAbd Muḥammad b. al-Muṣafīr. On the fighting in Dūrdjān and Kirmān see the article MĀKĀN b. KĀKĪ.

The last year of Naṣr’s reign was marked by a great revival of ʿṢīʿa propaganda, which had never ceased in Khorāsān and had been particularly encouraged just at this time by the rise of the Fāṭimid caliphate. The people of Naṣr’s paid homage to an ʿAlīī named Abu ʿl-Ḥusain Muḥammad b. Yahyā as caliph. Naṣr invited him to Bukhāra and when he left not only gave him a robe of honour but also granted him an annual allowance from the treasury. Ḥusain b. ʿAlī al-Marwazi had been converted to the ʿṢīʿa by Fāṭimid emissaries in Khorāsān. He was followed by Muḥammad b. ʿAbd al-Nakḥshbābī (al-Nasafī) who transferred his activities to Bukhāra and gained a number of proselytes among the high officials. He finally succeeded in winning Naṣr himself over to his party and in inducing him to pay the Fāṭimid caliph al-Kāīm [q.v.] a considerable sum to atone for the death of Ḥusain b. ʿAlī who had been killed in a Bukhāra prison. This naturally aroused the wrath of the orthodox clergy, who were joined by the Turkish guards and provoked a powerful reaction. Naṣr regretted his complaisance and is said to have abdicated in favour of his son Nāḥī, who had not been guilty of any heresy. Naṣr’s ill-health may have contributed to this decision. The details are variously recorded; in any case, the ʿṢīʿa in Bukhāra and Khurāsān were persecuted and al-Nakĥshbābī with several followers executed.

According to the usual statement, Naṣr died after thirteen months illness of pulmonary consumption on 27th Ṣadja 331 (April 6, 943); others say he was murdered like his father. According to some reports, he died earlier, on 12th Ramādan 330 (May 31, 942). This latter date perhaps refers not to his death but to his abdication. Nāḥī’s formal accession in any case only took place after his father’s death.

If we may believe Ibn al-ʿAthīr, Naṣr was distinguished by a singular gentleness of character; according to other sources however, this was not the case. He was also celebrated as an enlightened patron of poets and scholars and is particularly held in honour for encouraging the poet Rūḍānī [q.v.] in every way.

(V. Z. Zettersten)

NASR B. SAIYÂR AL-LÂTIHI, GOVERNOR OF KHURÂSAN. As early as 86 (705) we find him distinguishing himself in the campaigns of Kutaiba b. Muslim [q.v.] in Central Asia and from this time onwards his name is often mentioned in history. In 106 (724) he took part in the campaign conducted by Muslim b. Saïd-al-Kilabî, governor of Kurhâsan, against Fârghânâ. When the two tribes of Râbî’a and al-Azd refused military service, Nasr was sent with the Mu‘arid against the mutineers and defeated them at al-Barbûs near Balkh. After serving for some years under command of Balkh he was relieved of his office but afterward restored to it. When the governor of Kurhâsan Asad b. ‘Abd Allâh al-Kâsî [q. v.] died and the caliph Hâshâm b. ‘Abd al-Malik sought counsel of a trusted adviser, who was acquainted with the conditions in Kurhâsan, regarding the filling of the vacant post, the latter proposed among other names that of the seventy-four year old Nasr because he was “abstemious, experienced and shrewd” (tâjîf muqarrab ‘âdhî), and in Radjab 120 (June–July 738) he received the diploma of investiture. He honestly endeavored to live up to the above description of him. The old cities of Kurhâsan were four in number: Merw, Naisâbûr, Merw al-Rûdîh and Herât; there were also special commands in Balkh, Samarkand and Khwârizm. After taking over the governorship, Nasr transferred his headquarters from the remote Balkh to the more central Merw. In 121 (738–739) he declared war on his Turkish neighbours and invaded to Samarkand. From there he penetrated to Uzberûs and thence on to al-Shâhân. The Turkish chief Kursâl, who had only recently been killed the Khâqân and was regarded as one of the leading personalities among the Turks, along with al-Hâtîh b. Surâidî, a Murjâ’i who had rebelled against Arab rule and taken refuge among the unbelieving Turks, endeavored to check his progress; when the opposing forces actually met however, Kursâl was taken prisoner and hilled. Nasr then made peace with the ruler of al-Shâhân on condition that he banished al-Hâtîh, who, upon the latter went to Pârâb while Nasr continued his campaign into Fârghânâ without winning any considerable success. The result was that he had to be content with concluding a treaty of peace. The Soghdians who had at an earlier date migrated to join their Turkish neighbours in al-Shâhân and Fârghânâ, but found the troubled conditions prevailing after the assassination of the Khâqân intolerable and wished to return to their old Iranian home, were treated by Nasr with a wise leniency and an agreement was come to by which the Transoxians who had been converted to Îslâm but had gone back to the faith of their fathers were not to be persecuted in any way, the private debts and arrears of taxes of the emigrants were remitted and the Muslim prisoners taken by them were only to be restored to liberty after the evidence of witnesses had been taken and a judicial decision given. These measures, it is true, provoked not only the displeasure of the Arab emirs in Kurhâsan but also the dissatisfaction of the caliph Hâshâm; nevertheless Nasr succeeded in carrying out his plans. As regards domestic politics he regulated the relations between the Muslims and those under their protection by an important reform in the system of taxation, by which he ordained that all landowners, including Muslims, should pay the land-tax (khâshîd) while the poll-tax (qiyâza) should be imposed on non-Muslims exclusively. But the deep rooted clannishness of the Arab caused him continual difficulties. In the first four years of his tenure of office he chose his subordinates exclusively from the tribe of Mu‘arid; then he began to be little more broad-minded in this respect and to pay some attention to the Yamanis and thus gradually to pave the way to a reconciliation of the tribes at feud with one another. In the year 123 (740–741) the governor of the ‘Irât, Yusuf b. ‘Omar al-Thâkafî, endeavored to arouse the caliph’s suspicions of him; Hâshâm thereupon sent him a letter and left Nasr in his post. When al-Wâlid II ascended the throne in Râbî’ II 125 (Feb. 743) he confirmed Nasr in office but soon afterwards allowed himself to be persuaded by Yusuf b. ‘Omar to recall him and therefore ordered him to come to Damascus and to bring with him all kinds of hunting-birds and musical instruments. Nasr however did not hurry and before he reached the frontier of al-‘Irât, the news of the caliph’s assassination reached him and he at once turned back. When al-Wâlid’s successor, Yazid III, appointed Mansûr b. Dju’mah governor of al-‘Irât and Kurhâsan, Nasr refused to recognize him. In 126 (743–744) trouble broke out among the Azd and Râbî’a in Merw. When Nasr wanted to pay the troops not in money but with the gold and silver instruments procured for the caliph al-Wâlid they mutinied; Dju’dâb b. ‘Ali al-Kirmâni put himself at their head and appealed to their feelings by demanding vengeance for the Banu al-Muhallab who had been mercilessly persecuted by the Lîmâyids, a course which he knew would appeal to them. When the Mu‘aridis appealed to Nasr to render al-Kirmâni innocuous, he declined at first but later yielded to them and had him arrested (end of Ramâdân 126 = middle of July 744); but a month afterwards he escaped from prison. Negotiations were then opened between Nasr and al-Kirmâni but they led to no real decision. A much more dangerous opponent was al-Hâtîh b. Surâidî who at the end of Dju’mâdâ II 127 (beginning of April 745) again appeared in Merw after a many years’ sojourn among the Turks. In order to be safe from this rival, Nasr had unfortunately secured a pardon for Hâtîh and his followers from the caliph Yazid III and after his arrival in Merw he endeavored to win al-Hâtîh over by the greatest indulgence and friendliness. He even went so far as to confer on him the governorship of Transoxiana; but all his efforts were in vain; al-Hâtîh adhered firmly to his Murjâ’i conceptions and stubbornly refused to recognize Nasr as governor. As his following was steadily growing, he finally demanded that Nasr should resign his office and leave the choice of his successor to a court of arbitration. Nasr said he would agree to this, but when he declined to obey the judgment of the court insisting on his
resignation, open fighting broke out. Al-Hāthīth tried to take the city by surprise but was driven back (end of Djamāda II 128 = end of March 746). He then joined forces with al-Kirmānī and they attacked Naṣr with their combined strength. After several days' fighting, the latter had to abandon Merw and retire to Naisābūr; it was not long however before the two rebels fell out. Among other things al-Kirmānī's cruelty made him hated; in addition there were the endless feuds among the various Arab tribes. After al-Hāthīth's most influential follower Bishr b. Djamāts b. Dabbār had left al-Kirmānī with 5,000 men, al-Hāthīth soon followed his example but was killed in the fighting that ensued (end of Radjab 128 = April 746). Al-Kirmānī was now lord of Merw. The Yamanīs stood by him while the Muʿārids sought refuge with Naṣr in Naisābūr. Naṣr's position was by no means an enviable one. So long as al-ʻIrāq was in the hands of the Khāridjīs and the ʻAlīd rebel ʻAbd Allāh b. Muʿāwiyah [q. v.], Naṣr's communications with the caliphate were cut and even after Yazid b. ʻOmar b. Ḥabīrābād had regained al-ʻIrāq for Marwān II, he could not reckon on any very considerable help. There was therefore nothing left for him but to concentrate his efforts on the reconquest of the city of Merw. After repeated encounters between his troops and those of al-Kirmānī, he went there in person and pitched his camp opposite that of his opponent. The two rivals continued to fight with varying fortunes without being able to bring about a decision. Naṣr's appeals to Marwān and Ibn Ḥabīrābād for reinforcements remained unheeded; in view however of the danger that threatened from Abu Muslim the leadership of the rebels of the ʻAbbāsid propaganda, negotiations were begun between Naṣr and al-Kirmānī. After a son of Ḥāthīth b. Suraydī had killed al-Kirmānī to avenge the death of his father, the Khāridjī Shabīb b. Salama took his place and in the name of the Azd concluded a truce for one year. Abu Muslim was able however to bring this agreement to nothing by persuading ʻAli b. Dujādī al-Kirmānī that Naṣr had instigated the murder of his father and the Azd who were devoted to him broke the truce just concluded and resumed hostilities against Naṣr. When Abu Muslim was approached for assistance by the two combatant parties he was able to come forward as an arbiter and decided in favour of the Azd against the Muʿārid. He then entered Merw, according to the most probable statement in Rabī' II 130 (Dec. 747), and made the inhabitants swear allegiance in general terms to a caliph of the family of the Prophet without a name being mentioned. For Naṣr there was nothing left but to seek safety in flight. From Merw he fled via Sarakhs and Tūs to Naisābūr, where the news reached him that his son Tamīm, whom he had sent against Abu Muslim's general Kaḥṭāb b. Shābīb al-Tāʾī [q. v.] had been defeated and slain at Tūs. From Naisābūr he went to Kūmīs and thence to Djamālad. Nubātā b. Ḥanẓala al-Kirābī was here with a large army which Ibn Ḥabīrābād had at last sent him by the caliph's orders. But Naṣr and Nubātā did not cooperate and in addition the Kaīsīs went over from the former to the latter. On the 14th Dhu'l-Hijjah 130 (Aug. 1, 748) Nubātā was defeated by Kaḥṭāb and fell in the battle. After his defeat Naṣr could no longer stay in Kūmīs but fled, pursued by Kaḥṭāb's son Hasan, to al-Ra'y, without receiving any support from the Umayyad officials. Reaching al-Ra'y, he fell ill; nevertheless he wished to continue his journey to Hamadān but was no longer able to move without assistance; he had to be carried and died in 12th Rabī' I 131 (Nov. 9, 748) in Sawā [q. v.] at the age of 85. Naṣr combined with his eminent qualities as a statesman considerable gifts as a poet.

Naṣr Allāh b. Muḥammād b. ʻAbd al-Hāsūd Abū ʻl-Maʻālī of Shirāz, a Persian author and statesman, vizier of the Ghaznavid Khusraw Malik (1160—1186) by whose orders he was arrested and executed. Naṣr was the first Persian to succeed in giving a satisfactory Persian version of the celebrated Khaṭṭā al-Din. His version is based on the Arabic of ʻAbd Allāh the Muṭafāfī and was completed about 538—539 (1144), i.e. in the time of Bahramshāh (1118—1152). For a long time his translation was regarded as a model of elegant Persian style which could not be surpassed and served as the basis for the metrical version by Ḥāfiz (658 = 1260) and for a series of Turkish translations. It was only in the xvith century when even Naṣr Allāh's language appeared too homely and archaic that his translation was superseded by the celebrated Anwār-i Suhailāt of Husain Wālī al-Kashīfī [q. v.], d. 939 (1532—1533).

Naṣr al-Dawla Abū Naṣr ʻAḥmad b. Marwān, third and most important prince of the Marwānid dynasty [q. v.] of Diyar Bakr. He succeeded to the provincial sovereignty after the death of his elder brother, Muḥammad al-Dawla Abū ʻAbd Allāh Sā'd, in 401 (1010—1011), after a struggle with the latter's murderer, and was in the same year formally recognized by the ʻAbbāsid al-Kādīr, from whom at the same time he received his laḳāb, and by the Būyid amir, Sulṭān al-Dawla. Though now established in the capital, Maiyafārīqīn, he was unable to obtain effective control of ʻĀmid, the next most considerable city of the province, until 415 (1024—1025), when his tributary, Ibn Damna, who had hitherto ruled it, was assassinated; and during his reign of over fifty years, he suffered several ineffective attacks on his territory from the ʻAlālids of Diyar Raba', to whom he appears, at one period at all events, to have paid tribute (see Ibn al-Athīr, ix. 121),
and to whom, in order to compose a quarrel arising out of his divorce of a lady of that family, he was obliged, in 421 (1030), to cede Nisibin. In 433 (1041–1042) Dijâr Bakr was invaded from Adharbajjân by the bands of Ghuz Turkmen which had pushed north-westwards on the advance of the Seldjûkí leaders into the Djîbâl; and for two years parts of it were subjected to their depredations. Otherwise the province enjoyed, throughout his reign, a tranquillity remarkable in this troubled age.

The ruler of Dijâr Bakr was regarded as a principal guardian of the frontier of Islam, and as such was expected to harass the Christians whenever opportunity offered (see the letter addressed to Naṣr al-Dawla by the Seldjûkí Tughhrî-beg: Ibn al-Athîr, ix. 275). Nevertheless Ibn Marwân’s relations with the Byzantine Empire were for the most part amicable, being based on a pact of mutual non-aggression, to which both parties appeared when it was infringed. The only important breaches of this agreement occurred in 418 (1027), when Naṣr al-Dawla seized Ruhâ (Edessa), which, however, was recovered by the Greeks four years later, and in 426 (1034–1035), when an attempt was made by the Christian inhabitants of that city, in league with Arabs of the Numair tribe, to invade his territories. Later their good relations were of use to the Emperor—Constantine X—, who in 441 (1049–1050) obtained Ibn Marwân’s help in securing from Tughhrî-beg the release of the Georgian general Liparitî with whom he had been in league against the Georgian king, and who had been captured the year before by Tughhrî’s half-brother Ibrahim Inâl. Up to 436 (1045) Armenia, which also marched in part with Dijâr Bakr, was still independent of the Empire; and in 423 (1032) a Marwâní commander led a successful raid into this country. In 427 (1035–1036), on the other hand, a hajîdî caravan from northern Persia was attacked and looted near Ani by Armenians of the Sunnûsîa tribe, upon which Ibn Marwân forced the aggressors to give up their prisoners and booty.

Early in Naṣr al-Dawla’s reign the north of Syria and parts of the Djîzair contiguous to Dijâr Bakr were obliged to acknowledge the suzerainty of the Fâtimid caliphs, though their hold on these parts remained somewhat precarious. And his own territories were menaced by Fâtimid pretensions, when in 430 (1038–1039) the governor of Damascus, Anîşıkîn al-Dîzbarî, who was then reasserting his rule in northern Syria, projected an attack on Dijâr Bakr. This, however, came to nothing.

The reign of Naṣr al-Dawla saw the rise of the Seldjûkîs from complete obscurity to the empire of Persia and the İrâk. His first communication with them occurred as early as 435 (1043–1044), on the Ghuzz invasion of Dijâr Bakr; when he addressed a letter of protest to Tughhrî, who, though he was scarcely in a position to do so, undertook to restrain the marauders. (It may be noted, nevertheless, that Ibn al-Athîr describes this Ghuzz invasion as having been actually instigated by Tughhrî, who, he says, granted the province as a fief to its two leaders in advance; cf. Amedroz, The Marwânî Dynasty of Mavâyûrîn, in J.R.A.S., 1903, p. 137.) Surely this author is mistaken in considering the date 434 as wrong, since it agrees exactly with those given by Ibn al-Athîr). Eight years later Naṣr al-Dawla acceded to Tughhrî’s demand for recognition as suzerain; and this subservience, which was renewed in 446 (1054–1055), when Tughhrî made a triumphal tour through Adharbajjân and Muslim Armenia, spared Dijâr Bakr the experience of a Seldjûkí visitation. In the following year, however, Tughhrî’s attention was drawn to the murder of a Kurdish chieftain by Naṣr al-Dawla’s son Sulâmîn, his lieutenant in the Djîzair; and in 448 (1056–1057), when the sultan was obliged to visit al-Mawṣîl in order to oppose a combination of Shî’i leaders headed by al-Bassîrî [q. v.], he forced an indemnity from Ibn Marwân by laying siege to Djîzair and Ibn Ḥumar.

Naṣr al-Dawla was sagacious, or fortunate, in his choice of the three wazîrs who served him in turn, namely Abu ‘l-Kâsim al-Isfahânî, to whom he owed his throne (in office 401–415 = 1010–1025), Abu ‘l-Kâsim al-Maghribî [q. v.] (in office 415–428 = 1025–1037) and Abu Naṣr Ibn Djîhîr (afterwards entitled Fâkr al-Dawla) [q. v.] (in office 430–453 = 1039–1061). It was no doubt owing in part to their abilities that the remarkable tranquillity enjoyed by Dijâr Bakr during his reign was turned to advantage and resulted in an equally remarkable prosperity. This Naṣr al-Dawla fostered by a reduction of taxation and by renouncing the practice of fining the rich in order to augment the revenues. Nevertheless his court is said to have surpassed those of all his contemporaries in luxury, and many instances are quoted of his profusion and generosity. Maiyûrîn became during his reign a centre for men of learning, poets and ascetics, as also a refuge for political fugitives. Among the latter were the Bayyind prince al-Malik al-A’iz [q. v.], who was ousted from the amirate in 436 (1044–1045) by his uncle Abî Kâhlîjî [q. v.], and the infant heir of the ‘Abbâsîd al-Kâlin—afterwards al-Muqtâdî [q. v.]—who was removed with his mother from Baghdad on the occasion of its occupation in 450 (1058) by al-Bassîrî. Naṣr al-Dawla is said as being resolute, just, high-minded and methodical, and though much addicted to sensuality, he was strict in his observance of religious injunctions. He died, aged about eighty, on 24th Shawwal 453 (November 1061), leaving Fâkr al-Dawla still in office to secure the succession to his second son, Abu ‘l-Kâsim Naṣrî, Niẓâm al-Din.

(Harold Bowen)

Naṣr al-Din (pron. Naṣr-e-dîn) Kötu, the hero of the stories of wit and stupidity among the Turks, who bears a strong resemblance to the German Till Eulenspiegel, the English Joe Miller, the Italian Bertoldo, the Russian Balâkirev, etc. Various opinions are current about his life. One tradition for example makes him a learned man of the time of Hârîn al-Râshîd, but another makes him a contemporary of the Khârîzมînshâh ’Alî al-Dîn Takash (reigned c. 1172–1200). The two traditions are not to be taken seriously; at most they might be regarded as an indication that many of the jests of the Kötuja date from the period of the caliphate or that some of them came through a Persian intermediary.
The other versions of the life of Naṣreddin can be divided into two groups, of which the first puts him in the xviith and beginning of the xviiith century (the period of Bayāzīd I, Timūr and the eighth Karamanid 'Alāʾ al-Dīn), and the second in the xiiiith century (the period of the Saldijāk 'Alāʾ al-Dīn).

The first view appears to come from the Travels of Ewliyā Celebi (ii. 16—17). There, for example, the story of Timūr's meeting with the Khodja in the baths is told, when the Khodja said that he would give 40 əšq for Timūr's shirt but nothing for him himself. In spite of all the improbability of such an utterance and in spite of the fact that the older tejkhrs put this answer in Ahmadī's [q.v.] mouth (cf. also E. J. W. Gibb, *Ottoman Poems*, 1882, p. 166—167) Ewliyā's story, was given currency in Europe by Cantimir, Diez, Goethe, von Hammer, etc. When Mehmēd Tekvīfī accepted this story of Ewliyā's in his editions of the jests of Naṣreddin and Buqa (since 1853) which were later translated into German (about 1890), it was given renewed life and became almost the predominant opinion in Europe.

The second group of traditions champions the xivith century as the period of Naṣreddin and relies on the following facts. Firstly the poet Lāmī (d. 1532-1533) asserted in his Lāmīy, that Naṣreddin was a contemporary of Shāyād Hamza, who lived in the xivith century; secondly in old manuscripts the Khodja is associated with the Sulṭān 'Alāʾ al-Dīn. Koprulu Zinde (see Bīb.) therefore inclines to the view that he was a contemporary of the Saldijāk 'Alāʾ al-Dīn (xivith century). Sh. Sāmī Bey (Kūmīs al-Aṭām, vi. 4577) and P. Horn (see Bīb.) had already decided for the Saldijāk and the latter definitely for 'Alāʾ al-Dīn, but Koprulu Zinde supported his view by evidence, partly new, which we proceed to quote: 1. that the inscription on the tomb of Naṣreddin in Aşḵāhīr bears the date 386, which on the supposition that it was reversed, would indicate that the Khodja died in 683 (1284—1285); 2. on two authentic charters of endowment (awāliṯ/tevā) of the year 685 (1287) and 688 (1290) respectively, a certain Naṣreddin Khodja appears before the kādū as a witness, and 3. the statement which the former mutaf of Siwī-Ḥišār, Ḥasan Efendi, made about 45 years ago in the Medīnī-i Maʿrif about Naṣreddin, agrees with this assumption. According to Ḥasan Efendi, Naṣreddin was born in the village of Khorto (خورتو) near Siwī-Ḥišār in the year 605 (1208—1209), held there the office of Imām in which he succeeded his father, and moved in 635 (1237—1238) to Aşḵāhīr where he died in 683 (1284—1285).

Although this evidence is by no means to be rejected off hand, it seems to have been completely neglected by other scholars (Krymski in 1927 [see Bīb.] does not even mention Koprulu's book except for my article entitled *Je le Naṣreddin-Khodja ziehe* (*Did Naṣreddin Khodja really live?*) in the Christmas supplement to the Belgrade Politika (Jan. 6, 1932), where it was described as worthy of consideration, if not yet absolutely convincing.

After all these traditions and opinions, it is not a matter for surprise that some scholars (H. Ekhī, R. Basset, M. Hartmann, A. Wesselski [see Bīb.]) have been more or less sceptical about the historicity of the Khodja.

These doubts are to some extent closely connected with the question of the origin of Naṣreddin's jests. Basset, for example, thinks (in *Recherches sur Djehâ a...*) that they are a translation of the old Arabic droll stories which were current in large numbers at the end of the fourth (tenth) century about a certain Djehâ (Djehâ) of the tribe of Fażāra in Kūfa. Djehâ's stupidity became proverbial among the Arabs, as is already evident from Maidnā (d. 1124) (cf. *Arabum proverbia*, ed. G. Freytag, i. 403, N.° 175), and a Book of *Anecdota of Djehâ* (كتاب نادر جهان) is expressly mentioned as early as the *Fihrīs of al-Nādīm* (d. 993) (cf. Flügel's edition, i. 313). This collection, which had previously reached the west through oral transmission, was translated into Turkish in the xviith or xviiith century and the hero identified with a certain Naṣreddin Khodja, whose existence Basset thinks is at least doubtful.

This thesis of Basset's was not everywhere accepted without demur. Horn and Christensen (see Bīb., for example, do not believe in a translation from the old book of Djehâ's jests and Wesselski holds the view "that there is no evidence of the existence of any story of Djehâ in the period before that of Naṣreddin's alleged or actual life, which could with certainty be assumed to be the source of one of the jests of Naṣreddin". M. Hartmann describes Naṣreddin's jests as the common property of the literature of the world, expressed to some extent in a specifically Turkish guise and therefore regards any question as to whether there ever was such a person as of little importance. Horn and Krymski also regard the Khodja's jests and folk stories found almost everywhere. Christensen thinks similarly but admits that these jests form an independent collection "into which probably very many stories from the old book (of Djehâ) have been incorporated".

Whatever the truth may be, one thing seems to be certain: the immediate source for most of the stories of Naṣreddin is to be sought, as Basset and Hartmann say, in the world of Arabic culture and Islam where Djehâ certainly is often the hero of such anecdotes. In other words, Djehâ might be regarded as the ultimate prototype of many of the adventures of Naṣreddin. While Basset's theory then may not be correct in all details, it seems to be right in its main features, especially in the fact that it has directed the student of Naṣreddin to the influence of the rich Arabic literature of humorous anecdote. That many of these stories are originally not Arabic but Persian, Syriac, Indian, Greek, etc. is quite natural, especially when we remember that they are common to many literatures, but in this case it must often have been the Arabic version that was the source upon which the Turkish drew.

For the problem of Naṣreddin it is also important to put on record that stories of Djehâ are very early mentioned by Persian poets and authors (Mifrid, d. 1040/1041) or transmitted (a story in Anvari [d. c. 1190], three stories in Djalāl al-Dīn Rūmī [d. 1273] and a dozen stories in 'Ubaid-i Zākānī [d. 1370—1371]). When we remember the part played by Persian culture among the Saldijāk of Rūm and their Ottoman successors, we cannot consider it impossible that some stories of Djehâ may have come to the Turks through Persian literature.
This is all the more probable as Djalal al-Din Rumi himself spent the greater part of his life in Anatolia (especially in Konya) and used Diwh's (as Djalāh is called among the Persians) popularity to illustrate his mystic ideas (cf. Mathnawi, ed. Nicholson, ii. 3116 sqq.).

Particularly in view of this popularity and the fact of oral transmission, it is not impossible that the common people altered the name Djalāh (Djoha), as Basset repeatedly insists (Mélanges africains et orientaux, Paris 1915, p. 49). On the other hand, there may have been a droll Khodja named Nasreddin among the Ottomans (or Seldjucks), around whom gathered humorous stories of others, in addition to his own jests, and thus became the typical representative of wit and stupidity. For this reason he was probably also credited with the tales of the simplicity of Ārākūsh [q.v.], Saladin’s steward, who had been dead since 1201.

Other jests attributed to Nasreddin go back several centuries further which is proof that they cannot originate with him. The fact that most of the jests are not original is obvious (cf. e.g. Weisza’s parallels), in spite of all the changes and transformations they have undergone among the Turks.

One of the Turkish versions (with additions) was, according to Basset, translated in the middle of the xith (sixth) century into Arabic and thus the Turks returned to the Arabs part of what they had formerly borrowed from them. Nasreddin and DJah, being similar types, later became amalgamated in such a way that the Arabic editions identify the two in the title: Navaqād al-Khodja Nasr al-Din Efendii Djah. Sometimes however, the Arabs distinguish between the two by calling Nasreddin the “Rumelian DJah” (Djaha-al-Rumi). This DJah of the Navaqād easily reached the Berbers through the Arabs as Si DJah (Djah). In a similar way the Nubians procured their DJahua and the Maltese their DJahan. Whether the fool of Sicilian popular story, Giufo or Guca also comes from DJah is a further question.

On the other hand, the Turkish version of the jests of Nasreddin (under his or another name or anonymously) became known not only to the Rumanians, Bulgars, Greeks, Albanians, and Yugoslavs but also in Armenia, Georgia, the Caucasus, the Crimea, the Ukraine, Russia, Turkestan etc. On these long travels, Nasreddin naturally underwent many changes; distortions and additions were made which are quite foreign to the original text, so that the number of his (or Djaha’s) stories increased to several hundreds (in Wesselski to 515 or 555). The oldest manuscript (Leyden, No. 2715), which was already in the possession of a European in 1625, only contains 76 jests.

The first edition of the chapbook on Nasreddin, which was the foundation of many later editions, appeared in 1837 (125 jests). Mhemed Tewfiq’s edition (1299 = 1833) in which the coarse stories of the chapbook are omitted only contains 71 but a few months later Tewfiq published a further 130 under the name Bu Adam (“This Man”, i.e. the same Nasreddin) (in the final edition of 1302 Bu Adam only contains 96 stories). Anecdotes of Nasreddin were later collected by I. Kunos from the lips of the people between Aidin and Konya and separately published (Budapest 1899, with 160 stories and introduction, and in

Radloff’s Proben der Volksliteratur der turkischen Sämme, vol. viii., St. Petersburg 1899). The fullest, but uncritical, Turkish edition is that of Behāfī (pseudonym of Weled Čelebi), the fourth edition of which (1926) contains nearly 400 anecdotes.

The Turkish editions in the Roman alphabet are much shorter (e.g. Narrettin Hoca Hijayeleri, 1928 [only 79 pp.] and Letafi Narrettin Hoca, 1929 [only 96 pp.]) or are divided into various periods of Nasreddin’s life (like the Narrettin Hoca of Kemalettin Şakir 1920–1931, in four parts).

The first European translations were based on the early editions of the Turkish chapbook: the German by Camerloher and Prolog (Triest 1857, with 126 jests) and the French of Decourdemanche (Les plaisanteries de N. hoda, Paris 1876, also containing 126 anecdotes) which was increased in the second edition (1908) by those about Ārākūsh. Decourdemanche also provided a translation based on much larger material (he drew upon unpublished manuscripts also) entitled Sittietier der Nasr-Edām-Hodja (Brussels 1878, with 321 humorous anecdotes). While the translation by Camerloher and Prolog made it possible for R. Kohler to find many stories told of Nasreddin in European collections and to trace many of them back to an Indian origin (Orient und Orientale, i. [1862]; a later edition with additions in his Kleineren Schriften zur Märchenforschung, i. [1898]), Decourdemanche’s translation served Dragomanov as the basis for his studies on the dissemination of stories of Nasreddin in the Ukraine (Kiewskaia Starina, 1886).

Later (about 1890) Mhemed Tewfiq’s edition, including a portion of Bu Adam was translated into German by Mullendorff (Reclam N°. 2735). The remaining of the Bu Adam stories (N°. 131–226) were translated by Menzel; the much too long Abenteuer Budjem (N°. 197) in the Türkische Bibliothek (vol. xiii., 1911) and the others in the Beiträgen zur Kenntnis des Orients, vol. ix. (1911), p. 124–159. Nasreddin’s jests have also been translated into English, Russian, Hungarian, Greek, Serbo-Croat, Italian, Russian, Bulgarian, etc. Wesselski’s Der Hodschia Nasreddin (1911) is at present the most complete translation of these anecdotes in a number of versions (see Bibl.).

In conclusion, it may be mentioned that some anecdotes of Nasreddin were retold by A. Pann in Rumanian (1853), by Murad Efendi (Fr. v. Werner) in German (1878), by V. Veličko in Russian (1892), by V. Šcurat in Little Russian (1896) and by Kopitu-Zaide in Turkish verse (1918).

Nasr Al-Din — Nasrids

Nasrani. [See Nasar.]

Nasrids, the Banu Nasr, also sometimes called Banu ‘l-Ahmarr, a Muslim dynasty which ruled over the kingdom of Granada in the north of Spain from 629 to 897 A.D. (1231—1491).

While, thanks to the narratives of the contemporaries Ibn al-Khatib [q.v.] and Ibn Khaldun [q.v.], we are very well informed about the history of the kingdom of the Nasrids down to the second half of the sixteenth century, we have for the later period only a very few sources available in Arabic—and it is not always easy to fill the gaps from Christian sources—a few pages of al-Maqrizi’s Naqf al-‘Ibl and the short anonymous chronicle published in 1863 by Muller.

We give below a chronological list of the Nasrids; when a date A.D. is not preceded by its equivalent A.H., this is because it is not given either by Muslim historians or Arabic inscriptions.

I. Foundation of the Nasrid Kingdom. At the time when the power of the Almohads was beginning to collapse in Spain, two influential families, the Banû Mardanîsh in Valencia [q.v.] and the Banû Hûdî in Murcia [q.v.], took advantage of the civil strife to form for themselves little principalities in the east of the Peninsula. At the same time a member of the Arab family of the Banû ‘l-Ahmâr, settled in Arjona, a little town some 20 miles north of Jaen, who traced their descent from the chief of the Banû Khazraj, Sa’d b. ‘Ubâda, also tried his fortune at profiting by the troubled times. He was Muhammed b. Yusuf b. Ahmad b. Naṣir and was known as al-Shâkih. In 629 (1231) he found a few supporters to proclaim him; these were mainly members of his own family and of another, related to it, the Banû Ashkilîla. The towns of Jaen, Guadix and Baza rallied in the following year to his standard. After various exploits the details of which are somewhat obscure, Muhammed I, ancestor and founder of the dynasty of the Nasrids, took Granada, in 635 (1237—1238) and made this town his capital. He soon decided to build a royal residence on the famous hill of the Alhambra [q.v.]; al-Hamrâ’ or Hamrâ’ (Gharbâ’). In the course of the following year, he made himself lord successively of Malaga and Almeria. The little town of Lorca did not come under his sway until 663 (1264—1265). Hitherto Muhammed I had had to employ all his forces to fight against his Muslim rivals and in order to have his hands free he declared himself the vassal of Ferdinand I, king of Castile (1217—1252) to whom he undertook to pay a considerable annual tribute. He had to take part with his overlord in the capture of Seville from the Muslims in 1248 and be a passive witness of the triumphs of the armies of the king of Castile in the south of Spain. When on the death of Ferdinand I, Alfonso X succeeded him, Muhammed I had to renew his oath of vassalage to the latter. His kingdom, "the kingdom of Granada", was now the only area in the Peninsula ruled by a Muslim prince; bounded by the Mediterranean from the Straits of Gibraltar to Almeria, this kingdom did not go farther inland than the mountains of the Serrania de Ronda and the Sierra d’Elvira.

II. The Nasrid Kingdom in the xivth Century. — Muhammed I died in 671 (1273) and was succeeded by his son Muhammed II, called al-Fâkıh, who on his accession sought an
alliance with the Marinids who were finally putting an end to Almohad rule in Morocco. The Marinids answered his appeal. On coming to the throne Muhammad II had found himself faced with the necessity of putting down threatening rebellions; the most serious was that of the Banū Aṣkūliya, governors of Malaga and Guadix. He was able to rout the rebels near Antequera, with the help of forces sent him by the Infante Don Philip and Don Nuño de Lara. On the other hand, he soon realized that the king of Castille, his suzerain, had every interest in letting the kingdom of Granada exhaust itself in internal strife. This is why the Nasrid turned to the Marinids. In consideration for the return of Algeciras [q.v.] and Tarifa [q.v.], the sulṭān of Fās Abū Yūsuf Yaḥyā b. ʿAbd al-Ḥaṣṣa agreed to cross into Spain where he inflicted two defeats on the Castillian troops. The chroniclers of the Marinid dynasty record the four expeditions of the king of Fās into Spain and give details of the loss of Tarifa which the Spanish leader Alonso Perez de Guzman, celebrated in legend as Guzman el Bueno, was to defend heroically a little later, in 1293. But it is from this time that the permanent intervention of the sulṭāns of Fās in the affairs of the Nasrids of Granada dates; under pretence of a ḥifāṣ they were able at every opportunity to add to the confusion of a political situation already much troubled and to weigh heavily upon the destinies of the Nasrid throne by playing a game of alliances which were often broken as readily as they were made. The kings of Granada henceforth were to have at their side a regular body of Moorish soldiers, the ghnūt (sing. ghnt) under the command of a Marinid shāhīkh, consisting of adventurers of fortunes who had become more or less a slave remnant of their native land.

When he died in 701 (1302) Muhammad II was succeeded by his son Muḥammad III who was later to be known as al-Makhluṭ (the deposed). It was he who built the great mosque of the Alhambra. He had to put down risings by the governors of Guadix and Almeria but had to bow before the rising of a prince of his family, Abu l-Diyuṭūs Naṣr b. Muḥammad, who assumed the power in 708 (1309). Muḥammad III abdicated and withdrew to Almuñecar [q.v.].

Naṣr's reign was hardly any longer or happier than that of his predecessor. After a display of energy by which he forced the king of Aragon to raise the siege of Almeria and the king of Castille to raise the siege of Algeciras, he failed against a conspiracy hatched by a Naṣrid prince Ismā‘īl, who seized the power in Granada and left only the town of Guadix to Naṣr. The latter established himself here in 713 (1314) and stayed there till his death in 722 (1322).

The fifth Naṣrid ruler, Abu l-Walid Ismā‘īl I b. Faradž b. Ismā‘īl b. Yūsuf b. Naṣr, was one of the most remarkable members of the dynasty. As soon as he had assumed the power, he showed a certain strength of character and did his best to put his frontiers in a state of defence. He regained for a time the old Naṣrid lands which had passed to the Marinids: Algeciras, Tarifa and Ronda. In 719 (1319) he had to meet an offensive from Castille and with the help of the Shāhīkh al-Ghuzzat, Abu Saʿd ʿUṯmān b. Abī ʿAbd al-Ula al-Marini, he inflicted heavy defeats on his enemies at Alicum and in the Sierra d'Elvira. In this last battle the Infantes Don Juan and Don Pedro, guardians of king Alfonso XI, were killed. Soon afterwards, Ismā‘īl I regained the fortresses of Huescar, Orce and Galera, then that of Baza. In the following year he took Martos. In 725 (1325) he was assassinated in his palace at the instigation of one of his relations with whom he had quarrelled, the lord of Algeciras Muḥammad b. Ismā‘īl. He left four sons of whom the eldest, Muḥammad, succeeded him on the throne of Granada.

Muḥammad IV was still a minor on his accession and remained for several years under the strict guardianship of his ministers, notably of the vizier Muḥammad Ibn al-Mahrūk. The latter, after a long struggle with the Shāhīkh al-Ghuzzat Ibn Abī ʿAbd al-Ula, was finally put to death by orders of his sovereign who then took the reins of power into his own hands. The remainder of his reign was continually troubled. The help which he sought from the Marinid Sulṭān Abu l-Ḥasan al-ʿAli against the Christians earned him the enmity of the family of the Banū Abī ʿAbd al-Ula. In succession he lost Ronda, Algeciras, Marbella and Gibraltar and was ultimately assassinated in 733 (1333).

His brother Abu l-Ḥājjāj b. Yūsuf I b. Ismā‘īl succeeded him and reigned for a considerable period. His first care was to avenge his brother by expelling from his kingdom the Banū Abī ʿAbd al-Ula who took refuge in Tunis and in giving the office of Shāhīkh al-Ghuzzat to a Marinid lord, Yaḥyā b. ʿUmar Ibn Raḥmān. The struggle with the Christians was resumed in his reign. He sought and obtained the help of the Marinid Abu l-Ḥasan, who crossed the Straits of Gibraltar in 741 (1340) with a large force and laid siege to Tarifa. This expedition ended disastrously. The king of Castille, Alfonso XI, with his army and that of the king of Portugal inflicted a sanguinary defeat on the Muslims near the mouth of the River Salado, on the 7th Dhu- ʿAlīd 741 (Oct. 30, 1340). Abu l-Ḥasan had to take refuge in Algeciras, whence he was able to reach Morocco. Yūsuf I returned with all speed to Granada, while Alfonso XI profiting by the confusion of the Muslims seized Alcazaba la Real, Priego and Benameji. After taking Algeciras he granted the Naṣrid king a truce of ten years, at the end of which he laid siege to Gibraltar. Alfonso XI however died of the plague during the siege. Yūsuf I himself was assassinated by a madman in the great mosque of Granada on the day of the feast of the "Breaking of the Fast" of 755 (Oct. 19, 1354). This Sulṭān's name will always be associated with certain monuments of the Alhambra. It was he for example who built the great gateway of the enclosure called Bab al-Sharifa (gate of the Esplanade; commonly called wrongly "gate of Justice", in Spanish "Puerta Judiciaria" or "de la Justicia") the inscription on which records that it was finished in Rajab 1 749 (June 1348; cf. my Inscriptions arabes d'Espagne, No. 171). It was also Yūsuf I who in 750 (1349) built the madrasa of Granada (ibid., No. 172).

His successor was his eldest son Muḥammad V, who bore the honorific takab of al-Ghāni bi-llāh. This Sulṭān left the exercise of power in the hands of his father's old minister, the ḥājjib [q.v.] Riḍāwān, who maintained peaceful relations with Castille. After a few years, a conspiracy of dissatisfied Naṣrid princes forced Muḥammad V to abdicate and take refuge in Guadix, and afterwards in Morocco where he was well received by the Marinid Sulṭān Abu Salim (760 = 1359).
Isma'il II b. Yūsuf I, brother of Muhammad V, a Nasrid prince devoid of personality and prestige, was put on the throne, but only for a few months. In 761 (1360) he was assassinated at the instigation of the rā'īs Muhammad VI b. Isma'il b. Naṣr, who seized the power; his troops soon afterwards suffered a defeat at the hands of the Christians at Guadix. He was soon overthrown by Muhammad V who had returned to Spain and asked the help of Peter the Cruel of Castille to recover the throne. Muhammad VI also appealed to the Christian ruler but the latter had him put to death in 763 (1362).

Muhammad V’s second reign lasted for good or evil another 30 years. It was mainly occupied by family quarrels and civil strife. It was at this time that the famous vizier Lişān al-Dīn Ibn al-Khaṭṭīb had to seek refuge in Morocco, which however did not save him from assassination. It (1392) and the throne passed to his son Muḥammad VII. The latter imprisoned his elder brother Yūsuf in the fortress of Salobreña and resumed the offensive against the Christians, who took the fortress of Zahara from him in 809 (1407). When he died next year his elder brother Yūsuf III, the prisoner of Salobreña, assumed power and held it till his death in 820 (1417). After him his eldest son Muḥammad VIII became king of Granada; he is usually called by the chroniclers al-Aisar (“the left-handed”). It was in his reign, also much troubled, that we find the family of the Banu ‘l-Sarrāj, the Abencerrages [q. v.] and that of the Zegris (Arabic ṣaghrī: “man of the frontier”) beginning to play an important part in the history of Granada and the civil wars which characterise it. After various adventures, Muḥammad VIII had to abandon his

is also at this date that the history of the Nasrid dynasty not only by Ibn al-Khaṭṭīb, but also by Ibn Khaldūn, stops. Our information about the later rulers is not only scanty but also inaccurate. The relations of the kings of Granada and of the rulers of Castille continued to be much what they had been, truces or expeditions of short duration with limited objectives. But gradually the ultimate aim of Castilian policy became apparent and generally became more and more easily attainable: the capture of Granada, which was at the same time to put an end to the Nasrid dynasty and to Muslim rule in Spanish lands. Below we give only a brief sketch of the last period of the history of the Nasrid kingdom.

---

**III. End of the Nasrid Kingdom.** — Muḥammad V died in 793 (1391) and was succeeded by his son Abu 'l-Ḥādžīsāl Yūsuf II who reigned only a short time. He died in 794 capital for a time and went to seek an asylum with the king of Tunis, while Muḥammad IX known as al-Ṣaghīr assumed power. Muḥammad VIII soon returned and his second reign was marked by the disastrous battle of Higuerauela, near Granada, in which the Muslims were routed by the army of John II on July 1, 1431. Al-Aisar had to take refuge in Malaga for some months during which the throne passed to Yūsuf IV b. al-Mawl, a grandson of Muḥammad VI. Al-Aisar then resumed the throne for a third time but the frontiers of his kingdom were shrinking every day. The towns of Jimena, Huescar (1435) and Huelma (1438) fell into the hands of the Christian power and in 1445 Muḥammad VIII was forced to abdicate in favour of his nephew Muḥammad X, while the Abencerrages, gathered at Montefio, proclaimed Abu 'l-Naṣr Sa'd sultan. It was during the latter’s reign that in 1462 Gibraltar was taken by Rodrigo
NAṢĪR (A.), etymologically: what is apparent to the eye, as a technical term: text. In this sense the word does not occur in the Kurān nor in the Ḥadīth. Al-Ṣāhibī, on the other hand, appears to be acquainted with it. In his Risāla he uses it chiefly in the sense of nasī' dārām (p. 7, 16, 30, 41) or nasī' ḥukm (p. 5) “what has been laid down in the Kurān”. In other passages nasī' al-ḥāda'ī is distinguished from sūna (p. 2, 4, infra, 24, 71, 81, 31, 65, 21). The combination nasī' sūna occurs, however, also (p. 50, 14, 66, 2). From these passages it may also appear that al-Ṣāhibī uses the term chiefly to denote legal precepts. In accordance with this is the definition of the term as given in the Liwān al-Arā'ib: the naṣī' of the Kurān or of the sūna means the precepts (ṣahād) contained in the plain words (zāhir) of these sources”. 

An extension of the term has taken place chiefly in three directions, so that naṣī', apart from the general sense of text, may mean: a. the text of a precept of the law, written or not written; b. the zāhir [q.v.] of a sacred text; c. the sense of such a text. For other special meanings of the term, cf. Dozy, 5upplements aux dictionnaires arabes, s.v. Bibliography: al-Ṣāhibī, al-Risāla fi ʿIrāq fi-7īq, Cairo 1321; Muḥammad al-Ṭahānawi, Dictionary of the Technical Terms, ed. A. Sprenger, Calcutta 1862, p. 1405 sqq. 

NASSADES were the light wooden warships built in Nasso or Hohenau (Lower Austria), the “Nassauer” or “Hohenauer”, Magyar nassad, pl. nassadok, Slav. nasad, which were used on the Danube. They were usually manned by Serbian seamen who were called martoloses (from the Magyar martolás, martolat, lit. “rober”). According to a Florentine account, this Danube flotilla in 1475 consisted of 330 ships manned by 10,000 “nassadists” armed with lances, shields, crossbow or bow and arrow, more rarely with muskets. The larger ships had also cannon. About 1522 the commander of the Danube fleet was Kadi Borić who reorganised it at Peterwardein (cf. K. J. Jireček, Geschichte der Serben, 1/1, 158 sqq.). Through want of money, the Serbians were often deserted to the Turks (ibid., p. 262) who after the fall of Belgrade seized the Danube fleet and developed it into a powerful arm. About 1530 the Danube fleet consisted of 800 nassads and was commanded by the voivod Kázm (cf. J. v. Hammer, G.O.N., iii, 85). Bibliography: E. Szentesky, A dunai hajóhadok története (Budapest, Ungar. Akadémie, 1886); G. NASTA’LIK. [See ARABIA, i. 391b].

NAṢĪH PASHA, an Ottoman grand vizier, was of Christian descent and was born either in Gumuldjina (the modern Komotini, Thrace, Greece) or in Drama. According to some sources (e.g. Bauder and Grimestone in Knolles), he was the son of a Greek priest, according to others (e.g. Naṭmā, Ta’rīkh, first edition, p. 283: arnaud

The Encyclopaedia of Islam, III.
NAŞÜH PASHA — NAVARINO

djindž) of Albanian origin. He came early in life to Stambul, spent two years in the Old Seray as a telerdār (halbardier) and left it as a câşçah. Through the favour of the sultan's confidant Mehemmed Agha he rapidly attained high office. In quick succession he became woiwod of Zile (Anatolia), master of the horse and governor of Fülek (Hungary). He married the daughter of the Kurdish Mir Seref and thereby obtained riches as great as his power, which every one was now beginning to fear. His ambition and arrogance, his vanity and cruelty knew no bounds and he was even said to be aiming at the throne. In 1015 (1606) he was to conduct the campaign against the Ottomans as the son-in-law of Mir Seref and on account of his local knowledge, with the rank of third vizier and serasker, but his attention was claimed by the trouble in Anatolia which was affecting the whole of Asia Minor; through Kurd treachery he lost a battle and it was only in the autumn of 1608 that his troops joined the army of the grand vizier who received him very coolly (cf. J. v. Hammer, G. O. R., iv. 412 sq). In 1011 (1602) Naşuh Pasha had been appointed governor of Siwas, the next year of Halab and in 1015 (1606) of Diyarbakr. His goal was the grand viziership. He did not hesitate to ask the sultan to give him the imperial seal and the post of commander-in-chief in return for a sum of 40,000 ducats and the maintenance of the army at his own expense. Ahmet I handed on the offer to the grand vizier, who summoned Naşuh Pasha to him and fined him that sum as a punishment (cf. J. v. Hammer, G. O. R., iv. 446 sq). When soon afterwards the grand vizier, the Croat Kuyduju Murad Paşa died at the age of over 90, Naşuh Paşa became his successor (Aug. 22, 1611). In the following year he married A'isha, the three year old daughter of Sultan Ahmet I (Feb. 1612). His arrogance now knew no bounds; all his opponents were ruthlessly disposed of. His personal qualities dazzled everyone: "Of imposing appearance, brave and eloquent, never weary of talking, but at the same time passionate, impetuous, quite incapable of kindly conduct and uttering flattering words and always intent on humbling the other viziers" (J. v. Hammer, G. O. R., iv. 472). As human life was nothing to him but wealth everything, he accumulated vast treasures. Sycophants and astrologers nourished in him the delusion that he was born to rule. The number of his enemies increased from day to day as a result of his intrigues and his ruthlessness. When on Friday the 13th Ramazi 1023 (Oct. 17, 1614) he was to accompany the Sultan to the mosque, suspecting no good, he said he was ill. The bostandji bâbi sent to him had strangled by his own garden guards. His body was buried on the Ok Ma'dan. His estate which fell to the coffers of the state was enormous: pearls, jewels, carpets, cloth and bullion without number (cf. J. v. Hammer, G. O. R., iv. 474 sq. quoting Mezeray, ii. 195). — Naşuh Pasha left several sons, one of whom Husain Paşa (d. 1053 [1643]; cf. J. v. Hammer, G. O. R., v. 260 and Hâdi'dji Khalifis, Fedžile, ii. 226) had a son named Mehmed. The latter wrote a history of the Ottoman empire (Dheil-i Ta'vir-tikhi Ahi Othmân) from the death of Murad IV (1048 = 1639) to 1081 (1670) the original MS. of which is in Dresden (cf. F. Babinger, G. O. W., p. 211).

NAȚÎDJA (A.) is the usual name for the conclusion resulting from the combination of the two premisses mútakadămât in the syllogism (biyyā). It corresponds to the Stoic ἐπιποθήσης; this word in the works of Galen known to the Arabs is applied to the various discharges from the body but also means, as with the Stoics, the conclusion. Aristotle used the word ἐπιποθήσης: that which concludes or completes the syllogism. In place of the usual nattîda we also find rīdî or râfî (≡ deduction). (T. J. DE BOER)

NÂTÎK. [See SABIYA.]

NAVARINO (Navâzin), a little seaport in the southwest of Messenia not far from the ancient Pylos, opposite the promontory of Koryphasion on which there was in prehistoric times an acropolis and later, during classical antiquity, an often mentioned settlement. The harbour of Navarino is one of the safest in the Greek east for it is sheltered by the island of Sphacteria, which lies right opposite it and has intimate connections with many ancient, medieval and modern events. Recent research has shown that Navarino has no connection with the Homeric Pylos. The latter was in Triphylla near the village of Kakabatos where prehistoric tombs were recently excavated. The derivation of the name Navarino cannot be given with certainty. According to Fallmerayer, Gesch. der Halbinsel Morea, i. 188, the name Navarino is a distinct survival of Avar rule in Morea between 587 and 807. On the other hand, Hopf thought that it owed its name to the Navarrese (cf. below). Fallmerayer's view has been adopted by F. Curtius, Peloponnesus, i. 86; ii. 181 and W. Miller among others. According to M. Leake, Travels in the Morea, i. 411, the name Navarino developed from Ναυαρίνος. Hopf's view is however wrong, for Navarino is mentioned before the appearance of the Genoese in the Morea. In the middle ages the country round Navarino
NAVARINO — NAVAS DE TOLOSA

was called Zonglon (Zonchio), from which came the French name of the place Junch (Old French jonc = reed). One of the earliest mentions of Navarino is in the geographical treatise, the Nuzhat al-
Manazzik of Idrisi; he refers to the place as Irouda and adds that it has "a very commodious harbour.
After the period of Frankish rule, information about Navarino becomes fuller. The Knights, who
under Guillaume de Champlitte and Godefray de Villeharduin had planned the conquest of the
Morea, in 1205 took its inhabitants and governor
prisoners after the capitulation of Navarino.

Later the Baron of Thebes and Marshal of Achaea,
Nicolas St. Omer (d. 1294), built for his nephew
Nicolas III St. Omer, the Neocastro (New Castle)
of Navarino. This is said, according to Buchon,
to have been called Neo-Avarino in contrast to
Palaio-Avarino. At the end of 1381 or early in
the next year, the Navarrese company seized Nava-
riano and made it the chief centre of their military
power. Navarino then became known as Château
Navarres (Voyage d'Outremer par le Seigneur
[Nompar] de Caumont, publ. par la Grange, Paris
1858, p. 89). The Greeks however at this time
called Navarino Spanochori ( = village of the
Spaniards, after the Navarrese). In 1417 Venetian
soldiers occupied Navarino and six years later the
republic of St. Mark became the lawful owner of
the place. In the summer of 1460 Sultan Mu-
hammad II appeared before Navarino with an
army, which, in spite of the recently concluded
peace treaty, laid waste the country round the
town. In August 1500 the Turks took Navarino
from the Venetians without difficulty after taking
Modon and Koron shortly before, although the
garrison of Navarino numbered 3,000 soldiers and
had provisions for about three years. Soon after-
wards the Venetians were able to retake Navarino
by a stratagem and to destroy the Muslim garri-
son. Ali Paşa now advanced from the land and
Kemâl Reis attacked with his fleet by sea and in
1501 they took finally Navarino, inflicting great
losses on the Venetians. Navarino retained its
importance under Turkish rule and was often the
place of concentration of the imperial fleet. Hâджî
Khalifa and Eyiûlâ Celebi give some important
information about Navarino and the former says that
its original name was Anavarin. In the year 1568
the Venetians again took the town which they
held till 1715. The Turks then entered upon their
last period of occupation.

During the first Russo-Turkish War in the reign
of Catherine II (1768—1774) Navarino played an
important part. After a stubborn defence for six
days by the Turkish garrison and the Muslim
civilian populace, the Russians on April 10,
1770 forced the fortress, the town and the nearby
island to surrender. The fortress was now strongly
enough fortified but still amply provided with
munitions and artillery, to capitulate. By the
terms of the treaty, the Turks of Navarino
got to Chania (Crete) leaving behind them a
number of Christian women whom they had had
imprisoned in their harems. Soon afterwards
the Russians made Navarino, the fortifications of
which they renovated, their principal base of
operations in the Morea. Fate decided that the Russians
had to evacuate Navarino again. On June 1, 1770,
the Russian ships sailed from the harbour of
Navarino. The Turks next day occupied the well
placed fortress, which was in part burned and
destroyed.

During the last decades of Turkish rule in the
Morea, the Turkish family of Bekir-Agha of Nava-
riano played a prominent part. Soon after the out-
break of the War of Liberation, the Greeks laid
siege on March 29, 1821 to Navarino where the
Turks of Arcadia (Cyparissia) had also taken refuge.
On Aug. 7, 1821 the Turks surrendered to the
Greeks who massacred them all without mercy in
spite of all protests. In the spring of 1825,
Ibrahim Paşa of Egypt occupied Navarino and the
neighbouring fortress in spite of a heroic defence
by the Greeks.

What gave Navarino its special place in history
was the naval battle fought on Oct. 20, 1827 in
its harbour between the combined fleets of England,
France and Russia on one side and those of Turkey,
Egypt and Tunisia on the other, in which the
latter were almost completely destroyed. It is cal-
culated that the Turks lost 6,000 killed and the
allied losses were only about 1,000. Soon after
the battle, Ibrahim Paşa concluded a truce with
Admiral Codrington.

Navarino remained in Ibrahim Paşa's hands
until the spring of 1828. The French under General
Maison then relieved the Egyptian-Turkish troops.
Alfred Reumont gives a fine picture of Navarino
under French occupation in 1832.

NAVAS DE TOLOSA (LAS), a place in the
south of Spain in the province of Jaen on the
frontier of Andalucia, a short distance from the
modern town of Carmona. Its site corresponds to
that of a fortress called Hisn al-'Ishâb in the
Muslim period. It was in the plain which lies in
front of it that there was fought on the 15th
Safar 699 (July 16, 1212) the great battle
between the Christians and the Almohads which
ended in the rout of the latter.

As a result of the defeat of Alarcos [q. v.], the
king of Castile, Alfonso VIII, had concluded a
truce with the Muslims. On its expiration at the
end of the xiith century, the Christian troops
began a series of surprise attacks on the Muslim
frontiers. Disturbed at this, the Almohad ruler
al-Nâṣir [q. v.] prepared a great expeditionary
force in Morocco while on his side the king of
Castile secured the help of the kings of Aragon,
Navarre and Leon, as well as of the Count of Portugal and the Pope, who preached a crusade against the infidel. The Christian troops gathered in Toledo and set out, but the encounter was a bloody one. The Muslim volunteers from Morocco and the Andalusian contingents soon lost ground and the Almohad 'abd were in their turn decimated. The victors were able to exploit their success and took Ubeda [q.v.], Baéza [q.v.] and other strongholds. The Christian victory of las Navas de Tolosa was certainly one of the most important steps in the "Reconquista".

NAVAR. [See NURJ.]

AL-NAWAWI (or AL-NAWAWI), MUHAMMAD AL-DIN ABU ZAKARIYA' YAHYA B. SHARAF B. YUSUFI [following Nawawi's own spelling, Syuyt, vol. 53]. B. HASAN B. HUSAIN B. MUHAMMAD B. DUNA' B. HIJAZ AL-HIZM B. AL-URMAI, a Shi'i jurist, born in Muharram 631 (Oct. 1233) in Nawaw south of Damascus in Ljódwám. The ability of the boy very early attracted attention and his father brought him to 649 to the Madrasa al-Rawahiyya in Damascus. There he first of all studied medicine but very soon went over to Islamic learning. In 651 he made the pilgrimage with his father. About 655 he began to write and was called to the al-Ashrafiya school of tradition in Damascus in succession to Abu Shamsa who had just died. Although his health had suffered severely during his life as a student, he lived very frugally and even declined a salary. His reputation as a scholar and a man soon became so great that he even dared to approach Sulam Baibars to ask him to free the people of Syria from the war-taxes imposed upon them and to protect the teachers in the madrasas from a reduction in their income.

This was in vain however, and Baibars expelled al-Nawawi from Damascus when he alone refused to sign a fikhr approving the legality of these exactations. (This action of al-Nawawi's is commemorated in the popular romance Sīrat al-Zahir Baibars, Cairo 1326, xi. 38 sqq., in which the Sultan, cursed by al-Nawawi, becomes blind for a time.) He died unmarried in his father's house in Nawaw on Wednesday 24th Radjab 676 (Dec. 22, 1277). His tomb is still held in honour there.

Nawawi has regained his high reputation to the present day. He had an exceptional knowledge of Tradition and adopted even stricter standards than later Isāmī; for example he admits only five works on Tradition as canonical, while he expressly puts the Sunan of Ibn Mājda on a level with the Mustad of Ahmad b. Handal (cf. Sharh Muslim, i. 5; Adhkar, p. 3). In spite of his fondness for Muslim, he gives a higher place to Bukhārī (Tahdīh, p. 550). He wrote the principal commentary on Muslim's Sahih (pr. in 5 volumes, Cairo 1283); as an introduction to this, he wrote a history of the transmission of this work and a sketch of the science of Tradition. He gives not only observations on the text and a grammatical explanation of the traditions but he also comments on them, mainly from the theological and legal aspect, quoting whenever necessary not only the founders of the principal schools but also the older jurists like al-Awzā'ī, al-Dhahabi, etc. [p. 183].

Al-Nawawī's importance as a jurist is perhaps even greater. In Shi'i circles he was regarded with his Minhāj al-Talibīn (finished 669; pr. Cairo 1297 and frequently; ed. van den Berg with French trans., Batavia 1882—1884; cf. thereon Snouck Hurgronje, Versgr. Geschr., vi. 3—18) as the highest authority along with al-RAHĪ and since the tenth (with) century the two commentators on this work, Ibn Hadjar's Ta'ā to and Ibn-Kamil's Nihāyā, have been regarded almost as the law books of the Shi'i school. The book consists of excerpts from the Muḥāraʾ of Rahī and, as the author himself says, is intended to be a kind of commentary on it. It certainly owes the estimation in which it is held also to the fact that it goes back via al-RAHĪ and al-Ghazzālī to the Imam al-Haramain. We should also mention the Rawad fi Muhkamār Sharī' al-Rahī (on Ghazzālī's Wadīj) finished in 669 on which commentaries have often been written and the commentaries on Shāhāz al-Muḥadadab and al-Tanbih (G. A. L., i. 387) and al-Ghazzālī's Al-Wasīṣ, which do not seem to have survived, and a collection of several's put together by his pupil Ibn al-Asārī (Cairo 1352).

His biographical and grammatical studies resulted in the Tahdīh al-Asanw wa l-Lughāt (Part 1 on the names, Wustenfeld, Gottingen 1842—1847; Part 2 on in Ms. in Leyden; included by Ibn al-Asārī among the unfinished works and there are certainly gaps in it) and l-Tahlif fi Alfāz al-Tanbih. To his mystical tendencies — he had attended lectures on the Kishārī and transmitted it — we owe works like the Kīwād al-Adhkar in the prayers, finished in 667 (pr. Cairo 1311 and frequently), the Kīyād al-Ṣalātīn (finished in 670; pr. Mecca 1302, 1312) and the incomplete Busān al-Arījī fi l-Zahd wa l-Taṣawwuf. An almost complete list of his some 50 works is given in Wustenfeld, p. 45 sqq., those that are still in MSS. are given in Brockelmann, G. A. L., i. 394 sqq. and index and those that are printed in Saris, Muḥām, vol. 1876—1879.

**Bibliography:** Ibn al-Asārī (d. 724 = 1324), Talhīf al-Talibīn fi Tadājamat Sahīhīn al-Imām al-Nawawī [with many stattica's], MS. field, Über das Leben und die Schriften der Schrift Alu Zabariah fi Al-mawlawi, Gottingen 1849; Snouck Hurgronje, Verspr. Geschichten, ii. 357 sq. For the reference to the popular romance I am indebted to Heffinge.

Wangelin. (HEFFENING)

AL-NAWAWI Muhammad b. Omar b. 'Arafi al-Djawi, an Arabic writer of Malay origin, born in Tanara (Banten), the son of a village judge (pangulu), after completing his studies made the pilgrimage to Mecca and settled there permanently about 1855, after making a short visit to his native land. After he had studied and completed his education with the teachers of the holy city, he set up as a teacher himself and gained great influence over his fellow countrymen and their kinsmen. From 1870 he devoted half his time to authorship. He was still alive in 1888.

He wrote a large number of commentaries on popular textbooks, which are listed by Brockelmann, G. A. L., ii. 501 in addition to Snouck Hurgronje, Mekka, ii. 362 sq. Of these the following may be mentioned, with some information additional to what is contained in these two works.

He expanded the Kur'an in his al-Tafsir al-munir al-Malik al-Tansir al-musir 'an U'idah Malak al-Ta'wil, Cairo 1305. In the field of Fiqh he annotated the Fath al-Kharî of Muhammad b. al-Kasim al-Ghazzî (d. 918 = 1512), a commentary on Abu Shujâ' al-Islahî al-Takhib, entitled al-Ta'wilî, Cairo 1305, 1310, and again entitled Kût al-Hâbî, Cairo 1301, 1305, 1310.

He wrote a commentary on al-Ghazzî's Bidâyat al-hidâyâ under the title Marâkî 'l-Cuthâîa, Bulûk 1293, 1309; Cairo 1298, 1304, 1307. 1308. 1319, 1327. — On the Manâthîl al-Na'dîf of Muhammad b. Muhammad al-Shirînî al-Khatîb (d. 977 = 1569) he wrote al-Fath al-ma'dî, Bulûk 1276, 1292; Cairo 1297, 1298, 1306; Mecca 1316. — On the Sa'fînât al-Salâh of 'Abd al-Lâh b. Yâhiyâ al-Hadrâmî he wrote the Sallam al-Munâdî, Bulûk 1231, 1297; Cairo 1301, 1307. — He wrote a commentary on the 601 questions of Ahmad b. Muhammad al-Zâhidî (d. 819 = 1416) put into verse by his fellow countryman Mu'tâfa b. 'Othâm al-Djawi al-Kâritî as al-Fath al-ma'dî on âlût, alums, fast and pilgrimage under the title al-Tel al- Khâmîn, Cairo 1300; the Sa'fînât al- Na'dîf of Sâlim b. Sansir of Shîrîn in Hadrâmawt, ended in Batavi, was expanded under the title Kûsîfîl pill-Salâhî, Cairo 1292, 1301, 1302. 1303. 1305; Bulûk 1309. — On the exposition of the Wâlî al-Djawi by his colleague Muhammad b. Sulaîmân 'Hass Abî allâh al-Ridâlî he wrote the commentary al-Zîmîr al-alîfâ, Cairo 1299, 1308, 1329; Bulûk 1302.

In the field of dogmatics he annotated al-Sâ'îrî's al-Mun al-Dâ'ârîn (l. 892 = 1490) entitled Dhorât al-yâsins, Cairo 1304; the Sidât al- Asrowning of Ahmad al-Marrûkî (c. 1281 = 1864) entitled Nûr al- Zârun, Cairo 1303, 1329; al-Badîjri's Kisaâ fi 'ilm al-Tawîl entitled Tâsîân al-Dorârî, Cairo 1301, 1309, Mecca 1329; the Marâkî of Abu 'L-Lâth entitled Krir al-Ghaith, Cairo 1301, 1303, Mecca 1311; the anonymous Fath al-Rûhîâm entitled Hîyât al-Sîyâkî in a Madakhî, Mecca 1304; the al-Dur al-farîd of his teacher Ahmad al-Nâshrâwi entitled Fath al- Madîrî, Cairo 1298.

In the field of mysticism he wrote a commentary on the Manâshîmâ Hidâyat al-ad-Dhikrât al-Tarîkh al-Awlîyâ' of Zain al-Din al-Malbârî (d. 928 = 1522) entitled Safâlîm al-Fudâ'âsî, Cairo 1301, Mecca 1315; and on his Marâkî fi 'l-Allâmî al-Imân he wrote the Khâfat al-Tiqîyân, Cairo 1305. On the al-Manâbî al-stamî fî Tâwâb al-Nukhûm of 'Ali b. Husîn al-Din al-Hindi (d. 975 = 1667) he wrote Mi'âhâb al-Zûmî, Mecca 1314. — His commentaries on stories of the life of the Prophet may be classed as edifying popular literature; such he wrote on the Mas'âdî al-Nâdî under the title al-A'rûsî, Cairo 1926, which is ascribed by some to Ibn al-Djawi, by others to Ahmad b. al-Kasim al- Harîrî, entitled Fath al-Qâmid al-Malik 'alâ Mas'âdî al-Shâ'ikh Ahmad b. Kâsim wayyusamâ 'alâ Brûd al-Fawzi al-Byâ'în Alûfî; Mas'âdî Ibn al-Djawi, Bulûk 1292, entitled Bûrahât al-Awâm fî Sharîk Mustâfî al-Sâ'îrî al-Mu'în le-Îbâna, Bulûk 1292 and Fath al-Qâmid al-Malik 'alâ Mas'âdî al-Shâ'ikh Ahmad b. Kâsim, Mecca 1306, as well as on the Mas'âdî of Djâ'far al-Barrandji (d. 1179 = 1765) entitled Tâbârî al-Mustânî, Bulûk 1292, and on the Mas'âdî of al-Mustâfî al-Jâ'înî, Bulûk 1296, and on his al-Khâfat al-nabîwîa entitled al-Dauîr al-âshâî, Bulûk 1299. He made an excerpt from al-Hasâlînî's (d. 923 = 1517) Mas'âdî entitled al-Ibîrî al-darî fî Mas'âdî Sâ'idîma Muhammad al-Sâ'idî al-Munî, Cairo 1299.

In the field of grammar he wrote a commentary on the Adharîlmiya under the title Khâfat al-Mu'înîya 'an Siyâr al-Adharîlmiya, Cairo 1308 and on a versification Fath al-Qâmid al-Khâfatîiya 'alâ l-Kâwâbi al-âshâîa fî 'l-Nasîr al-Adharîlmiya, Bulûk 1298, on 'Abd al-Mun'im Iwâd al-Djârîjâni's (c. 1271 = 1854) al-Aswâd al-tâsriyya entitled Fath al-falît al-yâsîniya, Cairo 1299, in the field of rhetoric he completed in 1293 (1876) a commentary on the Râsidîl al-Nâ'îrîrî of Husain al-Nawwâlî al-Mâlikî entitled LÎdâb al-Bayân, Cairo 1301.

Bibliography: In the article; cf. also J. L. Sarkis, Mâdîm al-Mîsîrî, col. 1879-1883.

(C. BROCKELMANN)

NAWBA, an art-form in the music of the Islamic East similar to the European cantata or suite. There are two varieties: i. the nawba of chamber music; ii. the nawba of military music [for the latter see TÂBIL KIÎNÂ in the Supplement]. The nawba of chamber music varies in construction according to its provenance, and does not always carry this particular name. As early as the viiith century A.D. we appear to see this nawba in its nascent stage. The musicians at the court of the Caliphate under the early 'Abbasids performed in turn (dorî) and succession (nawba), and it is the time of al-Wâqî (d. 777) we know that a court musician had a particular duty for his nawba (Khîbî al-Îghânî, iii. 177; v. 82, 120; vi. 73; x. 123; xvii. 131; xxi. 150). Some musicians were famous because they specialized in certain genres of music, such as İbrâhim al-Mawsîlî in the máakhirî and Hakâm al-Wâdi in the kasîrî rhythms (Îghânî, vi. 12, 66), and a programme made up of these diverse types of music probably led to the term nawba being transferred to the programme itself (Ribera, Las Cantatas, p. 48).

Although we read in the Alî Laila wa-Laila of a nawba (ii. 54), a dârî (a quick movement; cf. the modern dârî) of a nawba (iv. 87), as well as a complete nawba (iv. 173) being played, yet it is not until the xivth century A.D. that we
possess precise information about the nawba and its integral parts. ‘Abd al-Karīd b. Ghalib [q.v.] tells us that among the ancient forms of musical composition were the nawba, masāḥ and bāṭil. The nawba, he says, was made up of four movements (‘āṯār) viz., the bawāl, the ḍhawāl, the tarāna, and the ḍarāʾid dā’ūlah. In the year 1579, whilst at the court of ‘Abd al-Rasūl al-Din Baybars the Dīlūrīd sultan of al-Irāq, Ibn Ghalib introduced a fifth movement to the nawba, which he called the mustaqād. During this occasion, he tells us, he composed fifty nawbāt for the court, and the words of one of these have been preserved (fol. 96v). These five movements were instrumental as well as vocal, and besides the verse-form being specified (the tarāna for instance was in ṭurūq), the rhythms (‘abād) for the instrumental accompaniments were also prescribed, one of the ḍhawāl group being essential. The purely instrumental movements are also mentioned by Ibn Ghalib including the overture called the ṭhawrād, which even to-day is the prelude to the nawba. He calls it ṭaḥūṭ ("embroideries"), and says that the ṭhawrād al-falānī has three or seven sections (siyāf). In day of old the nawba was considered the most important art-form in the music of Islamic peoples. To-day it has fallen into neglect and in some countries will probably soon disappear. Two distinct cultures may be found in the modern nawba, the Eastern and Western. The former is a clear survival of that nawba described by Ibn Ghalib in the xviith century A.D. The latter is claimed (Vafîl) to have had its origin in the Alandalus in the viith—ixth century, and is known to-day as the nawba gharānī. It is confined to North Africa, the purest type being found in the West, whilst the nearer the East is approached the more we find the influence of the Eastern nawba.

The Levantine nawba to-day comprises the following movements: 1. The ṭaḥūṭ, an instrumental prelude played by the muqallim or chef d'orchestre; 2. the bawāl or bāṭil, an instrumental overture; 3. the bār, a vocal movement; 4. the nawbāt, whose name recalls the form of the xviith century tarāna; 5. the ṭaḥūṭ, also reminiscence of the muqallim of old, since its function is tonal "embroidery"; 6. the ṭābīr sambār, in slow rhythm; 7. the dāḥir, comprising verses; 8. the yiḥār sambār; 9. the ṭābīr sambār, an instrumental finale (cf. Thibaut and Lavigne, v. 2861). A shorter nawba is described by Ducoudray (p. 22), whilst the famous British musician Sir Arthur Sullivan has related (Fortnightly Review, 1905, p. 86) his experiences as an auditor of the nawba. The various movements, especially the instrumental ones, are also cultivated in the Near East as sole items of performance, the bawāl, ṭaḥūṭ, and ṭābīr being specially favoured. The bawāl or bāṭil is still composed in sections as of old, but these are called ṭābīr instead of bāṭil. Another interesting type of nawba in Egypt includes the dance, and an example is given in complete score by Victor Foret. It comprises seven movements: 1. the bawāl, for instruments and voices; 2. the ṭarīmanī al-waṭwāl, for the ballet; 3. the sūqām, for the solo dance; 4. the ṭarīmanī al-thāthīnī, for the ballet; 5. the ṭaḥūṭ, for the solo dance; 6. the ṭarīmanī al-thāthīnī, for the ballet; 7. the ṭaḥūṭ, for the solo dance. The whole is accompanied by choir and instruments.

In Western Turkestān the nawba of to-day shows that in the Middle East it has developed somewhat differently from that of the Levant. Here, more attention has been paid to the purely instrumental movements, and they have been kept separate. The nawba is here called a maṣūm, a name which properly stands for "a melodic mode". It is divided into three parts, the first two being the most important. These two are the maṣūm or instrumental pieces, and the maṣīr comprising vocal-instrumental pieces. The names of most of the sections of the muṣūkhālīt and maṣīr refer to either rhythmic (ṣūq) or melodic modes (maṣūmāt), although two of them, the ṭhawrād and the tarāna, retain names which occur in the xivth century Ibn Ghalib treatise. In Buhūrā, only six maṣūmāt (= nawbāt) appear to have survived, although the Uzbek claim that they know others. These have recently been described by the Uzbek poet Fitrat, whilst the notation has been published by a Soviet Union official, Colonel V. A. Uspensky. There is also another but shorter type of maṣūm known in Buhūrā, and six of these have also survived. In Khwarizm, the muṣūkhālīt of the maṣūmāt (= nawbāt) differ from those of Buhūrā, and here an additional one has been spared the avages of time. The Khwarizm muṣūkhālīt are probably purer than those of Buhūrā because they appear to have been handed down, not viva voce as elsewhere, but by means of a notation which was known as early as the time of Khwarizm Shâl ‘Allâ al-Din Muhammad (d. 1220) (cf. Pro-Musica, New York 1927, v.; The Sackbut, London 1924, iv.).

In North Africa, as already stated, a different tradition in the nawba has been followed. Here there are several varieties, but the most highly esteemed is the nawba gharānī. As the name signifies, it is a pure form of origin, and this is claimed for both the words and music. Although MSS. exist which contain the words of the Granadan nawbāt, yet we only know the music itself from modern Moorish practice. We read of the "twenty-four nawbāt", which tells us that the nawbāt were composed in the twenty-four modes (jubayt). Others say that the Andalusians only possessed twelve or fourteen nawbāt (F. Salvador-Daniel, p. 52; Vafïl, Pref.) but it has now been shown (Farmer, An Old Moorish Lute Tutor) that there were twenty-four originally, but their names are different from those which some writers have presumed (Delphin et Guin, p. 62; Lavigne, v. 2859). The nawba gharānī as performed in Algeria to-day comprises the following movements: 1. the dâṭār, a short vocal prelude. 2. the muṣūkhālīt, an instrumental prelude; 3. the ṭāshiya or towâshiy ("ornamenting"), the overture proper; 4. the muṣūk or muṣūkād, a vocal movement, preceded by a short instrumental prelude called a kârs; 5. the bâṭil or bâṭilī, a vocal movement preceded by a kârs; 6. the dâṭār, also a vocal movement preceded by a kârs; and whose form is practically identical with the old dâṭār (cf. above); 7. the ṭaḥūṭ, a vocal movement which is introduced by a ṭāshiya; 8. the ṭaḥūṭ or muṣūk, the finale (British Museum MS., Or. 7007; Vafîl, Maṣūmî; cf. Lavigne, v. 2941; Delphin and Guin, p. 65). The words of the classical Granadan nawbāt have been edited from MSS. sources and viva voce by Edmond Vafîl in his Maṣūmî al-Aghânî, whilst with the collaboration of Jules Rouanet he issued his Répertoire de musique arabe
et maure which contains the music of a complete nawba gharnafti and sundry movements from others. In 1863, Christianowitsch published his Esquisse historique de la Musique arabe, which also contained the major portions of seven Grandan nawbah. Another type of nawba practised in Algeria, but of secondary importance, was the ikhtilatat. In Morocco the five movements of the nawba are the bazat, the ka’t si nanfis, the bâsîtî, the kadâm, and the daraf, as well as the overture fûjîya.

NAWBAKHTI. This Iranian patronymic (now or noi + baht “new fortune”) was borne in Baghdad during the first two ‘Abbasid centuries by a family remarkable for its influence on the advance of learning and on the political legitimacy of the Imámids.

It claimed descent (cf. Buhtari, Divan, p. 115) from the Persian hero Gw son of Gudarz celebrated in the Shâhnâma (cf. Justi, Iranisches Nationalbuch, p. 399 and Christiansen, Kayandis, p. 59, 117). Its first known representative Nawbakht, an astrologer, owed his fortune to the future caliph al-Mansûr, to whom in prison he is said to have foretold the throne and later the victory over the Zaidi rebel Ibrâhim ibn al-Yamamah in the year 761/796 of which, having drawn up the horoscope of Baghdad, the new capital, he was granted fiefs in it. His son Abî Sâlih Timâmî (on this curious prenome cf. Ibn Abî ʿUṣâibî, ed. Aug. Müller, Leipzig 1884, iii., p. xii. [Vorwort] and H. Ritter, op. cit., p. 9) (d. 760 = 785) had seven sons by his wife Zerrin, the founders of the various branches of the Al Nawbakht in which we find theologians like Ibrâhim b. Iṣâk b. Abî Sahîl (wrote about 750 = 961 the Kitâb al-Yaḥûsî, on which a commentary by ’Allâmah nâtîf al-Ikhâlî). In Morocco the five movements of the nawba are the bazat, the ka’t si nanfis, the bâsîtî, the kadâm, and the daraf, as well as the overture fûjîya.

NAWBAKHTI, nisha of the Nawbakht family.

1. Fâdîl b. (Abî Sahîl) b. Nawbakht (d. 200 = 815) an astronomer like his father (with whom he is confused) and, like his brother Hasan, attached to the Dîr al-Ḥikma to translate from Persian, wrote at least seven books (Ibn al-Nadîm, Fihrist, p. 274). All of these survives is a fragment of the Kitâb al-Nuhrânîn or (Yaḥûsî) on questions relating to horoscopes (Fihrist, p. 238–239).

2. Iṣâk al-Alî b. ... b. Nawbakht (235–311 = 849–925), the real political leader of the Imâmids party, who kept in close touch with the famous vizier ‘Alî b. al-Furat (whose father, Muhammad Mûsâ b. Hasan, we may note, had been a follower of the Nusairi heresy; cf. Nawbakht, Firaq, p. 78), and was also a theologian (cf. Massignon, Passion d’al-Hallaj, p. 142–159) who disputed with the learned Thâbit b. Qurra, the Mu’tazilī Djabî, and the mystic Hallâj; he also refuted, after their deaths, Abû l-Athâiyah, Abî Ṭâsî al-Warrâq, and Ibn al-Ramâdî. Of his 32 works (Ibn al-Nadîm, p. 176; Ṭâsî, p. 57) only a fragment of the Tanbih survives (in Ibn Babawâlî, Ṭâsî, p. 53–59) (cf. Ibn al-Nadîm, p. 176) which gives us the first outline of the Sharia shaiba.

3. Hasan b. Musa b. Nawbakht, d. before 310 (922), classed in this family through his mother, sister of the preceding: an Imâmî theologian, student of Hellenistic philosophy, author of 44 works (Ritter, l.c., p. 17–20; Eghbâl, p. 129–134) of which there survives, besides fragments of the Kadd ala’l-Ǧubûlat (in Khaṭṭî, vi. 380) and of the Aʿā wa-Diyyânî (Muṣâf, ii. 156; Ibn al-Qâwî, Tâlis, p. 42–43; 47, 49, 69, 74, 81–82, 88, 91), only one complete text, of very great value for our knowledge of the sects of the Shâï, the Kitâb Firaq al-Shâla, ed. H. Ritter (Istanbul 1931, vol. iv. of the Bibl. Isl.). In an interesting chapter (op. cit., p. 143–161), A. Eghbâl has collected the passages of the Firaq found in a contemporary, Sa’d b. ‘Abd Allah Aşârî (d. 299 = 914), which shows either plagiarism or the use by both of an earlier source.

(Louis Massignon)
NAWÍ, Muhammad Ridā of Khabāshān in the vicinity of Mashhad, a Persian poet. The son of a merchant, in his youth he spent some time in Kishān where he studied under the Mawlawi Najmī. Moving to Marv, he became intimate with the Hākim Nūr Muhammad Kāhlan there. Like the majority of Persian poets of the 11th century, however, he was attracted by the brilliant court of the Moghuls and went to India where at first he found a patron in the person of Mirzā Yusuf Khan Mughadāni but soon afterwards entered the service of Khānjānān Mirzā 'Abd al-Rahīm and remained with him and with prince Dāniyāl till his death, which took place in Burhānī in 1019 (1610). Nawī's best work is his poem Sīr u-Gūzā ("Burnning and Melting") which has a touching theme, the devotion of a Hindu princess who accompanies her late husband in death on the funeral pyre. It is written in excessively artificial language and distinguished by the originality of its subject, which had not been taken by any Persian poet before Nawī. Nawī's works were very highly esteemed in India, and he is said to have received 10,000 rupees, an elephant and a horse with valuable trappings for a Sādā-nāma dedicated to the Khānjānān. His Dilwān, which is entitled Lubb al-Āhlib, has come down to us but has so far attracted little attention.

NAWṑRŪZ (p.), New (Year's) Day, frequently represented in Arabic works in the form Nawīrūz (Kālahshānī, Sūb al-A\'ābą, ii. 408). It was the first day of the Persian solar year and is not represented in the Muslim lunar year (Mas\'ūdī, Murādī, iii. 416 sq.). In Achaemenid times the official year began with Nawrūz, when the sun entered the Zodiacal Sign of Aries (the vernal equinox). Popular and more ancient usage however would appear to have regarded the midsummer solstice as Nawrūz (Bīrūnī, *Chronology*, transl. Sachau, p. 185, 211). It was the time of harvest and was celebrated by popular rejoicings, but it also marked the date when the Khurās became collected. The two different dates were retained in Persia proper and also in Tūrk and Djībīl under Islam, and Hamza al-Iṣfahānī states (Ṭabīḫī, Berlin, 1340, p. 104) that Nawrūz in the first year of the Hijra fell on the 18th Hazīr (June), which he erroneously equates with the 1st Dhu 'l-Ka\'dā. Confusion arose however because the intercalation of one day every four years which allowed the date to correspond with the position of the sun was omitted in Islam (Mas\'ūdī, Kitāb al-Tanbih, p. 215) and unscrupulous revenue officials found it to their advantage to keep to the false calendar date rather than to the correct traditional one because it permitted them to collect their dues earlier (Makrizī, *Ḳīṣdot*, ed. Wiet, iv. 263 sq.). By the time of the Caliph Mutawakkil the date of collection of khurās had advanced by almost two months and in 245 A.H. he fixed the date of Nawrūz as the 17th Hazīrān, which approximated to the old time (Tabari, iii. 1448; Birūnī, *Chronology*, p. 36 sq.). The reform had no lasting effect and the Caliph Mu\'tawād was compelled again to move the date which was fixed as the 11th Hazīrān (Tabari, iii. 2143). Later again, in Sultan Malikshān's reform of the calendar, the Persian astronomers proclaimed the vernal equinox as Nawrūz (Ibn al-Athīr, x. 34; 467 A.H.) and the first day of the new era fell on the 10th Ramādān 471 (March 15, 1079).

Nawrūz was adopted in Egypt as elsewhere and has been retained by the Copts as the New Year's Day (Makrīzī, *Ḳīṣdot*, iv. 241 sq.), but it now falls on September 10 or 11.

Popular festivities have marked Nawrūz wherever it has been celebrated. In Sāsānian Persia the kings held a great feast and it was customary for presents to be made to them while the people who gathered to make merry in the streets sprinkled each other with water and lit fires. Both in Tūrk and Egypt these customs persisted in Muslim times (Tabari, ii. 2165; Māridī, Murādī, vii. 277; Makrīzī, *Ḳīṣdot*, ii. 410) and although Maṭawād attempted to prevent the customary horseplay in the streets during the midsummer solstices he was unsuccessful (Tabari, *Ḳīṣdot*). In the various parts of the Turkish Empire the day was celebrated as a public holiday and in Persia it has throughout its history been marked by great festivities as the chief secular holiday of the year.

NAZAR (A.), probably did not receive until the ninth century A.D. the meaning of research in the sense of scientific investigation as a translation of the Greek σύνεξις. With Aristotle (e.g. *Metaph.*, 1064 b 2) the philosophies were then divided into theoretical (nazarīya) and practical (camāliya); the latter seek to obtain the useful or the good for man, the former pure truth, in physics, mathematics and metaphysics.

Nazar is primarily an epistemological conception and after the example of Ammonios Heriae, a pupil of Proclus, is dealt with among the Arabs in a work prefixed to the *Isagoge* of Porphyry (Περὶ ἐγκαθίστασιν τῆς φύσεως) (cf. the article ῬΑΝΔΡΗ). Nazar is also discussed as an activity of the human ἀληθή in psychology but in this case as a rule under synonyms like ἐφύσεως, ταφάκου, etc. (cf. *Nafs*).

The history of this terminology has still to be written. In the oldest, still incomplete, logic (edited by ʿAbd Allāh b. al-Mukaffa or his son Muhammad b. Ḥasan) ἐφύσεως and ταφάκου are already distinguished as branches of philosophy (ἡμών), but ἐφύσεως is defined as a *ταβάνσαρ* and ταφάκου of the ἱδρύμα (i.e. of the mind) (cf. G. Furlani, *Di una presunta versione araba di alcuni scritti di Porfirio e di Aristotele*, in *R. A. L.*, ser. vi., vol. vi. [1926], p. 207).

The old speculative theologians of Islam were
perhaps more familiar with the distinction *itum* (אֶתַּל) than with *nazar* (נָזָר). The *itul* is generally recognised as a "root" of the Ma‘tazim system. The Zaidi Al-Kashim mentioned it (beginning of the third century A.D.) among his *itul*: *tefik*, Kurrin and *suna* (R. Strothmann, Die Literatur der Zaiditen, in *Jisr*, ii. 1911, p. 54). Nazar was felt to be an innovation like *rak* and *kekik* in *zikra*. The Hanbali school objected to the adoption of *nazar* but its greatest representative Ibn Hazm admitted *nazar* without hesitation — of course the *nazar* created and equipped by God — as a source of knowledge. Not blind belief (אֶתַל) nor deduction from the unknown (בְּיַרְכָּה) were to lead it to the acceptance of the Kurrin, *suna* and *zimma*, but quite certain knowledge. There is nothing which Ibn Hazm insists upon so often and so emphatically as this; there is no other way to certainty than that of tracing to sensual perception (Seeing) and intuition of the intelligence (‘אֶתַל’). Indeed sensual perception is so much preferred by him that comprehension by the reason is called a defect (כַּרְשָׁה לְכָלַת, i. 4—7). The philosophical position of Ibn Hazm is also well known. Theological and mathematical investigations of the *nazar* are called (perhaps here still synonyms) *bikra* (deduction by analogy) and *istiklah* (proof by circumstantial evidence). From what we know of *bikra* in Zaidi (cf. the article הָקָרְא לְכָלַת by J. Schacht, and Snouck Hurgronje, *Ver. Spr. Geis*, i. 140 sq.) and of *istiklah* in medicine (see Masudi, *Paris 1861—1877*, iv. 40; vii. 172 sqq.), we have probably to think of a process which is a mixture of induction and deduction, both methods used very arbitrarily. Analogous cases, often superficially regarded as similar (cf. Mazhahib, ed. v. Vloten, p. 8 sq.), were sought for, the *illa*, i.e. not the actual cause (causa) but the reason (ratio) in a higher conception of method or species, under which the further cases could be grouped. For Aristotle and his followers in Islam (Farabi, etc.) deduction had one meaning; they believed in causality or even in the creative activity of abstract thought. The great majority of Muslim theologians, jurists and physicians did not rise so far. It was not till the school of Asharite that the method of nazar superficially grasped penetrated into halal and halab was defined as *ilah al-nazar wa istikhala*. Rejected at first by the majority, gradually tolerated and used as an instrument against heretics and sophists, nazar in the orthodox school was finally recognised as a religious obligation.

Let us now turn back to the general conception of the *halah nazar...* Al-Farabi (d. 950) distributed them from the philosophical point of view in a special treatise (*Tishah...* Cairo n.d.) in a way which became the model for later. It was he who first worked on the logic of Aristotle wherefore his school was often called that of the *Manzhiyan*. He assumed with Aristotle that the *alhal* contained in itself the fundamental principles of all knowledge, the evidence of which had simply to be acknowledged. But the way of reflection and proof led to the non-evident, the culmination of which, apodictic proof (birkha), is described in "Second Analytic". From this eminence the branches of knowledge can be surveyed. After some observations on phylology (cf. the Stoics) first and most fully logic — whether as instrument of philosophy or as a part of it is a matter of indifference. Logic itself is of course a nazar with an object.
of its own. Next come the science of physics, mathematics and metaphysics with main and subsidiary branches. Each is a näzar. But it is noted that for example among the physical sciences medicine is a mixture of theoretical and practical and similarly music and mathematical subjects. Metaphysics is however like logic purely theoretical. Finally the three practical sciences of Aristotle, ethics, economics and politics, are united under the head of political science, with the addition of şiḥ and kalâm; al-Fârâbî remarks that the science of şiḥ and the art (şihr) of kalâm have to do partly with opinions (şûrah), partly with actions (aš'î). 

In conclusion let us compare with this philosophical division that of the Ash'arī theologian ʿAbd al-Ḵārī b. Ṭāhir al-Baghdâdî (d. 1037–1038) in his Catûl al-Dîn, Constantinople 1298, p. 8–14. After the distinction between divine knowledge and the knowledge possessed by other living creatures is laid down, the latter is classified as follows:

I. ḍârîrî (necessary, directly evident)

   1. ṣîrî 2. ḥamîrî

   (internal and external perception)

II. muhtasab (=all ʿilmû naṣrîya)

   (acquired)

   1. ʿāḥîyâ abârîyâ

   (knowledge acquired by reason and by law)

The ʿilmû naṣrîyâ are further divided into four acquired according to the way in which they are acquired:

1. Ṣâdîl bî ʿāṣî min ʿîjâh al-ḵyâl wa ʿl-nâzar (speculative theology);
2. Maṭûm min ʿîjâh al-ṭâdîfîrî wa ʿl-ḥâzî (e.g. medicine);
3. ʿIlmû min ʿîjâh al-ḥârî (legal science);
4. ʿIlmû min ʿîjâh al-ṭalîm (prophetology).

Compared with the ʿazîţa monism of Fârâbî this division still looks rather eclectic. But from the xiiith to the xivith century A.D. philosophy and theology, without becoming one, were approaching one another more closely. Ibn Sînâ, who builds upon Fârâbî, was the intermediary. Ghâzâlî sought to combine the ʿazîţa of the Neo-Platonic mysticism with the ʿazîţa fi of the rationalist thinkers, and Fâkhr al-Dîn al-Râzî appropriated the methods of proof of Aristotelian logic to a much greater extent than his theological predecessors.

NAZARETH. [See al-Nâṣîrâ]

AL-NĀZĪZ, title of sūra lxxix., taken from the opening word.

NĀZIM, properly Muṣṭâfâ b. Ismāʿîl, a notable Ottoman religious poet. The son of a Janissary, the inspector Yeni Baghşîl Ordeke İsmâʿîl Ağha, he was born in Constantinople and succeeded his father in his office, after rising through all the grades in the Janissary office: he became hâgırd, khalîfa, bash ʿalîî darî, and finally in 1165 (1756) yevecî darî, becoming the Janissary of the army. He died in this year on the campaign against Belgrade.

Nāzım wrote an extensive Divânî, the poetical value of which is not very great but which contains much that is religious and mystical in its 550 ghasels and about 50 târîkîh of the end of the reign of Mehmed IV.

NĀZĪM, Yaḥyâ, the most important Ottoman religious poet of his period, as is apparent from his epithet Nâṣîr al-Dîn, the singer of hymns. Born in 1659 (1649) in Kâsim Pasha in Constantinople, he entered the Serai as a boy where he received the education of the Enderûn and had the opportunity to acquire special proficiency in Arabic and Persian. He showed a talent for poetry and considerable musical ability. His beautiful voice and his work as a poet and composer gained him the favour of Sultan Murâd IV. He was given important offices at the court as a result: the office of the keğvîsh aghâdî to the kîsîr-i hâzî; he next became newbedîgî bashî and hürmî yevecîgî bashî and attained considerable influence. He then retired of his own accord and became bashar bashî. Later he made the pilgrimage to Mecca. He remained in Medina as muḥâdrî, where he died at the age of 80 in 1139 (1726). According to another statement (Brusail Mehmed Tâhir), he died in Adrianople.

He flourished under Mehmed IV and down to the reign of Ahmed III. He was a member of the Mewlewî order. Shâkiş Nêshât-i Mewlewî was his teacher in poetry and probably also in music. Nâzîm is the most religious poet of his period. He devoted the whole of his poetical talent to the naṭî, the hymn. His Divânî therefore resembles a warrant of pardon (aṣurî ʿaṣurî) He also gave special attention to the devotional forms of the teʿwîh, tâhmîd and muḫwârî.

His Divânî, printed in Constantinople in 1257 (1641), forms a thick volume of 500 pages, of which one third is devoted to the naṭî in the form of 60 keydâs, hundreds of ghâsîlîs, kâfîs, teʿwîh, tâhmîd and muḫwârîs, teʿwîh and a methâwî for the Prophet. The Diwâni is divided into five parts, each of which is in turn a kind of Diwânî in itself. He also wrote methâwîs for Mehmed IV and Mustafa II, Ahmad III, Selim Giray Khan, Mustâfâ Pasha and the vizier Ahmed Pasha; also târîkîh in imitation of Nâṣîr and Nâbî and sharîkîh in imitation of Nemîd.

Nâz-is a clever technician who gives expression to his effort for variety and change, not in the matter but in the form. In all his works however, a deep religious belief, even fanaticism is marked. His poems are a true reflection of the inclination of the period for religion and Sîfâism.

Bibliography: Feût, Teskere, Constâ...
NAZIM — NAZMI

NAZİM FARRUKH HUSAIN, a Persian poet. Mullâ Nazim, son of Şâh Rûdá Sabzawâri, was born in Herât about 1016 (1607) and spent the greater part of his life there. Little is known of his career, except that he made a journey to India and, after spending several years in Delhi, returned to his native town where he died in 1051 (1641–1642). He was court poet of the Emperor Shâh Jâhân. His early poems, which are not extant, are usually numbered in the minor mubâris of the Nâṣîr al-Dîn Târikh. His most important work, however, is his Hikmat al-Tabâkh, a collection of eighty-four stories dealing with the life of the Prophet. This work was originally written in Persian, but a Persian translation was made byAbâb al-Ilm al-Râfâ'I, Nazim was considered a high authority on Hadith. He wrote a number of works, none of which have been printed, namely: Hadîyet al-khûdân (“Present of the Brethren”): biographies of the seven greatest Kahlwetî personalities (Yâsun Mâkhdûmî; Mâhûmad Râkî; Şâh-Kobâdî Şîrwanî; Abî al-Majdî Şîrwanî; Şams al-Dînî Swâsî; Abî al-Majdîî Şîrwanî; Abî al-Achâd al-Nâbî) and some accounts of their successors. His poetic works consist of the rhymed Turkish translation of the first book of the Methhest of Jalâl al-Dîn Rûmî, a Divân of the usual type (with many hymns and sacred songs); also the Mîrâj al-farîhât (“Touchstone of the Order”). Bibliography: Thureqâ, Siqill-i ‘otkmâni, iv. 560; Hâlîm, Zîrârî-i Elyâsî, 1335. P. 120–122; Sâmi, Kâmur al-Dîvân, vi. 458–4590; Brussel Mehmed Tahir, ‘Otkmâni Muqaddimiyê, i. 175; Hammer, G.O.D., iii. 596–597; Basmandjian, Essai sur l’histoire de la littérature ottomane, Constantinople 1910. p. 127.

NAZMI, MEHMET (according to the Siqill-i ‘otkmam: Nazmi Nişâmî), Ottoman poet of Adrianopol in the period of Sulaimân al-Kâmbî. He was the son of a janissary, later himself became a janissary, then silâhdar and sipâhi. He died in 996 (1588) in Adrianopol, where he is buried in the Turbe of Shaikh Shujâ‘.
Naṣīr possessed great poetic gifts and ability, which he displayed particularly in the clever and accurate imitation of other poets, in so-called nafiz’s (pl. nafiz’). He also himself wrote ghazels. He rendered a great service to Ottoman literary history by collecting an enormous anthology of the best Ottoman poems, arranged under the eight principal metres. This anthology contains 4,000 ghazels by 125 Turkish poets and nafīz by himself in addition: Madīna al-Naẓīr. He presented this work, which he brought down to the year 930 (1524), to the Sulṭān. Hammer deals fully with it, as it deserves.

He also wrote a ghazel with the rhyme ‘īf on each behr of the Risālī-l ʿarūṣiyī of Wahīd Tabrīzī.

(Menzeł)

AL-NAẓĪM, IBRĀHĪM B. SAYYĪR B. ḤANFĪ B. ʿALLĀH, a Muʿtazilī theologian of the Baṣra school. Brought up in Baṣra, he spent the latter part of his life in Baghdaḏ, where he died between 220 and 230 (835—845) while still, it seems, at the height of his powers. A brilliant poet, a philologist of note, and above all an extremely periscopic and subtle dialectician, he is one of the most interesting figures in the culture of the ʿAbbasid period. He occupies a most important place in the development of Muslim ideas. He studied speculative theology in the madīja of Abu Ḥudhail al-ʿAllām. His ideas regarding the body and its relations are the logical result of this teaching. The structure of these ideas is however strongly influenced by the polemic against Manichaeanism, the fundamental problems of which al-Naẓīm had studied deeply. In his positive demonstration of the dogma of the creation one occasionally thinks there are traces of Aristotelianism: the creation was a setting in motion and the created world is in a continual state of movement (even rest is defined as a form of movement). God is then himself immobile but at the same time the primordial moving power. The tanbih, the distinction between the creator and creation, is carried a considerable distance. The divine attributes are represented to us by negations. The divine word is a body (therefore created) but that of man is an accident. The Kurʾān is miraculous because of the information it gives about the past and on account of the secrets which it reveals but not on account of its style, which men could have imitated if God had not prevented them (in reality there is no muḥaddaḏa in al-Naẓīm). Al-Naẓīm fundamentally rejects the arbitrary interpretations of the Kurʾān given by the great authorities on Tradition, ʿIṣraʿīl, ʿAlī, Abī ʿAbd Allāh, ibn Ṣadiq; he demands a strictly literal exegesis. The prophethood has always been universal, i.e. all the prophets and not Muhammad alone have been sent to the whole of humanity (against the traditionalists; al-Naẓīm thus did not deny the prophethood of Muhammad).

2. Aṣ ṣal-al-ʿall. The freedom of the human will is restricted, according to al-Naẓīm in a way that anticipates the Ashʿarī theology. All the actions of a man are movements, therefore accidents and movements which relate only to the man himself; the effects which are realised outside of the man are not due to him but to the natural forces which God has placed in his body (denial of taʿawwul). Man is the ṭābīʿ, which penetrates the body; the body in its turn represents an infirmity (ṣifā) of the ṭābīʿ. Now it is the body, different from man in the strict sense, which sets in motion the action of which man (i.e. the ṭābīʿ) is capable. It follows that man (the ṭābīʿ) is capable of the action before it is realised (al-ṭābīʿa kallî ʿl-ṭābīʿī), but at the moment when it is realised, the man is not capable of it.

3. Aṣ ṣal-al-waʿd wa ʿl-waṣīṭ. Al-Naẓīm is very
keenly interested in practical problems of fikr; we know his views and those of his school on the ghazāl, on fraud and on ritual purity (in which connection he gives some very curious psychological explanations). He is particularly concerned with the ṣūdūl. He waged a passionate campaign against the aṣūdāb al-raʿy wa l-ḥiyās, therefore against the Ḥanafis who were the representatives of the Mūjdūs. He flatly refused to admit raʿy and ṣūdūl and did not shun even from attacking the great men among the aṣūdāb who in his opinion had been guilty of using them. He was in this way led to criticise violently the institution of the iṣmāl which however he admitted to a certain extent. Through all this he prepared the way for Dāwūd al-Zāhirī and the Zāhirīa school.

(H. S. Nyyberg)

**NEBUCHADNEZZAR. [See BUKIT NAŠAR.]**

**NEJD.** The highlands of Arabia in contrast to the low-lying ground along the coast (Ṭībāma) or the depression (Ghor). In the dialect of the Hudhail Najd is pronounced Najd. The exact application of this originally topographical conception is very differently understood and sometimes it means more generally the elevated country above the coastal plain or the extensive country, the upper part of which is formed by the Ṭībāma and the Yaman and the lower by Syria and the Ṭīrāk, or the part of Arabia which stretches from the frontiers of al-Yaman to al-Madina and thence across the desert from al-Baṣra to Bahrain on the Persian Gulf (Ṭīsqaḵqārī, ibn Ḥawḵal) or the territory between the Ṭīrāk (al-Ṭīsqaḵqārī) and Ṭīrāk (ibn Khurdaḵzibī) or from the Ṭīrāk to al-Ṭībāma (Kudāma) or the land which lies behind the so-called Dīch of Chosroes (Ḵirā) as far as the Ḥarra (al-Biḥlī), or lastly, the territory between the depression of the Ṭīrāk (Ṭībāma) and the slopes of the Ṭīrāk (al-Amālī). That originally the name was applied to the plateau only is clear not only from the definitions of the separate authors but also from the fact that Najd appears in combination with various place-names; thus al-Asmāʾi (Ṭākūt, iv, 745) knows of Najdī bārīk (al-Yaman), Najdī ʿUrāf, Najdī Kākūb (near ʿArafāṭ), Najdī Mārī (in the Yaman), al-Bakri (ii, 574) besides the last named mentions Najdī al-Yaman, Ṭākūt (iv, 750 sq.) further mentions Najdī al-Ḥidżr, Najdī Alwādh in the country of the Hudhail, Najdī al-Shara, al-Hamadānī (p. 55) Najdī Ḥīmyar and Najdī Madīḥdīj along with a number of places not otherwise known which are combined with Najdī. Hamadānī (p. 277) further makes a distinction between upper Najdī (Najdī al-Uṣūrī) which is regarded as Najdī proper (al-Najdī) and in which he includes the district (ḥūrā) of Ḥidżrī and the town of Yābābām, and lower Najdī (Najdī al-Saffā) which is described as ʿArd Najdī and with the Ḥidżrī and al-ʿAṣrūn forms Central Arabia (p. 1, 8 sq., 36, 13 sq.), the territory in which pure Arabic is spoken (p. 156, 8 sq.). The original meaning is also seen in the dual Najdān, which, it is interesting to note, is used for two mountains in the Ṭāqī range, as well as the place-name Najdī Mārī and in the spring pasture ground Najdān in the land of the Khāṭām mentioned by the poet Ḥamīd b. Ṭhawr (Ṭākūt, iv, 745).

That the wide interpretation of the name Najdī above given is not unjustified is shown by the foundation in the second half of the fifth century A. D. by Ḥārūm, chief of the Kinda, of a short lived kingdom which extended from the Syrian times and al-medina to al-Yaman or from the hill of Ṭomīya in the N. E. on the Wādī Ṭ-Rummān to Ṭāqī ʿIṣr. At a later date, the whole of al-Najdī belonged to the administrative district of al-Yaman (Ṭākūt, iv, 746).

The widest area to which the name Najdī has ever been applied is probably that of the present kingdom of the same name which owes its origin to the Wūhābī chief ʿAbd al-ʿAzīz b. ʿAbd al-Rahmān al-Suʿūdī, who, as Amīr of Najdī, conquered Riyād in 1903, was chosen ʿaṣīf of Najdī and the adjoining lands in the summer of 1921, on Jan. 10, 1926 conquered the Ḥidżrī and on Jan. 19, 1927 was proclaimed king of Najdī and its dependencies at Riyād. The frontiers of his kingdom are: in the east, the Persian Gulf from Ṭīfāna and Ṭaṣṣar to Riʿāṣ al-Mīṣāṭīn, then the neutral zone between Najdī and Kuwait from this promontory to Riʿāṣ al-Kullīya; in the west the kingdom of the Ḥidżrī; in the south the line which runs from the port of Ṭūnūfūdīn on the Red Sea south of Abīlā Ṭāṣir and south of the Wādī ʿDaṣ&wār and includes Najdīn. The war at present going on between the king of Najdī and the Imam of al-Yaman may perhaps alter this frontier, especially as Ḥafīd in the. Yaman has previously been a bone of contention. The northern frontier which was delineated by treaties between the ruler of Najdī with the Ṭīrāk and England on the one side (signed at ʿUkūr on Dec. 2, 1922) and Najdī, Great Brittan and Transjordania on the other (signed on Nov. 2, 1925 at Ḥadīth in the Ḥidżrī) runs along the neutral zone between Najdī and the Ṭīrāk (29°–30° N. Lat. and 45°–46° E. Long.) and is then continued in a line running N. and N. W. to the intersection of 39° E. Long. and 32° N. Lat. and leaves the Dībāl ʿAnēzē on its north, then S. W. to the Wādī Raddíl and passing through in the S. E. the point where 38° E. Long. and 30° N. Lat. intersect. The Wādī Sirīñ is thus still in Najdī. This line continues towards the south from 25° to 38° E. Long. and crosses the Ḥidżrī railway towards Ṭāṣirā. The extent of the territory is estimated at 900,000 square miles and its population at 3,000,000. The capital is al-Riyyād; the more important towns are Buraidā (Berēde), Ṭāneīza (ʿAnēzē), Ḥīṣīl (Ḥayīl), Ṭhartāma,
Shakrā, Madjma'ā, Huraimla (Harēmle), al-Husḥuf and al-Katif. The population, which with the exception of al-Hasū with 30,000 Shī'is and a few Sūnīs has almost entirely adopted Wahhābism, belongs to the tribes of Muṣāir (Meṣirī), Harb, 'Utayba ('Atēbē), Subai', Dawāsir, al-'Uḏjmān, al-'Awizīm, al-Suhūl, Beni Murra and Ḥajjān.

The North-Arabian Nadjd forms a part of the great desert plateau which is formed of primary rock with overlying sandstone and volcanic outbursts and has two great mountain ranges running through it; that in the north is about 40 miles long and at its northeast end some 4,500 feet high, known in ancient times as Djabal Taiy or Djabal Taiy, i.e. Adja' and Salmā (Hamdani, p. 125, 25 yr.), is now called Djabal Shammar or Djabal Iḍā (Adja').

Ammārīya or Ujjidd, which towers some 500 feet above the ridge usually 2,000—3,500 feet high. The long southern part of the Tuwaykh is intersected by numerous wādis which lead the water that falls in the rainy season to the Rub' al-Khali. Its most important part is the Aftād, 40 miles long, with the oasis of Laila.

Nadjd is in the main steppe and desert. Nafūū and Dahna occupy the greater part of northern Nadjd while the Rub' al-Khali joins them on the S. E. There are no perennial streams in Nadjd so that the country has to rely upon subterranean channels of supply which are at various depths and have to be reached by wells. In the oasis of al-Kharid the wells are from 20 to 40 feet deep, in Aftād 30—60 feet, in Ḥāfīl and al-Riyadh about 80 feet. Sometimes these springs form ponds, for example in al-Kharid the springs of which form three pools, the largest of which is 150 paces long and 80 broad (cf. the picture in Philby, ii., p. 34) while the springs of Aftād feed a lake nearly a mile long and a quarter of a mile broad (Philby, ii., pl. at p. 86). These supplies sometimes dry up suddenly, probably because they have found a subterranean exit as has happened in the case of two waterholes in Aftād and the two larger ponds in al-Kharid. The hydrographic conditions of the country are therefore exceedingly dependent on the rainfall from the summer and winter rains. The former (wasmi or mafar al-ṣaij) fall in August and September and particularly refresh the pastures which the summer sun has dried up, while the latter produce a spring-like effect in the land on which they fall. The classic phrase saḥā 'allāk Nadjdun min raḥīm wa-ṣaijīn (Bakrī, ii. 647) eloquently sums up this state of affairs. Heavy rainfalls were also observed in April 1871 in the central

Map of Arabia with the new frontiers of Nadjd according to Amin Rihani

Both ranges, which rise out of a tableland levelled by weathering, are of granite. The Djabal Adja' stretches from N. N. E. to S. S. W., about 35 miles S. E. of it in approximately the same direction the Djabal Salmā, in front of which in the S. W. lies the Djabal Ramān, while S. E. of the Djabal Salmā lies the Ḥarrā of Faid, of volcanic origin.

S. E. of this rises the sandstone plateau, overlaid with limestone, of Djabal Tuwaykh (Tuwaykh) running N. W. to S. E., which forms the western declivity of a plateau which has come into existence through weathering and slopes towards the Persian Gulf on the one side and the sands of the desert of Rub' al-Khali on the other. It begins S. E. of the district of al-Kaṣim (S. E. of the Ḥarrā) and stretches E. from al-Wāṣim to al-Arid with the town of al-Riyadh and then turns, west of the Kharid oasis, S. S. W. towards the Wdzi 'I-Dawasir. The most important peak on this edge of the plateau is the Djabal
Wádi l-Rumma and in May in ’An’ezé between Djibal Salmá and ’An’ezé (1884, Ch. Huber), and Philby (ii. 110) noticed thundershowers in May as well as drizzle, while Doughty met with hail at Khabra (near ’An’ezé) in April. That the climate here cannot have changed very much is evident from Ibn Djeibir who records very heavy showers in this district in April 1184 a.d. Huber met with rain in June 1884 between ’An’ezé and Mecca, Sadlier, at the end of July 1819 between al-Hasá and Dar’iya heavy thunderstorm and rain, which however was described by the natives as unprecedented. Philby (i. 141, 147) records thunder and rain in December. The rainwater collects in the hollows below the thick layer of sand and enables palms to grow and also, on chemically decomposed fertile soil, wheat and barley, vegetables and fruit trees. The hot summer of course everywhere makes it necessary to water the crops from wells. On the other hand, the frequently very sudden flooding of the water-courses led in quite early times to the building of dams to hold back and store the water; such were built in the Wádi l-Rumma at ’An’ezé (Bakri, i. 207: Yāqūt, ii. 738), Dar’iya (Bakri, ii. 637) and on the road from al-Yamáma to ’An’ezé (al-Hamadhání, p. 174, 192). Doughty found remains of such dams in the Djibal Adjdā.

The district of al-Šharaf is the richest part of al-Nadjd, and the valleys of the Wádi 1-Djarír and Wádi l-Míáib are celebrated for their pastures. Here the early caliphs had vast grazing grounds (khamí) e.g. in Dar’iya, al-Rabádh, Faid, al-Nir, Dhu ’l-Šharí and Naqť. The most famous was that of Dar’iya, where the caliph Omar I secured an area six Arab miles in diameter as pasture for 300,000 ingophs and 36,000 camels for the army. Oghmán extended this area until the diameter was ten miles. The ’Abbásid al-Mádhí abandoned it, as the policy of this dynasty was to neglect Arabia deliberately in contrast to the Umayyads who, for example, intensively colonised western Nadjd. In the sixth century A.D. Nadjd was still well wooded, and al-Shurba, south of the Wádi l-Rumma, and Wajdja were particularly celebrated in this respect, while at the present day they only possess scanty remnants of these forests. Many areas seem to have been ruined by drought or disastrous inundations (Philby, i. p. 115; ii. p. 9); the decline of al-Yamáma is probably due to the latter cause. Crops are sometimes damaged by sharp frosts — in winter (January) the temperature sometimes sinks from a maximum of 53° F. by day to below 23° and ice and snow have occasionally been seen at the higher levels — while the summer drought with a maximum temperature of 113° destroys the crops. The two most important wádís are the Wádi l-Rumma about 650 miles long, which runs right across the plateau of North Arabia, rising in the Harrá of Khabra and entering the Euphrates plain at Harrá, and the Wádi l-Darawár. These have formed since ancient times the two main routes of traffic in Central Arabia.

It is with the object of improving agriculture that the king of Nadjd is endeavouring to keep the Bedú to the soil. Every tribe or clan has therefore been allotted a definite area of ground near a well where huts are being erected and the ground planted. These new settlements are called hijíra. In the last ten years, since the revival of Wahhabism, about 70 of these colonies with 2,000—10,000 inhabitants have been established; the most important is Iratiyá built in 1912; Riháni (p. 198) gives a list of others. In this way not only is the cultivation of the land secured but the revenues of the state are increased; these consist of the zakát (10% on movable property), the customs, a fifth in case of war and (formerly) £60,000 subsidy from England. The coins in circulation, in addition to the Maria Theresa dollar, are the English and Turkish sovereign, the Indian rupee and copper coins of ʻOmán of the last century, 60 of which go to the dollar. The once famous gold mines of the Barn Sulaím at al-ʻAṣlúr, al-Mujdíra and Bihán (Hamdání, p. 1544, 4 sq.) are now no more important and unlike al-Yamána, the country possesses no industries.

**NEDROMA (Ar. NADRUMA), pron. NADRUMA, and sometimes Medrum, 40 miles S.W. of Tlemcen, has since the dawn of the modern period been the most important town in the hilly country between the sea on the north, the lower course of the Tafna on the east, the plain of Lalla Moghniya (Marina) on the south and the Algero-Moroccan frontier on the west. It is the country known since the xvii century A.D. as the land of the Trara, Berbers converted to Islam and Arab culture in the period of the Idrisids who were known in the middle ages as Kūmīa. This little Berber bloc, speaking Arabic, forms with Nadruma, which is as it were the heart of it, a whole so homogeneous that they cannot be dealt with separately.

1. Past History. We may reject the childish etymology *Ndr-Ruma* "resembling Rome" given by Leo Africanus (ed. Schober, iii. 13). Nadruma was first of all the name of a tribe, a section of the Kūmīa family of the Berber stock of the Banū Fāten (Ibn Khaldūn, *Berbers*, transl. de Siane, i. 251). The name is mentioned by al-Baiḥākī (ed. Lévi-Provençal, *Doc. inéd. d’Hist. Almoh.*, Paris 1928, p. 44; transl., p. 66) where we must understand by al-karia Nadruma "the people of the citadel (i.e. the Nadruma)." This passage, written in the xiiith century, would tend to show how the name of the tribe of the Nadruma became attached to the little town which was then their principal centre.

Before this period however, Nadruma was the name of the town, for al-Bakri (xith century) gives it this name and gives us a brief description of its "he qualifies it as nadrina "town" and not as simply karya. In the time of al-Idrīsī (cf. the *Sīlah*) in the xiiith century, the town was a prosperous one surrounded by walls and had an important market. There is no doubt also — although these two geographers do not mention the fact — that Nadruma had a mosque.

In the xith century A.D., the Muslim geographer al-Yaḥṣibī (Kitāb al-Buldān, ed de Goeje, p. 18 and transl., *Descr. al-Magribiyya*, Leyden 1860, p. 117) mentions a considerable town inhabited by Berbers at the extreme boundary of the lands ruled by the descendents of the Idrīsī Muhammad b. Sulaimān. The name of this town, written in the Arabic text, might be Fālāšen or Fālāšen, but with difficulty "Fellousen" (cf. R. Basset, *Nerroman et les Tuars*, p. 7, No. 2) on account of the present day pronunciation of the word by the natives of the country. René Basset (ibid.) thinks this town could be identified with Nadruma, built on the N.W. flank of mount Fālāšen (modern local pronunciation) — the Fālāšen-on in the maps.

The Almoravid s of the xith—xiiith centuries gave Nadruma an important mosque and a pulpit, inspired, G. Maarçais says, by that of the Great Mosque of the Umayyads of Cordova as that of the Almohad Kuttubia of Marrakush was later to be. This fact alone would suffice to show the importance in the Almoravid period of this Muslim centre which must have been the greatest in the land of the Kūmīa at this period.

Nadirma had access to the sea by several small ports, the most important of which, Honain, which also served Tlemcen (cf. Marçais, *Honain*, in *R.A.*, 1928, p. 355–356) was however somewhat difficult of access from Nadruma by the very steep N.W. flank of mount Taghra. This town had therefore to use the port of Māṣīn (al-Bakri) which was only 10–12 miles away, easy of access at the end of a valley (Wādī Māṣīn) north of Nadruma.

In the Almohad period Nadruma as well as all the land of the Kūmīa, where 'Abd al-Mu'min, the first caliph of the dynasty, was born, must have been the object of special solicitude by these rulers, who were lords of Africa and Spain. Moreover it was on the Kūmīa, the tribe which they originated, that the Almohad caliphs relied for support — like all Muslim rulers —: these Berbers were the best auxiliaries in the conquests and the most reliable supporters of Marrakush. Although the name of the Kūmīa has now disappeared and has been replaced by that of Trara, it would be too much, as we shall see, to think that the Kūmīa tribes disappeared in the wars of the Almohads.

The name Trara is quite recent; it appears, it seems, for the first time in a treaty of union — of which the Arabic text is given by R. Basset (*loc. cit., App.*, p. 212–218) — between the Arab and Berber tribes of the N.W. of Oran and eastern Morocco, prepared in 955 (1548–1549) in anticipation of the struggle with the Spaniards, then lords of Tlemcen. In the text the Trara are described as made up of many sections, the names of which are unfortunately not given. At later dates we again find this name of Trara in various authors without being able to say to which it refers. As in the xith—xiiith centuries, Nadruma is still the capital and the principal town for these tribes.

Most of the Trara tribes of to-day have preserved the names which the same Kūmīa tribes bore in the time of the caliph 'Abd al-Mu'min.

This little Berber capital was undoubtedly never very large if we may judge by the traces still visible of its walls, which have hardly changed since the time of al-Bakri. It appears in the history of the middle ages, as in modern times as one of the chief towns of the province of which Tlemcen was the capital, whose political and religious influence dominated it and whose destinies it followed.

When in the xith—xvith centuries, Tlemcen being the capital of the 'Abdahwālid kingdom, Nadruma, a peaceful town with a temperate climate, in a charming position, overlooking the blue sea a few miles away, became the country resort of the rulers and princes of the royal house. They had a fortified palace there (the *kaṣira*) of which considerable remains of the surrounding wall still stand as well as the walls of the buildings. It commanded the town, standing quite near it on the south, and its ruins are still called *kaṣir* or *fustān*. It was to this place that Abū Yaḥṣibī *Yūsfî* renounced the royal throne of Tlemcen to the advantage of his two younger brothers Abū Sa'd
and Ābū Thābit, retired in 749 (1348) to live far from the court and politics in meditation and prayer (Ibn Khaldūn, Berberes, transl. ii, 422 sqq. ; Yahya b. Khaldūn, Histoire des Rues de Tlemcène, ed. and transl. A. Bel, Algiers 1903-1910-1913, i, 14, 18).

It was here that his son Ābū Hammūd II (reigned at Tlemcène 1359-1359) lived with him and the latter's son was born, Ābū Tāchīfn II who dethroned his father and reigned after him (1359-1393). This pious withdrawal of Ābū Yaqūb to Nadrūmā was only to last about four years until the conquest of Tlemcène and Nadrūmā by the Marinids of Fās in 1352.

No king and apparently no prince was ever buried at Nadrūmā. There is however the mausoleum of a saint in the midst of the ruins of the palace. The individual whose tomb it is believed to mark is called “Sīdi Sulṭān”. Neither the name, nor history, which does not mention him, nor legend, which simply makes him come from Egypt at a remote period, tells us anything of value about him. Nevertheless, in view of the numerous similar examples of the creation of holy places sacred to saints by the Berbers, who are of a deeply religious nature, and in particular by the Berbers of Nadrūmā and the Trārā, it is easy to reconstruct the process of the foundation of the mausoleum in question. The sojourn in the palace of Nadrūmā of a great prince who had abandoned his rank for a life of devotion must have impressed the people of the time and long afterwards the spiritual merits of this “sulṭān” must have been related, as one who had certainly been touched by the grace of Allāh. When many years later the name and story of this devout king had been forgotten, the place where he had lived, this ẓahr-e-sulṭān, this ẓahr as it is still called, although in ruins, impregnated with his sanctity—his baraka—remained a holy place. It was only a very short step from this to localise the centre of radiation of this baraka in a little sanctuary in which prayers could be addressed to the unknown saint who is alleged to be buried there. At the present day the little white dome covering the so-called tomb of Sīdi Sulṭān under a very old wild olive tree is the goal of the pilgrimage of numerous women; they come there particularly to seek the cure of a sick child; they expect to obtain this by the fumigation of the invalid with leaves from the olive-tree. Men also visit it. Every year the mosques of Nadrūmā (who say that Sīdi Sulṭān was a descendant of Bilāl, the Prophet's muʿādhdhin) go there on a mass pilgrimage and sacrifice a bull calf; they hope thereby to obtain the regular rainfall needed by the district.

If we have dealt rather fully with this feature of the religious mentality of the people of Nadrūmā, it is because it is a sign, among many others, of one of the most characteristic aspects of the religion of the Berbers and of those of Trārā. Mithraism is so developed among them that René Basset in his study of Nadrūmā and the Trārā has collected the names and sanctuaries of 296 holy men and 9 holy women, which is a large number for so small an area. This however does not prevent the people from observing as well as they can the ritual duties of Sunni Islam and of zealously attending the many mosques in Nadrūmā and in all the villages of the Trārā.

It has been mainly since the sixteenth century, during the great popular mystical movement which spread through all North Africa, that the people of Nadrūmā and the Trārā have developed this cult of saints and placed all their trust in men of religion and Sulṭām. Particular evidence of this was seen in the assembly on the banks of the Wardafla, on the borders of the land of the Trārā, of the tribes of the region of Nadrūmā and the adjoining country when in 1548 the holy man al-Yaʿqūb, whose venerated sīriṣa[q. v.] is a little to the west of Nadrūmā, led them against the Spaniards who then held Tlemcène.

As a matter of fact the Spaniards who were established in Oran and Tlemcène were never able to occupy Nadrūmā and the land of the Trārā. The Turks who finally occupied Tlemcène and the province were not always warmly welcomed there. On several occasions the sultān sharifs of Morocco were able to advance their frontiers to the lower Tāfīnā. However the Turks ended by establishing their authority which lasted until the conquest of Algeria by the French. Nadrūmā and the Trārā did not at once accept the rule of ʿAbd al-Kādir; they preferred to be under the sultāns of Morocco. Later they took the side of the emir against the French and it was in these mountains that ʿAbd al-Kādir often found a safe asylum when he was defeated, even after 1842 when the French occupied Nadrūmā, and notably in 1845 at the time of the famous affair of Sīdi Brāhim (cf. P. Azan, L'Emp. Abd el-Kaïd. Paris 1923, p. 207-214) a few miles west of Nadrūmā.

II. The Present. Nadrūmā, surrounded by gardens full of olive and other fruit-trees of various kinds, rises in terraces which lie on a well-marked ridge's back sloping from N. to S. running from the palace on the right bank where he had lived, this ẓahr-e-sulṭān, this ẓahr as it is still called, although in ruins, impregnated with his sanctity—his baraka—remained a holy place. It was only a very short step from this to localise the centre of radiation of this baraka in a little sanctuary in which prayers could be addressed to the unknown saint who is alleged to be buried there. At the present day the little white dome covering the so-called tomb of Sīdi Sulṭān under a very old wild olive tree is the goal of the pilgrimage of numerous women; they come there particularly to seek the cure of a sick child; they expect to obtain this by the fumigation of the invalid with leaves from the olive-tree. Men also visit it. Every year the mosques of Nadrūmā (who say that Sīdi Sulṭān was a descendant of Bilāl, the Prophet's muʿādhdhin) go there on a mass pilgrimage and sacrifice a bull calf; they hope thereby to obtain the regular rainfall needed by the district.

If we have dealt rather fully with this feature of the religious mentality of the people of Nadrūmā, it is because it is a sign, among many others, of one of the most characteristic aspects of the religion of the Berbers and of those of Trārā. Mithraism is so developed among them that René Basset in his study of Nadrūmā and the Trārā has collected the names and sanctuaries of 296 holy men and 9 holy women, which is a large number for so small an area. This however does not prevent the people from observing as well as they can the ritual duties of Sunni Islam and of zealously attending the many mosques in Nadrūmā and in all the villages of the Trārā.

It has been mainly since the sixteenth century, during the great popular mystical movement which spread through all North Africa, that the people of Nadrūmā and the Trārā have developed this cult of saints and placed all their trust in men of religion and Sulṭām. Particular evidence of this was seen in the assembly on the banks of the Wardafla, on the borders of the land of the Trārā, of the tribes of the region of Nadrūmā and the adjoining country when in 1548 the holy man al-Yaʿqūb, whose venerated sīriṣa[q. v.] is a little to the west of Nadrūmā, led them against the Spaniards who then held Tlemcène.

As a matter of fact the Spaniards who were established in Oran and Tlemcène were never able to occupy Nadrūmā and the land of the Trārā. The Turks who finally occupied Tlemcène and the province were not always warmly welcomed there. On several occasions the sultān sharifs of Morocco were able to advance their frontiers to the lower Tāfīnā. However the Turks ended by establishing their authority which lasted until the conquest of Algeria by the French. Nadrūmā and the Trārā did not at once accept the rule of ʿAbd al-Kādir; they preferred to be under the sultāns of Morocco. Later they took the side of the emir against the French and it was in these mountains that ʿAbd al-Kādir often found a safe asylum when he was defeated, even after 1842 when the French occupied Nadrūmā, and notably in 1845 at the time of the famous affair of Sīdi Brāhim (cf. P. Azan, L'Emp. Abd el-Kaïd. Paris 1923, p. 207-214) a few miles west of Nadrūmā.
NADRÔMA: that of the weavers (darrín) and that of the potters (zâdârin).

The weavers of Nadrôma have retained their ancient loom with low warp without any modern improvement not even the pucker, and all the old equipment of their ancestors, notably the warper (nârâ) and spinning wheel (redâbâna). On the loom, material and method of working, one may compare what is done in Tlemcen in identical fashion (cf. A. Bel and P. Picard, Le travail de la laine à Tlemcen, Algiers 1913, p. 63 sq.). The weavers of Nadrôma now make only woolen blankets (bârâbâh), white or decorated with stripes of colour, hooded cloaks with very short sleeves (dgallbâha), the white haik for men (particularly old men here) which is a long piece of wool without seams, which is wrapped round the body in a certain way. Nadrôma makes several kinds of haik (cf. L'industrie de la laine, loc. cit., p. 109). The potters have for centuries from father to son had their ateliers in the upper part of the town in the S.E. beside the Kâsha. They make pots and other articles on wheels (mânâ) of the usual type driven by the foot: cooking pots of rounded shape without handles called fâdra (whence the name zâdârin given to the potters), cooking dishes called fâgin and for barley or wheat griddle cakes or different kinds of cakes (mâbâla), portable ovens (mâgmar), thârâla which is in the form of an oven with an earthenware dome above it shaped like the bottom of an inverted pot on which is poured the liquid paste of these pancakes, as thin as paper, which on account of their thinness are called by the Berdouns in Orania rygâg "slices" and in Nadrôma as in the towns are called by the old Arabic name of lîth. When required the potters of Nadrôma also make other earthenware articles such as flower-pots (mîbâbâla) and the musical instrument called agwal, used by women, consisting of a large earthenware tube, one of the ends of which is closed by a skin stretched over it which is beaten.

The total population of the town of Nadrôma is 7,051 of whom 6,124 are Muslims, 850 Jews and about 200 Europeans (chiefly French). The Jews and the Turks actually have a special quarter but they live almost entirely in Darb al-Sîlgh and in another in the Bain Zul quarter; they are petty traders, labourers and artisans (it is they who make the saddles for the mules and asses). The majority are of Berber origin; they are usually poor. Although they only marry with one another and live apart from the Muhammandans, the Jews live in houses quite like those of the Muhammandans, lead the same kind of life and use an Arabic dialect among themselves.

The negroes (raib) who are not very numerous are called gnawa (Guineans) and live in a separate quarter in the west centre of the town. They are in very humble circumstances, stokers of the baker's ovens or the furnaces of the baths, labourers and workmen. Although regarded as Muslims, their religious life is not at all regular and they are regarded, as elsewhere, as more or less of sorcerers.

The French element is very small; it consists almost entirely of officials and their families. They live by themselves in the public buildings (schools, gendarmerie etc.) and in European houses roofed with red tiles, which form an entirely distinct quarter outside the native town (to the N. and N.E.),

Nadrôma is the capital of a mixed commune. The civil administrator who lives there has under his authority the town and the Trâra tribes of the neighbourhood: Djiha, Zâviya al-Mira, Saâliha, in the West and N.N.W., Bani Mina, B. Meshal, B. Khallâl, B. âbed, in the N.E., or S.E. the population of which numbers 47,224 native Muslims and 83 Europeans.

The other Trâra tribes are not under Nadrôma: these are the Marda, in the extreme N.W. who belong to the mixed commune of Marnia; the B. Wargûs and the Uthâsha Ghrâba, to that of Remchi-Montagnac.

On Thursday which is the market-day there come into Nadrôma large numbers of people from all the country round; they bring in their stock, especially sheep, goats, cattle and mules and, according to the season, the produce of their fields and gardens (wheat and barley, almonds, carobs, figs, grapes, etc.) and of their flocks (wool and goat-skins, butter, curds etc.) as well as chickens, eggs and honey. The country artisans (men and women) bring in the articles they have manufactured (articles of woven grass, walking-sticks and little articles of wood carved with the knife with Berber designs), wool, articles of terracotta, notably Berber pottery decorated with geometrical designs, made by the women of Mstâda (and similar to the other Berber pottery made by the women of Kabylia, the Tiss and elsewhere).

It is on market-day that one realises that Nadrôma is the economic centre of the whole district of the Trâra and sees the variety of products of the soil and industry of these Berbers.

The abundance and variety of these products are not due only to the activity of the inhabitants; the climate and the soil also help. The climate is fairly equable; tempered by the proximity of the sea it is never extreme as in the case of continental districts. For the rest, the height of the hills, while sufficient to encourage rainfall, is not very great: it does not exceed 3,500 feet at Fallausen and 1,200 at Nadrôma. It is therefore only in the very hardest winters that snow for brief periods whitens the summits of the range. As to the soils of this coast range, which, between a depression of the Tânâ in the east and the neighboring plains of the Moroccan frontier in the west, runs from the Wâd Meshal (2 miles N. of Marnia) to the sea, they offer a certain variety in their nature and origin. Around the primary massif, which includes the highest peaks, Fallausen and Tadja, are several eruptive islets (granite) and hills of secondary formation (Jurassic). The lower areas, especially the plains of the N.W., as far as the coast (where there are several old eruptive mamelons) and the depressions of the S.E. and E. along the Tânâ, are middle Mesocene formations.

The mountains also possess numerous perennial springs which feed little streams which irrigate the gardens; there are also various minerals, several of which have recently been or are still being exploited by Europeans.

It is due to the quality of the clay around Nadrôma and the granitic sand used for molds that the pottery industry is one of the oldest and most prosperous in the town. The native vegetation is abundant and varied; in addition to the many varieties of trees of the highlands (notably sumach [æzâba]), the wood of which is exported.
to Europe through the port of Nermours), we may mention many kinds of plants used for medicinal purposes or dyeing. It is for example thanks to the madder abundant in these regions and used by the natives for dyeing the dwarf palm leaf that the people of Uhâshâghâbra are able to make a fine and famous straw work (men's hats with high crowns and broad brims called mijal — baskets of various shapes all of dwarf palm leaves). All these articles are prettily decorated in red on the yellowish white foundation of the palm leaf; they are known and purchased by the natives of the whole of Orania and eastern Morocco.

It is also owing to the abundance of pasture in these hills that the rural dwellers, none of whom however are nomads, can raise so many flocks especially sheep. The wool from their flocks is almost entirely used in the country by the weavers of Ndrûma and by the country women who by their weaving, using the loom with a high rail like all the women in North Africa, make a considerable part of the family's woolen garments. All these women are excellent spinners; they have a great reputation for the fineness of their work.

Even from chickens — to feed which the country women in the autumn collect the red fruit of the mastic which is very abundant in this country — the people, who are greedy of gain, make a profit; thousands of eggs also are exported every month from Ndrûma via Nermours, to France and particularly to England.

(Alfred Bel)

NEFî, the greatest satirist of the Ottomans. Omar Efendi whose nom de plume (makhîs) was Nefî came from the village of Hasan Kaâfa near Erzerûm (Eastern Anatolia). Not much is known of his early life. He spent his early years in Erzerûm where the historian 'Âlî [q.v.], who was a defterdar there, became acquainted with him. During the reign of Ahmad I fate brought him to the capital Stambul where he worked for a time as a book-keeper. He failed in an attempt to gain the sultan's favour or that of his son, the unfortunate 'Othmân II, with some brilliant kâşîdas. It was not till the reign of Murâd IV that he gained the imperial favour but his malicious, sarcastic and indecent poems soon brought him into disgrace. He was appointed to the poll-tax office and later again became a member of the sultan's circle. His irresistible impulse to make all the notables of the empire the butt of his mockery made him a host of enemies. A satire on Bairâm Pashâ, the sultan's brother-in-law and vizier, who had succeeded in being recalled from banishment and again attaining influence, cost him his life. The mufti gave his sanction to the execution of the great poet. With the sultan's consent he was shut up in the wood-cellar of the serây, then strangled and his body thrown into the sea. The year of his death is 1044 (beg. Jum. 27, 1363), not 1045 as Hâjjîdî Khalîfa, Fâîlîdî, ii. 185 wrongly says (cf. on the other hand his Kitâb al-Zanîm, iii. 318 and 631 where the correct date is given).

Neîf wrote Turkish and Persian with equal ease. His mastery of technique and natural poetical talent make him one of the greatest Ottoman poets; he is also undoubtedly one of the greatest, although hitherto little known satirists. The reason why he is so little known is that a scholarly edition with full annotations of his Turkish Divânentitled "Arrows of Fate", Şâhîd-i  Kháşâ, has so far never been undertaken, so that at the present day hardly any one is able to understand the countless allusions to particular circumstances and the veiled attacks on the individuals dealt with. The publication of his poems demands a knowledge of the conditions of his period and particularly of life at court which it is hardly possible to attain and which it would be very difficult to gather from the existing sources. Many of his flashes of wit and allusions are very difficult to understand. Many of his poems are distinguished by an obscenity which can hardly be surpassed and however great may be their importance for the social history of his time, they are of little value as evidence of his poetic gifts. The "Arrows of Fate" are directed against almost every one prominent in politics and society in his time. In G. O. D., iii. 241, J. v. Hammer has compiled a list of them. Some of his poems which pillory existing institutions, like the popular saints, the Kâlender-devishes [q.v.] etc. are of value for social history. Hardly one important contemporary was able to escape his scorn and ridicule. They were all made targets for his "Arrows of Fate" without mercy. He attacked the jurists ('ulàmà) particularly unmercifully.

Neîf's Turkish Divân has been several times printed: two parts at Bûlûk in 1253 and in 1269 at Stambul. Selections (with ample evidence of 'Abîl al-Ḫâmîd's censorship!) were published by Abu 'l-Dîyâ Tawfîk in 1311 at Stambul. There are MSS. in European collections in London, Leyden and Vienna. Mr. Walther von der Porten now (1933) in Zurich owns two particularly beautiful and old MSS. A short Şâbî-nûme by Neîf is mentioned in the catalogue of MSS. of the Leipzig council library by H. L. Fleischer (p. 547). On his death, cf. Farâ'îdîzâda, Ta'rîkh-i gülşer-i Müsîrif, i., Stambul 1252, p. 668, and Naîmân, Ta'rîkhî, ii. 489.

Bibliography: In addition to the sources mentioned cf. also Gibb, Ottoman Poems, p. 208 and H. O. P., iii. 252 sq.; the history of Naîmân (i. 586) and Brûsâf Mehêmmêd Tâhir, 'Othmânî Mêlikêlyî, ii. 441 sq. (according to which parts of his Persian Divân were published in the Khazine-i Fûmîn).
NEFTA, a town in the south of Tunisia, lies 15 miles W. of Tozeur on the isthmus which separates the depressions of the Shott al-Djarid and the Shott Ghasra. In the middle ages it was considered one of the principal centres of the land of Kastilia [q.v.] along with al-Hamma, Takjius and Tozeur, which was the capital. It was regarded as the old town of Nefta and not the town of Nepte or Agarsel-Nepte. The Roman town must now be buried in the sands close to the present town. We may presume that there still existed in the early centuries of the Muslim period visible traces of the old town. Al-Bakri tells us that the town was built of large blocks of stone (qabār). The author of the Istīlār regards the wall which surrounds it as having been built by the ancient. The dam on the Wadi Nefta is made of Roman blocks if it is not actually of Roman work (Tissot).

Memories of the pre-Islamic past were also found among the people of Nefta. Its large population was regarded as consisting for the larger part of descending Christians (Ya’qūbī, Christians of the Prophet) who have retained their faith for a considerable period. Ibn Khalīdān (Berbères, i. 146, transl. i. 231) remarks on the presence of Christians in the province of Kastilia at the end of the xivth century. The outlying position of this province perhaps explains the survival of a Christian colony, which was exceptional in Barbary. It is moreover worth noting that the attitude of the people of Nefta in religious matters has often been non-conformist. In the tenth century, according to Ibn Hawkāl, Khāridjīsm still survived there; in the eleventh century, according to al-Bakri, the people of Nefta still called their city “the little Kūtā”. We shall see that at the present day it is an important centre of maraboutism.

The remoteness of the capital assured Nefta, like other towns of the Djarid, a fairly regular political independence. Like al-Hamma and Tozeur, it was long (probably from the period of anarchy which followed the Hilāl invasion) governed by a council of notables, the president of which held the position of a feudal lord, indeed prince. In the xivth century this office was held by the family of the Banū Khalāf, who claimed to be of Ghassānid Arab origin. The Banū Khalāf and the people of the oasis whom they ruled maintained regular relations with the Sulaimīd Arabs of the great tribe of Kūfī, who periodically frequented the country around. A tradition of reciprocal service united these immigrant nomads and settled natives, the nomads defending at need against the attempts of the central power the settled population who in turn assured them their subsistence and the provision of their supplies. The central power when it felt sufficiently strong naturally endeavoured to bring the Djarid under its authority again. Nefta thus underwent alternatively periods of submission and independence. In 744 (1343) the Hafṣid caliph Abu Bakr sent his son Abu I-Abbās to enforce the submission of the people of Nefta by cutting down a part of their palm-trees and putting to death nearly the whole of the Banū Khalāf. A century later (845 = 1441) the caliph Abu Omar al-‘Othmān, having taken Nefta, sacked it, executed the chiefs of the Banū Khalāf and placed the town under a kāfīr of his own choice. If the partial destruction of the palm-trees — a classical procedure — had brought the people of Nefta to terms, it was because these trees supplied the greater part of their income. Very abundant springs (the largest of which rising north of the town forms the Wad Nefta) assured and still assure the life of this splendid oasis. There is at the present day a forest of 273,000 palm-trees there. Nefta was however also a commercial town, a wealthy emporium of the exchange of goods. Before the establishment of the protectorate trade was mainly carried on at two periods of the year: at the beginning of spring, when the expeditionary force which had come from Tunis to collect taxes could guarantee the security of the routes and at the end of summer when the marauding Arabs had left the country to buy corn in the north.

Consisting of merchants and farmers with the important aristocracy of the Shorfa [q.v.], the population of Nefta (estimated at the present day at over 15,000) is distributed over eight quarters separated from one another by palm-groves. Each of the quarters has its mosque. Al-Bakri tells us that Nefta in his day had already a great mosque, equivalent to several minaretts. The places of worship belonging to the zawiya of the various brotherhoods are still characterized by their hemispherical or ovoid domes. The most important zawiya is that of the Kādiriya, an influential centre of worship. The architecture of the houses, the decoration of their façades with relieves of brick, contribute to give to Nefta an imposing appearance which is also characteristic of Tozeur.

[This record appears to be a mixture of different sources and topics.]

NEHĀWAND. [See NIHĀWAND.]

NERGISĪ, properly NERGISĪ-ZĀDE MEHMD EFFENDI, an important and distinctive stylist of the old school, poet and calligrapher. Born about 1500 (1502) in Serajevo (Bosna Serai) the son of the nūdīb Nergis Ahmad Effendi, he received his education in Constantinople where he attached himself as a pupil to Kādirzade Faiz‘ Abū al-Hāy. On the completion of his studies he served as muqaddar and nūdīb in Gabela, Mostar, Yeni Pazur (Novi pazar). Elbasan, Banyaluka and Monastir. He was on intimate terms with the Shāhāb al-Fārābī Yahya Effendi. He travelled a great deal. Nergīsī was appointed imperial historiographer (nefīz‘ nūrīs) when Murūd IV set out for Bagdad on the campaign against Erician. He died on the march at Gebze (Gebze) on the Gulf of Irmid as the result of a fall from his horse and was buried there (1045 = 1634). The other statement (Hāsib and Riażiz) that he was buried in Ayūb is not at all probable.
Nergis is also a great calligrapher particularly celebrated for his speed in writing. There are works written by him in several libraries.

**NEŞHet Khâdîja Suvalmân, an Ottoman poet.** He was born in Adrianople in 1148 (1735), the son of the poet Ahmad Raﬁ Efendi, then in exile; the latter is known as Mâgbûbû Şahkârîyân. With his father, who had regained the sultan’s favour by writing a şarîf, which met with general approval, he came to Constantinople. He also accompanied his father on a journey to the Hidjâz and the young Hâçdîjî, on his way back, joined the Mewlewî order in Konya. After his father’s death, he devoted himself to study, especially Persian, in order to understand the Mehdveci. In Persian, which he came to love passionately, he attained a high degree of perfection with the result that he had more pupils than an ordinary school in his house in Molla Gûrânî, where he taught Persian and expanded the Mehdveci (Mehdveçi, Kamîn al-‘Alâm). He enjoyed great prestige among the people. Later he attached himself to the Naşîhîbendi Şâhîkh Bursuwî Emin Efendi. He held a sief and therefore took part in 1182 (1768) in the Russian campaign. He could use the sword as well as the pen. Nêşêh died in 1222 (1807) and was buried on the Top Kapı.

He received the nom de plume of Neşê’t from Djâdî. Neşê’t was a moderate poet but an admirable teacher. No one would say an unkind word about him and they winked at his smoking the şiwel which was otherwise forbidden. He wrote poetry in Turkish and in Persian. Many of his pupils far surpassed him, such as Gâlib İlede. He left a Divân which was printed in two parts in Bâlük (1252 = 1836). His Mevhâ-î-name’s (about 20 in the Divân) are distinctive in character; these are poems in which he bestowed epithets upon gifted pupils. In addition he left writings on the Naşîhîye: Tefîn-i Mârifet; Târîxmat al-IŞhî; Malak al-Anwâr wa-Mandâl al-‘Azîr. His Terejim-i Şarîf-i dâbi Molla ‘Ismî was printed at Constantinople in 1265. A biography of him by his pupil Pertev Efendi which was continued by Emin Efendi is said to exist.

(MENZEL)
NESHRĪ — NESTORIANS

NESHRĪ, MEHEMMED, an Ottoman historian, with the nom de plume (makkala) of Neshrī; his origin is not definitely known. According to Ewwiyād Cevbeli (Secretary of the Bursa. Of this, he belonged to German-ele (v. 225) he was the career of a certain Mewīnī Mekhimmed b. Neshrī among the 'ulama' of Murād II. According to him, the latter came at an early age to Brussa, studied there in the Sūlān Medrese, was appointed muṭarrīs there, and died in Brussa. In view of the rarity of the name — indeed it is not otherwise known, it is probable that this Mehemmed b. Neshrī was the grandfather of the historian. As to the latter we know only that he was a teacher in Brussa and it may be assumed that he died there in 420 (1526).

Neshrī wrote under the title Līḥān-nūmá a history of the world in six parts, of which only the sixth, dealing with Ottoman history, seems to have survived. This, usually called Ta'rīkh ʿAlī ʿOthmān, is obviously a compilation but the question is still unsettled whether Neshrī was the compiler or whether he copied a compilation already in existence in order to add it as a sixth part (kām) to his own compilation on the history of the world (cf. P. Wittke, in M. O. G., i. 150, who decides for the second hypothesis). There are suspicious echoes of the work of ʿAshīq Pashā-Zade and of Bihishti's Chronicle (cf. F. Babinger, G. O. W., p. 43 sq.) and it should perhaps be investigated whether the madah b. Neshrī made a popular version of Bihishti's Ta'rīkh which was written in an elevated style, or the stylist Bihishti rewrote the work of Neshrī in elegant language. The sixth part of the Līḥān-nūmā is divided into three sections (Qalabtāt: B. Ewwiyād ʿOghlan, Saldjiqūs of Rūn and the House of ʿOthmān The history of the Ottomans is narrated down to the time of Bāyazīd II; the work comes down only to the year 1485, that is, as far as his sources go, of which one went up to 1485. He concludes with a kaṣīda in praise of the ruling sultān in the year of his reign. Bāyazīd II. Neshrī had considerable influence on contemporary and later historiography and is frequently cited as a source, e.g. by ʿAlī, Saʿd al-Dīn, Šolā-zağde and Munefīdīna-baṣhī. A full survey of the contents of the Taʿrīkh of Neshrī is given by Wittke, ibid. M. O. G., i. 77–150. There is so far not been published. There are a number of good manuscripts in existence. e.g. in the Bibliothèque Nationale in Paris (Suppl. Turc, No. 153, a very handsome MS) and No. 1183 of the Charles Schefer collection and in Vienna, Nat. Bibl., No. 986 (cf. Flügel, Kat., ii. 209). Specimens of his text have often been published; see a list of them in F. Babinger, G. O. W., p. 39. Bibliography: Cf. the sources collected by F. Babinger, G. O. W., p. 39, notably J. H. Metzdottmann, in Isl., v. (1920), p. 159 sqq.; J. v. Hammer, G. O. D. (1923), p. 168 sqq.; also J. v. Hammer, G. O. D., ii. 310.

FRANZ BABINGER

NESMI, SIYIĎ İMAD AL-DIN, known as Nesmi, an early Ottoman poet and mystic, believed to have come from Nesmi near Baghdād, whence his name Nesmi. As a place of this name no longer exists, it is not certain whether the lāḥab should not be derived simply from nāitzīm "zephyr, breath of wind". That Nesmi was of Turkoman origin seems to be fairly certain although the "Siyid" before his name also points to Arab blood. Turkish was as familiar to him as Persian; for he wrote in both languages. Arabic poems are also ascribed to him. Little is known of his life; it fell in the reign of Murād I (1359–1390) as his biographers tell us. He was at first a member of the school of Şâkiş Shībī (247–334 = 861–945) but about 804 (1401) he became an enthusiastic follower of Fadl Allāh Ḥādīlī [q. v.] with whom he was undoubtedly personally acquainted. He championed the views of his master with ardour and at the risk of his life. The poet Reftī, author (811 = 1405) of the Bihishti-nāme (copies in London, cf. Rieu, Cat., p. 164 sqq. and Vienna, cf. Flügel, Kat., p. 401 and 492 (two MSS., the second more complete), and presumably a Gond-nāme (in Vienna, cf. Flügel, Kat., i. 1700) was his pupil. A certain Shāh Khāndān who was a dervish mystic is mentioned as his full brother. Nesmi met a cruel death in 820 (1417–1418) in Aleppo where he was flayed for his heretical poems on a fēṭāw of the extremely fanatical muftī. He is considered the greatest poet and preacher of the Ḥādīlī sect. His work consists of two collections of poems, one of which, the rarer, is in Persian and the other in Turkish. The Turkish Divān consists of 250–300 ghazals and about 150 quatrains, but the existing MSS. differ considerably from the printed edition (Starmb 1298 = 1881). No scholarly edition has so far been taken. The Persian Divān has not been examined at all. Nesmi's spiritual influence on the dervish system of the earlier Ottoman empire was considerable. The pro-ʿAlid guilds in particular honour Nesmi as one of their masters, testimony to whose far-reaching influence is found even in earlier European travellers like Giov. Antonio Menavino (c. 1540; cf. F. Babinger, in Isl., xi, note 1, from which it is evident that Nicolas de Nicolay copied him and therefore cannot be regarded as an independent source, as Gibb, H. O. P., i. 356 sq. thought) and Sir Paul Reuct (xvii century; cf. Gibb, H. O. P., i. 357 sqq.). Nesmi's importance as a poet and mystic can only be estimated and stabilised in connection with a thorough study of the older Ḥādīlī texts, among which a most important one is that mentioned but not recognised by W. Pertsch, Pers. Handwörter, Berlin, p. 264 sqq. No. 231 by Siyid ʿAlī al-ʿAlā (d. 822 = 1419) because it might show the connection of the Huṣīfa with the Bektāshīa. Nesmi's poems were made popular in earlier times, especially by the wandering Kalendar dervishes [q. v.] and were known to every one.

Bibliography: Gibb, H. O. P., i. 343 sqq.; J. v. Hammer, G. O. D., i. 124 sqq. and the Ottoman biographers of poets who however contribute practically nothing to the life history of Nesmi. (FRANZ BABINGER)

NESTORIANS. The Christian community (müller) which we know as Nestorians is at the present day better known under the name of ʾashīqa or dhīfīla. Down to the year 1914 they lived in the central part of Kurdistan which lies between Mawṣīl [see Mawṣīl], Wān and Urmiya [see Urmeya]. Their main nucleus was represented by the highland Nestorians, in practice independent, living in the inaccessible regions of the highlands on the middle course of the Great Žāh, Tičārī, Tičānī. Tīkhab, Ijīlī, Dīz, Urī, Salbekan, Bāz, etc. Outside of this national centre the Nestorians are
found scattered in enclaves among the Muḥam-
dan population, Kurd and Persian, of the adjoin-
ing districts: Gawar, Tergawar, Mergawar, Shāmdinān [q. v.]; on the plateau of Urmīya (some sixty villages), in this town itself; finally in the
north at Salamas, Bāshkalā Khūshāb and in the
south in Mawsil and around it (Alkosh etc.).

Geography. It may be useful here to touch on
some of the salient features of the Nestorian country in
the strict sense, which is but very little known.
We mean by this the area on both sides of the
middle course of the Great Zāb, in the part where
it describes an arc towards the east, between 37°
and 37° 30' N., 43° 30' and 44° E. In Layard (Nineveh, i) we have a description of the Nestorian
district on the right bank: the upper Tiyyārī with
Cumbī and the greater part of the Lower Tiyyārī
with Ashṭā and Līzān. We shall give here a
general account of those on the left bank, namely,
going from N. to S. and from E. to Dizz, Kīu, the eastern part of the Lower Tiyyārī, Tal,
Walto, Tākhūm (with Tikhūb); further to the east,
Dijlū, Bāz and lastly Iṣṭāzīn. All these districts
lie in the folds of the massif which the Turks
know by the general name of Dijlū Dāgh, but
which for the natives has a number of names.
Thus the abrupt fall of Dijlū Dāgh at some degree forms
a curve in the inverse direction of the arc of the
Great Zāb.

History. The teaching of the Nestorians, who
were very active missionaries, was at one time
very widely disseminated in Asia. An inscription
in Chinese and Syriac was discovered at Singanfu.
At Travancore, in South India, there is still a
Nestorian community in existence. It was under
the Sāsānians that the Nestorians played an
important part. It is true that under Shāpur II (309–
379), Yazdegird I (399–420) and Bahram V
(420–438) severe persecutions took place for
various reasons, of which the extraordinary spread
of the sect was not the least. On the other hand,
purely political reasons, fear of Byzantine influence,
made the Persian government distrustful of them.
We know for example, that the Byzantine emperor
demanded from Bahram V and Khusrav I the free
exercise of the Christian religion. Permanent
good relations between the Nestorian Church and
the state therefore date only from the declaration
of independence of the Eastern Syrian church
under a Catholicos of Seleucia with a dyophysite
confession of faith. The most flourishing period
of Nestorianism was therefore in the reign of
Hormizd IV and at the beginning of the reign of
Khusrav II, i.e. from 578 to 605 A. D. Under
the influence of Gabriel of Sīgar, who had been
governor of some monophyist provinces, Khusrav II began
to persecute the Nestorians; one result was that from
609 to 628, the year of Khusrav's death, the
position of Catholicos remained vacant. Two events
in this period are of special importance to us.
The first was the establishment of Christianity in
Central Kurdistān, where we still find direct and
indirect traces of it at every step: churches,
monasteries, traditions, place-names. In the fifth
century the faith gained ground daily among the
people of the high plateaus of Iran proper and
among the Kurds. Pethion (4, 447) conducted
a very successful missionary campaign in these
mountains, which was crowned by his martyrdom.
Emulating him, Saba, the "teacher of the heathen",
got among the Kurds, who were sun-worshippers.

His eloquence supported by numerous miracles
won many converts (J. Labouret, Le christianisme
dans l'Empire Persé sous la Dynastie Sassanide,
Paris 1904). Let us not forget this first Nestorian
advance into Kurdistān. The oldest Nestorian
churches in Central Kurdistān date from the fourth
and fifth centuries. These are Mār Zaya at Dijlū;
Mār Bāshū at Iṣīl; Mār Sāba (ruins) at Kočānūs;
Mār Memo at Ormar. The monastery and church
of Mār Sāba at Ashṭā in Tiyyārī were also held
in great veneration but we do not know their date.
Secondly we must note here how relations were
established between the Nestorians and Islam (Tor
Andreae, Der Ursprung des Islam und das Christen-
tum, Upsala 1926). The part played by the
Nestorians at a certain period under the Sāsānians
explains the conversion of the Yaman to Nestorianism
at its conquest by the Persian general Wahrīz in
597. It was in the Nestorian form that Christianity
penetrated into Arabia in the zone of Persian
influence, i.e. from Ḥadramawt to Palmyra. We
know the names of six Nestorian bishops on the
eastern shore of Arabia. The first to be founded
was that of ʿOman (acts of Councils 424, 544,
576, 676). A Christian community on the island
of Soğotār used to receive its priests from the
Catholicos of Persia. Relations with Persia were
established by sea. By the time of Muḥammad the
South Arabian church was already Nestorian. We
have definite evidence of this in the fact that
Ṣayyid, prince of Nejdrān, came with the bishop
Iṣḥāyāb to Muḥammad to seek favours. Bar Hebraeus
who records the incident adds that the Prophet
gave them a document ordering the Arabs to see
that no injury was done to the Christians and to
help them to rebuild their churches. The priests
and monks were to be exempt from the poll-tax,
which besides was not in general to exceed 4 izaq
for the poor and iṣā‘ for the state. According to
another source, the bishop only wrote to Muḥammad.
A passage in a letter of Iṣḥāyāb III (647–648)
shows that the relations between Arabs and
Nestorians were very good. This may be attributed
to the fact that the Christology of the
Nestorians was much more acceptable to the
Muslims than that of the monophysites. Every Nestorian
church in the east possessed its own version of
the letter of protection alleged to have been given
by the Prophet (cf. for example that given by
George Dav. Malech in his History of the Syrian
Nation and the Old Evangelical-Apostolic Church
of the East). In any case this letter did not pre-
vent (see below) the proclamation of the ḥijāḥ
from which the Nestorians later suffered so much.
The life of the Nestorian Church during the
period from the Muḥammadan conquest to the
establishment of the Mongols need not detain us
here, as it is part of the religious history of the
Christian sects. We need only mention as par-
cularly concerning Ābighabīdān which the Jacobite
and Nestorian rites were rivals there. Thus from
630 to 1265 we have a line of Jacobite bishops.

We know also (Assemani, Bibl. Or., iii/ii. 707) of
Nestorian bishops both to the east of Lake Urmīya
and also in the country of Lake Wān and Central
Kurdistān. It is not always easy to identify the
names found there. We have good evidence of
the antiquity of Nestorianism in Salamas where
there is in the burial ground of Khusravām an
epitaph of the viiith century recording the name of
Khosrow Escolayā "the student Khusrav" (cf,
Duval, *Dialecte nie-araméen*, 1883). Under the Mongols we find at first that the Nestorian priests (arkants) were treated with consideration at the taking of Bagdad (Hammer, *Itkán*, ii, 152). We know also that Hülâgu's father was a Christian: at the taking of Arbil, the see of an important Nestorian metropolitan (Adharbâjjan was also under it), the lances of the Mongol horsemen bore little crosses. Later, in proportion as the Mongols became converted to Islam, the Nestorians became subjected to persecution, and particularly after the invasion of Timûr they sought refuge in the mountains of Kurdîstân from which they did not begin to emerge until the beginning of the xvi th century when they spread eastwards towards the region of Urmia and S. E. towards Mâwîsh. Duval (*op. cit.*, p. 9, note 4) gives notes on the different residences of the Nestorian patriarchs after the taking of Bagdad in 1258. It was under the Patriarch Simeon IV in 1450, that an innovation was introduced, making the episcopate hereditary; this produced a schism in the Nestorian community in 1551 when Sulâkha was elected in opposition to Simeon Bar Mama. From this dates the term "Chaldeans" henceforth applied to these Nestorians who recognised the supremacy of Rome, while English, American and German writers speak constantly of the "Assyrians", and lastly the Nestorians themselves like to be called Siwales. In Russian the name used is aîorî. In the second half of the xvii th century, the bishop Mâr Yusîf recognised the authority of Rome and received the title of Catholic Patriarch of Babylon and Chaldaea, while one of his near relatives, elected patriarch of the Nestorians and remaining faithful to this rite, was enthroned under the name, henceforth hereditary, of Mâr Shimûn and at once set out for the mountains of Central Kurdîstân, where his residence was sometimes at Kûrans and sometimes at Dûlâmêrk. Thus originated this quasi-autonomous community of Nestorian highlanders in which an ecclesiastical authority exists alongside of a purely tribal organisation. Indeed while the supreme power is in the hands of a hereditary Mâr Shimûn (passing from uncle to nephew) having the title of patriarka d-madenbû, who was consecrated patriarch by the Metropolitan Mâr Hûnsîtûn, living in Dera Rejû at Shândûnû, each tribe (shbûta) had alongside of a bishop (abûna), the ecclesiastical chief, a mûlûk or lay chief, distinguished by peacock feathers fixed on his conical felt hat, a characteristic feature of dress. The custom of the men arranging their hair in little pigtails may also be mentioned. The mûlûks had power to declare war on another tribe and to conclude peace.

The tribal organisation and mode of life of these highlanders have given some writers to give them the name of "Christian Kurds" (Garzoni, Lerch).

A. Wigram in the introduction to his *History of the Assyrian Church* thinks that some at least of the Christians of Hakkâri [cf. Kurds] are of Kurd origin although they deny it vigorously. On the other hand, there are Kurd tribes who remember that they were once Christians. Other writers (Grant), led astray perhaps by the theocratic aspect of Nestorian society, the names and certain Biblical traditions, see in them evidence in support of the hypothesis that the Nestorians are the de-cendants of the ten tribes of Israel. We know however which actually are the Jewish communities in Kurdîstân, quite distinct from the Christian groups in dress and customs. Only their language is also a Neo-Aramaic dialect. — The Highland Nestorians annually pay Mâr Shimûn a contribution called rich d-chîta. The arrears due to the Turkish treasury were simply left to mount up. Cuinet (p. 749—751), speaking of the autonomous tribes, gives the total of arrears as already 160,000 £ T in his time. There was besides somewhere in the Nestorian country (cf. Lalayan, who gives a photograph) a "rock of the collector of taxes" marking the limit beyond which this official never risked going. — The relations of the Nestorian hillmen with their Kurdish neighbours are no worse than with one another usually are. The interest of the tribe came before every consideration of religion, so that ad hoc alliances could be concluded between the Kurds and the Nestorians for joint action against their co-religionists.

"The grass grows quickly over the blood spilt in a just battle". A kind of fair play is therefore the ruling principle of the inter-tribal code. There are, it is true, exceptional cases. The pan-Islamism of 'Abd al-Hasîm had its unpleasant repercussions in Kurdîstân; the Turkish officials appointed there after the revolution of 1907 only complicated the position still further. Since the affairs of the Nestorians and Kurds were conducted on a tribal basis, we find the door of the patriarch's residence open to Kurds and Nestorians indifferently, who come to settle their disputes and hospitality is offered to all alike. On the other hand, we find the Nestorians seeking the good offices of Shaikh Salîm of Barzan known as the "Christian Shaikh", who was executed by the Turks in Mawîsh at the beginning of the War.

The Nestorians and the Dijhâd. Even before the official outbreak of hostilities between Russia and Turkey, in August 1914, the patriarch Mâr Shimûn was invited by Ljewdet Bey, the wâli of Wân, to come to see him. Presents were lavished upon him and assurances given that all the grievances of the Nestorians would be redressed. As a result of the proclamation of the dîjhâd however, the atmosphere became heavy in Kurdîstân. In November, Turkey entered the war and the per-secution of the Nestorians of Alûb (Bâsh-kal'as) began at once. In Persia fighting broke out between the Chritians of the Urmia region and the Bekâzî Kurds. At the end of 1914, the Russians evacuated Urmia and Salamas. Those Christians who did not save themselves in time by going to Dûlâmêr perished in large numbers. As to the Nestorians of the highlands, although the massacres and deportations of Armenians were at their height, the Turks endeavoured to attach the Patriarch to their side and to secure the loyalty of the Nestorians. Complete educational freedom, good rutes, subsidies and grants to the Patriarch and to the bishops and mûlûks, all these things were promised in vain. Mâr Shimûn retired to the particularly inaccessible district of Dîzû from which the Patriarch's personal bodyguard had always been recruited. About this time an accidental shot killed Mâr Shimûn's uncle Nestoros, who was, it was said, urging a more conciliatory policy towards the Turks. After an interview, which decided matters, with the Russian commander at Mûhändîjî, near Salamas, the Patriarch on May 10, 1915, issued the order for mobilisation. The fortune of war resulted in the Nestorians, at first encouraged by the Russian successes in Wân and Urmia at the beginning
of the summer, being left to their own resources. To be brief, with the help of the Barzānī Kurds, the Turks sacked Tāhāma, Tiyyārī, Dājūī and Bāzū. We may note especially the destruction of the irrigation ditches by acqua ced ita in Sargone province in the time of the Tsar. The famous march of Mār Zāia at Dājūī, of the fourth century, was desecrated for the first time in its long history. Interesting ex votos, Chinese vases, brought there in early days by missionaries, disappeared. The inviolability enjoyed by Mār Zāia is said to have been due to a letter guaranteeing it written on a piece of cloth, attributed to the Prophet (cf. above). After this disaster the Nestorians withdrew to their summer pastures, at a height of 10,000 feet. This final trial was a painful one. Harassed by the Kurds, with insufficient food and no salt, the Nestorians nevertheless held out. The Patriarch, taking refuge on the plateau of Shina, endured privations which were even harder for him who could not eat meat (even the mother of the patriarch apparently must not eat meat). The Nestorian rā'īāt of Gāwar were massacred at this time under the orders of Nūrī Bey. Finally in October 1915 a skilful retreat was carried through. The Kurds were actually holding the approaches to the Persian frontier. A detour was effected towards Abāk in the north via Kōrtanis (Berwar) and the bridges were burned after crossing the Ghūrā. The Kurds succeeded however in threatening the retreat by using the natural bridge of Hezkelan, but were driven back. The bravura of the Nestorian church was destined to become legendary. In the month of November the exodus of the Nestorians was completed, and they were safe within the Russian lines at Salamas. The Russian authorities organised assistance for the refugees, who, to the number of 40,000, were settled in the Persian districts of Khūr Salamas and Urmiya where they remained till 1918. After the departure of the Russians as a result of the revolution, the Nestorians formed detachments with the help of Russian munitions and instructors and opposed the advance into Aḡbarbādān of the Turks led by 'Ali Iḥsān Pāshā. Having been dispersed by the Persians in 1910, however, their munitions being exhausted, the Nestorians left the region of Urmiya via Saldūz-Sain Kāla-Bīdjār for Hamadān where the English forces then were. From there the refugees were sent to the concentration camp of Bakūba near Baghādād. The Patriarch was no longer alive. Led into an ambush by the Shūkār Kūrīd chief Ismā‘īl Aḡā Simkū, Mār Shim‘ūn was treacherously assassinated at Kohneh Shehr on March 4, 1918.

The Nestorian community is now living in scattered groups in the 'Irāq, Persia, Syria etc. The post-war history of the Nestorians is closely bound up with the problem of the wilayet of Mawji, finally attached to the 'Irāq. The line admissible for the same boundary of the wilayet in question, however, leaves the Nestorian districts to Turkey and it is very unlikely that they can return there. The martial qualities of the Nestorians were used by the British authorities who raised four battalions from them, which were very useful especially at the beginning of their establishment in the 'Irāq.

In conclusion a few words should be said about the Nestorians of the region of Lake Urmiya. Those of Salamas believe (Duval, cf. cit.) that they are aborigines converted in the early centuries of our era. In 1883 there were however only fifteen Nestorian families, the remaining 3,000 having become Roman Catholics under the bishop Mār Ihsāyāb (d. 1789). As to the Nestorians of the plateau of Urmiya, we know in general, according to which their immediate ancestors came down from the mountains five or six centuries ago, which corresponds very closely to historic fact. The Nestorians of Urmiya have been the object of lively competition among the missions, of which the Presbyterian was first established (1832). The Roman Catholic Lazarists followed in 1863 and finally an Orthodox mission, the brotherhood of Cyril and Methodius, began work in 1905. At one time shortly before the War, there were also Anglican and Cæcilian missions. The work of the missions has made quite appreciable modifications not only in the beliefs of this ancient Christian community but also in its life and customs. Although little information has been preserved on the subject, there is reason to believe that the Nestorians of Urmiya also lived under the authority of mālik, who were recognised by the Shāhs as the official representatives of the community. We have seen a number of firman preserved in the family of Dr. Johanna Malik. They were administered according to the old collection of canon law called Sunhāds of which Šamsaša Yūsuf Kaleta published a new edition in 1916 at the American Mission Press.

This is probably only one of the versions of the Syriac, which are known in the Chaldean edition with its wealth of learning. In the eyes of the Muslim authorities the Nestorians were zimmī (dāmmī; cf. dāmmā) and their position was regulated by Muhammadan law. With the coming of the missionaries, the position gradually changed. The mālik were replaced by miltē bāsī, each dependent on his respective mission. The Persian governor had to appoint a sersef, an official whose special duty was to deal with foreigners and those under their protection. During the War a national council called motawa was organised, which dealt not only with the defence of Christian interests before the local authorities, but also with the return to their numbers of the Nestorian territory acquired a certain political character but later disappeared in the general débâcle. — In conclusion it should be mentioned that in the present article we have confined ourselves mainly to the Nestorian highlanders of Central Kurdistān. The historical phenomenon that we have been led to study in this connection is far from being so limited and simple, for it demands not only consideration of linguistic problems, the ramifications of which go back to a remote past through Aramaic, but also of facts of ethnology even less known which are implied in the idea of Nestorianism. Finally the geographical area is also enormous if we remember for example the epigraphic material from Russian Central Asia.

NEWİ, YAHYÂ B. PIR 'ÀLI B. NAŞİR, an Ottoman theologian and poet, with the nom de plume (makhlûq) of Newi, was born in Malghara (Rumelia), the son of Shaikh Pir'Ali in 1490 (1533). Up to his tenth year he was taught by his learned father and then became a pupil of Karamanî-zade Mehemmed Efendi. His fellow pupils were Bâtî, the poet [q. v.] and Sa'd al-Din, the famous historian [q. v.]. He was an intimate friend of the former. He joined the 'Ulemâ, became modernis of Gallipoli in 973 (1565) and after filling several other offices became a teacher in the Medrese of Mir-i-Madî Sultan. In 998 (1598) he was appointed Kâdi of Baghi'd and before he could take up office Sultan Murâd III appointed him tutor to his son Mustafâ and to the princes Bâyazid, 'Othmân and 'Abd Allâh. When after Murâd III's death (1003 = 1595) the usual slaughter of the princes deprived him of all the charges, he retired completely from public life and lived on a pension granted him by the new sultan. He died at Stambul in Dhu 'l-Qa'da, 1417 (June 1499) and was buried in the court of the Shâh-i Wêfa mosque. He was the son of Newi-zade 'Aṭî (q. v.).

Newi was a man of great learning and his encyclopaedic knowledge was most clearly revealed in his best known of his works, the Naftul gilânä wa-Maḥasin al-Muṭân, in which he surveyed the twelve most important branches of learning; on it cf. [J. v. Hammer] Encyclopädische Übersicht der Wissenschaften des Orientes, part i. (Leipzig 1864), p. 22 sqq. and the German translation of the story of Shâhân and Beşîr, ibid., p. 24 sqq. which forms the concluding section of this work. Brunsâ Mehemmed Tahir gives a list of other prose works in his 'Oftâmânu Mu'llifikât, iii. 475 sqq. with references to the libraries in which they are kept. It is evident that the style of his contemporary Bâtî without however reaching his level. His poems which were collected in a scarce Dîvân (MS. in Stambul, Hamidiye library), lack ease and betray too readily the learned author who frequently makes his work difficult to understand with unusual words and obscure allusions. He tries his skill in different forms of verse, the ḵāṣīa, ghâzal, and mawwâd, without however attaining popularity in any one of them. His fame as a poet is completely overshadowed by that of his contemporary and friend Bâtî. Newi's high position as an author he owes to his learned work, particularly the already mentioned encyclopedia, which was the sort to appeal to, and as is evident from the numerous MSS. still in existence in European collections (e.g. Berlin, Bologna, Dresden, Leyden, London [3 copies], Upsala, Vienna). A Sultânîmûne by him (Paris, Bib. Nat., cod. reg. 44, Cat. No. 308 and F. Babinger, G. O. W., p. 76) does not seem to be mentioned by his biographers. His son Newi-zade 'Aṭî wrote a very full life of him (p. 418—27 of the Dîvân to Tashkoprûdzâ's work).

Bibliography: J. v. Hammer, G. O. D., iii. 108; Gibb, H. O. P., iii. 171 sqq.; Hâdisî Khalifa, Fedisiko, i. 120 sqq. also the biographies of poets by Kiânî-zade and 'Aḥdî.

FRANZ BÄRINGER

NEWİZÂDE 'ÂTĪ, 'ÂTĪ AL-DIN, an Ottoman author and poet, better known as 'Aṭî with the nom de plume Newi-zade, i.e. son of Newî, was born in 991 (1583) in Stambul, as the son of the celebrated Newî [q. v.]. After the death of his father from whom he received his early education, he placed himself under Kafrâzî Fâdî Allâh Efendi, the compiler of an anthology, and later under Akâhî-zade 'Abd-ı-Halîm Efendi. He then joined the 'Ulemâ but did not attain any of the higher offices. After becoming a muftızî, he was appointed a judge and served in this capacity in a number of Rumelian towns like Loğâ, Silistria, Rusuk, Tîrnovo, Monastir (Bitîf),
Trikalla and Český (Skopje). Soon after his retirement from this sphere of activity he died in 1634 (1634) in his native city of Stambul; here he was buried beside his father, Ishak. The latter is best known for his continuation (джакы) in Turkish of Taşkıprızade’s Şahisi ışık Naşri. This work, entitled Ḥadīth al-Ḥaṣbah fi Tahlīmat al-Şahis is, continues in a supplement to the Şahis ışık in which a place is given to many scholars of the time of Sulaiman and Selim II, overlooked by Taşkıprızade, the biographies of Ottoman ‘Ulema’ and dervish shaikhs down to the reign of Murâd IV (on the contents see F. Babinger, G.O.W., p. 172). Death prevented the author from continuing his work, which was taken up by others. Aşı’s book contains 999 biographies. It was written in a very artificial style permeated with Persian, which was popular at the time. Aşı’s book also enjoyed a great reputation as a poet. He wrote a quintet (Kahvam) on the contents of which see Gibb, H.O.P., iii. 234 sqq. The Ḥadīth al-Ḥaṣbah, manuscripts of which are also common (cf. F. Babinger, G.O.W., p. 172 to which may now be added Stambul, Lâlî Isma‘îl, No. 339), was printed at Stambul (15 + 771 pp. 2°) in 1668. The poetry still awaits a printer. Aşı’s signification as a prose writer is much greater than as a poet.

FRANZ BABINGER

NIEBŁA, the name of two Ottoman poets.

1. ‘Abd al-Razzâk known as Niebla, or more accurately Niebla-i Kadim, “Niebla the Elder,” to distinguish him from ‘Othmân Niebla [q.v.], came from Kûrück (near Bagdîd) and was probably of Kûrück origin. He seems however to have come to Stambul at an early age to prosecute his studies. Here he became a mödérres but in the year 1159 (1746) entered upon a legal career. According to the ‘İṣğilî-i ışık-i ışık, he held the office of jâfît in Sarajevo and Kutahya. His sharp tongue which found particular expression in daring and malicious chronograms (tɛo-wîrih) earned him banishment to Kethyana (Crete) along with the poet Haşmet and then to Brussa; he was later, according to Wâsîf (Taribî, p. 211), sent back to Kutahya. In any case he died in Brussa in Şawwâl 1175 (May 1762) of a broken heart and was buried in the cemetery opposite the mosque of Pir Ufûd the Muḥammad the founder of the order of the Djalwata. ‘Abd al-Razzâk Niebla composed a Dîvân in Persian and Turkish (p. Stambul 1300 and we believe 1304), and also a history of the war with Nâdir Şâh in 1145 (1730) in which he took part on the staff of Hekïm Oghlu Ali Paşa. The little book called Têrîsî-yi Hekïm Oghlu Ali Paşa is written in ornate language and is of no historical value. The fair copy in the author’s hand is preserved in the Berlin Staatsbibliothek (Cod. Or. 8° 2186). Niebla also enjoyed the reputation of being a distinguished münkî. Excerpts from his Inbâh are given by J. v. Hammer in his G.O.R., ix. 643 sq. His Divân is called Muḥallaq

al-Hikâm which gives the year 1172 (1758) for its completion (cf. however a similarly titled work in Vienna: Flügel, Cat., iii. 486, No. 1991).

Bibliography: Cf. F. Babinger, G.O.W., p. 204 sq. with further references. The promised very full bio-bibliography of Niebla Efendi by Iba al-Mu‘in Mahmîd Kemal Bey has not yet appeared (1933).

2. ‘Othmân, called Niebla or, to distinguish him from his older namesake, Niebla-i Djemed, came from Chios. He held several military posts in the capital and died there in 1293 (1876) in retirement. He is buried in the Karâđja Ahmîd cemetery in Skutari. His collected poems have been twice printed, Stambul 1257 and Stambul 1290 (by Yüsuf Kâtîlî Paşa) (Dîvân-i ‘Othmân Niebla). In 1302 there was published at the suggestion of ‘Abd al-Kârim Nâdir Paşa in Stambul under the title Efdî-i Nâdiri specimens of his prose and verse. A Turkish translation of the Gulûân by him exists in MS. ‘Othmân Niebla had a very thorough command of the three languages of Islam and wrote poetry in all three. His work however is hardly of permanent value.

Bibliography: Brâssilî Mehmedh Tahir, ‘Othmânî Mu‘ellifleri, ii. 405 sq. (FRANZ BABINGER)

NICEA. [See Iznik.]

niebla (Ar. ليبلا), a little town in the S.W. of Spina, 15 miles W. of Seville on the right bank of the Rio Tinto. Now much decayed, it has less than 2,000 inhabitants and is in the judicial district of Moguer, in the province of Huelva. It is the ancient Iliipa. In the Visigothic period it was the see of a bishop. In the Muslim period it enjoyed considerable prosperity. It formed part of the district of al-Sharaf (Ajarâfe) and was also called al-Ḥamrâ, “the red”, no doubt from the colour of its ramparts and of the water of its river. It was particularly an olive-growing centre. The gentian was also cultivated there and deposits of alum and of sulphate of iron were worked.

Niebla was taken in 94 (713) by ‘Abd al-‘Azîz, son of Mâsû b. Nuṣâir [q.v.]. In 149 (766) it was the starting point of the rising of Sa‘îd al-Maṣfîr al-Yaḥṣubî who seized Seville but was soon defeated and slain by the troops of ‘Abd al-Rahîm I. The town in 230 (844) suffered from a visit of the Normans (Maghûr; q.v.). In 284 (997) it rebelled against the Umayyads: it was however retaken by force of arms in 304 (917) by order of ‘Abîd al-Rahîm al-Našîr by his general Badr b. Ahmad. At the time of the fall of the Caliphate, it became the capital of a little kingdom formed in 414 (1024) by Abu l-‘Abbâs Ahmad b. Yaḥyâ al-Yaḥṣubî who seized al-Dawla, which also comprised the lands of Huelva and of Djalal al-Cyûn (Gibralon). This prince died in 433 (1041) and was succeeded by his brother Muhammad l‘izz al-Dawla. The ‘Abbâsid sovereign of Seville al-Mu‘tâqid [q.v.] soon displayed his desire to annex the principality of Niebla and made several raids into it. ‘izz al-Dawla had to abandon his capital and take refuge with the lord of Cordova Abu l-Walîd Muhammad b. Djalwar in 443 (1051) leaving the power to his nephew Abu Naṣr Fâth b. Khalaf b. Yaḥyâ al-Yaḥṣubî Naṣîr al-Dawla, who at first bought peace from al-Mu‘tâjid by paying him tribute but was forced two years later in 445 (1053) to abandon his
principally to the ruler of Seville and join his uncle in Cordova. Niebla passed a little later to
the Almoravids [q.v.]. When the power of this
dynasty was beginning to collapse in Spain, it
became the headquarters of another rebel, Yusuf
b. Ahmad al-Birawashi (or al-Batruji), who in 549
(1154) finally submitted to the Almohad general
Barraz al-Masafi and went five years later to Sala
on the summons of 'Abd al-Mu'min. A few years
later Yusuf al-Birawashi, maintained as governor of
Niebla by the Almohads, rebelled and the town
was retaken in 549 (1154) by the governor of
Seville and of Cordova, Yahiya b. Yaghmur, who
executed 8,000 of the inhabitants. This massacre
was condemned by 'Abd al-Mu'min who had
Yahya brought in chains to Morocco and then
exiled to Tlemcen.

Niebla remained under Muslim rule until 1257,
when it was taken after six months siege by
Alfonso X and became finally Christian.

NIFFAR (Niffar), a ruined site in southern
"Irak, in 32° 7' N. Lat. and 45° 10' East Long.
(Greew), now in the bed of Afek
in the Iquz al-Dijaniye. Niffar corresponds,
as J. Oppert was the first to point out, to the
town of Nippur well known from cuneiform inscriptions,
one of the oldest and most important places in
Babylonia. Its great importance was not political
but religious, as the temple of the chief deity of
the town formed a kind of central sanctuary or place
of pilgrimage for the whole of Babylonia, to which
almost all the important sovereigns of the period
before Hammurapi, and Hammurapi himself, as
well as the Kassite kings and many later rulers
like Assurbanipal, dedicated gifts.

Nippur's period of greatest prosperity lay in
the millenia before Hammurapi; but it remained
an important city down to the last Babylonian
and Achemenid rulers and an important com-
mmercial centre with a very mixed population which
gave it a somewhat cosmopolitan character. In
the fifth century B.C., under Artaxerxes I and Darius II,
we find in it an important business and banking
house, the firm of Muraqshab & Sons to whose
activities many documents still bear eloquent
testimony. Nippur still continued to flourish under
the Seleucids and Arsacids as buildings of this
period show, quite apart from the numismatic
evidence. It is not directly mentioned by Greek
or Roman writers, but the name of the district of
Nippur may be concealed in nippurine, the
name of a stone which Pliny (Nat. Hist., xxxvii.
10, 175) says is of Persian (i.e. presumably
Parthian?) origin.

In the Babylonian Talmud Nippur appears as
Niphar (ניפָר) and Nuphar (נָעַפָר); the latter form
corresponds to that which is now most usual:
Nuffar. In the passage in question in the Babylonian
Talmud (Yoma, 10b) we read: Kalneh (כַּלְנָה)
is Naphur (Nuphar) Ninni (ננה, נני); the qualification
Ninni (נני) is obscure; Daiches' explanation in O.L.
Z., xi, 539 as Ninib falls to the ground as the
name of this deity is now known to read Ninurta.
The basis of the equation Kalneh (Gen. n. 10)
= Nippur is not yet satisfactory. A Babylonian
place-name Kaln is so far not been found in
cuneiform inscriptions.

Nippur was also an inhabited place in Muslim
times; for example we find it mentioned in 38
(659) on the occasion of a rising against the caliph
Ali (Tabari, ed. de Goeje, i, 3425, 3242) as well
as during the Khurdi trouble (op. cit., ii, 929, c.
also Yahya, ed. Wustenfeld, iv, 275, 798 and
ages we find Nivar mentioned as a Nestorian bisho-
"p in the chronicles of the Patriarchs
(Askher Faqisik kuriu al-Maghrib), ed. Gissone,
Rome 1897 and 1899 of 'Amr b. Matta' (p. 83,
p. 95, a.) and of Mār b. Sulaiman, in the period
900—1058 A. D. (cf. also Sachau, in Abh. Pr. A.A.,
W., 1909, No. 1, p. 31). When the town was
abandoned by its inhabitants and became com-
pletely desolate we do not know. It probably
was the result of one of the Mongol invasions,
that under Hulagu or that under Timur, which
dealt their death-blow to so many flourishing places
in Mesopotamia.

The ruins of Nippur are next to those of
Babylon and al-Warka [q.v.], the most extensive
in the whole of the Babylonian plain; they cover
an area of almost 150 acres. The first European
to visit them was W. K. Loftus who spent some
time here in 1850 and came back again in 1854
(see the Bibl. for his report). A year later than Loftus,
in Jan. 1851, Layard was in Nippur and spent
two weeks digging but with little success because
Layard, paying too little attention to the difference
between Assyrian and Babylonian mounds, did not
dig deep enough and only turned over the cemetery
of a people who had settled there only in the
last centuries of antiquity, under the Arsacids.

The University of Pennsylvania (Philadelphia)
was the first to undertake a methodical investigation
of the ruins and in four expeditions from 1888
to 1900 (1888—1889, 1889—1890, 1893—1896
and 1898—1900) under the leadership of Peters,
Haynes and Hilprecht carried out excavations on
a large scale. On the results of this intensive work
see Hilprecht's full report in Exploration etc.
(see Bibl.), p. 289 sq.

On the topography of Nippur see, in addi-
tion to the descriptions by Loftus and Layard,
especially Peters, op. cit., ii, 104 sq.; Hilprecht,
op. cit., p. 540 sq. and notably Fisher, op. cit.,
cf. also King, op. cit., p. 85—86. The American
expedition also found an ancient Babylonian plan
of Nippur which Hilprecht, op. cit., p. 518 (re-
produced in Zeitschrift, op. cit., p. 66) published;
more distinct in Fisher, op. cit., pl. i. This plan
has been since 1926 in the possession of the University
of Jena with the rest of Hilprecht's private Assyrio-
logical collection; see Zimmer, in Z.A., xxxvii. 242-
The sight of the ruins is very impressive; they rise like a range of hills in close formation from 30—60 feet above the plain, culminating in the cone of Bint al-Amir 95 feet high, the ziggurat of the chief temple.

The most important part of the whole eastern quarter is the ziggurat of Im-Kharsag, still 95 feet high, which the inhabitants for some reason now forgotten called Bint al-Amir, the "prince's daughter". The triangular mound south of the sanctuary proper marks the site of the great temple library, about a twelfth of which, yielding some 23,000 cuneiform tablets and fragments, has been excavated. The western half of the inner city contains the residential quarters with the bazaars, business houses and private dwellings. Its history is still obscure as in the course of centuries it was repeatedly resettled. In the Persian period a large cemetery extended over a considerable part of the clay buildings which had fallen to pieces there.

In addition to the great Ešnāl temple E-kur there were a number of other highly venerated temples in Nippur.

According to the cuneiform inscriptions, Nippur must have in ancient times lain on the Euphrates itself or at least in its immediate vicinity (cf. e.g. O. L. Z., XX, 142, note 1); this fact forces us to the assumption that this river in the Babylonian period must have taken a much more easterly course below Babylon than in the middle ages and present day. The inner city is divided into two parts by a canal now dry but once navigable, which the natives call Shatt al-Nil. This was an important watercourse which, according to Hilprecht, was in many places at one time 20—25 feet deep and 150—190 feet broad and which the modern inhabitants rightly describe not as a mere ṣānīr (stream), canal) but as Shatt al-Nil.

According to the mediaeval Arab geographers: Nahr al-Nil was the name of one of the canals led off from the Euphrates to the Tigris. It still survives in its entirety; as in the middle ages, it starts from Babylon and flows a little above 32° 30' N. Lat. in an almost straight line eastwards. The geographer Sūrāh (who used to be called Ibn Serapion; cf. iv., p. 1130a) writing in the fourth (tenth) century observes that this canal bears the name Nahr al-Nil only after passing the town of al-Nil (the modern ruins Nīlīye). At the present day it is called only Shatt al-Nil throughout its course. Somewhat east of Nīlīye a side-canal, now dry, branches off to the south for which, not only in its lower part where it flows by the ruins of Nīfar but along its whole extent, the name Shatt al-Nil, the same as that of the main canal, was and is usual. Yākūt however says (iv. 77, 798) that Nīfar lay not on the Nahr al-Nil but on the bank of the Nahr al-Nars, a canal dug, it is said, by the Sāsānian king Narsē b. Bahram (293—303 A. D.) which leaves the Euphrates at al-Hilla a little below the Nahr al-Nil and turns southeastward. It was presumably connected by a branch with the southern small canal of the same name which branches off from the Nahr al-Nil, so that the occurrence of the two names Nahr al-Nil and Nahr al-Nars for the river in Nīfar is explained. It should be noted also that the nomenclature of the Babylonian canals changed several times already in the middle ages. On the Nahr al-Nil or Shatt al-Nil and Nahr al-Nars see Loftus, op. cit., p. 238; G. Le Strange, in J. R. A. S., 1895, S. 256, 260—261 and do., in The Lands of the East Caliphate, Cambridge 1905, p. 72—74; Streck, Babylonien nach den arabischen Geographien, 1. (Leiden 1900), p. 30 sq.; Hersfeld, in Sarre-Hersfeld, Archäolog. Reise im Euphrat- und Tigritgebiet, i. (Berlin 1911), p. 234 sq.; Hāshīm al-Sa‘dal, Dīnghāṣīyat al-‘Irāb al-ḥadīthā, Baghdad 1927, p. 34. 35.

Below Nīfar the Shatt al-Nil loses itself in the swamps of Hōr al-Afek. The Shatt al-Kār very probably forms its southern continuation.

If the "Euphrates of Nippur", as it is called in the cuneiform inscriptions, really represents the old course of this river, and not simply a branch of it, the modern Shatt al-Nil with its continuation, the Shatt al-Kār, probably corresponds to the bed of the Euphrates of Babylonian times. On the great changes in their courses which the rivers of Mesopotamia have undergone, cf. especially Fisher, op. cit., p. 2 sq. Hilprecht, who is followed by others like Zehnpfund, Unger etc., thinks that the name of the canal, Kābara (=the large) found in later texts from Nippur, corresponds to the "Euphrates of Nippur" of the older texts. He further compares it with the Kēbar (722) of Ezekiel (i. 1 etc.); see Hilprecht, Explorations, p. 412 and also in Der Bāl-TEMPEL in Nippur, p. 10. The identification of the Kābara with the old bed of the Euphrates, i.e. the modern Shatt al-Nīl, I do not consider proved; the Kābara may also be a canal in the neighbourhood of Nippur.

West and Southwest of Nīfar lies the very extensive Hōr al-Afek (on the meaning of Hōr see i.ii., p. 147b).

**AL-NIFFāR MUHAMMAD IBN `ABBĀD AL-DJÄBÄR.** This mystic, whom the principal Sufi biographers fail to mention, flourished in the ivth (9th) century, and, according to Häflig Khažifa, died in the year 554 (965). His *nisba* refers to the town of Niffar [q.v.] in Mesopotamia, and one MS. of his works asserts that it was during his residence at Niffar and Nil that he committed his thoughts to writing. Niffar's literary reliquiae consist of two books, the *Mawāṣif* and the *Mukhṭatābât*, together with a number of fragments. It is improbable that Niffar himself was responsible for the editing of his writings; according to his principal commentator, `Affī `Al-Dīn al-Tilmansî (d. 690 = 1291), either his son or his grandson collected his scattered writings and published them according to his own ordering. The *Mawāṣif* consists of 77 sections of varying length, made up for the most part of brief apodémes touching on the main aspects of Sufi teaching, and purporting to be inspired and dictated by God; the *Mukhṭatābât* is similar in content, and is divided into 56 sections. Niffar's most characteristic contribution to mysticism is his doctrine of *wakfā*. This term, which would appear to be used by him in a peculiarly technical sense, implies a condition in the mystic which is accompanied by direct divine audition, and perhaps even automatic script. *Mawāṣif* is the name given to the state of the mystic in which *wakfā* is classed higher than *mar'a*; and *mar'a* is above *'ilm*. The *wakfā* is nearer to God than any other thing, and almost transcends the condition of *bahšārya*, being alone separated from all limitation. Niffar definitely maintains the possibility of seeing God in this world; for he says that vision (*'ra'a*) in this world is a preparation for vision in the world to come. In several places Niffar distinctly touches on the theory of the Mahdi, and indeed appears to identify himself with the Mahdi, if these passages are genuine; and this claim is seemingly in the mind of Zābīd, when he describes Niffar as zābī ʿal-dhawā wa l-'qalā. Tilmansî however interprets these passages in an esoteric and highly mystical sense; and it does not accord with the general character of the author, that he should make for himself such extravagant claims. Niffar shows himself in his writings to be a fearless and original thinker. While undoubtedly influenced by his great predecessor al-Hallīdī, he acknowledges no obligations, and has a thorough conviction of the reality of his own mission.

**NĪĠDE, a town in the Turkish sāndjağa** (now wilâyet) of the same name in a fertile trough on the east edge of the Central Anatolian steppe. The town is first mentioned in the Turkish period; previously the chief town of the district was Tyana or Tana (A. A. Tivane) but it is probable that the striking hill which commands the important road from Cilia to Kaisāriye at its entrance to a pass over the mountains had a fortified settlement upon it in the pre-Turkish period. The old place-name may be the origin of the modern one, an older form of which was Nekide (Yakī, ed. Wüstenfeld, iv. 511: Nakida; Ibn Bībi and others, also in inscriptions down to the xvith century: Nakida; the modern form

Nīqād [in the new Turkish script: Nigde] is already found in *Hamd Allāh Muṣṭafā, Niẓāḥ, in G.M. S., xxiii/1, 99*. In this particular district some villages have retained their ancient names (Andavāl–Andabalis, Melegop–Malakopaisa) and considerable numbers of descendants of the original Christian inhabitants survived until quite recently (R. M. Dawkins *Greek in Asia Minor*, Cambridge 1916, p. 16 sqq.).

Nigde is first mentioned in connection with the partition of Saldıjak territory among the sons of Kīlidj Arslān II (685 = 1189) when it was allotted as an independent lordship to Arslān Shāh (Ibn Bībi, ed. Houtsma, *Rec.,* iv. 11). Nigde had perhaps previously belonged to the Danishmandids but Ewliyā, ii. 189, cannot be taken as evidence of this. Kaikāra I granted Nigde to the Emir-i Aḡrār Zain al-Dīn Bāhārā (Ibn Bībi, p. 44) who shortly before his death built the important mosque of *Ala* al-Dīn here (620 = 1223). In the xivth century Nigde was the headquarters (amīr-vaḵšār kert) of one of the great military districts of the Saldijūks. Under Kīlidj Arslān IV, Ibn at-Ḳahṭār Masʿud held this office. At first an ally of the all powerful Muʿīn al-Dīn Perwānī, with whom he killed the sultan in 1264, he endeavoured to remove the young Kāhṣurā times out of Perwānī's influence and brought him to Nigde (1276). But the help for which he had appealed to Egypt came too late and he succumbed to Perwānī who was supported by the Mongols (Ibn Bībi; Weil, *Gez. d. Chalifen*, iv. 80 sqg.). He built a well in Nigde opposite the *Ala* al-Dīn mosque (666 = 1268). Under the Ilkānīs there ruled in their name, or in the name of their Anatolian governor Eretu, Sunqur Aqgha who is known only from inscriptions and is, it is remarkable to note, not mentioned by Ibn Batṭūta who visited Nigde about 1333 (ed. Defrémery-Sanguinetti, ii. 286); he made himself independent after the death of Abū Saʿīd. He gave a large mosque on the wall of the gate which facing the Bezīstān is a Persian inscription, in which he grants Christian foreigners exemption from *jīvra* and *kharāj* (736 = 1335). The Saljuq princess Khusawāt bêtānīn buried in 732 (1332) in her splendid tomb built in 712 (1312) on the other hand probably did not rule in Nigde although she resided there. She was, if the lady buried beside her in 1344 was her daughter, then the eldest of the emir Shadjaʿ al-Dīn who is mentioned as the father of the lady on her sarcophagus: he ruled according to al-Umarī (ed. Taeschner, p. 31) in the Bulghanlagh, where a wilāyat Shadjaʿ al-Dīn is still mentioned in Saʿīd al-Dīn (i. 517 following Idrīs) and where lies Ubūkṭaḵī which, according to Häflig Khažifa (2bkāνmēnd, p. 617), was also called Shadjaʿ al-Dīn. After the period of Sunqur's rule, Nigde probably passed directly to the Karamanoglu, who held it against the attacks of the Eretuīn *Ala* al-Dīn *ʿAlī* (c. 1379) (Azīz b. Ardašīr, *Rezm u-Rezm*, p. 141 nqg.). In 1390 Nigde surrendered with other Karamanian towns to the Ottomans but was restored to the Kār-
manids who defended it successfully against Kāfīr Burhān al-Dīn, lord of Kāsīrīyā and Siwās (Bīzm u-Raṣāzm, p. 245). After Timūr’s invasion the power of the Karamanids extended northwards as far as Deweli Kārāṣhār which previously belonged to Kāsārīyā and for a time even to Kāsīrīyā itself. Nīgde then ceased to be a frontier town. Apart from a temporary occupation by Egyptian troops in 1419 (Weil, v. 146 sqq.) it enjoyed peace and prosperity and the special care of the Karamanids who had one of the bulwarks of their power here till the end of the dynasty. A series of buildings, the first of which not only in time but also in size and quality is the Aq-Medrese of the year 1409, is evidence of their interest in the town. Nīgde surrendered in 875 (1470) to the Ottoman general ʿErfān Pāsha who had the defences of the town restored. In 878 (1473) the Ottoman Sandjaḵ-bey of Nīgde, Kōtī Bey, forced Deweli Kārāṣhār which still belonged to the Kāramanoglī to surrender to prince Musaṭṭhī. The latter died on the way back at Nīgde (Saʿd al-Dīn, i. 517, 550).

The sandjaḵ of Nīgde belonging to the beyler-beylik of Kāraman, contained the kaẓr of Urubūgh, Bor, Deweli, Deweli Kārāṣhār and Ulukhāla. When about 1720 the grand vizier Ibrāhīm Pāsha transformed his birthplace of Muṣlla in the kaẓr of Urgūb into the imposing town of Newchehr, the site for the garrisons of the decayed fortresses of Nīgde and Deweli Kārāṣhār were transferred to the new foundation (v. Hammer, G.O.R. ii, iv. 250 sqq.). At the end of the Ottoman period the sandjaḵ of Nīgde, to which the kaẓr of Ak-serāi also belonged, contained 148,700 Muslims and 49,551 Christians the latter mainly natives and mostly speaking Turkish. Nīgde was the residence of the metropolitan of Konia. The town numbered at this time 11,526 inhabitants, in 1927 (after the exchange with Greece) only 9,463.

Nīgde (now on the Kayseri-Ulukhāla railway) consists of an upper town running north and south, now largely uninhabited (Tepe Whāne) at the highest point of which in the north stands the imposing citadel and the lower town (Shehr alti) which was also once surrounded by a wall. In the upper town is the ‘Alī al-Dīn mosque, one of the oldest mosques in Anatolia, with an architect’s inscription in Persian. Before the gate of the upper town at its south end is the Gothic mosque of Sunkur (c. 1350) showing influences from Little Armenia and Cyprus, and the bazaar. West of and below it is the Kāramanian Aq-Medrese of 1409. A little apart to the west of the town, separated by a broad road, running north and south is the modern quarter Kāyabaš with a few remnants of the old cemetery and a group of tūbīs among which that of Khuward Mādhūn of the year 1312 is prominent.

(historical and Muslim monuments of Nīgde, Bor and Ulukhāla). — Inscriptions: Khalīl Edhem, in T.O.E.M., ii. 747 sqq.; i. 821 sqq., 873 sqq. and A. Tewḥīl in Gabriël, op. cit. — On the Christian monuments of the region see Rott, Kleinasiatische Denkmäler, 1908; and De Jerphannot, Eglises ruppestres de Cappadoce, 1925.

PAUL WITTEK.

NIHĀL ČAND LĀHWĀRĪ, Indian man of letters, Hūḍī by religion, was born in Dīḥūb, but left it in early life and went to Lahore where he lived for a considerable time. Owing to this circumstance he called himself Lāhwārī. Search for a livelihood led him to Calcutta. Here he was introduced to Dr. J. B. Ghilghist who asked him to translate into “Hindi rekhā” the story of Tādī al-Mulākī and Bakawīlī. He consented and thus became one of the famous band of Fort William translators. He made the translation from Gulī Bakawīlī, a Persian rendering by Shaikh ʿIZZAT ULLĀH, 1772, of an old Hindi story, which has been reproduced in Urdu verse by Dāyā Shinkar Kāwul Nasim (q. v.), in his well-known māhnāwī Gulīrī-i Nasīm.

Nīhāl Čand called his work Māḥābī-i Ṭāhī. It is in very good prose mixed with verse. The name gives the date 1217 (1802). Apart from the above mentioned facts nothing is known about the writer.

NIHĀWĀN, a town in the old province of Hamādān, with, at the present day, 5,000–6,000 inhabitants (de Morgan), at a height of 5,860 feet on the branch of the Gāmāsh which comes from the S. E. of the vicinity of Būrāūj; the Gāmāsh then runs W. to Būsūtūn. Nīhāwān lies on the southern road which, coming from Kirmānshāh (Ibn Khurdābqīb, p. 198), leads into Central Persia (Iṣṭāḥāb) avoiding the massif of Alwand (‘Opārī) which rises W. of Hamādān. Hence the importance of the town in the wars of Persia with her western neighbours.

The French excavations of 1931 (Dr. Conteau) have shown that the site of Nīhāwān was inhabited from pre-historic times. The ceramics (‘Ibīs style’) which have been found there, seem to be older than those of style I and II of Susa. Potelmy VI, 2 knows of Nīhkuvānī and according to Ibn Faḵīh, p. 258 the town already existed before the Ptolomy. In the Stašfīnīan period the district of Nīhāwān seems to have formed the fief of the Kānīn family (Dīnīwārī, p. 99). There was a Protestante there. According to Ibn Faḵīh, p. 259 there could be seen on the mountains near Nīhāwān two figures of snow in the form of a bull and a fish (a similar talismanic are said to have existed at Bīlās also cf. also the steles of wisḵāp (‘dragons’), protectors of waters) in Armenia west of Lake Sewan which combine these symbols, Zāp, xxiii/3, 1916, p. 409).

The same legend is reflected in the name of the river Gāmāsh (Gāmāšt-Ab = ‘water of the bull and fish’; māšt is the Kurdish form of the Pers. mā‘īn). Among the products of Nīhāwān the Arab authors mention willow-wood which was used for polo-sticks (paṭālāgh), aromatic seeds (ḵaṣḥat al-ḵašārī or al-taḵmāḥ al-ḵeṣārī) which were used like ḥanī (a perfume put in coffins) and black clay used as wax for sealing letters. The district of Rūdrāwār was under Nīhāwān (cf. de Morgan, Mission, ii. 136: Khuward). and was famous for its abundance of saffron (Iṣṭāḥāb, p. 199). For a list of the places more or less dependent on Nīhāwī, cf. Schwartz, Iran etc., p. 505–509.
In the Mongol period, the Nusheh al-Kulib mentions three districts of Niwhand: Mal'iyir (now Daulatabad), Ishdihan (= Isbidihaan, see below) and Dhibukk. (Niwhand no longer forms part of the province of Hamadhân; cf. Rabino, Hamadan, in R. M. F., xiii., 1921, p. 221–227).

Near Niwhand was fought the famous battle which decided the fate of the Iranian plateau and in which the Kufi Nurmân b. Mu'arrin defeated the Sasanian generals. The commander-in-chief is given different names: Dhu'il-Hajibn Mardan-shâh (cf. Baladhuri, p. 303); Marquart, op. cit., p. 115 identifies him with the Mattaib Khurrazid) or Farhawi (cf. Tabari, i. 608; the latter also gives the name of his generals: Zarduk, Bahman Dâjdâya and the commander of the cavalry Anushék). The Arab camp was at Isbidihaan and that of the Persians at Waykhurd (†). The sources do not agree about the date: Sa'îb b. Oumar (Tabari, i. 2615−2619) gives the end at the year 18 (639) or the beginning of 19 (640); cf. Wellhausen, Skizzen und Verarbeitungen, vi., 1899, p. 97, while Ibn Isâkh, Abû Ma'shar and Wâkidî, followed by Caetani, Annali dell'Islam, iv., 1911, p. 474−504 put the battle in 21.

The district of Niwhand (formerly called Mih-Bahram, also Mêh-Dâr) was finally incorporated in the possessions of the Byzantines and called Mêh-Bâra (=the Media of Rasa) (Baladhuri, p. 306).

Niwhand is often mentioned in the period of the wars between the Safawids and the Ottomans. In 998 (1589) at the beginning of the reign of Abbas I, Cîhâlta-Zade built a fortress at Niwhand (Ailan-arâ, p. 273). After the death of Murad IV a rebellion took place among the garrison of Niwhand; the Ottomans were driven out by the Shi'i inhabitants. As a result in 1012 (1603) war again broke out with Turkey (ibid., p. 440). In the spring of 1142 (1730) Nâdir [q.v.] took Niwhand again from the Turks.

(V. Minorsky)

NIKH (א), marriage (properly: sexual intercourse, but already in the Kur'an used exclusively of the contract). Here we deal with marriage as a legal institution; for marriage customs see 1. 1. The essential features of the Muslim law of marriage go back to the customary law of the Arabs which previously existed. In this, although there were differences according to districts and the conditions of the individual cases, the regulations governing marriage were based upon the patriarchal system, which permitted the man very great freedom and still bore traces of an old patriarchal system. It is true that before the coming of Islam a higher conception of the marriage state had already begun to exist but the position of the woman was still a very unfavourable one. The marriage contract was made between the suitor and the "guardian", i.e. the father or the nearest male relative of the bride, the latter's consent not being regarded as necessary. But even before Islam it had already become generally usual for the dowry to be given to the woman herself and not to the guardian. In marriage the woman was under the unrestricted authority of her husband, the only bounds to which were consideration for her family. Dissolution of the marriage rested entirely on the man's opinion; and even after his death his relatives could enforce claims upon his widow.

2. Islam reformed these old marriage laws in far-reaching fashion, while retaining their essential features: but as in other fields of social legislation Muhammad's laws are not so much a change of position of the woman's position. The regulations regarding marriage which are the most important in principle are laid down in the Kur'an in Sura iv. (of the period shortly after the battle of Uhud): "3. If ye fear that ye cannot act justly to the orphans marry the women whom ye think good (to marry), by twos, threes or fours; but if ye fear (even then) not to be just then marry one only or (the slaves) whom ye possess; this will be easier that ye be not unjust. Give the women their dowry freely; but if they voluntarily remit you a part of it, enjoy it and may it prosper you. 26. Marry not the women whom your mothers have married (except what is already past); for this is shameful and abominable and an evil way. 27. Forbidden to you are your mothers, your daughters, your sisters, your aunts maternal and paternal, the daughters of your brother and sister, your foster-mothers and foster-sisters, the mothers of your wives and the step-daughters who are in your care, born of your wives, with whom ye have had intercourse — but if ye have not had intercourse with them, it is not a sin for you — and the wives of the sons, who are your offspring; also that ye marry two sisters at the same time except what is already past; Allah is gracious and merciful. 28. Further married women except (slaves) that you possess. This is ordained by Allah for you. But he has permitted you to procure (wives) outside of these cases with your money in decency and not in fornication. To those of them that ye have enjoyed give their reward as their due, but it is no sin to make an agreement between you beyond the legal due. Allah is allknowing and wise. 29. If however any one of you has not means sufficient to marry free believing women (let him marry) among your believing slaves, whom you possess; Allah best knows (to distinguish) your faith. Marry them with the permission of their masters, and give them their dowry in kindness; they should be modest and not unchaste and take no lovers". Also Sura iv. 220 (uncertain date), the prohibition of marriage with infidels, male or female (cf. Sura lx. 10), Sura xxxii. 49 (probably of the year 5), an exception in favour of the Prophet, and Sura v. 7 (of the farewell pilgrimage in the year 10), permission of marriage with the women of the possessors of a scripture. Other passages of the Kur'an which emphasise the moral side of marriage are Sura xxiv. 3, 26, 32 and Sura xxx. 20. In tradition various attitudes to marriage find expression; at the same time the positive enactments regulating it are supplemented in essential points. The most important is the limitation of the number of wives permitted at one time to four; although Sura iv. 3 contains no such precise regulation, this interpretation of it must have predominated.
very early, as in the traditions it is assumed rather than expressly demanded. The co-operation of the "guardian", the dowry and the consent of the woman is regarded as essential and competition with a rival the result of whose suit is still in doubt is forbidden.

3. The most important provisions of Muslim law (according to the Ṣahih school) are the following. The marriage contract is concluded between the bridegroom and the bride’s wali (guardian), who must be a free Muslim of age and of good character. The wali is in his turn bound to assist in carrying out the contract of marriage demanded by the woman, if the bridegroom fulfils certain legal conditions. The wali should be one of the following in this order: 1. the nearest male descendant in the male line; 2. the nearest male relative in the male line among the descendants of the father; 3. do. among the descendants of the grandfather etc.; 4. in the case of a freed woman the mawla (manumitter) and if the case arises his male relatives in the order of heirs in intestacy [cf. Sīrāṣṭah, 6, 6]; 5. the representative of the public authority (ḥākim) appointed for the purpose; in many countries his kāds or his deputy. In place of the ḥākim the future husband and wife may agree to choose a ṭal and must do so if there is no authorised ḥākim in the place. The wali can only give the bride in marriage with her consent but in the case of a virgin silent consent is sufficient. The father or grandfather, however, has the right to marry his daughter or grand-daughter against her will, so long as she is a virgin (he is therefore called wali muḥbir, wali with power of coercion); the exercise of this power is however very strictly regulated in this interest of the bride. As minors are not in a position to make a declaration of their wishes which is valid in law, they can only be married at all by a wali muḥbir. According to the Ḥanafīs on the other hand, every blood relative acting as ṭal is entitled to give a virgin under age in marriage without her consent; but a woman married in this way by another than her ascendant is entitled on coming of age to demand that her marriage be declared void (faṣāḥ) by the kāds. A bridegroom who is a minor may also be married by his wali muḥbir. As a kind of equivalent for the rights which the husband acquires over the wife, he is bound to give her a bridal gift (mahr, ūṣūb) which is regarded as an essential part of the contract. The contracting parties are free to fix the mahr; it may consist of anything that has value in the eyes of the law; if it is not fixed at the conclusion of the contract and if the parties cannot agree upon it, we have a case for the mahr al-mīrād, a bridal gift fixed by the kāds according to the circumstances of the bridegroom. It is not necessary to pay the mahr at once; frequently a portion is paid before the consummation of the marriage and the remainder only at the dissolution of the marriage by divorce or death. The wife’s claim to the full mahr or the full mahr al-mīrād arises only when the marriage has been consummated; if the marriage is previously dissolved by the man the wife can only claim half the mahr or a present (muwāra) fixed arbitrarily by the man; these regulations go back to Sūra ii. 237 sq. (cf. xxxiii. 48). In form the marriage contract, which is usually prefaced by a solicitation (ḥāla), follows the usual scheme in Muslim contracts with offer and acceptance; the wali of the bride is further recommended to deliver a pious address (ḥīṣa) on the occasion. The marriage must be concluded in the presence of at least two witnesses (ṣāхīād), who possess the legal qualifications for a witness; their presence is here not simply, as in other contracts, evidence of the marriage but an essential element in its validity. On the other hand, no collaboration by the authorities is prescribed. But since great importance is usually attached to fulfilling the formalities of the marriage contract, upon which the validity of the marriage depends, it is usual not to carry through this important legal matter without the assistance of an experienced lawyer. We therefore everywhere find men whose profession this is and who usually act under the supervision of the kāds. The part they take is to pronounce the necessary formularies to the parties or even to act as authorised agents of one of them, usually the wali of the bride. The most important impediments to marriage are the following: 1. blood relationship, namely between the man and his female ascendants and descendents, his sisters, the female descendents of his brothers and sisters as well as his uncles and great-uncles; 2. foster-relationship, by which extension of the Kur'ānic law by tradition is regarded as an impediment to marriage in the same degrees as blood relationship; 3. relationship by marriage, namely between a man and his mother-in-law, daughter-in-law, step-daughter etc. in the direct line; marriage with two sisters or with an aunt and niece at the same time is also forbidden; 4. the existence of a previous marriage, in the case of a woman without limitation (inclusive of the period of waiting after the dissolution of the marriage, ʿidda, q.v.) and in the case of a free man with the provision that he cannot be married to more than four women at once; 5. the existence of a threefold woman (q.v.) or of a ḥām (q.v.); 6. social inequality; the man must not be by birth, profession etc. below the woman (unless both the woman and wali agree); a free Muslim can only marry another's slave girl if he cannot provide the bridal gift for a free woman, and the marriage between a master (or miśṭress) and his slave (or her slave) is quite impossible (a master is however permitted conubinage with his slave); 7. difference of religion; there is no exception to the prohibition of marriage between a Muslim woman and an infidel while the permission given in theory for marriage between Muslim men and the women of the possessors of a scripture is at least by the Ṣahihis so restricted by conditions as to be prohibited in practice; 8. temporary obstacles such as the state of ʿiyām (q.v.). On the other hand, the law knows no minimum age for a legal marriage. If a marriage contract does not fulfil the legal requirements, it is invalid; the Ḥanafīs and especially the Mālikis but not the Ṣahihis distinguish in this case between invalid (bāṭil) and incorrect (faṣāḥ) according as the error affects an essential or unessential element in the contract; in the former case there is no marriage at all, in the second its validity may be attacked but (according to the Mālikis) consumption removes any defect. Marriage does not produce any community of property between husband and wife and the woman retains her complete freedom of dealing; but certain laws regarding inheritance come into operation [cf. Sīrāṣṭah, 6, c]. The man alone has to bear the
expense of maintaining the household and is obliged to support his wife in a style befitting her station; if he should not be in a position to do so his wife may demand the dissolution of the marriage by farzâ [q.v.]. The man can demand from his wife readiness for marital intercourse and obedience generally; if she is regularly disobedient, she loses her claim to support and may be chastised by the man. The latter however is expressly forbidden to take upon himself vows of continence (idâ and zîkâr). Children are only regarded as legitimate if they are born at least six months after consummation of the marriage and not more than 4 years (the predominant Shâfi i view) after its dissolution; it is presumed that such children are begotten by the husband himself; the latter has the right to dispute his paternity by idâ [q.v.]. Parentage can also be established by the husband's zîkâr [q.v.], while both recognition and adoption of illegitimate children are impossible.

4. The laws regarding the rights and duties of husband and wife cannot be modified by the parties at the drawing-up of the contract. This can however be effected by the man pronouncing a conditional malik [cf. Talik, vii] immediately after the conclusion of the marriage contract; this shift to secure the position of the woman is particularly common among Indian Muslims. For the rest the couple are left to private agreements which need not be mentioned in the marriage contract. The actual position of the married woman is in all Muslim countries entirely dependent on local conditions and on many special circumstances. It is not a contradiction of this to say that the legal prescriptions regarding marriage are most carefully observed as a rule. In spite of certain ascetic tendencies Islâm as a whole has been decidedly in favour of marriage. — In modern Islâm the problem of the woman's position in marriage and polygamy is especially discussed between conservatives and adherents of modern social ideas. For the different views resulting from these conditions see the Bibliography cited below.

5. Alongside of the usual form of the old Arabian marriage which in spite of its laxity aimed at the foundation of a household and the procreation of children, isolated the temporary marriage in which the pair lived together temporarily for a period previously fixed. Such temporary marriages were entered upon mainly by men who found themselves staying for a time abroad. It is by no means certain that these are referred to in Sûra iv. 28, although the Muslim name of this arrangement (mut'a [q.v.], "marriage of pleasure") is based on the literal meaning of the verse; it is however certain from Tradition that Muhammad really permitted mut'a to his followers especially on the longer campaigns. But the caliph 'Umar strictly prohibited mut'a and regarded it as fornication (zîdâ) (a group of traditions already ascribes this prohibition to the Prophet). As a result, mut'a is permitted only among the Shi'is but prohibited by the Sunnis. The latter have however practically the same arrangement; those who wish to live contrary to the law as husband and wife for a certain period simply agree to do so without super- lating it in the marriage contract.

NIKOPOLIS(S), in Turkish spelling Nibul or Nikûlîn (in Ewliyâ Celebi, vii, 463: نیکوپولیس), town on the southern bank of the Danube, at 43° 43′ N., 24° 54′ E. This Nikopolis, founded by Heracles (c. 575—642), has often been confused, especially in medieval literature, with Nikopolis ad Istrum or ad Haemium, founded by Trajan in 101 in commemoration or his victory over the Dacians (ruins recently excavated near modern Nikop in the upper valley of the Djantra by Mt. Haemus). The Byzantine Nikopolis is sometimes called Nikopolis Major to distinguish it from Trajan's Nikopolis and Nikopolis Minor on the opposite bank of the Danube near the Romanian town of Târnagure.

The importance of Nikopolis as a trade centre and military post is due chiefly to the command which it holds over the Osma and the Aluta, the two Danubian arteries reaching into the heart of Bulgaria and Roumania respectively. Situated on a naturally flat plateau, it dominates the plains to the south, the Danube to the west, and the eastern gorge connecting the interior of Bulgaria with the river. The medieval double walls and strong towers surrounding Nikopolis were destroyed by the Russians during their occupation of the city in 1810 and 1877.

Nikopolis was first captured from the Bulgarians in 791 (1389) by Ali Pâsha Cenderelî [see Ali Pâsha]. Seven years later, it was the scene of the famous battle in the Crusade which is called by its name. The acquisition of Bulgaria by the Turks and their continual irruptions north of the Danube into territories claimed by Hungary, together with a state of comparative peace in western Europe in the last decade of the sixteenth century, made it both necessary and possible for most Catholic countries to participate in the expedition. An army of about 300,000 men (according to the most reliable estimates) from France, Burgundy, England, Germany, Italy, Spain, Hungary, Poland, Wallachia and Transylvania marched along the Danube, seized Widdin and Rahova, and finally set siege to Nikopolis while an allied Veneto-
Genoese fleet blockaded the city from the river. The siege lasted about fifteen days, during which Bayazid [q. v.] abandoned the siege of Constantinople, burnt the siege machinery, and summoned his Asiatic and European contingents to arms. A Turkish army of perhaps 110,000 men met at Adrianople and, marching through the Shipka Pass, descended into the valley of the Osma and pitched their camp on the southern hill commanding the Nikopolis plain.

The battle took place on Monday, September 25, 1396, and the crusaders were completely routed owing to the superiority of Ottoman tactics and the dissensions amongst the leaders of the Christian host. Bayazid divided his army into two large sections. The first, consisting of two large bodies of irregular cavalry and of irregular infantry, occupied the slope of the hill. Between the cavalry vanguard and the foot rearguard of this section, the Turks planted a field of pointed stakes. Beyond the sky-line on the other slope of the hill, hidden from their unsuspecting enemy, the second and more important section, consisting of Bayazid with his Sipahi and Stephen Lazarović with his Serbs, waited for the right moment to advance against the exhausted Christians. These tactics proved to be effective when the Crusaders' vanguard of French and foreign auxiliaries defeated the Turkish irregular cavalry and, after forced dismounting to uproot the stakes, routed the irregular infantry and pursued them uphill to face the new and unseen forces. Meanwhile, a stampede of riderless horses produced confusion in the Crusaders' rear which comprised the Eastern European armies. Michael and Laczko, who were for Sigismund of Hungary, retired with their Wallachian and Transylvanian auxiliaries who constituted the left and right wings of the rearguard. After desperate fighting for the relief of the French and foreign contingents, the Hungarian nobles persuaded their king to board a Venetian galley and escape by way of Byzantium and the Morea to Dalmatia. The rest were either killed or captured, only to be massacred on the following day by Bayazid in order to avenge in this way the severe losses which he had sustained. A small number of nobles were, however, saved from the massacre for a ransom of 100,000 gold florins.

The immediate result of the Ottoman victory was the extension of the conquests into Greece and the submission of Wallachia to Ottoman suzerainty. More important, however, was the breathing-space it gave for the consolidation of the Turkish territories in Europe, which enabled the Ottoman empire to survive the critical struggles of the next decades.

In later history Nikopolis plays only a minor part. During the wars of the sixteenth century it was thrice captured by Russian armies (Sept. 1810; July 1829; July 1877), and by the Treaty of Berlin (July 13, 1878) was included in the tributary principality of Bulgaria.

**Bibliography:** The standard histories of the Ottoman Empire. For the "Crusade of Nikopolis" a full and classified bibliography of the extensive MS. and printed sources, both Eastern and Western, is contained in A. S. Atiya, The Crusade of Nikopolis (London 1934); see also the following older monographs: A. Brauner, Die Schlacht bei Nikopolis, 1396, Breslau 1870; J. Delaville Le Roulx, La France en Orient au XIVe siècle, Paris 1886; H. Kiss, A'Nicapoly nióket, Magyar Academiai erettesito, 1896; I. Kohler, Die Schelachten bei Nikopolis und Warnia, Breslau 1882; F. Šišić, Die Schlacht bei Nikopolis, Vienna 1893. (A. S. Atiya)

**NIKOS, Neo-Caesarea**, first mentioned by Pliny (vi. 3) so that it presumably arose under Tiberius, lies in the Anatolian wilayet of Stwā [q. v.] 1,150 feet above sea-level. The town is picturesquely situated at the foot of a hill, crowned by the ruins of a mediaeval castle which was erected from the material provided by the numerous buildings of antiquity there. Here in remote antiquity was Cabira and after its decline Dias polis founded by Pompey, later called Sebaste. In Church history Nikós is famous as the scene of a Council (314 A.D.) and as the birthplace of Gregory the miracle-worker. In the Muslim period it became important under the Samdiks of whom numerous and important buildings have survived to the present day. It became more important with the Dānīshmandīya [q. v.] whose founder Malik Dānīshmand Aḥmad Gāhāz took Nikos among other places. His grandson Muhammad successfully resisted a siege by the emperor Manuel in Nikos. His son Yaghibāşan (537—562 = 1142—1166) of whom there survives an inscription of the year 552 (1157) died in 562 (1166) whereupon Nikos was taken by the Byzantine emperor Manuel (Kinnamos, p. 296 sq., 300) although only for a short time. In 1397 Nikos passed to the Ottomans and gradually lost its former importance. It remained noted for its very prolific orchards, celebrated already in the time of Fakhr al-Din and later (in 1848) the special produce of which, very large and sweet cherries, pears, figs etc., were famous at all times. Ewliya Celebi (cf. Siyağat-nâma, ii. 389; v. 14; Travels, ii. 102 sqq.) who visited Nikos in 1083 (1672) describes the town in his usual extravagant fashion, mentioning 70 schools, 7 monasteries, many mills and waterwheels and 500 shops with a large number of shoe-makers. The pomegranates there, he says, are the size of a man's head and weighed 1 okka. The remains of the Muslim period so far as they bear inscription, have been published by Ismail Hākki, Kiltāber (Stamboul 1345=1827, pp. 58—73. The turves (sepulchral cupolas) of Malik Gāhāz and of Ḥādji̇ Chīrfê are worth mentioning; among old dervish monasteries there are the Iṣkur-tzekke and the Kołak-tekke. Nikos has often been visited and described by modern travellers. The population (c. 4,000) was before the war one quarter Christian; they were mainly engaged in the silk and rice trades.

AL-NIL, the river Nile. The Nile is one of the large rivers which from the beginning have belonged to the territory of Islam, and the valleys and deltas of which have favoured the development of an autonomous cultural centre in Islamic civilisation. In the case of the Nile this centre has influenced at different times the cultural and political events in the Muhammedan world. Thus the Nile has, during the Islamic period, continued to play the same part as it did during the centuries that preceded the coming of Islam.

The name al-Nil or, very often, Nil Miṣr, goes back to the Greek name Nīlēkos and is found already in early Arabic literary sources, though it does not occur in the Qur'ān. (In sūra xx. 39 the Nile may be meant by al-yamm). The Christian habit of calling the river Gēbōn, after one of the rivers of Paradise, as found in the works of Euphrasius Syrus and Jacob of Edessa and in the Arabic-Christian author Agapius (Patrologia Orientalis, v. 596), is not followed by the Muhammedans, who know only the Ouxos under this name. Al-Zamakhshari (Kitāb al-Asma'īnina, ed. Salverade de Grave, p. 127) mentions as another name al-Faṣīf, no doubt a poetic allusion to the yearly flood. Already in the Middle Ages, the word baḥr having come to acquire in Egyptian Arabic the meaning of "river", the Nile is also called a l-Baḥr or Baḥr Miṣr (cf. al-Makrīzī, ed. Wiet, i. 218), which is also the case with several other parts of its river system, such as Baḥr Yūsuf or Bahr al-Ghazal. In the Delta the different ramifications of the river are occasionally also called Nile, but where necessary the main stream (ṣāmīd) is distinguished from the minor branches (ghīrā' or khalijā'ī) and the canals (tur'a).

The geography of the Nile is treated here only from a historico-geographical point of view so far as the knowledge of Islamic science is concerned. The geographical knowledge of the Nile among the Muhammedans, so far as we can learn from their literary sources, is based partly on direct observation, but for the most part on the pseudo-scientific traditions which go back to local beliefs or to classical science. For a long time during the Middle Ages the limit of Islamic territory on the Nile was well fixed; it ended at the first cataract near the island of Bílīk (Philae) to the south of Usāwn (Assouan); here began, since the treaty (baḥr) concluded by ʿAbd Allāh b. Abī Sāḥib with the Nubiāns, the Nubian territory, where for long centuries Christianity prevailed (al-Baldbhūrī, p. 236; Ibn ʿAbī al-Ḥakam, Futūḥ Miṣr, ed. Torrey, p. 188) the first locality on Nubian territory, where tribute was paid, was called al-Kafr (al-Maṣūdī, Murūǧīd, iii. 40, 41).

Historical tradition has preserved parts of the alleged correspondence between ʿAmr b. al-ʿĀṣ and the caliph ʿUmar on the subject of Egypt, then newly conquered; here the Nile is described as a river "whose course is blessed"; while the flood and the inundations are praised in poetic terms (ʿUmar b. Muḥammad al-Kahlī, Faḍl al-Miṣr, ed. Østrup, p. 204; al-Dimbashi, ed. Mehren, p. 109). The same correspondence reveals the perhaps historical fact that ʿUmar did not wish to see the Arab army established in Alexandria, because there would be then a great river between the army and the caliph (Ibn ʿAbī al-Ḥakam, p. 91; cf. also what is said on p. 128 about those who went to live in al-Dīzu).

The principal towns by which the Nile passed in medieval Egypt in Upper Egypt, between Usāwn and al-Faṣīf, are Aṭfū (Edfu, on the left), Isnā (Esna, i.), Ṭarm (I.), Kūsār (r.), al-Akṣūr (Luxor, r.), Kīff (r.), Iḥṣām (Akhmīm, i.), Uṣūyāt (Assūy, i.), al-Uṣmānīnīn (i.), Anṣān (r. opposite al-Uṣmānīnī), Taḥāt (i.), al-Kāsī (i.), Dalālīn (i.), Ahnās (i.) and Iṣfīḥ (Aṭfū). This succession of towns is given for the first time by al-Yaʿqūbī (B. G. A., vii. 331—334), while Ibn Hawkāl (B. G. A., ii. 95) is the first to give a table of the distance between these towns, expressed in birādis, the entire distance being 21 days' journey (al-Mundisi, ed. Dūzī and de Goeje, p. 52, gives 25 days' journey for the same distance). Shortly before al-Uṣmānīnīn branched off on the left the canal that conducted the water to al-Faṣīf, which is known to Ibn al-Faṣīf (B. G. A., vi. 74) as Naḥr al-Lāhūn and to al-Mundisi (p. 50) as KHolād al-Maḥmūd; this canal, according to unanimous tradition was dug by Joseph, occurs already on the MS. map of the year 479 (1086) of Ibn Hawkāl in the Serai Library of Constantinople, No. 3346 (reproduction on fol. 658 of Monumenta Africæ et Aegyptiæ by Yousouf Kamīl). It is the Baḥr Yūsuf of our days; on it was situated al-Bahnaus. The banks of the Nile in Upper Egypt are not very completely described by the geographers; one finds repeated everywhere the assertion that the borders were cultivated without interruption between Usāwn and al-Faṣīf (cf. al-Iṣṭakhri, B. G. A., i. 59), but that the width of the cultivated territory varied during the river's course, dependent on the greater or lesser distance of the two mountains that border the river. Ibn Hawkāl (MS. of Constantinople, cf. supra) describes two extremely narrow strips, one between Usāwn and Aṭfū (now called Gebelein) and one between Isnā and Ṭarm (now called Gebel Silsile). The curves in the course of the Nile, especially in the upper part of the ʿAtīd, are not indicated on the maps of Iṣṭakhri and Ibn Hawkāl. The oldest extant Arab map of the Nile, however — which is at the same time the oldest Arab map that we know of — gives clear indications that the sinuous course was a known fact. This map is found in the Stratburg MS. of the year 1037 of al-Khwārizmi's Sīrat al-ʿArq and has been reproduced in the edition of that text by H. v. Miik (B. H. L. C., iii., Leipzig 1926). The representation of the Nile here is connected with the classical tradition of astronomical geography; al-Khwārizmi himself, and after him Suhāb (Ibn Saʿīd) and Ibn Yūnus (MS. 143 of the University Library at Leyden, where on p. 136 a special table is given of the towns lying on the banks of the Nile) give exact indications as to the longitudes and latitudes of the Nile towns; but these indications need many very uncertain corrections to allow of the reconstruction of a map, as v. Miik has tried to do for al-Khwārizmi in Denkacher. Ak. Wiss. Wien, lix, Vienna 1916 and J. v. lebeau, Ibn al-Wásü in Vi. i. of the Atlas annexed to his Géographie du Moyen-Âge, Paris 1850. But the fact that the course of the Nile is from south to north is well known to all the Arabic sources, which often repeat the
assertion that the Nile is the only river in the world for which this is the case. Only the text of Ibn Hawkál seems to imply that the Níl reached al-Fúsíy, from the S. E. (R. G. A., ii. 96).

The Delta of the Nile begins to the north of al-Fúsíy, where the distance between the two mountain ranges widens, while these hills themselves become lower and pass gradually into the desert. Immediately below al-Fúsíy began the canal that was dug by 'Amr b. al-‘Àṣ to link up the Nile with the Red Sea; this canal (Khâlidj Mîṣr or Khâlidj Amir al-Mu’mínîn) was made in 23 (644) according to Muhammad b. Yûsuf al-Kindi (cited by al-Makrîzî, Khiṭbât, Bâlik, ii. 143; cf. Yâkût, ii. 405) and served for the conveyance of provisions to the Hijâj until the reign of ʿUmar Ibn ʿAbd al-‘Àzzî; afterwards it was neglected and even obstructed by the order of the caliph al-Mansûr, so that, in the ivth (9th) century, it ended at Dhamab al-Tîmisî in the lakes to the north of al-Kulzûm (cf. al-Maṣûdî, Murādî, i. 147).

The two principal arms of the Nile in the Delta began about 12 miles to the north of al-Fúsíy (a little further than nowadays, according to Guest) and had, as now, a great number of ramifications which communicated in many ways and ended for the greater part in the big lakes or lagoons south of the Delta. To the south of these lakes were called in the Middle Ages: Bahairat Maryût (behind Alexandria), B. Idkî, B. al-Farrûûsî or B. al-Bâbi and the very large B. Tinnís, which last contained a large number of islands with Tinnís as the most important. On the land tongue, where the two main arms separated was situated the town of Shânâfât. The western arm went as now to the town of Raghit (Rosette) after which it reached the sea; near the town of Shânâfât a branch parted from this arm in the direction of Alexandria, ending in the Bahairat Maryût; this branch was only filled with water in the time of the flood (a very complete survey of the different “canals” of Alexandria by P. Kähle, in Jcl., xii. 83 sqq.). The eastern arm ran, as is still the case, past Dimyût (Damiette) and reached the sea shortly afterwards; it had several branches that went to the Bahairat Tinnís, one of which continued one of the Nile mouths of antiquity. Though many sources, based on a pseudo-historical tradition, repeat after each other that there are seven Nile arms (Ibn ʿAbd al-Hâkâm, p. 6; further al-Khwârizmî, Kudāmâ, Sûrasingh, al-Masûdî, Ibn Zûlâtî, the more realistic authors Ibn Khudâdbêh, al-Yâkûtî, Ibn Rustâ, al-Istakhî, Ibn ʿHawkál, al-Mârî, only kings of the two main arms). These were linked up by a canal system which, in the Middle Ages, differed considerably from the present situation. The chief sources from which we know them are Ibn ʿHawkál and al-Idrîsî, who give itineraries following different branches, but as the places named in these itineraries have been identified only in part, an integral reconstruction is not yet possible (on this problem cf. R. Guest, The Delta in the Middle Ages, in J.R.A.S., 1912, p. 941 sqq. and the map annexed to this article). The description in the text of Sûrasingh (ed. v. Milik, B. A. H. C. G., v.) has little value as an endeavour to trace back to his time (xth century) the seven legendary arms; among these arms special attention is paid to the “Arm of Saradîs”; which, according to tradition, was dug by ʿHamân (Ibn ʿAbd al-Hâkâm, p. 6; cf. Guest, loc. cit., p. 944 and Massépor and Wiet, Matériaux, in M.I.F.A.O., xxxvi.) Al-Makrîzî gives a detailed description of the canal system in the province of al-Buḥâra, to the east of Alexandria, from the Khâtâb al-Minâhâjî of Abu l-Ḥasan al-Maḥrûmî, who wrote in the xith century (M.I.F.A.O., xlvii., p. 167 sqq.). It seems possible that a study of the ancient maps (especially the Delta map of the Constantinople MS. of Ibn ʿHawkál and the maps of al-Idrîsî) may be useful for a more complete reconstruction of the medieval situation.

The Nile arms have always been decisive for the administrative division of the Delta, where the sources call by the name of Aṣâf al-Arîd, Aṣâf al-Arîd, or Aṣâf al- Ṭārî Mîṣr. The region to the east of the eastern branch was called Al-Ḥawf; the texts of al-Iṣâkhî and Ibn ʿHawkál place Al-Ḥawf to the north of the Nile, which may be understood in connection with the view referred to above that the Nile at al-Fúsíy had a direction from S. E. to N. W. The region between the two main arms was called Al-Kif (a name sometimes used for the entire Delta as well) or Baṣîn Al-Kif, while the country to the west of the western arm was called Al-Buḥâra and later Al-Ḥawf al-Gharbî, the original Ḥawf being called then Al-Ḥawf Al-Ṭāriq (the Ḥawf that is divided into kâras, the limits of which were determined by the more important branches; the bigger administrative units of later times [cf. Egypt] depended likewise on the river system. The present geographical aspect of the Delta is the result of the new irrigation works that began in the xith century under Muhammad Alî; the most conspicuous new canals are the Maḥmûdîya canal, dug from Fîwâ on the western arm to Alexandria, the Tawfîkîya, Maḥfûsiya and Buḥairîya canals that were completed in 1890, and the Ismâʿîliya canal, which links up the Nile with the Suez canal.

As to the knowledge of the course of the Nile to the south of Egypt the Muhammadan geographical literature begins rather late to give information based on direct observation. At first these sources content themselves with saying that the Nile comes from the country of the Nîba; for the rest there were ancient sources of a different kind that helped to complete the geographical conception of the course of the great river. This conception involved also the origin of the Nile, covered since antiquity by a veil of mystery. The real origin of the Nile always remained unknown to the Muhammadan scholars and travellers. It is a curious fact, however, that the information on this subject which we find uniformly repeated in the Islamic sources from the treatise of al-Khwârizmî (+ 830 A.D.) gives an idea of the origin of the Nile which does not correspond entirely to the data furnished by the classical sources. This conception makes the Nile emerge from the Mountains of the Moon (Djabal al-Kamar) to the south of the equator; from this mountain come ten rivers, of which the first five and the second five reach respectively two lakes lying on the same latitude; from each lake one or more rivers flow to the north where they fall into a third lake and it is from this lake that the Nile of Egypt begins. This conception is largely schematized and corresponds only partly to Ptolemy's description of the Nile sources; Ptolemy
knows only two lakes, not lying on the same latitude and does not speak of a great number of rivers coming from the Mountains of the Moon. The third lake especially is an innovation (cf. A. v. Mäik, in Denksehr. Ak. Wiss. Wien, lixxix., p. 44); in later authors such as Ibn Sa'id and al-Dimashqī this third lake is called Kūrā and may connected with some notion of Lake Chad (the same authors change the name of Djabal al-Kamar into Djabal al-Kumr which pronunciation is commented on by al-Māqrīzī, ed. Wiet, i. 219), but this is not probable for the time of al-Khwārizmī; the knowledge of more equatorial lakes, however, may perhaps be traced to the experiences of the two centuries dispatched by al-Ma'sūdī and the geographical region, which has been identified with the Bahr-al-Ghaţal. The system described by al-Khwārizmī of the origin of the Nile is represented on the map in the Strassburg MS. and is repeated many times after him (Ibn Khurādābīdhe, Ibn al-Fakīh. Kudāma, Suhrāb, al-Iṣmīrī and later authors). Al-Ma'sūdī, in describing a map he has seen, does not speak of the third lake (Murūǧ, i. 205, 206) and Ibn Rusta (B. G. A., vi. 90) says that the Nile comes from a mountain called B-ban and also knows only two lakes. Al-Iṣiṣkī and Ibn Ḥawkal on the contrary, frankly admit that the origin of the Nile is unknown, which is also illustrated by their maps. Still the system of al-Khwārizmī continued to be a geographical dogma and is found as late as al-Suyūtī. Al-Khwārizmī also took over from Ptolemy a western tributary of the Nile, which comes from a lake on the equator; this river is called by Ptolemy Astatos and may perhaps be identified with the Atbara. A later development, which connects with the Nile system a river that flows to the east in the Indian Ocean, is found for the first time in al-Ma'sūdī (Murūǧ, i. 205, 206; ii. 383, 384); this view is later taken up again by Ibn Sa'id and al-Dimashqī.

Another category of notions about the origins of the Nile is connected with the Jewish and Christian traditions which make the Nile come from Paradise. Medieval cosmographical theories place Paradise in the extreme East, on the other side of the sea (cf. the maps of Beatus), so that the Nile, like the other rivers of Paradise would have to cross the sea. This state of things is actually described in an old tradition, probably of Jewish origin, of a man who went in search of the sources of the Nile and had to cross the sea, after which he reached Paradise (al-Ma'sūdī, Murūǧ, i. 268, 269 and Akhbār al-Zamān, MS. Vienna, fol. 151b-h; al-Ma'ṣṣīsī, B. G. A., iii. 21). With this origin in Paradise is perhaps connected the view, which all sources attribute to al-Iṣāhāzī in his lost Kitāb al-Buldān, that the Nile and the Mahrīn (Indus) have the same origin (cf. al-Ma'sūdī, Tanṭīkh, B. G. A., viii. 55), a view which is sarcastically criticized by al-Iṣmīrī (Indur, p. 101).

To the same origin may go back the idea, often found in Muhammadan sources, that, when the Nile rises, all the rivers of the earth go down in level.

Thirdly there is a cycle of geographical conceptions which link up the western part of Africa with the river system of the Nile. Herodotus already had sought a western origin and Pliny quotes the Lybica of king Juba of Mauretania, who makes the Nile rise in western Mauretania. Mar-

quardt (Brün-Nammlung, p. 125 sqq.) has explained this view from a corruption of the name of the river Nuhul, which he identifies with the Wādh Nīl and which has its origin in the Mauritanian Atlas. Traces of this western Nile are to be found in Ibn al-Fakīh (B. G. A., v. 87) who, following an authority of the time of the conquest, places the origin of the Nile in al-Sūs al-Akṣā. Al-Bakrī for the first time identifies this western Nile with the river Nīger, although we find already in al-Ma'sūdī the knowledge of a great river, far to the south of Sūḏūmās (Murūǧ, iv. 92, 93). Al-Bakrī describes the Nile as passing through the territory of the Sūdin (ed. de Slane, p. 172) and numerates the tribes of the Sūdān, tribes and their towns which border the river; the westernmost town is with him Šanghāra, followed in eastern direction by Takrūr, Silla, Ġhāna, Tiraḳkā and finally the country of Kawāw. After al-Bakrī a similar description is given by al-Iṣrāʾīlī, but this last author goes back to another source than al-Bakrī when he places the mouth of the Nile in the neighbourhood of the salt town Awīlīs, thus identifying the lower course of this Nile with the Senegal (Marquardt, loc. cit., p. 171). Al-Iṣrāʾīlī likewise shows himself informed on the course of the Nile to the east of Kawāw, though he is in doubt if Kawāw is situated on the Nile itself or on a side arm (ed. Dossy and de Goër, p. 17); he finally derives this western Nile from the third branch of the big Nile lakes mentioned above, thus connecting the Nile of the Sūdān with the Nile of Egypt in one river system. So long as the complete text of al-Bakrī is not known, we cannot ascertain if this conception goes back already to that author. Al-Iṣrāʾīlī's Nile course is clearly indicated on his maps of the 1st—4th section of the first climate. After him it is especially Ibn Sa'id who has described the western Nile in this way and he has been followed again by Abu 'l-Fīđā. Al-Dimashqī (ed. Meiren, p. 89) gives the same representation; this last author even makes the third lake, which he calls like Ibn Sa'id the lake of Kūrā, on the Nile, and which borders the Sūdān on the western side, the Nile of Egypt, and a third river running in eastern direction towards Baḥḍāshī in the Zand pl. county on the Indian Ocean. This last river, which was also connected by al-Ma'sūdī with the Nile [cf. supra] is probably identical with the Weber river in Italian Somalia.

While the geographical authors constructed in this way the Nile system with a good deal of credulity and imagination, the real knowledge of the Nile south of Egypt advanced but slowly. The southernmost point reached by the Arab conquerors was Dongola (al-Kindī, ed. Guest, p. 12) and it was well known that this town was situated on the Nile; its latitude and longitude are given by al-Khwārizmī and Suhīrā. Al-Yaḥṣī (Tarīḵ, ed. Houtsma, p. 217) knows that, in the country of the Nība called 'Alwa, which lies behind the Nība called Mukurra, the Nile divides into various branches; this same author, however, places Sīr behind 'Alwa. Al-Ma'sūdī (Murūǧ, iii. 31, 32) knows that the country of the Nība is divided into two parts by the Nile. Ibn Ḥawkāl (Constantinople MS.) describes two places where there are cataracts (jumāḏātī), namely the one above Uswān, which is the "first cataract", and one near Dongola, of which it is not certain whether the "second" or the "third" cataract is meant. About the same time,
AL-NIL

however, a traveller named Ibn Sulaim al-Luwátî wrote a valuable description of the middle Nile course, which has been preserved in al-Mâkriži’s Khiṣaf (ed. Wiet, in M.I.F.A.O., xvi. 252 sqq.). This Ibn Sulaim, on whom al-Mâkriži’s Khiṣaf gives some information (cf. Quatremer, Mémoires sur l’Égypte, ii.), had been sent by the Fatimid general Džawhar to the king of the Niha on a diplomatic errand, and was the author of a Khiṣaf Akhbar al-Nîha wa ‘l-Muṣṭaf wa-al-Ālwa wa ‘l-Bağha wa al-Nîhl, in which a detailed description is given of these countries. He says that the region between Luxor and Dunqûla, and Dunqûla and the north by the Maris and more to the south by the Muṣṭaf; the northern part is barren and the great cataracts are correctly described. The country between Dunqûla and ‘Alwa (this last spot is the region of Khaṣrūn) is described as highly flourishing; the big wending of the Nile here is perfectly known to Ibn Sulaim. The Nile “is divided” then into seven rivers; from the description it is clear that the northern one of these rivers is the Aḥbara, coming from the east; further south the “White Nile” and the “Green Nile” join near the capital of ‘Alwa and the “Green Nile”, which comes from the east, is again the result of four rivers, one of which the author thinks from the country of the Ḥabasha, and one from the country of the Zandj; this last, incorrect, statement may have been influenced by learned tradition. Between the “White Nile” and the “Green Nile” there stretches a large island (djawād, as it is still called on our maps), which has no limits in the south. This is about the only description in medialāl Islamic literature that shows how far the knowledge of the middle Nile really went. Only little of it seems to have reached the systematic geographic treatises; al-Idrisi, e.g., describes this part of the river in a way which only shows that he did not make good use of the inadequate sources that were at his disposal.

The exploration of the upper Nile and its sources since the end of the xviiith century was the work of European travellers. They discovered, or perhaps re-discovered, the real big Nile lakes and identified the Ruwenzori mountain range with the Moon Mountains, the name of which was found again by the explorer Speke in the name of the Ḫunawzi country, the “country of the moon”. A part of the exploration of the Nile was due, however, also to Egyptian initiative. The well-known military expedition of 1820—1822 under Muhammad ‘Alì’s son Ismā‘îl Pasha, during which the city of Khaṣrūn was founded, established Egyptian domination in the Egyptian Sūdān and opened the way for further scientific exploration. In the years 1825—1842 three Egyptian expeditions went up the White Nile, and during the reign of Ismā‘îl Pasha the Egyptian government repeatedly tried to cleanse the swamps of the White Nile above Sobaž from the masses of vegetation (sudād) which hindered navigation.

The yearly flood of the Nile (ṣīwa, faṣī, fayyāṣa) is the phenomenon to which Egypt has been at all times indebted for its fertility and prosperity, as it provides, in compensation for the almost complete lack of rain in the country, a natural and almost regular irrigation for the lands on both sides of the delta and for the delta itself. It is the foundation of all cultural life and justifies entirely the attribute muḥārak so often given to the river. On the same account the Nile is considered, as well as the Euphrates, as a “believing” river (al-Mâkriži, ed. Wiet, in M.I.F.A.O., xxx. 218). The flood deeply influences the private and public life of villagers and townsfolk alike, and already the oldest Muḥammādian traditions about Egypt reflect the feelings of wonder and thankfulness that animated the people of Egypt before them (Ibn ʿAbd al-Ḥakam, p. 109, 205). Having reached its lowest level towards the end of May at Assuan and in the middle of June at Cairo, the Nile begins to rise again, reaching its highest level in the beginning of September. Then and in the beginning of October at Cairo. This regularity brings about a similar regularity in the methods of irrigation in the several parts of Egypt, in the times of the sowing and reaping of the different crops and consequently in the modes of levying the land taxes (e.g. al-Mâkriži, ed. Būlāk, i. 270, which text comes from Ibn Hawkal); all the dates referring to these occupations have always continued to be fixed according to the Coptic solar calendar.

There is much discussion in the literary sources about the causes of the flood. The most ancient belief, which at the same time corresponds best with reality, was that the flood is caused by heavy rainfall in the countries where the Nile and its tributaries have their origin. This is expressed in a somewhat exaggerated way in a tradition that goes back to ʿAbd Allāh b. ʿAmr b. al-ʿĀṣ, according to which all the rivers of the world contribute, by divine order, with their waters to the flood of the Nile (Ibn ʿAbd al-Ḥakam, loc. cit., and p. 149). This implies the belief that all other rivers fall while the Nile rises, but, on the other hand, it is sometimes observed that other rivers also show the same phenomenon of rising and falling, especially the Iūdas, and this again is considered as a proof of the common origin of the two rivers (al-Mâkriži, ed. Wiet, M.I.F.A.O., xxx. 227). There are, however, other views, which attribute the cause of the flood to the movement of the sea, or to the effect of the winds; these views have been inherited from sources of the pre-Muḥammādian period, among others from the treatise on the flood of the Nile attributed to Aristotle, and they are discussed and refuted at length in a special chapter of al-Mâkriži’s Khīṣaf (M.I.F.A.O., xxx. 236 sqq.).

Up to the xviith century the irrigation system of Egypt continued along the same lines. When the flood begins all the outlets on both sides of the main stream and its principal arms in the Delta are closed, to be opened again about the time of the highest flood, when the water level has reached the necessary height according to the different places. The most important of these yearly “openings” was that of the canal (Khālidj) of Cairo, which, until recent times, remained a public festival. In Cairo the flood is complete (wawrī al-Nīl), when it has reached 16 ḏā‘ūrī, generally in the first decade of the Coptic month of Mesore (about the midst of August), and this was proclaimed everywhere in the town (cf. the description by Lane, Manners and Customs, ii. 257 sqq. and E. Littmann, Ein arabischer Text über die Nilwellschiefe, Festschrift Oppenheim, Berlin 1933, p. 66 sqq., for older times, al-Kalḵṣuḏl, iii. 156).

The height of the level of the Nile has been measured since olden times by the Nilometers (cf. wawrīk). Many of these wawrīs are recorded by the
sources, the southernmost being that of 'Alwa and the most celebrated the one of al-Fustat, constructed by Usama b. Zaid al-Tanakhī about 92 (711) and often restored afterwards (a complete survey of all the mīqāṭs is given in Omar Toussoun, Mémorial sur l'Histoire du Nil, ii. 265 sqq.). These instruments generally were made of stone, with marks upon them, but they were sometimes of other materials (see al-Jazari's treatise on the manufacture of tabanīf in Nubia; cf. Evetts, Churches, p. 262). The level necessary for the operations of irrigation varied in different places: in the capital the average level had to be 16 dīrāṣa above the lowest level of the Nile; if the flood surpassed 18 dīrāṣa it became dangerous, while a flood not exceeding 12 dīrāṣa meant famine (cf. e.g. al-Idrisī, p. 145, 146). In the history of Egypt the years after 1444 (1052), and especially the year 451 (1059), are notorious for the famine and disaster caused by the failure or practical failure of the flood. A historical account of the flood from the years 152—1296 (759—1579) is given on p. 454 sqq. of Omar Toussoun, Mémorial sur l'Histoire du Nil.

The regulation of the main stream and its branches are ascribed to the ancient Egyptian kings (al-Maqrīzī, on the authority of Ibn Wāṣif Shāhī), but no real irrigation work of a wider scope existed in the Middle Ages and later except the famous canal system of al-Fayūm [q.v.], which all the sources ascribe to the prophet Yūsuf. In the rest of Egypt the water was allowed to flow freely over the lands after the piercing of the dams, so that large areas were completely inundated for some time; the Arabic sources contain some vivid descriptions of the large stretches of water, where in those days the villages were with the villages being only possible by means of boats during that time of the year (al-Maṣʿūdī, Murūjī, i. 162; Ibn ʿAbd al-Hakam, p. 205). Since the reign of Muhammad al-ʿĀthir new irrigation works have been planned with the aim of making the country more productive, a possibility at which already the medieval authors hinted more than once. The first efforts, however, failed. About 1840 was begun the construction of a great barrier across the two arms of the Nile at the apex of the Delta, according to the plans of the French engineer Mouget, but this enterprise began to bear fruit only fifty years later when this barrage project, including the Tawfikīya, Manṣūria and Fuḥāṭīya canals, had been completed in 1890. The later great irrigation works were executed higher up the river, such as the great dam and locks at the head of the cataracts near Philae above Assuan, in 1902, which was raised again in 1912, and again in 1933. While allowing, on one side, a better regulation of the distribution of Nile water in Egypt, these barracks higher up enable at the same time a better irrigation of the borders to the south of Egypt. Herewith is connected the enormous barrage of Mākwār, near Sennāf on the Blue Nile above Khartūm, which permits the irrigation of the region called al-Layṭra, between the Blue Nile and the White Nile. This work was finished in 1923 and is meant to be completed by a similar barrage on the White Nile. In this way the control of the Nile waters has passed to a certain extent out of Egypt: it recalls the days of the great floods in 1959, when the Egyptians thought that the Nubians were holding up the flood of the Nile.

The same problem came up recently with regard to the new project of constructing a dam on the frontier of the Süddan and the Belgian Congo and the question was raised whether this dam will prove a fālāq ṣaʿīla or a fālāq ʿaḍīla for Egypt (cf. the newspaper al-Balāzgh of March 17, 1934).

It has already been shown how the flood of the Nile was the occasion of popular festivals such as the opening of the canal of Tāfannīf in Nubia (cf. Evetts, Churches, p. 262). Other respects also the Nile is connected with traditional customs of a religious character, which are to be traced back through the Greek-Christian period into very ancient times. When the Arabs conquered Egypt, the sacrifice of the "Nile Bride" was still in use; every year a richly apparelled young virgin was thrown into the Nile to obtain a plentiful inundation. According to a tradition first recorded by Ibn ʿAbd al-Hakam (p. 150), this custom was abolished by Amr Ibn al-ʿĀṣ and the Nile resumed its flood after a note of the caliph ʿUmar had been thrown into it requiring the river to rise if the flood was willed by God. In later times a symbolic bathing of a girl called adīrīya (Norden, Travels in Egypt and Nubia, 1757, p. 63—65); Lane (Manners and Customs, p. 290) mentions a round pillar of earth, near the dam of the canal of Cairo, which pillar was called adīrīya. Another custom, practised formerly by Christians and Muḥammadans alike, was to bathe in the Nile on the eve of the Epiphany, in memory of the Baptism of Christ (cf. Evetts, Churches, p. 129). Al-Maṣʿūdī (Murūjī, ii. 364 sqq.) describes this festival, which he calls Ṭalal al-Ghīṣār, for the year 330 (942). Lane (p. 263 sq.) describes the same ceremony, but in his account communication between the villages being only possible by means of boats during that time of the year (al-Maṣʿūdī, Murūjī, i. 162; Ibn ʿAbd al-Hakam, p. 205). Since the reign of Muhammad al-ʿĀthār new irrigation works have been planned with the aim of making the country more productive, a possibility at which already the medieval authors hinted more than once. The first efforts, however, failed. About 1840 was begun the construction of a great barrier across the two arms of the Nile at the apex of the Delta, according to the plans of the French engineer Mouget, but this enterprise began to bear fruit only fifty years later when this barrage project, including the Tawfikīya, Manṣūria and Fuḥāṭīya canals, had been completed in 1890. The later great irrigation works were executed higher up the river, such as the great dam and locks at the head of the cataracts near Philae above Assuan, in 1902, which was raised again in 1912, and again in 1933. While allowing, on one side, a better regulation of the distribution of Nile water in Egypt, these barracks higher up enable at the same time a better irrigation of the borders to the south of Egypt. Herewith is connected the enormous barrage of Mākwār, near Sennāf on the Blue Nile above Khartūm, which permits the irrigation of the region called al-Layṭra, between the Blue Nile and the White Nile. This work was finished in 1923 and is meant to be completed by a similar barrage on the White Nile. In this way the control of the Nile waters has passed to a certain extent out of Egypt; it recalls the days of the great floods in 1959, when the Egyptians thought that the Nubians were holding up the flood of the Nile.

The quality of the Nile water is a matter of discussion in medical treatises. Avicenna (al-Kānin in al-Tibb, ed. Bulāk 1294, i. 98; cited by al-Maqrīzī) holds that the circumstance that a river flows from south to north has a bad influence on the water, especially when a south wind blows, and on this account he thinks that the abundant praise given to the Nile is exaggerated. The Egyptian physician Ibn Riwān (d. 453 = 1061) says that the Nile water reaches Egypt in a pure state, owing to the health in the country of the Süddan, but that the water is spoilt by the impurities with which it on Egyptian soil (cited by al-Maqrīzī, Mifṭāḥ al-Aʿlā, xxx. 275 sqq.). This same author describes very clearly the troubled condition of the water when the flood begins. He discusses likewise the influence of the Nile on the climate of Egypt and the medicinal properties of its water.

Other authors speak at length of the fauna of the Nile, giving especial attention to the fish. A very long list of fishes is given by al-Idrisī (p. 16 sqq.) with a description of their often curious qualities. The animals most frequently described by the geographers are, however, the crocodiles, and the animal called sakankūr, which is said to be the result of a cross between a crocodile and a fish, but which seems to be in reality a kind of lizard. The productions which are afforded for navigation are best seen from the historical sources. Sea-going vessels do not seem ever to have entered
its arms, while the traffic on the river was maintained by small craft; various names of Nile boats occur in literature; in the sixteth century the vessel called ḥabatyā is especially known. In earlier times the term saḥlatī is used for a Nile boat (al-Kindī, Kitab al-Umarā, ed. Guest, p. 157; Dusy, Supplement, s.v.). The skill of the fishermen in their saḥlatī boats on the Nile is often recorded on shallow places, however, as well as on the inundated lands, boats had to be moved by means of oars or poles. The rapids between Egypt and Nubia were, as nowadays, an insurmountable barrier to river traffic; the loads were conveyed along the shore to the other side of the falls (Ibn Hawkal, MS Sultan Ahmad Kosk, No. 3346, fol. 86).

The cataracts above Assuan for a long time continued to form a barrier to the spread of Islam towards the countries bordering the Nile to the south of Egypt, which forms a curious contrast with the part played by the Nile in the introduction of Christianity into Nubia (cf. J. Kraus, Die Anfänge des Christentums in Nubiien, Münster [ Diss. ] 1930). Islam penetrated only slowly into Nubia and became more generally disseminated in the Sudán only in the sixteth century (cf. Sudán).

Something has been said already about the praises of the Nile and its descriptions in poetical terms, by which this river has contributed to Arabic literature. Al-Maqrizi (loc. cit., p. 270 sqq.) cites some fragments of poems in praise of the Nile and its flood; among the poets which he names are Tanīm Ibn al-Mu’izz (q.v.) (d. 985) and Ibn Kalakas (d. 1172). Further Yakūt (i. 592; iv. 865) cites some poems which he attributes to Umayya b. Abi ‘l-Salt; this poet is probably Abū l-Salt Umayya b. ‘Abd al-Azīz (d. 1134) who wrote a treaty al-Risāla al-Miṣriyya, from which also al-Maqrizi makes quotations. The earliest Arabic poems on the Nile are probably those found in the Divān of Ibn Kais al-Rukayyat (q.v.), the court poet of ‘Abd al-Azīz Ibn Marwān in the beginning of the eighteth century. Several treatises have been especially devoted to the Nile. Ibn al-Zark (d. 1067) says in his Faḍl al-Miṣr (MS, arabo No. 1818 of the Bibliothèque Nationale at Paris, fol. 317) that he has written a book on the importance and the salutary qualities of the Nile, which now seems to be lost. Further there are a treatise Taḥṣīrat al-Akhrār fi Nil Miṣr wa-Alḥawātih sin an-Narb (MS. in Algers; cf. Brockelmann, G.A.L., ii. 506), and two short opuscules by Djalāl al-Dīn al-Mahallī (d. 1459) and al-Suyūṭī, which are found together in the MS. Or. 1535 of the British Museum (Rieu, Suppl., No. 1198; G.A.L., ii. 114).

As the aim of the present article is to give only an account of the Nile from the point of view of Islam and its history, it seems superfluous to quote here even the most important modern works and articles belonging to the abundant bibliography of the Nile. The earlier Muhammadan authors have all been named in the text; the later ones, such as Yakūt, ‘Abd al-Latif, Abu ‘l-Fidā‘ī, al-Kalakrahim, al-Maqrizi, al-Suyūṭī (Hamm al-Muhaddara), al-Nuwwarī and others are in most cases a compendium of earlier earlier views and statements. A very important later Muhammadan source is al-Khitīf al-Tawfīkīyya by ‘Ali Bīl Mubārak. The Muhammadan literary sources have been used in the following works: Else Reitemeyer, Beschreibung Aegyptens im Mittelalter, Leipzig 1903, p. 31–61; J. Maspero and G. Wiet, Mémoire pour servir à la Géographie de l’Egypte, in M.I.P.A.O., xxxvi. 215 sqq.; and very profusely: Omar Toussoun, Mémoire sur l’Histoire du Nil, vols. i., ii., iii., in Mémoires présentés à l’Institut d’Egypte, viii., ix., Cairo 1925. The last of these three volumes contains a series of cartographical reconstructions. A number of ancient Muhammadan maps of the Nile are to be found in the Maggæs Arabiæ, ed. Konrad Miller, Stuttgart 1926–1930, and more completely in vol. iii. of the Monumenta Cartographica Africae et Aegypti by Youssouf Kemal, as far as this work has appeared; in this same work all the geographical references to the Nile are also to be found in a chronological order.

(N. H. Knaben)

NILÜFER KHATUN, wife of Urkhan and mother of Murad I, apparently the Greek name Nευτηρια (i.e. Lotus-flower) (cf. J. v. Hammer, G.O.R., i. 59), was the daughter of the lord of Yarıcı (Anatolia, near Brussa; cf. Hadjiyi Khalifa, Lékkanum, p. 659) and according to one story was betrothed to the lord of Belokoma (Bilecik). 'Othmen, the founder of the dynasty which bears his name, is said to have kidnapped and carried her off in 699 (1299) and to have destined her to be the wife of his son Urkhan, then only 12 years old. Idris Bitlis, and following him Nesrī, tells the story of the rape but the Byzantine sources make no reference to it. Nilüfer Khatun became the mother of Murad I and also of Sulaiman Pasha. The river which flows through the plain of Brussa bears the same name as also does the bridge over it in front of the town and monastery there. The bridge and monastery are said to have been endowed by Nilüfer Khatun. Nothing more is known of her life. She was buried beside Urkhan on the citadel of Brussa. That Ibn Battuta, ii. 323 sq. really means Nilüfer Khatun by Bayallīn, (بیالینی) Khatun, which both F. Giese (cf. Z.S., ii. 1924, p. 263) and F. Taeschner (cf. Isl., xx. 135) think to be obvious, as they take بیالینی to be a corruption of نیلیفه, is however by no means proved, because Bayalīn is a name which occurs again in Ibn Battuta for a Byzantine princess (cf. ii. 393 sqq.). Besides, the mention in Ibn Battuta who paid his respects to the princess at her court in Iznik (c. 740 = 1339) is very brief. F. Taeschner suggests that Nilüfer is a corruption of Olivera, while hitherto Nilüfer (cf. Pers. nilūfar “water lily” and Greek νεφείζω and νερόβαζα with the same meaning) has been derived from the Greek. Nilüfer was and is also popularly known as Lüfter (e.g. in the early Ottoman chronicles) or Ulfur the river Ufer Čai; cf. F. Taeschner, op. cit. p. 135 sq.

Bibliography: J. v. Hammer, G.O.R., i. 59 sq.; Siğilli ‘ishā‘īnī, i. 86 (according to Nesrī); F. Taeschner, in Isl., xx. 133–137.

(Franz Babinger)

NI'MAT ALLAH b. AHMAD b. KHUṢRĀK, known as Khālij Şeff, author of a Persian-Turkish Dictionary, entitled Lūhčī: Ni'mat Allah. Born in Sofia, where as an enameller he made a reputation as an artist, he moved to Constantinople and there entered the Nikšbānḏi order. Association with the Nikšbānḏi dervishes made him more closely acquainted with literature and
especially with Persian poetry. Ni'mat Allâh decided to make accessible to others the knowledge he had acquired by an ardent study of Persian literature and thus arose his lexicographical work which he probably compiled at the instigation and with the assistance of the famous Kemsî Paşa-zade (d. 940 = 1533). He died in 969 (1561-1562) and was buried in the court of the monastery at the Adrianople gate in Stamboul. His work which survives in a considerable number of manuscripts is divided into three parts: verbs, particles and inflection, nouns. His sources were: 1. Ėkrmîn-i ʿAdım (s. Ėr., p. 291, N. 108); 2. Kâsim-i Lutf Allâh Hâlim (Ḥaddîjî Khâlîfa, iv. 505); 3. Khâlid ibn al-Ḥakam (Flugel, Arma Catalogue, i. 197); 4. Lügât-i Korî-Hâkim (Rieu, p. 515); 5. Șêhê-i ʿAdım (Ḥaddîjî Khâlîfa, vi. 91 and Leyden Catalogue, i. 100). Besides making careful use of these sources Ni'mat Allâh added much independent material, of which his dialect notes and ethnographical observations are especially valuable. This work is of considerable scientific importance and deserves greater attention than it has so far received.

Bibliography: O. Blau, Uber Ni'matullah's persisch-türkische Worterbuch, in Z. D. M. G., xxxi. (1877), S. 484; Rieu, Catalogue, p. 514; Ḥaddîjî Khâlîfa, vi. 362. Partly used by Gollus in his part of the Catalogue of the Libri glotten. The best MSS. are Don, St. Petersburg Catalogue, No. 431 (p. 426) and Flesscher, Dresden Catalogue, No. 182. (E. Berthels)

N'I'MAT ALLAH b. HABIB ALLAH HARAWI, a Persian historian. His father was for 35 years in the service of the Great Mughal Akbar (1556-1605) where he was a khâlîsa inspector. Ni'mat Allâh himself was for 11 years historian to Djiâhânîr (1605-1628), then entered the service of Kânâ-Djiâhân whom he accompanied in 1018 (1609-1610) on the campaign against the Dekkan. Soon afterwards he became acquainted with Miyân-Habêt-Kân b. Sâdîm-Kân Kâzar of Sâbûnâh who persuaded him to write a history of the reign of Kânâ-Djiâhân. Ni'mat Allâh began his work in Malkâpûr in Dhu l-Ḥijdja 1020 (Feb. 1612) and finished it on the 10th Dhu l-Ḥijdja 1021 (Feb. 2, 1613). The work is dedicated to Kânâ-Djiâhân, is entitled Târîkhi Kânâ-Djiâhânî, and begins with a history of the Afghans, beginning with their legendary descent from the Banû Isma'il and treats with special fullness of the history of Bahûl Lodi, Shîr Shâh Sûr and Nawwâb Kânâ-Djiâhân Lodi. The last chapters are devoted to the genealogy of the Afghans and the reign of Djiâhânîr. The khâlitma contains biographies of famous Afghân shâhiks. There is also an abbreviated version of the work entitled Mîhâgan-i Afghânî.

N'I'MAT ALLAH WALI, a Persian mystic. Amir Nûr al-Dîn Ni'mat Allâh, son of Mir 'Abd Allâh, and a descendant of the fifth imâm of the Shîa, Bûrîr, the founder of the Ni'mat Allâh order, is highly esteemed in Persia as a great saint and wonder-worker. He was born in Halab in 730-731 (1230-1330/1), spent his early years in the 'Irâk and went to Mecca at the age of 24 where he became a pupil and khâtîf of the famous Shâhî 'Abd Allâh Yâfî [see Yâfî]. After his teacher's death, he went to Samarkand, then visited Herût and Yazd and finally settled in Mâhân, 8 farsaks from Kirmân, where he spent the last 25 years of his life and died on 22nd Ra'jâb 834 (April 5, 1431). His tomb is still a popular place of pilgrimage (zâvâratâkh). In his lifetime he was held in great honour by all rulers and received particular marks of esteem from Shâh-Rukh. His grandsons migrated to India and were appointed to high office in the Deccan by 'Alî al-Dîn Ahmad-Shâh Bahmanî (1435-1457). Ni'mat Allâh was, 1555, prolific theorist of Sûfism, it is said to have written over 500 risâlas on different questions of Sîf doctrine. About a hundred of these have come down to us and can be identified. They are for the most part quite short treatises, generally explanations of difficult passages in the classics of Sîfism like Ibn al-'Arâbi, Fâkîr al-Dîn Târîkî etc. His large Divân of lyrics is more valuable; it contains much true poetry and is marked by a fervent sincerity.

Bibliography: H. Ethê, in G. I. Ph., ii. 299, 301; Rieu, Catalogue, p. 434, 645, 645b, 774a, 829a, 829b, 868a; E. G. Browne, History of Persian Literature, 3rd ed., Cambridge 1912, p. 465 sq.; Divân, lith. Tîhrân 1276. A biography by Šan Allâh Ni'mat-Allâh, Savânî al-A'îmâ fî Mustâhîjat al-A'îmâ malawim ki-Silatat al-Ārîfîn (Persian), lith. Bombay 1307 (1890). See also Ḥabîb al-Siyar, iii. 3, 143 (where 25th Ra'jâb is given as the date of his death) and Dawlatshâh (ed. Browne, p. 333-340), who however with his usual carelessness gives 827 as the date of his death. (E. Berthels)

N'I'MAT KHAN 'ALÌ, MIRZâ NûR AL-DîN MÜHÂSÂMAD, son of Haçim Fâth al-Dîn Shîhâzî, a Persian author, was born in India and came of a family several of whom had been distinguished physicians in their ancestral home in Shâhâzî. He entered the service of the state under Shâh-Djiâhân (1628-1659) and was appointed keeper of the crown jewels with the title of dârâghgî-î dastvîr-khâmân. He attained his highest honours under Awrangzêb (1659-1707) who gave him the title of Ni'mat Khan (1104 = 1692-1693), which was later changed to Mûkarrab Khan and then to Dânâshâh Khan. He died at Dehli on the 1st Rabî' II 1128 (May 30, 1710). Ni'mat Allâh who wrote under the taqhallîs of 'Ali, was exceedingly prolific and wrote a number of works in prose and verse of which the following are the most important: 1. Wâ'dî-l-i Haïdarâbâd: a description of the siege of Haidârâbâd by Awrangzêb in 1097 (1685-1686). This work is characterized by a biting wit and describes the siege in a satirical form which procured the little book the greatest popularity; 2. Diang-nîma, a chronicle which covers the last years of Awrangzêb's reign and the war which broke out after his death among his sons; 3. Bahâdur-zâb-nîma, a chronicle of the two first years of the reign of Shâh 'Alam Bahâdur-Shâh (1707-1712); 4. Hîzan u'zîkh, also called Kuttubdîyâ or Munawwâziyî Hîzan u'zîkh, an allegorical love story, an imitation of the celebrated Hîzan u-Dil of Fâtihî [q.v.]; 5. Râbât al-Kulâb, satirical sketches of a number of contemporaries; 6. Râshâ-yî Hâfiz-i 'Ukamãî
anecdotes of physicians and their incoherence; 7. Khánn-i Nímat, a work on cookery; 8. Ruḥášt, letters to Mirzá Muḥárrak Alláh Irádat Khánn Wádí, Mirzá Muḥammad Sa’dí, the head of the imperial kitchen and others, which were very highly thought of as models of a choice style of letter-writing; 9. a lyrical Dáwát 10. a short Mathnwc without a title, which deals with the usual Sáhi ethical themes. This survey shows a great versatility on the part of Nímat Khánn but it must be pointed out that, with the exception of the satirical works which are really original and of great value for the characterisation of his age, none of them rise above the level of degenerate imitations of classical models.

Nírúd, a ruined site in the ancient Assyria, the northern portion of the modern Irák, about twenty miles south of Músíl, in 36° 5’ North Lat. and 43° 20’ East Long. (Greenwich) in the angle formed by the Tigris and its tributary, the Upper or Great Záb, six miles above the mouth of the latter. The plateau of Nírúd rises abruptly from the surrounding country, and the great advantages of this situation caused a settlement to be made here already in remote antiquity. Excavations on the site have established the fact that the ruins there were those of the town of Kalákh (Kalikhu). This is also mentioned as Kalákh (Calah) in the Old Testament in a passage which is not absolutely unambiguous (Gen. x. 11—12), which says it was built either by Nírúd or Āshur; the latter appears to me more intelligible. In Greek writers we find only the name of the district Kalákyi or Kalákw (cf. Pauly-Wissowa, Realmsch. der klas. Altertumswiss., x. 1530). It was no doubt its favourable strategical position that decided the Assyrian King Salmanassar I (c. 1280—1261) to raise it to be his royal residence alongside of the previous capital Āshur (now Kalíkh Šerkt); q.v.

We learn nothing from the cuneiform inscriptions about the decline of Kalákh. Kalákh probably fell about the same time as Nineveh after a stubborn resistance to the onslaught of the Median-Babylonian army. When Xenophon in 401 B.C. passed by the town, which he describes clearly, it was already a ruin.

So far as I know Kalákh is not mentioned in Syrian literature and in the Arab writers of the middle ages only incidentally and under wrong names. In Yákút (ed. Wustenfeld, i. 110, 16: iii. 115) we are told that al-Salámiyá is in the vicinity of the ruins of the town of Āshur, which can only mean the ruins of Kalákh (cf. also ii., p. 184). At the present day the site is known only as Nírúd, which so far as I know first appears in Niebuhr, who stayed in Músíl in 1766, see his Reisebesch. nach Arabien und anderen untelligen Ländern, ii. (Copenhagen 1778), p. 355, 368. When this, now the usual, name arose is unknown; I consider it to be of modern origin. It should be noted that names like Nírúd, Toll Nírúd, etc. are not found in the geographical nomenclature of Mesopotamia and the Irák in the middle ages, while they are several times met with at the present day.

The first European to give a brief account of the ‘ruined castle’ of Nírúd and the remains there was Niebuhr, although not from his own inspection. In 1821 Cl. Rich visited the site and gives the first detailed account of the ruins; in his posthumous work are the first pictures of cuneiform tablets discovered there. A few years before Layard, William Ainsworth examined the site. In 1843 Fletcher visited it. Layard, the real investigator of Nírúd, twice examined the mounds of ruins in 1840 but it was not till 1845 that he was able to begin excavations, which were conducted in two great expeditions (1845—1847 and 1849—1851). Layard’s reports were supplemented in many details by the notes, to which no little attention has so far been paid, by Sandrock (see Bibl.) who spent a considerable time in Músíl and its neighbourhood in 1850. After Layard’s departure home, H. Rassam continued his work in Nírúd. In 1873 G. Smith resumed Layard’s work but only for a month. Finally Rassam on behalf of the British Museum again conducted the earlier excavations for a period of five years (1878—1882).

Our study of the topography of Nírúd must still be based on the large map of the vicinity of Nineveh and the whole area between the Tigris and Upper Záb made by F. Jones in 1852, which the Royal Asiatic Society published in three sheets under the title Vestiges of Assyria (sheets 2 and 3 deal with Nírúd). The commentary on these maps is the article by Jones, in J.R.A.S., vol. xvi. (1876), 107—169. The fairly comprehensive complex of ruins at Nírúd forms in the main a rectangular plateau, out of which a triangular mass juts in the southeast giving the whole the appearance of an irregular hexagon. The longest side, which runs east and west, measures 7,000 feet and the northeast side 5,000 feet (in the southeast including the salient triangle 6,600 feet). The circumference of the whole area is six miles. Layard’s investigations revealed that this extensive area marking the site of the town of Kalíkh was surrounded by a wall with towers. In the north he found fifty-eight, in the east fifty of these towers; in the south this wall of earth has now almost entirely disappeared (cf. Layard, Discoveries etc., p. 656). The length of the wall was seven miles, that is to say it was longer than the boundary of the whole ruined area because two arms were necessary to include the suburbs in the southeast.

The royal quarter in the southwest corner with the palaces and chief temples occupied a relatively small part of the area described. It lay on a terrace and was shut off from the rest of the town by a wall. To it also belonged the high cone-shaped mound in the northwest which is the dominating
feature of the landscape at Nimrud. Its diameter is 350 feet in breadth and 600 in length and it still stands 130 feet above the level of the Tigris but must as a storied temple tower (zikkurat), have been originally about 160 feet high. The royal city is oblong in shape and has a circumference of over 2,000 yards; its west side measures 2,000—2,050 feet and its north side about 1,200 feet.

In the northwestern part of the royal city stood the temple of Ninurta (formerly read Ninh), the chief centre of worship of this deity in Assyria. It had a storied tower, the builder of which, according to an inscription, was Salmanassar III, Xerophon's "magus Kāšānī, now represented by the conical mound (cf. Streck, op. cit., p. cxix., note 2 sq.; Lehmann-Haupt, Materialien, e. 20 sq. and 60, Armentia, 111, 253 sq.). Farther south on the same side was the so-called northwest (better: west) palace of Assurnasirpal II which Sargon II replaced by a new building. The sculptures with which its founder adorned it came for the most part to the British Museum (cf. Redaction der Assyriologis, i. 218). In the centre of the royal city but more to the south, Salamanasar III built the so-called central palace which at a later date was completely restored by Tiglatpileser III. The famous black obelisk came from it. This palace is less well preserved as Assurabadon partly destroyed it when he took out Tiglatpileser III's reliefs to transport them to the new palace which he built in the southwest of the royal city. This southwest palace however remains unfinished as after a fire the building was not resumed; cf. Meissner and Rost, in Beitr. zur Assyriol., iii. 191 sq.; Redakt. der Assyriol., ii. 202 and see also E. Unger, Die Reliefs Tiglatpilezers III aus Nimrud, Constantinople 1917.

In the south-east part of the royal quarter Assur-til-lānī built a palace and at the same time restored a temple of Nābū there which Adad-nirāri III had built and called after the chief sanctuary of this deity, E-zīda in Borsippa (= Birs; q.v.). Here Rassam discovered a series of statues of Nābū dating from the time of Adad-nirāri III which because they were found in situ were of topographical importance (cf. Streck, op. cit., i., p. cc—cclii. and ii. 272).

The eastern and north-eastern sides of the royal city have so far only been cursorily examined; probably they also conceal royal buildings.

Outside of the city walls, in the already mentioned triangle at the south-east corner, there are smaller mounds. Layard (Discoveries, p. 656) thought that the largest of these tells was perhaps once a fort or castle; he gives it the name of Tell Aṭṭār (op. cit., p. 165) on the authority of the local Arabs. Now it is true that — as already mentioned — in the Arab middle ages, the mounds of ruins near al-Salamiyya, i. e. the modern Nimrūd, were erroneously thought to be ruins of the town of Aṭṭār. Educated Moslems still held this view in the time of Rich (cf. Rich, op. cit., ii. 131). I think nevertheless that Layard's name Tell Aṭṭār for the mound or four mounds in question is due to a misunderstanding. In Vestiges of Assyria, sheet ii., Jones gives the name Tall Yaṣār for it, J. Oppert (op. cit., i. 309) Tulūl Yaṣār, Sachau (op. cit., p. 106) writes Tell Aṣār, which is probably the name of a tribe (Yaṣār, J. A., 1879, xiii. 224, 226).

The Tigris now runs about one and a half miles from Nimrud but in Assyrian times it flowed directly past the walls of the town as distinct traces still prove (cf. thereon Jones in J. R. A. S., xv. 342—343 = Selections etc., p. 446 sq.; Lehmann-Haupt, Materialien, p. 27 and his Armentia, 111, 250 sq.). In the centre, between the still distinct ancient bed of the Tigris and the modern one, is a third bed which the river filled in the middle ages; this latter now bears the name of Sīrat Alīb Debān (see Jones, Vestiges and J. R. A. S., xv. 343 = Selections, p. 447) = "The road of Alīb Debān", apparently after a Beduin tribe (the explanation given by Jones is hardly tenable).

A quarter of an hour west of the ruined site of Nimrud (called frequently al-Kaṣr = the citadel) is an older settlement, the fair-sized village of (old) Nimrūd also called Darāwīsh. Still farther west, near the Tigris is a village also called (New) Nimrūd of more recent origin and a mile N.W. of it directly on the river the village of Nāife. Again a mile N.W. are the remains of a dam first described by J. Macdonald Kinneir from personal observations (see his Journey through Asia Minor, Armenia and Koordistan, London 1818, p. 465). The natives call it Sāk or Sārū Nimrūd (see Kinneir, loc. cit.; Layard, Nineveh, i. 8) = Nimrud's Dam. Jones gives (J. R. A. S., xv. 343 = Selections, p. 447 and Vestiges of Assyria, sheet ii.) Sākhir Nimrūd (= Nimrūd's Cliff); I suspect that he picked up the name wrongly (ṣākhr for sāk "dam"). At the same time we also have the name Sīk al-Awāzī (Rich, op. cit., i. 129) or simply al-Awāzī, Āwā (Layard, op. cit., i. 8, 365; Jones, loc. cit.) = "dam of noise" or "the noise" (awāzī or awāh from Persian awāštān; see Vullers, Lex. Pers., i. 56) and this second name owes its origin to the great noise caused by the waters breaking over the rocks here. The people of the vicinity say that there was once a bridge here. Probably a barrier of rock in the river was already used in ancient times as the foundation for a dam for irrigation purposes.

Still farther northwards about three miles from the ruins of Nimrud lies Selāmīye on the Tigris, now a small village but in the middle ages as Yākūt, iii. 113 (al-Salamiyya; cf. also i. 119, 46) tells us, one of the most beautiful places in the region of Mōsul. The modern Selāmīye lies in the southeast corner of an area covered with old ruins.

This Selāmīye may with great probability be identified with the Biblical Resen, numbered among the four Assyrian towns founded by Ashšūr (or Nimrūd; cf. above) according to Gen. xi. 11—12, and there located as lying between Nineveh and Calah (Calah). The assertion constantly made in learned works because of the words describing them "the same is a great city" and in view of passages in Jonah (1, 2. 3—4; 4, 11) that these formed a gigantic tetrapolis linked together hardly deserves serious refutation.

The greater part of the finds at the English excavations at Nimrūd are in the British Museum where they are exhibited in the Assyrian transept, the Nimrud Gallery and in the Nimrud Central Saloon (cf. the B. M. Guide etc. [see Bibi], p. 41 sq.). Nimrūd provided the British Museum with even greater treasures in sculptures (not inscriptions) than Koyunjik—Nineveh. Various objects from Layard’s collection were left in Bombay on the way home and are now, with some pieces brought
by Rawlinson, in the possession of the Bombay Branch of the Royal Asiatic Society; on them see Karkoria in the *Journal B. R. A. S.*, xviii. (Bombay 1891), p. 97–107. A large series of sculptures came to the Louvre; cf. E. Pottier, *Catalogue des Antiquités Assyriennes* (Louvre), Paris 1924, p. 23, 49–63. There are also miscellaneous antiquities from Nimrud in the national collections in Stambul, Berlin, Zürich and Leningrad (Hermitage); on a few finds by Lehmann-Haupt, see his *Materialien*, p. 22 sq.

The English excavators left the site without filling in or even roughly levelling the ground they had cut up. In the spring of 1920 the 'Iraq government however had the half exposed sculptures lifted and put in the new Museum in Baghda'd. During my stay in Nimrud (May 1928), I saw the sculptures lying on the bank of the Tigris ready to be moved (2 statues of Nabû, a colossal bull, fragments of another, an unfinished lion in stone, two great slabs with inscriptions of Assur-nasirpal II.).

**NIMRUD** [See SîTAN.]

**NIRIZ**, a place in A'dharbâjdâjan on the road from Marâgha [q. v.] to Urmia [q. v.] south of the Lake of Urmia. The stages on this route are still obscure. At about 15 farsakh south of Marâgha was the station of Barza where the road bifurcated; the main road continued southward to Dinawar while the northwest went from Barza to Toilis (2 farsakhs), thence to Djâbârwan (6 farsakhs), thence to Niriz (4 farsakhs), thence to Urmia (14 farsakhs); cf. Ibî Khûrâddâbhî, p. 121 (repeated by Khudâm with some variations); MuÊkâddasî, p. 383.

The distance from Urmia indicates that Niriz was in the vicinity of Sudûz [q. v.] which would confirm the etymology from nir-z "flowing". Sudûz lies in the low plain, through which the Gâdir flows to the Lake of Urmia. At the present day the name Niriz is unknown, but a Kurd tribe of the region of Sa'dûj-bulâk [q. v.] bears the name of Nirizh.

After the Arab conquest a family of Tâ'i Arabs settled in Niriz. The first of these semi-independent chiefs was Marr b. 'Ali Mawjûl who built a town at Niriz and enlarged the market of Džâbârwan (cf. Râlàhûrî and Ya'kûbî, ii. 446). One of his sons, 'Ali, was among the rebels of 212 (827) whom the governor of A'dharbâjdzân Muhammad b. Hamîd Tâsi deported to Baghda'd, but 'Ali succeeded, it seems, in returning to his lands) cf. Ibî Khûrâddâbhî, p. 119. Abu Rûdânine 'Omar b. 'Ali, appointed in 260 (873) governor of A'dharbâjdzân by the caliph, made war on his predecessor 'Ali b. Ahmad Aqlî and killed him (Tabâri, iii. 1886). He was supported by the Khândîjîs. Cf. the account in *Pâdghârîn-i gummân*, Tehran 1929, ii. 27, 34–35.

In the 4th century Iṣâqî, p. 186 and Ibn Hâwkal, p. 240 mention the Banû Rudânine as a dynasty already forgotten which had reigned over Dakhûrân (read Džâbârwan), Ta'bîr (read Niriz) and Ugrînân al-A'dhîâyê [cf. OMNE].

(V. MINORSKY)

**AL-NISÂ',** the "Women", the title of Sûra iv. of the Kûrân; so-called because in the opening verses the position of women is dealt with. Xoldeke (*Geschichte des Qur'ân*, i. 193) thinks that the greater part belongs to the period between the end of the year 3 and the year 5 A. H. This sûra contains many verses that were abrogated: among these principal we may mention 8–9 abrogated by 12; 10 abrogated by ii. 178; 20 abrogated by xxiv. 2; 33 abrogated by xxiv. 60 etc. . . .

It is also one of the most important sûras of the Kûrân because many of the precepts formulated in it form the foundations for the Muhammadan laws of marriage.
The story lacks unity, consisting as it does of a collection of verses of different origin and on different subjects. The following is a brief analysis of its contents: the creation of man; consanguinity; the care of orphans; rules for succession; marriage; relations of husband and wife; impediments to marriage; almsgiving; evidence; accidental homicide; holy war and the art of war; obedience to Allah and to the Prophets; punishment of the unbelieving Jews and Christians.

*Biography:* Cf. the att. al-Nahf and add: Tawfiq Jawhari, Tawfiq, Cairo, 25 vol.; Ahmad Rida, Tawfiq al-Munir, Cairo, 9 vols. so far appeared. (MAURICE CHEMOUL)

**NIS."** See ZAKAN.

**NISAN, the seventh month in the Syrian calendar.** Its name is taken from the first month of the Jewish religious (seventh of the civil) year with the period of which it roughly coincides. It corresponds to April of the Roman year and has its 30 days. On the 10th and 23rd Nisàn, according to al-Bïrûnî, the first two stars of the moon rise in the direction of the city of the two as first and second shows that the numbering was established by scholars for whom Nisàn was the first month) and the 15th and 16th set. In 1300 of the Seleucid era (856 A.D.), according to al-Bïrûnî, the stars of the 28th and 1st stations of the moon rose and those of the 17th and 25th set while the rising and setting of the 2nd and 16th stations of the moon took place in Ayyar.

*Biography:* al-Bïrûnî, Aflarî, ed. Sachau, p. 60, 70, 347-349; cf. also the references under TAMMUE.

(M. PLESSNER)

**NISH** (Serbian Niš), the second largest town in Serbia, now the capital of the banate of Morava in the kingdom of Jugoslavia, situated 650 feet above sea-level in a fertile plain surrounded by hills, on both sides of the Nišava not far from its junction with the Morava and an important centre of communications by rail and road, on the interantional route to Sofia-Istanbul or Salonika-Athens. The larger part of the town with the railway station lies on the left bank, the fortress is on the right. The two parts of the town are connected by four iron bridges (including a railway bridge), cover an area of 11.5 sq. m. and had in 1931 35,384 inhabitants of whom only 3.7% are Muslims. According to the latest (Dec. 1933) statistics of the Imam-registrar, Nish has 1,982 Muslims in 365 households, chiefly gipsies, while Muslims speaking Serbo-Croatian, Turkish and Albanian form the remainder. These gipsies call themselves Muslims, bear Muslim names, marry with Muslim rites but nevertheless observe at home some of the Serbian Orthodox Church feasts, visit the churches etc. There are a number of offices of the civil and military authorities in the town, including a district shari'a court. This court has existed only since Oct. 29, 1929, i.e. since the abolition of the old office of district mufti whose authority till then extended over the whole of Serbia. The authority of the new court extends over a part of that of the older (19 districts) while the remainder are under the kâdi of Belgrade. The Muslims of Nish have also a district wakf muftâf council (cf. i., p. 760), a common council (etnanički medži) and a registration office (imâna). There are said to have been 19 mosques in Nish in the last Turkish period (1878), only one of which now survives. The second last mosque of which the great minaret is still standing, was destroyed as a result of the great floods of 1896. Nish has also Serbian Orthodox churches and a Roman Catholic church and a synagogue. Besides several colleges, it has a Hygienic Institute, two hospitals and a society for popular education. The town is making steady progress. Its whole show that Nish has always been an important strategical and commercial centre.

In antiquity Nish (Nassas, Niz, Nissa etc.) belonged at first to the Roman province Moesia Superior and later became the capital of Dardania.

Nish's greatest claim to fame is that it was the birthplace of Constantine the Great (306-337) and attained great prosperity in ancient times. The Romans had state munition works here.

In the time of the migrations of the Huns, Nish was taken after a vigorous resistance by Attilla (434-453) and destroyed but rebuilt and refortified very soon afterwards by Justinian I (527-565). By the middle of the sixth century the first forces of the Slavs who had entered the Balkan peninsula in their endeavours to conquer the peninsula of the Byzantine empire appeared before Nish. Nish was thus in the ninth century usually in the hands of the Bulgars and until 1018 it belonged to a Slav state founded in Macedonia in 976 by the emperor Samuel. The Byzantines held it from 1018 to the end of the eleventh century, when we find it described as large and prosperous; Idristi who calls it "Nisa" (also on his map of 1154, ed. K. Miller) lays special emphasis on the quantity and cheapness of food and the importance of its trade. But even then it did not enjoy peace. In 1072 the Hungarians reached the town on a marauding campaign, and in 1147 the inhabitants had to defend themselves in a strenuous battle "at the Bridge" against the Crusaders in which the latter suffered very heavily, and in 1182 the town was taken by Bela III supported by Nemanja, the Serbian prince. A little later Nemanja took Nish and the whole country as far as Serdica (Sofia). The town suffered considerably in these troubled times. The Third Crusade (1189) found it almost empty and practically destroyed. In spite of this, Nemanja was able to receive the emperor Barbarossa in Nish with great ceremony. From this time on to the Turkish conquest Nish was generally in Serbian hands.

In the earlier Turkish chronicles (e.g. Shukrullah, Urudj b. Zaid, Ali Cevkipahzadie, Nizam [Noldeke], Anonymous Giese) there is no mention of the taking of Nish: Sa'd al-Din (i. 92-93), Hajići Kjulafta and Ewlyia Celebi, then von Hammer (G.O.K., i. 157) and Lane-Poole (Turkey, p. 49) on the other hand, assume that it took place in the reign of Murad I in 777 (1375-1376). The Serbian chronicles however definitely give 1356 and this year, which Gibbons has recently strongly urged as the correct date (The Foundations of the Ottoman Empire, Oxford 1916, p. 161-162), is now generally accepted.

During the Turkish period (1356-1578) Nish had chequered fortunes. In 1443 it was taken by the Christian army under king Vladislav III and John Hunyadi and destroyed. After the fall of Smederevo in 1459 the Serbian despotate became a Turkish province and Nish was even more secure in Turkish hands. For several days after June 29, 1521 a great fire raged in Nish which would have destroyed it completely if the Beglerbeg Ahmad Pasha, who was leading an army against Hungary
at the time, had not come at the last moment to its assistance [F. Tauer, Histoire de la campagne du Sultan Suleyman 3rre contre Belgrade en 1521, Prague 1924, p. 26 (Persian text), p. 31 (transl.)]. Western travellers who visited Nish in this period (Dernschwam, Contarini etc.) were not particularly attracted by it.

Turkish writers give us an idea of the appearance of Nish in the xvii century. Hâdîddî Khalîfâ (c. 1648) describes it i.e., as a great town and kâdînîn in the sandjak of Sofia. The description which Ewliya Celebi (c. 1666) gives is much fuller: it is a fortified town in the plain with 2,060 houses, 200 shops, three mosques (i. Gâzi Khâdîwendi-giâr; 2. Mašli Efendi; 3. Husain Kethkadî), 22 schools for children, several maṣjîdîs, darîwshî monasteries, fountains, baths, many vineyards and gardens etc.

On Sept. 23, 1659 Nish was taken by the Austrians under Ludwig of Baden but abandoned the very next year to the Turks (1690). In 1737 Nish was again taken by the Austrians under Seckendorf but lost to the Turks again after two months occupation. It is to this period that the city owes its fortifications.

When in 1804 the Serbs under Karadörde (Ildji) rebelled against the Turks they soon won a number of successes and in 1809 were able to build redoubts against Nish, in which, Stevan Sindelić, one of Karadörde's voivodes, on May 31 blew himself and the attacking Turks. Nish was nevertheless not relieved and the Turks built the so-called Cele-ului ("tower of skulls") with the heads of the Serbs killed there, of which A. de Lamartine gave a moving description on his way home in 1833 (Lettres de l'Orient, Paris 1859, p. 255—256). It was not till Jan. 11, 1878 that Nish, with the capital of a Turkish ilâç, finally passed from the Turks. This induced many Muslims to migrate to Turkey.

Lying on the military road between Constantinople and Vienna and therefore exposed to every campaign Nish was by no means favourably situated to become a centre for the development of even a modest intellectual life. It appears, at least according to Gibb, that Nish has produced no Turkish poets or authors, except perhaps Sumbaldeâ Webdi (end of the xviii century) who celebrated in song his meeting with the young Sarch in the Turkish camp at Nish (H.O.P., iv. 255). In Nish however, two Turks worked for a time who later were to become celebrated: 1. Ahmed Lutfi (1815—1907), afterwards imperial historiographer served in Vidin and Nish from April 1845 (G.O.W., p. 384); 2. the famous statesman and author of the Turkish constitution of 1876, Midhat Pasha [q. v.], was appointed governor of Nish and Prizen in 1861. In this capacity he saw to the building of a Serbian school (1864) in Nish.

Nish played an important part in the World War: first as the seat of the Serbian government and the Skupština (till Oct. 26, 1915) and then as the scene of a battle between the Germans who were then on the sandjak here and the Serbs in pursuit of them which ended in the capture of the town by the latter (Oct. 12, 1918).

(FERHIM BAJRAKTEVIC)

NISANDJI, secretary of state for the Sultan's tughras, chancellor.

The Sâlûjûks and Mamlûks already had special officials for drawing the tughras, the sultan's signature. As their official organisation was inherited in almost all its details by the Ottomans this post naturally was included. Its holder was called Nisandji or ievâli. The nisandjî held the same rank as the defterdârs [q. v.], and indeed even preceded them, for we find defterdârs promoted to nisandjîs but never a nisandji before a defterdâr. The nisandjîs were individual among the "pillars of the empire" (evâni deâlev). The part which he played varied in course of time. Besides being secretary of state for the imperial tughra (nîþân) he had originally considerable legislative powers and he was called mufîsî ësûnî (to distinguish him from the mufisî proper, i.e. the Şâhiş al-lîsmâ). In his office the texts of the laws were prepared under his supervision. Most of the Ottoman codes of law (ësûnîn) that have come down to us go back to nisandjîs. As they had besides the right to approve the contents of documents put before them for the imperial tughra, they had no slight influence on the business of administration. Of their official career we know that according to the Kânûn-nâmâ of Muhammed II they had to be chosen from teachers acquainted with law (muître), apparently because they had to display legislative ability, or from the defterdârs and rûçasû-êkûtêdâb. As their authority diminished more and more in course of time, so did their influence, and finally they were limited to preparing the tughra. According to Mouradjea d'Ossel (Tableau de l'Empire Ottoman, iii. 373), the nisandjîs received from the state a salary of 6,620 piastres. On their official dress, see v. Hammer, G.O.K., iv. 431, according to whom they wore red in contrast to the other锹 evâni deâlev锹 who wore violet.

(FRAZ BABINGER)
NISHĀNDĪ — NISHĀPUR

The founder of the Sa'dārid dynasty, Ya‘qūb b. al-Laith b. Mu‘addal, entered Nishāpur on the 2nd Shawwāl 259 (Aug. 1, 873) and took Mu‘ammad b. Tahir prisoner (Tabari, iii. 1881; Gardizi in Barthold, Turkestân down to the Mongol Invasion, p. 217, note 6) but the latter soon regained his liberty and land. Only after Ya‘qūb’s death was his brother ‘Amr b. al-Laith granted the fiefs of Khurāsān and other districts. Rāzī b. Harījāna in 882 took Nishāpur from him (Tabari, iii. 2039) and ‘Abd al-Malik b. Tahir in 902 again lost it to the new governor of Khurāsān in 885 again; but in 279 (892) ‘Amr was finally confirmed in office as governor and erected many buildings there. He finally fell in battle (899–901) with Ismā‘īl b. Ahmad. The town thus passed to the Sāmānids, under whom it retained its greatest prosperity. It was the residence of the governor and commander-in-chief of the province of Khurāsān (sipāh-sālār).

The Arabic geographers describe Nishāpur at this time as a thickly populated town divided into 42 wards, 1 farsakh in length and breadth (al-Iṣkāshīrī, B. G. A., i. 254) and consisting of the citadel, the city proper and an unincorporated village. The chief town in the province was Khurāsān (al-Iṣkāshīrī, 4th ed.); it was the public market called al-Mu‘askar, the governor’s palace, a second open space called Maidān al-Ḥusainīyin and the prison. The citadel had two gates and the city four: the Gate of the Bridge, the Gate on the road from Ma‘ṣīl, the Gate of the Fortress (Bāb al-Khānāzīd) and the Gate of the Taktin Bridge. The suburbs also had walls with many gates. The best known market places were al-Murabba‘at-al-Kabira (near the Friday Mosque) and al-Murabba‘at-al-Saghir. The most important business streets were about fifty in number and ran across the city in straight lines intersecting at right angles; all kinds of wares were on sale in them (on the products and exports of Nishāpur see G. Le Strange, The Lands of the Eastern Caliphs, p. 420 sq.). Numerous canals were led from the Wādī Saghātar, which flowed down from the village of Būstāntik and drove 70 mills, from whence it passed near the city and provided the houses with an ample water supply. Gardens below the city were also watered in this way. The district of Nishāpur was regarded as the most fertile in Khurāsān.

The town suffered many vicissitudes after this period. A great famine broke out there in 401 (1011). At the beginning of the 12th century Nishāpur was the centre of the pietist Karrāmīs led by the anchorite Abū Bakr Muhammad b. Isḥāq. The Sādīqū Tughrul-Beg occupied the town in 1037 and made it his capital. Alp Arslān also seems to have lived there (cf. Barheinæus, Ch. on. Syr. ch. 4, ed. Bedjan, p. 243). In May 1142 the Khwārizmīshāh Atσīz took the town for a time from the Sādīqū sultan Sanjār. When it was sacked by the Ghurids in 548 (1153), the inhabitants fled, mainly to the suburb of Shādīyāk (al-Shādīyāk) which was enlarged and fortified by the governor al-Mu‘ayyid. Tughrul-Shah Abū Bakr ruled the city 1174–1185 and his son Sandjar Shahl 1185–1197.

In May or June 1187 the Khwārizmīshāh Takhīr took Nishāpur and gave it to his eldest son Malik-Shāh. At the end of 1193 the latter received Marw and his brother Kūth al-Dīn Muhammad became governor of Nishāpur. Malik Shah died in 1197 in the neighbourhood of Nishāpur. ‘Alī al-Dīn Muhammad (as Kūth al-Dīn called himself after

NISHĀNDĪ. [See Ɗähltəlaxe Mustafə Cëlsëh: Karamanı Memed Pașa.] NISHĀPUR, the most important of the four great cities of Khurāsān (Nišāpur, Marv, Herat and Balḵ), one of the great towns of Iran in the middle ages.

The name goes back to the Persian New-Shāhpūr ("Fair Shāhpūr"); in Armenian it is called Niušhapūr, Arab. Naṣībūr or Niṣābūr, new Pers. Nishapur, pronounced in the time of Ya‘qūt: Nišāpur, now Nišāpur (Noldeke, Tod. p. 59, note 3; G. Hoffmann, Anciente... p. 81, note 510). The town occasionally bore the official title of honour, Irānshāh.

Nishāpur was founded by Shāhpūr I, son of Ardaxšīr I (Hama sa-Isfahānī, ed. Gottwaldt, p. 48), who had slain in this region the Turanian Pahlīcak (Pālīčak) (Staatsliche von Erān, p. 13); some authors say it was not founded till the time of Shāhpūr II (Tabari, i. 840; al-Tha‘alībī, ed. Zoteberg, p. 529).

In the year 968 the sense of Nishāpur comprised the districts of al-Tabaṣsūn, Khūstān, Nisīs, Beward, Abarshāh, Djam, Kāshās, Tūs, Zōzān and Marv (Ya‘qūbī, ed. de Goeje, p. 278; cf. Tabari, i. 288). In the narrower sense Nishāpur was the province of the governor of Khurāsān (Armen. Apur aškher, the "district of the Apurāvis"); Marquart, Erānshāh, p. 74; vo. Catalogue of the Prov. Capitals of Erānshāh, p. 52), which was in turn divided into 3 Rustāks and 4 Tassāds (names in Iṣkāshīrī, p. 258; Ibn Hawkal, p. 313; Ibn Khurṣidābīh, p. 24; Ya‘qūbī, p. 278; Ibn Rusta, p. 171). The latter were: in the west Rīwand (now Rīwand), in the south al-Shamāt, Pers. Tak-Ab, in the east Pūšhtīr (now Pūshīr Farah) and in the north Māsīl (now Māsīl); cf. al-Maḥdīs, p. 14–321.

In the Rīwand hills to the northwest of the town was one of the three most sacred fire-temples of the Sāmānids, that of the fire Burzūn-Mīhr (G. Hoffmann, op. cit., p. 290). Yazdārdīr II (438–57) made Nishāpur his usual residence.

In the year 30 (651) or 31 (652) the governor of Baṣra, ‘Abd Allāh b. Amīr [q.v.], took Nishāpur (Tabari, i. 3305; Bālaghūrī, p. 404) whose governor Kaṇārān (Xawāryyavī: Marquart, Erānshāh, p. 75) capitulated. The town was then insignificant and had no garrison. During the fighting between ‘Ali and Mu‘āwiya (36–37 = 666–667) the Arabs were again driven out of Nishāpur by a rising in Khurāsān and Tukhtāshān (Tabari, i. 349, 3502; Bālaghūrī, p. 408; Dinawarī, p. 163); Pērūz III, the son of Yazdārdīr and of the daughter of Kaṇārān of Nishāpur, is said to have lived for a period in Nishāpur. Khulādī Bay Kā’s was sent in 37 by ‘Ali against the rebellious town (Dinawarī, op. cit.). Mu‘āwiya reappointed ‘Abd Allāh b. Amīr governor of Baṣra in 41 (661–662) and commissioned him to conquer Khurāsān and Sīdijān. The latter in 42 (662–663) installed Kās b. al-Haitham al-Sulamī in Nishāpur as governor of Khurāsān. Ziyād b. Abī Sufyān in 45 (665–666) made Khulādī Bay Kā’s Allāh b. Al-Hanafī governor of Abarshāh (Nishāpur). ‘Abd Allāh b. Khāzin rebelled in 683 against the Umayyads. He fell in 692 at Marv fighting against ‘Abd al-Malik, whereupon Umayyad rule was restored in Khurāsān.

The prosperity of the city dates from the time when Abū 1-l-Abbās ‘Abd Allāh b. Tahir made it his capital in the third (`nineth) century.
his father's death) took Marw and Nishapur in 1202 from Ghayath al-Din and his brother Shihab
al-Din.

In addition to the wars and rebellions (e.g. 1207–1208) which afflicted the town, it suffered from
repeated earthquakes (540 = 1145, 605 = 1208, 679 = 1280). Yakut who visited it in 613
(1216) but stayed in Shadyak, still could see the damage done by the first earthquake and by the
Ghuzz but nevertheless thought the town the finest in Khurasan. The second earthquake was
particularly severe; the inhabitants on this occasion fled for several days into the plain below the
city. In 618 (1221) the Mongols under Cughiz-Khan sailed up the river. The city of Hamadan,
Allah Mustawfi (c. 1340) and of Ibn Battuta (c. 1350) it had to some extent recovered. After each
earthquake the inhabitants had rebuilt the town on a new site but it never regained its former
importance.

According to the Georgian chronicle (transl. by Broset, Hist. de la Gorie, i. 472), the Georgian
queen Tamar is said to have taken the city of Romgur between 1210 and 1212; Broset identified
this with the Mahalla Ramdaj mentioned by Yakut in the district of Nishapur (more probably a suburb
of it). Here the patriarchs of Antioch, whose jurisdic- tion extended to the upper Khorasan, compiled
in 854 (ed. Schone in his edition of Eusebius i., pp. 82 sq.) already at this time extended to Khurasan
(μέχρι της επιστείας έρημου του Χαραστ), created about 1053 the cathedral of
"Pamuhazes or Pamohazes into Persia which, in
name at least, still existed in 1365 (Brief des
antiochenischen Patriarchen Petros III. an Domi-
nico von Greuze and Aquila, ed. by Cornelius Will,
Acta et scripta quae de controversiis ecclesiis Greec.
et Lat. saculis XI composita extant, Leipzig and Mar-
bur 1861, p. 212; Notitia Antiochana, ed. Geizer,
in B. Z., i. 247; ii. Niels Donatpros, ed. Parthey in
Hierocles Symeonus et Notitiae graecae episcop.
atuum, Berlin 1866, p. 273; Acta patriarchatus
Constantinopolitan, i. 207, 464–465; Pref., p. x.).

The modern Nishapur is in 36° 12' N. Lat. and
58° 40' East Long. (Greenwich) on the east side
of a plain surrounded by hills. To the north and
east of the town lies the ridge of Binallah-Kuh,
which separates it from the valley of Meshhed
and Tus. At its foot spring a number of streams,
among them the Shurah Rood and the river of
Dizbeh (Hamid Allah al-Mustawfi) which irrigate
the lands of Nishapur and disappear in the salt
desert to the west. North of the town in the
mountains was the little lake of Cashmab Saba-
out, according to al-Mustawfi, two streams, one
to the east and the other to the west.

Northwest of Nishapur were the famous turquoise
mines (Ma'din: the district is still called Bari-
Ma'den). In the S. E. of the town is shown the
tomb of her celebrated sons 'Omar Khayyam and
Farid al-Din 'Attar.

A history of the 'ilmad of Nishapur was comp-
leted in 8 volumes by Haskan Abi 'Abd Allah
al-Baiji al-Nisaburi (d. 405 = 1014); it was used
by Yakut and Haji Husain al-Khulfa (ed. Fuguel, ii. 155
sq.) and continued by 'Abd al-Qahhar b. Isma'il al-
Farisi down to the year 518. Al-Dhahabi produced
an abbreviated version of the Baiji's work.

NISIB (نورم و نزيب and Nisib in the modern
Turkish orthography Nizip), an administrative
district in the Turkish vilayet of Ghazi 'Attab (now officially Gaziantep) which borders
on Syria in the south. The little town lies not far from the right bank of the Euphrates, N. E.
of Halab (Aleppo). Nisib formerly belonged to
northern Syria, to the sandjak of Urfa in the
vilayet of Halab. According to the census of
1927, the whole district had 45,717 inhabitants
of whom only 3,000–4,000 were in the town.
Nisib is noted for its extensive olive groves and
sesame fields, which extend to Kilis (in the same
vilayet but nearly on the Syrian frontier); in this
town the annual production of oil is estimated at
5 million kilos.

Ewiliya Celebi visited Nisib in the xviiith century
and describes it as "an inhabited town in the middle
of an unfertile district on the edge of a high hill,
with inas, mosques, baths and a small market but
without vineyards or gardens". Nisib at this period
was the residence of a judge on the salary scale
of 150 akçe.

During the war (1831–1840) between the Turks
and Egypt under Mehemet 'Ali, Nisib became
the scene of a celebrated battle. Ibrahim Pasha,

The Encyclopedia of Islam, III.
Further the niya must immediately precede the act, lest it should lose its character and become simple decision (ṣawm). It must accompany the act until the end (Abū Ishāk al-Shirāzī, Ṭūnīkh, ed. Jayyoubi, p. 3). Its seat is the heart, the central organ of intellect and attention. Lunatics, therefore, cannot pronounce a valid niya.

So the niya has become a legal act of its own. It is usually called obligatory, but in some cases, e.g. the washing of the dead, commendable. It can even be asked what the intention of the niya is. According to al-Bāḍūrī (p. 57), four conditions must be fulfilled in a niya: who pronounces it, it must be Muslim, compost mentis, well acquainted with the act he wants to perform, and having the purpose to perform this act. In some instances qawma is used, where the later language has nasu (e.g. Nasu, Ṣiyām, bāb 68; Tirmidhi, Ṣiyām, bāb 53).

The term does not occur in the Kurān. It is found in canonical hadith, but the passages show that is has not yet acquired in this literature the technical meaning and limitation described above. The development of this technical use appears to have taken place gradually, probably aided by Jewish influence. In Jewish law the kawmānā has a function wholly analogous to the niya. Al-Shahtī’s († 204 = 820) appears to be acquainted with the niya in its technical sense (Kīthāl al-Uṣūm). In canonical hadith — i.e. the literature which, generally speaking, reflects the state of things up to the middle of the eighth century A.D. — neither the verb nasu nor the noun niya appear to have any special technical connection with the šidāt. On the contrary, niya has here the common meaning of intention.

In this sense it is of great importance. Bukhārī opens his collection with a tradition, which in place of a declaration that he is performing the act, does in their intention only (imama l-māni bi l-niya or bi l-niyār). This tradition occurs frequently in the canonical collections. It constitutes a religious and moral criterion superior to that of the law. The value of an īhdā, even if performed in complete accordance with the precepts of the law, depends upon the intention behind the performer, and if this intention should be sinful, the work would be valueless. *For*, adds the tradition just mentioned, “every man receives only what he has intended”; or “his wages shall be in accordance with his intention” (Māhī. Ḥāyāt, trad. 36). In answer to the question how long the ḥifṣa is open, tradition says: “There is no ḥifṣa after the capture of Mecca, only holy war and intention” (Bukhārī, Manāṣib al-Arāb, bāb 45; Dīthāū, bāb 1, 27; Muslim, Ḥimā, trad. 83, 86 etc.). This higher criterion, once admitted, may suspend the law in several cases (cf. Snouck Hurgronje, Islam und Phonography, in T.B.G.K.W., xlii. 393 sqq. = Versp. Geschriften, i. 410 sqq.). So the intention, in this sense, becomes a work of its own, just as the intention in its juridical application. Good intention is taken into account: by Allāh, even if not carried out; it heightens the value of the work. On the other hand, refraining from good intention is reckoned as a good work (Bukhārī, Kīthāl, bāb 31). In this connection the (post-canonical) tradition can be understood, according to which the intention of the faithful is better than his work (Līli al-Arāb, xx. 223: cf. Ghazālī, Ḥayā, iv. 330 sqq., where this tradition
NIYĀZĪ, an Ottoman poet and mystic.

Sama al-Dīn Mehemmed known as Miṣrī Efendi, Shaikh Miṣrī, whose muḥājil was Niyażī, came from Asfūrī, the former summer capital of Malatia (cf. Eswaṭī Celebi, iv, 15; v; Mithke, Reiselschriften, pp. 349), where his father was a Naṣāḥīandi dervish. Niyażī was born in 1027 (1617—1618). The statement occasionally found that Shoghaṣīfī was his birthplace is not correct. His father instructed him in the teaching of the order, then he went in 1048 (1638) to Diyarbakr, later to Mardin where he studied for three years and finally to Cairo. There he joined the Kādirī order, travelled for seven years and finally settled down in the Anatolian village of Elmali, once notorious as a centre of heresy, to devote himself to study under the famous Khaļwetī Shaikh Umni Taṣnīm (d. 1060 = 1658).

He stayed with him for twelve years until he was sent by the Shaikh as his deputy to ʿUṣhāshqī near Smyrna. After the death of his master he moved to Brussa where a pious citizen, Abdal-Čelebi, built a hermitage for him. The fame of his sanctity and his gifts of prophecy spread more and more and finally reached the ears of the grand vizier Koprulu-zâde Ahmad Pasha, who invited him to Adrianople, entertained him with great honour for 40 days and finally sent him back to Brussa. When in 1083 (1672) the army set out for Kemeniec in Podolia (q. v.), he was summoned to Adrianople where he had great audiences as a preacher. As he had allowed himself to drop obscure allusions (kelimāt-i ʿ dazzī) he gave umbrage and was banished to Lemnos. There he spent some years in exile until he received permission to return to Brussa. The fact that during his stay on the island it was spared Venetian attacks was interpreted as a miracle wrought by this holy man. But when he stirred up the people by “kabbalistical” preaching he was again banished to Lemnos in Şafar 1088 (May 1677). All kinds of prophecies which were fulfilled as well as the stories of his coming had been foretold by Ibn al-ʿAtā (q. v.) strengthened his reputation as a holy man and miracle-worker. He spent ten years on Lemnos until in 1101 (1690) the vizier Koprulu-zâde Muṣṭafâ Pasha allowed him to return to Brussa. In the next year he was summoned to Adrianople; he again excited the people by political utterances and mystical allusions so that the Kālimaḵām ʿOṯmān Pasha had him taken with all respect by a guard of Janissaries and Čawsheṣ out of the mosque and sent directly via Gallipoli to Brussa. From there he was again banished to Lemnos but died on the 20th Radjab 1105 (March 17, 1694). The date 1111 (1699) given by v. Hammer, G. O. D., iii, 588 must therefore be wrong.

Unfortunately the contemporary notices give no information about the nature of the sermons by Niyażī which gave offence from the political as well as religious point of view. The historian Demetrios Kantemir said Niyażī was secretly a Christian. His Divān, in Arabic and Turkish, does not justify this suggestion although the poem declared by v. Hammer (G. O. D., iii, 569) to be apocryphal, given in translation by Kantemir, is really taken from his Divān, as Gibb, H. O. P., iii, 315 has proved. No study has yet been made of the Divān or of Niyażī’s position in the religious life of Turkey generally.

The order founded by Niyażī once possessed several monasteries on Greek soil, in Modoni, Negroponte (Eghriboz), Saloniki, Mytilene, also in Adrianople, Brussa and Smyrna. Cf. thereon the study by V. A. Gordel’evsky, Tarikat Mṣri Niyaẓī, in Duklajy Akademiy Nank S. S. R., 1929, p. 153—160.

The main source for the history of Niyażī’s life and work is the rare Turkish treatise of Morrīzide Ṭūsfī (Muṣṭafā Lūsfīlūfī), Tuhfat al-ʿaṣrī fi Manākīb Miṣrī, published at Brussa in 1508 (1690—1691).

Niyażī’s poems were repeatedly published 1254 and 1259 in Bālā, also 1260 and 1291 in Stambul; cf. thereon J. v. Hammer, in Wiener Jahrbiicher, lixxv, p. 36 and J. A., ser. 4, vol. viii., p. 261. On his numerous other works, only available in MSS. of Brūsl Mehemmed Tāhir, ʿOthmānī Mīlāʾifīrī, i, 173 sq. with references to where they are preserved.

his celebrated work, called the Ta'bahār-i Akbari (Traditions), Tāfīr (Commentary on the Kurān) and literature. His tomb is visited by innumerable Muhammadans from all parts of India during the time of his 'Urr (anniversary of his death). His work and the utterances of the saints taken down from his lips by Hasan 'Ali Sandjari (cf. Rue, Cat Brit. Mus., p. 972; Hādīdī Khalīfa, iv. 478); Kāhāt al-Mubīdīn, discourses of the saint uttered in several successive sitting during the year 689 and 690 A. H. and taken down by one of his disciples (cf. Rue, Persan Cat Brit. Mus., p. 973).

NIZĀM AL-MULK, ABD AL-HĀJIB AL-HANAS E. ALI B. ISKĀH AL-ﺘﺼI, the celebrated minister of the Sālджūq sultān Alp Arslān [q.v.] and Malik al-S̱āh [q.v.]. According to most authorities, he was born on Friday 21 Dhū 'l-Ka‘d 408 (April 10, 1018), though the sixth (twelfth) century Turākī Bahārā, which alone supplies us with detailed information about his family, places his birth in 410 (1019-1020). His birth-place was Rādkān, a village in the neighbourhood of Tūs, of which his father was revenue agent on behalf of the Ghaznavid government. Little is recorded of his early life. The Wāsālāī however for a description of the capability of which see J. R. A. S., October 1931: "The Sarguddāshī Sayyidnā, etc.") contains several anecdotes of his childhood, and is also responsible for the statement that he became a pupil in Nāshāpūr of a well known Shāfī'i doctor Hībat Allāh al-Muwaffāk. On the defeat of Mas‘ūd of Ghazna at Dandānīkan in 431 (1040), when most of Khurāsan fell into the hands of the Sīlājkūds, Nizām's father Alī fled from Tūs to Khurāsamārād in his native Bahārā, and thence made his way to Ghazna. Nizām accompanied him, and whilst in Ghazna appears to have obtained a post in a government office. Within a few years of the latter, he left the government for the Sālджūq service, first attaching himself to Caghri-beg's [q.v.] commandant in Balkh (which had fallen to a Sālджūq force in 432 [1040-1041]), and later, probably about 445 (1053-1054), moving to Caghri's own headquarters at Māw. It seems to have been now, or soon after, that he first entered the service of Alp Arslān (then acting as his father's lieutenant in eastern Khurāsan) under his wariz, Alī Abū ‘Abd Allāh b. Shāhān. And he so far won Alp Arslān's regard as on Ibn Shāhān's death to be appointed wariz in his stead (then, probably, receiving his best-known labāb). During the period between the death of Caghri-beg in 451 (1059) and that of Tughrī-beg in 455 (1063), therefore, Nizām had the administration of all Khurāsan in his hands.

The fame he thereby acquired, and the fact that now Alp Arslān was firmly attached to him, played a considerable part in prompting Tughrī-beg's wariz al-Kunduri, first, before his master's death, to scheme for the throne to pass to Caghri's youngest son Sulaimān, and then, after it, to do his utmost to prevent Alp Arslān's accession. For he calculated that Alp Arslān, on becoming sultān, would retain Nizām rather than himself in office. In the event al-Kunduri, who
soon found himself too weak to oppose Alp Arslan, and therefore sought to retrieve his position by acknowledging his claim, was retained in his post on the new sultan’s first entry into Raiy. But a month later Alp Arslan suddenly dismissed him and handed over affairs to Niẓām. Al-Kunduri was shortly afterwards banished to Marw al-Rād, where ten months later he was beheaded. His execution was undoubtedly due to Niẓām, whose fears he had aroused by appealing for help to Alp Arslan’s wife.

During Alp Arslan’s reign Niẓām accompanied him on all his campaigns and journeys, which were almost uninterrupted. He was not present, however, at the famous battle of Manzikert, having been sent ahead with the heavy baggage to Persia. On the other hand, Niẓām sometimes undertook military operations on his own, as in the case of the reduction of Iṣṭakhir citadel in 459 (1067). Whose, his or Alp Arslan’s, was the directing mind in matters of policy it is hard to determine. Its main points, however, appear to have been the following: first, the employment of the large numbers of Turkmen that had immigrated into Persia as a result of the Seldjuk success in the future; in fact, part of the army was despatched into Fāṭimid territory: hence the apparently strange circumstance that Alp Arslan’s first enterprise after his accession, despite the precarious condition of the empire he had inherited, was a campaign in Georgia and Armenia; secondly a demonstration that the sultan’s force was both irresistible and mobile, coupled with clemency and generally reinstatement for all rebels that should submit; thirdly the maintenance of local rulers, Shīʿa as well as Sunni, in their positions as vassals of the sultan, together with the employment of members of the Seldjuk family as provincial governors; fourthly the obviation of a dispute over the succession by the appointment and public acknowledgement of Malikshah, though he was not the sultan’s eldest son, as his heir; and lastly the establishment of good relations with the Abbasid caliph al-Kāʾim [q.v.], as the sultan’s nominal overlord.

Niẓām al-Mulk did not really come into his own until after the assassination of Alp Arslan in 465 (1072). But thenceforward, for the next twenty years, he was the real ruler of the Seldjuk empire. He succeeded from the outset in completely dominating the then eighteen-year-old Malikshah, being assisted in this purpose by the defeat of Kaurwābāg’s attempt to secure the throne for himself (for which service Niẓām received the title aṭ-ṭugh [q.v.], thus bestowed for the first time). Indeed in one aspect the history of the reign resolves itself into repeated attempts by the young sultan to assert himself, always in vain. Malikshah undertook fewer campaigns and tours than his father, the prestige of the Seldjuk arms now being such that few would risk rebellion, and warlike operations being left largely to the sultan’s lieutenants, as they had not been under Alp Arslan. Nevertheless, from Iṣṭahār, which had by now become the sultan’s normal place of residence, Malikshah visited the greater part of his empire accompanied by Niẓām. Policy continued on the same lines under Malikshah as under his father. Niẓām, however, was notably less tender than Alp Arslan had been to insubordinate members of the Seldjukid family, insisting at the outset on the execution of Kāwrud, and, later, on the blinding and imprisonment of Malikshah’s brother Takāṣh. Niẓām also reversed during the earlier part of Malikshah’s reign the conciliatory policy originally pursued under Alp Arslan towards the caliph. He had been rewarded for the friendly attitude he first evinced — which formed a welcome contrast to that of al-Kunduri — by the receipt from al-Kāʾim of two new lakhs, viz. ʿIzbān al-Dīn and Raʾīṣ Arvī al-Muʾimin (the latter believed to be the earliest of this type in the case of a waqf); and up to 460 (1068) his relations were fair. In fact, the caliph’s waqf Fakhār al-Dawla ibn Djiḥār [q.v.] became more and more cordial; so much so, indeed, that al-Kāʾim in that year dismissed Ibn Djiḥār, chiefly on account of his too-subservient attitude to the Seldjukid court. To secure this attitude in the caliph’s waqf was, however, the very aim of Niẓām; and on Fakhār al-Dawla’s dismissal he sought to impose a nominee of his own in a certain al-Riḍāwārī, and subsequently in the latter’s son Aḥbā Shūdjaʿ. Al-Kāʾim, to avoid this, reappointed Fakhār al-Dawla, though on condition that his relations with the Seldjukids should not be normal in the future. In fact, Fakhār was, in every respect, strained, till Niẓām came to attribute any unwell event in Baghād to Fakhār’s influence. For many years matters were prevented from coming to a head by the tact of Fakhār’s son, ʿAmīd al-Dawla [cf. Ibn Ṭurjān, 2], who won Niẓām’s favour so far as to marry in turn two of his daughters, Nāṣīḥa and Zubiyya; but in 471 (1075) Niẓām demanded Fakhār’s dismissal, which the caliph al-Muṣṭadī [q.v.] (who had succeeded in 467 [1073]) was obliged to grant. Niẓām now hoped to obtain the office for his own son Muʿayyid al-Mulk; but to this al-Muṣṭadī would not agree. Thenceforward, accordingly, Niẓām’s dislike was directed to al-Muṣṭadī himself, and to Aḥbā Shūdjaʿ, his former protégé, whom the caliph now created deputy waqf in an effort to conciliate him, leaving the waqfrate itself unoccupied till the next year, when he appointed ʿAmīd al-Dawla. But in 474 (1082) Niẓām in turn demanded the dismissal and banishment of Aḥbā Shūdjaʿ, and at the same time composed his quarrel with Fakhār al-Dawla, when the latter was sent on a mission to Iṣṭahār, concerting with him a plan by which Fakhār should watch his interests at Baghād. As a result al-Muṣṭadī, who gave in with a bad grace, lost all confidence in the Banū Djiḥār, and two years later replaced ʿAmīd al-Dawla with the offensive Aḥbā Shūdjaʿ, whereupon Fakhār and ʿAmīd fled to the Seldjukid headquarters. Niẓām, on this, vowed vengeance on al-Muṣṭadī, and at first even seems to have contemplated the abolition of the caliphate (see Muʿāṭ al-Zamān), as a prelude to which he commissioned Fakhār to conquer Dīyār Bakr from the Marwānids [q.v.], the sole remaining Sunni tributaries of any consequence. The Marwānids were duly ousted by 478 (1085); whilst al-Muṣṭadī, on his side, showed himself consistently hostile to Niẓām. But Niẓām’s feelings towards the caliph were in the following year completely transformed as a consequence of his first visit to Baghād (not for the wedding of al-Muṣṭadī to Malikshah’s daughter). The caliph received him very graciously; and thenceforward he became a champion of the caliphate in face of the enmity which developed between al-Muṣṭadī and Malikshah as a result of the marriage.
The celebrity of Nizâm al-Mulk is really due to the fact that he was in all but name a monarch, and ruled his empire with striking success. It was not his aim to innovate. On the contrary, it was to model the new state as closely as possible on that of the Ghaznavids, in which he had been born and brought up. His position was similar to that of his forerunners, the Barkamids (q. v.), and the notable Bûyûd wâzir ʿImâlî b. ʿAbhâd (q. v.). All three may be said to have represented the old Persian civilization (progressively Islamicized, of course) in the face of a rise to empire of barbarian conquerors, Arab, Dailami and many Turkmen. The monarchs were in each case equalled, if not surpassed, by their wazirs, and most of all in the case of Nizâm al-Mulk. For with him the invaders aspired to an emperor’s position whilst still quite unacclimatized to their new habitat, so that his superiority in culture was the more marked (cf. Barthold, Turkistan, p. 308). But in revenge the Saljûqids’ lack of acclimatization stood in the way of a complete realization by Nizâm al-Mulk of the now traditional Perso-Muslim state. Hence the lamentations that recur in the Siyâsê-Nâma.

The Siyâsê-Nâma, written by Nizâm in 484 (1093), with the addition of eleven chapters in the following year, is in a sense a survey of what he had failed to accomplish. It scarcely touches upon the organization of the dîwân, for instance, partly, it is true, because the book was intended as a monarch’s primer, but also because Nizâm, having absolute control of the dîwân, as opposed to the dârgâh (cf. again Barthold, p. 227), had succeeded, with the assistance of his two principal cadijûrs, the mustâwî Shahraf al-Mulk and the maqûl Kamâl al-Dawla, in exactly modelling this, his special department, on traditional lines. Of the dârgâh, on the other hand, Nizâm complains that the sultân’s failed to maintain a sufficient majesty. They were neither magnificent (though he approves their daily free provision of food), formal, nor awe-inspiring enough. At their court, accordingly, the formerly important offices of hâzi, waqîî and amîr-i harat had declined in prestige. Nor, as had his model potentes, would they maintain a sound intelligence service, whereby corruption might be revealed and rebellion forestalled. The Siyâsê-Nâma consists in all of fifty chapters, of advice illustrated by historical anecdotes. The last eleven chapters, added shortly before the wâzir’s assassination, deal with dangers that threatened the empire at the time of writing, in particular from the Ismâ’îlîs (for a review of the world by Browne, A Literary History of Persia, ii. 216–217).

Nizâm’s situation resembled that of the Bûyûd administrators in another respect. He was faced, as they had been, with the problem of supporting a largely tribal army, and solved it likewise by a partial abandonment of the traditional tax-farming system of revenue collection for that of the iqtâ, or sef (q. v.), whereby military commanders supported themselves and then troops on the yield of lands allotted to them. Since in the decay of the ʿAbhâd power provincial amîrs had tended to assume the originally distinct and profitable office of amîl, the way for this development had been paved. The Bûyûds had later attempted to restore the older system, but the establishment of numerous local minor dynasties had favoured the new. Nizâm now systematized it in the larger field open to him. In the Siyâsê-Nâma he insists, however, on the necessity of limiting the rights of fief-holders to the collection of fixed dues, and of setting a short time-limit to their tenures (see on this subject Becker, Stenographie und Lehensverw., in Ist., v. 5).

In the absence of the intelligence service he de-tired, Nizâm contrived to intimidate potential rebels and suppress local tyranny by a judicious display of the might and mobility of the Saljûqids’ army. He also insisted on the periodic appearance at court of local notables such as the Mardinid (q. v.), and ʿOṣâyîlids (q. v.), and proclaimed the sultân’s accessibility to appeals for the redress of wrongs by means of notices circulated throughout the empire and exposed in public places (see al-Mâfarukhî, Makhirn-i Istahân). He also gained the powerful support of the ʿalâmâ, especially those of the Shâfi‘i school, of which he was an ardent champion, by the institution of innumerable pious foundations, in particular of madrasâs, most celebrated being the Nizâmîya of Baghdad (opened 459 = 1067), the earliest west of Khursâân; by the general abolition of mukâṣ (taxes un sanctioned by the shârî’a) in 479 (1080–81); and by undertaking extensive public works particularly in connection with the hâdîqâ. After the Hîdâjâ had returned from Fâtimid to ʿAbhâsid allegiance in 468 (1076), he exerted himself to make the ʿIrâq road safe from brigandage for pilgrims, as well as to diminish their expenses; and from the next year until that of his death the journey was accomplished without mishap. It was not until the second half of Malikshâh’s reign that the full effects of Nizâm’s achievement made themselves felt. By 476 (1083–84), however, such were the unwonted security of the roads and the low cost of living that reference is made to them in the annals.

Nizâm al-Mulk was naturally much sought after as a patron. The poet al-Mâizzly (q. v.) accuses him of having “no great opinion of poetry because he had no skill in it”, and of paying “no attention to anyone but religious leaders and mystics” (see Câhîr Mašâila, transl., p. 46). But though his chaitly, which was profuse (see for example al-Sulûk, iii. 41), went in large measure to men of religion — among them the most notable objects of his patronage being Âbâ Išāk al-Shârî (q. v.) and al-Ghâzâlî (q. v.) — he was clearly a lavish patron also of poets, as is testified by the Damaqy al-Kâyr of al-Bâkhkârî (q. v.), the greater part of which is devoted to his panegyrist. In another sphere, the inauguration of the Dârgâh calendar (q. v.) in 466 (1074) was probably due to his encouragement, since at this time his ascendency over Malikshâh was at its most complete.

For the first seven years of Malikshâh’s reign Nizâm’s authority went altogether unchallenged. In 472 (1079–80), however, two Turkish officers of the court instigated Malikshâh into killing a protégé of the wâzir; and in 473 (1080–81) again, the sultân insisted on disbanding a contingent of Armenian mercenaries against Nizâm’s advice. Malikshâh now began to hope, indeed, for the overthrow of his mentor, showing extraordinary favour to officials such as Ibn Bahmanyar and, later, Saiyid al-Ruṣâsî, who were bold enough to criticize him. Ibn Bahmanyar went so far as to attempt the wâzir’s assassination (also 473),
whereas Saiyid al-Ru‘asā‘ contented himself with words. But in each case Niẓām was warned; and the culprits were blinded. In the case of Ibn Bahmanvār, in whose guilt a court jester named Dījāfarak was also implicated, Malikshāh retaliated by contriving the murder of Niẓām’s eldest son Dījam al-Mulk, who had taken Dījāfarak’s execution into his own hands (475 = 1082). After the fall of Saiyid al-Ru‘asā‘ in 476 (1083–1084), however, the sulṭān left plotting till, some years later, a new favourite, Tāj al-Mulk, caught his fancy.

All went well with Niẓām al-Mulk till 483 (1090–1091). In that year, however, occurred the first serious challenge to the Saljuqīd power, when al-Baṣra was sacked by a force of Karmaṭians; and almost simultaneously their co-sectary the Assassin leader al-Ḥasan b. al-Ṣabbāḥ [q. v.] obtained possession of the fortress of Alamūt, from which repeated attacks failed to dislodge him. Meanwhile, moreover, an awkward problem had arisen over the succession to the sulṭānate, on account of the death in turn of Malikshāh’s two eldest sons, Dāwūd (474 = 1082) and Aḥmad (481 = 1088). These sons had both been children of the Čarbhāgī princess Terken Khatūn (see Dāmīr al-Tawārīḵ), who had borne the sulṭān a third son, Mahmūd, in 480 (1087). She was eager for Mahmūd to be formally declared heir. Niẓām, however, was in favour of Barkiyārūḵ [q. v.], Malikshāh’s eldest surviving son by a Saljuqīd princess. Hence Terken became his bitter enemy, and joined with Tāj al-Mulk, who was in his service, in instigating Malikshāh against the wāzir.

Tāj al-Mulk accused Niẓām to the sulṭān, who by this time was in any case incensed with the wāzir’s championship of al-Muṣṭafid, of extravagant expenditure on the army and of nepotism; and Malikshāh’s wrath was finally inflamed beyond bearing by an unguarded reply made by Niẓām to a formal accusation of these practices. But even so he did not dare to dismiss him. (The earliest historian to assert that he was dismissed is Raḥshid al-Dīn Faḍl Allāh, who appears to have misunderstood the purport of some verses by al-Nahlāṣā quoted in the Kāfijat al-Sanā‘ī, and really composed after Niẓām’s death). Niẓām al-Mulk was assassinated on 10th Ramaḍān 485 (October 14, 1092) near Sīhāna, between Kanguwar and Bisūṭīn, as the court was on its way from Isfahān to Baghādād. His murderer, who was disguised as a Šāfī, was immediately killed, but is generally thought to have been an emissary of al-Ḥasan b. al-Ṣabbāḥ. Contemporaries, however, seem to have put the murder down to Malikshāh, who died suddenly less than a month later, and to Tāj al-Mulk, whom Niẓām’s retainers duly tracked down and killed within a year. And Raḥshid al-Dīn combines the two theories, stating that the wāzir’s enemies at court concerted it with the Assassins. The truth is therefore uncertain; but as Raḥshid al-Dīn is one of the earliest historians to whom the Assassin records were available, his account would seem to deserve attention.

The extraordinary influence of Niẓām al-Mulk is attested by the part played in affairs after his death by his relatives, despite the fact that only two appeared to have displayed much ability. For the next sixty years, except for a gap between 517 (1123) and 528 (1134), members of his family held office under princes of the Saljuqīd house.

with a model battalion of 1,600 men was raised, to be composed of volunteers. This body was formed of young men of different nationalities and religions, mostly Austrian or Russian deserters collected during the war with Russia. The result was that the force enjoyed little prestige and native Turks only joined it in small numbers, with the consequence that this corps, popularly called încenc 'askeri, consisted of only a few hundred man and was unable to attain to the strength of a battalion (1,600) until 1799. The Sultan's force trained and armed on European lines was limited to this body. The Sultan employed foreign officers, mainly from England, Sweden and Spain, to train the soldiers and see to the management of the arsenals, shipbuilding and fortifications. Large barracks and ammunition depots were built. The new revenue earmarked for military purposes which by 1797–1798 amounted to 60,000 purses, i.e. 48,000,000 francs (cf. Djedvet, Tarihî, viii. 139 sq.), supplied the necessary funds. Internal difficulties, especially the ever increasing number of opponents of reform, prevented the Sultan from completely realising his plans. The name Nizâm-i djidid became more and more hateful and pejorative so that it finally decided to abolish it altogether and to call the corps of regular troops Sejmên or Sığah, i.e. "kennelmen." On Selim's deposition it was disbanded. Under his successor Mustafâ [q.v.] the attempt was made to revive the Nizâm-i dji did. The Austrian renegade Sulaimân Agha who had previously commanded the division quartered in Lewend Ciftlik was ordered to reconstitute it again secretly, but this effort met with no permanent success (cf. Zinkeisen, G.O.R., vii. 552 sq.).

**NIZÂM ŞÂH, title assumed in 895 (1490) by Malik Aḥmad Bahri, founder of the Nizâm Şâhi state of Ahmândagar [q.v.], one of the five independent sultânates which arose out of the ruins of the Bahmani kingdom of the Dakhân towards the end of the fifteenth century. For a chronological list and genealogical table of these kings of Ahmândagar see Cambridge History of India, ii. 704–705; also Zambar, Manuel, p. 298–299.**

The second ruler, Burhân Nizâm Şâh I (914–960 = 1509–1553), adopted, in 1537, the Şâh's form of Islam which, except for a brief period under Isâîlî when the Mahdawis were in power, became the established religion of this kingdom. During Burhân's reign an unsuccessful attempt was made by the anti-Dakhân party known as the Foreigners, to place his brother, Râjdâdî, upon the throne. The flight of the defeated rebel to Berâr, combined with the refusal of 'Alî al-Ibrāhîm Şâh to surrender Pâhti, the home of Burhân's Brahmân ancestors, led to war with Berâr and to the capture of Pâhti. It was a dispute as to the possession of Sholâpur, the chief bone of contention between Ahmândagar and the neighbouring kingdom of Bîdjabur, that caused Burhân to adopt the disastrous policy of joining forces with Sâdâtshârâvîyya of Vîjâyânâgar, as a result of which the Hindu monarch was able to annex the Râjâtîr Dîwân to his dominions, while Burhân was successful in capturing the fortress of Sholâpur.
Burhan was succeeded, after a period of civil warfare, by his son Husain who reigned until 712 (1313). His reign, however, is of outstanding importance in the history of the Dakhân, for it was at this time that the Muslim rulers of this area, with the exception of Berar, irritated by the overbearing insolence of Sadāghārvārya and realizing the strength of the Hindu menace in the south, combined to crush the military power of Vijayānagar at the battle of Tālikota (712 = 1565).

In the same year Husain was gathered to his fathers and his son, Murutdā Niţâm Shâh I (712 – 794 = 1565 – 1566), reigned in his stead. Murutdā, called Diwāña or Madman, neglected the affairs of his kingdom for a life of dissipation, the real power being in the hands of his ministers. An unsuccessful attempt was made during this reign to drive the Portuguese out of India, but the effort came too late, for, during the critical years when the Portuguese had been establishing themselves along the coast, the forces which might have united to hurl the invaders into the sea had been engaged in inglorious internecine conflicts. The most important event in this reign was the annexation of Berar, in 792 (1574).

The subsequent history of this dynasty, until the Mughal invasions of the Dakhân, is unimportant. Full details will be found in the pages of Fīqihāt, the national annals of the dominion. The efforts of the dowager queen, Când Bibi, the imperial forces conquered Aḥmadnagar in 796. Nevertheless, it cannot be said that the incorporation of the Niţâm Shâhi dominions in the Mughal Empire was effective under Akbar. All attempts by his successor Dāh Hundreds to complete his father’s policy were frustrated by the organizing ability of Malik Ambar, an able Abyssinian minister, who was in charge of the affairs of Aḥmadnagar until his death in 1035 (1626). It was not until 1042 (1633), in the reign of Shabhdhāman, that this kingdom was finally annexed, although for some years afterwards the Marâghâ leader Shâh Shâh attempted to resuscitate the Niţâm Shâhi dynasty.

Bibliography: Alí b.ʿArīz Allah Šābabʾi, Burhān-i Mâqīr, annotated translation by H. W. Haig, Bombay 1923; Mâhâm Mâhâm Fīshā, Ġulīqān-i Irānšāhī, Bombay 1852; Sir T. W. Haig, Cambridge History of India, vol. iii., ch. xvii. (C. Collin Davies)

NIZĀM, NIZĀM AL-DĪN ABU MUḤAMMAD ILĀYAS B. YUSUF, ONE OF THE GREATEST POETS OF PERSIA. He was born in Ganjīdā, the later Elsavetpol in 535 (1140–1141). His parents died while he was still quite young so that the education of his brothers and of his younger brother had to be undertaken by his uncle. From Niţâm’s poems, it is apparent that his uncle very soon followed his parents to the grave. Nevertheless the two boys succeeded in getting an excellent education, for Niţâm’s brother, who wrote under the pen-name of Kiwâmi Mutârri, attained a very high skill as a writer of kâfīs (an ingenious kâfī by him is given in Browne, Lit. Hist. of Pers., ii. 47 sg.). Niţâm was thrice married and had a son named Mâhâm Mâhâm. The poet was interested in Siyâṣah and studied in Sufi circles under a certain Shahīd Aĥšū Farrukh Râhānī. Nothing more is known about his career and it may be presumed that he led a relatively uneventful life, as he says himself that he avoided the bustle of princes’ courts and had a strictly ascetic conception of life. Neverthe-
it is not on his chivalrous adventures that stress is laid but on seven stories related to the hero by seven kings' daughters with whom he is in love. Each of these stories is associated with a day of the week, a planet and a colour. They form a masterpiece of Oriental story-telling which has never been surpassed and their grotesque and gruesome fantasy is particularly effective. As a master of fantasy, Niẓāmī recalls F. T. A. Hoffmann and J. Callot and is able to make his readers visualise his wonderful pictures just as vividly as the European masters. Besides these large works, Niẓāmī left a lyrical Divān of which only three MSS. are known (Bodleian, No. 618, 619 and Berlin, Fetsch Cat., No. 691) and which so far has received little attention. It contains no καθισια in the court style and is distinctly Şafī in tone.

Niẓāmī's works are of the greatest importance in the history of Persian literature. They mark the zenith of epic poetry in Persia, as in them for the first time the antithesis between the language of the lyric and the archaic style of the epic is overcome and the epic is brought into the milieu of the time, which until this time was already fully developed in the lyric. The epic however at the same time loses its heroic character and devotes itself more and more to psychological characterisation at which Niẓāmī was a master. The overloading with learning, which in time came to choke the action completely, is very noticeable.

Niẓāmī's influence on the later poets was unusually strong. A whole series of important poets, among them men like Amīr Khusrav Dihlawī, Khwādžū Kirmānī, Kātibi, Dāmān, Hāfīz and even the great mystic Farid al-Dīn 'Attār and the great master of Cagāhat poetry Mir 'Ali-Shir Nawī, tried their skill in niṣāras on Niẓāmī's Aʿbādāt (the number of poems in later writers rises to seven).

In spite of its great importance, so far critical editions of parts only of the Khamsa have appeared and we are dependent for the rest on bad Indian lithographs or manuscripts difficult of access. It is most desirable to put an end to this state of affairs and devote greater attention in Europe to the study of Niẓāmī.

(E. Berthelez)
of the first rank, to judge by the fragments that survive; in any case it was very inferior to his prose. Auch Brown says is almost unequalled in Persian.

The Čâdâr Mojâfa consists of four discourses, each of which deals with one of the classes of men whom the author regards as indispensable in the service of Kings: secretaries, poets, astrologers and physicians. Each discourse begins with general considerations, which are followed by anecdotes, often from the writer's personal experience. The number of these anecdotes, which form the most interesting and valuable part of the book, is about forty; some give valuable information on the literary and scientific state of Persia. We may say that the "Four Discourses" (especially the second) and Awšâl's Lâhab are the two old works which deal systematically with Persian poetry. Dawlatshâh made a great deal of use of it (cf. Brown, Sources of Dawlatshâh, in J. R. A. S., 1899, p. 37-66). We may specially point out that it is to Nizâmi that we owe the earliest notice of Firdawsí and the only contemporary reference to Khayyám. On the other hand, we must point out the historical inaccuracy of certain passages, even in the case of events in which Nizâmi claims to have taken part. His book is mentioned or quoted by Awshâl (Lâhab), Isfandîyâr (Jâhil, of Tahârat), Muwâfî, Khâzûn (Târîkhi Gohi), Dâ'îmî (Silisht al-Dhâkah), Ghastari (Nûrîstân), Hâdîjî Khâla speaks of a Madâ'î al-Nâvâ'îr, though he thinks it is different from the Čâdâr Mojâfa; but Mirzâ Muhammad Khâzûn has shown that this is another title of the same book.

(H. Massâ').

NIZâMI, Hasan, a Persian historian whose full name was Şâder al-Dîn Muhammad b. Hasan. Born in Nishâpûr, he went on the advice of his shaikh Muhammad Kûfi he left to give an opportunity to his remarkable talents as a stylist. A severe illness forced him to leave Ghariz. and he went to Dâbih. He was appointed to court historian to the Pathân Sulhâns and began to 602 (1206) a great historian's work Tâdî al-Mâshir fi Târîkhi, which brought him great fame. He deals with the history of the first three Pathân Sulhâns of Delhi - Muhammad b. Sâm (588-602 = 1192-1206), Kûf al-Dîn Alâbâk (602-607 = 1206-1210) and Shams al-Dîn Ilutmish (607-633 = 1210-1235). The book begins with the capture of Adâmîr by Mu'izz al-Dîn in 587 (1191) and ends with the appointment of Na'îr al-Dîn Muhammad as governor of Lahore (614 = 1217). An Appendix contains a panegyric of Ilutmish and his campaigns of conquest. The work was very highly esteemed in the Muslim east as a model of elegant style. It is written in high flow and is less a language art than a large number of poetical passages inserted in it. It is only with difficulty that the historical facts can be extricated from the medley of rhetoric but nevertheless the book is of undeniable value for the history of India and Afghanistan.

Potts, Die persischen Handschriften der... Bull. z. Götha, p. 53: E. Blochet, Catalogue des ms. persans de la Bibli. Nationale, Paris 1905, i. 333; C. Salomon and v. Rosen, Indices alphabet. codicum ms. persicorum... in Bull. Imp. Litterarum Universitatis Petropolitanae, St. Petersburg 1888, p. 12, No. 578. On the biography of the author see also Miskhônd (lit., Bombay, i. 7. (E. Berskès).}

NIZAMI-SHâH (i.e., Hîr-yi Nizâm-Shâh) "ambassador of Nizâm-Shâh" of the Dakhân), a Persian historian whose real name was Khîrshâh b. Kûhâl al-Husâini. Born in the Persian 'Iraq, he entered the service of Sultan Burhân (cf. Nizâm-Shâh). The latter being converted to the Shi'a sent Khîrshâh as ambassador to Tâhmsâp-Shâh Safawi. Reaching Raiy in Radjab 952 (Sept. 1545), he accompanied the Shah to Georgia and Shirwân during the campaign of 953 (1546) against Alkây-Mirzâ. He stayed in Persia till 971 (1563), perhaps with occasional breaks. He died at Golconda on the 15th Dhu 'l-Kâda 972 (June 24, 1564).

Khîrshâh's chief work is the Tûrîkhi-i Hîr-yi Nizâm-shâh, a general history from the time of Adam bây on each source taken from Dâbih, Tûrîkhi-i gushta, Fâtar-nâmâ, Hâlib al-Suyûrî, the Memoirs of Shâh-Tâhmasp" etc. The book is divided into a preface and seven mojâfas, each of which is again divided into several gusfâr. The most important part of this work is that which refers to the reign of Tâhmsâp-Shâh (in the Brit. Mus. MS. Or. 153, written in 972 = 1565, the events come down to 969) and to the local dynasties of the Caspian provinces: Mâzandârân, Gilân, Shirwân. The two manuscripts in the British Museum show differences in their contents: Add. 23,513 (written in 1093 = 1684) has passages added by some continuator, and taken from Dâbih and a document of Ahmad b. Muhammad Ghâfî. The later additions of Or. 153 come down as late as 1200.

According to Fir âstâ, "Shâh Khîrshâh", during the reign of Ibrâhîm Kûsh-Shâh of the Deccan (957-988) also wrote a history of the Kûsh-Shâhis [i. v.]. It is difficult to reconcile this with a continuous stay in Persia from 952 to 971.

Bibliography: Rieu, Catalogue, p. 107—111; Schefer, in his Chrestomathie persane, ii., 1885, p. 5815-133) printed the sections relating to the Caspian provinces.

(Y. Minorsky).

NIZâR b. MA'ADD, a common ancestor of the greater part of the Arab tribes of the north, according to the accepted genealogical system. Genealogy: Nizâr b. Ma'add b. 'Adnân (Wustenfeld, Gen. Tabellen, A. 3). His mother, Mu'mâna bint Uhlâla, was descended from the pre-Arab race of the Djarum. Genealogical legend which has preserved mythological features and folklore relating to several eponyms of Arab tribes is almost silent on the subject of Nâzîr (an etymological article about his name: Tâdî al-A'mâs, in. 563, 15-17 from the Kâ'âd al-Dir' of al-Suhali [i. 8, g-86] is without doubt of very late origin as is shown by the connection which is established
with the prophetic mission of Muḥammad; the same etymology from *nazar* "insignificant" is further found in Ibn Duraṣ, Kīrāb al-ṣāḥib al-ṣāliḥ, p. 20, 62 *Muṣjadiyya*, ed. Lyall, p. 763, 16 (without the story in question). Tradition has more to say about his four sons Kābi', Muḍār, Anmār, Ḣiṣād and about the partition of the paternal heritage among them, in connection with which they visited the Djarūmi ḥabām al-Afīs. Their adventures on the journey (they are able to describe minutely the appearance of a camel they have never seen from the traces it has left) form the subject of a popular story which has parallels among other peoples; its object is to make the origins of the *ḥādiqah* go back to the most remote period (al-Mufaḍḍal b. Salama, al-ṣāliḥ, p. 155–156 and the sources there quoted; Tabārī, i. 1108–1110 etc.); it perhaps is of interest to note that the story was known to Voltaire who introduced it into his Zadig.

As Robertson Smith showed half a century ago (Kinship and Marriage in Early Arabia, p. 5 991, 283–289) and as Götzüther has confirmed by numerous quotations (Mukaddamische Studien, i. 1915, p. 92), the name Nīzār only appears late in Arab poetry, while that of Maʿād (which is found as early as the Byzantine historians Propozius and Nonnus) appears quite early in it, although its ethnic character is rather vague (as that of `Adnān, still more comprehensive, one of the oldest historians of Arab poetry, Muḥammad b. Sallām, d. 230 = 844–845, had already pointed out that his name was almost unknown in ancient poetry, Tabārī, al-Sīrah, ed. Hell, p. 5, 1; cf. Ibn ʿAbd al-Barr, al-Ināʿāth, p. 102, and Kūfah: Cairo 1359, p. 48). Before the Umayyad period the only trace we find of the use of Nīzār as an ethnic is in a verse of the pre-Islamic poet Biṣr b. Abī Khāzim (in the Mannāfi, p. 667, 1) and in another of Kāb b. Zuhair (in Tabārī, i. 1106, 10), in the verse of Ḥassān b. Ḥithāib, ed. Hirschfeld, lx. 2, the reference is to another Nīzār, son of Maʿād b. ʿAmīr b. Luṣayy (Wustenfeld, Tabellen, p. 15) belonging to the Kūraish. The line in Umayyad b. Abī ʿl-Salt, ed. Schultheiss, U, i. 10, in which the descent of the Ṭāḥif from Nīzār is celebrated, is apocryphal and is connected with the known dispute regarding the origin of the Ṭāḥif. The story of the verdict of al-Akāb b. Ḥabīs al-Tamimi in favour of Djarīr b. ʿAbd Allāh al-Baṣrahi against Khālid b. Ṭāhā al-ṣāliḥ (Yahiyā), ed. Bevan, p. 141–1425; cf. Ibn Hishām, Sīra, ed. Wustenfeld, p. 50) in which there is a reference to Nīzār and which is placed before Islam, is not less suspect; its object is to defend the northern origin of the Baṣrāh (descendants of Annār), often disputed, as well as that of their brethren the Kūraish [q.v.], and to refuse the same origin to the Kāb descendants of the Ḥādiqah, to which it was attributed just at the time of the strife that raged around the succession to Yazīd I. The raidaz quoted by Ibn Hishām, Sīra, p. 49 (and often elsewhere; they are sometimes attributed to ʿAmīr b. Murra al-Dhuḥānī, a contemporary of the Prophet, and sometimes to a certain al-Allāh b. al-Yaḥyā, otherwise unknown) in which we find used with reference to Ḥuṣayn, the verb tanazzura "to announce oneelf to be descended from Nīzār" may be regarded as apocryphal. No need need be laid on the isolated reference in al-Balādhuri (Futūḥ, ed. de Goeje, p. 276, 16) to the quarters (khaṭṭ) of the Banū Nīzār in Kūfah contrasted with those of the Yamani; his language simply reflects the position in the author's time or that of his sources, later than the great revolution of the first century A.H.

It is only from this period, and to be more exact after the battle of Mardj Kāḥib (65 = 684) won by the Kūfah over the Kāṣīs, that we begin to find the name Nīzār recurring with increasing frequency; it occurs mainly in the poetry: Djarīr, al-Farāzāsāk, al-andezā, al-Kuṭāmah, Zuhair b. al-Ḥāṣim use it to designate the common source of the tribes of the north, contrasting it with the terms "Yaman" or "Kaḥīţa". The expression Ibnū Nīzārīn "the two sons of Nīzār" becomes regular; it indicates the Muḍār (Kāṣīs al-Aṣṣāh) and the Rāmūs as belonging to one ethnic group; they were previously regarded as unrelated to one another. The tribes descended from Annār (cf. above) and Ḣiṣād (the fourth son of Nīzār; but other sources make him a son of Maʿād) appear only rarely as members of the group. This is what the genealogical systematisation seeks to explain by alleged migrations of Annār and Ḣiṣād into the groups of Yamani tribes. But the implication of the term Nīzār continued to remain vague, more so than those of Kāṣīs, Muḍār and Rābī, which represent very large groups but more precise than that of Maʿād, of which it tends to take the place. This is due to the fact that the term Nīzār corresponds to a political ideal rather than to a historical reality; in the latter the reigning dynasty, claiming descent from Kūraish (themselves, consequently, Nīzāris) had as their henchmen the Kūfah, one of the most powerful Yamani tribes, while the Azd, another tribe of the south, bound to the policy of their most illustrious representatives, the Mahallabids, were sometimes on the side of the Umayyads and sometimes against them. It was this complicated position that gave rise to the attempt to separate the Ḥuada (i.e. the Kūfah) from the southern stock in order to make them descendants of Nīzār. The story told in Alghaynī, xi. 160–161, al-Baki, Muḍjam, ed. Wustenfeld, p. 14–15 is intended to explain the separation of the Ḥuada from the rest of the Nīzāris as a result of the murder of the Nīzāri Yadhīkur b. ʿAnaza by the Kūfah ʿHaṣimā b. Ṣaḥdān. The lines in Djarīr (Nūqūt ʿl-id, p. 994) sum up very completely the way in which the Ḥuada-Kāb were connected with the Nīzār, while elsewhere (e.g. ibid., p. 261: al-Farazāsāk) Ḥuada and Nīzār are opposed. Later, at the end of the Umayyad period and especially in the period of the struggle in Kūraish which was the prelude to the fall of the dynasty, Nīzār (also in the form Nīzārūn) became the term of designation which was contrasted with Yamaniya: henceforth the Banū Nīzār were to be the representatives of northern Arabism: as early as the period of decline of the Umayyads, the poet al-Kumait b. Zaid al-Asadi [q.v.] had composed a long poem, the Muṣakhakab, exalting the Nīzār at the expense of the Kāḥīţa; nearly a century later, the Yamani Dūūl [q.v.] replied to him; these poetical jousts on which the ṣālaḥiyya, nationalist fanaticism, of the two great ethnic groups of the Arabs was nourished, continued down to quite a late date, especially among the Yaḥūd of the Yaman.

From what has been said it is evident that we cannot speak of Nīzār as of a tribe having had
a real historical existence nor, as is the case with the Ma'add, as a comprehensive term indicating an effective grouping together of tribes of different origin. Nizār is simply a fictitious invention, a label intended to serve political interests. One must however ask whence the name came and what were the precedents which suggested its use in the sense above outlined. The problem has not yet been thoroughly studied and perhaps we do not possess the material necessary to solve it. It is possible that the history of the four sons of Nizār (cf. above), a popular story the nature and diffusion of which seem to take it back to a very early period and which originally had nothing to do with genealogical tradition, supplied the names on which the nizār later gave their imagination free play. But this is a pure supposition which would have to be confirmed by definite proofs.

NOBIZAR B. AL-MUSTA‘īR

Dolmān, born 10th Rabi‘ I 437 (Sept. 26, 1045).

On the death of his father, having been displaced by his younger brother al-Mustālī [q.v.], Nizār fled to Alexandria, took the title of al-Mustafāli-Din Allāh, and rose in revolt early in 488 (1095) with the assistance of the governor, Naṣr al-Dawla Aftakīn, who was jealous of al-‘Afjal, and the population of the city. He was at first successful in driving back al-‘Afjal and advanced as far as the outskirts of Cairo, supported by Arab auxiliaries. Al-‘Afjal again took the field against him, and after a short siege in Alexandria he surrendered towards the end of the same year, was taken to Cairo, and there immured by order of al-Mustālī.

By the Ismā‘īlī organization in Persia (see the art. Al-Ḥasan b. Al-Ṣabāḥī), Nizār was recognized as the rightful successor of al-Mustansir, and this, with its offshoots in Syria, formed a new group (al-la‘wā al-djādīda), opposed to the Mustashi group (al-la‘wā al-kudrīna), now known as Khudjas [q.v.] and Bohārās [q.v.] respectively. A party of the Nizārīya at first held to the belief that Nizār was not dead and would return as the Mahdi or in company with him, but the majority held that the line of Nizār was continued by the Grand Master of Alamut.

Bibliography: See under al-Mustālī; also Ibn Khalilīkān, transl. de Slane, i. 160—161 (from al-Nuwayrī); Sīdījlīm, al-Mustansir bi’llāh, MS., S. O. S., London, Ns. 35 and 43 (cf. B. S. O. S., vii. 307 sqq.).

[Hi. A. R. Ghil]

NOAH. [See NoH.]

NOVIBAZAR or YENI BAZAR is the name of a former (down to 1912) Turkish sanjaḵ in what was once the vilâyêt of Kosto; it now belongs to Jugo-Slavia. The district through which the river Lim flows and which is therefore also called the Lim district (area 7,350 sq. km. with 120,000 inhabitants of whom 1/4 are Christian Serbs and 1/4 Muhammadan Albanians), was bounded on the north by Bosnia and separated Serbia from Montenegro. The importance of Novibazar was for military reasons as it secured communications between Bosnia and Serbia (cf. ‘Ammār) and the same time prevented communication between Serbia and Montenegro. By art. 85 of the Treaty of Berlin, Austria-Hungary held the western part of the sanjaḵ (the Lim district) from Sept. 1879 to 1908, namely the towns of Plevje (Turk. Tağlıda), Prijepele and Bjelopole with a garrison of some 3,000 men, while the southern part, the kaza of Mitrovica, was returned to the Turks. After it was handed over in 1908, Novibazar formed a bone of contention between Turkey, Serbia and Montenegro. In 1912 the sanjaḵ was conquered by Montenegro (Bjelopole Oct. 12, Tusi Oct. 14, Berane Oct. 16, Gusanje Oct. 20, Plevje Oct. 24) and Serbia (Novibazar Oct. 23, Sjenica Oct. 24) and in 1913 divided between the two countries.

The district forms with Zeta the ancestral home of former Serbia and roughly corresponds to the ancient Rascia. The chief town Novibazar (in the official spelling Novipazar) is situated above the level on the Raska, is now an impoverished place of 11,000 inhabitants with miserable houses and poor streets. In the middle ages however, it was of considerable importance as the imposing remains of churches monasteries and baths around it show. Not far from it lie the ruins of the town of Rakovica, capital of the old Serbian Kingdom and already mentioned in Byzantine history in the 8th century (’Páro), where the Nemanjić prince Stephen held his court for a time. The settlement of Pazariste or Trygoviste there was called by the Turks Eskī Bazar, “Old Market”. A subābi is mentioned as being there in 1459 after the conquest of the land by the Turks (1456) and in 1461 a kāți. The Turks then founded a New Market not far away, Yeňi Bazar, which soon became the capital of the whole district. The Ragusa historian Laciari says the founder of Novibazar was Ese, i.e. undoubtedly Isk-Beg (1444—1460, from 1453 governor of Sarajevo), son of Isk-Beg (1414—1444), both of whom were governors in Uskub (Skopje) and were among the most important Turkish leaders of the time. The foundation of Novibazar must have taken place about 1460 for a year later we find mention for the first time in the archives of Ragusa of Ragusan merchants in Novibazar. In 1467 we already find a kāți and a subābi in Novibazar. The town from the end of the XVth century was frequently visited and described by western travellers as it lay on the old trade route from Ragusa (Dubrovnik) to Nish. The knight Arnold v. Hæff mentions Novibazar in about 1499 as Nunwamarchet. John Chrysostom (cf. Le voyage de Monseigneur d'Armançon, ed. Ch. Schair, Paris 1887, p. 11) describes Novibazar as ville non fermée, assez marchande. While these and other travellers of the XVIth century like Benedict Kurpišić (1530; cf. Benedikt Curipéschitz, Itinerarium der Botschaften des Jos. v. Lamberg, etc., ed. by Elenore Grönfin Lemberg-Schwarzburg, Innsbruck 1910, p. 43 sqq.), Catarino Zeno (1550, in his Descrizione del viaggio di Constantinopoli, 1550 in the Stärte of the Yugoslav Academy of Agram, vol. x.) and Melchior v. Selditz (1555, in his Gründlichen Beschreibung der Wallfahr, Gorlitz 1580) were very little impressed by Novibazar, Paolo Contarini (1580, in his Diario del viaggio de Venezia a Constantinopoli, Venice 1856: note on Girmian-Frankancion) and the Sieur de
Stochove (c. 1630, cf. *Voyage du Sieur de Stochove fait es années 1630, 1631, 1632, 1633*, Brussels 1643, p. 30: at second hand and not from his own observation) and also Louis de Hayes, Sieur de Courmenin (1621, in *Voyage de Laos out par le commandement de Rey en année 1621 par Le Sieur L[i]e[C] Courmenin*, Paris 1624) devote far more attention to it. P. Contarini spent a day of rest in the caravanserai of Novibazar (New Bazar) which he found was a town with 6,000 Turkish and 100 Christian houses. He mentions the Ragan settlement and the 16 mosques, the very long bazaar, which attains all kinds of local and international stores for sale (mostly articles of iron from the adjoining Günhavica in the S.E. of Novibazar which was as early as 1396 the seat of an Ottoman judge and had a customs house). The Sieur de Stochove describes *La ville de Genti Bazar, qui en Turez veut dire nouveau marché, elle est située sur la petite rivière de Rusa en un lieu haut et bas, et qui en rend la vue fort agréable, son circuit est de demy lieue sans entrer enfermé de murailles, est la ville la plus considérable que l'on trouve depuis la frontière* (i.e. the Dalmatian-Bosnian frontier). Louis de Hayes in 1621 found Igni Bazar (i.e. Yeli Bazar) a pleasant place with one storey houses. It was under the government of Barija judges and the Chief Kadi of Sarajevo (q.v.). The description given by the traveller Ewliya Çelebi (q.v.) of his visit to Novibazar (1669) (v. 544 sq.) is as usual full of exaggerations. He says there were 45 quarters in Novibazar, 23 large and 11 small mosques, 5 medresses and 2 monasteries. Of the mosques he mentions the Altun mosque and the mosque of Ghazi Tsk-Beg formerly a church, and the Taghçupru mosque and mosque of “Hadjagi mašterem” (2). The bazaar had 1,110 shops, and there were 7 churches of the *Serbs, Bulgars and Latins* in Novibazar. He particularly praises the white unmixed bread and 48 kinds of apples and 35 of pears. Among the nobilities of the time Hacı Ali Efendi, who had “cleansed” the roads to Bosnia and Herzegovina and erected bridges and rest-houses, and Dhu T-Fiğsr-Zâde Mahmûd Ağha receives words of praise. Both had palaces (sârâ) in Novibazar. In consequence of its exceedingly important military position and as the key to Bosnia for Turkey in Europe (cf. F. Kanitz, *Serbien*, Leipzig 1868, p. 200 sq.) Novibazar has frequently played a part in military history. In 1689 it was occupied under the Margrave of Baden; but the Christian inhabitants, disillusioned by the tyrannical attitude of the garrison, the excesses of the imperial armies, the heavy taxation, the intolerance shown the orthodox clergy and the partisanship for the Roman Catholic church, soon turned against their new masters and very soon Novibazar with the whole of Old Serbia again passed to the Ottomans. In 1737 Novibazar was again occupied for a few months by the imperial forces, but as a result of the careless leadership of the generals fell with Nish again into Turkish hands and this settled the disastrous result of the war for Austria (cf. F. Kanitz, op. cit., p. 203 sq. and the Turkish description of the Bosnian campaign, from the pen of the kadi of Novi, 'Omar Efendi' [q.v.], e.g. in the German version by J. N. v. Dubs, Vienna 1879, p. 134 sqq. or the English by C. Fraser, London 1830, p. 49 sqq.). It is remarkable that the defence of Novibazar in the Turkish period were never what the strategic importance of the place demanded (cf. the description in A. Boué, *Die Europäische Türkei*, vol. 1, Vienna 1859, p. 549). In view of the stubborn defiance and steady opposition of the people, the Ottoman authorities — Novibazar was the seat of a kâim-malâmân [q.v.] — had a difficult time. General Hasan Paşa who was to carry out the disarming in 1880, was killed in the street in a rising and those guilty were never brought to book. Unpopular officials were as a rule simply driven out. As the Porte ceased continuous fighting with the rebellious population of the sanjak it made no attempt to make a regular military expedition against them. The result was that all branches of administration, trade, agriculture and industry gradually went to pieces. From the xviith century therefore Novibazar was always a place of little importance. Nor did it revolve under the semi-independent feudal lords of the family of Ferhadagić (Ferhādagić). Of the remains of Muslim times in Novibazar may be mentioned the fortress (bašta) built in 1103 (1690) in the reign of Sultan Ahmed II. The surrounding buildings as a rule date only from the time of Abl al-Ḥamīd II. Historically most interesting is the Altun ʿAlem Mosque built by Ghazi Tsk-Beg (see above), the founder of Novibazar. Behind it lie the remains of the old mosque of the Chief Kâdi of Sarajevo (q.v.).

**NUBA, name of a country [and people?] to the South of Egypt** The names Nuba, Nubian, Nuba are commonly used without scientific precision and it is only in the linguistic sense that they have an unambiguous meaning. The frontier separating Nuba from Egypt proper is well defined as the first cataract of the Nile in the neighbourhood of Assawan, and the area where Nubian is spoken nowadays ends in the vicinity of the 18th parallel. The southern limit of Nubia is sometimes placed as far south as the junction of the Atbara and the Nile or even the confluence of the two. Nubia is often sub-divided into Lower Nubia
from Aswān to Wādi Ḥalfa and Upper Nubia from Wādi Ḥalfa southwards, but neither term has any political or administrative significance.

The medieval Arabic writers are equally vague about the southern extent of Nubia, the region immediately bordering on Egypt, which bore the name of Maris, seems to have been regarded as Nubia per excellence; to the south of it lay Muṣṭarrah with its capital at Dongola (Dunqula, Dunqula), and beyond this the kingdom of 'Alwa the capital of which was Sōba, near the site of the modern Kharga. According to the tenth-century author 'Abd Allāh b. Aḥmad b. Salih (Sulaimi), quoted by Maqrizi, Maris and Muṣṭarrah had distinct languages, and the frontier between them was situated three post-stations (barid) to the south of the Third Cataract; politically, however, Maris formed part of Muṣṭarrah and this probably accounts for the fact that Ibn Sulīm immediately afterwards places the commencement of Muṣṭarrah at a day's journey from Aswān. The frontier between Muṣṭarrah and 'Alwa was the district of al-Abwāh, a name still in use for the country round Kabāysiyya in Berber province. 'Alwa is generally placed outside Nubia, and the preamble to the treaty which governed the political relations between Nubians and Arabs makes its provisions incumbent on the king of the Nubians and all people of his dominions .... from the frontier of Aswān to the frontier of 'Alwa'; yet Mas'ūdi speaks of 'Alwa as part of Nubia, and states that it is under the political suzerainty of Muṣṭarrah. According to Yāḳūṭ, Nubia extends along the Nile a distance of eighty days journey, Dongola being situated halfway at forty days distance from Aswān; of 'Alwa he speaks, with obvious exaggeration of the distance, as a people beyond Nubia three months' journey from the king of the Nūba, whose official title is 'king of Muṣṭarrah and Nubia'.

The modern conventional division of the population of the northern Sudān into Nubian, Beja, and Arab is in the main a linguistic one and does not correspond to any clearly-marked racial divisions. The "Nubian" type, itself a hybrid one, which poured into the Sudan in the middle ages and eventually brought about the fall of the Christian kingdoms of Dongola and 'Alwa. The numerous Danāğıla colonies on the Blue and White Niles have given up their language in favour of Arabic, and the same applies to a branch of the Maḥās, settled since the sixteenth century in the neighbourhood of Kharga; who now claim to be descended from the Khraddj of Arabia. Throughout the northern Sudān the original Nubian stratum has coalesced with the Arabs to such an extent that it is no longer possible to separate the two strains. This fusion has also affected the groups which still speak Nubian, though the Barābrā may be said to have maintained a separate identity and to have absorbed the foreign elements rather than the reverse. The Danāğıla repudiate the appellation Nubian, and the term Barābrā is used only by Egyptians and other foreigners, while the people themselves prefer to call themselves by their tribal names (Kenūz, Maḥās, Sukkot). It is only in recent times that they have begun to develop a national sentiment as Nubians and to make occasional use of the name.

Language. The Nubian language can scarcely be indigenous to the Nile Valley, and it is in no way connected with the language of the Beromitic inscriptions which preceded it in that area. The problem of its linguistic grouping has not been satisfactorily solved: both Hamitic and Sudanic features are present, and L. Reinisch (Die sprachliche Stellung des Nũba, Vienna 1911) regards it as a connecting link between the two groups. G. W. Murray (Sudan Notes and Records, vol. iii.) suggests the conclusion that in the remote past Dinka-Shilluk, Bari-Masai, and Nubian had a common origin, and that they all have to a greater or lesser degree been permeated by Hamitic influence. W. Menhof (Eine Studienfahrt nach Korofan) definitely classes Nubian as a Hamitic language.

The following branches are distinguished:

a. Nilotic Nubian (the language of the Barābrā and Danāğila) with three dialects: Kenūz, Maḥās, and Dongali; the latter is the third, though separated geographically, form a single dialect group. A fourth dialect distinguished by Reinisch (Fadida, Faddikka) is stated by Lepsius to be only a variety of Maḥās.

d. Hill Nubian spoken by a number of negroid tribes in the present province of Korofan. The area in question is inhabited by a medley of tribes of different linguistic and racial stocks, and it is only in the case of the Nubian-speaking groups (mainly in the north) that the appellation Nubia is justified. The best known dialect is that of Dilling (Delen). A form of Hill Nubian is also spoken by the people of Djebel Mādūb in northern Dāfūr.

On the problem of the racial and historical connexion between Hill Nubia and Nilotic Nubians, see below.

The isolated dialect of the Birched tribe in Dāfūr designated by Zylilar as South-West Nubian.

Old Nubian, the literary language of medieval Nubia. The examples which have survived belong to the viii—ix centuries and consist of homelitic and edifying pieces intended for the common people, as distinct from strictly theological literature for which Greek was employed. The language of these texts approximates most closely to modern Maḥās, although the provenance of the existing remains is the northernmost part of Nubia where Kenūz is spoken. Scanty remains from Upper Nubia justify the conclusion that Nubian (perhaps in a form more closely connected with the Hill dialects) was also used for literary purposes in the kingdom of 'Alwa.

Modern Nubian has no literature apart from biblical translations produced under European influence. The Danāğila and Barābrā use only Arabic for written communications and for literary purposes.

History. In speaking of the early history of the country the name Nubia is misleading, as there is no evidence of its use in ancient Egypt as a tribal or geographical name. To the Egyptians Lower Nubia was known as Wawat, and Upper
Nubia as Kaš (the Biblical Kush) which corresponds to the classical Ethiopia. From the earliest times there existed relations of trade, conquest, and cultural influence between Egypt and its southern neighbour, and under the Middle Empire the Egyptian penetration of what is now Dongola Province led to the development of a special local civilization based on the culture of Egypt, but deeply affected by local forms, materials and customs. Under the New Empire Wawat and Kaš were governed by Egyptian viceroy, and Napata (Qebel Barkal) became an important centre of the cult of Amon-Ra. Later Napata was the capital of an independent Ethiopian kingdom which, in its turn, conquered Egypt, and five kings of Napata sat on the throne of the Pharaohs (the 25th dynasty, n. c. 730–663). Subsequently the centre of gravity shifted southwards and Meroe, about 130 miles north of Khartum, was the capital of a kingdom which still preserved the elements of a civilization based on that of Egypt, though the isolation of the country, which was now almost complete, led to a rapid decline. In circumstances of which we have no detailed knowledge, the character of the population was modified owing to the ingress of negroid elements from Kordofan and the Dajzara, and cultural contact with the north diminished to such an extent that to the Hellenistic-Roman world Ethiopia was but vaguely known, as indeed was the case of medieval Nubia in its relation to the Muslim world. Byzantine missionaries, however, introduced Christianity in the sixth century, at which period the two kingdoms of Muṣarra and 'Alwa were already in existence: the Maccuritae, we are told by the chronicler, became Christians in 569 and the Alosaeans in 580, and an embassy of the Maccuritae visited Constantinople in 573.

The name Nubian appears for the first time in the Hellenistic-Roman age and the earliest occurrence seems to be in Eratosthenes (quoted by Strabo, xvii.) who speaks of the Noubai as “a great race living in Libya on the left side of the course of the Nile extending from Meroe to the bends of the river”. In this passage, as well as in other references in Greek and Latin writers, Nubians are clearly distinguished from Lybians, Ethiopians, and other Meroitic folk, and as late as ca. 550 A.D. a kinglet of Lower Nubia speaks of himself as basileus Neubadnos kai ean ton Alisitow. It is not until the Muslim period that Nubia is found to have replaced Ethiopia as the name for the whole of the riverain country to the south of Egypt.

Of the events which brought about this change of name (no doubt signifying a change in language and in the ethnic character of the people) there is no historical record. From the linguistic evidence it is probable enough that the name originally belonged to the negroids of Kordofan, and that the Noubai (Noubades, Nubate) of the classical writers were immigrants from the southwest who, as a result of political ascendency, imposed their language on the Ethiopians of the Nile valley. The fact, however, cannot be disregarded that the modern Hill Nuba are strikingly dissimilar in physical character and culture to the mainly Hamitic Barahra-Dangala, and on this ground the possibility of a racial connexion of the two groups has been challenged by C. G. Seligman and H. A. MacMichael (see esp. MacMichael, History, i. 14 sq.). Yet it is certain that the separation of the dialects must have taken place at a comparatively early date (before Christianity); the presence of “Nubian” speech in Kordofan can therefore not be explained as the result of Danagla settlement in recent times. For a discussion of this vexed question see Ernst Zuhler, Zur Stellung der Darfur-Nubischen, in W.Z.K.M., vol. xxxvii.; and S. Hillelson, Nubian Origins, in Sudan Notes and Records, vol. xxiii. (1950). What can be said with certainty is that the Arab conquerors of Egypt found on their southern frontier a population mainly Hamitic in the north, but containing negroid elements which increased in importance in the south. These people were Jacobite Christians, and they used Nubian as the language of government and letters.

Yākṣīt quotes two sayings ascribed to the prophet in which Nubians are praised as faithful friends and useful slaves, but there can hardly have been any contact between Arabs and Nubians before the two invasions (A.D. 641–642 and 651–652) the second of which carried the Arabs as far as Dongola (q.v.). As a result of these raids the relations between Muslims and Nubians were regulated by treaties which provided a system of mutual tolerance and non-interference; the tribute of slaves (baṣīr [q.v.] from πασαρί) to which the Nubians undertook to pay annually was not so much a sign of submission as the basis for an exchange of commodities. Intercourse between the two countries, whether commercial or political, remained very restricted, and the interests of the Arabs to the south of Egypt were in the main confined to the exploitation of the mines of al-Allāḥ, which affected the Bedja rather than the Nubians. An invasion of Upper Egypt, said to have been undertaken by the Nubian king Kyrikos in A.D. 737 (or between 744 and 750) is recorded only on the doubtful evidence of Christian writers and ignored by Muslim historians. Minor raids occurred from time to time, and the “tribute” was occasionally withheld, but on the whole relations were peaceful. Muslims began to penetrate into Nubia at an early date, presumably for purposes of trade, and as early as the tenth century they are said to have had a special lodging-place (rabah) in the capital of ‘Alwa. According to a Syrian writer (quoted by Mec., Renaissance des Islams, p. 32), Nubians resident in the lands of the caliphate remitted taxes to their own king and enjoyed the privilege of an autonomous jurisdiction. Further evidence of friendly relations is found in an account of an embassy to Baghdad in the time of al-Mutawakkil when a Nubian prince was honourably entertained.

Of internal conditions in Nubia we know very little; there are no native sources of information and Muslim accounts throw light only on special periods and occasional contacts. The fullest descriptive accounts, both dating from the tenth century A.D., are those of Majdu (ii. 302; iii. 31–34, 39–43) and Ibn Salim (Sulaim) who wrote an account of “Nubia, Muṣarra, ‘Alwa, the Budja, and the Nile”, of which extensive fragments are extant in the Khita of Maṣūlī (ed. Viet., vol. iii., ch. xxx. sqq.).

During the reign of Saladin Nubian affairs came into some prominence owing to the support given by the semi-Nubian Banū Kanṣ (on whom see below) to a Fāṣimid pretender, and Lower Nubia was
invaded by Saladin’s brother Turān-Shāh (1172—1179) who pillaged Ibrim and took many captives, but reported unfavourably on the resources of the country with the result that a planned annexation was not proceeded with. Soon afterwards (about 1208), the Armenian Abū Ṣāliḥ composed his account of the Churches and Monasteries of Egypt (ed. and translated by B. T. A. Bayly, Oxford 1895) which contains some interesting details about Maris, Muṣarrar, and ‘Alva, but must be used with caution owing to the confusion in the writer’s mind between Nubia and Abyssinia and his uncritical use of older authorities.

The factors which brought about the disintegration of the Nubian kingdom and the dispossession of the country were the immigration of Arab tribes, the rise of the Bānū Kanz, and the intervention in Nubian affairs of the Mamlük rulers of Egypt, especially during the reigns of al-Ẓāhir Baibars [q. v.] and al-Manṣūr Kālimūn [q. v.].

The Bānū Kanz are first heard of in 1202 when the Fāṭimid caliph al-Hākim, as a reward for services rendered, conferred the hereditary title of Kanz al-Dawla on Abū Makālim Hībat-Allāh, a chief of the Rāfī’a Arabs who had settled on the borderland between Egypt and the Sūdān. Already in the tenth century the Rāfī’a had gained control of the mines of al-‘Allāqī and imposed their rule on the Bēḍja with whom they allied themselves by intermarriage. Another section, settled near Aswān, fraternized with the local Nubians, and the tribe, formed by this amalgamation and ruled by the Kanz al-Dawla dynasty, came to be known as the Bānū Kanz; they are represented by the Kenzū of the present day. During the reign of the Mamlūks they were virtually in independent control of Upper Egypt, alternately in alliance with or in revolt against the Mamlūk government, and though repressed at times with a heavy hand, they remained a powerful tribe until the Ottoman conquest of Egypt. Before this event, however, they had played their part, together with nomad Avars and Mamlūk troops, in the destruction of Nubian independence.

The Bāhārī Mamlūks, for reasons not apparent in our sources, departed from the traditional policy of Muslim Egypt, and actively intervened in Nubian affairs. The pretext for the expedition undertaken by the generals of Baibars and Kālimūn were non-payment of the tribute and, more frequently, the championship of Nubian pretenders who had solicited Egyptian support in order to gain the throne. On several occasions such pretenders of the Mamlūk government were installed in Dongola only to lose the throne again as soon as the Egyptian troops withdrew. A formal treaty concluded with one of these kings virtually established an Egyptian protectorate. Meanwhile the disintegration of the kingdom went on under the pressure of Arab immigration, and Arab chiefs who married into the royal house took advantage of the matrilineal line of succession to grasp at the throne. The age-long Christianity of Nubia was gradually undermined and in the xivth century Muslim kings begin to appear: the first king to bear a Muslim name was Abū-Allāh b. Sanā who was installed in 1316 and after a short reign lost the throne to a Kanz al-Dawla. From the Kitāb al-Turjīf of Ahmad b. Yahyā b. Fadl Allāh, written some time between 1340 and 1349, we learn that at this date Christian kings still alternated with Muslims, and Ibn Baṭṭūṭā in 1354 (iv. 396) speaks of the Nubians as Christians, but mentions a Muslim king (Ibn Kanz al-Dun) of Dongola. The conversion of the common people we have no details: no doubt it was brought about by the absorption of the native inhabitants, or those who survived, in the Arab tribes.

The immigration itself has left little trace in the pages of the historians, though the outlines of the process can be reconstructed from occasional references and from oral tradition. The nomads who had entered Egypt in the wake of the first conquest can never have found that country congenial to their mode of life, and the rise of non-Arab dynasties tended to make conversion less attractive, while the Sūdān seemed to offer all the advantages, from the nomads’ point of view, that Egypt denied. For a long time the kingdom of Dongola formed an effective barrier to southward expansion, but a gradual infiltration of Arabs must have begun at a comparatively early date, even though the end of the process was not accomplished for several centuries.

The early stages of the movement are seen in the conditions depicted in the story of Abū ‘Abd al-Raḥmān al-Qumari, the events of which are laid in the reign of Ibn Tulun (Maqrizi’s Kitāb al-Muqaffa, quoted by Quatremère, li. 59—80). Arabs of Rāfī’a and Djihaania, led into the Sūdān by that adventurous prince, have fraternized with the Bēḍja and exploit the mines of the Eastern Desert, but the Nile is forbidden them and Nubia is too strong to be attempted by force of arms. A fratricidal struggle in the Nubian royal house provides an opportunity for an alliance between the Arabs and a princely pretender to the throne. Acts of unblushing treachery are committed on both sides and in the end the Arabs have the worst of the encounter. The end of the process is seen in the fourteenth century. The kingdom of Nubia had now to all intents and purposes ceased to exist and such kings as reigned in name were puppets of the Arab tribes. It is from this period, the early years of the fourteenth century, that the immigration of most of the camel-owning nomads of the Sūdān dates. Generally speaking, it seems, the Djihaania and their allies, most of whom we may be sure were Fazāra, loosened their hordes southwards and westwards, leaving the Bānū Kanz and Ikrīma in northern Nubia and Upper Egypt (MacMichael, loc. cit., p. 187).

Of ‘Alwa nothing is heard at this period, but no doubt the course of events was similar to that in the northern kingdom, and already in the time of Ibn Khaldūn (1332—1406) we hear of branches of Djihaania “close to the Abyssinians”, that is to say no doubt on the upper reaches of the Blue Nile in the southern Djihaaria. The kingdom of ‘Alwa nevertheless lingered on precariously and Nubian Christianity was still a living memory in the time of the Portuguese Alvares (1520—1527), but about the year 1500 Sōba fell to an alliance of Kawšma Arabs (a branch of Rafa’i-Djihaania) and the negroi Fundj [q. v.] who here for the first time appear in history.

The fifteenth century is almost completely barren of records relating to Nubia, and the historical memory of the present inhabitants remembers little of pre-Fundj days. With the coming of the Fundj who soon extended their influence to Dongola, the history of Nubia is merged in that of the
Sūdān, and the Nubians, now Muslims and deeply affected by racial mixture with their conquerors, survive only as a linguistic minority on the northern fringe of their ancient kingdom.

Lower Nubia, however, was politically separated from the Fundj kingdom by Selim I who annexed the country south of Aswān as far as the neighbourhood of the Third Cataract, and garrisoned it with Turks and fishermen called Ghuzz by the people of the Sūdān. From these many of the modern Barābra claim to be descended.

The Barābra-Đanagla of the present day (in the Egyptian province of Aswān and the Sūdān provinces of Halīf and Dongola) are a peaceful race of cultivators and skilful boatmen of the Nile. Owing to the poverty of their country and aided by an enterprise of disposition, large numbers seek their livelihood in Egypt and the Sūdān where they are found everywhere engaged in various forms of menial employment. The Đanagla have also spread all over the Sūdān as traders, and in the nineteenth century they played an important part, together with their rivals, the Djalliyin, in the trade of the Upper Nile and the Bahr al-Ghazāl where they adventured as slave-traders, sailors, and mercenary troops.

The men are generally bilingual in Nubian and Arabic which latter they speak ungrammatically and with an accent of their own. Those in foreign employment show themselves remarkably adaptable to alien ideas, at the same time they are taciturn of their own customs and clannish to a degree. Under modern conditions they are keen to take advantage of educational facilities, and show an aptitude for the educated professions. In the past they have made no important contribution to the intellectual and spiritual life of Islam and produced no scholars of note. Dhu l-Đumm the mystic [q.v.] is said to have been of Nubian origin, but he is generally called "the Egyptian". The most remarkable figure of their race is Muhammad Aḥmad [q.v.], the Mahdi of the Sūdān (died 1885), who was a Dongolawi, though his family claim to be sharifs. The Barābra and Đanagla are generally devout Muslims, and most of them belong to the Miḥrānīya (Khatmiya) tariqa.

(S. Hillelson)

NUBANDJAN. [See Shilistán.]

NŪBĀR PASHA (1825–1899), an Egyptian statesman, who played a most prominent part in Egyptian politics in the nineteenth century. Summoned by his uncle Boggos Bey, the Minister of Foreign Affairs and of Commerce under Muhammad Ali, he came to Egypt in 1824 as the agent of the government service to second secretary to the Viceroy. In 1848 he accompanied Ibrahim Pasha to Europe as secretary and interpreter. Under Sa'id, Nūbār began to play a part in public life. His independent spirit, his methodical and precise mind were revealed in the organisation of the Egyptian railways which he put in order in the space of six months (1857).

But it was under Ismā'il that he fully revealed his gifts as a negotiator and diplomatist. He was however not called upon to play a national part because of his Armenian origin and his ignorance of the language of the country. Raised to the rank of Pasha at the beginning of the reign (1863) he hastened to take advantage of the support and advanced views of the Viceroy to carry through a great scheme: to encourage externally the independence of Egypt and its development not in Asia — this was Isrā'īlim's idea — but in Africa where her destinies summoned her, and at home the regeneration of Egypt with the help of Europe. From the first Nūbār Pasha grasped the great truths of the Egyptian question. But if the conception was grandiose, the execution of the scheme proved difficult on account of the confusion of interests and the European jealousies. These inherent difficulties in the Egyptian problem proved impediments to many solutions and the policy of reform frequently had to twist its way round obstacles of all kinds.

On the smaller matters Egypt had to wage an unequal struggle with Europe. Nūbār conducted the struggle on three fronts at the same time, on three fundamental questions.

The question of the Suez Canal. On Ismā'il's accession the Company formed a state within the state and constituted in the very heart of Egypt a kind of colony, as a result of the lands it had obtained along the sea canal and the fresh water canals which were linked up with it. Nūbār conducted negotiations in Constantinople and in Paris with the object of securing the territorial sovereignty of Egypt. His activity ended in the famous decision of the Emperor Napoleon III on July 6, 1864, who ordered Egypt to pay the Company $4,000,000 francs to regain her rights. This enormous indemnity was nevertheless far from bringing about a final settlement.
The question of judicial reforms. Nūbār used often to say: "Give Egypt water and justice and the country will be happy and prosperous". But in order to place justice on a sound footing so that it could protect the native against the government and the European who was exploiting him and particular against the arbitrary decisions of the consuls, each of whom laid down his own law to the governed and governors alike, Nūbār thought of organizing a mixed system of justice composed of Egyptian and European elements and thus establishing uniformity of jurisdiction, legislation and executive action. As a result of the systematic opposition of France and of certain powers interested in maintaining the "privileges", the mixed tribunals were not established till 1875 after ten years of striving and of waiting endured by the government.

The question of autonomy. The territorial servitudes inflicted by the Suez Canal and the system of capitulations did not prevent Nūbār from remembering the political restrictions imposed by Turkey, the suzerain power. From 1863 to 1873 Nūbār endeavoured to extract from Constantinople by negotiation and bribery privileges which would enable the work of progress to develop freely. After the firmans of 1866 and 1867, Egypt obtained the famous firman of 1873 which constituted a new charter conferring on the viceroy the title of Khedive (q.v.), hereditary succession to the throne in direct line from father to son, an increase in the army — limited to 15,000 in 1840 — and lastly the right to conclude loans and commercial treaties with the Powers.

But the error made by Nūbār and the Khedive was to consolidate Egyptian independence in theory but not in practice. Nūbār was anxious for the introduction of capital and European enterprise: a beneficial idea but also dangerous because the Khedive, encouraged by his minister, became involved without due consideration in a disastrous series of loans. The various enterprises which arose with the rapid development of the resources of the country had to be put in the hands of companies like the Steam Navigation Company, the Sudan Company, the Agricultural and the Trading Companies, in which Nūbār, Oppenheim, Dervieu and others were the chief directors. The failures of the companies were liquidated by Egypt which made good all losses. The collaboration of Nūbār with these financiers brought an atmosphere of suspicion into the good understanding between the minister and the Khedive, as did the negotiations conducted by him to conclude loans in Paris and elsewhere.

But the tragic side of the question lay in the accumulation of a debt of £90,000,000 which opened the gates of the Delta to foreign control. There is no doubt that Nūbār had always resolutely opposed any foreign interference. Down to 1875, during the little time that he was actually in Egypt — he was often on missions to Europe — Nūbār endeavoured to act as a check on absolute rule and to oppose all European interference from wherever it came. He was not popular either in England or France. He was rightly distrusted in the entourage of the Khedive also. But in the end of 1875 an event took place which modified his attitude. England having taken the unusual step of intervening in Egypt to defend the private interests of some of her capitalists and sending a mission under Mr. Cave to conduct an enquiry in the country, Nūbār, with his remarkable political instinct, felt the immediate danger of such interference and resolved to oppose it by all means. He was able to provoke the intervention of the consuls-general of Russia and Germany, who offered the Khedive the support of their governments. Ismā‘īl listened to this offer, which was a grave political error. He went farther and communicated with the English consul and did not scruple to sacrifice his minister.

Nūbār had to hand in his resignation on Jan. 5, 1876 and to leave Egypt on March 21. Henceforth he swore a bitter feud against his master and his attitude gradually changed and inclined to England. In deciding to undermine the personal authority of the ruler, and allying himself with the foreigner, without being able to fix in advance how far the alliance was to go, in a word in wishing to humble his sovereign, Nūbār weakened his country for the benefit of England. For it was to the government of England that he appealed in 1876 to intervene, acting on the pretext that intervention was here inevitable as a result of the enormous debts contracted by Egypt and that England’s action would be of more benefit to Egypt than that of any other power. The result was that England finally imposed on the Khedive both Nūbār and her complete control by exorting from him the rescript of Aug. 28, 1878 which established a "responsible ministry" presided over nominally by Nūbār but in effect by Rivers Wilson as Minister of Finance and de Bignières as Minister of Public Works. This dangerous innovation — the formation of a European ministry not responsible to the Khedive whose authority was now negligible, and installed in the heart of the country to support European policy and high finance — aroused the Egyptians from their lethargy and created general discontent. The Khedive became at once popular and his cause was identified with that of the nation. The result was the outbreak of Feb. 19, 1879 which removed the Khedive from power. The European ministry presided over by the crown prince was formed but the evil remained. Finally Ismā‘īl, emboldened by public opinion, dismissed the European ministers (April 7) and formed a national ministry under Sharif Pasha. But the Powers — and Nūbār’s doings in Europe were not without influence on their decision — decided on the ruin of the Khedive and succeeded with the help of Turkey in deposing him (June 26).

Two years after the English occupation, Nūbār returned to Egypt to form a ministry after the resignation of Sharif Pasha as a protest against the evacuation of the Sudan by Egypt, dictated by England. Nūbār endeavoured in vain to come to terms with England and to put a check on her policy of practically depriving Egypt of her territory in Africa (Jan. 1884 — June 1888).

He again formed a ministry (April 16, 1894) but he soon had to submit to the control of the English councillor in the Ministry of the Interior, and seeing himself powerless against Lord Cromer’s policy which aimed at controlling the whole of the administration he had quickly to retire from the scene (Nov. 1895).

Nūbār then went to Europe to compile his memoirs — still unpublished — and peacefully await his end. He was, to sum up, a great minister, a statesman who made mistakes, it is true, but
the fates were against him: 1875 marks the final blocking of his great project. We must not however forget the early struggles in which he extorted from Europe and from Turkey piece by piece rights and privileges which constituted a great boon to his country.

(Edward B. T. J. Peterson)

**NUBUWWA** [See Nabi.]

**Nūḥ, the Noah of the Bible,** is a particularly popular figure in the Kur'ān and in Muslim legend. The 'alā'ī gives 15 virtues by which Nūḥ is distinguished among the prophets. The Bible does not regard Noah as a prophet. In the Kur'ān Nūḥ is the first prophet of punishment, who is followed by Ḥūd, Sāliḥ, Idrīs, Shu‘āb and Mūṣa. Ibrāhīm is one of his following (Shu‘a) (Sūra xxvii. 81). He is the perspicuous admonisher (Muslih miṣri) of the Bible (Sūra xxi. 2), the “true believer” is named Nūḥ the messenger of God” (Sūra 107, 1), the abd al-‘abīr, “the grateful servant of God” (xxvii. 3). Allāh enters into a covenant with Nūḥ just as with Muhammad, Ibrāhīm, Mūṣa and Ḥūd (xxviii. 7). Peace and blessings are promised him (xi. 50). Muhammad is fond of seeing himself reflected in the earlier prophets. In the case of Nūḥ, the Muslim Kur'ān exegetes have already noticed this (see Grünbaum, *Neue Beiträge*, p. 90). Muhammad puts into the mouth of Nūḥ things that he would himself like to say and into the mouths of his opponents what he himself has heard from his. Nūḥ is reproached with being only one of the people (27—74). God should rather have sent an angel (xxii. 24). Nūḥ is wrong (vii. 58). he is lying, deceiving (vii. 62), is possessed by qīrn (liv. 9), only the lowest join him (xxiii. 111). When Nūḥ replies: “It is grievous to you that I live among you, I seek no reward, my reward is with Allāh (x. 72—74; xi. 31); I do not claim to possess Allāh's treasures, to know his secrets, to be an angel and I cannot say to those whom ye despise, God shall not give you any good” (x. 31—33), we have here an echo of Muhammad's defence and embarrassment about many of his followers. Muhammad pictures events as follows: Allāh sends Nūḥ to the sinful people. Sūra lxxi. which bears his name, gives one of these sermons threatening punishment for which other analogies can be found. The people scorn him. Allāh commands him to build an ark by divine inspiration. Then the ‘chaldrum boils” (xi. 42; xxiii. 27). The waters drown everything: only two of every kind of living creature are saved and the believers whom Nūḥ takes into the ark with him. But there were very few who believed. Nūḥ appeals even to his son in vain; the latter takes refuge on a mountain but is drowned. When Nūḥ bids the waters be still, the ark lands on mount Ijūdī (q. v.; xi. 27—31). Not only Noah's son but also his wife with Iltī's wife are sinners (lxvi. 10). From the Haggada is developed, as Geiger shows, the following elements of this Qur'ānic legend of Nūḥ: 1. Nūḥ appears as a prophet and admonisher; 2. his people laugh at the ark; 3. his family is punished with hot water (main passages: Talm. Sanhedrin, 10a; Gen. Rabba, xxix.—xxvii.).

The post-Kur'ānic legend of Nūḥ as in other cases fills up the gaps, gives the names of those not mentioned in the Kur'ān, makes many links e.g. connects Nūḥ with Fārūq of the Persian epic although it is pointed out that the Magi (Persians) do not know the story of the flood. Nūḥ's wife is called 'Āliya and her sin is that she desires Iltī for his people as nāqān, the names of Nūḥ's sons, Sāmū, Ḥām and Yāfūq are known to Kur'ān exegesis from the Bible but it also gives the name of Nūḥ's sinful son who perished in the flood: Kānān, “whom the Arabs call Yāmī”. Muhammad's statement that Nūḥ was 950 years of age at the time of the flood (īfā'ān (xxix. 13, 14) is probably based on Gen. 16. 39 which says Nūḥ lived 950 years in all, but on the other hand, it serves as a basis for calculations which make Nūḥ the first muhammad; according to the Khab al-Muhammadin of Abū ʿAbd Allāh al-Sijistani (ed. Golzheir, p. 1), who begins his book with Nūḥ, he lived 1,450 years. Yet in his dying hour he describes his life as a house with two doors in which one door is closed and the other is opened. Muslim legend knows the Biblical story of Nūḥ, his times and his sons, but embellishes it greatly and in al-Kisā' it becomes a romance. From the union of Kābīl's and Shēṭē's descendants arises a sinful people which rejects Nūḥ's warnings. He therefore at God's command builds the ark from trees which he has himself planted. As he is hammering and building the people mock him: "once a prophet, now a carpenter?", "a ship for the mainland". The ark had a head and tail like a cock, a body like a bird (Thcab). How was the ark built? At the wish of the apostles, Jesus arises (for Hām) b. Nūḥ from the dead and he describes the ark and its arrangements: in the lower storey were the quadrupeds, in the next the human beings and in the top the birds. Nūḥ brought the ant into the ark first and the ass last, it was slow because Iblīs was clinging to his tail. Nūḥ called out impatiently: "come in even if Satan is with thee"; so Iblīs also had to be taken in. The pig arose out of the tail of the elephant and the cat from the lion. How could the goat exist alongside of the wolf, or the dove beside the birds of prey? God tampered their instincts. The number of human beings in the ark varies in legend between seven and eighty. Uḏ b. ʿAnāq was also saved along with the believers. Kābīl's race was drowned. Nūḥ also took Adam's body with him which was used to separate the women from the men. For in the ark continence was ordered, for man and beast. Only Hām transgressed and for this was punished with a black skin. The whole was covered with water and only the ʿIjrām (or Kīsā'), also the site of the sanctuary in Jerusalem was spared: the Ka'ba was taken up into heaven and Dījārīl concealed the Black Stone (according to al-Kīsā', the stone was snow white until the Flood). Nūḥ sent out the raven but finding some carrion it forgot Nūḥ; then he sent the dove which brought back an olive leaf in its bill and mud on its feet; as a reward it was given its collar and became a domestic bird. On the day of ʿAshūra' every one came out of the ark, men and beasts fasted and gave thanks to Allāh.

There are many contacts with the Haggada: the
different, it is true) partitioning of the ark, Nūh’s anxiety about the animals, Hāṭsin’s sin and punishment (Sankhedrin, 108a b). The story that the giant Og escaped the Flood is also taken from the Ḥaggada [see Ḥag. b. ‘Anaḥ]. But Mashiḥ legend goes farther than the Bible and Ḥaggada, like Muhammad who sees himself in Nūh.

On the name Nūh: Goldzweker, in D. M. G., xxiv. (1870), 207–211; on Nūh as Mu‘ammār; Goldzweker, Abhandlungen zur arabischen Philologie, ii, Leyden 1899, p. xxxix. and p. 2.

(Bernhard Heiller)

Nūh, the name of two Sāmānids. 1. Abu Muḥammad Nūh I b. Naṣr b. ʿAmmād, called al-Amīr al-Ḥanīd, succeeded his father [see Naṣr]; but the real ruler was the pious theologian Abū ʿAbd Allāh Muhammad b. Ḥamād al-Sulami. The latter long refused to take the title of “wazir” but finally succumbed to Nūh’s pressing representations, and took much less interest in the business of government than in his devotional exercises and theological studies which earned him the name of “al-ḥāṭik al-Ṣaḥwīḥī”. There were also by this time unmistakable symptoms of decline. In 332 (943–944) Abū Ṣalāḥ b. al-ʿAṣḥābī rebelled in Khawārizm and Nūh set out with an army from Bukhārā towards Merw. But when Abū Ṣalāḥ placed himself under the protection of the ruler of the Turks, whose son was a prisoner in Bukhārā, peace was restored, and the rebels were fought at Khātār and Bukhārā in Dūmāda I 336 (Nov.–Dec. 947); Abū Ṣalāḥ was defeated and returned to Saghāniyān. After some time a rumour spread that Nūh intended to attack him once more, whereupon Abū Ṣalāḥ again mobilized his followers. Bakhth and Tokhristan fell into his hands; in Rabi’ I 337 (Sept.–Oct. 948) however, he came into conflict with the government troops and suffered a defeat. The latter sacked Saghāniyān but when they were cut off from communication with Bukhārā, Nūh had to open negotiations for peace and in Dūmāda II of the same year (Dec. 948–Jan. 949) peace was made. The Ottomans sound the following details of the terms of the treaty: at any rate, Abū Ṣalāḥ’s son Abū ʿl-Muẓaffar Abū Allāh was sent to Bukhārā as a hostage and there received with great distinction while Abū Ṣalāḥ remained in Saghāniyān. Since Mānṣūr b. ʿAṣrāfī could not maintain discipline among the troops in Kūrāsān he repeatedly asked Nūh to relieve him of his office. The latter therefore promised Abū Ṣalāḥ to restore him to his old post and when Mānṣūr died in Rabi’ I 340 (Aug.–Sept. 951) Abū Ṣalāḥ was appointed his successor. In Ramaḍān (Jan.–Feb. 952) he left Saghāniyān, the administration of which he gave to his son Abū Mānṣūr Naṣr b. ʿAmmād, then went to Merw where he arrived at Naft, Nūh I b. Ḥāfīẓ (April–May 952). He restored order in Kūrāsān, but when by Nūh’s orders he attacked the Būyid Rukn
al-Dawla and his achievements did not come up to expectations, he was dismissed and Abū Sa‘īd Bakkā b. Mālik al-Farghānī appointed his successor, whereupon Abū ʿAlī sought refuge with Rukn al-Dawla. On Nūh’s dealings with the Bayyids see the article ʿABDALLĀH b. ZAYN. Nūh died in Rabī’ 1 343 (Aug. 954), and his son Abū al-Mālik succeeded him.

SĀMĀNĪDS.

2. Nūh II b. MAṬAṢĪR b. NŪH, called al-Maṭṣār or al-Raḍjī, ascended the throne at the age of 13 after the death of his father in Shawwāl 366 (June 977). The government was at first in the hands of his mother and the able vizier Abū ʿl-Husayn Abī Allāh b. Ahmad al-ʿUthmānī, who assumed office in Rabī’ 1 367 (Nov.-Dec. 977). In 371 (981-982) the powerful Sipahsālār in Khurāsān Abū ʿl-Ḥasan Mūḥammad b. ʿIbrāhīm b. Simdžār, who according to Ibn al-Athīr’s description of him “only obeyed when he pleased” (lī yaʿīs illā fi-ma ʾyūrīt), was dismissed and Ḥusayn al-Dawla Abī ʿl-ʿAbbās Tāsh, a devoted servant of the vizier, put in his place. But the rule of the vizier did not last long; the Sāmānīd armies were defeated by the Bayyids and the vizier himself murdered at the instigation of Ibn Simdžār. When Tāsh went to Bukhārā in order to restore order there, Ibn Simdžār joined forces with the former Mamlūk Fātīk, who had taken part in the war against the Bayyids and offered him his assistance in the conquest of Khurāsān; they then met in Naṣīḥa and seized the country around. When Tāsh heard of this he went to Merw and entered into negotiations with the two allies with the result that it was agreed that Tāsh should retain the supreme command along with Naṣīḥa while Fātīk was to get Bahlī and Ibn Simdžār’s son Abū ʿAlī was to receive Harāt. After some time, in 373 (983-984) or 376 (986), Abī ʿAlī b. Mūḥammad b. ʿUzair was appointed vizier. The latter was hostile to the ʿUbī family and at once dismissed Tāsh and re-tore Ibn Simdžār to the supreme command in Khurāsān. Some officers indeed appealed for Tāsh but their representations were of no avail with the vizier, who was supported by Nūh’s mother. Equally unsuccessful were the efforts of the former Sipahsālār to enforce his claims by force of arms against Ibn Simdžār and Fātīk, although he was supported by the two Bayyids, Fakhr al-Dawla and Shabāl al-Dawla b. ʿAdud al-Dawla. Tāsh was defeated and fled to Ḥudjīn where he died in 377 (987-988) of the plague or, according to another statement, of poison. In Dhū l-Hijjah 378 (March 990) Ibn Simdžār also died and was succeeded by his son Abū ʿAlī, who was jealous of Fātīk and wished to get him out of the way. When he resorted to arms Fātīk could not resist him but fled to Merwarātaḥ. Abū ʿAlī then was recognised as governor of all the provinces south of the Amūl-Daryā and soon made himself independent of the central government in Bukhārā while Fātīk took possession of Bahlī. The amir Abū l-Hārīth Mūḥammad b. Ahmad b. Farīghūn, whom Nūh sent against him, was defeated and joined Fātīk against the lord of Saghānīyān, Tāshir b. Fadl. The latter could not resist the combined forces of the allies; he himself was slain and his army scattered. In addition, there was the intervention of foreign rulers in the domestic affairs of the kingdom. Abū ʿAlī turned to the ʿAkhshābīn Bukhīrī-Khān and arranged with him for a partition of the Sāmānīd kingdom by which Bukhīrī-Khān was to have Transoxania and Abī ʿAlī Khurāsān. As a result Bukhīrī-Khān appeared in Bukhārā in Rabī’ I 382 (May 992) but soon withdrew and died on the way back to Turkestan [cf. the article BUKHĀRĪ-KHĀN]. After Nūh, who had had to evacuate his capital, had returned, Fātīk again appeared on the scene. On the approach of Bukhīrī-Khān he had been sent against him, but, as we are told, presumably correctly, deliberately allowed himself to be defeated, whereupon he submitted and was rewarded by Bukhīrī-Khān with the governorship of Tirmīzh and Bahlī. After the return of Nūh he made an alliance with Abī ʿAlī whereupon the helpless Sāmānīd decided to appease him by help to the Ghaznavīd Sabuktegin [cf. the article SĀMĀNĪDS]. After a time Abī ʿAlī and Fātīk, who had taken refuge with the ʿAbūl Fakhr al-Dawla in Ḥudjīn, wished to return to Khurāsān (386 = 995). At first they had some success but when they encountered Sabuktegin near Tūs, they suffered a decisive defeat and fled to Amūl. They then sent messengers to Bukhārā to appeal for pardon. The authorities turned a deaf ear to Fātīk’s appeal but declared themselves ready to restore Abī ʿAlī to favour. Fātīk therefore fled to the ʿAkhshābīn, while Abī ʿAlī after many vicissitudes finally made his peace with the authorities in Bukhārā through the intervention of the amir Abū l-ʿAbbās Mūḥammad b. Mūḥammad in Surgand; he received very kindly but later thrown into prison with several of his brothers and officers. At the same time, a raid by the ʿAkhshābīn forced Nūh again to appeal to Sabuktegin who was then in Bahlī. The latter at once invaded Transoxania with a large army; but when he demanded that Nūh should join forces with him, Nūh refused on the advice of the vizier Abī ʿAlī b. ʿUzair. Sabuktegin was not at all pleased and Nūh had not only to give in but also to hand over the vizier and Abū ʿAlī, whereupon the vizierate was given to Abī Naṣīḥ Ahmad b. Mūḥammad b. Abī Zaid. Sabuktegin imprisoned Abī ʿAlī and Ibn ʿUzair in Gurdā. The former died in 387 (997) in prison while the vizier was afterwards released. At the conclusion of peace, Sabuktegin and the ʿAkhshābīn agreed that the steppe of Kāzwīn should be the frontier between the Sāmānīds and the ʿAkhshābīn. Fātīk was also recognised as governor of Samarkand. Sabuktegin ruled as an independent sovereign in Khurāsān; in Transoxania the vizier Abī ʿAlī endeavoured to restore order by force but after a few months he was murdered and Nūh appointed his successor Abū l-Muqaffa Mūḥammad b. Ṭahmān al-Barghashi. Nūh died in Rajab 387 (July 997) and was succeeded by his son Abī ʿl-Hārīth MāṬAṢĪR b. NŪH.

(Rev. V. Zetterstēen)

Nūḥ b. Mustafā, an Ottoman theologian and translator. He was born in Anāla but migrated while still quite young to Cairo where he studied all branches of theology and attained a high reputation. He died there in 1659. He wrote a series of theological treatises, some of which are detailed by Brockelmann, G.A.L., ii. 314. His most important work however is his free translation and edition of Shahriārī’s celebrated work on the sects. TERGEMEI MILAT vee-Khawāl which he prepared at the suggestion of a prominent Cairo citizen named Yūsuf Efendi. It exists in manuscript in Berlin (cf. Perisch, Kat., p. 157 sq.), Gotha (Fertsch, Kat., p. 76), London (cf. Vell, Cat., p. 35 sq.), Uppsala (cf. Tornborg, Codices Antiqua, 213), Viena (cf. Fligel, Kat., ii. 190) etc. and was printed in Cairo in 1625. On the considerable differences between this Turkish translation and the original Arabic cf. Rieu in the British Museum Catalogue, p. 35. In his Memoire sur deux effets goniatiques du moyen age, du Cabinet de M. le Duc de Blacas (Paris 1832), p. 28 sqq. J. v. Hammer gave some extracts from the latter part of the work. He also wrote on it in the Wiener Jahrbücher, lxxi, p. 50 and ch. 4.

In 1150 (1741) a certain Yūsuf Efendi wrote a life of Nūḥ b. Mustafā which exists in MS. in Cairo (Cat., viii. 364).

Bibliography: The catalogues of MSS. above mentioned and also Brockelmann, G.A.L., ii. 314 and Muhammad al-Muhfīz, Ṭavīrīkh Khudāyat al-Āthār, Cairo 1868, iv. 458.

(Franz Babinger)

Al-Nukhālī, a town in the Ṭirāq, near al-Kūfa. It is known mainly from the accounts of the battle of Kādīsya. From the statements collected by Yākūt regarding its position it appears that two different places of this name had later to be distinguished, namely one near Kūfa on the road to Syria, which is several times mentioned in the time of the Caliphs ‘Alî and Mu‘āwiyah and another, a watering station between al-Muhfīz and al-‘Akhāra, 3 mīl from al-Hafar, to the right of the road to Mecca. Several encounters took place there during the second battle of Kādīsya. According to al-Kalâbî in al-Bakî, this al-Nukhālī was in the Syrian steppe (al-Fardāyī): Ibn al-Fakîh also seems to be thinking of this region. Caetani assumes that the reference in both cases is to the same place on the edge of the desert. According to Musīl, it perhaps corresponds to the modern Khān Ibn Nkhalīh about 14 miles S. S. E. of Kerbelā and 40 miles N. N. W. of Kūfa.

Al-Bakî, a plain west of the Djielb al-Harwan on the border of Trachonitis in Transjordan. The name al-Nukhā (the ‘cavity’) is quite modern. It is applied to an area which includes the two districts of al-Mukhātān (with its chief town al-Hafar) and Harwan (west of the hills of the same name), i.e. the whole northern half of Transjordan. In the wider sense al-Nukhā includes all the country from al-Lajj, Djaiedîr and al-Balka to the foot of the Djielb al-Harwan, in the narrower sense only the southern part of this; in any case it stretches from al-Sanāmīn to the Djielb al-Duruz (Harwan). To al-Nukhā belong Mu‘ātibin or Mu‘āhibn, Tubnā (now Tilnīb), al-Mahādja, Obaţ, ʿOlmā, al-Musāfiya and al-Faidān already mentioned in Syriac texts of the pre-Muslim period.

NUMAIR b. ‘Āmir ii. Ṣaṣa‘a, an Arab tribe (Wustenfeld, Genial. Tabellen, F 15) inhabiting the western heights of al-Yamāma and those between this region and al-Ḥima Dārīya: a bare and difficult country the nature of which explains the rude and savage character of the Numair. Their name like that of Namir and ‘Ammār borne by other ethnic groups (there are also in the list of Arab tribes a number of other clans with the name Numair: among the Assād, the Tamīm, the Djiṣṭ, the ʿAbdān etc.) is no doubt connected with namir, the Arabian panther; we know the dedications made by Robertson Smith from this fact and from other similar cases, to prove the existence of a system of totemism among the early Arabs (Kinship and Marriage in early Arabia, second ed., p. 234). His theory is now abandoned.

The geographical dictionaries of al-Bakî and Yākūt mention a large number of places in the land of the Numair, especially their wells, and often even record a change of ownership from one tribe to another (e.g. Yākūt, Muḥjam, iii. 822: the well of Ḥish, which formerly belonged to the Tamūnī clans of the Khulāb b. Yarhī, later passed to Numairi); this wealth of references does not however mean that the Numair played an important part in the history of Arabia. It is only due to the fact that the country of the Numair is typically Bedain in its scenery and lends itself to description by poets. The Numair besides were much intermixed with the neighbouring tribes (especially the Tamīm, Bāhila and Kūṣair) and the boundaries of their territory were rather vague.

The Numair, a poor tribe without natural wealth, have always been brigands. The part they took in the pre-Islamic wars was a very modest one and they appear nowhere alongside of the other groups of the great tribe of ‘Āmir b. Ṣaṣa‘a (they hardly played any part in the battle of Fāir al-Riḥ against the Banu ʿl-Hārīth b. Ka‘b and their allies, Nakāfī, ed. Bevan, p. 469–472). It is to
this isolation that they owe the privilege of being known as one of the Ḍumār al-ʿArāb, i.e. a tribe which never allied itself with others (al-Mubarrad, Kāmil, ed. Wright, p. 372; Naṣāʾī, p. 946; Mafāṣīṣ, ed. Lyall, p. 841; on the different tribes to which this title is given, cf. Tāj al-ʿArūs, iii. 107); the other designation of the Numār is ʿAlī b. Ṭāhir, because of the same tribe as is the same ʿAmir (Maĥfīz, p. 259, 12–15 = 771, 2–4; the source is the Qamāḥa of Ibn al-Kalbī, Brit. Mus. MS., fol. 120b–121v). Neither during the life of the Prophet, nor at the beginning of the caliphate, did the Numār make any stir: they appear neither as partisans nor as enemies of Islam. It is only from the Umayyad period that the name begins to appear in histories, but only to record their insubordination to the central power or their exploits as brigands; in the caliphate of ʿAbd al-Malik their refusal to pay tribute brought a punitive expedition against them (al-Baladūrī, Fī Ṭalāb, p. 159; cf. Aḥbār, xvii. 112–113; sīx. 135–136). Another expedition of the same kind but on a larger scale was that sent against them under the famous general of the caliph al-Muta-wakkil, Buhār al-Kābirī, in 232 (846) to put an end to their systematic plundering: it ended in the complete dispersal of the tribe (Ṭabarî, iii. 1357–1363); a most interesting account of Bedouin customs including on p. 1361 a detailed list of the Numār clans only one of which, the Ṣaḥīb b. Numār, devoted itself to agriculture and grazing, while the others lived only by brigandage.

It appears however that the Numār soon resumed their old habits and another expedition was sent against them with the same object as the earlier ones in the 15th century A.D. by the Ḥamālīn Saʿīd al-Dawla (Yūnī, al-Mudīm, iv. 378).

An event of little importance in itself has given the Numār considerable fame in literary history, although little flattering to them: this is the satire directed against them by the poet Ḥajarī, which is one of the most famous examples of the invective of the ḥiṣbī (especially the hemistich: "Cast down thine eyes; thou belongest to the Numār!"). The occasion of it was the unfortunate intervention of the Numār poet al-ʿRābī in favour of al-Parādašī in the celebrated feud between him and ʿIjārī (Naṣāʾī, p. 427–451, No. 53: Aḥbār, vii. 49–50; xx. 169–171 et al.). The memory of this quarrel survived for a very long time. It was probably no accident that the man who urged the emir Buhār to the expedition against the Numār was the great-grandson of Ḥajarī, the poet ʿUmmār b. ʿAṣīl b. Bīrād b. Ḥajarī; the Numār moreover had slain four of his uncles (Ibn ʿUkba, Ẓīf, ed. de Goeje, p. 284, where we must read B. Ḥimma [b. ʿAbd Allāh b. Numār] in place of B. Dabba). The enmity between the family of Ḥajarī and the Numār was probably revived by the proximity of the latter to the title of the poet, the Bani Kulaib b. Yarīn.

To the Numār belonged notable poets — in addition to al-ʿRābī and his son ʿIjārī — ʿAbd al-Ḥayyā (in the early Abābādī period) and Ḥajarī b. ʿAbd Allāh al-ʿAwd, whose Dīwān was recently published (Cairo 1350 = 1931, publications of the Egyptian Library).

Al-Numār b. Bāshīr Al-Anṣākī, gover-

nor of al-Kūfa and Ḥimī. According to some Muslim authorities, al-Numār was the first anṣārī to be born after the Hijra. His father Bāshīr b. Saʿīd [q. v.] was one of the most distinguished of the Companions of the Prophet, and his mother, ʿAmr bint Rawāsha, was the sister of the much respected ʿAbd Allāh b. Rawāsha [q. v.]. After the assassination of ʿOthmān, al-Numār, who was devoted to him, refused to pay homage to ʿAli. According to some stories which seem rather apocryphal, he brought the bloodstained shirt of the Caliph, according to others, the fngers cut from the hand of his wife Ṣabīa to Dumascus and these relics were exhibited by Muʿāwiyah in the mosque. In the battle of Šīrīn [q. v.] he faithfully stood by Muʿāwiyah and he was always a favourite with him while the other anṣārīs were kept at a suitable distance from the Umayyad court. In the year 39 (659–660) al-Numār by order of Muʿāwiyah undertook an expedition against al-ʿAṣīl b. Kāhū al-ʿArabī, who had occupied in ʿAlī's name ʿAin al-Tamr on the frontier between Syria and Mesopotamia and began to besiege it but had to retire without accomplishing anything. Twenty years later he was given the governorship of al-Kūfa. He was not really fitted for this post, because his pronounced antipathy to ʿAli and his followers did not suit the Ṣufī population of the town. In addition he did not conceal his sympathy with the anṣārīs, who were attacked by Yazid b. Muʿāwiyah's favourite al-ʿAṣīl [q. v.], but freely expressed his opinion on the in-

sult offered to his fellow tribesmen. After Yazid had come to the throne in 60 (April 680), he nevertheless left al-Numār in office; but the latter did not long remain there. Al-Numār is described as an ascetic and he knew the teachings of the Kurān thoroughly. But his asceticism was not of the strictest type, and his interest in musical entertainments was regarded as evidence of lack of dignity. In policy he proved very tolerant so long as it did not come to an open rising. When Muslim b. ʿAṣīl, Ḥusain's partisan, appeared in al-Kūfa to ascertain the feelings of the people and found a number who were ready to pay homage to Husain, al-Numār adopted a neutral attitude and took no steps to check the vigorous propaganda. As a result the followers of the Umayyads in al-Kūfa wrote to the Caliph and called his attention to the fact that the threatening situation demanded a man of vigour who would be able to carry out the government's orders, while al-Numār out of real or feigned weakness was letting things take their course and only urging people to keep calm. When al-Yazid was discussing this with his coun-

sellors, notably the influential Ibn Sarājih, the latter showed him a document signed by Muʿāwiyah shortly before his death, containing the appointment of the then governor of al-Bayra ʿUthmān b. Ziyād [q. v.] to the same office in al-Kūfa. In spite of his antipathy to the proposal, Yazid carried out his father's wishes and made ʿUthmān governor of al-Kūfa without removing him from his post in al-Bayra, whereupon al-Numār hastened back to Syria. When the people of Mardin rebelled
at the beginning of the year 63 (682) and drove all the Umayyads out of the town, Yazid wished to see what tact would do before resorting to arms and sent a mission to Medina under al-Nu'mān to show the people the futility of armed resistance and to bring them to their senses. The mission was also instructed to go on to Mecca to induce the stubborn 'Abd Allāh b. al-Zubayr to pay homage. Al-Nu'mān's warnings and threats had no effect on his countrymen however and there was nothing left for the Caliph but to subdue the rebels in the two holy cities [see the article YAZID B. MU'awiya] by force of arms. After the death of Yazid in Rabi' I 64 (Nov. 683) al-Nu'mān who had in the meantime become governor of Ḥims declared openly for 'Abd Allāh b. al-Zubayr. In Dhu l-Hijjah of the same year (July-Aug. 684) or in Muharram 65 (Aug.-Sept. 684) however, the latter's leading follower al-Dakāk b. Kais al-Fihrī [q. v.] was defeated at Mardj Rāhib [q. v.] and thus the fate of al-Nu'mān was also decided. He attempted to save himself by flight but was overtaken and killed. According to the Arab historians, the town of Ma'arrat al-Nu'mān takes its name from Nu'mān b. Bashir.

**AL-NU'MĀN B. AL-MUNDIR (with the kunya Abū Kābūs or Abū Kūbās) was the last 'king' of the house of the Lakhmids of al-Hira [cf. LAKHM]. He is certainly the best known to the Arabs but not by any means therefore the most important of the dynasty. He is often mentioned by the poets, according to circumstances a subject of panegyrics or of lampoons. His best known court poet was al-Nābiḥa al-Dhubyānī [q. v.]; on his relationship with 'Adi b. Zaid al-Thābit see below.

His fame among the Arabs does not mean that we know a great deal about his life and activities. What we can get from the poetry is of very little historical value and what the historians tell us about him is of almost less value. Arab tradition about the house of Lakhmids is generally speaking of the same nature as that of the partly contemporary houses of Ḥassān and Kinda. In addition there is the complication produced by the frequent confusion of different people of the same name in the stories. What is to be found in non-Arab sources, although more reliable, is too trifling and accidental to build a historical narrative upon.

The material has been collected by Noldeke in his Geschichte der Perser und Araber zur Zeit der Sassaniden and G. Rothstein, Die Dynastie der Lahmiden in al-Hira and critically studied as far as possible.

The "kings" of al-Hira were vassals of the Persian Great Kings and were installed by them, and given the task of keeping together the Arab population of the marches and the desert Arabs, their dependents, and thus to protect the empire against raids and plunder by the Beduins. Al-Nu'mān is said to have reigned 580—602 a.d. or perhaps a little later. His father was al-Mundhir b. Hind, one of the three sons of the famous princess of the house of Kinda, who came to the throne in succession. His mother however was of humble origin; she was, it is said, the daughter of a goldsmith near Medina, a fact which the enemies of the king made good play within their lampoons on him. After the death of his father al-Mundhir, the Great King (Hormizd IV) is said to have hesitated for a time to fill the throne. Al-Nu'mān's final appointment is said only to have been made through the influence and cunning of the Arab poet 'Adi b. Zaid al-Thābit [q. v.], who was secretary for Arab affairs to the Great King and whose family were devoted to al-Nu'mān.

No really important events are known of the reign of al-Nu'mān. Mention is made of hostilities with Arab tribes and anecdotes of his life recorded. At first a pagan, like all his male ancestors, he was baptised which did not prevent him remaining a polygamist. But there had been previously Christians in his family. His grandmother Hind above mentioned founded a monastery [cf. al-Thura] and his sister of the same name (others say daughter) was a nun. Towards the end of his life he had the poet 'Adi b. Zaid put to death as his enemies had poisoned him against him. But he is said to have helped a son of the poet to obtain the same influential position with the Great King (Khusraw II) as his father had held. He himself was not long afterwards made prisoner by the Great King — it is said as a result of the machinations of this son of 'Adi — and died in prison. There are all sorts of legends giving details of his end.

**AL-NU'MĀN B. THĀBIT.** [See ABD HANIFA] AL-NU'MĀN B. ABD ALLĀH MUḤAMMAD B. MANSUR B. AJMAD B. HAIYEN AL-TAMMĪ AL-SAMMĀLI AL-MUNDIRĪ ABŪ HANIFA, the greatest of the Ismā'īlī jurists and a protagonist of the early Fātimids in Egypt. Nu'mān appears to have been derived from a Maliki stock in Kairawān, adopting the Ismā'īlī faith early in life. The exact date of his birth is not known, but it is probable that he was born in the last decades of the third century of the Hijra. He began his service of the Fātimids by entering the service of al-Mahdi (first Fātimid caliph) and served him for the last nine years of his life, i.e., 313—322 a.h. Thereafter he continued to serve al-Kā'im (second Fātimid caliph) for the whole of his life. During this time al-Nu'mān was concerned chiefly with the study of history, philosophy and jurisprudence, and the composition of his numerous works. Just prior to al-Kā'im's death, which occurred in 335 (946), he was appointed a kāfī. His rank rose during the time of Mansūr (third Fātimid caliph) and he reached his
zenith in the time of the fourth Fāṭimid caliph, al-Mu‘izz (died 365 = 976), whom he predeceased by two years. Officially he does not seem to have been appointed ʿāṣim, a designation given for the first time to al-Nūmān’s elder son ‘Ali; but during the reign of al-Mu‘izz, al-Nūmān acquired great power and was in effect the highest judicial functionary of the realm, and one of the most important figures in the hierarchy of the Da‘wā (pronounced Da‘wa‘ by the Ismā‘ilis).

Kādji al-Nūmān was a man of great talent, learning and accomplishments; learned as a scholar, prolific as an author, upright as a judge. Not many external facts of his life are known. Possibly he was a recluse immersed in juristic and philosophical studies, and engaged in the composition of his numerous works. He was the founder of and is rightly regarded as the greatest exponent of Ismā‘ili jurisprudence. According to the Ismā‘ili tradition, he wrote nothing without consulting the Imāms who were his contemporaries; and his greatest work, the Da‘wā‘ im al-Islām (The Pillars of Islām), is regarded as almost the joint work of Imām al-Mu‘izz and Kādji al-Nūmān, and therefore of the highest authority. It was the official corpus juris after the time of al-Mu‘izz throughout the Fāṭimid empire. In addition to being a jurist, some of his other works are also considered as standard works by the Ismā‘ili doctors and are still eagerly studied, for example, Aṣīs al-Taw‘il and Tā‘wil al-Da‘wā‘ (taw‘il), Sharh al-Akhbār and Iṣṭilāḥ al-Da‘wā (akhbār), and al-Majdūl wa l-Mudāyirat (w‘ā‘).

Al-Nūmān was the founder of a distinguished family of kādjas, and both of his sons, ‘Ali and Muḥammad, attained the rank of chief kādja, kādji al-kadhaf.

Kādji al-Nūmān died at Old-Cairo (Mīr‘) on Friday, the 29th of Dhumādī II, 363 (March 27, 974).

Al-Nūmān was a prolific and versatile author, and the names of 44 of his works have come down to us. Out of these, 22 are totally lost; 18 are wholly, and 4 partially, preserved by the Western Ismā‘ilis of India. Instead of giving a complete list of his works, which may be found elsewhere, I am only classifying them according to subjects, mentioning the most important of them: A. Fīkh: 14 works (Kītāb al-Iṣlah, Da‘wā‘ al-Islām, Muhkhasar al-Āthār); B. Ma‘āyangar: 5 works; C. Ta‘wil (Allegorical Interpretation): 3 works (Aṣīs al-Taw‘il, Tā‘wil al-Da‘wā‘); D. Hafṣīk (Esoteric Philosophy): 4 works; E. Aḵā’īd (Dogmatists): 6 works (al-Kāfala al-muḥṣarā); F. Aḵbār al-Sira: 3 works (Sharh al-Akhbār); G. Ta‘rišk: 2 works (Iṣṭilāḥ al-Da‘wā‘); H. Wast: 3 works (al-Majdūl wa l-Mudāyirat); I. Miscellanea: 4 works.

Nūn, the twenty-fifth letter of the Arabic alphabet, with the numerical value of 50, belonging to the group of liquids (al-khurāf al-dhahābi), and as such subject to numerous changes and assimilations; cf. the Bibliography.

On the palaeographic history of the character, cf. ARAH, plate i.

Nūr (Nūr), light, synonym daw‘, also dīw and dīya‘ (the latter sometimes used in the plural).

According to some authors, daw‘ (dīya‘) has a more intensive meaning than nūr (cf. Lane, Arabic-English Dictionary, s.v. daw‘); this idea has its foundation in Kūran x. 5, where the sun is called dīya‘ and the moon nūr. The further deduction from this passage that dīya‘ is used for the light of light producing bodies (sun) and nūr on the other hand for the reflected light in bodies which do not emit light (moon), is not correct, if we remember the primitive knowledge of natural science possessed by the Arabs in the time of Muḥammad, nor is there any proof of it in later literature.

The works on the natural sciences of the Arabs in the best period of the middle ages (Ibn al-Haitham, Ḥawāni and later writers) in the great majority of cases use the term daw‘ and it therefore seems justified to claim this word as a technical term in mathematics and physics.

Besides dealing with the subject in his Optics (Kītāb al-Manāsir) Ibn al-Haitham devoted a special treatise to it entitled Kanw al-Ḥasan b. al-Ḥasan b. al-Ḥaitham fī l-Daw‘ which has been published with a German translation by J. Baarmann in the Z. D. M. G., xxvii. [1882], 195—237, from which we take the following details:

As regards light, two kinds of bodies are distinguished, luminous (including the stars and fire) and non-luminous (dark); the non-luminous are again divided into opaque and transparent, the latter again into such as are transparent in all parts like air, water, glass, crystal etc. and such as only admit the light partly but the material of which is really opaque, such as thin cloth.

The light of luminous bodies is an essential quality of the body, the reflected light of a body in itself dark on the other hand is an accidental quality of the body.

In the opinion of mathematicians all the phenomena of light are of one and the same character; they consist of a heat from fire which is in the luminous bodies themselves. This is evident from the fact that one can concentrate rays of light from the brightest luminous body, the sun, by means of a burning-glass on one point and thus set all inflammable bodies alight and that the air and other bodies affected by the light of the sun become warm. Light and heat are thus identified or regarded as equivalent. The intensity of light, like that of heat, diminishes as the distance from the source increases.

Every luminous body whether its light is one of its essential qualities (direct) or accidental (reflected), illuminates any body placed opposite it, i.e. it sends its light out in all directions. All bodies whether transparent or opaque possess the power of absorbing light, the former have futher
the power of transmitting it again; that a transparent body (air, water, etc.) also has the power of absorbing light is evident from the fact that the light becomes visible in it if it is cut with an opaque body: the light must therefore have already been in it.

The penetration of light into a transparent body takes place along straight lines (proof: the sun’s rays in the dust-filled air of a dark room). This transmission of light in straight lines is an essential feature of light itself, not of the transparent body, for otherwise there must be in the latter specially marked lines along which the light travels; such a hypothesis is however disproved by admitting two or more rays of light at the same time into a dark room and watching them. The ray is defined as light travelling along a straight line. The early mathematicians were of the opinion that the process of seeing consisted in the transmission of a ray from the eye of the observer to the object seen and the reflection from it back to the eye. Opposed to this is Ibn al-Haitham’s view that the body seen — luminous or opaque — sends out rays in all directions from all points of those going towards the eye of the observer collect in it and are perceived as the image of the body (cf. Optics, book i. 23: “Vidio non fit radiis a visu emissis” and also book ii. 23).

There is no absolutely transparent body; on the contrary, every body even the transparent one reflects a part of the light which strikes it (reflection of the phenomenon of twilight). According to Aristotle, the heavens possess the highest and most perfect degree of transparency. Ibn al-Haitham challenges this statement and shows from a use of the theory of the mathematician Abū Sa‘d al-‘Allī b. Suhail, which is based on the well known rules of there fraction of light in passing through media of different densities, that the transparency has no limits and that for every transparent body an even more transparent one can be found.

An explanation of the origin of the halo around the moon, of the rainbow, its shape and its colours, and of the rainbow to be seen at night in the steam laden atmosphere of the sea, is given in Physiography, i. (Agānī’s Makh̲k̲hat, ed. Wustenfeld, Gottingen 1849, p. 100 sq.; transl. Ethé, Leipzig 1868, p. 205 sqq.). Kašwini in his discussion replaces the raindrops by small looking-glasses; Ibn al-Haitham, on the other hand, deals with the problem in a much more conclusive fashion by assuming a single or double reflection of light in spheres (cf. E. Wiedemann, Wied. Ann., vol. xxxix., 1890, p. 575).

Bibliography: References given in the article.

(Willy Hartner)

The doctrine that God is light and reveals himself as such in the world and to man is very old and widely disseminated in Oriental religions as well as in Hellenistic gnosticism and philosophy. We cannot here go into the early history; it will be sufficient to refer to some parallels in the Old and New Testaments, e. g. Gen. i. 3; Isaiah, Ix. 1, 19; Zech., iv.; John, i. 4—9; iii. 19; v. 35; viii. 12; xii. 35 and Rev., xxi. 22 sq.

How Muhammad became acquainted with this teaching we do not know, but the Qurān has its "light" verses [notably Sūra xxiv. 35; the "light verse" proper; cf. with it Sūra xxxiii. 45 (Muhammad as lamp); lx. 8 sq. (Allah’s light); lxiv. 8 (the light sent down = revelation)]. The light verse runs (as translated by Goldziher, in Korānuntzüge, p. 183 sq.): “Allāh is the light of the heavens and of the earth; his light is like a niche in which there is a lamp; the lamp is in a glass and the glass is like a shining star; it is lit from a blessed tree, an olive-tree, neither an eastern nor a western one; its oil almost shines alone even if no fire touches it; light upon light. Allāh leads to his light whom he will, and Allāh creates allegories for man, and Allāh knows all things”.

From the context it is clear that we have to think of the light of religious knowledge, of the truth which Allāh communicates through his Prophet to his creatures especially the believers (cf. also Sūra xxviii. 40). It is pure light, light upon light, which has nothing to do with fire (nūr), which is lit from an olive tree, perhaps not of this world (cf. however A. J. Wensinck, Tree and Bird as cosmological Symbols in Western Asia, in Verg. Ak. Anst., 1921, p. 27 sq.). Lastly it is Allāh as the all-knowing who instructs men and leads them to the light of his revelation (cf. Sūra lxiv. 8). It is clear that we have here traces of gnostic imagery but those rationalist theologians, who — whether to avoid any comparison of the creature with God or to oppose the fantastic mystics — interpreted the light of Allāh as a symbol of his good guidance probably diverged less from the sense of the Kurān than most of the metaphysicians of light. Passages are very frequent in the Kurān in which Allāh appears as the Knowing (al-shī‘) and the Guiding (al-hādī). One did not need to look far for an exegesis on these lines. As Maḥdī observes (Maḥdal, ed. Ritter, ii. 534) the Mu‘tazilī-Allāh al-Ḥusain al-Nadjiḏār interpreted the light verse to mean that God guides the inhabitants of heaven and earth. The Zaidīs also interpreted the light as Allāh’s good guidance [cf. the article Sīḥā’].

From ca. 100 A. H. we find references to a prophetic doctrine of nūr, and gradually to a more general metaphysics of light, i. e. the doctrine that God is essentially light, the prime light and as such the source of all being, all life and all knowledge. Especially among the mystics and in the more emotional thinking vein of the Hellenistic age these speculations developed. Meditation on the Kurān, Persian stimuli, gnostic-Hermetic writings, lastly and most tenaciously, Hellenistic philosophy provided the material for new ideas. Kumait (d. 743) had already sung of the light emanating through Adam via Muhammad into the family of ‘Allī [cf. the article Sīḥā’]. The doctrine of light was dialectically expounded by Sahl al-Tustari (d. 896) (see also Massignon, Texte incīl., p. 39 and the article Sahl al-Tustari).

The first representatives of a metaphysics of light in Islām readily fell under the suspicion of Manicheanism, i. e. of the dualism of nūr and ghnūn (darkness) as the eternal principles. The tradition of Tirmidī that Allāh created in darkness [cf. the article Khuṣū] must have aroused misgivings. The physican Rāzi (d. 923 or 932), although a Hellenistic philosopher, adopted ideas from Persia and was for this refuted or cursed by various theologians and philosophers. Many mystics also (e. g. Ḥallāj; according to Massignon, Passion, p. 150 sq. wrongly) were accused of this dualism.

But the speculations about nūr found a powerful support from the ninth century in the monistic doctrine of light of the Neo-Platonists (we do not
know of any Persian monism of light) which was compatible with the monism of Islam. The father of this doctrine is Plato, who in his Politeia, 506 D seq. compares the idea of the good in the super-sensual world with Helios as the light of the physical world. The contrast is not therefore between light and darkness but between the world of ideas or mind and its copy, the physical world of bodies, in the upper world pure light, in the lower world light more or less mixed with darkness. Among the Neo-Platonists the idea of the good is the highest God is pure light. This identification was also facilitated by the fact that according to Aristotle's conception light is nothing corporeal (De anima, ii. 7, 418b [42a]... δε το τον άνθρωπον αύριαν οντος, aor. ἐκ τοῦ/) from the context which is however not altogether clear, it appears that Aristotle regarded light as an effective force (ενέργεια). This is however of no importance here. Many Aristotelian forces and Platonic ideas are described by Neo-Platonists and Neo-Platonists sometimes as forces and sometimes as substances (spiritual). With Aristotle σκότος (darkness) was conceived not as something positive but as στρίφωσις (privatio, the absence of light).

From this developed the doctrine which we find in the Arabic "Theology of Aristotle". Not far from the beginning (ed. Dieterici, p. 3) it is said: the power of light (κύρωσις κύριας) is communicated by the prime cause, the creator, to the  ἀκήλι and by the ἀκήλι to the world soul, then from the ἀκήλι through the world soul to nature and from the world soul through nature to things which originate and decay. The whole process of this creative development proceeds without movement and timelessly. But God who causes the force of light to pour forth is also light (μέρις; occasional synonyms: λάμπειν, ἀκήλι), the "prime light" (p. 51) or (p. 44) the "light of lights". Light (p. 51) is essentially in God, not a quality (φύσις) for God has no qualities but works through his being (κατά ζωήν) alone. The light flows through the whole world, particularly the world of men. From the super-sensual original (p. 150), the first man (ισημυ ἀκηλί), it flows over the second man (ισημύ μενήσιαν) and from him to the third (ισημύ διήνυμι). These are the originals of the so-called real men. Light is of course found in its purest form in the souls of the wise and the good (p. 51). It should be noted also that μέρις as a spiritual force (ὑπέρ, ἀκήλι) is distinguished from fire (μέρις) which is said to be only a force in matter with definite quality (p. 85).

Fire of course like everything else has its super-sensual original. But this is more connected with life than with light.

The elevation of the soul to the divine world of light corresponds to the creative descent of light (p. 8). When the soul has ascended on its return beyond the world of the ἀκήλι, it sees there the pure light and the beauty of God, the goal of all mysteries. Although the author of the Liber de causis is of the opinion that nothing can be predicates regarding God, yet he has to call him the prime cause and more exactly pure light (§ 5, ed. Bardenheuer, p. 69) and as such the origin of all being and all knowledge (in God is ʿuṣūṣ = mārifṣa; see § 23, p. 103).

The light emanated by God may, if it is regarded as an independent entity, be placed at various parts of the system. Most philosophers and theologians connect it with the ṛוח or ṛ ṛ ṛ ṛ or identify it with them, sometimes also with life (ḥayyāt), but this must be more closely investigated.

The great philosophers in Islam, Fārābī and Ibn Sinā, connected the doctrine of light with the ʿaṣrī in metaphysics as well as in psychology. Fārābī is fond of using many synonyms for the light of God and the ʿaṣrī (bahaḥ etc.; see e.g. Der Mutter- stap, ed. Dieterici, p. 13 seq.). In the biography of Fārābī in Ibn Abī Uṣāfī (Cynán, ed. Muller, ii. 134—140) a prayer is attributed to him in which God is invoked as the "prime cause of things and light of the earth and of heaven". Ibn Sinā like Fārābī takes up the doctrine of light in theology and further develops it. In his psychological writings he regards the light as a link of the soul and body (cf. Sahih al-Tustari who places ʿarūf between ʿarīf and ʿīn in the four elements of man). In the Kitāb al-Iṣbāḥ (ed. Forget, Leyden 1892, p. 126 sq.) he even reads the whole metaphysical doctrine of the ʿaṣrī of the Aristotelians into the light verse of the Kurān. Light is the ʿaṣrī bi ʿaṣrīr, fire the ʿaṣrī ʿaṣrīr and so on. Allāh's ʿaṣrī is therefore like the nous of Aristotle! This discovery of Ibn Sinā's was incorporated in the pious reflections of Ghāzālī (in Maʿārif al-Khānī Maʿārif al-Miṣrī al-Marāfī, Cairo 1927, p. 58 sq.).

The basic opinions of this further development of speculation on ʿaṣrī, especially among the gnostics and mystics, are in Massignon's articles ʿARMAṬIANS and TAṢAWWUF.

NUR ALLĀH AL-SAYYID B. AL-SAYYID SHARĪF AL-MARĀṢĪ al-HUSAINI AL-MUṢṭAFA, commonly called Kādī Nūr Allāh, was born in 956 (1549). He was descended from an illustrious family of the Maʿrāṣī Sayyids and settled in Shushtar. He left his native place for India and settled in Lāhore where he attracted the notice of Ḥakīm Abū l-Faḍī (d. 997 = 1588) and through his presentation to Emperor Akbar (963—1014 = 1556—1605), he was appointed Kādī of Lāhore in lieu of al-Shākī Muʿīn (d. 995 = 1586). Abū al-Kādir Badūnī, iii. 137, says that he was "although a Shīʿa, a just, pious and learned man. He was lugged to death in 1019 (1610), on account of his religious opinions, by the order of the Emperor Dāhirāng (1014—1027 = 1605—1628). He is regarded as al-Shahīd al-Thāḥīṭ, "the third martyr", by the Shīʿa and his tomb in Akaṭābād is visited by numerous Shīʿas from all parts of India.

He is the author of innumerable works of which the following may be quoted: 1. ʿHāṣīya ʿala l-Baiḍāwīt, a supercommentary to al-Baiḍāwī's commentary on the Kurān, entitled Arṣwār al-Tanzil, Asiatic Society of Bengal MSS., List of the Government Collection, p. 161; 2. ʿHāṣīya Sharḥ ʿUṣūl ʿala l-Tanwīl, glosses to Kūshī's commentary on Naṣīr al-Dīn al-Tūsī's Compendium of metaphysics and theology, entitled Taṣwīr al-Kākim; 3. Hāṣīya al-Ḥaṣb wa-Ishāb al-Bāṭil, a polemical work against Sunnism written in reply to Faḍl b. Rūzbihān's work entitled Ḥaṣāl al-Bāṭil, a treatise in refutation

Nūr al-Din-Abu Iṣaṣim Muḥammad b. Ibrāhīm b. Shāhruḵ, called al-Malik al-ʿĀṣir, atābeg of Ḥalab and Damascus. Nūr al-Din was born in 511 (Febr. 1118) and took part under his father in the siege of Kaššāf Dījar bar where the latter was murdered in Rabiʿ II 541 (Sept. 1146). His kingdom was then divided between his two sons, Saif al-Din Ghāzī [q. v.] who took possession of al-Mawṣil, and Nūr al-Din who established himself in Ḥalab. Scarcely had the news of the 'Imād al-Din's death reached Joscelin II who lived in Tell Bāṣhir [q. v.] than the latter entered into negotiations with the people of Edessa, mainly Armenians, the chief stronghold of the Crusaders, which 'Imād al-Din had taken shortly before and assured himself of their cooperation in his proposed attack on the city. He was thus able to occupy the city without difficulty and its Muslim garrison took refuge in the citadel. When Nūr al-Din heard this he hurried thither by forced marches; Joscelin fled and Edessa fell into the hands of Nūr al-Din who wreaked a terrible vengeance on the treacherous Christians, laid the city completely waste and left only a few citizens in it. In the following year he invaded the district of Ḥalab and took from the Christians Artāb and Kafarālah and several other places. The news of the fall of Edessa in 539 (1144) made a tremendous impression in Europe and induced the Pope Eugenius III on Dec. 1, 1145 to send a letter to Louis VII and the knights of France in which he demanded a new crusade and in the spring of 1146 to send St. Bernard of Clairvaux to preach the crusade. He was listened to with enthusiasm; on receiving the Pope's message Louis had already declared himself ready to take the crusader's vow and finally the Hohenstaufen Conrad III was also won over. In the first half of the year 1147 the two kings set out and after great difficulties and considerable losses through starvation, epidemics and enemy attacks, the European armies joined one another in Palestine in the spring of 1148. It was decided to attack Damascus which was then nominally in the power of the Būrid Mūdir al-Din Aḥāb b. Muḥammad although the real ruler was one of his Mamluks named Mūʿīn al-Din Anār. In Rabiʿ I 543 (July 1148) the Christians began the siege of the town from the northwest. The first few days were spent in heavy fighting with great losses on both sides. In the meanwhile Mūʿīn al-Din had appealed for assistance to Saif al-Din Ghāzī. The latter set out with a large army and was joined on the way by his brother Nūr al-Din. Before giving the hard pressed Mūʿīn al-Din the assistance he desired he sent him a letter in which he demanded the surrender of the town to his deputy in order to have a base in case of a defeat; but if he was victorious he would leave the town at once. But as Mūʿīn al-Din did not trust him completely he endeavoured instead to frighten the Christians by threats and declared that if they did not retreat he would hand over the town to Saif al-Din who would certainly drive the invaders completely out of Syria. These representations, supported by the gold of Damascus, did not fail to influence the eastern leaders who were able to appreciate the situation much better than their European allies. But as they had not the courage to propose that the siege should be at once abandoned, they suggested in the council of war held in the night of the July 26–27, 1148 that the camp should be moved from west to east because, they said, the walls on this side were not so strong and the attack would not be impeded by gardens. The besiegers followed the
advice of those possessing local knowledge but
soon saw that they had been deceived because the
terrain on the east side offered even greater
difficulties in every respect and there was there-
fore nothing left for them but to withdraw in
order to resume the siege another time. When
Bertrand, the son of Count Alfonso of Toulouse
who had just died, took the fortress of al-
Sira and threatened the district of Tripoli Count Raymond
of Tripoli appealed to Nūr al-Dīn and Mu‘ān al-
Dīn who had joined one another in Baalbek;
the two Muslim leaders supported by a contingent
sent by Saif al-Dīn hurried to his help. Bertrand
had to surrender; the fortress was destroyed and by
himself taken prisoner. The Christian troops
prepared to invade the district of Ḥalab; Nūr al-
Dīn however anticipated them, defeated them at
Yaghra taking much booty, which he divided among
his brother Saif al-Dīn, the caliph al-Muqtafi
and the Saldjuq sultan Mas‘ūd. At the beginning of the
following year (May 1149) Nūr al-Dīn invaded the
region of Anṭākiya, laid waste the country with the
suburb of Ḥārīm and laid siege to the fortress of
Inmī. Prince Raymond of Antioch hastened
up with a small army to attack Nūr al-Dīn but
was enticed into an ambush and fell in the fight.
Nūr al-Dīn then went with his victorious forces
doing great damage as he went, close up to Antioch
in order to inspire the inhabitants with terror
and on his way back took Ḥārīm and forced the
strong fortress of Fāmiya (Apamea) near Ismā‘īl
to surrender. About the same time Saif al-Dīn died
and his brother and successor Kūb al-Dīn Mawdūd
prepared to fight Nūr al-Dīn, but the dispute was
settled amicably [cf. the article Mawdūd]. Soon
afterwards (545 = 1151 or 546 = 1152) Nūr al-
Dīn succeeded in capturing his enemy Joscelin II
of Edessa. The latter had previously won a victory
over Nūr al-Dīn and treated him very scornfully.
When one night he was travelling with only a few
followers to Antioch he was surprised by a
troop of Turkomans in the pay of Nūr al-Dīn and
brought to Ḥalab where he remained a prisoner
till his death, while Nūr al-Dīn gradually took
all the fortresses belonging to the country of
Edessa. In order to split up the Christian forces
and to bring some relief to the Muslims besieged in
‘Aškalān, he made an agreement with his enemy,
the prince of Damascus, Muqjiy al-Dīn Abak, and
in Safar 548 (May 1153) they both appeared before
the walls of Bānīyās [q.v.]. But when the irresolute
Muqjiy al-Dīn would undertake no serious steps
against the Christians, they soon abandoned the
siege and separated without having achieved any-
thing. When ‘Aškalān, was forced to capitulate after
an eight months siege the Christians began to
cast covetous eyes on the great and wealthy
city of Damascus, especially as Muqjiy al-Dīn acted
almost as if he were their vassal. In order to
thwart their plans, Nūr al-Dīn endeavoured to gain
over Muqjiy al-Dīn by pretended friendship and by
making false charges against them persuaded him to get rid of his chief emirs so that Muqjiy
al-Dīn thus lost his most reliable friends. When Nūr
al-Dīn suddenly appeared before the gates of the
city they were opened to him by his friends in
Damascus as had been prearranged. Muqjiy al-
Dīn took refuge in the citadel and summoned the
Christians to his assistance but surrendered
the city before help arrived (Safar 549 = April 1154).
In compensation he received Ilīms. There he
began to intrigue against Nūr al-Dīn and the
latter offered him Bālās instead; Muqjiy al-Dīn
however was not satisfied, but settled in Baghdād
where he remained till his death as a protégé of
the caliph al-Muqtafi. In 551 (1156) Nūr al-Dīn
made a peace with Baldwin III of Jerusalem,
whereby the latter gave up the annual tribute which
Damascus had had to pay him since the time of
Muqjiy al-Dīn and ceded the half of the lands of
Bānīyās. In spite of this about the end of the year
551 (Feb. 1157) Baldwin fell upon a defenceless
encampment of Arabs and Turkomans in the neigh-
bourhood of Bānīyās, took the men prisoners and
carried off their cattle. As a result the war broke
out and Saif al-Dīn sent two Christian princes,
Saad al-Dīn Shīrkuh, some in the vicinity of Damas-
cus by Nūr al-Dīn’s brother, the emir Nāṣir al-
Dīn. Many prisoners were brought to Damascus and
put to death by Nūr al-Dīn’s orders in revenge for
the Muslims killed at Bānīyās. Nūr al-Dīn
then attacked Bānīyās and destroyed the town but
could not take the citadel; he retired on the
approach of Baldwin. The latter rebuilt the ruined
town, dismissed a number of his troops and
intended to return to Tiberias, but was surprised
on the way by Nūr al-Dīn and suffered a disastrous
defeat (Djumādā I 552 = end of June 1157). Another
peace was then negotiated by Nūr al-Dīn to take the town was also unsuccessful; he again raised the siege by the
approach of Baldwin. Very soon afterwards he
fell very ill and a rumour spread that he had died.
The Christians thereupon attacked Shāizar [q.v.]
which had been severely damaged by an earthquake,
and had along with Baalbek shortly before fallen
into the hands of Nūr al-Dīn. The attack failed
however owing to the jealousies among the Frankish
leaders. On the other hand, they were successful
after two months siege in taking Ḥārīm in the
following year and in inflicting a severe defeat
on Nūr al-Dīn on the Jordan (Djumādā I 553 =
July 1158). About the same time the emperor
Manuel I Comnenos appeared in Syria to chastise
the rebelling Franks and in particular the princes
Raynald of Antioch who had undertaken an expedition against
Cyprus. After receiving the submission of the
princes, the emperor resolved to join Baldwin in
an attack on Ḥalab at the beginning of 1159.
Nūr al-Dīn however escaped the danger which
threatened him by releasing the Christian prisoners.
He then concluded a truce f-r four months with
Baldwin, took Harrān and al-Raṣīk from his brother
Nāṣir al-Dīn and invaded the lands of sultan
Kirdil Arslān II [q.v.]; but when Baldwin began
to lay waste Nūr al-Dīn’s territory, the latter
hurried back to Ḥalab and Baldwin retired. About
this time conditions in Egypt began to attract
the attention of Nūr al-Dīn and from the year
556 (1161) his history is so closely bound up with
that of Saladin that it is sufficient to refer in
the article on the latter for the main facts. Only
the following need be added here. In 558 (1163)
Nūr al-Dīn had planned an invasion of the country
of Tripoli and encamped before Hīrān al-Adār
[q.v.] and was preparing to storm it when he
was suddenly attacked by the Christians. His
troops who were quite unprepared were scattered
and Nūr al-Dīn himself only escaped with difficulty.
Nevertheless he succeeded by exerting all his
efforts in raising a new army in a short time
with which he again advanced on Ḥārīm After
winning a decisive victory over the Christian relief force, he took Harrim by storm (Râmaḍân 555 = Aug. 1163) and a few months later also forced Bâniyas to surrender. When the atâbâg of Mawsîl, Nûr al-Dîn's brother Khûth al-Dîn Mawdûd, at the end of 565 (Sept. 1170) died and his younger son Sâîf al-Dîn Ghâzî was chosen successor by the emirs, Nûr al-Dîn went there and said that Sâîf al-Dîn Mawsîl but was forced by Sînjâr to his elder brother 'Imâd al-Dîn Zangî. In 568 (1173) he invaded Asia Minor and took several towns; on his relations with the Sâlîdî Sûlûn see the article KULDI ARSLÎN II. While he was still on this expedition, an envoy arrived from the 'Abbâsîd caliph of Baghdâd bearing a diploma recognising Nûr al-Dîn as lord of al-Mawsîl, al-Djazîra, Irîb, Khiît, Syria, Egypt and Kûnya. He died on 11th Shawwâl 569 (May 15, 1174) in Damascus of a disease of the liver (ilât at-khuwayînî) and was buried in the citadel; his body was later brought to the madrasa founded by him at the entrance to the Sûk Khawwâsîn.

With reference to Nûr al-Dîn, Ibn al-Athîr, xi. 265 says: "I have studied the careers of the rulers of the past but from the time of the legitimate caliph 'Abd al-Malik and 'Omar b. 'Abd al-'Azîz I have found none who led a purer life or had greater enthusiasm for righteousness'. As a pious Muslim convinced of the truth of the Prophet's mission, he was always eager to follow out in exact detail the many prescriptions of the Kûrâ and the Sunna regarding the conduct of believers in private and public life. He was distinguished by a remarkable love of justice which was seen for example in the fact that he would never punish on mere suspicion alone and was able to check any arbitrariness on the part of the lower courts also, and avarice and selfishness were entirely foreign to his character. He never gave way to the temptation always at hand to enrich himself at the expense of the treasury; on the contrary, he applied the proceeds of the booty taken in war to pious foundations and public works for the benefit of Islam. Among the important cities of Syria the fortifications of which were renovated by him, Ibn al-Athîr mentions (xi. 267) the following: Damascus, Hîmz, Hâmât, Halâb, Shîzar and Baalbek, and mosques, schools, hospitals and caravanserais were built everywhere. On his great activity as a builder cf. the article DAMASCUS; cf. also Fleischer, Mi'hâl Mi'sâhî's Cultur-Statistik von Damasus (Kleiner Schriften, iii. 306 sqq.). He was also a generous patron of scholars in whom he took great interest; on the battlefield he earned the admiration of his soldiers by his personal bravery, which was coupled with unusual talent as a general. If on the other hand he was guilty of acts which are not quite compatible with humane warfare, like the massacre in Edessa on the recapture of the town and the slaughter of the Christian prisoners in Damascus after Baldwin's attack on the defenceless Muslims at Bâniyas, it should be remembered that this was no breach of the practice of war of the time. The constant aim of his efforts was the expulsion of the Christians from Syria and Palestine and to this object he remained faithful throughout his life. In the political history of Syria and Mesopotamia, Nûr al-Dîn played an unusually important part and laid a firm foundation on which Saladin was later able to build.

Nûr Al-Dîn Abû 'l-Hâridh Arslân Shâh b. Masûd b. Mawdûd b. Zangî, called al-Malik al-'Adîl, lord of al-Mawsîl. After the death of his father [q.v.] in Shabân 589 (Aug. 1193) Nûr al-Dîn succeeded him; the real ruler however in the early years of his tenure of office was the governor of the citadel, the eunuch Mujâhidh al-Dîn Kamâz al-Zâînî, who is described not only as a pious and learned man but as an official much concerned with the welfare of the people. He died in Rabî I 595 (Jan. 1199) or, according to another statement, in Şafar of the same year (Dec. 1198). Many buildings, such as mosques, monasteries, schools and bridges, which the city of Mawsîl owes to him, are evidence of his interest in the welfare of the community. When the officials of Nûr al-Dîn's uncle, the lord of Sînjâr, 'Imâd al-Dîn Zangî b. Mawdûd, seized several places in the neighbourhood of Nasûbîn, but really belonging to the territory of al-Mawsîl, Nûr al-Dîn after long and fruitless negotiations decided to seize the town of Nasûbîn. 'Imâd al-Dîn then died and was succeeded by his son Khûth al-Dîn Muhammâd. The change in the throne caused Nûr al-Dîn to hasten; in Diûmâd I 594 (March—April 1198) he set out with a large army. Khûth al-Dîn was defeated and turned to the Aiyûbîd al-'Adîl [q.v.] with an appeal for help while Nûr al-Dîn established himself in Nasûbîn; but his army melted away through sickness and death and on the approach of al-'Adîl he evacuated the town and returned to al-Mawsîl (Râmaḍân 594 = July—Aug. 1198) whereupon al-'Adîl laid siege to Mârdîn. In Muhammâd 595 (Nov. 1198) the ruler of Egypt al-'Azîz died and when his successor al-Afjal recalled al-'Adîl's Egyptian troops and also made an alliance with Nûr al-Dîn, al-'Adîl had to withdraw and leave the conduct of the siege of Mârdîn to his son al-Kâmî [q.v.]. Nûr al-Dîn then took the field and along with his two cousins Khûth al-Dîn Muhammâd and Sînjâr Shâh b. Ghâzî, lord of Dzjarat b. Omar, encamped before Dunaîsîr [q.v.]. After two months there they moved their camp to Harmân between Dunaîsîr and Mârdîn. In the meanwhile, the inhabitants of Mârdîn had exhausted their supplies; in addition devastating epidemics
broke out which still further reduced the ranks of the
defenders; the commander therefore sent a message
to al-Kāmil and declared himself ready to surrender
the town within a definite period on condition
that he was allowed to import sufficient food.
Al-Kāmil agreed but with the arrival of Nūr al-
Dīn the people of Mārīn placèd up their courage
and continued to resist the struggle. Al-Kāmil
might almost have taken the town by treachery;
although Kuṭb al-Dīn pretended to be devoted
to Nūr al-Dīn he was really secretly attached to
al-Kāmil and had promised him to take to flight
at once in case of an encounter. When the troops
were drawn up for battle he was placed in such
a position however that there was no possibility
of escape on the narrow battlefield. Al-Kāmil was
defeated and fled to Damascus to his father (Shawāwīl
595 = Aug. 1199). As to Nūr al-Dīn, he fell sick
and could not follow up his victory but returned
to al-Mawṣil. After he had recovered from his
illness, he went in Ṣafāʾīn 597 (May–June 1201)
with Kuṭb al-Dīn to Harrān to resume the struggle
with al-Ādil. When he reached Raʾs al-Ašūr, he
encountered and overpowered him from whom he
obtained Kuṭb al-Dīn. A third party, al-Fāizi al-
Adīl who lived in Harrān to seek peace and as
he knew that the other Ayyūbidis wished to make
peace with al-Ādil and deadly epidemics had broken
out among his troops, he granted their request for
a return to the status quo and returned to
al-Mawṣil. In the year 600 (1203–1204), Kuṭb
al-Dīn openly paid homage to al-Ādil and had
the khūba read in his name; Nūr al-Dīn could
d not perni this and took possession of Naṣībūn
except the citadel. This also would probably have
fallen into his hands if the news that the lord of
Irbil, Muṣaffār al-Dīn Kūbkūrī [q. v.], had invaded the
territory of al-Mawṣil in his absence and he had
wrought great havoc, had not forced him to return.
After he had ascertained that the accounts that
had reached him were much exaggerated he turned
his attention to Tell Affar which belonged to
Sindjār and laid siege to it. But fortune did not
favor him. It is true that he succeeded in taking
Tell Affar; then a number of Mesopotamian
princes allied themselves with Kuṭb al-Dīn and
Nūr al-Dīn could not face their combined strength.
When it came to battle he was completely routed
and had to surrender Tell Affar and make peace
(beg. 601 = late summer 1204). The relations
between Nūr al-Dīn and Kuṭb al-Dīn had never
been particularly friendly and matters did not
improve when Nūr al-Dīn gave his daughter in
marriage to one of al-Ādil's sons. On the occasion
of this union of the two dynasties, Nūr al-Dīn's
viziers proposed to him to conclude an alliance
with al-Ādil so that he might himself take pos-
tession of Djazar Ibn ʿOmar which was under the
rule of Muṭʿiz al-Dīn Maḥmūd b. Sindjār Shāh
and that al-Ādil should occupy Kuṭb al-Dīn's territory.
This plan which was entirely in keeping with Nūr
al-Dīn's desires was also approved by al-Ādil and
the latter undertook a campaign against the east.
On this campaign in a short time he took al-Khābūr
and Naṣībūn and besieged Sindjār. While Kuṭb
al-Dīn was preparing to fight to defend his capital,
Nūr al-Dīn equipped an army which was to join
al-Ādil's. Then a sudden change took place in the
political situation. The lord of Irbil, Muṣaffār
al-Dīn Kūbkūrī who had promised Kuṭb al-Dīn
to intervene with al-Ādil on his behalf but had
been unsuccessful, now proposed to Nūr al-Dīn to
join him against al-Ādil. Nūr al-Dīn agreed and
when the Ayyūbid ruler of Ḥalab al-Malik al-Zāhir
and the Saltāq Saltān of ʿOmayr Šāhīrūs 1 b.
Khitīr Arslān [q. v.] joined the alliance and al-
-Ādil was further ordered by the ʿAbbasid caliph
al-Nāṣir [q. v.] to abandon his hostile plans, he
had finally to yield, especially as his emirs had
no inclination to continue the campaign. In the
end Kuṭb al-Dīn was left in possession of Sindjār
and al-Ādil returned to Harrān. Nūr al-Dīn died
at the end of Radjab 607 (Jan. 1211) and
was succeeded by his son al-Malik al-Kābir Izz
al-Dīn Masʿūd.

Nūr Dīhān, name given to Mihr al-
Nīṣāʾ, the famous queen of Dīhānīr, the Muhağal
Emperor. She was born at Kandahār in 1577 when
her father, Ghiyāth Beg, was migrating from Persia
to Hindūstān (Maʾāthir al-Umārāʾ, i. 129). In
the reign of Akbar she was married to Aḥī Kuṭb Beg,
a Persian who had rendered distinguished military
service to the Emperor and who, because of his
bravery, was known as Shīr Afghān. The assas-
ination of her first husband will always remain
a matter of controversy, some regarding it as a
repetition of the story of David and Uriah, others
holding the view that he had been suspected of
disloyalty. It was not however until four years
later, in 1611, that she became, at the age of
thirty-four, the wife of Dīhānīr. In the eleventh
year of that monarch's reign her name was changed
from Nūr Maḥālī into Nūr Dīhānī (Ṭāzūkī Dīhānī-
ḡīr, ed. Rogers and Beveridge, i. 319).

An extraordinarily beautiful woman, well-versed
in Persian literature in an age when few women
were cultured, ambitious and masterful, she entirely
dominated her husband, until eventually Dīhānīr
was king in name only. The chroniclers record that
she sometimes sat in the ḟarāwak, that cows
were struck in her name, and that she even dared to
issue fārmāns (Īkāhāmā, p. 54–57). She became
the leader of fashion and is said to have invented the
ṭat-ṭī Dīhānīrī, a special kind of rose-water. Her
style in gowns, veils, brocade, lace, and her farāk
sandānī (carpets of sandalwood colour) were known
throughout the length and breadth of Hindūstān.
Ably assisted in political affairs by her father,
now known as Iʿtimād al-Dawla, and her brother,
Aṣāf Khān, she dispensed all patronage thus-
falling foul of the older nobility led by Maḥāt Khan. The history of the last years of Dīhānīr's
reign is the history of Nūr Dīhānīr's efforts at
paving the way for the succession of her son-in-
law, Prince Shāhriyār. But the death of her father,
combined with the fact that Aṣāf Khān was sup-
porting the claim of his own son-in-law, Prince
Khurrām, considerably weakened her power. On
the death of Dīhānīr, in 1627, she was com-
pletely outwitted by Aṣāf Khān, her candidate
was defeated, and Prince Khurrām ascended the
throne as Shāh Dīhānī. The last eighteen,

NUR DJAHAN - PANGULU
of this remarkable woman's life during the reign of Shah Djañh are unimportant to the historian of Mughal India.

Bibliography: Mu'tamid Khan, Ishqnama Djañhagni, Calcutta 1865; Shâhâwâz Khan, Na'âthâr al-Ummâr, in biblioteca Indica, i. 127–134; Beni Prasad, History of Jahângir, 1922. (C. COLLIN DAVIES)

NUR MUHAMMADI, the technical term for the pre-existence of the soul of the Prophet Muhammad; the predestined essence of the last of the prophets is said to have been created first, all, in the form of a dense and luminous point; all the predestined souls are saidto have emanated from this.

Among the Sunnis, the idea first appears among the mystics in the third century A.H., then gradually begins to dominate popular worship (cf. Sahl Tustari and Hakim Tirmidhi, in our Rezâl, 1929, p. 34, N° 39 and p. 39; Abd Bakr Wâsî, whose Hâ Mîm al-Kidâm should be identified with ch. 2 of the Tawâwîl of Hâlidi [cf. our P. 8]) extends it. According to Kitâb, Muhammad is "the image in the pupil which is in the centre of the eye of creation" (insân 'ân al-khwasîd); this is what Ibn Arabî calls the hašîkha muhammadiya the pre-eternal conception of which is celebrated by the poets Şârâ, Witrâ and the mystic Djañîlî; hence Muhammad's immaculate pedigree since Adam (cf. the poems of the Mawâlî). Orthodoxy has always carefully placed the doctrine of the uncreated Kur'an above this cult. Popular legend among the Hoşâyîn has reduced and materialised this devotion: in showing the model of the body of the Prophet knitted from a handful of earth from Paradise with from the spring Tazmân which makes it shine like a white pearl. But it is certain that it is a question here primarily of a gnostic pre-existence, an intellectual substance of the nature of the angels as is evident from the antiquity of the equation insîr = wâdî, borrowed from Tirmidhi from the Ismâ'îlîs (cf. 'Aqî). Among the Shi'is, this doctrine appears earlier and with more logical coherence; among the extremists, who explain this "prophetic light", either as a "spirit" transmitted from age to age and from elect to elect, or as spermatic germ (Tradicanism) inherited from male to male. At the beginning of the second century Mughira and Djañîlî taught the primogeniture of the luminous shadow (wâdî, opposed to šâbâb "dark body") of Muhammad. It is a fundamental dogma of Ismâ'îlism from its beginning (al-shâhîr nîr mahk = al-mîm); it is found again extended through solidarity to all the 'Alîs or to all the Tâlibis with the gift of sinlessness among the Nusârîs and even among many pious Ismâ'îlî writers (Kâfîn, Nûrî, p. 116). The authors of this doctrine derive it from the Kur'an (nîr al-mîm: xxiv. 35; the tawâwîl: the connection between the two terms called muhammadi by Bûhîrî [Brit. Mus. Add. 16,779]).

NURBAKHSHIYA, religious sect or order called after Muhammad b. Muhammad b. 'Abd Allâh, called Nur Baksh (955–985) by the Brit. Mus. A.H.

1. Life of the founder. Of this person there is a detailed biography in the work Madâlî al-Muminîn of Nur Allâh al-Shustari (Bedleian MS., Osn. 366; see also Brit. Mus. Catalogue of Persian MSS., chiefly based on a work (tafsîk) by Muhammad b. Muhammad al-Samarqandi. His father was born in Kâfîn, and his grandfather in al-Hass, whence in some ghâsâls he styles himself Lahryvî. His father migrated to Kâfîn in Kuhistan, where his cousin was imam. The latter became a disciple of Isâsh al-Khâfrica, himself a disciple of Saiyûd 'Ali al-Hamadâni (whose biography is published in Khâshvat al-Afghânî, Lucknow 1322, ii. 293). Isâsh in obedience to a dream gave his pupil the name Nûr Baksh ('light-gift'), and conferred on him the khâfrica of 'Ali al-Hamadâni. In virtue of his supposed de-cent from the Imâm Mîsâ al-Kâfîm he received the title Mahdî, and was proclaimed leader of a number of followers; indeed in the heading of his Qânûn (Brit. Mus. Add. 16,779) he is styled "Imâm and Caliph over all the Muslims". In a letter to a disciple (Brit. Mus. Add. 7,688) he claims mastery of all sciences, religious and secular; he could have taught Plato mathematics, etc. He calls on the people of his time to take pride in such a contemporary and display activity in his cause. These pretensions were taken seriously by the Sultan Shâh-rakh (Timûrîd, 807–850) whose viceroys Bâyazîd arrested him at Kub-Tirî "a fortress in the neighbourhood of Khâfrica", whither he had gone in 826; he was sent to Herât and thence to Shirâz, where he was released by 'Ibrâhîm Sultan; after travelling to Başâ, Hilla, Baghdâd and the (Shî'î) Sanctuaries, he went to Kurdistân, where he was again proclaimed Caliph, and coins were struck in his name. He was again arrested by Shâh-rakh's order, and brought to Ashhab-âdjmân; he made his escape and after much suffering reached Khâfrica, where he was recaptured, and sent back to Shâh-rakh, who despatched him to Herât, where he had to mount the pulpit and abjure the caliphate. In 848 he was released on condition that he confined his activities to teaching; but, having incurred suspicion, he was sent to Tabriz, thence to Shirwân, and thence to Gîlân.

After Shâh-rakh's death he was set free, and took up his residence in a village Sulfân in the neighbourhood of Raiy, where he died.

2. His doctrines. In his poems (ghâsâls, ma'khasâzî and rubâ'îs), he insists on his personal importance, but also emphasizes the Sûfî pantheism, e.g. "We have washed away the impress of other from the tablet of existences; we have seen that the world is qualities and an identical substance". Prose works by him were a Riadî 'Afsâda probably in Persian, and a treatise on Law, in Arabic, called al-Fikriyy, which neither of these appears to have reached Europe. The extracts from the latter given in the Madâlî are Shi'î in character. The imâm besides possessing numerous virtues must be a descendant of 'Ali and Fâtimâ; this is sufficient for "the lesser gihaâ", but for the "greater" he must also be a wa'dî perfect in the ma'khasî of that dignity. The mu'âmar marriage is lawful, since it was so certainly in the Prophet's time, and the writer had been commanded to abolish innovations and revive the practice of the Prophet's

The Encyclopaedia of Islam, III. 61
time. He rejects the expedient called 'asad in dealing with deceased persons' estates, as being neither in the Kurān nor the Sunna.

3. Later history of the sect. The Magūliīn names two successors (khalīfāt) of Nūrbakhsh: Shams al-Dīn Muḥammad b. Yaḥyā al-Lahdijānī al-Gilānī, called Aṣīrī, the author of a Dirūnīn of which there is a copy in the Brit. Mus.; this person built a khanqāh in Shirāz; and Nūrbakhsh's son Shāh Kāsim Fatābakhsh, first heard of in 'Irāq, whence by permission of the Āq-Kuyunlū Sultan Yaḥyā (884–896) he was allowed to go to Khurāsān to cure Ḥusayn Mīrzā, the governor, of an ailment by his baraka. His religious opinions won him the favour of Ismā'īl the Safawīd (930). According to Firīghta, who cites the Zafar-nāme, a disciple of Shāh Kāsim, named Mir Shams al-Dīn went from 'Irāq to Kashmir about 902, where he was received with high honour by Fath Kān, who made over to him the confiscated lands which had formerly fallen to the crown. In a short time many of the Kashmiris, particularly those of the tribe Čūk, became converts to the Nūrbakhshī sect (Firīghta, transl. Briggs, Calcutta 1910). The Kashmiris had previously been Sunnī of the Hanafī rite according to Mīrzā Ḥusayn (author of Tārīkh-i Kakhūhī, transl. E. D. Ross, London 1895, p. 435), who when he came into possession of the country asked the opinion of the 'ulūmā' of Hindūstān about al-Fīrūz al-Abānātī; as they condemned it as heretical, he persecuted and endeavoured to extirpate the sect (about 950). His confused and fanatical account of it has misled some European writers. It survived his perseverence, and according to J. Biddulph, Tribes of the Hindoo Koosh (Calcutta 1880) it numbers over 20,000 followers, most of whom are to be found in Shigar and Khaspūl of Baltistān. A few of the sect, he adds, are now to be found in Kībtwarzar, to which place they were deported by Golāb Sing when he conquered Baltistān.

The work last cited contains some details about their practices; its account is, however, mixed with fables, and without access to the Fīrūz Akbarī it is difficult to estimate the justice of the assertion that the system is "an attempt to form a via media between Shi'ī and Sunnī doctrines".

Bibliography: references are given above.

(D. S. Marqolouth)

Nūrī, a common name in the Near East for a member of certain Gipsy tribes. A more correct vocalization would perhaps be Nawwār (so Hava, Steingass, etc.), with plural Nawwār, Minorsky [above, iii. 38] gives Nawwā. By displacement of accent we also find the plural form as Nawwār (e. g. in Jauzen, Coutumes des Arabes, p. 90, and British Admiralty's Handbooks, Syria [1919], p. 156, Arabia [1916], p. 92, 94). In Persia the current name for Gipsy is Lūrī, Lūrī, or Lūtī [q. v.]. It is not unlikely that by a natural phonetic transformation the form nūrī derives from Fīrūz, which, it has been suggested, originally denoted an inhabitant of the town of al-Rūr (or Arūr) in Sind. Quadrémère advanced the theory (Hist. des Sultans Mamlouks, I., p. 5) that the name nūrī arose from the Arabic nūr (fire) [he gives the form نور] because these vagrants were usually seen carrying a brazier or a lantern. Even to-day many of the Nawwār earn their living as itinerant smiths. But it is more probable that the correct etymology is to be found in some Sanskrit dialect of N. W. India, the original home of the Gipsy tribes.

In the various countries of the Orient in which Gipsy families are located, we find several designations for them used. The older name, now much restricted in use, was Zuṭṭ [see ZOTT] or Jatt. The Turkish name Čingana passed into European languages under such forms as Činfāk, Tsagane, Zingaro, Ciszgany, Zigeuner, etc. Dusy (Supplément aux Dictionnaires Arabes, i. 605), quoting Causin de Perceval, records the occasional use of the name Žanāyıya, but this is inexact [cf. art. ZANJ]. The commonest names, apart from those already mentioned, seem to be Nawwar and Kurabt or Khurbat (perhaps of N. Syria and Persia), Čighar and Halabar (especially in Egypt and N. Africa) and Diman (in Mesopotamia). For other sub-divisions reference may be made to the bibliographical, and particularly to E. Littmann's Zigeunerv-Arabisch, which is an excellent summary of the whole subject, particularly on the linguistic side.

The collecting of data regarding the Gipsy tribes of the Orient is by no means easy. Even experienced orientalists and travellers have reached different conclusions regarding them. For example Lane (in his Modern Egyptians, London 1836, ii. 108) in spite of his profound knowledge of Egypt, asserted that there were few Gipsies in the land, while numbers of well-educated natives to-day, are still unaware of the presence of these tribes in their midst. The statistics of Massignon's Annales des musulmans (Paris 1925, p. 115) however, gives the number of Gipsies in Egypt as two per cent of the population, consisting, namely, of two tribes of Čhāgar and Nawwar respectively, and four tribes of Halabar.

The Gipsies as a rule seem, chameleonic-like, to take their creed, such as it is, from their surroundings. In Muslim countries these tribes usually profess Islam, in so far as they may be said to profess any religious views, many of them, indeed, being very superstitious and reported to be scoundrels and vagabonds. The same applies to the Muslim Gipsies of what was formerly European Turkey (Admiralty's Handbook of Turkey in Europe [1917], p. 62). In the Balkans many of them are Greek-Orthodox.

Persian and Arabic writers preserve for us the tradition that tribes of Jats (or Zutt) from the Punjdāb were conveyed westwards by command of the Sāsānian monarch Bahram Gūr (420–438 A.D.) and their descendants proved a troublesome problem some centuries later for the Caliph of Baghdad. Once more numbers of them were dispersed to the borders of Syria, where many of them were captured by the Byzantines, and thus found their way into the Eastern Roman Empire, thence to continue their migrations to other ends of the East and West. Many of them are even said to have risen to high rank, e. g. al-Sarī b. al-Ḥakam b. Yaḥṣūf al-Zuṭṭī, governor of Egypt (200–205 A. H.), while it has been supposed that the famous Bar- maude family at the court of Hārūn al-Rashīd were of similar Gipsy origin. The name Barāmūk is actually the designation in Egypt of a class of public dancers (Ghawārī) of low moral character and conduct who have been regarded as of Gipsy blood. The question, however, is doubtful (see Bouvier, Les Barricades d'après les historiens arabes et persans, Paris 1912, p. 110, 125).

The German traveller Setzen and the American
missionary Eli Smith gathered valuable material in the Near East regarding those nomadic peoples which proved useful to later scholars. They were followed by Capt. Newbold (1856) on the Gypsies of Egypt, Syria and Persia; von Kremer, Austrian Consul at Cairo, on the Egyptian Gypsies (1863); Sykes (1902) dealt with the Persian Gypsies, while an excellent treatise appeared in 1914 from the pen of R. A. S. Macalister on the Language of the Naur or Zut, the Nomad Smiths of Palestine. Macalister in this work had the rather difficult task of reducing to writing a language almost completely unknown, and interpreting and analysing the Naur stories. The folk-tales recounted to him by members of the Nauri settlement north of the Damascuse Gate in Jerusalem. He employed several of these Naur in the course of his excavations there. A small Syrian Gypsy vocabulary received by Miss G. G. Everest of Bairût from a friend at Damascus was also published in the Journal of the Gypsy Lore Soc., Jan. 1890, in an article by F. H. Groome. The philological aspect of the question has received, in recent years, the attention of scholars such as E. Galtier and E. Littmann (see Bibliography). 

In Egypt the Halab (sing. Ḥalab) are to be found mostly in Lower Egypt carrying on their special occupations at the various markets and masāfiit, as traders in camels, horses and cattle. Their womenfolk are noted seersesses and medicine-women, practicing all the arts of sorcery (ṣıdır): sand-divination (farḥ-ar-raml), shell-divination (farḥ-al-tad‘a), bibliomancy (fash-al-Kitāb) etc. Their tribal subdivisions are variously given by Galtier (p. 7) and Newbold (p. 291). Their name suggests some connection with Aleppo (Halab), but they themselves proudly claim a South Arabian ancestry their tribal chronicle being the popular broad-sheet production, Ta‘rikh Zir Sālim.

The Gharar Gipsy tribe, however, have a rather unsavoury reputation, a fact that is reflected in the modern Egyptian Arabic verb gharar “to be abusive”. Their speech has fewer foreign ingredients and Galtier is of the opinion that they are more recent arrivals in the Nile Valley, probably wanderers from Constantinople. The argot of the Gharars and the gharar al-Sim, and in modern colloquial Arabic in Egypt “to speak in enigmas” is yatakallam bi-l-Sim.

The word Nāri in Egypt is almost synonymous with thief, and their chasing propensities are libelously associated in a popular proverb with the inhabitants of Damānhūr [q. v.] ( alf Nāri wa-l Dāmanhūr). According to the age-old policy of setting a thief to catch a thief, the Naur are often recruited as estate watchmen (ghufūr).

Their pursuits and proclivities are varied in the extreme. Besides the myriad occupations of enchanters, amulet-sellers, quack-doctors, snake-eaters and astrologers many of them travel about as hawkers, metal-workers, animal-trainers, professional tumblers, rope-dancers, acrobats, monkey-leaders, musicians and ballad-singers, while some are employed to circumscribe Muslim girls, to tattoo lips and chins, and to bore ears and nostrils.

Nuṣāiri, the name of an extreme Shi‘a sect in Syria.

I. The etymology of the name is disputed: a. contemptuous diminutive from nasrūni “Christian”, in allusion to certain ritual similarities (Renan); b. corruption of material Latin name meiners for a Syrian tetrarchy of the first century near Edessa (but the name is still found uncorrupted in situ: it is the Djār‘at al-Nasirūn, which is crossed in going from Tell Kallākh to Homs, between the bridge called “Achan Kepru” and the lake of Homs; cf. British G. S. map of 1/250,000, Homs-Beirut sheet, 1918); c. nisba from a village near Kifā, Nuṣārāyya (Barhebræus; cf. de Sacy, Druses, i., p. clxxvi. and Ta‘bī, ill. 2128); nisba from an eponym: a fictitious Shi‘a martyr, son of 'Ali (according to the 'Alī-Ilāhīs), or a freedman of 'Alī’s or vizier of Mu‘awiyah (Dussaud, p. 10); or rather Ibn Nuṣāir, i.e. Muḥammad b. Nuṣāir Namītī 'Abbīt (≡ of the 'Abbīt al-Kās, a Bakr clan), whom we shall find below as the first theologian of the sect.

As a matter of fact this name adopted from the time of Khaṣibī (d. 346 A.H.) by these sectarians, previously called Namītīya (Namawbākht, Fīrāq, p. 78; Asbā‘ī, Ma‘āṣ, i. 15) and who called themselves mu‘āmilīn, has been applied since Samā‘ī (s.v.) and ‘Umāra (ed. Derenbourg, p. 145, 286) not to a district only partly converted in the north of Syria, but to an extreme Shi‘a sect also found in Egypt and along the Euphrates. This etymology, that of all the Muslim heresiographers, from the
Shī Ḫnr al-Ghāḍarī (d. 411 A. H.) and the Sunnī Ḫnr Hazām, has been and is the most probable.

II. the term has three acceptations: administrative, social and religious.

a. Administration: it is the “mountain of the Ansāriyya” of Syria (formerly Djabal Lūkkām), the former ḫnā’ī of Latakiya to the east of the Orontes which has been extended to the south and since 1920 has become the state of the Alawis (6,500 sq. km.; 334,173 inhabitants end of 1933 of whom 215,066 are Nuṣairīs, 61,957 Sūnīs in the north of Ṣāḥyūn and at Baniyya, 5,659 Ḫnā’īs at Kadmās and Mayās; 53,604 Christians, mainly Orthodox in Al-Ḥir and around the north of Ṭartīs; 35,652 in Latakiya (22,000) divided in Ṣūr, Latiyya and 8 kazas: Latakiya, Ṣāḥyūn (Hafta), Djabal, Ṭartīs, Mankūb (Banías), Ḫnā’īs‘ila (Tell Kallīkh), Sūrīs‘ila, Al-Ḥir (Maṣ‘af); a country of patient and industrious agriculturists (tobacco, silkworms). Its place-names studied by M. Hartmann (Z.D.P.V., xiv. [1891], 151—255) for the north (villages, not canons of which there is a list in [Delattre] Rēpertore ελπαθηβιτος, Latakia [Raghib‘ī press], Dec. 1933), show an old stratum of names, in part Aramaic and later vocational Arabic without any definite local religious traits except for modern Shī‘a influences, beneath which one can hardly see the pagan or Christian culture of the substratum (cf. on the contrary, Lebanon). The study of the district from the point of view of ethnology and folklore has hardly begun; certain prohibitions regarding food have been noted (Niebuhr, loc. cit.) Dupont, in J. A. P., 1824, p. 134; Batnāra, p. 57), some general (camels, hares, eels and catfish) and others special to the Ḫnā’īs‘ila (female or maimed animals, gazelles, pig, crab, shellfish, pumpkins, Ḫnā’īs‘ila, tomatoes). The only domestic art is bak-ken-making.

b. Socially, the name covers tribes of different origins, almost all speaking Arabic, who have adopted the Nuṣairī teaching.

1. In the state of the Alawis (215,066): the nucleus seems to be descended from Yemen clans of Hamdān and Kinda (Ya‘kūb, in B. G. A., vi., 3342); Ḥassān, Bahār and Taiḥ (Hamdānī, Šī‘a, p. 132) early converted to the Šī‘a, from the Tiberian and the Djabal Šam (where there are still Metwals) to Aleppo, increased by immigrants from Taiḥ (end of the ninth century) and from Ḫna‘ăn who at the time the Crusaders were being driven back came with their emir Ḥasan b. Makkūn (d. 638 = 1240, ancestor of the Ḥaddādān), from Mount Sīnjar, and imposed on the district their ruling families, their clans and ethnic structure (M. E. Ghālib, Tāwīl, p. 356). The following is the present day list of the principal clans (wāqī‘ah) (map in K. M. M., xlix. 6; cf. ibid., xxxvi. 278; and Tāwīl, p. 349—52) grouped in 4 confederations: Kulliyā (at Kahlāda; with Nawāsira, Karāhla, Iljula‘iya, Rashāwina, Shalhāma, Rasā‘ina, Dirdiyā, Hāt al-Sī‘īf, Bait Muḥammad and Darawīs); Khāyātīn (at Mankūb; with Sarāmīta, Makhalisa, Fāšāwī, Amānīra [mixed with Abī al-Kais]; Ḥaḍādīn (clan of the emir Ḥasan b. Makkūn; with Makhalisa, Banī ‘Aḥ, Yashbāya, Ṣawārīya, Mahārīya) and Mawāwīn (with Nūmālīyā, Sāwilīyā, Aleppo, Sarāwīna, Mahārīya who claim to be Ḥa‘īmīs, and Dāshārīga). From the xviith century the political history has been a series of persecutions by invaders (the Crusades; Ba‘bars who covered the country with mosques; legend of Durrat al-Ṣadaf, daughter of Shī‘a al-Anṣār [tomb at Aleppo] who instigated Tūnīr to sack Damascus; massacres under Selīm I) and civil wars among the clans themselves and against the Iṣmā‘īlīs of Kadmās (lost, and retaken for a brief period in 1808 by the Maḥārīza) and of Mayās, allied with the Turks;

2. In the sādīqah of Alexandretta (58,000: at Antioch 1/3, Ljūwādiya, Suwāidiya, Ljūidiya; with two deputies in Parliament;

3. In the State of Syria (29,693): at Ḥamāh and at Ḥom with one deputy; in two quarters of Aleppo; near Ljūs, and to the north of lake Hule (Ain Fic, 3,000);

4. In Šam (2,000): to the north of Nablus;

5. In Cilicia from the xviiith century (at Tarsus and Adana: 80,000 in 1921 now turkicised);

6. Along the Euphrates. In Kurdsṭān and in Persia, there are ultra-Shī‘a elements who have similar views and are called Nuṣairīs (among the ‘Ali-Īlahis or Ahl-ī Ḥaqq; q.v.);

7. In Lebanon, there were some down to the xviiith century (in Kṣrawān).

III. Religion: it is the religious teaching of the Nuṣairī sect that we have to study more particularly here.

Cosmogony and eschatology. According to the Nuṣairīs there is immediately below the ineffable divinity a spiritual world for heavenly beings (or stars), which emanates from him in the following hierarchy: Iṣm, Bāb and other Ahl al-Marāthī (of the first seven classes); it is the “great luminous world” (mawāj kāhir nūrīn); when they appear here below it is to lead back gradually to heaven the “little luminous world”, fallen beings, half materialized, imprisoned in the bodies which are their tombs; this operation revives them and brings them back to heaven to form the seven last classes of the Ahl al-Marāthī (119,000 out of a total of 124,000 = the traditional number of the prophets); next comes the “little world of darkness” (zulmānnt), extinguished lights, souls that damnation materializes (khwānān al-maṣūfīyya) in the bodies of women and animals; and lastly the “great world of darkness” composed of all the “adversaries” (afldāl) of the great luminous world, demons, who after innumerable metamorphoses in corpses of murdered men or slaughtered animals still quivering after death, are reduced to inert or passive manner (fused metals etc.). Just as the fall takes place through seven stages (doubts about divine appearances) so does the return to heaven of the elect go through seven cycles or adwār of divine emanations.

Theory of revelation. The pure divinity (ghāhib), the object of adoration, being ineffable his first emanation is the Name (Iṣm), the articulating prophetic voice (Nābī‘), the signification (Mā‘īn) of divine authority; such was the primitive teaching, that of Abu ‘l-Khaṭṭāb, the common teacher of the Iṣmā‘īlīs and the Nuṣairīs. But his disciple Māmūn Kāḍ ḳān, thinking that the enunciation by the divinity of an object which manifests him, is of greater importance than its signification which is a mute idea, detached the Mā‘īn from pure divinity, identified it with the ʾṢamīʿ (the silent) man; opposed to Nābī‘ and placed it a mere accident, below the substance, the Iṣm. Then, by reaction, other Khāṭṭābīya like Bāshshār, Shī‘ī, retaking the equation Mā‘īn = ʾṢamīʿ, reestablished the Mā‘īn before the Iṣm. And, as Abu ‘l-Khaṭṭāb had taught that in the Muḥammadiyya cycle, the
signification (maw’na) of the ineffable divinity was expressed through five privileged Asmā‘ (Muhammād, ‘Allī, Fāṭīmā (the masculine form of Fāṭima, for as we have seen women have no souls; this explains why they may form part of the offering of hospitality among initiates). Ḥasan and Husain, announcing equivalently its mysterious Unity), this group of Five equals, in which we recognise the Five of the nummāzāh (q.v.; cf. our, Salmān Fakh, No. 7 of the Soc. des Études Iranienes, 1933, p. 40–42) became in the hands of his pupil Maimān a descending series of five terrestrial terms (nummāzāh with the five spiritual terms, and inferior to them, the Druze say): Naḥī (Mim), Asūr (‘Arūn), Dīlā‘, Maḥdīn, Maḥštār; whence the Mim, the Khāridjīs Wadjalānī remarks, has the priority (cf. Nūr Muhammād). While according to Bāshāh, the five were equal and became Muhammād, Fāṭīmā, Ḥasan, Ḥusain, Muḥā’sān; ‘Allī being thought to surpass them was identified by hyperdulia and against all logic with the Ma’na. This is its last list that the Nuṣairis have adopted. And this is the origin behind their ‘god’ ‘Allī whom there is no need to seek antecedents in the Syrian pagan pantheon or in a Druze emanation. Bāshāh and the ‘Uqāyīya or ‘Ahdīya) copied by the Nuṣairis have simply copied the Karmaian list of Maimān, by inverting the order of priority between Mim and ‘Arūn, and making the ‘Ahdīya (Ma’na) the superiors of the Naḥī (Im) the following is the double list (Im in italics): a. in the seven cycles (nayb, kabhī personified by women among the poets) of the khurārī dīšiyā: 1. Ḥābīl, Adūm; 2. Nuḥ, šāhī; 3. ‘Arūn; 4. ‘Arūn; 5. Mīnā; 6. Mīnā, Ḥābīl; 7. ‘Allī (Abū Turāb, Ṭārīkh al-Nahr, Muhammād. Khasibi allows that there were 44 (=63–19) other khurārī (nīkhtiyā) during these seven cycles; b. in the šar ‘al-dīshānia (=the twelve classical imāms substituted for the early list of Ibn Nuṣair [which we shall see later) by Khaṣhi] each imām is promoted ma’na after having been the Im of his predecessor. The mode of appearance of the two divine emanations located behind the screen (agrāb, tifāzīf) of a phantasmagoric body (ṣamī al-zulāḥ, ma’mūn al-dīshār), is a reality for the faith of the Nuṣairis; this body is the support of a momentary illumination for the believer: while for the Druze nominalism it is only a mirage (zarīb) and for the Ishāṣiya, a real body, transfigured by a gradual sanctification. 

Theory of catechism. Aḥsa Kaiḥāshab had taught that the Five persons of the Im were pointed out to the believers by one or more inspired angelic intermediaries (tawāb, ṭawāḥif) of whom the first was Salāl or al-Sīn = Salmān in the Muḥammān, Muḥammad (cf. 106–110). Bāshāh’s initiates became, with his disciple Maimān, the five spiritual symmetricals of the Asmā‘ (ṣamī = Salmān; nāfi = Mīkūd; Ṯakar = Abī Dharr; fath = ‘l-Thāzīr b. Muḥā’b; Ḥāyāl = ‘Arūn; tāhīya = ‘ṣamā‘). Bāshāh. corr. thus No. 60 of the Druze catechism). While among the Track, these five initiates remained equal and far below the Im, became the five Alām (Mīkūd, Abī Dharr, ‘Abī Allāh b. Ṭawāḥ, ‘Uṭmān b. Muḥā’sān b. Kaḥbār), Salmān being thought to be above them was placed third as ‘Aḥbīr after the Ma’na and the Im. Such was the origin of the Nuṣairi descending series of five terrestrial terms (Im-Ma’na-Mīnā-Mi’un-Dīlā‘) in which there is no need to see an original pagan Syrian triad of Sun, Moon and Sky: this astrological correspondence, a favourite subject with Nuṣairi poets, found its way into the Shi’i catechism of Salmān under the influence of the Sufis of Ḥarrān; the assimilation, in the spiritual, of the sun to Muḥammād and of the moon to ‘Allī (the moon, like the imām, is the regulator of canonical acts; cf. our, Salmān, p. 36, No. 4) appears at Salmān with Maḥbūrah (d. 119 H.) In any case if pagan survivals are at the basis of astral gnosticism, as Dussaud suggests, it is not among the uneducated peasants (Dūḥal Lakkām) but among the towns-dwellers in Ḥarrān that they have been able to survive.

Below the Bāb are the Five Alām, whom he associates as lords of the elements (maw’kūkullū bi-magāl al-‘ālam) with his role of Demiurge engendering souls by initiation. The list of Nuṣairi alām given above should be compared (as well as that of the Druze ḥadīd ‘wise virgins’ of Salmān; like the Nuṣairi alām are the ṣāḥibāt of the Dīk al-A’rūn = Salmān) with the lists of Garmy (Aṣṭābād, Manbāq, p. 225) and of the Khaṭṭāyia the eightaries of the Pāhirs (R. E. I., 1932, p. 442, trans. Ivanow).

Initiation. This has three degrees (nakīf, nakīf, inām): the first consists of a solemn pledge (iğāk, kīfāb with tālīb ma’allāk; cf. suṣrābīyā) to reveal nothing of this spiritual marriage (niṭāb al-zamān) in which the word of the initiator fertilizes the soul of the initiate in three seances, the ritual of which is related to that of the other extreme Shi’a sects (and of the futuwwet-nāme) and through them and the Sufis of Ḥarrān to the old mysteries of Central Asia (cf. miṣār; Dussaud, p. 106–110). The cup of wine (called ‘ṣāf al-nūn, Cat. N. 4) of the anticipation of Paradise, is partaken of at it.

The initiatory teaching is essentially an ultra-Shi’a symbolism (ta’wīl) of the seven canonical rites (da’imān) of Islam which are personified: 1. alāt: the five āwāz by Muḥammad (= ωυν; same among the Ishāṣiyā, Fāṭimā, Ḥasan, Husain and Maḥdīn (= fadh); among the Druze as among the Khaṭṭāyia of the Pāhirs by the muḍāb, the kwāb, Abī Dharr, Mīkūd, Salmān). Similarly the 17 the 31 51 dīrāt; 2. yāṣīr: the secret guards of guarding 30 names of men (days) and thirty of women (nights of Khaṭṭāyia); 3. khaṭṭāb: by Salmān; 4. kīfāb: the sacred land 12 miles around’; this is the sect; Bait = the Iṣr; the Black
Stone = Məḥīdād; the 7. aḵāvat = the 7 cycles; 5. ẓirād = the maledictions upon the aḵāvat (Bāk., p. 44) and the discipline of the mystery; 6. ẓāwīlāyā = devotion to the ʻAlīs and hatred of their adversaries; 7. the ʻAdhāyān al-farānāk, the formal aḵāvat, the performance of the aḵāvat. The Karūn is an initiation to devotion to ʻAlī; it was Salmān (under the name of Džbrāyi) who taught it to Muḥammad.

The annual festivals include: the Sihā lunar festivals: Fīrīr, ʿAdhār, Gbādir, Mubāṣṭa, Fīrāš, Ṭāhīr, 9th Rabīʿ I (martyrdom of ʻOmar) and 15th ʻAšrān (death of Salmān); then certain solar festivals: Nawrūz and Mīhīrān, Christmas and Epiphany, 17th ʻAdhār, St. Barbara. Certain liturgies (kwādīzi) pertain to these festivals and are wrongly called "masses" (kwādīzi ʻṬīb, al-Baḥlār, al-Tābitā).

V. History of the Sect. All the initiatory, insāds of the sect go back from ʿKhashībī to Ibn Nuṣair through two intermediaries, Muḥammad b. Džundab and Muḥammad al-Džannān al-Džundabī. Of Ibn Nuṣair, a notable of Baṣra, teacher of ʿAbīyīhī, we know that in 245 a. h. he proclaimed himself the 10th of the 10th ʻĀli (the ʻAlīs) and of his eldest son Muḥammad who died before him in 249, the year of the ʻAhdā of the Mahdi, according to Ibn Nuṣair (Ibn Bābawāh, Gbābir, p. 62, l. 12, taken from Nawbābakht, Fīrāš, p. 77, 83; such was still the belief of the Ḥamādān emir Abūl Fīrās, Dīvān, 1873, p. 39). It is only ʿKhashībī who says that Ibn Nuṣair joining the eleventh imām (Nūrī, Naḥṣ, p. 144) had taken for mahdi his son Muḥammad b. Ḥasan.

Of the two successors of Ibn Nuṣair we only know that the second, like ʿKhashībī, belonged to Džundabī between ʻUkāf and Wāṣāf, the centre of the Žand and Karmātīn rebels (Ṭabarānī, iii. 1517, 1925, 2198; Maṣṣūḥ, Tāmbīr, p. 391), native place of Ibn Wahāḥib. Muḥammad b. Ḥamādūn ʻKhashībī (vocalisation attested by Dżhabāb, Muṣṭālīḥ; in Persia and the šāk wrongly now pointed Ḥaḍīnī) died in 346 (957) or 358 (968) at Aleppo (tomb to the north called Ǧāshīk Bairī�) was the real founder of the Nuṣairī sect; he lived, like his patrons the Ḥamādānī, between ʻUkāf (in 344. according to Aṣṭarādhī, loc. cit., p. 112) and Aleppo; he dedicated to them his Hiḍāyā; cf. his Ṭūlūn Kābābīya (Taḥlīl, p. 196 sqq., 210, 257). Among his 51 disciples the best known is Muḥammad b. ʿAli Ḥallī of Džulliyeh near Antioko where the chief of the Ḥaḍārī still lives. His direct disciple was ʿAbīd Mainīm Tabābanī (d. 427 = 1035), a prolific polemicist against the chief of the ʻIshāḥīya of Latakia, ʻAbī Dabha Ismāʿīl b. Khaḍīlād. After him mention is made of ʻImāt al-Ḍawla, Ḥātem Ḥarbānī (c. 700 = 1300; Paris, M., 1450, vol. 112; Taḥlīl, p. 315), author of the Ṭūlūn Kābābīya, Ḥasan Aṣṣūḥī of Ṭaʿān, died at Latakia in 836 (1432); lastly, several heads of parties, the ʻIsmāʿīlī poet Muḥammad b. ʿYūsūs Ḥalātī (1011 = 1602), who lived near Antioko, ʿAli Māhīṣūs, ʿAṣṣīr Ṣafīlā, ʿUṣūs Ḥaṣīdād. In this connection we may note that the four alleged Nuṣairī sects reduce themselves to two; that of the north (Šamsīya because it is Mīmīsīya, Šamsīyā = Ḥaḍārīsīa, from the name of ʻAli Ḥaḍārī, its head in the 14th/15th century = ʿIsmāʿīlīa) and that of the south (Kūlīyā, for it is dominant there), which is ʻAṣmīya, then ᴷᵃᵐᵃʳⁱya. The spiritual organisation is quite distinct from the political among the Nuṣairīs. The four Ṣaḥābah mentioned by Niebuhr in 1780 (at Bahlīlye near Latakia, Simerian-Khāḏbī, Ṣafīlā and Ǧūbāl Kahlīye) were temporal rulers. In 1914, there were two spiritual leaders, the ẓāwīlāyā (ʻAmīrī) in Cilicia and the ẓāwīlāyā aḥt al-baṣir (ṣamārī) at Karūn (1913; Sliman al-ʻAzmī al-ʿAzmī, the Nasirīs. From 1620 the Žaḥīr al-Sīrī al-kadīs of the south have found their way among the Nuṣairīs. In the last ten years a shepherd of the ʻAmāmirā, Sliman Muršīd, has been trying to find a new sect to the north of Maysaf.

VI. Bibliography: 1. Nuṣairī and Muḥammādīn sources: there is no canon of the Nuṣairī initiatory writings, as for the Dzuṣes (cf. de Sacy and Seybold); but Catafago has given a list (J.A.P., 1876) of 40 esoteric works, of which 29 are theological and 11 poetical (specimens translated by Huart, in J.A.P., 1879); we may mention No. 20, Ḥaḍīr Mūṣīrūn (= 16 liturgical sūras; text in Bāk., p. 7–34 and Dussaud, p. 181–189 with transl.) and No. 19, Ḥaḍīr Mūṣīrūn al-Yād of A. S. M. Ţabarānī; transl. in J.A.P., 1878, in R.M.M., xix, 56–57. This list might be supplemented. For the above-cited references to MSS. (1440–1450 etc.) there is a bio-bibliographical collection of the writers of the sect, similar to that of the ʻIsmāʿīlī writers published by Ivanow. Nuṣairī writing makes free use of moderate Sihā works (Mūṣīrūn is quoted by Ţabarānī) and have even written some; e.g. the Ḥaḍīyā of ʿKhashībī which is still read in Persia. Two Nuṣairī catechisms have been studied: Žālīm Diyānāt al-Nuosairiyya, in 101 questions (Paris, M., 1682; transl. Salisbury, in J.A.O.S., 1868, p. 287–308; cf. Taḥlīl, p. 356; the first part is taken from an authentic manual where there is not a lodge of initiation; cf. M., 564). A popular history, in places containing a good deal of romance but documented (without exact references), was published by Meḥmed Emin Ghalūb (d. 1932), of the Al-Ṭawālī al-Wadīrī of Adana: Žālīm Diyānāt al-Nuosair, by Tārāštī, Latakiya 1343 (1924), 478 pp. Two refutations are well known; a Dzuṣe by Ḥamza (Rūṣa Ḥamṣī, No. xvi. of the canon; perhaps refuting No. 9 of Catafago’s list) and a Sunni by Ibn Taimiyah (fatwā, p. 94–102 of the Magīnī, Cairo 1325; transl. Guyard, in J.A.P., ser. 6, vol. xviii., 1871, p. 158).

NUŠAIRI — AL-NUSHĀDIR

3. In Arabic the only recent studies are: Kudali, Khitat al-Sham, vol. vii. (1928), p. 258—268; and Kamil Ghazzi, Naher al-Dakhah (Aleppo 1432 A.D., vol. i., p. 204—205); cf. also the Bairut press (A’khr, Sept. 19, 1930) and that of Damascus (Ayyûm, March 29, 1933). (Louis Massignon)

NUSB, standing stone, especially one which is held sacred. The root is the same as in the Hebrew maszaba, Phoenician nĕb and nēb and South Arabian nēba, nēb. On the explanation of the Arabic forms the philologists are not agreed. They generally assume nēba as singular with the plural anēba, but others pronounce it nēbû and consider it the plural of nēb or nēba. In addition to these forms Arabic has also from the same root the substantives manṣāb and nazī’a.

In answer to the much discussed question of the ideas associated with standing stones, Arabia only makes one contribution, in as much as it is evident that the fundamental conception was that of a dwelling place of the deity (bé-tē). Of several of the old Arab deities we are told that they were rocks or blocks of stone, i.e. that they were incarnate or present in them. Whether this was always so or whether this form of worship developed out of stones placed upon graves (e.g. Hamúra, p. 502, l. 8 and the use of nēbā in the sense of tombstones) where the stones were originally memorials, is a question which cannot be dealt with here. We need only mention that the theory of worship of the dead breaks down if the deity has its abode in a tree, like al-Uzza of Nakha in a samara tree (umbrella acacia). Examples of the presence of a deity in a stone are given in the articles DHIU l-SHARK, AL-LAT and MANAT. Other examples are Dhu ‘l-Khalasa, al-Fals, al-Djasal, Sa’d. The worship associated with such stones usually consisted in sprinkling them with the blood of sacrifices. Thus Zahir, 10, 24 speaks of a sacrificial stone, manṣāb al-ziir, the top of which was red with blood; a wounded and bleeding man is compared to a red nēb (Ibn Sa’d, iv, l. 162, 4); among forbidden foods, Sūra v. 4 includes what is slaughtered ‘ala l-nēb; al-Ashā (Morgenländische Forschungen, p. 258) warns against worshipping a dhī l-nēbī l-mansūba (? read manṣīb) with sacrifices; cf. also Mutafammas, ed. Vollers, 2, 1. The words of Sūra lxx. 43, which say that the resurrected stream out of their graves as if they were running (yaihūna) to a nēb (other readings nēb or nēb) refer to a characteristic feature of the worship. In view of the prominent part played by the stones in the worship of the early Arabs, it is natural that Muhammad should have included anāb among things prohibited to the believers like wine, māṣir etc. (Sūra, v. 92) for the worship associated with them was one of the principal forms of idolatry.

The Sneering of the anāb with blood recalls the well known statement in Herodoto iii. 8 regarding the ancient Arabian ceremony of concluding alliances. There is however an essential difference. In the first place there is no question of any act of worship and further we are told that the participants put their blood on seven stones lying between them, and called upon the two Gods Qottūl and Allat [s.v.]. The stones were not here conceived to be habitations of the gods but owed their merit to the number seven which was the important thing on taking oaths.

(Fr. BuHL)

AL-NUSHĀDIR, also nussādir, nusādir, Sanskrit navasaidra, Chin. nau-āo, sal-ammoniac. The etymology of the word is uncertain; perhaps it comes from the Pahlavi anūsādir “immortal fire” as we find the form antušādir in Syriac.

The oldest references to the occurrence of sal-ammoniac in a natural state are in the reports of Chinese emperors with whom the good of the eightieth centuries, which were the subject of very full investigation in connection with a geological problem, the question of volcanoes in Central Asia by H. J. von Klapproth, A. von Humboldt and C. Ritter, in the first third of the xixth century. The reference was to mountains of fire, Pe-Shan on the northern slopes of the Tien-Shan south of Kuldja, Ho-Chou on the south side of the Tien-Shan near Turfan and the sulphur pits of Urumtsi. The mountain Pe-Shan was said to pour forth fire and smoke continually; on one side of it all the stones burn, and are melted and then after flowing some miles solidify again. Nau-āo and sulphur were obtained there for medicinal purposes but the stones could only be collected in winter when the cold had cooled the ground. A. von Humboldt and C. Ritter do not accept a reference to the burning of coal by which sal-ammoniac and sulphur are obtained. The statement that the volcanoes of Central Asia produce sal-ammoniac in immense quantities is found in G. Bischof and even G. von Richthofen still held the volcano theory. The botanist and geographer Regel who travelled in these regions about 1879 was the first to dispute the existence of volcanoes. After Nansen, Le Coq and others had been unable to confirm the existence of volcanoes but established the fact that there were large deposits of coal on the surface, the old sources in Central Asia are now generally attributed to the burning of coal.

Almost all the Arab geographers who refer to Central Asia, from al-Mas’ūdī, al-Iṣākī, Ibn Hawkal, to Yākūt and al-Kazwini, give fantastic stories about the method by which sal-ammoniac is procured in the Bumm hills east of Samarqand. Here again the details suggest the burning of the earth rather than volcanic exhalations. The Persian traveller Nāṣir-i Khusraw however mentions deposits of sal-ammoniac and sulphur at Demāwend and Ibn Hawkal is acquainted with the volcanic sal-ammoniac of Etan; the latter was still exported to Spain in the xivth century. At an earlier date they had begun to procure sal-ammoniac from the soil of camel dung. This product remained into modern times an important import by the Venetian traders and was only driven from the market by the modern cheap methods of production from gas liquor etc.

The use of sal-ammoniac as a remedy in cases of
inflammation of the throat etc. is already mentioned by Sahl b. Rabball an-Talar. Ibn al-Baṭrār also quotes from other authors all kinds of remarkable uses of it, on which no stress need be laid. Liljibr b. Huwān reckons sal-ammoniac among the poisons, which is true of large doses.

The part played by sal-ammoniac in alchemy is much more important. Liljibr b. Huwān adds it as a fourth to the three τυπατζια of the Greeks, quicksilver, sulphur and sulphide of arsenic (A₃S or As₂S₃), and it is used by all Persian-Arab alchemists in countless recipes. The preparation of carbonate of ammonia through distillation of hair, blood and other materials is already fully described in the "Seventy Books" and other works of Liljibr. These methods seem to have given the stimulus to the discovery of the Egyptian method of obtaining sal-ammoniac. All these things came with alchemy to Spain and thence into western alchemy.

In the earliest Latin translations sal-ammoniac is still called mescador, mizadir etc., i.e. translations of the Arabic name. The general term al-Cūbā is also found in the forms alivāda, alocaph or translated by aquila. The identification of this salt with the salt of the oasis of Ammon already mentioned by Herodotus is first found in Syrian authors and lexicographers.

NUSRĪRĀN. [See ANŠUHRĀN.]

NUŠTĀRĀD. [See SĪSTĀN.]

AL-NUWĀIRĪ. Shihād al-Dīn Ahmad b. 'Abd al-Wahhāb al-Bakri al-Kindi al-Shāfī', a rabbi historiographer, born on the 21st Dhu-l-Ka‘da 677 (April 5, 1279) in Upper Egypt (probably in al-Kūs), died on the 21st Ramadan 732 (June 17, 1332) in Cairo, author of one of the three best known encyclopedias of the Mamlūk period (the others are by al-Umārī and al-Kalqashandī). His father before him had been an official (al-Kūthī) of note (628–699 = 1231–1300); the son filled several offices at the court of Sultan al-Malik al-Nāšīr (Muhammad b. Khalīl), whose favour he was. He was for a time Nāẓir al-Ḍirās in Tripoli (Syria) and later Nāẓir al-Dīwān in the Egyptian provinces of al-Dakhāliya and al-Muṣṭaḥṣa. His monumental work Nahlāt al-arab fi Fawā'id al-Adāb which was dedicated to al-Malik al-Nāšīr was a result of his administrative activities. As he says in the preface, at the beginning of his literary career he was almost exclusively concerned with kītāb (i. 2) and only later took up adāb (i. 3); he wished to sum up in his encyclopaedia all the knowledge that was indispensable for a first class kītāb. The book is divided into five sections called fāwn, each fāwn has five parts, each fāwn has a different number of chapters (abkūdā) varying from two to fifteen. The first fāwn is devoted to heaven and earth, the second to the man, the third to the flora and the fifth to history (full list of contents: vol. i., p. 4–25; also in de Goeje, Catalogus, i. 5–14; cf. also Šajdi Pasula, ed. Flügel, iv. 397–398, No. 14069). The division is unequal; the last fāwn of the fifth fāwn, which is devoted to Muslim history fills almost half the work, which runs to nearly 9,000 printed pages. In addition to the division according to subjects, the book is divided into volumes: the last, the 31st discovered by Ahmad Zaki Pāshā, contains the history of Egypt down to the death of the author in 731. From the dates of the separate parts and volumes it is evident that he devoted no less than twenty years to his book (cf. e.g. de Goeje, Catalogus, i. 16 where the year 714 is given; vol. i., p. 416: year 721; vol. v., p. 355: year 722 or Weil, op. cit., xv.: year 725 etc.). In the earlier parts later additions are often found (cf. e.g. vol. i., p. 13, q: 10: 15, 4–5; 20, 6–9). For contemporary history Nuwairī's book is of the first importance; in other parts its value depends on that of his sources. Its extent and many-sidedness will only be appreciated when the edition is complete and a study like that of Björkman on al-Kalqashandi Shihād al-Dīn has been undertaken. Al-Nuwairī himself makes no claim to originality; like the majority of Arabic encyclopedists, he expressly says that he follows his predecessors and places the whole responsibility on them (i. 26). Owing to the existence of many manuscripts of separate parts, European scholarship early became acquainted with al-Nuwairī; he is already mentioned by d'Herbelot (1625–1693) in his Bibliothèque Orientale (Maestricht 1776, p. 670). In the collections made by Golius and Warner some fine copies came to Leyden (includued in albums) (W. M. C. Jaymboll, Zesventende eeuwse Samenstelling van het Arabisch in Nederland, Utrecht 1931, p. 178; Catalogus, i. 5–18, No. 5) and attracted great attention in the xviiith century. One of the first to study him was J. Heyman (d. 1737) whose Newarijana — not too fortunate excerpts and notes — is in manuscript in Leyden (Catalogus, i. 18, No. 6); on Heyman see Reiske, Prodignagmata, in J. B. Kohler's Abultedeb Tabula Syriae, Leipzig 1766, p. 233 and Jan Nat, De studie van de oosterse Talen in Nederland in de 18e en de 19e eeuw, Purmerend 1929, p. 25–26). In general in the xviiith and early xixth centuries too much stress was laid on the account of pre-Musliman history in al-Nuwairī (Schultens, Monumenta, 1740, Historia, 1786; Reiske, Prodignagmata, 1766, p. 232–234, Primaire langue, ed. Wustenfeld, 1847; Rasheshcen, Historia pacificorum aradam regnum, Copenhagen 1817, p. 81–124 etc). Later investigation showed that while the existence of older sources (al-Nuwairī only of secondary importance (see Mittowch, Prachia arabum pagamom, Berlin 1899, p. 26–30; G. Olinger, The Kings of Kinda, Lund 1927, p. 19 etc). Of considerable importance are the parts which deal with later, especially contemporary, history and historical geography; in the course of the xixth century they were frequently appealed to and excerpts edited or translated by Silvestre de Sacy, de Sèville, Descrémery, v. Hamer, Quatremère, Weil, Tiesenhausen, Amari, etc. One of the latest studies of a section of his work is the second volume Historia de los musulmanes de España y Africa. Texto árabe y traducción española de M. Gaspar Remiro (Granada 1917–1919; cf. Angel González Palencia, Historia de la literatura arábigo-española, Barcelona 1928, p. 162–163). Ahmad Zaki Pāshā
deserves honourable mention for the interest he (died July 5, 1934) has aroused in the study of Nuwairi modern times. With great industry and perseverance he has collected photographs of all 31 parts of the Nihāyat al-ʿArab frequently from autographs, and these are now deposited in the Royal Library in Cairo. As a result of his efforts, a complete edition was undertaken in 1925 and ten volumes are now available in the handsomely and imposing edition of the Dār al-Kutub al-Misriyya, which affords a sound basis for the general estimation of the value of the book.

Al-Nuwairi was not only an official but also a fine calligrapher: he was able to copy as many as 80 pages a day. He himself made at least four or five copies of his own encyclopedia and sold them at 2,000 dinhems each. He made eight copies of the Sākh of Bulhāri at 1,000 dirhems each. He was also famous as a bookbinder.

(IGN. KRATSCHKOWSKY)

NUZHA. [See MIZAF.]

1) See also U.

AL-OBOLLA was in the middle ages a large town in the canal region of the Tigris Delta, east of al-ʿArba. It was situated on the right bank of the Tigris and on the north side of the large canal called Nahr al-ʿArba, which was the main waterway from al-ʿArba in a southeastern direction to the Tigris and further to ʿAbbādān and the sea. The length of this canal is generally given as four faraḍās or two barāds (al-Mašdi). Al-Obolla can be identified with ʿAṣlāb al-Maṭrūq, mentioned in the Periplus Maris Erythraei (Geogr. Graeci Minores, i. 255) as lying near the coast. In a story told by al-Mašdi (Muradī, iii. 364) there is still a reminiscence of the period before the foundation of al-ʿArba, when al-Obolla was the only seaport in the Tigris estuary. The earlier Arab authors, in discussing the ancient administrative division of lower Babylonia in Sāṣānian times and the foundations of towns by the Sāṣānian kings, identify al-Obolla with other places, such as Dast-Mašin (Ibn Khurādābhūhī, in B.G.A., vi. 7) or Bahman Ardashīr (Tabarī, i. 687), although these provinces must be sought on the opposite bank of the Tigris; Eutychius (in Migne, Patrologia Graeca, iii. 911) likewise makes al-Obolla a foundation of Ardashīr i (cf. on this question: H. H. Schaedler, in L.H., xiv. 27 sqq.). Ibn Khurādābhūhī, p. 7 quotes an Arabic poem of a contemporary of Muḥammad, where al-Obolla is mentioned. In the story of the conquests the town is reported to have been captured by ʿOthā b. Ghazwān in the year 12 (633) and this conqueror described it to the caliph ʿOmar as the "port of al-Baḥrān. ʿOmar, al-Hind and al-ʿIffāl" (al-Balāḏūsī, p. 341). This conquest enabled the Arabs to seize the opposite bank of the river (Dast-Mašin) and the so-called Euphrates county. After the rise of al-ʿArba, al-Obolla became of secondary importance, but throughout the ʿAbbāsid caliphate it remained a large town. It was further from the sea than it had been, but still the effects of the tide were perceptible even above al-Obolla. All the great geographical authors of the xth–xiith century give a longer or shorter notice of this place. Its environs are described in very laudatory terms (cf. Yaḥṣī, i. 97); the borders of the Nahr al-Obolla were one large garden (Ibn Hawkal, in B.G.A., ii. 160). The part of the Tigris opposite al-Obolla was important for navigation; in earlier ʿAbbāsid times there had been here a dangerous whirlpool, which had been eliminated by sinking a large quantity of stone in the water at the expense of an ʿAbbāsid princess. Here was erected a beacon light which is described by al-Idrīsī (ed. Jaubert, i. 364). Al-Obolla was in this period even larger than al-ʿArba, according to Mašdi (in B.G.A., iii. 118), and the place was n-tel for linen goods and also, as appears from al-Yaḥṣūbī (in B.G.A., vii. 360), for its shipbuilding. Naṣir-i Khosrow, who visited the place in 443 (1051), gives likewise a vivid description of its beautiful surroundings (Berlin 1341, p. 133). On the other hand, al-Obolla does not seem to have been an important strategic point; occasionally it was occupied, as in 331 (942) by the governor of Ḥātān in his action against the Barīdī brothers in ʿArba (cf. Miskawāzh, ed. Amedroz, i. 46), but as the events showed it was far from being an important bulwark of that city. After the xith century the general decline of those regions seems to have brought about the gradual disappearance of the place; Ibn Baṭṭūta (ii. 17 sqq.) calls it only a village and the Nushāt al-Kulūb
(p. 58) knows only the Nahr al-Obolla, but does not mention the place itself. About this time it must have disappeared; last account (as late as the 1830's) of the Nahr al-Obolla of the Hijaz is recorded by Lane-Poole in the "Raschid-Shaw" (p. 453) reproduce only obsolete geographical traditions.

**OCHIALY,** Turkish corsair and admiral in the eighteenth century. He was born in a village of Calabria called Licastelli, about 1750, as, at the time of his death in 1787, he is said to have been over ninety years old. Ochialy is the name by which he is known in Italian sources of the time; the Turkish sources call him Ulu'dj 'Ali, which name probably was given to him in Northern Africa. It may be the Arabic plural 'ulûdîj (from 'ulûdîj), denoting his foreign descent (Hammer, G.E. R., ii. 481-491) gives conflicting statements). After being a catured galley slave, he became a Muhammadan and entered on a long maritime career in the Mediterranean. According to the Sidjîl-i őethmani (ii. 502), he became Tersâne Kapudanî in 1769 (1554). He owed his rise to his connection with the famous admiral Torghud Re'îs, whose lieutenant he was. With Torghud he was at Djebba during Charles V's expedition against this island, and in 1565 both took part in the abortive expedition against Malta, where Torghud was killed. Then, until 1568, he was the latter's successor as viceroys of Tripolis, after which he was appointed in the same capacity to Algiers, as successor of Şehîd Pasha. During this time he extended his influence over Algeria, even west and, in 1567, he temporarily took Tunis from the last Haçşîd sulün and his Spanish protectors. Cervantes mentions him as king of Algiers in chapter xxxix. of his Don Quixote. In the following year Ulu'dj 'Ali took part in maritime expeditions against the Venetians and the Maltese. His chief exploit is connected with the battle of Lepanto [q. v.], in September 1571, where he commanded the left wing of the Ottoman fleet. His success in bringing a part of the fleet safely to Constantinople after the defeat procured him the dignity of Kapudan Pasha, the former grand admiral Mu'elîhdin-Zade 'Ali having perished at Lepanto. On this occasion the name Ulu'dj 'Ali is said to have beenchanged into 'Ilîdij 'Ali. He remained in this office until his death and commanded a series of predatory expeditions in the Mediterranean, participating i. a. in the reconquest of Tunis and La Goulette in 1574, along with the serasker Sînân Pasha [q. v.]. The inner political changes did not affect his favour with government circles. His last official activity was to bring the new Khân of the Cîmea to Kaffa to install him in place of the deposed Khân. Ochialy displayed considerable activity in ship-building, especially after the delâlec of Lepanto; in addition he was the builder of the Topkâne Dîâmî at Galata, and of a hamâmî in the sulün's palace. When he died unexpectedly in his own mosque (14th July 995 = June 21, 1587) he left an enormous fortune, which fell to the state.

**OCSONOBA,** the old name of the circle (kâra) in al-Andalus corresponding to the present Portuguese province of Algare de which Silves [q. v.]; Ar. Sîwâlîn was the capital. The geographers and historians transcribe this place name in the forms Ukkunuba and Ukkûnuba; we also find the wrong forms Čghknîya and Ukkûnîya, the result of graphic errors. The name Ossonoba seems also sometimes to be applied to a town which would be the old Santa Maria de Algarve [q. v.] now Faro. On the authority of an epigraphical reference it has however been identified with Milreu (Estoy) by Hubner (C.I.L., i. 3-4, 781-785).

**OPEN.** [See BUDAPEST.]

**OGHUL,** a word common to all the Turkish languages, meaning "son", "child", "descendant". In this connection attention may be called to certain formations, such as oğlak oğlu, "son of the old house", and oğlak oğlu, which may be applied to the sons of the Janissaries. Oğul is very frequently found in family names where it takes the place of the Persian zade or the Arabic ibn, e.g. Hekim-oğlu or Hekim-zade for Ibn al-Hekim or Ramađân-oğul or Ramađân-zade for Ibn Ramađân (where it should be remembered that the Arabic ibn does not mean exclusively "son" but "descendant"). An incomplete survey of such formations in an early period is to be found in Sijjl-i őethmani, iv. 778-812. — The new law on family names will give rise to numerous forms where oghul is combined with names and crafts.

Cognate is oğlan, "boy", "young man", "servant", a word also found in certain compounds, e.g. iî oğlan, "sultan's page" or iî oğlan, "language-boy", "interpreter". From oğlan we also get uylan, the name for light cavalry.

(FRANZ BÄRINGER)

**OHOD,** a mountain about three miles north of Medina, celebrated for the battle fought there in the year 3 which ended unfavourably for Muhammad. It is a part of the great range of hills which runs from north to south but here spreads to the east over the plain and thus forms an independent group of hills. The rocky walls surmounted by a rectangular plateau — without peaks, Yağıfit says — "which rise like masses of iron" (Burton) above the plain are quite destitute of trees and plants and only the face of the south wall is broken by a ravine which played a decisive part of the battle. The country round is stony and covered with gravel but farther south there are a few cornfields and gardens watered by a brook, but these are sometimes flooded by sudden rainstorms so that the pilgrims coming from the town cannot reach the hill. The Meccans who had
set out to avenge the defeat at Badr were encamped at the already mentioned cornfields at al-‘Irāl or al-‘Ijār, which were then full of ripe corn and supplied food for their animals. Muhammad who against his will and against the advice of the elders was forced to leave the town and meet the enemy in the open field, went unhindered past the enemy camp and drew up his troops at the foot of the hill with their backs to it: a strategy no less peculiar than that of the enemy. At first it looked as if the enthusiasm of his followers would secure him a victory like that of Badr. But when the archers, whom the Prophet had placed upon the hill with distinct orders to prevent a flank attack by the enemy and not to leave their positions, were unable to restrain themselves when they saw the Meccan camp being pillaged and hurried up to see what they could get, Khalid b. al-Walid’s quick eye at once saw the weak spot and when he attacked it, the tables were quickly turned. When the rumour spread that Muhammad had surrendered (the tradition says his men had given way, and finally the flight became general. In reality the Prophet was only wounded, and some of his followers succeeded in concealing him in the ravine. Fortunately the Meccans, little experienced in warfare, did not know how to follow up their victory and began to go home. The Prophet was in this way saved from the worst but he had to lament the loss of many of his followers, including his uncle Ḥamza [q.v.], a loss which he felt particularly. It is not easy to get a clear idea of the treatment of the fallen as the traditions differ very much. It is said that the Medinese at first brought their dead to Medina but the Prophet soon forbade this; some mention a common grave in which those who knew the Qur’ān were put in the first row; but according to others the martyrs were buried singly or in two and threes and some authorities say that the alleged common graves of the martyrs of Oḥod are really those of beduins who died in the reign of ‘Omar (Wāqidī, transi. Wellhausen, p. 143). All accounts however agree in their tendency to glorify Ḥamza. The Prophet is said to have uttered the ṣabūra over him first; the bodies of the other dead are said to have been placed beside him one by one and Muhammad prayed over him 70 times, as he included him in the prayer with each new corpse. Every year afterwards the Prophet went to Oḥod to visit his and the other graves and the early caliphs did so also. Muhammad is said to have ordered that the women in lamenting the death of every Anṣāri should begin with a lament for Ḥamza. In this way Oḥod became one of the most prominent places of pilgrimage the Medinahmāns, the mosque was built over Ḥamza’s tomb and it is mentioned by Maqādissi; it lay behind a well near the graves of the other martyrs. We have a brief description by Ibn Dju‘ārī in the 9th (xiiith) century. He mentions first of all Ḥamza’s mosque on the south side of the hill 3 miles north of Medina; a mosque is built at his grave with the grave in an open space to the north of it. Opposite lay the other graves of martyrs and opposite them again was the cave where the Prophet took shelter on the lower part of the hill. Around the graves of the martyrs is a low wall of red earth ascribed to Ḥamza at which people seek a blessing. The best modern description is that of Burckhardt who visited the place in 1814 after its devastation by the Wahhābīs. From his description we may quote the following: “About one mile from the town stands a ruined edifice of stones and bricks, where a short prayer is recited in remembrance of Muhammad having here put on his coat of mail, when he went to engage the enemy. Further on is a large stone, upon which it is said that Muhammad leaned for a few minutes on his way to Oḥod. . . . To the east of this torrent, the ground leading towards the mountain is barren, stony, with a mound, on the slope of which stands a mosque, surrounded by about a dozen ruined houses, once the pleasure villas of wealthy towns-people; near them is a cistern, filled by rain water. The mosque is a square solid edifice of small dimensions. Its dome was thrown down by the Wahhābīs but they spared the tomb. The mosque encloses the tomb of Ḥamza and those of his principal men who were slain in the battle; namely, Mu‘āz b. Umar, Dji‘ārī b. Muhammad (not mentioned in the traditions) and Abd Allāh b. Dji‘āh. The tombs are in a small open yard, and, like those of the Bākī, are mere heaps of earth, with a few loose stones placed around them. Beside them is a small portico, which serves as a mosque. A little further on, towards the mountain, which is only a gun-shot distance, a small cupola marks the place where Muhammad was struck in battle by a stone . . . . At a short distance from this cupola, which like all the rest has been demolished, are the tombs of twelve other partisans of the Prophet, who were killed in the battle . . . The people of Medina frequently visit Oḥod, pitching their tents in the ruined houses, where they remain a few days, especially convalescents, who during their illness had made a vow to slaughter a sheep in honour of Ḥamza if they recovered. Once a year (in July, I believe), the inhabitants flock thither in crowds, and remain for three days, as if they were the feast days of the saint. Regular markets are then kept there: and this visit forms one of the principal public amusements of the town”. In modern times Wavell records that the opening of the railway to Medina in 1905 produced a disturbance among the beduins which resulted among other things in the Banū ‘Ali, whose duty it was to protect the pilgrims visiting the tomb of Ḥamza, while putting no obstacles in their way, declining to take any responsibility. The Wahhābīs who now rule in northern Arabia permit pilgrimage but as at all the holy places forbid actual worship.

**OKAILIDS, a dynasty of al-Mawsīl.** The Banū ‘Oqail belonged to the great Beduin tribe of ‘Amir b. Sa‘sa‘a. From their original home in Central Arabia they spread in course of time in different directions and among their better known subdivisions were the Banū Khafāfa [q.v.] and the ‘Umarī [q.v.]. In the fourth century of the
Hidrja the Banū 'Okail in Syria and Irāk were tributary to the Ḥamdānids and when the latter were no longer able to maintain themselves in al-Mawṣil the city passed to the 'Okailids. The Kurd chief Bādh, the founder of the dynasty of the Murāwīdīs [q.v.], endeavoured to bring al-Mawṣil under his rule, whereupon the two Ḥamdānī brothers Abū Tāhir Ibrāhīm and Abū 'Abd Allāh al-Ḥusain appealed for help to the emir of the Banū 'Okail, Abu l-Dhawwād Muhammad b. al-Musayyib. The latter at once announced his readiness to assist them and was given as a reward Džābir b. 'Omar, Naṣīrīn and the town of Balad. After the death of Bādh in battle (380 = 990—991) his sister's son Abū 'Ali al-Ḥusain continued the war with success. Abū 'Abd Allāh was taken prisoner and when Abu Tāhir went to Naṣīrīn to seek the protection of Abu l-Dhawwād, the latter took him, his son and several of his retainers prisoners, put them to death and then occupied al-Mawṣil. He then submitted nominally to the Bāyil Bahrā Ḍawla [q.v.] and persuaded him to send a representative to al-Mawṣil. But the latter did not play any part of any importance. Bahrā Ḍawla's efforts to make his influence felt in al-Mawṣil did not have the success he desired. Abu l-Dhawwād remained the real ruler. He died in 386 or 387 (996—997) and was succeeded by his brother al-Muṣallād [q.v.]. The latter was assassinated in Şafār 391 (Dec. 1000—Jan. 1001) and his eldest son Karwāsh [q.v.] was recognised as emir of al-Mawṣil. After holding office for fifty years, he was deposed by his brother Abū Kāmil Baraka [cf. Karwāsh] in 442 (1050—1051) and on the latter's death in the next year 443 (1051—1052) the rule passed to his nephew Kuwaris b. Badrān [q.v.]. The latter was succeeded in 453 (1061) by his son Muslim [q.v.] under whom the territory of the 'Okailids attained its greatest extent; their power then declined rapidly. On Muslim's death (478 = 1085) his brother Ibrāhīm who had been languishing in prison for years was set free and proclaimed emir of al-Mawṣil. In 482 (1089—1090) however, the Sālidjūk sultan Malikshāh invited him to come and give an account of his stewardship, and as soon as he appeared he was thrown into prison and Fāhār al-Dawla b. Dāhir [q.v.] was placed as governor over al-Mawṣil. Only after Malikshāh's death (Shawwāl 485 = November 1092) was Ibrāhīm set free and returned to al-Mawṣil. In the meanwhile Muslim's widow Ṣafiyah who was also the aunt of Malikshāh, had married Ibrāhīm, and on the death of Malikshāh she went with 'Ali, her son by Muslim, to al-Mawṣil. But as Muḥammad, another son of Muslim's, also coveted the city, its inhabitants split up into two parties and when it came to fighting, Muḥammad had to take to flight, while 'Ali occupied al-Mawṣil. As soon as Ibrāhīm heard of this he began negotiations with Ṣafiyah and received from her the town of Balad which Malikshāh had given her as a fief. The Sālidjūk prince Tutush [q.v.] then demanded that Ibrāhīm should recognise him as sultan and when the latter refused, the decision was left to arms. In Rās al-Ṣafā 1 486 (April 1093) the two armies met near al-Mawṣil; Ibrāhīm was taken prisoner and put to death and Tutush took control of the city. Muslim was given leave to settle there and to be governor over al-Mawṣil. He was not however long to dispute his power. He asked the emir Kuwaris [q.v.] to help him against his brother and the result was that he lost his life while 'Ali had to give up al-Mawṣil (Dhu 'l-Ka'dā 489 = Oct.—Nov. 1096).

In addition to the emirs of al-Mawṣil, several 'Okailidi dignitaries are mentioned in history. In 479 (1086—1087) Salīm b. Mālik b. Badrān b. al-Muṣallal surrendered Halab to sultan Malikshāh and received in return the fortress of Dja'bar [q.v.] to which al-Raḵša was soon added and these remained almost without interruption in the possession of his descendants until 504 (1106—1107) when his grandson Mālik b. 'Ali b. Salīm ceded them to Nūr al-Dīn Maḥmūd b. Zangī.

Another branch was established in Takrit [q.v.]. According to Ibn al-Aṣhrī, x. 289, where a short sketch of the history of this town is given down to the year 500 (1106—1107), the 'Okailid Rāfī b. al-Ḥusain died in 427 (1036) as lord of Takrit. His nephew Abū Ma'na Khamis b. al-Taghilib inherited his governorship. After the latter's death in 435 (1043—1044) he was succeeded by his son Abū Ghaṣṣāh. The latter was suddenly attacked in 444 (1052—1053) by his brother Ḥāfiz and thrown into prison and Ḥāfiz seized the power. In 448 (1056—1057) Ḥāfiz died and soon afterwards his son Naṣr died also. Ḥāfiz's widow Amīra then had Abū Ghaṣṣāh, who was still in prison, murdered and installed a governor named Abu 'l-Ghaṣṣāh in Takrit but he handed the town over to the Sālidjūk sultan Taḏhrīlābād.

'Okailidi governors are also occasionally found in other towns, like 'Anā, Ḥadīthā, Hit and 'Ukbara. After the extinction of the dynasty in Mesopotamia and the Irāk the 'Okailids withdrew to Bahrain.

(K. V. Zetterstén)

'Okāz, name of an oasis situated between Ṭā'if and Nakha. The Arab philologists derive the name from the root meaning 'to retain', in the middle forms 'to assemble' or from the meaning of 'concourse'. Both interpretations are based on the fact that 'Okāz was primarily celebrated for its annual fair, which was held on the 1st—20th Dhu'l-Ka'da and was at the same time an official occasion of mufakhara, i.e. a gathering of tribes or rather of groups and individuals belonging to the same tribe where individuals competed for honours and for the honour of their tribe.

These assemblies to which poets came to recite their poems were also a great fair at which merchandise was exchanged. That of 'Okāz was followed by those of Madjanna (last ten days of Dhu 'l-Ka'da), of Dhu'l-Madjāz (1st—8th Dhu'l-Hijja).
and those which accompanied the great pilgrimage. These weeks formed the climax of public life in pre-Islamic Arabia — the truce of the sacred months making discussion of the political affairs of the tribes of the Hijaz possible. The Tamim took no part in them. Islâm by condemning hereditary and individual feuds was the cause of the decline of the mawâzin [cf. MAWSIM].

Muhammad was on his way to the fair of 'Okâz with a few of his companions when at Nakha'(a) the djjâm heard the Kurān being recited and were struck with admiration as we are told in the Kurān (sūra Ixxii. 1 sqq.; xlv. 28 sqq.) and hadith (Bukhārī, Aḍḏi'l, bāb 105; Tafsir, sūra Ixxii., bāb 1; Muslim, Saḥārah, trad. 149; Tirmidhi, Tafsīr, sūra Ixxii., trad. 1).

'Okâz is also noted for the fighting which took place there at the beginning of Islâm.

(A. J. Wensinck)

'Oḵba b. Nāfī' b. 'Abd Kaṣī al-Kūrašī al-Fihrist, the famous general of the first century A.D. who endeavoured by consolidating the first successes of the Arab conquest in North Africa to put an end to the resistance of the Berbers but finally perished after a troubled career at the hands of African rebels.

The data supplied by the historians regarding the career of 'Oḵba are relatively abundant but like all that relates to the beginnings of the expansion of Islâm in North Africa have frequently to be taken with caution. They come from later traditions, and W. Marçais has clearly demonstrated the particular bias which they represent (Le passé de l'Algérie musulmane, in Histoire et Historiens de l'Algérie, Paris 1931, p. 150). It is certain as regards 'Oḵba that the essentials of what the Maghribi historians have preserved about him are of eastern origin and in addition the most circumstantial accounts of his career that we possess are from the pens of eastern authors: Ibn ʿAbd al-Ḥakam and al-Nuwairi. The only authority for the African tradition regarding 'Oḵba so far known is al-Ḥakām, but al-Ḥakāwī, at once detailed and new, found in a Maghribi MS. (cf. Bibliography) about 'Oḵba's raid into the south of Morocco seems fairly reliable up to a certain point from the very fact of its precision. Use of it after a critical study seems likely to throw doubt upon the statements hitherto regarded as reliable regarding the progress and chronology of the Arab conquest of Northwest Africa, such as are given in studies, already antiquated like Fournel (Les Berbères, Étude sur la conquête de l'Afrique par les Arabes, Paris 1875), or more recent and more distinguished works but also based on unchecked translations like that of E. F. Gautier (Les siècles obscurs du Maghreb, Paris 1927).

This is why in the present state of our knowledge we shall here confine ourselves to tracing a sketch of 'Oḵba b. Nāfī's activities in North Africa which need not be considered final on all points.

'Oḵba was born in the last years of the Prophet's life and was through his mother the nephew of 'Amr b. al-ʿAs [q.v.], the celebrated conqueror of Egypt, who shortly before his death in 43 (663) gave him the supreme command in Ifriqiya. According to a story, difficult to verify, 'Oḵba at that time was directing his attention to the Sudan and establishing Islam by force of arms at Ghadrânis. But this was only a raid and not a regular occupation of the country. It was not till some years later that we find him preparing for a new expedition, no doubt better equipped than the others. This was the expedition of 50 (670) in which he founded the military stronghold of al-Kaïra-wân [q.v.] in the middle of the province of Byzacene. For this expedition 'Oḵba had at his disposal a force of 10,000 horsemen which was gradually increased by the accession of Berbers converted to Islâm: with the help of this force he was able not only to attack the Byzantines who continued to hold out on the atlas sides of the coast of Ifriqiya but also the Berbers. The foundation of Kaïrawân, forming a strong base for the Arab troops, seems to have very much facilitated if not the occupation and pacification of Ifriqiya, at least its conversion to the religion of and obedience to the authority of the invaders. But in the end 'Oḵba who gathered the fruits of this spread of Islâm. Ifriqiya remained a dependency of the province of Egypt; the new governor Masmâla b. Mâqâlî dismissed 'Oḵba in 53 (675) and replaced him by one of his own clients, Abu l-Muhâdhjî, who very soon undertook a raid on Algiers, and according to Ibn Khalîlîn got as far as Tlemcen [q.v.]. On his return to the east, 'Oḵba is reputed to have complained to the caliph Mu'âwiya of the way in which he had been treated by the governor of Egypt and a little later Mu'âwiya's successor restored him his governorship.

This second appointment of 'Oḵba to Ifriqiya may be put with certainty in 62 (682). His enemy, the governor Abu l-Muhâdhjî, had in the course of his raid defeated the Berber chief Kūsâïla [q.v.] who became a Muslim and it was on these two that 'Oḵba wreaked his vengeance in his turn. He put them into chains and carried them with him wherever he went. At the same time he prepared an expedition on a larger scale than the previous one the stages of which can be traced from the narrative of Ibn Khalîlîn. 'Oḵba's army, preceded by an advance guard under Zuhâr b. Kaṣî al-Balâwî, advanced from Kaïrawân into the Central Maghrib, at first encountering in the Zag and again in Tafsîr the Berber and Byzantine elements which he defeated and received tribute from. He finally reached the region of Târîkha. The chief of the Ghumâr, Iyâm (Julian 2), submitted to the Arab leader and became his military adviser. He dissuaded him from crossing the Straits of Gibraltar and undertaking the conquest of Spain and pointed out the danger threatening the Arab troops from the great body of still unconverted Berbers in the Great Atlas and Sûs [q.v.]; 'Oḵba therefore turned his attention to the Berbers. First of all he occupied the massif of the Zarhûn, took the town of Uûlî (Volubilis), crossed the Middle Atlas and advanced through the Dra (Dar'a) and Sûs, the inhabitants of which he pursued up to the desert of the Lamsûn. He
then turned to the Atlantic coast, reached the land of Sari and began to subject the Berber bloc of the Ma'muda of the Jbel Duran (Great Atlas) then that of the Anti-Atlas as far as Tériblou [q.v.].

But however brilliant they seemed these successes led nowhere. An advance no matter how brilliant through a country meant nothing if it was not followed by an occupation which Okba was not able to secure. But when he and his army turned homewards, he does not seem to have realised that all would have to be done again. Kusaila escaped from him and organised resistance, making use alike of the fondness for fighting of his Berber compatriots and the discipline and technical skill of the Byzantine garrisons in the country. Okba trusting to his good fortune did not see the danger. Reaching the Zāb, at Thubunza (Ulūna) he went so far as to divide his army into several contingents which he sent off in succession on the road to Kairawan. Trusting the Berbers, who had submitted to him, he had only a small body of Arabs with him left out from the army [q.v.]. But he was soon surrounded by Kusaila's bands on the border, of the Sahara at Tahāda and fell with 300 of his companions in 63 (683).

His grave and that of his companions is still pointed out at the same place and forms the centre of a little village which bears his name: Saiyidī 'Ukba (vulg. Sidi 'Ukba), a few miles S.E. of Biskra, not far from the old site of Tahāda.

(E. Lévi-Provençal)

AL-ʿOLAIMI, Abu l-Yemen ʿAbd al-Rahman b. Muhammad Muḥammad al-Dīn al-ʿOmari al-Ḥanjārī, an Arab historian, born on the 13th Dhu l-ʾKhāda 810 (Oct. 13, 1450) in Jerusalem, studied from 880 (1476) in Cairo, became in 885 (1481) kāšī in Ramla and in 891 (1486) chief kāšī in Jerusalem. He retired in 922 (1516) and died in 928 (1522) in Jerusalem.

His best-known work is a history of Jerusalem and Hebron, which he began on the 25th Dhu l-ʾḤijjāda 900 (Sept. 17, 1494) and finished on the 17th Rāmāḍān 901 (May 31, 1495), entitled al-luʾūs (al-Ans, which is sometimes found in the MSS. in place of it and is sometimes corrupted to Ṣanṣ al-qādīl bi-Tawṣīʾ al-Kuds wa l-Ḥalalīl). For the earlier period he takes almost everything out of Shihāb al-Dīn al-Makdisi’s (d. 765 = 1354) Muhīr al-ṣahrūm ilā Shirāz wa l-Kuds wa l-ʾAlam (cf. C. König, Der Kitaib Muhīr etc., Leipzig Diss. 1896, p. 20) and supplements it mainly with biographical data. The work which exists in numerous MSS. was first printed in Venice Cat. dell. Ar. Ingl. Bot., 2nd ed., N. 951; Brockelman, 3rd ed., i, 43, 609 sqq.; 1511; Burger, ii, 1022, 3759-60, 5999, 6103; Aya Sofya, N. 2976; Kiliç ʿAlī Pasha, N. 729; Bankiore, xv. 1084-1085, etc.) was first made known in Europe through extracts in the Journal des Étrangers, 1754, April, p. 8-45, and then through Hammer's Fundamenta, ii. — From the printed edition, Cairo 1283, H. Sauvain translated Histoire de Jerusalem et d'Hebron depuis Adam jusqu'à la fin du XVIe siècle, Fragments de la chronique de Meudjiraddîn, Paris 1876. At the end of his work the author announces his intention of continuing it when able to do so. This continuation is found in Leyden N. 953, down to 915, and in Oxford (see Cat., i, 853, 3) and in the Khalidi Library in Jerusalem (see A. L. Mayer, in Journ. Pal. Oriental Society, xi, 1-13).

Probably before he wrote his great work, he had written a general history with special reference to Jerusalem and continued it down to the year 896 (1491); this survives in a MS., in the British Museum, Suppl. N. 488 without title and is perhaps identical with the al-Tawṣīʾ al-muṣṭāfā fī Anbak man ʿamran mentioned by Ḥajīdī Khalīfa, ii. 150; v. 619. To the Tabābāt al-Ḥanjālāla of ʿAbd al-ʿAlī Shamsī b. Ahmad b. Radjab (d. 795 = 1393) he wrote a continuation al-Manhajī al-ʾAḥmadī fi Tarāqīm Afkār al-ʾImām, MSS. Berlin N. 10043, Laleli N. 2083 (see Spies, Beilage, 15, in the possession of J. E. Sarkis (Cat. 1928, p. 48, lvi, photo in Cairo, Firihis, v. 372), Kamāl al-Dīn Muhammad b. Muḥammad Shafīʿ al-Ghazzi (d. 1214 = 1799-1800) wrote a continuation of this work down to the year 1207 (1792-1793) and on this and the original work Muḥammad Ḥamāl b. ʿOmar al-Shaṭṭī al-Baghdādī in 1325 (1907) based his Muḥāz zar Tabābāt al-Ḥanjālāla, Damascus 1339 (see R. A. D., i, 160). Whether the al-ʿOlaimi who is mentioned in Dāwūd al-Mawsīli, Makālib al-Mawṣīl, p. 152-54 as the author of a commentary on the Diwan of Ibn al-Fārūq is the same as our author, is a question which is impossible to decide with our present knowledge.

OLCĀITU KHUDĀBANDA, eighth Ikhān of Persia, reigned from 1304 till 1317. He was, like his predecessor Ghāzī, a son of Arghun and a great-grandson of Hulāgū. At his acces-
sion he was 24 years of age. In his youth he had been given the surname of Kharbana, for which different explanations are given (cf. the poem by Rashīd al-Dīn reproduced on p. 46 of E. G. Browne, *A Literary History of Persia*, iii. p. 46 sqq. and Ibn Battūta, ii. 115), but E. Blochet, in his *Introduction à l'histoire des Mongols* (M. S., xii. 51), has explained the name as a Mongolian word, meaning “the third”. The Byzantine historian Pachymeres calls him Kaghzībat (ed. Bonn 1835, ii. 459). His mother ʻUqūd Kattūn had baptized him as a Christian, but under the influence of one of his wives he afterwards embraced ʻIslām and received the name Muḥammad, while his surname was changed to Khudābanda. In addition he took the ḱāb of Ghīyān al-Dunya wa ʻl-Din. When Chāfīdī died, Olācitū was absent with an army on the Indian frontier of the empire, but there was no difficulty about the succession, as a possible claimant, his cousin ʻAlafrankī, had been killed previously. Olācitū continued the traditional warfare of his predecessors with the Mamlūk Empire and their friendly relations with European Christian powers; some of the letters addressed by him to the Pope Clement V and the English King Edward II are still extant; these letters were brought by his Christian envoy Thomas ʻIlūdū, who, in contradiction to the facts, kept up the fiction that his master was a Christian. Olācitū likewise sent a military expedition to relieve the Byzantine Emperor Michael Palaeologos by dividing the force of the Turks in Asia Minor; but this was of little avail (Pachymeres, ii. 588). Against the Mamlūks Olācitū himself conducted a campaign during which the town of Ṣashāna on the Ephrates was besieged in vain (1313). The authority of the government in the interior was strengthened by the conquest of Dīlān in 1307 and in the same year by the conquest of Herāt from the vassal ʻUqūd dynasty. In 705 (1305-1306) Olācitū made the newly founded town of ʻUṣūlānīa [q. v.] the capital of his empire, on the occasion of the birth of his son and successor ʻAbū Saʿīd. Prosperity was increased by the laws of Chāfīdī, whose canon was promulgated again by Olācitū, and also by the able administration of the famous historian Rashīd al-Dīn [q. v.]; the latter’s colleague and rival, ʻAbū al-Dīn, was executed in 1312 through the intrigues of ʻAli Ṣashān, who took his place. The dispute which soon arose between the two ministers made the sultān in 1315 assign to each of them the administration of half of the empire. The attitude of Olācitū towards ʻIslām deserves special notice. After first showing preference for the Ṣhiʿa (cf. the story of Māmaj al-Din of Shīrāz told by Ibn Batūtā, ii. 57 sqq.), he became an adherent of the Sunna. Then, after an attempt to introduce the Ṣhiʿa instead of the Ḥanāfī madhhab, he finally decided again to join the Ṣhiʿa, after having visited the tomb of ʻAli; one of his coins affords proof of this.

— Olācitū is described as a virtuous, liberal ruler; he showed interest in the observatory of Marāqqa, where ʻAbī al-Dīn, ʻAbū al-Din’s son, was appointed astronomer. He likewise favoured the literary-historical activity of Rashīd al-Dīn and the historian Ṣashāh. He died at ʻUṣūlānīa on December 16, 1316; afterwards Rashīd al-Dīn was accused of having caused his death.

In ʻUṣūlānīa his tomb is still to be seen.

**Bibliography:** Contemporary sources are the *Ṭarīkh-i Waṣṣāf*, lth. Bombay 1269, and a continuation of Rashīd al-Dīn’s *Qānūn* al-Tārīkhī, which continuation is found in several manuscripts, but has not yet been edited. Further the *Ṭarīkh-i Guzīda* by ʻAbd Allāh Mustawfī and the later Persian works. — Of European works must be mentioned: D’Ohsson, *Histoire des Mongols*, iv. 478-598; J. von Hammer-Purgstall, *Geschichte der Ichten*, Darmstadt 1843, ii. 178-251; H. Howorth, *Histoire of the Mongols*, iii. 534-584; E. Blochet, *Introduction à l’histoire des Mongols*, G. M. S., xii., Leyden—London 1910, passim. — For Olācitū’s coins: Stanley Lane-Poole’s *Catalogue*, vi. 44 sqq.

**ʻOMĀN,** a nominally independent state on the Persian Gulf under the protectorate of England. Its extent has varied considerably in the course of its history. While Ḵaṭṭārī, for example, who gives ʻOman an extent of 300 parasangs, includes the district of Mhara in it, Idrīsī describes the latter as an independent country. In the northwest ʻOman was bounded by the province of al-Bahrain or al-Ḥaljār, in the south by Yanan and Ḥaḍramāt. The sultanate reached its greatest extent under Sūlān Ibn Mālik b. al-ʻArab b. Sūlān, under whom ʻOman not only included the territory from Rās al-Ḥadd to Dīlūfār, but also al-Bahrain and other possessions, particularly on the African coast where his son Saif conquered Kilwa and Zanzibar. ʻOman at the present day includes the whole south-eastern part of Arabia with a strip about 500 miles long on the south coast of the Peninsula including the land of ʻOṣfār. By the decision of the International Court at the Hague in 1905 in a dispute between England and France regarding the granting of the French flag to owners of sailing-ships in Maskat, the southern boundary was fixed at Rās Ṣakār and the coast as far as Ḫūr Kalībe reckoned to ʻOman, while at the same time the sultān’s claim to the peninsula of Rās Masandūm from Rās Dībba to Tibbā was expressly recognised by both powers. This of course does not prevent the actual power of the sultān barely extending beyond the coast district of Maskat and Bātina. The population of ʻOman is estimated at half a million but that of ʻOman proper is about 40,000 only. As regards creed the ʻIbadīs are preponderant particularly in the south, but the northern districts are inhabited mainly by Sunnis. The capital is Maskat [q. v.] while at an earlier period ʻAbī Ṣubīr [q. v.] was regarded as the most important town in the country.

The following details of the distribution of the population may be given: the thickly populated district of Bātina has 105,000, the Wādī Sāmīl 2,800, Maskat 10,000, Māṭrah 11,000, Sīr 12,000, Suḥār 7,500. ʻOman for administrative purposes is divided into four districts: 1. Dīlān, the land of the Ben Alis.‘Ali and all the land south of Bedīa; 2. ʻOman proper from Bedīa to ʻUṣūlānīa; 3. Duṭra from the latter place to al-Buraimi and 4. al-Bāṭina, the narrow strip of coast from Sīr to Ḫūr Fakkān. The characteristic feature of the coast of the country is a mountain range which runs from Maskat south in a southerly direction as far as Sūr close to the coast but runs a considerable distance inland north of Maskat and thus leaves space for the fertile low-lying land on the coast, al-Bāṭina, which is in

The capital is Maskat [q. v.] while at an earlier period ʻAbī Ṣubīr [q. v.] was regarded as the most important town in the country.

The following details of the distribution of the population may be given: the thickly populated district of Bātina has 105,000, the Wādī Sāmīl 2,800, Maskat 10,000, Māṭrah 11,000, Sīr 12,000, Suḥār 7,500. ʻOman for administrative purposes is divided into four districts: 1. Dīlān, the land of the Ben Alis.‘Ali and all the land south of Bedīa; 2. ʻOman proper from Bedīa to ʻUṣūlānīa; 3. Duṭra from the latter place to al-Buraimi and 4. al-Bāṭina, the narrow strip of coast from Sīr to Ḫūr Fakkān. The characteristic feature of the coast of the country is a mountain range which runs from Maskat south in a southerly direction as far as Sūr close to the coast but runs a considerable distance inland north of Maskat and thus leaves space for the fertile low-lying land on the coast, al-Bāṭina, which is in
a way comparable to al-Tihama in the Yemen, although it never attains the same width, being only from 20 to 30 miles across. South of Kustak just below 23° Lat., almost at right-angles to the former, is a second range, higher in its highest parts, known as Jebel Akhdar which with 10,000 feet is the greatest height in the country. It runs parallel to the coast as far as Ras Masandam and sends off a second range which runs to Ras al-Khim. The most fertile part of Oman is the already mentioned low-lying coast land of al-Batin where in addition to intensive cultivation of the date-palm, wheat is grown and all kinds of fruits flourish. The Arab geographers raised the dates of Oman and al-Ashar was not wrong in comparing Oman to a garden. Among the fruits special mention is made of bananas, pomegranates, and nebe (lotus nebk). A considerable part of Oman however is quite unsuited for agriculture; for example the part bordering on the desert zone of Arabia which however contains a few fertile oases among the mountains, for example on the way from Beni Abi ‘Ali to Nizwa. These oases are watered by subterranean deposits as was long ago pointed out by Ibn al-Fakih; where the water is not too deep below the surface or there are subterranean channels, springs supply the necessary water to the fields. The climate of Oman suffers from the great heat, which is only to some degree tempered by the refreshing winds from the sea; in Maskat the maximum in July and August is 91°—88° F. The rainy season is in winter from October to March, but the rains seldom fall more than three or four days in a month; among the mountains heavy storms occur and the snow sometimes lies. In Masqat the annual rainfall is 3 to 6 inches.

The cereals grown are wheat, dhura, some rice, the fruits, tamarinds, mango, bananas, pomegranates, quinces, pistachios, agrumi, grapes, almonds, figs, walnuts, water-melons, apricots and cherries, while cotton, sugar-cane and indigo are cultivated. Stockraising is now mainly confined to horned cattle; at one time Oman was celebrated for its strong, swift camels and oases. The Arab geographers (Ibn al-Fakih) praise Oman’s wealth in fish, which supplied the food of large sections of the community (especially in al-Batin). Industry, once very flourishing, is now confined to weaving on a modest scale in Maskat, Nizwa and Ibra, dyeing in the two last named towns and the making of weapons in Masqat. Idrisi mentions the pearl-fisheries of Srir below Cape al-Maladja and in Dammar. The pearl-fisheries now produce about half the revenue of Bahrain (10-15,000,000 rupees). The Arab philologists (Ibn al-Arabi) derive the name Oman from ‘amana with the meaning “to stay continually in one place”. According to others the name goes back to Oman b. Ibrahima al-KHSH, who built the town of Oman; this is of significance in as much as the classical writers knew of a town called Omana (Pliny, Nat. hist., iv. 172) and Omana in Persia (Potomly, vi. 7, 30), this has been identified with Suhr which was later regarded as the most important trading centre. Al-Mukaddasi (p. 35) compared Oman with ’Aden and Egypt for importance in the world’s trade and called it and Shiraf (q.v.) the forecourt of China (p. 449). This does not seem however to have much benefited the people of Oman, for they were regarded as dishonest, wicked and deceitful merchants; indeed Ibn al-Fakih (p. 92) describes them in much coarser language. The prosperity coming from the trade and agriculture is evident from the huge yield from taxation, 300,000 dinars in the Abbasid period. A dirhem a year was paid on each palm-tree (Muqaddasi, p. 105).

For the early history of Oman, Hatt’s account may be consulted.

The relations of England with the country have been of great importance to Oman. They began in 1798 with a treaty between the East India Co. and the sultan by which the French and Dutch were excluded from the territory for the duration of the war, and this was followed in 1806 by the granting of permission for the E.I.C. to have an agent permanently resident in Maskat. By the treaties made by the French with Sayid Saiid b. Sultan in 1807 and 1808, this resident was joined by a French Consular agent. But French prestige suffered a severe blow when Mauritius was occupied by the English in 1810. In 1839 a commercial treaty was concluded between England and Maskat, modelled on one concluded in 1833 between the U.S.A. and Oman. In 1844 there followed a commercial treaty with France, which secured this country the most favoured nation clause and freedom to trade in Maskat for its subjects. In 1852 came the Anglo-French guarantee of the independence of Oman, but England was able to secure a predominant influence in Oman by vigorously supporting the sultan at various crises and by paying him a subsidy. In 1891 the sultan declared in a treaty of friendship, which also regulated questions of trade and navigation between the two countries, and was binding upon himself and his successors, that he would not cede any of his territory in any way to any power other than England. When then, in 1898, the sultan in contravention of this agreement wished to allow France to have a coal-station in his territory, he had to withdraw the concession on receiving an ultimatum from England; France was compensated with a coal-station in Mukalla [q.v.]. The dispute assumed a more serious aspect which arose out of the practice of the French consul in Maskat giving ships’ papers and French flags to Maskat ships which abused the privilege to carry arms and slaves. The dispute was settled by the International Court at The Hague, the decision being that only those ship-owners who had received permits before January 2, 1892 were allowed to retain them. The result was that in 1917 only 12 ships of Oman were allowed to carry the French flag. The result has been the practical exclusion of French influence from Oman, and the securing of English predominance.

OMAR and ABD AL-AZIZ

Abu ʿAbd al-ʿAziz b. Marwān b. al-Hakam, Abu Ḥafs al-ʿAshādū, was a Umayyad caliph. He was born in Medīna in the year 63 (682–683). His father ʿAbd al-ʿAziz [q. v.] had been for many years governor of Egypt; through his mother he was descended from ʿOmar I. She was ʿUmm ʿĀṣīn bint ʿĀṣim b. ʿAbd al-Khaṭṭāb. He spent the greater part of his life in Medina. He was sent there by his father from Egypt to receive a fitting education in the city of the Prophet and remained there till the death of his father in 85 (704). His uncle, the caliph ʿAbd al-Malik, then took him to Damascus and married him to his daughter Fāṭima. In Rabī‘ I 87 (Feb.–March 706) ʿOmar was appointed governor of the Ḥijāz by al-Walid I and he settled in Medina again. Unlike other governors who were as a rule very arbitrary, ʿOmar immediately on his arrival in the city formed an advisory council of ten pious authorities on tradition with whom he discussed all important matters, and further empowered them to keep a watchful eye on his subordinates. In other respects also, his patriotic rule was for the good of the subjects. But in the long run the all powerful Ḥādījādī [q. v.] was not pleased with ʿOmar’s mild rule because many Ḥārākis fled to the two sacred cities in order to escape the harsh lot by which they had to be prepared in their native land. Under pressure from him ʿOmar was recalled in 93 (711)–94 (712) without however being disgraced. After the death of Dābiq [q. v.] in Saʿfar 99 (Sept.–Oct. 717) of Sulaymān b. ʿAbd al-Malik who had intended to succeed him, the autocratic theologian Rāḍā’ b. Hāwā wa assembles the Umayyads in the mosque and without mentioning any name demanded that they should pay homage to whomsoever Sulaymān should have mentioned in his will. Only when they had paid homage, did he announce the death of the caliph and the name of the successor designate. As ʿOmar belonged to a collateral line and had nevertheless been preferred to the two sons of ʿAbd al-Malik, Yazid and Hishām, it is not a matter for surprise that the latter at first raised objections to the choice of his cousin as commander of the faithful; but he was soon appeased and ʿOmar ascended the throne without encountering any serious opposition.

As a caliph, ʿOmar stands apart; he was distinguished from his predecessors and successors alike. Inspired by a true piety, although not entirely free from bigotry, he was very conscious of his responsibility to God and always endeavoured to further what he believed to be the right and conscientiously to do his duty as a ruler. In his private life he was distinguished by the greatest simplicity and frugality, although he is said to have lived no less luxuriously than other Umayyad princes before his accession. Poets who praised the delights of worldly pleasures were therefore not particularly popular at his court.

ʿOmar laid no special stress on military glory, and his reign which only lasted two and a half years was poor in military events. The siege of Constantinople was raised on his accession to the throne; but it is uncertain whether the Muslim army was actually withdrawn by him. In Mesopotamia he allowed the people of Turanda to evacuate their town whereupon they settled in the adjoining Malaya and Turanda was destroyed. In the far West the Muslim armies crossed the Pyrenees, invaded Southern France and returned to Spain laden with rich booty. On a later campaign which is usually but not quite certainly attributed to the reign of ʿOmar, they captured Narbonne, fortified it, and used it for a time as their headquarters. ʿOmar however by no means felt obliged to spread Islam by the sword; rather he sought by peaceful missionary activity to win members of other creeds to the faith of the Prophet and in case of conversion by this means demanded no tribute. This method proved particularly successful and suitable among the Berbers and it is even said that there was not a single Berber left unconverted to Islam in the governorship of Isma‘il b. ʿAbd Allāh appointed by him. In a similar way were converted the princes of Sind when ʿOmar’s governor Amr b. Muslim al-Bihili invited them to adopt Islam and promised them complete equality with Muslims; but under Hishām they lapsed again.

His interests were primarily in home affairs. He had the untrustworthy governor of Kharūsān Yazid b. al-Muhallab [q. v.] arrested and his post given to al-Djarrāb b. ʿAbd Allāh al-Hakami. In other cases also, the most important offices were filled with men whom ʿOmar thought to be capable and just. He adopted a kindly attitude to the Alids. The practice introduced by Mūsāiyya of publicly cursing ʿAll in the service in the mosque was abolished by ʿOmar. It is said that when he was a boy and his father appointed governor of Egypt he begged him to forbid the customary cursing of ʿAll and received the reply that such a step although laudable in itself would be against the interests of the Umayyad dynasty and might give support to the Alids claims to the caliphate. ʿOmar gave up in favour of the Alids the oasis of Fakag [q. v.] which had originally been the private property of Muhammad but was then declared a state domain and had finally become the property of the Umayyads. After his accession he decided that it should revert to its original use and according to one story expressly ordered that it should be handed over to the descendants of Fāṭima as the heirs of the Prophet. He also restored to the family of Taḥa their property in Mecca, which ʿAbd al-Malik had
taken from them and abolished the addition to the tithe which had been levied by a former governor of the Yemen, Muhammad b. Vusuf, a brother of al-Hadjjasdji. In general he laid great stress on compensating those who had in any way been subjected to illegal extortions; but, as is obvious, this principle, while it testifies to the caliph's love of justice, was often applied, according to Ibn Sa'd, v. 252, uncritically (lisza'ir al-abayina al-ha'ira) and in the long run could not be beneficial to the treasury and was destined to have serious consequences.

As a devout Muslim he was gracious to members of other creeds in so far as this was possible without a breach of the principles of Islam. Christians, Jews, and fire-worshippers, were allowed to retain their synagogues, churches, and temples but not to build any new ones. In Damascus, al-Walid [q. v.] had taken down the basilica of John the Baptist and incorporated the site in the mosque of the Umayyads. When 'Omar came to the throne, the Christians complained to him that the church had been taken from them with permitted Omaryar of the government to give them the site of the addition to the mosque. But as the people of Damascus would not agree to this, the matter was settled with 'Omar's approval by the churches outside the town, notably that of St. Thomas which belonged de facto to the Muslims and not by treaty because the Ghūla [q. v.] had been conquered by the sword and not surrendered by capitulation, being handed over to the Christians on condition that they abandoned all claims for the future on the Church of St. John. While 'Omar endeavoured to protect his Muslim subjects from being abused, he was also anxious that his Christian subjects should not be crushed by oppressive taxation. In Aila and in Cyprus the tribute settled by treaty had been increased: 'Omar reduced it to the original amount. In al-Yaman the Christians of Nadgrān had made a treaty with the Prophet which guaranteed them complete security in their land on payment of an annual tribute of 2,000 robes (jullū) each of the value of 40 dirhams. This treaty had been broken by 'Omar I. Nevertheless, they had to pay the full tribute until 'Othman reduced it by 200 robes. Mu'awiya or, according to another story, his son Yazid granted them a further reduction of 200 robes because their numbers had been much reduced by death and conversions to Islam (on this see Lammens, Le califat de Yazid Ier, p. 346 sqq.). But when 'Abd al-Rahman b. Muhammad b. al-Ash'ath [q. v.] rebelled against al-Hadididh, the latter raised the total tribute to 1,800 robes because he suspected the Nadgrānians of being in secret agreement with the rebels. In the meanwhile however, their numbers had sunk from 40,000 to 4,000 and when they appealed to 'Omar to alleviate their hard lot he reduced the tribute to one tenth and demanded only 200 instead of 2,000 or 8,000 dirhams.

One of 'Omar's most important measures was his reform of the taxation. The comprehensive administrative system of 'Omar I which proved excellent for the conditions in his day, was now no longer suitable to the demands of the time. The treasury was continuously suffering from the ever increasing conversion to Islam of non-Arabs who had paid tribute and their consequent exemption from taxation and in addition many of the new converts settled in the large cities instead of remaining at home and tilling the fields, so that agriculture lost much of the labour it required. To overcome this difficulty al-Hadidj had imposed the kharūj also upon Muslim landowners who were not paying tribute and prohibited immigration into the cities. This aroused general dissatisfaction but this did not worry him. 'Omar, on the other hand, adhered to the principle that Muslims should pay no tribute. He further propounded, no doubt by agreement with those learned in the law in Medina, the theory that conquered land was the common property of the Muslim community and therefore could not be broken up and transformed by sale to Muslims into private property. Consequently in the year 100 (718—719), he forbade Muslims to buy land which should pay tribute; but he did not make this legislation retrospective and he placed no obstacles in the way of the immigration of new converts into the cities. Further, just claims upon the treasury for compensation for services rendered were never refused: he granted the Mawri the Krāsān, who had fought against the unbelievers, pay and exemption from taxation just like Muslim warriors. He thus found a balance of the various elements in the caliph's empire and although his system of reformed taxation did not survive because the principle of the inalienability of tribute-paying land could not be permanently maintained, he did his best to clear up the existing financial muddle.

The historians of the older school described 'Omar as an unpractical idealist, who pursued purely Utopian ideals as a result of his theological preconceptions, without paying any heed to actual conditions, and only modern research has put his work in its true light. His reign was spared trouble from the Khāridjīs but hidden forces were working in secret which were to bring about the fall of the Umayyad dynasty. 'Omar died after an illness of 20 days in Radjab 101 (Feb. 720) and was buried in Dair Simān near Halab. He was succeeded by his cousin Yazid b. 'Abd al-Malik [q. v.].

Very much influenced since his boyhood by pious authorities on tradition, he was one of the authorities in this field and regarded, although wrongly, after his death as one of the first collectors of Sunna. In course of time a whole cycle of pious legends gathered round his name which were quite devoid of any historical foundation. For example we are told (Ibn Sa'd, v. 301, l. 17) that a roll of parchment fell from heaven upon the men who were filling up his grave which assured him security from the flames of hell (amūn min Allāh il-'Omar b. 'Abd al-Azīz min al-nār). Even the biased historians of the Abbasid period who as a rule run down the Umayyads on every possible occasion in favour of the 'Abbasīds make an exception in his case and give him the highest praise. His tomb was also left undisturbed when those of the other Umayyads were desecrated after the triumph of the 'Abbasīds.

The persons in his poems are "sensitive, aimable creatures, full of individuality. They reveal their souls, they act, they speak. Dramatic scenes, full of feeling stand out vividly before the reader's eyes" (Schwartz). In the form of his verse also 'Omar is a gifted poetical genius who writes without difficulty. His verse flows easily and naturally in simple language. His prosody differs from that of the Beduin poets; although he uses the same metres, he does not prefer those most popular in the old poetry (bustí or tawill) but flexible and light metres (khsfij, ramal, muftarib, munarib). That he did not feel himself bound by tradition is shown by some traces of strophic verse in his poems. It would be a mistake to see in 'Omar the first love-poet of the Arabs. But he was the first to bring this form to perfection. The roots of this genre are to be found not so much in the introductory parts of the old Arabic Ḷaṣīṣas as in the love-poems, which were particularly cultivated in South Arabia (perhaps not without Persian influence). A study of the surviving fragments of Waddāl-yāman, a contemporary of 'Omar which has been long in preparation by V. Ebermann, will perhaps shed new light on this point.

'Omar attained great popularity with his contemporaries and in the following generations, chiefly among singers, wits and men of letters. But his popularity among learned men was hampered by two things: his simple language offered very few "testi di lingua" in comparison with poets like, e.g. al-Farazādāk, and the matter of his poems was little suited for study in schools, especially religious and literate circles. The importance of Arabic literature in modern times has brought about a change; besides several monographs devoted to him, special chapters are devoted to him in the text books. 'Omar b. Abī Rabī'a is now so to speak rehabilitated among the Arabs and recognised as a great poet.

'OMAR B. AIYŪB. [See Ḫāmad and Aiyūbīs supplement.]
'OMAR b. 'ALI (SHARAF AL-DIN) AL-MUṢRĪ, generally known as IBN AL-FĀRĪD, a celebrated Ṣūfī poet. The name al-Fārīd (noury) refers to the profession of his father, who belonged to Ḥamīt but migrated to Cairo, where 'Omar was born in 576 or, more probably, in 577. In early youth he studied Shaf'ī law and Ḥadīth; then came his conversion to Ṣūfism, and for many years he led the life of a solitary devotee, first among the hills (al-Muṣṭṭam) to the east of Cairo and afterwards in the Ḥijāz. On his return to Cairo he was venerated as a saint till his death in 632, and his tomb beneath al-Muṣṭṭam is still frequented.

The Divān of Ibn al-Fārīd, though small, is one of the most original in Arabic literature. Possibly the minor odes, which exhibit a style of great delicacy and beauty and a more or less copious use of rhetorical artifices, were composed in order to be sung with musical accompaniment at Ṣūfī concerts (Nallino, in R. S. O., viii. 17); in these the outer and inner meanings are divided, so that they may be read either as love-poems—a fact to which they owe their wide popularity in the East—or as mystical hymns. But the Divān also includes two purely mystical odes: 1. the Khuraṣiyā or Wine Ode, describing the “intoxication” produced by the “wine” of Divine Love, and 2. the Nqmi al-Sulūk or “Pilgrim’s Progress”, a poem containing 760 verses, which is often called al-Tawīyat al-akbrā to distinguish it from a much shorter ode rhyming in the same manner. In this famous qaṣīda, nearly equal in length to all the rest of the Divān together, Ibn al-Fārīd depicts his own experience as a Ṣūfī. The result is not only a unique masterpiece of Arabic poetry but a document of surpassing interest to every student of mysticism (for a résumé of the contents, see Nicholson, Studies in Islamic Mysticism, p. 195–199). Its whole character is psychological rather than speculative; though some passages are pantheistic in feeling and expression, it bears little or no trace of the intellectualism which marks the system of Ibn al-'Arabi; and the charges of heresy brought against the poet do not appear to be justified. Among Ṣūfīs the Tawīya occupies the position of a classic, and many commentaries have been written on it.

'OMAR (Abū Di‘AFAR) b. ḤAṣṣ̄ was appointed governor of the province of Irfiyya by the 'Abbasid caliph al-Maṣūr in 151 (768). He belonged to a family which in the time of the Umayyads had furnished a number of high officials to the state. One of his uncles, al-Muhallab b. Abi Sufra, had attained fame as governor of Khurāsān under 'Abdu al-Malik b. Marwān. 'Omar whose bravery was celebrated had himself held a command in the eastern provinces; he had been given the Persian epithet of Haṣāmerd (“1,000 men”).

The difficult situation in Irfiyya at the time justified the choice of an energetic governor. Barbary had gone over almost entirely to various sects of the Khāridjī heresy. The chief leader of the movement was the Ṣūfī Abū Kūra. The Arab 'qurud showed little enthusiasm to fight the rebels and besides, it was much divided by old tribal rivalries.

'OMAR b. Ḥaṣṣ, appointed by the caliph, brought with him 500 horsemen. He cleverly won the hearts of the people of Kairawān and was able to secure the country over three years of peace. Al-Maṣūr having given him orders to strengthen the defences of Tobna (q.v.), an old town, the strategic position of which on the western borders of the empire was becoming so important, 'Omar went there with the utmost speed. 'Abū Kūra being thus denuded of troops, the Berbers rose and 'Omar’s lieutenant Ḥābib al-Muhallabi was killed. This initial success encouraged the rebels who concentrated a large force around Tripoli under an 'Ībādi chief, Abī al-Qa‘im b. Banū, who had assumed command at Kairawān after Ḥābib’s death, asked for reinforcements from 'Omar b. Ḥaṣṣ. He received them but was defeated. The inscription now became general. Kairawān was again besieged and soon 'Omar himself who had only 15,500 men under him was besieged in Tobna by several Khāridjī armies, 'Ībādi, and Ṣūfī united under the command of Abū Kūra and numbering over 73,000 (the figures given are of course not at all reliable). 'Omar wished to cut his way through his opponents but his companions prevented him. He then tried to bribe Abū Kūra to leave his allies and offered him 60,000 dirhams but the offer was rejected. 'Omar then turned to his brother (or son) and obtained for 4,000 dirhams the secession of the Ṣūfīs. Abū Kūra had then to withdraw. 'Omar b. Ḥaṣṣ, thus rid of his enemies, sent a corps against the 'Ībādi Abū Rustam who had to take refuge in Ṭahert (Tiaret) (q.v.).

'Omar was again at work in strengthening the defences of Tobna when he learned of the critical situation of Kairawān. The town blocked for eight months by the 'Ībādi Abū Hakim was in dire straits. With 700 men of the 'qurud, he hurried to Irfiyya but instead of marching on Kairawān he took the road for Tunis, enticing the Berbers after him. He succeeded in getting supplies into Kairawān which he then entered himself. The siege was resumed with fighting every day. Food again became very scarce. 'Omar b. Ḥaṣṣ wished to send two chiefs of the 'qurud to procure supplies but they refused to go. He then decided to make a sortie himself which meant certain death, without awaiting the reinforcements of 60,000 men with which the caliph was sending him. Throwing himself on the enemy like a camel mad with rage, he fell on the 15th Dhu l-Hijjah 154 (Nov. 27, 771).

OMAR b. ḤAFṢŪN, leader of a famous rebellion in Spain, who at the end of the ninth century A.D. held out for years against the Umayyad emirs of Cordova and in the end was only brought to book by the caliph 'Abd al-Raḥmān III al-Nāṣir (cf. UMAIYAD). His full name was OMAR b. ḤAFṢŪN b. OMAR b. DЇAFAR called al-ĪLĀMĪ, from his conversion from Christianity to Islam and he claimed descent from an ancestor named Alfonso who had the title of count (comtes). 'Omar's father Ḥaṣūn or with the specifically Spanish suffix (-ān), Ḥaṣūn, was thus the grandson of a Visigothic lord who had become a Muslim and lived on the income from his lands at Iznate (Ḥiṣn Āwī) in the region of Ronda [q.v.] in the south of Spain in the middle of the 9th century A.D. His son while still quite young displayed a very violent temper and as a result of a crime committed by him against the person of one of his neighbours, had to escape for a time to North Africa, and spent some time at Tábert [q.v.]. He only returned home to rebel at once against the Umayyad emir of Cordova. Having gathered around him a small body of followers he estabished himself in 267 (880) in a ruined fortress at Bobastro (Ar. بسترو; q.v.), which he restored.

Doby has identified this castle with el Castillón, to the south of Campillos, between Teba and Antequera, relying on the discovery at this place of an inscription, mentioning the municipium Singilenste Barbastren, while Simonet thinks that its site corresponds to las Mesas de Villaverde, a little farther south between Ardales and Carrastraca. Excavations have recently been begun in the district in order to find the ruins of Bobastro. Whatever be the real position of the castle, we know that it commanded the valley of the Guadalhorce in the direction of Malaga and from there Ibn Ḥaṣūn could disturb a considerable part of the territory of the ērra of Rejí, which a governor dependent on Cordova was supposed to rule. 'Omar having had several successes, the governor tried to bring him to reason but without success and he lost his post. His successor was no more fortunate. Soon Ibn Ḥaṣūn was exercising complete authority over all the inhabitants of the mountainous region which extends from Ronda towards Grenada, Malaga and Algeciras. The Umayyad emir Muḥammad b. 'Abd al-Raḥmān, had to organise a regular expedition against him the command of which was entrusted to his vizier Hāshim b. 'Abd al-'Azīz. Ibn Ḥaṣūn submitted and went to Cordova to offer his services to the Umayyad emir in 270 (883). But his submission did not last long; in the following year the rebel had regained the mountains of Bobastro and took by storm the castle in which Hāshim had put a strong garrison.

From this time on Ibn Ḥaṣūn begins to play the part of a champion in the nationalist movement in the south of the peninsula, where he put himself at the head of all the malcontents, whether Christians or neo-Muslims (muwgalātūdūn). The rapid growth of his rebellion did not fail to disturb greatly the Umayyad emir whose position each day became more precarious. The task of bringing Ibn Ḥaṣūn to book was given to the heir-presumptive al-Munṣīr b. Muḥammad, who laid siege to one of the rebel's principal supporters Hāshim b. Ḥamdūn al-Rifa'i in his castle of Alhama. But in 273 (886) the emir Muḥammad died and al-Munṣīr had to go back to Cordova to be proclaimed in his place. Ibn Ḥaṣūn seized the opportunity to organise resistance in all the mountainous districts of Southern Spain and had himself recognised as leader of the rising by all the inhabitants.

On ascending the throne al-Munṣīr found himself faced by a critical situation. But he at once took the necessary steps with great energy. There were continual encounters between the rebels and the loyalist troops; in the end al-Munṣīr set out in person to lay siege to Bobastro, but after the siege had lasted forty days he died, undoubtedly poisoned at the instigation of his brother 'Abd Allāh who succeeded him.

The new emir displayed no less energy than his brother. Ibn Ḥaṣūn had profited by events to increase his influence and according to the chroniclers the land which he ruled was only separated from Cordova by a day's journey. After a truce which only lasted a few months, 'Abd Allāh and Ibn Ḥaṣūn resumed the struggle. The Umayyad emir at this time sent his two rebel chiefs, Sawwār b. Ḥamdūn and Sa'īd b. Ḥiṣād, whom he conquered, while Ibn Ḥaṣūn was collecting a considerable army at Polei [q.v.]. But 'Abd Allāh with a superior army defeated him, put him to flight and took Polei in 278 (891), then Ezīja [q.v.] and finally laid siege to Bobastro again. But the rising of the Banū 'l-Hāshidjdān in Seville created a diversion in favour of Ibn Ḥaṣūn, who from now on seems to have received at least the moral support of the Fāṭimid sovereigns of Ifrījīya.

The rest of the reign of 'Abd Allāh passed without any great successes being obtained. It would take too long to detail here all the negotiations followed by agreements, more or less observed, which went on during these very troubled years. But the most striking gesture of the rebel was to repudiate Islam openly and, in order to have the more complete support of the Christians of Andalusia and Cordova, to return to his ancestors. Ibn Ḥaṣūn then took the name of Samuel and proclaimed himself not only the leader of the nationalist movement but the champion at the same time of a regular crusade against Islam.

The situation was then very critical when 'Abd Allāh's successor, his grandson 'Abd al-Raḥmān III al-Nāṣir, mounted the throne of the emirate of Cordova in 300 (912). Without delay the new sovereign saw that it was necessary before all else to dispose of this threat which was steadily increasing in magnitude. Not only the future of his dynasty was at stake but also that of Islam in Spain. For several years he made his preparations with the greatest care and displayed exceptional tenacity. The mountain districts of Andalusia were blockaded, attacked and reduced in turn. Ibn Ḥaṣūn, more and more surrounded in the Serrania de Ronda, finally died in 306 (918) leaving to his sons the task of continuing the resistance.

According to some chroniclers, Ibn Ḥaṣūn in the last years of his life, seeing the futility of his efforts, submitted to 'Abd al-Raḥmān III and even gave him one of his sons as a hostage. He is himself said to have taken part in the campaigns against the Christians of the north in the Umayyad army.

In any case after the death of the aged rebel,
given ear to the Prophet's preaching. It is from this sudden reversal of his attitude as well as perhaps from the fact that it was under 'Omar that Islam became a world phenomenon, from the simple incident in Arab history that it originally was, that 'Omar has earned the epithet of the "St. Paul of Islam" which the west has given him. In reality there is nothing exceptional about him, two except the stubborn energy with which they later championed the cause against which they originally fought. As with all great converts, we have in his case only an example of change of polarisation of the same exclusive and uncompromising attitude which, recognising no middle course, is as impetuous in devotion as in hatred. Tradition places the conversion of 'Omar in his 26th year, four years before the Hijra. It is probably that the round figure of 30 which we thus get as the age of 'Omar at the beginning of the new era has something artificial about it. But he was in any case certainly in the flower of his vigour when he began his new career of apostle of Islam. Besides, at first his support was only personal and legend has no doubt exaggerated its importance. 'Omar was not able to assist the new religion through the power of his clan (he belonged to the Bani 'Adi b. Ka'b who being only Kurâsh-âzâwîhir enjoyed no influence in the political life of the early republic) in his position with regard to his fellow-citizens was in no way outstanding. Even if it is true that, as tradition has it, as soon as 'Omar joined the community of the faithful, the latter's faith in its ultimate triumph was increased, his intervention certainly had no influence on the events which led the migration to Medina. It is only in this town alongside of the Prophet and apparently through the prestige of his initiative and strength of will that 'Omar without holding any official position began to be the real organise of the new theocratic state. His part was that of councillor rather than of soldier; although he took part in the battles of Badr, Ohod and later ones, practically nothing is recorded of his military exploits. accounts of which are so abundant in the case of 'Ali and other Companions. Tradition which traces to his initiative no less than three Kur'ânic revelations (ii. 119; iii. 57; on the veiling of the Prophet's wives; ixi. 61; on the threat of punishment to the same women) is probably not only true but may even record only a few of the cases in which a suggestion from 'Omar stimulated the Prophet's inspiration. What is remarkable about 'Omar in the Medina period is his perfect agreement with Abû Bakr, a concord which — a surprising thing and one which is a tribute to the two great champions of Islam — was never disturbed by jealousy. The fact that 'Omar like Abû Bakr, also became the father-in-law of the Prophet through the marriage of his daughter Hafsâ, did not arouse the slightest feelings of rivalry in him; on the contrary it was he who on the death of Muhammâd thrust the caliphate upon Abû Bakr. The ingenious theory put forward by Lammens (M. F. O. P., iv. 113 sq. and reproduced in Études sur le siècle des Omeyyades) about the "triumvirate Abû Bakr, 'Omar, Abû 'Obaida b. al-Djarârah (these three individuals united by a bond of intimate friendship are said to have dominated and so to have monopolised the authority of the Prophet, controlling him either by direct action or through
his wives, A'isha bint Abi Bakr and Hafsa bint 'Omar) may be to some extent correct but should not be pushed too far. It is beyond question that 'Omar, the greatest brain of the three, was able in the lifetime of Muhammad as well as during the brief caliphate of Abu Bakr to resist the temptation to come too much into the foreground. But as soon as the first caliph became dead the power naturally passed to him.

The question whether the dying Abu Bakr designated 'Omar as his successor has been the subject of much discussion by the theorists of Muslim constitutional law. As a matter of fact, there does not seem to have been any formal act of investiture which would in any case have been of no value for it would have been quite out of keeping with Arab custom. 'Omar assumed power de facto and the recognition which was at once given him by the majority of the Companions assured him the exercise of it in a way quite similar to that in which the nomination of the emir in the tribes took place, who, as we know, was only firmly seated when the individual approval of the members of the tribe had been asked and obtained after he had effectively assumed power. Such a system however primitive gave no trouble, except when the feeling between two parties was acute; this is what happened at the election of 'Ali. Against 'Omar there was only the dissatisfaction of the "legitimist" party of 'Ali and the Ansar who had however been defeated too recently when Abu Bakr had become caliph to feel like organizing a regular opposition.

'Omar at the beginning of his rule found that the great expansion by conquest had already begun; he had perhaps contributed more than any other to its beginning in his capacity as adviser to his predecessor. This is not the place to discuss once more the traditional story of the Arab conquests, nor to subject to a revision the well-known thesis of Caetani on their origin and character. This thesis has seemed to lessen considerably the importance of 'Omar's personal action and to take from him the glory of having been their initiator and director, according to a strategic plan conceived in advance of the campaigns against the Byzantine empire and Persia. In reality there is reason to marvel that a simple citizen of Mecca should have been capable of controlling with an undisputed singleness of command undisciplined levies of Beduins, scattered over a vast area and should have been able to keep control over their chiefs who were practically the sole masters of the position. If the military victories were not due directly to 'Omar it was certainly to him that the credit should go of never having lost control of his generals and above all of having been able to make use of the powerful and talented family of the Omayyads, without however allowing them to have a free hand. His quarrel with Khalid b. al-Walid who, after having won the most brilliant victories for Islam, was dismissed and died in oblivion, gives us an idea of the political talent of 'Omar and the extent of his authority. The knowledge of the limits of his power (which is the mark of political genius) caused him to treat the wily 'Amr b. al-As with tact and to leave him the initiative in the conquest of Egypt. But he was careful at the same time to put at his side an old Companion of the Prophet, al-Zubair, as a check upon him. He was careful in general (and the appointment of al-Zubair was no exception to the rule) not to appoint to high commands respected Companions whose ambition he had cause to fear. He preferred to watch them from close at hand and to satisfy their parvenu desires with the revenues of the great royal domains of the 'Iraq and Syria, which he assigned to them [cf. Kafr and al-Hula]. If tradition has done justice to 'Omar's strength of will, it should be remembered that he also knew how to employ with success gentler and simple methods.

The caliphate of 'Omar which is marked by the complete transformation of the Muslim state, is regarded by tradition as the period in which all the political institutions by which it was later ruled had their origin. That there has been in tradition a process of idealisation which centred in a single individual a complicated development extending over several generations is what historical criticism has not failed to recognise. But the part played by 'Omar was nevertheless a great one. The regulations for his non-Muslim subjects, the institution of a register of those having the right to our military pensions (the d'adud), the founding of military centres out of which were to become the future great cities of Islam, the creation of the office of jàdî were all his work, and it is also to him that a series of ordinances goes back, religious (the prayer of the month of Rama'dan, the obligatory pilgrimage) as well as civil and penal (the era of the Hijra, the punishment of drunkenness, and stoning as a punishment for adultery; in connection with the last it looks as if he did not hesitate to interpolate a verse in the text of the Qur'an; cf. Noldeke-Schwally, Geschichte des Qur'ans, i. 248—251). If it is true that several of these institutions, particularly those of a fiscal character, were rather of the nature of provisional regulations than definitive legislation and if it is also true that the fiscal business continued to be carried on by Persian and Byzantine officials and that the coins continued to be struck with the types of both empires, we cannot however refuse the title of political genius to the ruler who was able to impress a stamp of unity and permanence upon the variegated and confused elements which went to make up the new Muslim state.

In spite of the autocratic character of 'Omar's rule, his caliphate has nothing of the monarchal character about it. It is further distinguished from that of Abu Bakr by a deeper feeling of its permanent character. Thus for the title of khalif which conveys the idea of deputy, there was substituted that of 'Amir al-mu'minin (which 'Omar is said to have assumed in the year 19), in which the character of sovereign is more marked; at the same time the religious character in it becomes more distinct. Indeed one might say that 'Omar was inclined to renew, naturally with a shade of difference, the theocratic regime of the time of the Prophet; being neither able nor willing, it must be remembered, to pose as a prophet, he yet knew how to take advantage of the intimacy in which he had lived with the Prophet to legislate in the spirit of the latter and to give to his own measures an almost supernatural origin. It is perhaps this which tradition is trying to express when it makes Muhammad say: "If God had wished that there should have been another prophet after me, 'Omar would have been he"
(cf. al-Muhbib al-Tabari, Manākih al-Aṣghara, i. 199); we can easily understand how such an attitude was only possible through the surprising prestige of 'Omar (it ceased with him; the theory of the transmission of prophetic powers was only revived later by the Shi'a).

Tradition shows us 'Omar feared rather than loved. This feeling must have been a real one but it should be pointed out that it was only to his high moral character that 'Omar owed the respect which he inspired, for the physical force at his command was not great. The opposition to him (to that of 'Ali there was later added that of a number of the old Companions) did not dare to display itself publicly. The man in whom 'Omar confided, perhaps his successor in pector, was the third member of the "triunvirate": Abū 'Ubaidah. When he died, a victim of the great plague of the year 18, it does not seem that 'Omar had thought of the question of the succession. He was still, besides, at the height of his powers (53; according to the age accepted by tradition) when he fell for the 26th night of the month of Ḥijdja (Nov. 3, 644) by the dagger of Abū Lu'lu'a, governor of Baṣra. The motive which tradition gives to the murder is the very heavy tax against which the slave had appealed in vain to the caliph; according to Caetani, the murderer was only the unconscious instrument of a conspiracy of the Companions tired of the caliph's tyranny. It is certain that one of the latter's sons, the unstable 'Ubayd Allah who fell in the battle of Siffin (in 37 A.H.), cherished this suspicion but there is really no reason to believe that it was well founded (cf. the remarks made by the writer on Caetani's views in N.S.O., iv., 1912, p. 1059—1061). The history of murders of sovereigns shows that cases of assassination from personal vengeance are just as frequent as those with political motives. We may suppose that if he had lived to a greater age 'Omar would have provided for the succession — his farseeing mind would have undoubtedly shown him the necessity of settling this question which is always, in states not ruled by the dynastic principle, the crucial test of their vitality. He was not spared to do this and the plan of an elective council formed of the six oldest Companions (ṣāḥibān) which resulted in the election of Othman even if 'Omar had nominated him on his deathbed (which is denied with good arguments by critical historians) could only be a temporary expedient.

In going to rejoin his two dear friends, the Prophet and Abū Bakr, in the delights of Paradise, 'Omar could contemplate with satisfaction the work that he had accomplished. He was really, as has been said, the second founder of Islam, he who gave the edifice erected by the religious inspiration of Muhammad, its social and political framework. But it must be added that the formidable problems raised by the enormous and rapid expansion of Islam did not receive their final solution from him. In particular the question of the relations between the early converts and the first helpers, the Ansar, and the newcomers from the Meccan aristocracy and the question of the subordination to the central power of the Arab forces scattered over the immense territory of the empire, although still latent, presented difficulties and dangers of the utmost gravity. It was 'Omar's successor, Othman, who had to face them without possessing in the slightest degree the necessary qualities to overcome them.

While orthodox tradition reverses in 'Omar not only the greater ruler but also one of the most typical models of all the virtues of Islam (cf. a list of his merits in the work of al-Muhbib al-Tabari, al-Riyād al-nādira fi Manākih al-Aṣghara, Cairo 1327), the Shi'a has never concealed its antipathy to him who was the first to thwart the claims of 'Ali (cf. Goldziher, in W.Z.K.M., xv. 321 sqq.). The Shī'a teaching although it exalts the ascetic austerity of the life of 'Omar, has very little to do with him: besides this type of puritan lends itself very little to mystical speculations whether in its historical reality or in its idealisation in legend.

Bibliography: All the historical material is to be found collected in L. Caetani, Annali dell' Islam, ili.—vi. (Milan 1909—1912); vol. v. contains the historical synthesis of his caliphate and vi. the general index. The material contained in the works on Hadith, which has only been partly utilised by Caetani, is collected by A. F. Wensink, A Handbook of early Muhammadan Tradition, Leyden 1927, p. 234—236, s.v. 'Omar.

G. Levi Della Vida

'Omar Efendi, an Ottoman historian, according to popular tradition originally called Elkezović or Čausićević, belonged to Bosnian-Novj (Bosanski-Novj). Of his career we only know that he was acting as kaši in his native town when fierce fighting broke out on Bosnian soil between the Imperial troops and those of Čačk-Oghlu 'Ali Paša (1150—1737). 'Omar Efendi at this time wrote a vivid account of the happenings in Bosnia from the beginning of Muhač 1149 (May 1736) to the end of Džumāda I 1152 (end of March 1739); written in a smooth easy style, this work is of considerable importance for social history. It seems to have been called Ghażawāt-ī Ḥakim-Oghlu 'Ali Paša but is usually quoted as Ghażawāt-ī Diyar-i Bosna, and sometimes as Ghażawāt-ī Fārānālić (i.e. Banjalučka in Bosnia). As a reward for this literary effort, 'Omar Efendi was promoted to be one of the six judges (rūbeh-i velde-i sitte). Of his further life and death nothing more is known. It is certain that he ended his days in Bosnian-Novj and was buried there. The site of his grave is still pointed out but the tombstone has disappeared.

'OMAR EKENDI — 'OMAR KHAJĪYĀM

'OMAR KHAJĪYĀM, famous Persian scientist and poet of the Sālīḥī period (d. in 526 = 1132).

Biography. Although reliable information on Kha'īyām is scarce we cannot underestimate the importance of the sources at present available.

In his Algebra he calls himself Abu 'l-Fath 'Omar b. Ibrahim 'Abbās Khājīyām and in his verses seems to use Kha'īyām ("tent-maker") as his taškal-luq. It is likely that this nickname refers to the profession of his ancestors. W. Litten, in his pamphlet Was bedeutet Chajīyām? (Warum hat O. Chajīyām ... gerne dieren Dichternamen gewählt, Berlin 1930 (25 p.), has suggested the possibility of a technical interpretation of Khājīyām as "poet, expert in metrics" (cf. Shams al-Din Muḥammad b. Kāis, Mu'ūjam, in G. M. S., p. 13–16), where metrical terms are explained by the names of different parts of the tent (bīt in Arabic both "house > tent" and "verse"). However, in the well-known quatrains, such as Kha'īyām ki kha'ma-hū-yi ḥakmat mīdīkht the reference is evidently to "tests" and not to "verses".

Omar was a Khūjāyām, from Nishāpur or its neighbourhood. The date of his birth is unknown. He was already famous as a mathematician in 467 (1074–1075) when with Abu 'l-Muzaffar Asfarī and Māmān b. Nadīm Wāṣīṭī (cf. Ibn al-Ashrī, x. 67, under the year 467) he was invited by Malik-Shāh to collaborate in the reform of the Persian calendar (cf. Dahākī). In 506 (1112–1113) Nizām-yi 'Arūđī met 'Omar, whom he calls Ḥudūji al-Ḥabbī, in Balkh and in 500 (1135–1136) visited his grave in the Hira cemetery of Nishāpur "it then being four (variant: some) years since he died". Consequently the probable date of Kha'īyām's death would be 526 (1132). (On Kha'īyām's grave beside the shrine of Muḥammad Maḥrūk see Muḥammad Ḥasan, Muṣṭafā al-Shamsī, iii. [Tehrān 1503 = 1886], p. 101, 175; Sir F. Sykes, A pilgrimage to the tomb of Omar Khayyām, in Travel and Exploration, London, Sept. 1909, ii. 129–138, and Williams Jackson, From Constantinople to the Home of Omar Khayyām, New York 1911, p. 240–245. See also a picture in the Times, July 16, 1934). On the occasion of Firdawsī's millenary (Oct. 1934) the Persian Government took the occasion also to erect a new monument of white marble over Kha'īyām's tomb).

Nizām-yi 'Arūđī's Čahār Maḥāla, written ca. 551 (1156), remains the oldest contemporary witness to 'Omar. The second and even more important biographer is Abu 'l-Ḥasan 'Ali Bāhākī [q. v.; died 565 (1169)]; the relevant passages, already known through quotations in Shahrāzūrī, have been translated by Jacob and Wiedemann, Zu 'Omeri Chajīyām, in Isl., iii. (1912), p. 42–62 (English transl. of the principal passage by Sir E. D. Ross and H. A. R. Gibb, in B. S. O. S., v., p. 467–473). Bāhākī calls 'Omar al-Dustār al-Falāsīfī Ḥudūji al-Īslām 'Omar b. Ḥrabīn al-Kha'īyām. He says that he had a disagreeable character and was not so nice to his pupils as for example Asfarī. However, when in 507 (1113) Bāhākī (at that time only 8 years old; cf. Yā'qūbī, Ithād al-Arūđī, v. 208) visited 'Omar, the latter examined him in Arabic poetry and geometry and expressed his satisfaction. Malik-Shāh (cf. also Čahār Maḥāla, p. 63) and the [Karaḵhāndī] Shams al-Mulūk of Būkhārā (d. 472 = 1179) were particularly kind to 'Omar but Sandjar had a grudge against him. Among the persons who had direct intercourse with 'Omar are mentioned Abū Ḥamdūd Muḥammad al-Ghazālī and the learned prince of the Karaḵāndī dynasty Farzān b. 'Ali Farzānī Farzāmarz. In different sources 'Omar is also described as a follower of Abū 'Alt b. Sinā (Avicenna). Though he was a scholar in philosophy, jurisprudence and history he was no prolific writer and of his works Bāhākī mentions only a short treatise on physics (Mukhtarāf fi 'l-Tafriṣīyār), a treatise on Existence (Fi 'l-Wujūd) and a treatise on Being and Obligation (al-Kaws wa'l-Takīf). In the Khāridat al-Kāsar of 'Imād al-Dīn al-Kātib al-Īsfahānī (written in 572 [1176–1177]) Kha'īyām is mentioned as an incomparable scholar of his time enjoying a proverbial reputation (bihī yuṭarbal al-maṭlib). Khākānī (d. 595 = 1198–1199) refers to him once in a verse. Among the later sources may be mentioned Shaikh Nadīm al-Dīn's Mirād al-Ībādād (620 = 1225–1224) where 'Omar is called "an unhappy philosopher, atheist and materialist". Kiṭīfī, Ta'rikh al-Hikamādī, ed. Lipper, p. 243–244 [the passage first utilised by Woepcke], represents Kha'īyām as a follower of Greek learning (cf. Bāhākī). Shahrāzūrī's Nuzhat al-Ārwaṭ (sixth century) chiefly repeats Bāhākī. Rashīd al-Dīn in his Ḥājīm al-Ta'wārīhī is the earliest authority known for the tale of three schoolfellows: Nizām al-Mulk, Ḥasan-i Šabāb and Kha'īyām. The chronological discrepancy involved by this story was already noticed by A. Müller: Nizām al-Mulk was born in 408 (1017) and there are no indications that Kha'īyām [or Ḥasan-i Šabāb] died at the age of more than 100 years (cf. A. Müller, Der Islam im Morgen- und Abendland., ii. 97, 111; Browne, A Liter. Hist. of Persia, iii. 190–193. On the different explanations of the legend see Houtsma's preface to al-Bundārī, p. xiv., note 2; Muḥammad-Khan Kazwīnī in Browne's translation of the Čahār Maḥāla, p. 138 and latterly H. Bowen, in J. R. A. S., Oct. 1931, p. 771–782). However, the facts remain that Nizām al-Mulk must have met Ḥasan-i Šabāb (cf. Ibn al-Ashīr, x. 110 [year 494]) and that Kha'īyām in his metaphysical treatise dispassionately mentions the Ismā'īlī among the searchers for metaphysical truth, but the authorship of the treatise is suspect.

Kha'īyām as a scientist. Kha'īyām's scientific activities for a long time eclipsed his poetical renown and in 1848 Reinard in his learned introduction to Abu 'l-Fidākī's Geography wrote: "malheureusement, 'Omar alliait avec l'astronomie le goût de la poésie et du plaisir".

On the reform of the calendar for which Kha'īyām is responsible jointly with his colleagues, cf. Dahākī.

MSS. of Kha'īyām's principal work on Algebra exist in Leyden, Paris and the India Office (see Woepcke, L'algébre d'Omer Alkhiyami publiée, traduite et accompagnée d'extraits de ms. inédits, p. 1851). Kha'īyām's introduction to his researches on Euclid's axioms (Mukhtārāf) has been translated by Jacob and Wiedemann, in Isl., iii. (MS. in Leyden). The treatise MuṣḥkHzālī al-Ḥisāb exists in Munich. G. Sarton, Introduction to the History of Science, Washington 1927, i. 759–761, calls Kha'īyām "one of the greatest mathematicians of
medieval times. His Algebra contains geometric and algebraic solutions of equations of the second degree; an admirable classification of equations, including the cubic; a systematic attempt to solve them all and partial geometric solutions of most of them. His classification of equations...is based on...the different forms of cubic equations.... Binomial development when the exponent is a positive integer. Study of the postulates and generalities of Euclid" (cf. also W. E. Story, *Omar as Mathematician*. Boston 1918 [17 pages]). In physics Khāyām’s researches were devoted to the specific weight of silver and gold (MS. in Gotha; see Wiedemann, *Über Bestimmung der spezifischen Gewichte* [Beitrag 8], in *S.B.P.M.S. Erf.,* xxviii. [1906], p. 170–173). The *Tārīkh-i-Aftī* (written about 1000 = 1591) quotes the names of the *Mā’īn al-Hikam* "on the methods of ascertaining the value of objects studied with precious stones without taking the latter out" (perhaps the same work on the same subject) and of the *Lavāzīm al-Ahmīdī* "on the methods of determining the orientation and the cause of the difference of climate of various countries".

Of metaphysical works of Khāyām a MS. of the above mentioned treatise on Existence in Berlin and a MS. of a little Persian treatise (Dar ‘Ilmi Kulliyātī) in Paris. Of the latter Christensen has translated several chapters, *Un traité de métaphysique d’Omar Khayyam*, in *M. O.*, i. (1908), p. 1–16. This treatise, of the contents of which Christensen has a poor opinion, is dedicated to a certain Fakhr al-Milla wa ‘l-Dīn Mu’ayyad al-Malk, probably one of Niẓām al-Mulk’s sons. Finally must be mentioned the *Nawrūz-nāma* of which the existence was first revealed by F. Rosen, *The Quatrains of O. Khayyam newly translated*, London 1930, p. 5–18. The text based on the unique Berlin MS. (Rosen: 1365 A.D.; Muḥammad Khān Kazwini: "not later than the 12th century of the Hīdjrā") was published with notes and a presentation pamphlet written at the request of a friend. The matters referring to Nawrūz [q.v.] occupy only 19 pages out of 77; the rest is taken up by such subjects as gold, horses, falcons, wine, beautiful faces. The treatise does not show any deep knowledge in the compiler and its authorship, for several reasons, cannot be considered as finally established. An incomplete copy of the same treatise (perhaps the first 43 pages out of 77 of the printed edition exists in the British Museum, Add. 23,568, fol. 869–1019; *Riśāla dar tāhlīl-i Nawrūz* [anonymous]).

For lists of Khāyām’s scientific works see Brockelmann, *O.E.L.*, t. 471; Suter, *Die Mathematiker und Astronomen der Quatrains*, 1900, p. 12; Muhammad Khān Kazwini, notes on the *Cāhūn Maṣlahāt*, p. 220–221; Caillié, *op. cit.*, introduction (21 names are quoted of which some are only Persian equivalents of Arabic titles).

In a very detailed book Khayyām, or uskī sawādīn kanīnī dāfūnī pur naqṣāna naqṣān, published in Hindustani by Saiyid Sulaimān Nadwī, ‘Aṣamgarh 1933 (508 pages), the following scientific works ascribed to Khayyām have been reproduced: *Riśālat al-Ka‘ūn wa l-Takhti* (with further polemics on the subject); *Riśālat al-Wujūd* (published in Cairo under the name of *Dīyā‘ al-‘akīt*); *Riśālat al-Wujūd* also called *Awqaf il-l-Mawjūfī; Riśālat fi Kulliyāt-i Wujūd* (in Persian); *Mā‘īn al-Hikam*.

Khāyām as a poet. Already Ḥāmad al-Dīn Isfahānī in his *Khāridat al-ʿAsr* (752 = 1152) mentions Khāyām among the poets of Khūrāsān and quotes four Arabic verses of his. Nadīm al-Dīn Kāzī cites two quatrains in Persian. Shahrazūri gives three Arabic fragments (?) numbering respectively 4, 6 and 3 verses [while the Persian translation of Shahrazūri, finished in 1011 (1602), substitutes for them 2 Persian quatrains]; that of 6 verses belongs to the same poem as the verses quoted by Ḥāmad al-Dīn. Kīṭī reproduces exactly the latter’s quotation. Dīwānī (658 = 1260), i. 128, puts a Persian quatrain into the mouth of Saiyid ʿĪzz al-Dīn who was counting the victims of the Mongol invasion in Khārizm in 618 (1221). One quatrain is found in the *Tārīkh-i-Guzida*, in *G. M.*., p. 818. From 741 (1340) we possess 13 quatrains preserved in the *Munṣīs al-ḥārīr*. The MS. edited by F. Rosen contains 329 quatrains but its date 721 (1321) is certainly wrong. The other oldest collections of the 13th (xvth) century arc:

Stambul A S 1032 861 (1456–1457)

N 3892 865 (1460–1461)

Oxford Bodl. Ouseley 140 865 (1460–1461)

158 quatrains.

Later the number of rubā‘īyat in some MSS. rapidly rises: the MS. in Vienna (*Flugel, Handschriften*, i. 496, Nr. 507) dated 957 (1550), has 482 rubā‘ī, that of the Bankipur Public Library, dated 961 (1553–1554), 604 rubā‘ī, till finally in the Lucknow edition of A. D. 1894 one finds 770 rubā‘ī. Miss Jessie E. Cadell (*Frazer’s Magazine*, May 1879) is said to have collected from all available sources 1,200 quatrains, which is the list of the MSS. in Caillié, *op. cit.*, p. 37–39.

Already in Th. Hyde’s *Veterum Persiarum.... religionis historia*, Oxford 1700, p. 529–30, there is found a Latin translation of Khāyām’s quatrain *Ay, sīḥāta-yi sīḥāta-yi sīḥāhtāni*. For the first time several Persian quatrains were published in a Persian grammar compiled by F. Dombay in Vienna in 1804. Khāyām’s renown in Europe, however, was long based on his scientific activities and it is noteworthy that his Treatise on Algebra was translated in 1851, while the first edition of Fitz-Gerald’s famous version of the quatrains was published in 1859, the French edition by Nicolas in 1867, and only since the second edition of Fitz-Gerald’s version in 1868 has the wave of admiration for Khāyām swept through western lands. *Critical studies of the text started only in 1897, when Żukowski published his article *Omar Khayyām istranstomyusjītā istworosthyjā* in *Almagrasīf*, a presentation volume to Baron V. Rosen, St. Petersburg 1897, p. 324–363 (made more widely accessible in an early (abridged) translation by Sir E. D. Ross, in *F.R.A.S.*, xxii., 1898, p. 349–366). Żukowski’s merits consist in:

1. rendering accessible some old texts on Khāyām’s biography entirely unknown up to that time, and 2. shattering the uncritical belief in the authenticity of the existing collections of quatrains. Żukowski showed that 82 out of 464 quatrains included in Nicolas’ edition are found also in the *diwān* of
39 other authors (and sometimes simultaneously in the *dhwâns* of several poets). He then divided these 82 quatrains into different subject groups and thought that the proportion thus obtained would (in inverse order!) serve as a hint for the characteristics of Khâyîm. For example, the interpolations of epicurean character represent 39 3/9, and those which give expression to Muslim free-thinking 2% of. Therefore, the safest way is to take as a basis the least interpolated groups “of which the authenticity has been shattered the least”. Consequently Żukowsky attaches a particular importance to the “mystic *šîfâst*” in Khâyîm’s poetry. This theory (which puzzled Christensen, *Recherches*, p. 10, and misled Hartmann, in *W.Z.K. M.*, xvii. 367) is certainly insufficient both psychologically and statistically, for it is not the percentage of interpolations but that of the remaining quatrains which is of importance. So Żukowsky’s discovery of a high proportion of “wandering” quatrains is valuable only as a negative principle (cf. Barthold, in *Zap.*, xxv. 403–404). The thoroughness of Żukowsky’s work is shown by the fact that the later researches by E. D. Ross and Christensen resulted in the raising of the total number of attributed “wandering” quatrains only to 108.

In his *Recherches sur les Rubâ‘îyât de ‘Umar Hâyân*, Heidelberg 1904, Christensen went one stage farther. Stating how rapidly the number of quatrains increased since the date of the Bodleian MS. (only a century later the Bankipûr MS. contains 604 quatrains!), he postulated a similar process for the time separating that MS. from Khâyîm’s death (over three centuries): “how many quatrains then would remain attributable to Khâyîm? A *dîwân* is transmitted tolerably intact, whereas a collection of *rubâ‘î* is much more exposed to tampering”. Consequently “there exist no criteria [of genuineness] both as regards the form and the matter” of the quatrains (p. 32). Christensen admitted only the probability that the twelve *rubâ‘î* containing Khâyîm’s name and the two quoted by Nâsîr al-Dîn Khâyîm had some contemporary genuineness. [But even one of the 12 quatrains of the first category has a variant ascribed to ‘Abd al-Kâshî].

The more optimistic conclusions of Christensen are that those 14 quatrains “contain, so to speak, in nucleus all the *rubâ‘îyât*” and that in general the poetical and historical importance of the *rubâ‘îyât* must be severed from the question of their authorship. As Khâyîm wrote in the national Persian spirit the later addition kept “within the same cycle of ideas” (see the 14 quatrains above mentioned). Only the few mystical and erotic quatrains seem to be interpolations foreign to Khâyîm’s nature. In a following chapter Christensen studies the historical traits of the Persian national character and winds up by saying that “Khâyîm’s spirit is the Persian spirit as it existed in the Middle Ages, and as in substance it is nowadays” (p. 89). This part of Christensen’s reasoning must be inevitably accepted cum grano salis, such matters admitting unfortunately no final demonstration. A further step in the study of Khâyîm’s text was the discovery by Muhammad Khân Khwânî of 13 quatrains in the anthology *Mu‘âmm al-‘ahrâr* (composed and copied in 714 = 1310; see Sir D. Ross, in *R.S.O. S.*, iviii., p. 433–439). F. Rosen, in the Persian preface to his new edition (1925) of the *Rubâ‘îyât* (also in German, *Zur Textfrage der Vierzeiler Omaros des Zeitmachers*), in *Z. D. M. G.*, 1926, p. 285–313, criticised the exaggerations of the theory of “wandering” quatrains but authenticated only 23 *rubâ‘î* (those quoted by Râzî, Dhuwâni, etc., six of those containing the name of Khâyîm and 13 of the *Mu‘âmm al-‘ahrâr*). Finally, after a new revision of all the materials available, Christensen in his *Critical Studies in the Rubâ‘îyât of ‘Umar-i Hâyân*, Copenhagen 1927, offered a new criterion to ascertain the genuineness of the quatrains. He divided (p. 10) the collections of quatrains into three categories: those in which the quatrains are disposed without any alphabetical arrangement, those with single alphabetical arrangement (i.e., in groups according to the final letter of the rhyme) and those with double alphabetical arrangement (under each rhyme letter the quatrains disposed in the order of the first letter, of the beginning word). He takes the first arrangement as the oldest and of this group mentions five specimens: one bearing the apparently false date 721 (1321), one dated 902 (1496) etc. The double alphabetical arrangement is already found in the Bodleian MS. and the single alphabetical one must be presumably older. Moreover Christensen noticed that in different collections (of the first and second class) there were found series of quatrains “in the same, longer or shorter succession” (p. 13). Though the comparison of the non-alphabetical group led to a purely negative result” (p. 27) as regards the establishing of a textual tradition, Christensen suggests that in some cases (MSs. dated 1528 and 1540) the principle underlying the non-alphabetical arrangement was the disposition according to the contents. Moreover he thinks that we may “learn something by studying the total stock of the texts” (p. 27) and consequently (p. 39) lays down an elaborate system of rules based upon the number of times a given *rubâ‘î* is found in different groups of MSS. This system being strictly enforced entails considerable changes in the former views on the subject: thus out of the six best attested quatrains containing Khâyîm’s name 216 are contained spurious, one uncertain and four genuine (p. 121).

Finally 121 quatrains which have stood the test are taken as a basis for a new characteristic of ‘Omar.

The new method, in spite of its mathematical character, greatly depends on the materials utilised by its author. H. Ritter in his important review of Christensen’s work (*Zur Frage der Echtheit der Vierzeiler ‘Omar Châyân*, in *O. L. Z.*, 1929, No. 3, col. 156–163) has quoted 7 ancient MSS. found in Constantinople. Of these the two oldest (that of 865 = 1456 containing 151 quatrains, and that of 865 = 1461 containing 315 quatrains) are non-alphabetical while that of 876 (1471–1472) containing 320 quatrains is alphabetical. This fact is partially in favour of Christensen’s views but the order in the two non-alphabetical MSS. is different from that of BNI (the oldest of the non-alphabetical MSS. quoted by Christensen, dated 902 = 1496–1497 and containing 243 quatrains). On the other hand, the MS. of 865, contemporaneous with the famous Bodleian MS., contains double the number of the latter’s quatrains. Lastly two of the MSS. mentioned by H. Ritter contain each 478 quatrains in a special arrangement by Yer (ṣ) Ahmad b. Husain al-Rashîdi al-Tabrizi, who in 867 (1462–1463) arranged the quatrains
in nine chapters according to their subjects. This fact, Ritter thinks, may be responsible for the traces of a similar arrangement in the two later MSS. (dated 1528 and 1540) mentioned by Christensen [in his introduction] a paper was read by M. F. M. Koprunzade at the Orientalist Congress at Oxford; it was also known to Husain Dânish; [v. i.] So H. Ritter falls back upon Christensen's conclusions of 1904 and in a somewhat modified form insists on the practical impossibility of authenticating this or that of Khayyâm's quatrains. The rubâ'iyât have been transmitted by methods typical of popular songs (typical Volkliederuberlieferung); they express the popular feeling of the masses (Volksempfindung) which opposed the official religious and literary spirit of foreign origin. As now we happen to speak of a truly "Khayyâmic" quatrains, so historically the particular genre must have been associated with the great saviant, and Christensen's attribution of his selection of quatrains to Omar can be understood only in the sense of a collective name for all what is looked upon as a manifestation of Omar's influence (Einzeluberlieferung).

Finally, it must be mentioned the discovery of a MS. dated 1423 and containing 206 quatrains announced by Mahfuz al-Âbâq at the meeting of the Asiatic Society of Bengal, on April 5, 1932, and H. H. Schaefer's paper Der geschichtliche un der mythische Omar Khayyâm, read at the Orientalisten tag held at Bonn at the end of August 1934. Schaefer is extremely and perhaps excessively sceptical as regards the attribution of the quatrains to Omar Khayyâm. He concludes by saying that "Khayyâm's name must be struck out of the history of Persian literature". He also doubts the authenticity of the treatise published by Christensen and the Nafrâ'î-nâma. Schaefer's paper will appear in book form. For a resumé see Z. D. M. G., xiii.2, 1934, p. 25-28.

Conclusions. The upshot of the preceding study is that we possess nothing approaching a recension recepta of Khayyâm's poetical works. What could we say, if we consider the historical personalities we had his correspondence in which scarcely a single letter could be authenticated and many were decidedly spurious. Taking, for instance, the important point of "mystic Şûfism", we find that Žukowsky makes a strong point of it in Khayyâm's poetry, while Christensen denies its importance, though in support of this insufficiently attested tendency one could quote Khayyâm's metaphysical treatise in which the most honourable place is reserved to the Şîfî seekers of Truth (cf. Rosen, 1926).

The striking contradictions in the ideas and feelings expressed in the Rubâ'iyât have struck all those who have written on Khayyâm and the characteristic trait of the "type associated with Khayyâm" seems to be precisely the alternation of sarcastic pessimism and epicurean hedonism, of the consciousness of futility of our contingent existence and the joyful motto of carpe diem. Nevertheless it must be admitted that the pessimistic side of Khayyâm's poetry is better attested by the quotations in the older biographers and, what is more, by the Arabic verses of Omar Khayyâm which may have suffered in transmission but which certainly could not be imitated by popular tradition (F. Rosen has utilised the Arabic verses in his penetrating study of 1926).

FitGerald's version. Khayyâm's popularity among large circles of the public is chiefly due to the English version by E. Fitzgerald (1809-1883). This paraphrase of exceptional poetical merits, consisting in the second edition of 110 quatrains [third edition: 101], cannot, however be taken for a translation in the strict sense of the word. E. Heron-Allen who most carefully compared the English and Persian texts (Some side-light upon Fitzgerald's poem The Rubâ'iyât of Omar Khayyâm, 1898) has established that 40 quatrains are faithful paraphrases of single rubâ'î; 44 are traceable to more than one rubâ'î; 2 are inspired by the rubâ'î found only in Nicolaj's edition; 2 reflect the "whole spirit" of the original; 2 are traceable exclusively to 'Aţâr; 2 are inspired by Khayyâm but influenced by Hafiz and 3 (only in the first two editions) could not be identified. As manifestations of the almost religious feeling with which the admirers treat Fitzgerald's version may be mentioned the Omar Khayyâm Club, founded in London in 1892 (and its numerous imitations in the U.S.A.), as well as J. R. Tutin's book, A concordance to Fitzgerald's translations, London, 1900.

The principal European editions of the Persian text are J. B. Nicolas (with a French translation), Paris 1867; E. H. Whinfield (with an English translation), London 1882, 1893 etc.; E. Heron-Allen (facsimile of the Bodleian MS. of 865-1460 with an English translation), London 1898; F. Rosen, Berlin, Kaviān Press, 1304 = 1925; Husain Dânish with a translation and an interesting introduction in Turkish, second edition, Constantinople 1346 = 1927; Christensen, Critical Studies (v.s.) with a complete comparative table of the quatrains in the principal collections; B. Cilik, Les manuscrits mineurs des Rubâ'iyât de Omar Khayyâm dans la Bibli. Nationale, textes originaires des ms., Suppl. Persan 1777, 826; 745; 793; 1481, 1425; 1317; 1327; 1458, published as Nû. 2 of the Traux des de la Bibli. Universitaria de Seged, viii. (French introduction) + 69 (Hungarian introduction) + 85 p. (Persian text) [a very thorough study].
Translations into principal European languages: into English see above, Whinfield, Horen-Allen, Christensen, J. Payne, 1898; F. Rosen, The quatrains newly translated, London 1930; into German: A. von Schack, Stuttgart 1878; Bodenstedt, Breslau 1881; F. Rosen, Die Simplicius Omars des Zilmachers (several editions); into French: see above Nicolas, Ch. Grolleau, Paris 1902; Claude Anet [in collaboration with Muhammad Khān Kaswini], Paris 1920 (144 quatrains). Cf. also the extensive collection of translations into English, French, German, Italian and Danish edited by N. H. Dole, Boston and London 1898, 2 vols., cxixix. + 655 p. Single quatrains have been translated into most of European and extra-European languages, Basque, Yiddish and Gypsy included. Modern Arabic translations: Ahmad Hāmid al-Ṣarrāf, Baghādād 1350 (1931) (with lengthy introduction); al-Sayyid Ahmad al-Ṣāfī al-Nadjarī, Dimashq 1350. (V. MINORSKY)

1'OMĀRA B. ABI 'L-ḤASAN 'ALI B. ZAIDĀN AL-ḤAKAMI AL-YAMANI, an Arab man of letters born in 515 (1121) in Maṛṯān on the Wādī Waṣṭ in the district of al-Zar‘īb in the Thāāmāt al-Yamani executed on Ramadhān 2, 569 (August 1774) in Cairo by order of Ǧāhrū al-Salāṭīn [cf. the article SALĀDĪN]. In that period the Yamani, broken up into many little principalities, was suffering severely from continual civil wars. Traditional learning was still in a flourishing condition however, especially in the large towns. In 530 (1136) ʿOmāra was sent by his father to Ẓabīd, where he studied, especially Shāhī law, under ʿAbd Allāh b. al-Abbār and others. In the year 535 he was given his teacher’s diploma (iḏāma), visited his parents and taught for three years in the madrasa of Ẓabīd. While civil war was raging with particular violence in Ẓabīd, he spent some time in the coast town of ʿAnbara where he was on intimate terms with one of the pretenders, ʿAlī b. Mahḍī [q. v.]. Returning to Ẓabīd, he continued his studies and in the years 538–548 engaged in trading between Ẓabīd and ʿAdn which brought him into contact with the Banū Nadjāḥ, who bought the bulk of the butter from the Ẓabīd. In the year 538 (1143) he went on his first ḫadḍīj with some members of the dynasty. In ʿAdn he entered literary circles and was able to develop his poetic gifts. The rivalry between the Nadjāḥids and the Zura’īds who ruled in ʿAdn provoked intrigues against him which threatened his life and forced him to leave the Yamani. In 549 (1155) he went on pilgrimage to Mecca and was sent by the Sharīf Kāṣim b. Ḥāshim on a mission to the Fāṭimids in Egypt. Returning to Mecca in the same year, he visited Ẓabīd and ʿAdn for the last time in 551 (1156) and in 552 (1157) again made the ḫadḍīj. Sent on a mission a second time, he settled permanently in Egypt. He said himself that he came here to seek “position and fortune” (atĪbu al-ḏaḡa waʾl-imāla: Divān, i. 287); his later life is typical of the Arab adīb. Although he held for some time the title of ǧālī, he devoted himself exclusively to working as a court poet. His ǧālīs of praise were dedicated not so often to the last Fāṭimids caliphs fātimīn al-Fāṭīz [q. v.] (d. 555 = 1160) and al-ʿĀḍīd [q. v.] (d. 597 = 1171) as to their autocratic viziers, who changed on the stage like marionettes: Taḥlit b. Ruzzik [q. v.] (d. 556 = 1161), Ruzzik (d. 558 = 1163), Dirghām [q. v.] (d. 559 = 1164) and Shīrkhī [q. v.] (d. 564 = 1169). In the continued changes at court, ʿOmāra managed always to hold his position. When Ǧalāl al-Dīn came to power first as vizier, he addressed him to 1169 an appeal in verse which appears to have had the desired effect. With the end of the dynasty his position became difficult; ʿOmāra was neither a Sahī nor an Ismāʿīlī (cf. however Ismāʿīl al-Dīn in Dernbourg, i, 399 or al-Danjani, ibid., ii, 546–547) but his sympathies inclined to the Fāṭimids and he openly expressed them in a popular ǧālī of lament. Very soon afterwards he took part in a conspiracy, the object of which was the restoration of the Fāṭimids, was crushed along with other participants and buried in the cemetery of Cairo.

Among his contemporaries ʿOmāra was especially renowned as an authority on law; in Ẓabīd he was known as al-Farāḍī, in al-Yamani as al-ʿAbīdī (see al-Danjani in Dernbourg, ii, 546); several textbooks compiled by him on al-farāḥid were popular in his native land in his lifetime (see al-Nuṣrī al-Dīn, Dernbourg, i. 23). Nothing of his legal work has survived and we only know him as a literary man of very ordinary type. His works in number considered of Ǧalāl al-Dīn alone, but ʿOmāra enjoyed his time, but Dernbourg much exaggerates their literary value. The most interesting is perhaps al-Nuṣrī’s Kitāb al-wazār al-Miṣrīya (ed. by Dernbourg, i. 5–154; ii. 503–511) which contains many autobiographical details, an anthology of his verse and notes on the contemporary Egyptian viziers. It begins in the year 558 (1162) and comes down to the death of Ǧawwar (564 = 1169). He dedicated his history of al-Yamani to the Ǧāḍī al-ʿAbīdī [q. v.] (1135–1200); it began at his suggestion in 563 and finished in the following year (ed. by H. C. Kay). Based on the same plan as a work of his predecessor, the emir of Ẓabīd Ǧadīyāz b. Nadjāḥ (d. 498 = 1158), called al-Mufīṣ ḍī Ṣāḥāb Ẓabīd, which has not come down to us, it is known as the Ǧarīr al-Yamani. Its importance lies mainly in what it tells us from his own experience or from hearsay. Of less interest are his Tarāṣṣūlī, nine books (ed. by Dernbourg, ii. 431–449). They show the influence of the famous Kasūd al-Ǧāḍī al-ʿAbīdī, being in rhymed prose filled with all kinds of stylistic figures. His anthology of the poets of Arabia, particularly of al-Yamani, has not come down to us but was much used by Ismāʿīl al-Dīn in his Khatībat al-ʿAskī. Of his Divān (ed. by Dernbourg, i. 355–394; ii. 405–429, 511–539) no proper edition exists and all the known manuscripts differ in their contents and are not all complete. His famous ǧālī of lamentation for the Fāṭimids for example is known not from his own Divān but from the separate MSS. and other sources (in addition to the texts from Ibn Wasi and al-Makrizī given by Dernbourg, ii. 612–616 see now al-Kākshandī, Ṣubh al-ʿĀḏā, iii., Cairo 1914, p. 530–532). As a poet ʿOmāra was entirely in the tradition of the later ʿAbbāsid school. His models in the panegyric style he found in Bashīrī, Mihāyr and al-Buḥtūrī (Divān, i. 266–267); to these may be added Abī Tammām (the Arab critics had already noticed this; cf. e.g. Ibn al-ʿAṭīr, al-Maḥgūl al-sawrār, Cairo 1828, p. 409) and al-Mutanabbī. The influence of the last named is particularly marked,
not only in his verses, but also in many passages in his letters. As regards subject, his poems are mainly ḍaṣbīs of praise or lamentation. Satires (ḥādīt) are rare as he had once promised his father never to insult a Muslim (Derenbourg, ii. 791). This of course did not prevent him from mocking officials of Christian origin in epigrams which are quite obscene (Divān, i. 312, 331); in keeping with the taste of his time we frequently find in his Divān poetic lines (v. 353, 393, ii. 421, N. 343). The form of his poetry follows tradition in matter and composition; only a few muwaṣṣaḥāt are attributed to him (Divān, i. 388–391; to be added in M. Hartmann, Das arabische Strophengedicht, i., Weimar 1897).

OMDURMAN (Umm Durman), a town of the Anglo-Egyptian Sudan situated on the west bank of the main Nile immediately below the junction of the Blue and White Niles. A seven-span steel bridge built in 1925–1928 connects Omdurman with Khartum [q.v.], and the two towns (together with Khartum North on the right bank of the Blue Nile) form for practical purposes a single city; but whereas Khartum as the seat of the government and the centre of foreign commerce has acquired a European character blended of British and Levantine elements, Omdurman remains the focus of native life and of the internal trade of the Sudan. The inhabitants number some 110,000, of whom the great majority are natives drawn from every part of the country.

The importance of Omdurman is of very recent origin; it started as an insignificant village in the territory of the Kishāb (a branch of the Dāmūy tribe) and is first mentioned as the dwelling-place of an ascetic and ‘holy man’, Ḥamad b. Muhammad generally known as Ḥamad Walad Umm Maryūm, who lived from 1640 to 1730 A.D. (see MacMichael, History of the Arabs in the Sudan, ii. 277). The site first became important when it was fortified by Gordon for the defence of Khartūm against the Darwīsh army of Muhammad Ahmad [q.v.] who captured it on January 15, 1885, ten days before the fall of Khartūm. Under Muhammad Ahmad’s successor, the khālīfa Abdūllāh, Omdurman was the capital of the Mahdist state and the religious centre of the new sect. The Mahdi’s tomb, a domed building designed by an Egyptian captive, was erected in the middle of the new settlement which henceforth was known as Buq’at al-Mahdi, the [holy] place of the Mahdi, and by the khālīfa’s ordinance the duty of visiting the tomb was substituted for the orthodox pilgrimage to Mecca. In order to consolidate his personal rule the khālīfa induced large numbers of his fellow-tribesmen, the Ta‘īsīs and other Baṣrās from the western Sudan, to settle in Omdurman where they could support themselves only through the spoliation of the rivetain population; this migration was described as a ḥijīrā in accordance with the Mahdist practice of establishing analogies between the life of Muḥammad and the early history of Islam. The population of Omdurman was further swelling by the enforced settlement of large numbers of tribesmen from all parts of the country whom the khālīfa desired to concentrate at his own headquarters for political or military reasons. The town grew up in a haphazard fashion and, apart from the houses of the khālīfa and his principal amirs, consisted of a straggling mass of straw huts covering a length of about six miles from south to north. The khālīfa’s “mosque” was a vast open space in the centre of the town enclosed by brick walls. For a graphic description of Omdurman under the khālīfa’s rule see Sir Rudolf von Slatin’s Fire and Sword in the Sudan.

The reconquest of the Sudan by the Anglo-Egyptian forces under Sir Herbert (later Lord) Kitchener was completed by the battle of Omdurman on September 2, 1898, the scene of which was near the village of Kerki in a few miles to the north of the town. Under the new administration the town has acquired such modern features as regularly laid-out streets, tramways and electric light. The houses of the well-to-do townpeople and the government buildings are built of brick and stone, but a large part of the town still consists of the rectangular mud buildings which are characteristic of the northern Sudan, and the life of the busy markets preserves its Oriental and African character. Associated with the principal mosque there is an institution known as al-mḍad had al-ulūm, presided over by a šāfi‘ī ‘al-‘ulām‘, which provides instruction in the traditional subjects of Muslim learning. The kādis employed in Muslim law courts are however drawn from students of the Gordon College in Khartūm. For secular education Omdurman possesses a government intermediate school and several kuttābs (government elementary schools) as well as a number of schools maintained by missionary societies and by private enterprises.

ORÂMÅR, ÜRMÅR. The administrative geography of Turkey speaks sometimes of the kaďa of Oræmår containing two nähiya, Dijluler and Iştişan, with 32 townships and 25,910 inhabitants (cf. Cuijet, *Turquie d’Asie*, ii. 756), sometimes of a nähiya of this name forming part of the kaďa of Gawar, in the sandjak of Hakkari, in the wilayet of Nîn [q. v.]. We incline rather to the second definition, having visited this district, lost in the middle of Central Kurdistan. Not only has Oræmår the name of a kaďa but the two nähiya attributed to it are inhabited exclusively by Nestorians [q. v.]; the one, Dijlû, being autonomous while Oræmår is at present at least purely Kurdish and an appendage of the house of Mâlû Mîrî, a tribe of Duskání Zbîrî and not Herîkî (Cuijet, *op. cit.†); a further proof of the inaccuracy of the Turkish statements regarding this part of Kurdistan. The boundaries of Oræmår are on the north Iştişan and Gawar; on the south Rekân; on the west Dijlû, Baz and Tjoímâ [cf. Nestorians] and Artuşi; in the east Sît [cf. Shâmddinân]. Oræmår situated at a height of 5,520 feet (cf. Dickson) is a group of hamlets scattered on the two sides of a rocky mountain spur above the Rûbârî Shîn. On the spur itself which is called Gaparànî Zher, at the place named Gire Bûti, is the capital of the group and the residence of the aqchâ, the Nûn Gund or “the middle of the town”. A large cemetery occupies the promontory at the end of the spur. The name of Gire Bûti which we explain as the “hill of the idol” seems to indicate the antiquity of the settlement. The fact that the slopes separated by the Gaparàn are very carefully cultivated and present a complicated system of little terraces each of which is a field or tiny kitchen garden, leads one to believe that man chose this site for habitation a long time ago, perhaps simply on account of its extreme isolation in the centre of a wild country.

Oræmår is at east end of the curve traced by the system of the Dijlû Dagh. According to Dickson, the chains and valleys of Turkish Kurdistan run roughly along the parallels of latitude and take a south-eastern direction as they approach the Persian frontier and at the point where they change their axis form a complicated system of heights and valleys. The most complicated part near the centre of the change of axis in question may be called Harkî-Oræmår.

Road System. Although they are really nothing but tracks used for intertribal communications, it is nevertheless interesting to indicate the directions to connect the routes with the road-system which we have studied at Rawînî and Shâmddinân [cf. these articles] which must have played a more prominent part in ancient times. Oræmår is connected with Gawar via Shamski, the pass of Bâştain,† Alû Kânî, Bâştïgâ and Dîzîa. It is a road which shows, traces of works undertaken at the more dangerous places. To the south the road going through a very narrow defile leads first to Nîrwa (cf. below) where it forks: 1. to the west, by the district of Artuşi, via Bîrî-Ci-Tîtim and the district of Nirwe via Wîlla and Pftî Halâna, this last place being on the left bank of the Great Zâb opposite Surîya on the road from ‘Akrå; 2. to the east, by the district of Rekânî, via Berejî-Sahdajî and Awi Marik (water course) to Barzàn and Bahrî Ras on the left bank of the Great Zâb opposite Bîra Kepran, also on the road from ‘Akrå. A third road goes from Nîrwa to Nehri, the centre of Shâmddinân, via Râzga, the heights of Peramîzî (frontier of the three tribes — Rekânî, Harkî, Duskání), Dirî, defile of Harkî (Shîwa Harkî), Begor, Mazra, Nehri. It is to be hoped that with the final delimitation of the boundary between Turkey and the İrâk, this region will be properly surveyed and mapped and will no longer as at present show so many blanks and inaccuracies on the maps (cf. *Asie Française*, Oct.–Nov. 1926, treaty of delimitation).

Ethnography. The following Kurdish tribes may be mentioned in Oræmår itself and in the vicinity with ramifications inevitable as a result of the Kurd migrations. After the name of each tribe we give in brackets that of the district and the number of households: Duskání Zbîrî (Oræmår, 2,000); Nirwe (Nîrwa, kaďa of Amâdiya, 800); Dîrî (Gawar and Gela Dîrî, 1,000); Penînîshî (between Gawar and Dijlûmerk, and the part of the Pirîhulî, near Basîkala, 4,000); Duskání Zbîrî (kaďa Dehûk, 2,000); Miûzî Zbîrî (ibid., 5,000); Berwûri (ibid., 4,000); Guweî, nomads (wintering at Dehûk; summering at Gawar and Oræmår, 1,400); Cella (Dijlûmerk, 6,000); Artûshi (summering at Fîrsînah, wintering at Bæri Zengar, 6,000); Artûshi (sedentary: Alîhî, 1,000; Nûrîzî, 1,000); parts of Artûshi: Gewdan, Mâm Khoûran, Zîri (around Dijlûmerk, 6,000).

History. There are so far as we know no texts mentioning Oræmår except this brief note in the *Miûrû al-Bûlûdân* (Tîhrân, p. 22): "Urmär bi-dammî awwal wa-sudînî-i thini takti as aţîzî-î Așdârba-idân ast dar amdî âjamî birzâvâ ajamî wa-mudâfâtî Sâdî ibn aţ’-As âjamî šabdand Sâdî Djarîr ibn ’Abd Al-lâl al-Bajdrî râ bi djarîr-i ân âjamât namûr kurd wa-djarîr ân âjamât râmuzhîn wa-sarkâd-i ibshân râ bi dîr zed. —

We may note here: 1. the reading Urmär which corresponds to the pronunciation of the Highland Nestorians for the first part Ur but differs in it giving an a and not an â for the second (in Kurdish the pronunciation is Horâmår with the characteristic aspiration); 2. the qualification al-Bajdrî which is to be connected with Bajdrî, a Kurd village in the neighbourhood known for its family of Shâikh Bajdrî; 3. the fact that the date of this event is not indicated. Orâmår however like all this part of Central Kurdistan must have had a rich history full of associations with the history of Christianity in these regions. Here we give a description of the Nestorian church of Mârî Mâmû which is in the village of the same name in Orâmår and has not been previously described; Dickson mentions it; as to Cuijet (cf. *op. cit.*, ii. 757) he says that the 40 Nestorian rays domiciled in Orâmår are entrusted with the care of the two Nestorian churches in the Kurdish town (see above). The second church called that of Mîr Dânîl at Nûn Gund (cf. above) has been turned into a mosque within the memory of the present generation. The Nestorian charm uttered at the sight of a snake in order to escape its bite mentions the two saints: Mârî Mâmû Mîr Dânîl kip’s-l-hawâlî hakîh ("M. M., M. D., the stone on the snake"). For legend says
that the saint Mārī Mamû escaped from martyrdom in the time of Julian the apostate at Caesarea in Cappadocia and took refuge in the mountains where he collected the reptiles and shut them up under a flagstone over which was built the church which bears his name (cf. Acta Martyrum et Sanctorum, ed. Bedjan, vi., 1896). The life of the saint however contains no mention of Orāmār or of reptiles but it does attribute to him certain powers over wild animals. The version collected by Dickson seems to differ too much from the life of the saint. Dickson thinks that the church was erected on the site of an Assyrian zikkurat. In any case the following is the description of the sanctuary which is guarded by the Nestorian family bearing the title of Serdar Bī Mārī Mamû. Were it not for a very little door adorned in the upper part with a Nestorian cross and two circles within which is the same cross, one would not suppose that the building of rough stone in the form of a parallelepiped was a church. In the semi-darkness of the interior one can see that a quarter of the area is taken up by the sanctuary while its separated from the nave by a wall in which are two doors. Through that on the left one approaches the altar proper represented by a stone over three feet high and about two broad half built into the wall with rounded edges and narrowing towards the top. Above this altar is an embrasure which admits a little light; on the left in the wall is a small niche. From the sanctuary a door through a stone wall leads into another chamber in which there is a primitive baptistry carved out of the rock and a little lower on the same base a hearth (tamura) for the preparation of the unleavened bread. In front of this part set aside for the divine offices, there are two pulpits also in stone for the liturgical books and for the Gospels and the cross. The bells are replaced by two metal plates hung from a rod connecting the two walls at the bottom of the vaulting. There are no sacred images. The dimensions of the church are 40 feet long, 17 broad and 16 high. According to the legend, the reptiles shut up beneath the altar would come out if the family of guardians were deprived of their secular privileges. The dust from the walls possessed virtues against the bites of mad dogs, the stings of snakes and scorpions, etc. — We have very little certain information about the Nestorian churches of Kurdistān, some of which, that of Mār Bīshū on the Persian frontier (Tergawar), that of Mār Zaia at Djjilī, that of Mār Sawā at Ashīta as well as the ruins at Kučanīs must with Mār Mamû go back to a high antiquity between the ivth and vth centuries, for it is to this period that we are told we must put the coming of the first missionaries, Mār Aqūn, Mār Bīshū etc. The plan of Mārī Mamû may be compared with that of Mār Bīshū given by Hezall (Kurds and Christians), while in W. A. Wigram (The Assyrians and their Neighbours, London 1939) is a sketch of the interior of the church of Mār Shālíthā at Kučanīs. In any case there is reason to believe that Orāmār was once inhabited by Christians. A local tradition even suggests that the ancestor of the modern Zājān came long ago into this Christian district and by stratagems and intrigues succeeded in driving out its inhabitants. The toponymy of Orāmār seems to confirm this. The etymology of the name Orāmār itself would also seem to be Aramaic. — We owe to Mgr. Graffin the interpretation of the name as Ur-nār “citadel of the master” (cf. Ur-šikûn). This explanation would be corroborated by the inaccessible character of the region. It would confirm at the same time our supposition that this district was inhabited at a very early date. — There are similar place-names elsewhere in the region: Ora Bighû, one of the slopes of Kūra Tawkē (cf. above); Oritis, a village beyond Geltī Nū; Urī, a Nestorian clan; finally Urmīya itself.

Bibliography: The only works with which we are acquainted are listed in our joint study with E. B. Soane, Suto and Tate, a Kurdish text with transl. and notes, in B.S.O.S., iii., p. i. — In the review of the Geographical Society of Paris appeared in 1935 our study on Le système routier du Kurdistān, containing besides many geographical details a general view of Orāmār from a rare photograph.

(B. Nikitine)

ORAN (WAHRAĪN), a sea-port town on the coast of Algeria (33° 44' N. Lat.; 0° 39' W. Long.). The anchorage which is protected on the west by the heights of the Aidour, the extreme end of the little range of the Murjdjado, and the bay of Mars al-Kabīr, 10 miles distant, was probably the Portus Divini mentioned in the Itinerary of Antoninus. According to the Arab writers however, the town was founded, like a number of other towns on the same coast, by an invasion at the beginning of the tenth century (c. 290 A.H.) a band of these émigrés came there under the leadership of two chiefs in the service of the Umayyads of Cordova, Mūhammad b. Abī 'Awn, and Mūhammad b. 'Abdūn who concluded a treaty with the families of the Berber tribe of the Azadājīs settled in the district.

Seven years after its foundation, Oran, which the agents of the Umayyads had no doubt wished to make a base for the enterprises of their masters, felt the repercussions of the rivalry between the Umayyads and the Fātīmids of Kairawān. A body of soldiers sent by the latter and supported by the Azadājīs Berbers seized the town and burned it. Rebuilt, Oran was placed under the authority of the Fātīmid governor of TIvrāt. Throughout the fourth century (tenth A.D.) it was held alternately by the Fātīmids and Umayyads and was taken and re-taken and destroyed (notably in 945) and rebuilt by expeditionary corps or Berber chiefs representing the two rival caliphs. In spite of these vicissitudes, the town enjoyed great economic prosperity as a result of its position on the coast. The geographer Ibn Hawqāl, who visited it in the second half of the tenth century, thought that there was not a more sheltered port in the whole of Barbary. The commercial relations with Spain were considerable. (The town however at this date was under the authority of Zīrī b. Manād [cf. Zīrīds], a vassal of the Fātīmids).

Large quantities of wheat were exported from it. The country around was well cultivated. The river (Wātī Rehā, now covered over in its passage through the town) served to irrigate the fine gardens.

In the eleventh century, Oran belonged to the Banū Khazer, a branch of the Maghrība Zenāta who ruled in Tlemcen. It was from them that the Almoravid Yūsuf b. Tashfin took the town when he conquered the Central Magrib in 473 (1081). 63 years later it was to be the scene of the drama in which Almoravid power met its end.
On Ramadán 27, 539 (March 23, 1145) the second last emir of the dynasty, Taḥšīf b. ‘Alī, defeated near Tlemcen by the Almohads, died there. Three days later the town passed to the Almohads.

Under its new masters the town prospered. Idiist described it as surrounded by a good wall of earth and possessing well-furnished bazaars. The harbour was supplemented by that of Mars al-Kabir which was within easy reach of Almería. It had a naval arsenal and ‘Abd al-Mu’min built ships there.

The part which it played in commerce with Spain became still more important when the ‘Abd al-Wāḍidīd [q. v.] replaced the Almohads in the Central Maghrib. Oran was, along with Honain, to the east of the modern Némours, a port of Tlemcen. The wealth of the capital depended on the possession of these ports and on the safety and liberty of traffic on the roads which led to them. This explains why throughout the xivth century, when the Marinids came to besiege Tlemcen, they sent a force against the coasts to try to take Honain and Oran. In 748 (1347) the Marinid Abu l-Hasan built two forts there.

At the beginning of the xvth century, the Castilians, continuing the work of the Reconquest on the Berber coast, endeavoured to take Oran, which had now become a dangerous centre of piracy. They were only able to take Mars al-Kabir in 1505 and Oran in 1509. On May 17, Pedro Navarro entered the town, massacred 4,000 Muslims and sent off 8,000 prisoners. Cardinal Ximenes who had organised the expedition came in person to take possession of the new conquest. Wishing to develop their success the Spaniards interfered in the quarrels of the last ‘Abd al-Wāḍid kings of Tlemcen. They gave their support to one of these princes who had lost his throne and this provoked the intervention of ‘Aṭīd [q. v.], the Turkish corsair of Algiers. The latter having been defeated and killed, the ‘Abd al-Wāḍid Abū ‘Abd Allāh was restored to the throne of Tlemcen by the Christians in 1543 and became their vassal. The other expeditions planned from Oran as a base produced little result, and were ended by the disastrous expedition of the Count Alcaudete against Mostaganem in 1558.

The Spaniards were at Oran, as elsewhere, practically confined within their walls, badly supplied by their Berber allies (los Moros de l’Az), exposed to famine, plague, and the attacks of the Berbers supported by the Turks; they nevertheless held it till 1708. After a siege of five months, they capitulated and the Bey of Mescara Bū Shalāghām took possession of it in the name of the Bey of Algiers.

At the end of twenty-four years of Turkish rule the Spaniards re-entered the town. The Count of Montemar, having routed the Arabs who held the coast, entered the town which was undefended in 1732. Bū Shalāghām tried in vain to re-take it. At last in 1791 after a terrible earthquake in which almost 2,000 perished and which was followed by an attack by the Bey of Mescara, Muḥammad al-Kabir, the king of Spain Charles VI agreed to surrender Oran to the Bey of Algiers; some 70 or 80 Spanish families remained in it however. The town restored to Islam became the residence of the Bey of the West and remained so till 1830. On Jan. 4, 1831, the French, already masters of Mars al-Kabir, entered Oran.

The town has developed immensely since then. The population, which was 3,800 in 1832, is now over 160,000. Of this total the Muslims number at least 25,000. They live mainly in the southern quarter known as the ‘village noir’. Among the Europeans the element of Spanish origin is considerable.

There is little trace of its Muhammadan past in Oran. The Spanish period has left more, notably the old fortress with its gateway adorned with vigorously carved coats of arms.

**ORFA** (Greek Edessa, Syr. Orhā, Armen. ʿUrhay, Ar. al-Ruḥā), an important town in Diyār Muḍar, the ancient Osroœne.

The origin of the town, which must have existed before the Macedonian conquest, is lost in obscurity. Repeated attempts to prove the existence of the name in Assyrian times (E. Honigmann, _Urfa keilschriftlich nachweisbar_, in _Z. A._, N. F., v. 1930, p. 301 sq.) have so far failed. The original name was probably Ṫayra which has survived in that of the spring Kallāqān, which lay below the walls of the town, and in that of the district of Norouane (cf. Ṭayra in Isid. Charac., i, ed. Müller, in _G. G. M._, i. 240; Osifin, _Steph. Byz._, s. Bārāzī; _Arabes Orosi_, Plin., _Nat. Hist._, vi. 85; vi. 129; in inscriptions _Orheni_, _C. L._, vi. 1707; their land was called in Syriac Ṭayra Ṭayra; _Cureton, Spicil. Syr._, p. 20). A derivation of the Syriac Ṭayra from the Arabic Ṭahra (a fallāt form from aṣwahrā, “rich in water”) as proposed by Markwart (in E. Herzfeld, in _Z. D. M. G._, lxviii., 1914, p. 665 sq.) can hardly be accepted; as little probable is that from Ṭairah, the alleged first ruler and patronym of the town.

Edessa was refounded by Seleucus I on the site of an older settlement (Euseb.-Hieron., _Chron._, ed. Helmi, p. 127) and renamed by Antiochos IV Ἀντιόχεια ἐντὸς Ἐρημίας (Plin., _Nat. Hist._, v. 86: _Edessam quae dicensant Antiochica dicitur, Callirhoeo a fonte nominatam; coins in Babelon, Kois de Syrie, ciii.; Head, _Hist. num._, 2, p. 814 and Hill, _Greek Coins of Arabia in the British Museum, London 1922_, p. cviii.-cixii. and 91-119). It received its Hellenistic name very probably from that of the capital of Macedonia (the ancient Agisai, now Vodena) and the wealth of water may have contributed to the choice of the name (Steph. _Byz._: Ἕδεσσα, τῆς Συρίας, διὰ τῶν τῶν ύδατων μέγα οὖς κληρίζει ἀπὸ τῆς ἐν Μακεδονίᾳ: Noldeke, _Hermes_, v. 459, wished to emend οὖς to ὀρμόν, but cf. _rēsēssā_ from ῥῆς = ῥῆς, _tētō_, from which Vodena is derived: G. Hoffmann, _Die Makedonen_, Gottingen 1906, p. 257; J. Marquart, _loc. cit._, p. 665 sq.; W. Tomaschek, in _S. B. A._ Wiz.
cxxx, 1893, treatise ii, p. 5). According to Malalas, the town was also called "Antiochē μεταβατός (p. 418 sq., ed. Bonn).

In the pre-Christian period Edessa, like Harran, was the centre of a planet-cult. Edessenes called Venus "Baral Nikkal" (Docrina Addaia, p. 24), i.e. "the daughter of Ningal" (G. Hoffmann, in Z. A., xi, 1896, p. 258—260, § 11; Winckworth, in Journal of Theol. Stud., xxv. 402).

Before the foundation of the Osroene kingdom, the town seems to have been an uninhabited place under the Seleucids (to 139 B.C.). Its earlier history is quite unknown. The kings of Osroene, whom the Romans regarded as Arabs (Tacit., Ann., xii. 12, 14; Plin., Nat. Hist., v. 85; Aram. Orrhoecon), bore Nabatean (Mānū, Bakrū, Ābdūl, Sahrū, Gebāru, Arūyū, Arab (Abgar, Mānū, Wāllī) or Parthian (Phrađash, Uranpharatas or Phartamaspates) names. From the end of the first century A.D. the dynasty was closely related by inter-marriage to that of Adiabene (Duval, Hist. d’Edesse, p. 27 sq.) which then ruled Nisibis also (Josephus, Ant. Iud., xxv. 68).

The names and chronology of the kings or, as the Greeks called them, toparchi or phylarches of Edessa (Osroene) are known from the "Edessene Chronicle" (composed about 540 A.D.) and the "Chronicle of Zuqīn" (near Amīd; preserved in the same Cod. Vat. Syr. 162) written about 775 A.D. According to the "Edessene Chronicle," the dynasty ruled for 352 years, and began in 133—132 B.C. with Orhāh b. Ḥewwī, but according to v. Gutschmid, rather with Arūyū (Docrina Addaia, ed. Phillips, p. 47), whose name is not to be regarded as Iranian (v. Gutschmid, in Mém. de l’Acad. Imp. des Scienc., de St. Pētērbs., series vii., xxv., 1887, p. 19), but as Semitic ("Lion") (Duval, Hist. d’Edesse, p. 26 sq.).

The list of toparchi which has been corrected by von Gutschmid from historical references and coins is as follows: they were under Parthian suzerainty at first (down to 87 B.C.): Arūyū (132—127 B.C.); Ābdūl bar Mānū (127—120); Phrađash bar Gebāru (120—115), Bakrū I bar Phrađash (115—112); Bakrū II bar Bakrū (alone 112—94; together with Mānū I 94; with Abgar I 94—92); Abgar I (alone 92—68), in whose reign the kingdom passed for a short time to Tigranes of Armenia; Abgar II (Ariamnes) bar Abgar, of the family of Mānū, hence in Florus III, 11, and Ruf. Fest., Brev., 17: Mazorus, Mazzaes etc. (68—53), who entered into friendly relations with Rome about 65—64. After the battle of Carrhae there was an interregnum of one year (53—52). Mānū II Allāhā (Theos, 52—34); Pākūrī (34—29); Abgar III (29—26); Abgar IV Sumākā (26—23); Mānū III Saphūlī (23—4 B.C.); Mānū IV bar Mānū (7—13 A.D.); Camout found in the citadel of Bireljik an epitaph in Syriac of 6 A.D. (7) of Zābarā, commandant of Bātīr and governor for the toparch Mānū bar Mānū (Kugenier, in R.S.O., i, 1908, p. 587; Camout, Études syriennes, Paris 1917, p. 144); Abgar V Ukkāmā (for the second time: 13—50); Mānū V bar Abgar (50—57); Mānū VI bar Abgar (57—71); Abgar VI bar Mānū (71—91), under whom the Senator Mānū bar Mānū had a sepulchral tower built for himself in Seīrīn on the Ephrates (B. Moritz, Inschriften aus Syrien, Mesopotamien und Kleinasien, ed. Oppenheim, Leipzig 1913, p. 163 sq.;) interregnum of 18 years (91—109; rule of Sanātčis of Adiabene, nephew of Abgar, over Edessa?); Abgar VII bar Īzū (109—116).

After the great rebellion of 116 the town was taken by Lucius Quietus and burned. There followed a brief interregnum under Roman rule (116—118). Iūr (or Yalud) and Pharnataspat (118—122), then Pharnataspat alone (122—123); Mānū VII bar Īzū (123—139); Mānū VIII bar Mānū (139—163). In the Parthian war of Lucius Verus, Edessa was besieged by the Romans in 163—164 and surrendered to them after the murder of the Parthian garrison. During the war the ruler was Wāllī bar Sahrū (163—165). After the conclusion of peace (165) Edessa passed under Roman protection; Abgar VIII (165—167); Mānū VIII phalāmāwās (for the second time 167—179); Abgar IX bar Mānū (under coins: Α. Κλής Εστίτιμος Μέγας "Αβγάρος; 179—214), when occurred the first great inundation of Edessa (Nov. 201) which destroyed his palace; a winter palace was therefore built in the Tērā quarter. The official account of the catastrophe and of the measures taken by the king is preserved in the "Edessene Chronicle" for documents in the royal archives. Abgar was in Rome perhaps in 202, when he was received with all honour by Septimius Severus. Christianity is said to have been made the state religion at this time; (which has however not been proved: Gompertz, Archäol.-epigraph. Mitt., aus Osterr.-Ungarn, xiv. 154—157); according to legend Abgar V Ukkāmā had become a Christian in the year 29 or 32 (R. A. Lipsius, Die edessnische Abgangsrede kritisch untersucht, Brunswick 1880). A friend of Abgar IX was the Christian scholar Bardaisān (Barqādāyān, 154—222 A.D.); Sex. Julius Africanus is also said to have spent some time at his court (Ps.-Moses Khoren., Hist., ii. 10). The cult of Thaḥmah was exterminated by Abgar IX with great rigour. Abgar then ruled along with Severus Abgar X bar Abgar as co-ruler (214—216); both were put in chains by the emperor Antoninus Caracalla in 216. The emperor spent the winter in Edessa which was now called a Roman colonia and on Apr. 8, 217 he was murdered on his way from there to Carthæa. After the fall of the kingdom of Edessa, according to the "Chronicle of Zuqīn," Mānū X bar Abgar ruled for another 26 years (216—242); but he probably lived during this time in Rome and was only nominal ruler.

When the Saṭānān Ardashīr and Shēhpuhīr I disputed Osroene with the Romans, Gordian III again set up a member of the old family as king in Edessa. According to the coins, Abgar XI Phrahates reigned from 242—244; he was probably a son of (Antoninus) Mānū. Returning to Rome, he erected a tombstone there to his wife Hooda with inscription (C. I. L., vi. 1797).

After the royal house had adopted Christianity, Edessa became along with Adiabene the centre of literary activity in Syriac (east Aram.) (cf. Duval, Hist. d’Edesse, p. 107 sq. and the histories of Syriac literature by Wright, Duval and Baumstark). Edessa became a Roman city from the time of Gordian (244); after his death, it is true, Philip the Arabian handed over Mesopotamia as far as the Euphrates to the Parthians; but the Roman garrisons remained in the country (Mommsen, R.G., v. 422). Shēhpuhīr I besieged Edessa in 260, and the emperor Valerian was taken prisoner by the Persians not far from here about this time. The
town then belonged for a time (till 273) to the kingdom of Palmyra under Odaenath and Zenobi.

After the peace of 363 Aphrem (Ephraim; d. June 9, 373) of Nisibis moved to Edessa and founded there the "Persian school"; the emperor Valens banished the Orthodox from Edessa as Arians in Sept. 373 and they only returned after his death in 378. The monasteries on the sacred hill at Edessa were plundered by the Huns in 396 and Aphrem's nephew 'Absamyl composed lamentations upon this.

It is only from the beginning of the third century that we know the names of bishops of the town; these begin with Balūt (c. 200) and among them are Rabbašt, the enemy of the Nestorians (411−435), his opponent and successor Hībā (435−457) and in the sixth century the founder of the Severian "Jacobites", James Baradaroos (Yaḥbōb Būrēš'ānā, d. 578), but later persecutions of the Christians led to the martyrdoms, much embellished by legend, of the "Edessa professors" Sharibil and Barsamyā (250 A.D.), Šemūnā, Girīyā, and Ḥabbīb (309−310). The legend of the "man of God from the city of Rome" (St. Alexius) is put in the period of Rabbašt.

Edessa became the capital and ecclesiastical metropolis of the eparchy of Osroene. There were seven bishoprics under it in 451: Maraqētōs (Syriac Hiklā de-Syājīyā, "temple of the hunter", Kāllīm (Harrān), Kīrīkēn, Bābī (now Bireidjik), Kallīnas, Kwašetīn (Tellā, Tellā du-Mawzelah), and that of the Ţayyāq (Schulsthess, in Abb. C. W. G. Gott., N. S., x., 1908, No. 2, p. 134). Later were added Bītma (Sarudjī), Šēwašīm (Tellmahró), 'Hmēri (Syri. Imerin), Dašargē (Arab. Kaṭal Dībār), Nīa Oṣānēti (Nīa Ošānēti) and Maraqē (Syri. Māratā; cf. B. Z., xxv., 1924, p. 73 sqq., 77 sqq.).

The emperor Zenο in 489 finally closed the school of the Persians" after the Nestorians had already with their leader Narsai been driven out of Edessa in 457 (Baumstark, Geich. d. syr. Lit., p. 104, note 12, p. 109, note 10).

The war with the Persians (502−506) in the reign of Anastasius is described in the Syriac chronicle by an Edessene, the author of which is wrongly said to be Joshua (Ishāy) Stylites. After Amida had fallen in 503, Kawkād besieged Edessa but could not take it (Procopius, Bell. Pers., ii., 13). The undisciplined Gothic troops, who were to defend it, plundered it like enemies and practically the whole of Osroene was depopulated. After the fourth inaudiation of the town (525 A.D.; see below) the emperor Justin I restored it and gave it the name of Kastōnī (Malucción, ed. Bonn, p. 419; Euagrius, Hist. ecc., iv. 8); Hallier's quite unfounded doubts, Texte w. Unters., IX, i. 130, are repeated by Ed. Meyers, R. E., s. v. Edessa, No. 2, etc.). Khosrow I in May 540 on his way back from Syria encamped in front of the city but retired on receiving 200 pounds of gold (Chr. of Edessa, ch. 105; Noldeke, Ṭabarī, p. 239). This stubborn siege in 544 proved without success. According to a late legend, the wondrous powers of the ēokin ḥemwetūt, which were rediscovered at this time, saved the city from the enemy.

In the sixth century the whole of Syria and Mesopotamia was won for the Monophysites. In Edessa Stephanos bar Ṣudali, who, influenced by Origen, preached a pantheistic doctrine, found many followers. In 580 Hormizd IV sent the general Adharmahan against the Byzantines but he retreated after a few days' siege of Edessa. Khosrow II who had been previously in Edessa on his flight to Mauricius, conquered the town in 609 (Chron. Pasch., ed. Bonn, p. 699; Cedren., ed. Bonn, i. 714; Theoph. contin., ed. Bonn, p. 432) after it had previously gone over to him for a time under the Byzantine general Narsae, and deported a large number of Jacobites to Khūrāsān and Sājidjān (Barhebraeus, Chron. ecc., ii. 125). After his victories over Persia, Heraclius in 628 restored orthodoxy in Edessa, and banished the prominent Jacobite families.

On the topography of the town Syracy and Greek authors supply us with a good deal of information. Edessa lay at the intersection of the road from Samsot (Samāt) to Carrahes (Harrān) with the great trade route between east and west from the Euphrates at Zegma-Balkis and Birtha-Bireidjik via Mardin and Našibin to the Tigris. The Antiochene Itinerary knows (p. 184−192) two roads from Germanicia via Zegma, one from there via Samsot and one from Callecom to Edessa. The town lay in a hollow surrounded on three sides by mountains and open on the southeast on the river Sīmēr (Syri. Dītwr, "the Leaper"); the modern Kara Koyun or Nahr el-Kouant. This river which with the Dijlāb flows into the Balikh, in the past, according to the Edessene Chronicle, four times inundated the town and wrought great havoc (in Nov. 201, Mar. 253, March 18, 413 and April 22, 555) until the emperor Justinian had a canal dug to drain off the flood water of the town (Procopius, De aed., ii. 7, 2 sq.; Anced., xii. 38). We hear again in 668 and 743 of floods however (Theoph. Chron., ed. de Boor, p. 537; Chronicle of Zuḵni, under the year 743). The town was surrounded by a double wall. This enclosed on the southwest the citadel which stood on a spur of the Nimrud-Dagh and was overshadowed by this mountain; Justinian therefore had its walls strengthened on this side. At the western end of the citadel are two columns one of which, according to its inscription, was put up by queen Shalmat, the daughter of Ma'nā (Sachau, in Z. D. M. G., xxxvi. 153 sqq.). On a large open place in the citadel called Bēth Tebārā, Abgar IX after the inundation of 201 had a winter palace built (cf. above) and the aristocracy of the town moved their quarters to the adjoining upper market called Bēth Saḥrāyē. There was also a large altar there which was still standing in Christian times, and probably also the royal archives (Ἀρχιβιβαῖος; Bēth Udānā). Below the citadel there were two ponds inside the town. The larger fed by a spring, the fish in which were considered sacred like those of the lake of Bambykhe (Mabbij), corresponded to the old spring Kallīmān, the modern Birket l'ā唯īhūm. South of it lay the smaller pond 'Ain Zilka. In the town stood the council house (Antφρων), a gallery built in 497 (τεμένος), several public baths (Σωμάζων), a theatre, a hospital and the hippodrome. The six gates were called: the Gate of Bēth Shemesh and the Gate of Barlāhā (Βαρλάθα τῶλα): Procop., Bell. Pers., ii. 27, 44) in the north, the Gate of the Caves which led to the catacombs in the west, the Gate of the Hours (שיחא, probably the Σωμάζων τῶλα of Procopius, Bell. Pers., loc. cit.; cf. Duval, Hist. d'Edesse, p. 207, note 1) in the southwest, the Great Gate in the south and the Gate of the Theatre in the east (Duval, p. 14).
At a later date, the Arabs only mention four gates: that of Ḥarrān, the Great Gate, the Gate of Saḥā and the Water Gate. The "Old Church," several times destroyed by floods stood near the "Tetrapylon" and the square of Bēth-Shabţat (Barhebraeus, Chron. ecol., i. 359). The Syracusan authors mention many other churches within and without the town (Duval, loc. cit., p. 16 sq.; Baumstark, in O. C., iv. 164–183).

In the Nimrud-Dagher west of the town cavaes were hewn out in the rock in very early times; there also were the mausoleums of the kings, that of the bishop Abshelamā bar Abgar and, 2½ hours from the town, that of Amathshēnēk (Iyšaaśēnē, wife of Bēthshābḥa, son of Māwnā). Numerous anchorites had their cells in the "sacred mountain" and many monasteries on it. It is probably Στέματα (read Στέματον "Cross Hill" as at Antioch) ṣaṣāą on which the monk Aṣwānā (ἄσων) had his visions (Philoxenos, Letter to Patriarch, under the wrong title; Iyšah of Niphene, Letter to Symeon from Θεομάρτιος ṣaṣāą, in Nova Patrum Bibliothecae, ed. Angelo Mai, viii., Rome 1871, p. 186, ch. 39; cf. Baumstark, Gesch. d. syr. Lit., p. 29, 142, note 10; 225, note 2). Another hill was called in the Christian period Kāmāṭa de-Bēth Aḥlah Kīklā (Symeon Metaphrastes, Migne, Patr. Graec., cvii., col. 141: Bēšaškēšē). In the vicinity of Edessa were the villages of Bokhān, Serenn, Kubbē and Kefar Șelem or Negaḥ. Two aqueducts restored in the year 505 brought down from Tell Šimā and Mawdid supplied the town with spring water (Ps-Joshua Stylites, col. 59 sq., 62, 87). The position of these villages and of the buildings in Edessa can as a rule no longer be ascertained exactly (plans of ancient Edessa: by G. Hoffmann, who corrected the old sketches by Carsten Niebuhr [1780] in Wright, Chron. of Joshua Stylites, 1882; better in F. C. Bartkitt, Ephemeris and the Goth, London 1913, p. 46).

Abū Ubaidā in 637 sent ʿiyād b. Ghann to al-Djazira. After the Greek governor Jonnues Katema, who had endeavoured to save Oshoune by paying tribute, had been dismissed by the emperor Heraclius and the general Polémajos put in his place, al-Ruḥā (Edessa) had to surrender in 639 like the other towns of Mesopotamia (al-Baladuhr, ed. de Goeje, p. 172–175; Ibn al-Athīr, ed. Nurenger, ii. 414–417; Yaḵūṭ, s. v. al-Djazār; Khāṣirmī, ed. Baethgen, Fragm. syr. u. arab. Hist., Leipzig 1884, p. 16, 110 = Abb. K. M., viii., No. 3; Theophanes, ed. de Boor, p. 517, 521). The town now lost its political and very soon also its religious significance and sank to the level of a second-rate provincial town. Its last bishop of note, Jacob of Edessa, spent only four years (684–687) and a later period again of four months in his office (708). The Maronite Theophilos of Edessa (d. 785) wrote a "Chronicle of the World" and translated into Syriac the "two Books of Homer about Ilion".

Al-Ruḥā, like al-Raḥṣa, Ḥarrān and Karḵišiya, is usually reckoned to Diyar Maḏar (Ibn al-Athīr, vii. 287; Yaḵūṭ, i. 177; M. Hartmann, Bohān, p. 88, note 3 = M. V. A. G., 1897, i. 28). In 67 (686–687) al-Ruḥā, Ḥarrān and Sumašāt formed the willayet, which Ibrāhīm b. al-Aḥsār granted to Hātim b. al-Nuʿmān (Ibn al-Athīr, iv. 218).

The "old church" of the Christians was destroyed by two earthquakes (April 3, 679 and 718). In 737 a Greek named Bāšīr appeared in Ḥarrān and gave himself out to be "Tiberias the son of Constantine"; he was believed at first but was later exposed and executed in al-Ruḥā (Barhebraeus, Chron. syr., ed. Bedjan, p. 119). In 133 (750–751) the town was the scene of fighting between Abū Djaḍār, afterwards the caliph al-Mansūr, and the followers of the ʿUmayyads, Iyšah b. Muslim b. ʿUkaili and his brother Bakkār, who only gave in after the death of Marwān (Ibn al-Athīr, v. 333 sq.). But continual revolts broke out again in al-Djazira (Ibn al-Athīr, v. 370 sqq.); in the reign of al-Mansūr, for example, the governor of al-Ruḥā of the same name, the builder of Ḥisn Manṣūr, was executed in al-Raḥṣa in 141 (758–759); (al-Baladuhr, p. 192). When Hārūn al-Rašid passed through al-Ruḥā, an attempt was made to cast suspicion upon the Christians and it was said that the Byzantine emperor used to come to the city every year secretly in order to pray in their churches; but the caliph saw that these were sanders. The Gümāyē (from al-Djuma, the valley of "Afrin in Syria"), who, with the Telmahāyē and Rusāfiyē, were one of the leading families of al-Ruḥā, suffered a good deal however from his coveousness (Barhebraeus, Chron. syr., p. 130). In 812 the Christians were only able to save the unprotected town from being plundered by the rebels Naṣr b. Shabāt and ʿAmar by paying 5,000 zānē; Abū Shāḥārah therefore fortified al-Ruḥā at the expense of the citizens (Barhebraeus, p. 136 sqq.). At the beginning of his reign al-Maʿmun sent his general Tāhir to al-Ruḥā, where his Persian soldiers were besieged by the two rebels, but he had a successful resistance supported by the inhabitants among whom was Mār Dionysios of Tellmahār (Barhebraeus, p. 139). Tāhir, who himself had fled from his mutinous soldiers to Kallinikos, won the rebels over to his side and made "Abd al-Aʿla governor of al-Ruḥā; he oppressed the town very much (Barhebraeus, p. 139 sqq.). Muḥammad b. Tāhir who governed al-Djazira in 825 persecuted the Christians in al-Ruḥā as did the governors under al-Muʿtaṣīn and his successors.

In 331 (942–943) the Byzantines occupied Diyārbakr, Arzān, Dārā and ʿAin, advanced on Naṣībān and demanded from the people of al-Ruḥā the holy picture of Christ called μανᾶλων (al-Ḥonas al-Manālū); with the approval of the caliph al-Muṭṭaḥī he was handed over in return for the release of 200 Muslim prisoners and the promise to leave the town undisturbed in future (Yaḥyā b. Saʿīd al-Aḥṣārī, ed. Kravčikovski-Jančev, in Pastoral Orient., xviii. 730–732; Thabit b. Sinān, ed. Baethgen, op. cit., p. 90, 145). The picture reached Constantinople on Aug. 15, 944 where it was brought with great ceremony into the Church of St. Sophia and the imperial palace (cf. in addition to Yaḥyā, loc. cit.; al-Maṣʿūdi, Muḥāfī al-Dhānak, ii. 331; Ibn al-Athīr, viii. 302 and an oration ascribed to Constantine Porphyrogenetos on the οἰκώμας ἐξομολόγως or De imagin. Edessana, ed. Migne, Patr. Græc., xxii., col. 432, better ed. v. Dohschutz. Christusherder, in Texte u. Untersuch., xviii.). But by 338 (949–950) this treaty was broken by Saʿīf al-Dawla who together with the inhabitants of al-Ruḥā made a raid on al-Maṣṣūl (Yaḥyā, op. cit., p. 732). Under the Domestikos Leon the Byzantines in 348 (950–960) entered Diyar Bakr and advanced on al-Ruḥā (Ibn al-Athīr, viii. 393). The emperor Nicephorus Phocas towards the end of 357 (967–
became lord of Edessa and six months later (Sept. 23, 1083) Philarétos Brachamios succeeded him. But he lost it in 1086—1087 when in his absence his deputy was murdered and the town handed over to Sultan Malikshah. The latter appointed the emir Bużan governor of al-Ruha' and Ḥarrān. When the latter had fallen in 1094 fighting against Tutuşh, Alyaşrukt, general of the sultan of Dimashq and Halab, occupied the town but it was not plundered by his army as he was poisoned by a Greek dancing-girl called Gali. Then the Armenian Kuropatles Tòros (Theodors), son of Het'um, took the citadel. When in 1097—1098 Count Baldwin captured Tell Bāshir Tòros asked him to come to al-Ruha’ to assist him against their joint enemies and received him with joy but was shortly afterwards treacherously murdered by him (Matthews of Edessa, ed. 1898, p. 260—262 = transl. Dulaureier, p. 218—221; Anonym. Syriac Chronicle of 1025—1204 in Chabot, C.R. Acad. Inscr. Lettr., 1918, p. 431 sq). From 1098 the Latins ruled for half a century the "county of Edessa" to which also belonged Sumaissi and Sarudj (1098 Baldwin I; 1100 Baldwin II: 1110 Joscelin I; 1131 Joscelin II).

The town suffered a great deal under them. On Dec. 23, 1144 Imād al-Din Zangi of al-Mawṣīl took it (a detailed description of these events in the Anonymous Syriac Chronicle of 1203—1204, ed. Chabot, in C.S.C.O., series iii., vol. xv., p. 118—126; transl. Chabot, Une épisode de l'histoire des Croisades, in Milanges Schlumberger, i., Paris 1924, p. 171—179). Under Joscelin II and Baldwin of Kaisūn the Franks again attempted to retake the town in Oct. 1046 and succeeded in entering it by night, but six days later Nūr al-Din appeared with 10,000 Turks, and soon occupied and sacked it; the inhabitants were put to death or carried into slavery. Baldwin was killed and Joscelin escaped to Sumaissi (Barhebraeus, p. 311 sq). The fall of this eastern bulwark of the Crusaders aroused horror everywhere; in Europe it led to the Second Crusade. The Syrian Dioniouos bar Saḷibī as Diseounus wrote an "oration" and two poetic mēnrē about the destruction of the town. Three similar pieces were written by Basilios Abu 'l-Faraqī b. Shumānān, the favourite of Zangi; he had also written a history of the town of Orhāi (Baumstark, Gesch. d. syr. Lit., p. 293, 298).

After the death of Nūr al-Din his nephew Saif al-Din Ghāżī took the town in 1174; in 1182 it fell to Saladin who later handed it over to al-Malik al-Manṣūr. When Malik al-Adīl died in 1218, his son Malik al-Ashtar Sharāf al-Din Mūsa became lord of al-Ruha', Harrān and Khūšā. In June 1234 the town was taken by the army of 'Alā' al-Din Kaļūhā büd and its inhabitants deported to Asia Minor (Kamāl al-Din, transl. Bluchet, in R.O.L., v. 88; Barhebraeus, Chron. syr., p. 468). But it was retaken within four months by Malik al-Kāmil. In 1244 the Tatars passed through the district of al-Ruha' and in 1260 the Mongols under Hūjāgū. The people of al-Ruha' and Harrān surrendered voluntarily to him but those of Sarudj were all put to death (Barhebraeus, Chron. syr., p. 509; Chron. arab., ed. Bairiś, p. 486). In the time of Abu 'l-Fida' al-Ruha' was in ruins. Hamd Allāh al-Mustawfī about 1340 could still see isolated ruins of the main buildings. According to al-Kāṭkhāndī, the town had been
rebuilt by his time (c. 1400) and repopulated and was in a prosperous state. In connection with the campaigns of Timur, who conquered al-Dżezir in 1393, al-Ruha′ is repeatedly mentioned in the Šafar-nāme of Sharaf al-Dīn ʿAli Yazdi (written in 1388 = 1425).

The Ottomans finally took the town, to which they gave the name of Orfa, in 1637 during Murād IV’s war with Persia.

Today Orfa (Orfa) has nearly 30,000 inhabitants. It is the capital of a wilayah of the same name numbering a little more than 200,000 souls. The town is 550 m. above sea-level.

ORIHUELA, Arab. Uryūd, a town in Eastern Spain (Levante), 15 miles N.E. of Murcia, the capital of an administrative area (partido) and the see of a bishop, contains with its adjoining country, which is thickly populated, 35,000 inhabitants. It was conquered by the Muslims at the same time as the other towns of the šūba of Todmir (q.v.) and was for a long time the capital of this šūba before it had to give way to Murcia. Its history was that of the latter town as long as it remained Muslim. It was however for a very brief period in the middle of the 10th century A.H. (middle of the 11th century A.D.) the capital of a petty independent state ruled by the Kādı Ahmad b. ʿAbd al-Raḥmān b. ʿAlī b. Ṭāsim.

ORISSA (ODRA-DEGA), a part of the modern Indian province of Bihār and Orissa, has an area of 13,706 square miles and a population of 5,306,142, of which only 124,463 profess the Muslim faith. For administrative purposes it is divided into five districts of Cuttack, Balasore, Puri, Angul and Sambalpur. There are in addition twenty-four native states, the Orissa feudal states, with a population of 4,465,385, the Muḥam-madans numbering only 17,100 (Census of India, 1931).

Modern Orissa, which embraces the deltas of the Mahanadi and neighbouring rivers, extends from the Bay of Bengal to the borders of the Central Provinces and from the river Subarnareka to the Čikla Lake. In the past its inaccessible proved its salvation for, while the coastal strip was sometimes conquered, the highlands of the interior remained under semi-independent or tributary chiefs. It was included in the ancient kingdom of Kalinga, the sole conquest of the peace-loving Aṣoka, but, with the disintegration of the Maurya empire, once more passed to the Kalinga kings. Until the eleventh century the history of this area is extremely confused. Those interested in the solving of chronological puzzles would do well to consult the first volume of Banerji’s History of Orissa.

Certain parts of modern Orissa were annexed to the empire of Muhammad b. Tughluḵ and were included in the province of Dāḏingar. The real conqueror of Orissa, however, was Akbar’s famous general Ṣadžā Mān Singh, who took it from the Afghān of Bengal, who had obtained a temporary footing in the country. Under Akbar it was administered as part of the šūba of Bengal, for it was not until the reign of Dāḏāngīr that it became a separate province. With the decline of the Mughal empire Orissa fell into the hands of the Bhoṣe Marāṭhīs of Nāgpur (q.v.). Although it nominally passed to the British by the Delhi grant of 1765 it was not finally conquered until the year 1803. With the exception of the district of Sambalpur, the territory now known as Orissa was administered along with Bengal until October 1905, and with
West Bengal until March 1912, when Bihar and Orissa was formed from two separate provinces. Orissa has always been a stronghold of Hinduism and the temple of Dajjanaath still draws thousands of pilgrims to the sands of Puri.

(C. Collin Davies)

**Orkhān or Urkhan (Ur-khan) 2 was the eldest son of the emir ‘Othmān (q. v.), the founder of the Ottoman dynasty.** His mother was Malikhatun, the daughter of Shāhshāh Ede-Ball of the village of Itbunna near Eski-Shehir. The year of his birth is not known and indeed the whole chronology of his reign leaves much to be desired. Ottoman sources say he was born in 857 (beg. Feb. 6, 1258); according to others he was born as early as 860 (beg. Apr. 22, 1251). The first date which probably goes back to Hājīdji Khālīfa’s Taṣawwīr has most in its favour. We know very little about his youth. When barely twelve years old he was married in 699 (1299) to the daughter of the lord of Yār-Hişar named Nilūfer-Khatun (q. v.). A Greek girl, who was betrothed to the lord of Belokoma (Bilećik). From his union were born among others his sons Murād, who succeeded him, and Sulaimān Pasha. Orkhān was nearly 40 when he ascended the throne in it is said, Ramadān 726 (Aug. 1326). According to tradition, Orkhān offered his brother Ali al-Din ‘Ali (usually called ‘Ala’ al-Din only; cf. Isl., xi. 20, note 3) a portion of the ancestral possessions but the latter is said to have been content with the vizierate. This story strongly resembles that of Moses and Aaron as given in the Qur’ān (xx. 30) and is probably intended to give a historical foundation for the office of vizier. ‘Ala’ al-Din ‘Ali was also the first to bear the title pasha (q. v.) which then passed to Orkhān’s son Sulaiman and was inherited from him by Kara Khalil.

Orkhān’s rule may be divided into two periods: that from 1326 to 1344 when he was establishing the Ottoman power in Asia Minor, creating the army and becoming the founder of the Ottoman empire and the period from 1344 to his death in 1359–1360 during which he was preparing to gain a footing in Thrace and Macedonia and to extend his rule on European soil. He laid the foundations for the later empire of the Ottomans and is to be regarded as its real creator.

Orkhān had already showed his ability as a conqueror in the lifetime of his father. Shortly before the latter’s death of gout at the age of about 70 he had taken Brussa without bloodshed. It now became the capital of the kingdom. Nicaea and Nicomedia were now the next objectives of Ottoman arms. He was assisted by a number of able leaders of whom the best known were Kose Mihkāl [see Mihkāl-Oghlu], Akke Koca, Konur-Ala, Abd al-Rahmān Ghaṣi, Kara ‘Ali, Kara Mural. With their help he carried through all his enterprises with the greatest success. Before taking these two cities, Orkhān first of all secured possession of the most northerly peninsula of Bithynia, which is enclosed on the north by the Black Sea, on the south by the Gulf of Nicomedia and on the west by the Bosphorus. The two strongly fortified fortresses of Semendra and Aidos which guarded the military road from Constantinople to Nicomedia were taken. The town and district of Semendra were given in feudal tenure to the general Akke Koca and henceforth known as Koca-Hil. The fall of these strong places was followed by the subjection of most of the little towns on the coast on both sides of the Gulf of Nicomedia, of which the fort of Hereke offered most resistance. Kara Mural conquered the land on the southern coast by occupying Yalova, famous for its medicinal baths, and the district of Kara Mural which bears his name. As Orkhān’s vassal, he pledged himself to maintain a small fleet to protect the coast so that communication by sea between Constantinople and Nicomedia was entirely stopped. Orkhān now took the field against Nicomedia in person. The town was taken without any special difficulty after the hill fort of Köyun-Hişar had fallen. While the emperor Andronikos abandoned Nicomedia, he prepared to defend the old seat of the Palaeologoi, Nicaea. At the beginning of 1330, the Byzantines moved over to the Asiatic shore and in the vicinity of the little coast town of Philokrene in Mesothyna, now Tawshandjil, a battle was fought about which there are no records in the Ottoman sources while the Byzantine historians (Kantakuzenos, ed. Bonn, i. 341 sq.; Nikephoros Gregoras, ed. Bonn, i. 434; cf. there on Phrantzes and Chalcocondyles) show obvious errors and deliberate perversions of the facts. The defeat of the Byzantines at Philokrene meant the end of any hope of saving Nicaea. The inhabitants did not even attempt a serious resistance but hurried to swear fealty to Orkhān. The city, upon which Orkhān lavished all kinds of endowments, soon became one of the most flourishing and prosperous towns in the Ottoman empire after its period of tribulation. Nicaea, now Iznik (q. v.), became celebrated as a centre of Muslim intellectual life especially through its medresees. In 1353 Orkhān’s son Sulaiman undertook a campaign into the still independent country north of the Sangaris (Sakarya) with the towns of Goinik, Modrene and Tarakdjik, which he occupied almost without striking a blow. All Orkhān’s victories and conquests had so far been won at the expense of the Greeks and there had been no warlike encounters with the little principalities which had arisen in Anatolia out of the Saldjūq empire. The adjacent country of Karasi (q. v.) where in 1335 the succession had given rise to a dispute between two brothers, the youngest of whom, Tursun, was living at Orkhān’s court, came first. Orkhān’s help was called upon by Tursun against his older brother (named Timur-khan) and he invaded Karasi on receiving certain assurances. On the way he took Ulubad, Kirmast (q. v.) and Mikhailidj along with the castles of Koilos and Ailos. Balkesiri was surrendered to Orkhān.
without a blow and the resistance shown was limited to Bergama. This town also soon passed into Ottoman hands as a return for the leniency shown by Orkhan to the lord of Karasi when the latter had treacherously disposed of his younger brother (736 = 1336). Haji Kili-beghi, the vizier of the last prince of Karasi, was entrusted with the administration of the newly won territory, and as his councillors Edje-Beg and Ewrenos [q.v.] were appointed. After the fall of Bergama Orkhan was engaged in consolidating his rule by systematic regulations and arranging for the administration of the now considerably enlarged Ottoman kingdom. He seems to have been the first to organize his rule on Anatolian soil (on this cf. the full account in Zinkeisen, G.O.R., i. regularly sqq.) in which his brother 'Ali al-Din 'Ali played a prominent part until after his death in 1333; his place was taken by his nephew Sulaiman. In 728 (1328) 'Ali al-Din is said to have induced his brother to set up the first mints (according to Sa'd al-Din). In this year the first gold and silver was struck in Orkhan's name and replaced the Seldijik coins which had previously been current throughout the Ottoman empire. A regulation regarding dress produced a strict distinction between ranks and classes, and the army was completely reorganised in keeping with the new conditions by Cendereli Khaliti [q.v.]. In 1330 the corps of Janissaries [q.v.] was founded, the Turkish infantry composed of youths of Christian birth and associated with Haji Bektaş [q.v.]. But the irregular infantry also, the 'Azabs, was put on a better footing and the feudal cavalry (akindis) developed in keeping with the object of the new empire. At the same time Orkhan founded numerous mosques, monasteries and schools and the foundations which he endowed everywhere in the newly conquered territory bear witness to the great attention which he gave to matters of religion. The dervish system which at this time was at the height of its development — the order of the Bektaşis seems to have arisen in the reign of Orkhan — had undoubtedly a great patron in Orkhan as is seen by the number of cells and monasteries of holy men in his capital Brusa, who had come from the east during his reign to find asylum in the Ottoman empire. The religious life of Islam under Orkhan, which had a marked 'Alid, not to say Shi'a, stamp, is one of the most remarkable phenomena in the history of religion and still requires elucidation in essential points through special studies.

In Orkhan's reign we have the beginnings of friendly and peaceful intercourse between Ottomans and Byzantines, although we also have an alternation of peace and war, of enmity and alliance (cf. J. v. Hammer, G.O.R., i. 126). Ottoman troops were repeatedly summoned to the assistance of the Byzantine emperors and when Orkhan ascended the throne, Turkish hordes had already crossed the straits three times, without success it is true, and without leaving the slightest trace on European soil (cf. J. v. Hammer, G.O.R., i. 120 sqq. and Zinkeisen, G.O.R., i. 184 sqq.). There obviously was no idea of establishing Ottoman power on the other side of the Dardanelles in these raids and the Byzantine emperor paid very little attention to them. But in course of time there arose out of these casual enterprises more and more regularly organised expeditions by the petty dynasts of Anatolia. For example the ruler of Aidin-eli [q.v.], Umar-Beg, one of the most brilliant, if very little known, figures of the time, had undoubtedly intended to develop systematically his repeated raids into Europe. Orkhan himself is said in 1333 to have concluded a treaty with the emperor Andronicus at the time of the siege of Nicomedia, by which he bound himself not to disturb further the towns of Asia Minor which were under Byzantine suzerainty (cf. Kantakuzeenos, ed. Bonn, i. 446). The increasing weakness of Byzantium and the growing power of the Ottomans soon however deprived any such agreement of its binding force. Already in 1337 Orkhan had tried to effect a landing near Constantinople with a fleet of 30 ships; his intention must have been to attack the capital and establish himself in Thrace. The Ottomans suffered a disastrous defeat and escaped with one ship only. The dynastic troubles which broke out soon afterwards in Constantinople when the Grand Domestikos Kantakuzeenos became emperor and joint ruler with John Palaeologus, brought about a rapprochement between Orkhan and Kantakuzeenos. Umar-Beg renewed his efforts to gain a footing on European soil, but, in spite of the expenditure of men and ships, they remained unavailing. Orkhan maintained an attitude of watchfulness. The empress Anna, mother of the young emperor John Palaeologus, induced him to send a force to help her against her rival Kantakuzeenos. The latter saw the increasing danger and after this force had come to a miserable end endeavoured with all his power to win Orkhan over for his own plans. In return for 6,000 soldiers he offered him his daughter Theodora, who was still a minor, as a wife in January 1345 (cf. Kantakuzeenos, iii. 31; ed. Bonn, p. 498; Dukas, 9, ed. Bonn, p. 33 sq.; Chalcoc., i. 24) and in May 1346 the wedding was celebrated with great splendour in Selymbria (Kantakuzeenos, iii. 95, p. 585 sq.; Nikeph. Gregorios, xxv. 5, p. 762 sq.; Dukas, 9, p. 35; according to Nikeph. the bride's name was Maria, cf. i. 762, certainly a mistake). It is worth noting that Orkhan's bride did not abandon her religion but remained a devout Christian (cf. Kantakuzeenos, ed. Bonn, p. 588; Zinkeisen, G.O.R., i. 201 sqq.) and acquired great merit by purchasing numerous Christian slaves and sending them home to freedom. The prince Khalil Celebi, who later became a prisoner of the Genoese and when very young married a daughter of the emperor John V, was probably the result of this union (cf. Jorga, G.O.R., i. 201). The alliance with the Ottomans was to cost Kantakuzeenos dear. When, shortly after the wedding, Orkhan sent 10,000 men to help in his fight with the Serbian prince Stjepan Dušan, the Turks turned against the Byzantines and returned with vast booty from Europe to Asia. This breach of faith did not deter Kantakuzeenos from again asking for assistance from his son-in-law in 1349. But this time also the army of 20,000 men, summoned unexpectedly back to Anatolia, recrossed the Dardanelles after burning and plundering all the way. Besides these two invasions of Europe by request the continual raids of the Anatolian hordes went on and the sufferings of the people of Thrace became intolerable. Orkhan took advantage of this uncertainty to carry out his long cherished plan of establishing the Ottomans permanently in Europe. His son Sualımân Pasha in 1356 was ordered to cross the Dardanelles. The crossing was successfully carried through at the fortress of Tsyme (the modern
Djemenlik). In 759 (1357) Kallipolis (now Gallipoli) was taken by the Ottomans. The sudden death in 760 (1358) of the conqueror Sulaiman Pasha, who was buried inside a cist in Brussa but in Sulaiman on Thracian soil, put an end for the time to any further advance by the Ottomans. Hâdji Hilbeghi and Edje-Beg conducted raids into the interior, it is true, but no effort was made to extend Ottoman power. Orkhan died very soon after Sulaiman. The date of his death is not exactly known. The most probable statement is that which says he died at the beginning of 761 (beg. Nov. 23, 1359). The statement (taken by K. J. Jirecek from a Slav chronicle) that Orkhan lived till March 1362, after the capture of Adrianople, has no claim to credence (cf. Archiv fur slav. Phil., xiv. [1892], p. 260), although Oskar Halecki, Un Empereur de Byzance à Rome (Warsaw 1932 = Travaux historiques de la Société des Sciences et des Lettres de Varsovie, vol. viii.), p. 74, note 3, based on C. Jirecek, loc. cit., and Byz. Zeitschr., xviii. (1909), p. 582 sq. is inclined to accept the year 1362. That the Byzantine annals (especially p. 392) edited by Jos. Muller, in Sitzungsber. d. k. k. Ak. d. Wiss., Vienna 1853, ix. are in favour of such a supposition cannot be disputed as well as the fact that the Florentine chronicler Matteo Villani (cf. Muratori, Rerum Ital. Script., xiv., p. 672 sq.) puts "Orcam's" first actions still in November 1361. If Murâd I is justly called the "conqueror of Adrianople" the year of his father's, i.e. Orkhan's death must be fixed earlier as the taking of this town in spring 1361 (cf. thereon F. Babinger, in M. O. C., ii. 311 sqq.) can now be taken for granted (cf. thereon the fact not noted in M. O. C., that, according to O. Halecki, loc. cit., p. 75, the capture of Adrianople became known in Venice on March 14, 1361).—Orkhan was buried beside his father in Brussa (cf. J. v. Hammer, G.O.K., i. 157 sq. with a description of what his personal appearance is said to have been).

Bibliography: Contemporary Ottoman sources have so far not come to light. Of the Byzantine chroniclers the most important is Orkhan's father-in-law Kantakuzenos although his bias makes it necessary to use him with great caution. Nikephoros Gregoras is much more to be believed. The crossing of the Ottomans into Europe in the sixteenth century has been critically studied by Joh. Drasecke, in der Nüe Jahrbuch für das klassische Altertum, vol. xxii., p. 7 sqq. The whole period of Orkhan's reign has recently been dealt with in not always reliable fashion by H. A. Gibbons (d. 1935), The Foundation of the Ottoman Empire, Oxford 1916. p. 54—109. Further sources are indicated in the works of J. v. Hammer, Zinkeisen and Jorga. (Franz Baringer)

ORMUZ. [See Hormuz.]
ORTOKIDS (Urtokids), a Turkmen dynasty, branches of which ruled in Mârûd, Hîshkafâ and Kharbârît. When the Sâlûq Sultan of Damascus, Tutush, conquered Jerusalem in 479 he appointed as governor of the town his officer Urtuk b. Al-Tabûb who had already served under Malikshâh and had taken over the city under the Abbasids in 477. He was succeeded in 484 (1091) by his sons Sukmân and Ilhâzâ, after the Holy City had been taken for the Fatimids in Shabban 489 (1096) by al-Adal b. Badr al-Djamiâl, Sukmân went to al-Rûha and Ilhâzâ to his lands in the 'Iqâ. In 495 (1101) Sultan Muhammad made Ilhâzâ his commissioner (Shâhna) in Baghda. A. Hîshkafâ, Mu'n al-Dawla Sukmân I (cf. iv., p. 510) assisted Mûsâ when he was besieged by Djakarmish in al-Mawûlî as and as a reward received from him in 495 (1101) 10,000 dinârs and the town of Hîshkafâ (Ibn al-Atîr, x. 234—236). He had already owned Sârûd since 488 and in 498 or shortly before, Mârûd also fell into his hands (Ibn 'l-Fîtâ, ed. Reiske. iii. 350—353). Along with Djakarmish, Sukmân took Count Baldwin and his brother Joshelin prisoners at Harra. After his death in 498 his son Ibrâîm ruled in Hîshkafâ while Mârûd passed to his brother Ilhâzâ in 502. In Hîshkafâ, Ibrâîm was succeeded first by his brother Rukn al-Dawla Dâwûd (who is mentioned in 508 and again in 511; Ibn al-Atîr, x. 352 sq.; ibi. 73), then by the latter's son Fakhr al-Din Kârâ-Ärslân who ascended the throne about 543 and probably died in 562 (or perhaps not till 570) (van Berchem in Arch. G. W. Cott., N. S. ix., 1907, p. 145, note 3). He ruled over Hîshkafâ and a considerable part of Dîyarbâk (Ibn al-Atîr, xi. 217); to him or his father we probably owe the bridge over the Tigris at Hîshkafâ [q. v.]. After his death he was succeeded by his son Nûr al-Din Mâhâmâm. When Sâlûq al-Din in 578 came to Dîyarbâk, Nûr al-Din was ready to pay homage to him and to assist him at the siege of al-Mawûlî. As a reward he was next year given the valuable town of Idrâm (579). He died in 585. He was succeeded by his son Kuth al-Din Sukmân II who lost his life in 597 from a fall (Ibn al-Atîr, xii. 112). Before his death he had designated as his successor a Mâmilik named Äyûs, as he hated his brother al-Mâlik al-Sâîh Nâsîr al-Din Mâhâmâm, whom strict Sunnîs condemned as a philosopher and heretic. But Mâmûd seized Idrâm when the emirs asked him to do so (Ibn al-Atîr, xii. 112). He recognised the suzerainty of the Ayyûbids 'Ädil and Kâmil and of the Sâdûqûk Kâlûcû. On an Âmid inscription of the year 605 (1208—1209) he calls himself sulâq of Dîyarbâk, al-Rûm and al-Ärman (van Berchem, op. cit., p. 147). After his death in 619 he was succeeded by his son al-Mâlik al-Masûd Mawûdî (Ibn al-Atîr, xii. 260). According to a coin of 628, Hîshkafâ then belonged to the ruler of Mârûd. The lands of the Ortûkîs had already been much diminished by the attacks of the Sâdûqûk sultans of Rûm when in 629 (1231) the Ayyûbid Kâmil advanced against Idrâm and took it with the towns that belonged to it, including Hîshkafâ (Ibn 'l-Fîtâ, iv. 395) which, if this statement is correct, had therefore again been taken by Mawûdî from his relative, Al-Kâmîl's son, al-Mâlik al-Sâîh, remained in possession of Idrâm and Kâfâ. In 639 he had to cede Idrâm to the allied armies of Halab and Rûm, while he retained Kâmil (Kâmîl al-Dîn, History of Aleppo, transl. E. Blochet, p. 219 = R.C.L., vi. 16.). Mawûdî remained in prison until the death of al-Kâmîl in 635; then he escaped and found refuge with al-Murâfîr of Hûmâ until his death probably during the Tatar invasions (Ibn 'l-Fîtâ, iv. 395).

R. Mârûd. On the death of its governor Lu'lû' the city of Halab submitted voluntarily in 1117—1118 to Nâdîm al-Dîn Ilhâzâ I [q. v.], who had since 502 (1108) been lord of Mârûd. Ilhâzâ
gave it to his son Timürtaş (Ibn al-Athir, x. 372). When in 515 the latter was sent by his father to Sulaiman Mahmud to intercede for Duhais b. Sadaka, the sulţan gave his father Ighţaţ Maiyâfirîkin (Ibn al-Athir, x. 418) which henceforth remained Ortoqîd until Şâlih al-Din annexed it in 581. After the death in 516 of Ighţaţ, the most dangerous enemy of the Crusaders among the Ortoqîds (Ibn al-Athir, x. 426), he was succeeded by his sons Şams al-Dawla Sulaiman in Maiyâ-

bidj in 518 Balâk received a mortal wound from an arrow (Ibn al-Athîr, x. 436). In Halâb and his other possessions he was succeeded by Hûsîm al-Din Timûrtaş but the latter lost Halâb as soon as he went to Dîyâr Bakr as the city, besieged by the Franks, opened its gates to al-Bursuki [cf. ÅK SONGOR AL-BURSK]. After the death of his brother Sulaimân in 518 Timûrtaş inherited Maiyâfirîkin also (Ibn al-Athîr, x. 441) and at his death in 547 (1152-1153) was lord of Mârdîn and Maiyâfirîkin (Ibn al-Athîr, xi. 115). He was succeeded by his son Na'dim al-Dîn Alî. During the lifetime of his father he had received al-Bira from the Franks in 539; they had given him the town out of fear of 'Imad al-Dîn Zangi. At a later date (before 565), we find ruling there Shihâb al-Dîn b. Ighţaţ who had distinguished himself in fighting against the Crusaders. His son was besieged in 577 (1181-1182) in al-Bira by Kûb al-Dîn Ighţaţ II of Mârdîn (cf. ii., p. 466), who had succeeded his father Alî in 572, and

appealed for help to Şâlih al-Dîn; at the latter's command Kûb al-Dîn retired to Mârdîn (Ibn al-Athîr, xi. 313). After his death in 580 the guardian of his sons Shâh Arman Sulaimân of Akhîta, then after the latter's death in 581 (1185) Şâlih al-Dîn, took possession of Maiyâfirîkin (Ibn al-Athîr, xi. 335; C. Defremery, in F.d., ser. iv., i., 1843, p. 72-78). In Mârdîn Kûb al-Dîn was succeeded by his son Hûsîm al-Dîn Yûluk-Arslan (var. Bûluk, Bûlak-Arslan) who again in 587 regained Maiyâfirîkin for a short time; the next successor was the latter's brother Nâşir al-Dîn Urtuk-Arslan al-Manûr (from c. 596-598). In his time Mârdîn was besieged in 599 by al-'Arâf by order of al-'Adîl. At the conclusion of peace the Urtukîd recognised the suzerainty of al-'Adîl (Ibn al-Athîr, xii. 117; coins). The later Urtukîds of Mârdîn are given by Abu 'l-Fida' (v. 295) down to his time (715 = 1315). Urtuk-Arslan was followed in 637 by his son Na'dim al-Dîn Ghazi I al-Sa'id, in 658 by the latter's son Kara-Arslan al-Mu'azzafar, about 691 by his son
Shams al-Dīn Dāwūd, about 693 by his brother Nadīm al-Dīn Gāzārī II al-Manṣūrī, in 712 by his son ʿĪmād al-Dīn ʿAlī al-ʿAdilī, then by his brother Shams al-Dīn ʿAlī, in 765 by his son Aḥmad al-Manṣūrī, in 769 by his son Muḥammad al-Ṣāliḥī, in 769 by his uncle Dāwūd al-Muẓaffarī, in 778 by the latter's son Maḥmūd al-Dīn ʿĪsā al-Ẓāhirī, and lastly by the latter's brother ʿAlī al-Ṣāliḥī (809–811 = 1406–1408). After Timūr had taken Mārīn, the ownership of the town passed to the Karā-Koyunlī. To the territory of the Ortōkid of Mārīn belonged at least down to the time of Nadīm al-Dīn Gāzārī II the town of Dunāsir (q.v., now Kazanūr), according to coins found in the neighbourhood near Tell Ermen (E. Sachau, in *Abb. Pr. Ak.* 1880, p. 117, phil.-hist. Kl., treatise ii, p. 80).

Khartābīrt (Kharpūt). Khartābīrt is found as early as 515 in the possession of the Ortōkid Balāk b. Bahrānī, who held it till 518. His relative Sulaymān then occupied it but he seems to have died in the same year. It then belonged successively to Dāwūd of Ḥiṣn Kaifa and his son Karā-Arsānā and grandson Muḥammad. There is an inscription (dated 561 = 1165–1166) of Fakhr al-Dīn Karā-Arsānā commemorating a building in Kharpūt (van Berchem, in *Abb. G. W. Göttingen*, xi/iii, 1907, p. 142 sq., No. 9). After the death of Nūr al-Dīn Muḥammad in 581 (1185–1186) his brother ʿĪmād al-Dīn Abū Bakr founded an independent dynasty there as Lane-Poole was the first to show (*Essay on the Urduqis, in Num. Chron.* N.S., xiii., 1873) (van Berchem, op. cit., p. 144, note 1). At his brother's death he was in Ṣalāḥ al-Dīn's camp before al-Mawṣil and at once set off for Ḥiṣn Kaifā on hearing the news to claim his inheritance. But his nephew Sukmān II had already taken possession of the fortress and had been recognised by Ṣalāḥ al-Dīn. The uncle had therefore to be content with Karābīrt (Ibn al-ʿAdhir, xi, 339). Abū Bakr must have died in 600 at latest for Muḥammad of Kaifā and Ḍāmid unsuccessfully besieged his son Niẓām al-Dīn in Khartābīrt in 601 (Ibn al-ʿAdhir, xii, 132). This last Ortōkid of Khartābīrt is said to have been called Niẓām al-Dīn Abū Bakr; according to the inscription on a bronze mirror in the Blacas collection in Paris, his name was more probably Niẓām al-Dīn Ibrāhīm, unless we have to see in Abū Bakr a (childless) brother of Ibrāhīm (van Berchem, op. cit.). Ibrāhīm had two sons: ʿĪz al-Dīn ʿAbd al-Muẓaffarī mentioned in a manuscript of 685 written in his reign and al-Ḥijrī named on the above mentioned mirror, father of Nūr al-Dīn Abū ʿAbdu l-ʿAbd Ortōk-Ṣāliḥ who ruled at an unknown time and unnamed place. Khartābīrt probably remained in possession of the Ortōkids only down to 531. At least the town was taken in this year by Ṣūltān Ka hüküm I.

Coins: Four mints are named on the coins of the Ortōkids: al-Ḥiṣn or Kaifā, i.e. Ḥiṣn Kaifā, Ḍāmid, Mārīn and Dunāsir. The strong influence of trade with Byzantium is seen on the coins in a remarkable fashion: we find on them not only rulers' heads taken from ancient coins and no longer understood but also the Virgin Mary, Christ and the Greek inscription Emmanuel on them.

(E. Hönigmann)

**OSMAN DIGNA** [see *OTTOMAN ABU BAKR DIGNA.*]

**OSRÜSHANA,** the name of a district in Transoxiana. The form Osrūshana is the best known although Yāḡūt (i. 245) says that Osrūshana is preferable. In the Persian versions of the text of al-Īṣṭakhrī and in the Persian text of the Ḥudūl al-Aʿlam (ed. Barthold) we find more often Surūshana while Ibn Khuradhdhib sometimes has Surūssana; the original form may have been Srūšana. This district lies to the north-east of Samarqand between this town and Khodjand, to the south of the Sir Daryā (Sāhūn) so that it forms the approach to the valley of Farghāna; on the north west it is bounded by the steppe. The southern part is occupied by the mountains of Kūhit which, along the upper course of the Zar-Mahsān, these hills are generally regarded as forming part of Osṛūšana. The geographical information about this region is based almost exclusively on the geographers of the tenth century; the later geographers down to Hādīdd Khulfa only repeat what their predecessors have said: it appears therefore that the name Osrūshana had fallen into disuse before the end of the middle ages. As a result of its numerous streams, which flow into the Sir Daryā, it was at one time a rich country visited by many travellers because the route to Farghāna lay through it. The geographers describe several roads from Samarqand to Khodjand all of which passed through the towns of Sābāh and Zāmīn, the name of which still survives. The principal town — in which in the tenth century the governor lived — was in all probability called Naʿmān ḏ-jī-kāth — this must be the basis of the more or less uncertain readings of a number of manuscripts (cf. especially Ballāšhūrtī, p. 420); the form Būndiktī given by Yāḡūt (i. 744; but see also iv. 307 where the name is Kuḥb) and adopted by Barthold is a late corruption; it lay a little to the south of the great road and was identified in 1894 by W. Barthold with the ruins called Shahrīstān to the south of the present town of Ta Tube; these ruins were examined a little later by P. S. Skvarky. The geographers describe the town in detail. Two other towns of some importance were Zāmīn and Dīzak, and a number of other places are recorded;
After several checks due to the treachery of subordinates, Khazin entrenched himself in a camp at a place, the name of which is not given, and by a number of strategic movements and with the help of reinforcements from Tukharistan succeeded in defeating the rebels, of whom large numbers were slain. Ostadsis escaped to the mountains but was captured in the course of the following year. The 30,000 who accompanied him were set free but he and his sons were sent to Baghda and executed. The rising of Ostadsis was of a religious character: he represented himself as a prophet and exhorted the people to kifir (Tabari, ii. 773); he was one of a series of heretical rebel leaders who appeared in Khurāsān after the death of Abū Muslim [q.v.] like Sinbād the Magian, Bih-āfrīd [q.v.], Yūsuf al-Barm, and al-Muḳānānī. It is probable that his views were based on Zoroastrian doctrines. The name of the leader is given by Tabarī as Usṭād-Sis; "lord Sis"; the name Sis is found in several Iranian names (cf. Justi, Altiran. Namensbuch, p. 336; Mani's successor was called, according to the Fihrist, p. 334: Sis al-Imām and in the Greek sources: Sisinios). On the other hand this heretic numbered among his adherents, according to the Kitab al-Bad' wa-l-Tarīqī (ed. Huart, vi. 86), a large number of Ghuzz Turks, as was the case also with the rebel Iṣāḥāk al-Tūr, who saw in Abū Muslim an incarnation of the deity. In al-Yaḥṣūbī's story it is said that Ostadsis declined to recognise al-Mahdi as heir apparent, but the most astonishing statement is that of Ibn al-Āthir, who says that Ostadsis was the father of Marāqījī, wife of Hārūn al-Rasādīd and mother of al-Ma'mūn, and that Ġhīlī, son of Ostadsis and maternal uncle of al-Ma'mūn, assassinated the latter's vizier, the famous al-Fadl b. Sahl known as Dhu 'l-Ryāṣātān. It is impossible to say what can be at the basis of this story but perhaps we may see in it a tradition from a Persian source the object of which was to give al-Ma'mūn a royal or even saintly pedigree. The rising of Ostadsis broke out about half a millennium after the foundation of the Parthian dynasty and one of its bases was Sudjīsān which may have made this leader be regarded as one of the "savours" (taṣāyāt) expected in Zoroastrian religious tradition (cf. G. van Vloten, Recherches sur la domination arabe, in Věk. Ak. Ansie., i. 3, 1894, p. 68).

**OTBA B. GHAZWAN** B. AL-ḤĀSHĪB B. DIĀRĪK B. WAHIB (OR WAHIB) B. NUSAYR ABU ʿUBAID ALĀH B. OTBA B. GHAZWAN B. MAZINI, belonged to the tribe of Kās ʿAllān, half of the Nafzaf or of the ʿAbd Shams, one of the oldest Companions of the Prophet, "the seventh of the Seven", i.e. the seventh to adopt Islam and one who had shared in the sufferings to which the first believers had been exposed in Mecca. He took part in both the battle of Badr, and in most of the battles and expeditions of the Prophet. He is best known as the founder of Baṣra. In the caliphate of ʿOmar he fist of all conducted an expedition which ended in the capture of Obolla. ʿOmar then appointed him agent (dāmil) in "the country of India", i.e. the borderland between Arabia and Persian territory with orders to begin a campaign in the Sawād [q.v.]. He made
his headquarters at a hamlet called Khuraba, where he built all that was necessary for a military base: a mosque (cf. iii., p. 318), a residence for the governor, quarters for the soldiers, their families and all that goes to make a rising town. This was the nucleus of al-Baṣra [q. v.]. The order of events and the chronology generally are far from being settled; the years given vary between 14 and 17. The years 15 and 17 are given for his death. Having performed the pilgrimage, he asked 'Omar to be allowed to resign his governorship but 'Omar refused to permit it. He then prayed God to spare him from returning to Baṣra. On the way back he fell dead from his camel at the age of 57. Another tradition is given by Ibn Sa'īd [cf. Bi.] He was succeeded by al-Mughira b. Shu'ba [q. v.].

(2) A. W. WENSICK)

'OTBA b. RABI'AH b. 'ABD SHAMS B. 'ABD MANṣUR, b. L-WALID, one of the chiefs of the tribe of Kuraish, who refused to follow Muhammad. He met his death in the battle of Badr. His daughter Hind was the wife of Abū Sufyān [q. v.].

Shocked by the number of adherents of Muhammad, 'Otba having consulted the other chiefs of the Kuraish, went to the Prophet to offer him anything he would care to ask if he would only abandon his propaganda. According to the traditional story, Muhammad in reply only repeated a part of Sūrat al-XLI, which made such an impression on him that the effect was still visible when he rejoined his friends, whom he advised not to importune Muhammad any more. — Tradition puts him in a similar light when it represents him as one of those who on the eve of the battle of Badr endeavoured in vain to persuade the Kuraish to withdraw. He himself was mortally wounded in the battle and his body was thrown into the common ditch (kūlah). Muhammad is said to have thought highly of his gifts.

Biography: Ibn Hīṣām, Sīra, ed. Wustenfeld, index; Tabari, ed. de Goeje, index; Ya'qūbi, ed. Houtsma, ii. 6, 19, 36; Buhār, Das Leben Mohammeds, Leipzig 1926, p. 183, 191, 342, 252; Lammens, La Vie de à la veille de l'hégire, Bairat 1924, p. 69, 75.

(2) A. J. WENSICK)

'OTHMAN I, very often called 'Oṯmān Ghāṣi, founder of the dynasty of Ottoman sultāns and the first in the traditional series of the members of the dynasty. We are only imperfectly acquainted with the life and personality of this founder of a great empire but we may conclude from the fact that his name has remained attached to the dynasty of the 'Oṯmān Oğulları or Al-i 'Oṯmān and is later found in the description of the empire and its inhabitants as 'Oṯmānlı or 'Oṯmān, that behind the name of 'Oṯmān there lies a powerful personality. The most extensive source of information about him is Turkish historical literature and particularly its ancient chronicles, the Tawarikh Al-i 'Oṯmān, representing the oldest tradition, along with a few poetical compositions of an epic nature dating from the end of the xivth century, like the latter part of the Iskandar-nāmas of Al-Jāmi. The study of the ancient chronicles reveals to us that although they certainly contain some good historical traditions, they are loaded with additions of a legendary character. These additions are explained by the enormous expansion of the power of the earlier Ottoman princes within less than a century of the death of its founder. As often happens in such cases the obscure history of the ancestor was embellished with details of a legendary character foreshadowing the greatness of his descendants. On the other hand, all the chronicles show a tendency to establish a historical connection between the power of the Saltāns of Asia Minor and that of the first Ottoman rulers by making Ertogrul or 'Oṯmān be invested with certain powers by Sultan 'Aла al-Din (II). These relations are more than doubtful. A third feature of the traditional accounts of 'Oṯmān's career, which we find in all the chronicles, is the explanation of a number of geographical names by connecting them with events which took place in the glorious period of the founder of the dynasty. There is further the tendency which we find pushed to its greatest extent in the chronicle of 'Ashīq Pasha Zade to attribute to 'Oṯmān events which belong to the tradition of Ertogrul, like the prophetic dream regarding the greatness of the posterity of 'Oṯmān and the daughter of Shaikh Ededali, and the capture of the castle of Karadağ Hisar; in the same way the chronicles put many feats of arms of Orkhan like the taking of Brusa and even the conquest of Қodja Ilı to the reign of 'Oṯmān, who had then long been an invalid "with a disease of the limbs". While in the chronicles we can still distinguish with some probability the non-historical features, pragmatic Ottoman historiography, with which 'Ashīq Pasha Zade and İdris Bulluş form the transition, represents these traditions as historical facts. Among the Byzantine historians, Pachymeres and Nicephoros Gregorios alone have preserved historical features independent of the Ottoman tradition, which clearly shows its influence in the later Byzantines (Phrantzes, Ducas, Chalcocopondas). Quite legendary stories of 'Oṯmān are also found in the hagiographic literature (cf. Das Vitalitäts-Namen des Hüği Bektasch, transl. E. Gross, in Türk. Bibl., xxv., Leipzig 1915, p. 133 sqq.);

According to unanimous tradition, 'Oṯmān was one of the sons of Ertogrul [q. v.] whom he succeeded as chief of a semi-nomad Turkish clan which had its winter camp at Sogud [q. v.] in the valley of the Kara Su. The date of Ertogrul's death is uncertain; later sources vary between 1264 and 1282. At this time Karadağ Hisar and Eski Shehir [q. v.] situated considerabily to the south of Sogud were perhaps already in the possession of this clan. They formed the frontier district bordering with the lands of the Germiya-
Oğlu. 'Othemān in the first phase of his career extended this cradle of Ottoman power to the north by taking the fortresses of Inegöl, Khar- mendjik, Biledjik, Yar Hisar and Kopru Hisar, which had hitherto been in the hands of the Byzantine feudal lords. This country consists of mountains and valleys lying to the west of the course of the Sakarya [q.v.] and ends in the north in the plain of Yeni Shehir; the capture of the last place seems to have been of great military importance as it became a base of operations for future conquests (cf. the map Das Stammgebiet der Osmanen, attached to the article Anatolische Fachungen, or F. Taeuber, in Z. d. M. G., N.S., vii. 83 ff.). Von Hammer, G. O., R. 2, i. 69 thinks the enumeration by Pachymeres (ed. Bonn 1835, ii. 413) of the fortresses taken by the Turks corresponds pretty well with the conquests of 'Othemān.

It is perhaps to this first stage of conquests that belongs the first recital of the Kushto at Kuradja Hisar in the name of 'Othemān by Tursun Fakth. The chronicles put this event in 689 (1290). During this time the newly conquered territory seems to have received an increase of population from the side of the Gerimyan (Aşlık Paşa Zade, ed. Giese, p. 20). The second phase in 'Othemān's career is that in which from his base at Yeni Shehir he continued his conquests in the westerly direction towards Brusa and in a northern direction towards Iznik. The Turks were not strong enough to take these towns but they ravaged the country round. According to the chronicles, there was a battle between 'Othemān's Turks and a confederation of lords (takwār) of Brusa, Iznik and several other places at Koyun Hisar, near Iznik, in which the Turks were victorious; this battle has been identified since von Hammer's time with the battle of Baphaeon, in which, according to Pachymeres (ii. 337), the heterarch Mouzalos was defeated in 1301 as a result of the impetuous onslaught of the Turkish cavalry. This victory enabled Lefke and Aş Hisar on the Sakarya to be taken and in the west Tricoccia between Iznik and Brusa (Pachymeres, ii. 637). In connection with this last victory (in 1308) Pachymeres mentions a personal feud between 'Othemān and the Byzantine princess Maria, sister of the emperor Andronicus, who lived in Nicomedia. She had been promised in marriage to the İlikhan Oelaiat Khudâbanda [q.v.] and had threatened 'Othemān with the latter's intervention. In this second period the Turks extended their conquests as far as Ulubâd (Leopadion) to the west of Brusa. The third phase is that in which 'Othemān no longer took part personally in the military expeditions although, according to tradition, he was still alive. It was Orkhan [q.v.] and his companions in arms who continued the conquests. The first enterprise of Orkhan was the expulsion of a horde of Tatars who had invaded the district of Eskî Shehir (perhaps sent by the Mongol allies of Byzantium). In the latest stage, 'Othemān devoted himself to the closer encirclement of Iznik and Brusa. This last town finally fell in 726 (1326), according to the chronicles, shortly before the death of 'Othemān who is said to have received the good news just before he died in Sagud. The sources are not agreed as to whether 'Othemān was buried at Sagud or Brusa. This last town has however for a very long time claimed to have a 'turbe of 'Othemān.

From the very beginning of his reign 'Othemān was surrounded by a group of devoted followers, consisting in part of his brothers and their sons and in part of allies like Şahîş Edebali — whose daughter Mâlkhatûn (in the two versions of Uruđ Beg her name is Râbi'a) became the wife of 'Othemān and the mother of his sons Orkhan and 'Alâ' al-Dîn — and the Byzantine lord of Kûrmendjik, Kosî Mîkhâl [q.v.] who later became a Muslim. The chronicles record how 'Othemān divided among his friends the civil and military administration of the places he conquered. As to 'Othemān's foreign policy, it seems that his relations with the Gerimyan Oğlu were not very friendly; it was from their territory that the army which was exposed to the invasion of the Tatars. The chronicle of Aşlık Paşa Zade tells us that he had other independent Turkish allies like Şamsâna Çâ'ush with whom he made raids across the Sakarya. The chronology of the career of 'Othemān is uncertain. It is a pure fiction to say his reign began in 700 (1300); this is connected with the popular belief that at the end of each century a new conqueror makes his appearance (cf. Alî, Kunh al-Akkhâr, v. 3). Neither does the statement made by several chroniclers that at his death 'Othemān had reigned nineteen years (beylîk ettî) agree with other records. Perhaps however it gives a hint that his death took place long before the traditional date. The importance of the career of 'Othemān has attracted research into the true nature of the expansion of the little Turkish clan and the power of its first chief. It has been suggested (Gibbon) that it was the conversion of 'Othemān to Islam which gave the first impetus to expansion, but that is little probable as most of the available facts suggest a milieu already Muslim; 'Othemān did just what a number of other Turkish chiefs were doing in Asia Minor about the same time. 'Othemān's name, which looks strange among the Turkish names of the members of his family (the name of his grandfather Sulaimân Şâh excepted), has also been the subject of study. While the chroniclers all write 'Othemān (like the few coins of Orkhan, cf. T. O. E. M., viii. 48 and an inscription of Orkhan at Brusa; cf. T. O. E. M., v. 318 sqq.), Pachymeres has the form Aruând and Nicephoros Gregorios (ed. Bonn 1820, i. 539) Aruaund. See also the Arabic sources (Ibn Baţûtâ, ii. 321; Ibn Khaldûn, 'Abû (' Âshî) give 'Othemândîjk (Ibn Faḍl Allah al-Umarî, however, has Taman) and the Italian historian Donado da Lisse (Historia Turcica, Bucarest 1910, p. 4) says that Ottoman was the son of Zich. Now some traditions make the founder of the dynasty be born in the town of 'Othemândîjk to the south of Sinope (Ewliya Çelebi, ii. 179) which may be a hint of the origin of the name. Moreover, the text of the chronicle of Uruđ Beg (p. 6), taken in combination with other texts, shows that Ertogrul had three sons with Turkish names which might even make one suppose that 'Othemān was not a son of Ertogrul (cf. J. H. Kramers, Wer war Osman, in A.O., vi. 242 sqq.; W. L. Langer and R. P. Blake, The Rise of the Ottoman Turks and its Historical Background, in American Hist. Review, 1935, p. 496). 'Othemān Şâzî then may have belonged to one of the corporations of şâzî's or abî's as did several members of his entourage like Edebali and his nephew Akhi Hasan (Aşlık Paşa Zade, p. 28), corporations which at this period represented a Muslim element more civilised
and more orthodox than the semi-nomad Turks. Bibliography: The Turkish chroniclers quoted in the text are those of Neşri (ed. Noldeke, in Z. D. M. G., xii. 194 sqq.), Abdül Paşa Zade (ed. Giese, Leipzig 1929), Urudj Beg (ed. Babinger, Hannover 1925) and the Anonymus Giese (Breslau 1922). All the general Ottoman histories give the history of 'Othmān (G., O., W.) as do the histories by v. Hammer, Jorga and Zinkeisen. A careful historical investigation is found on p. 11-53 of H. A. Gibbons, The Foundation of the Ottoman Empire, Oxford 1916. (J. H. Kramers)

'Othmān II, sixteenth sultan of the Ottoman empire, was born on the 19th Dhu-mādār II 1012 (Nov. 15, 1603; cf. Siğilli 'Othmānî, i. 56), the son of Sultan Ahmād I. After the death of his father in Nov. 1617, the brother of the latter had been proclaimed sultan as Mustafa I [q. v.] but 'Othmān, taking advantage of the weak character of his uncle and supported by the muftī Efendi and the Khizlar Āgha Mustafa, seized the throne on Feb. 26, 1618 by a coup d'état. The youth of the new sultan at first assured the promoters of the coup d'état of considerable influence. To them was due the replacement of Khâlid Paşa as grand vizier by Oküz Mehmed Paşa [q. v.] in Jan. 1619. Khâlid had just concluded a treaty of peace with Shāh 'Abbās I of Persia, after a campaign which had been indecisive. The relations with the other powers, Austria and Venice, with which the capitulations were renewed, were also peaceful. But after, in Jan. 1620, Mehmed Paşa had been replaced by the very influential favourite Guzelde 'Ali Pasha [q. v.] who removed from the court all possible rivals, the chances of war increased. This time it was a war with Poland which broke out through the intrigues of the voivod of Moldavia. In the battle of Vassy on Sept. 20, 1620, the Polish army was annihilated by the ser-asker Iskander Pasha. The grand vizier, who held office mainly by satisfying the avarice of the young sultan, never lost an occasion to irritate and provoke the enmity of Austria and Venice. He died on March 9, 1621 and under his successor Husain Paşa of Okhri, 'Othmān II took part in person in the campaign of 1621 against Poland. This campaign ended in a check for the Turks and the Tartars, who, with great losses, had in vain tried to storm the fortified Polish camp on the Dniester near Chocizm. A preliminary peace was signed under the same conditions as before under Sulaimān I and the sultan appointed a new grand vizier Dilāwēr-Zade Husain Paşa. Since the time when Othmān, still considerably under the influence of the Khizlar Āgha Sulaimān and his khanum Khodja Molla'Omer, had begun to act independently, he had not been able to gain the sympathy of the army on account of his brutal treatment of the Janissaries, nor of the people chiefly as a result of his avarice, nor of the 'ulamā'. The latter were particularly horrified at the sultan's wish to take four legitimate wives from the free classes of his entourage; he actually married the daughter of the muftī Es'ad. His unpopularity increased still further when he wished to put himself at the head of an army to fight Fakhr al-Din, the Emir of the Druses, and to go on and make the pilgrimage to Mecca. Preparations had already been made for this expedition when on May 18, 1622 a mutiny broke out among the Janissaries and Simpson who plundered the house of Molla Omer. Next day the rebels secured the cooperation of the chief 'ulamā and demanded the heads of the Khizlar Āgha, the Khodja, the grand vizier, and three other high officials. 'Othmān at first refused but after the rebels had forced the third wall of the palace he had to sacrifice the grand vizier and the Khizlar Āgha. But in the meanwhile his uncle Mustafā had been brought out from his seclusion in the harem to be proclaimed sultan. 'Othmān tried during the night to secure his throne through the influence of the Āgha of the Janissaries, but the latter was killed on the following morning and he became the prisoner of the Janissaries who took him to their barracks. The rebels had no intentions against his life but in the meanwhile the direction of affairs had passed to Dâwūd Paşa, the favourite and son-in-law of Mâh-Feiker, the mother of Sultan Mustafâ. Dâwūd Paşa being appointed grand vizier had 'Othmān taken to the castle of Yedi Kule where he was put to death in the evening of May 20, 1622. He was buried in the turbe of his father Ahmad I. — 'Othmān is praised for his skill as a horseman and for his intelligence. He was also a poet with the maqâlîs of Farsî. He was the first of three sultans to lose his life in a rising, the others being Ibrâhim and Selim III.

Bibliography: The Turkish sources are the works of Na'imî, Peşvêkî, Hasan Bey Zade, the Râvast al-Abîr of Kara Čelebi Zade, and the Fârâbî of Hâджî Khalîfa. — The Wâfâ'i Sultan 'Othmân Khan of Tâghi is specially devoted to the deposition of 'Othmân (transl. by A. Galland; cf. G.O.W., p. 157), while his whole reign is described in a Şahâname by Nâdirî (G.O.W., p. 169). Among contemporary western accounts: the Relationi quoted by von Hammer, in the note on p. 806 of G.O.R., ii. and that of Sir Thomas Roe. Cfr. also the general histories by von Hammer, Zinkeisen and Jorga.

( J. H. Kramers)

'Othmān III, twenty-fifth sultan of the Ottoman empire and son of Mustafâ II, succeeded his brother Mahmûd I on Dec. 14, 1754. He was born on Jan. 2, 1699 (Siğilli 'Othmānî, i. 56) and had therefore reached an advanced age when he was called to the throne. No events of political importance took place in his reign. The period of peace which had begun with the peace of Belgrade in 1739 continued; at home only a series of seditious outbreaks in the frontier provinces indicated the weakness of the Empire. In the absence of any outstanding personality the sultan was not often pleased, but his activities were practically confined to changing his grand vizier frequently (six times). His favourite Siyîh-Bîr 'Ali Paşa, grand vizier from Aug. 24 to Oct. 22, 1755, had his career terminated by execution. The appointment on Dec. 13, 1756 of Râghib Paşa [q. v.] was an important one, as for five years this great statesman showed himself an excellent administrator of the empire under Mustafâ III. 'Othmān III's other activities were the suppression of cafés, of the liberty of women to show themselves in public and the regulation of the dress of his non-Muslim subjects. His name is associated with the great mosque of Nûr-i 'Othmānî, which had been begun by Mahmûd I and was solemnly opened in Dec. 1755. The reign of this sultan is remembered
for the great fires in the capital in 1755 and 1756. He died on Oct. 30, 1757 and was buried, like Mahmidd 1, in the tomb of the Yeşi Ülümî.

**Bibliography:** The Ta'rikh of Waṣî is the principal source. The reign is described in the great histories of von Hammer, Zinkeisen and Jorga.

(J. H. KRAMERS)

**OTTOMAN III - AFFAN**

344 - 355 = 644 - 655. He belonged to the great Meccan family of the Banû Umayya and to the branch descended from Abu Ḥafs, whose grandson he was (cf. the genealogy in Wustenfeld, *Gesam. Tabellen*, U. 23). This makes his prompt acceptance of the teaching of Muhammad quite noteworthy; he became a convert, if not at the very beginning of the Prophet's mission, at least at a very early date, several years before the Hijra. ʿOṯmān was a rich merchant and an accomplished man of the world; tradition, which likes to represent him as a model of beauty and elegance and deals to a degree which borders on exaggeration with his toilet, may be correct, simply because it is unusual. Whatever was the exact motive that induced him to embrace a cause of which no one could then have possibly foreseen the success is a question that can never be answered with certainty. One of the most important facts of historical traditions connects his conversion with his marriage to Muhammad's daughter Ruqayya but other sources, probably with more justice, put this marriage after his conversion.

The conversion of ʿOṯmān, the first Muslim of high social rank, must have made a sensation and contributed to the success of the new religion, but his personal efforts on behalf of Islam were never remarkable. His indolent character, which was however accompanied by a very living faith and great good nature, is another feature ascribed by tradition to ʿOṯmān and it is unlikely that we have here an invention intended to excuse the inaction of this caliph against his lying officials; just because lack of energy and initiative is evident in ʿOṯmān from the very beginning of his career, this defect must have been a real one. ʿOṯmān is believed to have taken part in the migrations to Abyssinia and then joined the nûkâǧîrîn in Medina; but he did not take part in the battle of Badr (it is alleged that he had to attend to a sick wife; the Prophet however regarded him as present and allotted him his share of the booty). After the death of Ruqayya the Prophet's alliance with ʿOṯmān was renewed by his marriage with another daughter, Umûm Kulqûm; the doubts raised by Lammens (Fâtima et les filles de Mahomet, Rome 1912, p. 3-5) regarding the actuality of this marriage do not seem to be justified; there is no reason to think that Muhammad did not lay great stress on this alliance with the only member of the Meccan aristocracy of whom the Muslim community could so far boast.

During the lifetime of the Prophet and those of the caliphs Abu Bakr and ʿOmar, the part played by ʿOṯmān was a very humble one; how did it happen then that the council (qârî) appointed by ʿOmar on his deathbed chose him as successor to the second caliph? The sources dealing with the history of this laborious concave have been minutely analysed by Caetani; but it is only too evident that the mysteries of these secret deliberations are never destined to be revealed to historical criticism. What it seems possible to affirm is that, as often happened in the papal conclaves, the most outstanding candidates ruled one another out; for example ʿAli whose election would have meant the negation of ʿOmar's policy; or al-Zubair and Ṭalha, also it seems opponents of ʿOmar and whose ambition and covetousness was feared. If among the three who remained, Saʿd b. Abū Waqâṣ, ʿAbd al-Rahmân b. ʿAff and ʿOṯmān, it was the latter who was chosen, it may be thought that even more than his relationship to the Prophet it was his being a member of the Umayyad clan that proved the decisive argument in his favour. The Umayyads had already regained in the lifetime of the Prophet, and especially during the caliphate of ʿOmar, a part of the position they held during the Uğhûliya. There is no need to think as some one has done that Abû Sūfîyân, the head of the family, was the deus ex machina of policy during the first twenty years of the caliphate, and it would be naive to represent the Umayyads as having formed a kind of secret committee dealing with the Islamic state as it pleased. In reality it was not so much to their noble birth as to a real talent for affairs possessed by several of their members that the Umayyads owed their influence. But this was counterbalanced in the time of ʿOmar by the part played by other elements and especially by the oldest Companions. The strong personality of the second caliph had been able to maintain equilibrium among a number of heterogeneous elements, often in opposition to them.

It was otherwise with ʿOṯmān. In reality, as Wellhausen pointed out and Caetani has expounded at length, ʿOṯmān only followed and developed the policy of ʿOmar. The difficulties he encountered were only the results of the policy of his predecessor. But it was just here that the difference in their talents became apparent.

The tragedy which put a bloody end to the reign of ʿOṯmān and opened up the period of civil wars has caused the greatest embarrassment to the Arab historians, forced to record the series of grievances which the adversaries of ʿOṯmān raised against his rule and faced with the alternative of either acknowledging that the caliph had sinned against the laws of Islam or that his accusers, among whom were some of the most venerated patriarchs of the faith, had either lied or been deceived. It is owing to this painful dilemma (out of which orthodox tradition extricated itself by means of the theory of the "excusable error" and other subtle distinctions) that there has been preserved for us the long list of these grievances (which are given in great detail for example in Muḥammad al-Dîn al-Taḥbî, al-Kiyâd al-mâjîd fi Manâṣib al-ʾAlîhâ, Cairo 1327, ii. 137-152). The first and perhaps the gravest charge against him is that he appointed members of his family to the governorships in the provinces; if Syria had already been long in the hands of the Umayyad Muḥâwîya b. Abû Sūfîyân, ʿOṯmān replaced Abû Mûsâ al-ʾAshîrî and Saʿd b. Abû Waqâṣ at Basra and Kūfa respectively by his two relatives ʿAbd Allâh b. ʿAmir b. Kurâz and al-Walîd b. ʿUkba, his half-brother; when the latter was dismissed, having been involved in a scandal, he was replaced by another Umayyad, Saʿd b. al-ʾAzîz, to whom is attributed the celebrated saying: "The Sawâdî of Kūfa is the garden of the Kurâshî." Egypt, the first conqueror of which, ʿAmr b. al-ʾAsî, seemed to deserve the right to hold the governorship for
life fell to ‘Abd Allāh b. Sa’d b. Abī Saḥḥ, who was not an Umayyad, but whose Muslim past was, to say the least, suspicious. Finally the caliph’s intimate adviser to whom tradition likes to ascribe a baneful influence, was Marwān b. al-Ḥakam b. Abī l-‘Āṣ, first cousin of the caliph, who had recalled his father from the exile to which the Prophet had condemned him. It cannot be denied that these measures of ʿOthmān were not entirely free from nepotism; but we must recognise in them a deeper motive: the intention of establishing unity of government and administration which was being threatened by the excess of independence which the governors enjoyed. It was practically the same end that ʿOmar had had in view but the latter had succeeded by his energy and prestige in imposing his authority even on governors who belonged to other tribes and clans. ʿOthmān thought he could obtain the same results by using officials connected with him by ties of blood; he was not successful; the parts were reversed and it was the caliph who was under the influence of his relatives (perhaps however to a less extent than the official historians say); besides, popular discontent ascribed solely to this cause the troubles that arose, which were probably quite independent of the personality of the officials. Indeed (and it is one of Caetani’s great merits that he has called attention to this) the ʿAmīrīn system instituted by ʿOmar demanded that the plunder taken in war should increase steadily in perpetuity, the regular receipts from the taxation of the Abī al-ʿĀṣīma not sufficing for the new recruits who hastened to the provinces from the depths of Arabia. From this came the stimulus to the expeditions which in the caliphate of ʿOmar never ceased to push forward the frontiers of the Arab empire: such were the conquests of the last provinces of the Sasanian empire (the dynasty of which became extinct with the murder of the last king Yazdagird III), the occupation of Armenia, a series of expeditions along the north coast of Africa, into Nubia, into Asia Minor, and by sea into the eastern basin of the Mediterranean. If we sum up the conquests made or begun by the Arabians in the caliphate of ʿOthmān we shall see that if they do not match the expansion of those that took place under ʿOmar, they are nevertheless impressive as they mark on one side the conclusion of the initial stage of the Arab empire and on the other the preliminary to the second period of expansion, that of the Umayyads.

Nevertheless the booty produced by these expeditions was perhaps not so great as had been hoped; besides, ʿOthmān — this is another of the grievances against him — instead of assigning it entirely to the soldiers, reserved a share for his governors and for the members of his family, by developing the system of ṣafṣaf (kāṣūr), which ʿOmar had already made great use of. In this again, we should recognise not a simple scheme for enriching his relations but perhaps rather a conscientious attempt to transform domains for the state in contrast to the communal system of dividing all the booty among the combatants. The I-lāmic empire was tending from an innate necessity to give itself a regular administration, for which the Byzantine and Persian afforded models. What ʿOmar had already begun, what the Umayyads to some extent accomplished and the ʿAbdāǧids realised, the transformation of the incoherent and anarchistic grouping of the tribes into an absolute monarchy of oriental type, was also ʿOthmān’s programme. He may be reproached with not having chosen the means best fitted to realise it and described as not being fit for a task of this magnitude; but his plan was a reasonable one and only meant following up ʿOmar’s ideal. Besides, the economic crisis, the inevitable consequence of the sudden enriching of the Arab masses, very soon forced the state to make economies and to cut down the military pensions; this not unnaturally increased the number of malcontents.

One of the steps which contributed very greatly to stirring up against ʿOthmān the religious element, formed of the old Companions of humble or even servile origin (such as ʿAmmār b. Yāsir, Abī Ḍharr, ʿAbd Allāh b. Masʿūd etc.), whose influence upon the masses was very strong, was the official edition of the Qurʿān (cf. Noldeke-Schwally, Geschichte des Qur’āns, ii. 47–119). What was found most odious in this process was the destruction of the provincial copies. ʿOthmān was no doubt urged to this step by considerations of a religious and liturgical nature, but nevertheless the dominant motive may have been a political one. The kūrā', who were the receptacles and of course also the expositors of the sacred text, exercised for this reason a tremendous influence on the masses, which made them to some degree independent of the central power, the latter having no way of checking whether the kūrānic passages used by the kūrā’ were authentic or not. In depriving them of this weapon and making itself the monopolist of divine revelation, the government was endeavouring to realise unity and to establish its absolute power over the state: but it is only very natural that the opposition to this tendency should have accused the caliph of having mutilated and destroyed the divine word.

ʿOthmān therefore made himself enemies in very different quarters: the turbulent elements of the ʿamīr [see Mīr] faced with economic difficulties and disposed to accuse the caliph of confiscating for his own benefit the property of the Mushīms; growing pietism to which the assertion of the authority of the state did not show the respect it demanded, and which in depicting the principles of equality laid down by the Prophet; lastly the former governors who had been dismissed and the great Companions who, removed from power, were striving for it with all their might: such were Taḥṣa, al-Zubair and ʿAlī. It may be asked if ʿOthmān, while following the line of conduct imposed upon him, as we have seen, by the necessities of state and the example of his predecessor, could have avoided the fate which overtook him and which so profoundly disturbed the unity of Islām. Although the answer to this kind of question cannot be a definite one in the field of history, it may be supposed that a more intelligent mind and a more energetic temperament than that of the third caliph (or to be more definite a real political genius such as Muḥāṣṣa would undoubtedly have revealed) if he had then been at the head of the government, might perhaps have overcome these difficulties. Perhaps also his adviser Marwān, who was thirty years later to face a situation not less difficult, lacked as yet experience and prudence. In any case, ʿOthmān, incapable in himself, was also badly advised and the Umayyads, whom he had overwhelmed with riches and honours, thought more of themselves than of their relative in the hour of danger.
The course of development of events can only be briefly indicated here. Tradition divides quite artificially the caliphate of 'Othmän into two periods of equal length: six years (23–29) of good government and six (30–35) of illegality and confusion. The change is represented symbolically by the loss of the seal of the Prophet which 'Othmän, according to the story, dropped into the well of 'Aris in the year 30. It is in any case a fact that it was just at this period that the first movements of rebellion began in the 'Iraq, the region which was suffering most from the economic crisis and the one where the turbulent elements were the most numerous. The episode of Abî Dharr, one of the precursors of asceticism in Islam, exiled to Syria with several of his companions, and later sent to Rabadha to die there in destitution, although embellished by legend is characteristic as showing the attitude of the growing piety to the secular transformation of the caliphate. Much more serious troubles broke out in Kufa in 32–33, led by the karra', who combined a religious character with a military one and formed a number of doubtful elements. In spite of severe measures taken against them, the recalcitrant elements succeeded in procuring the deposition of Sa'id b. al-Âṣ who was replaced by the former governor of Basra, Abî Mâ-a al-Âshîrî, himself a pietist and opponent of 'Othmän; Kufa was henceforth no longer under the central government. Similarly in Egypt, Ibn Abî Sarî had to yield to the violence of a group led by the young Muhammad b. Abî Hu'dhafa who although an adopted son of 'Othmän took the side of his opponents. It seems that the wily 'Amr b. al-Âṣ who had retired to Palestine after his dismissal was secretly encouraging the revolutionary movement in Egypt. The storm which had been brewing for some time burst at the end of the year 35 when bodies of rebels advanced on Medina from the provinces. The first to arrive were the Egyptians; dramatic interviews took place between them and the caliph; the grievances against 'Othmän were expounded with great bitterness of language. But the rebels were disarmed by the humble and conciliatory attitude of the caliph who gave in to all their demands, promised to annul his previous measures and to change his governors; the Egyptians left satisfied. But suddenly, on the way back at the halting-place of al-'Arîsh, a messenger of 'Othmän's was seized and a letter found upon him from 'Othmän to Ibn Abî Sarî confiscated which contained an order to put to death or mutilate the leaders of the movement on their return. The latter turned back furious and retraced their steps to Medina, determined on vengeance. 'Othmän denied that the letter was genuine, and even insinuated that it had been forged by his enemies in order to ruin him. Although official tradition shows a tendency to attribute this forger-y to Marwan, there is also the trace of other versions and even of one (preserved by al-Balâdhuri alone), which says that 'Othmân suspected 'Ali; this, by the way, is what Caetani had suspected without knowing of this text (Annali, viii., p. 159). Whatever we may think of this suspicious episode (we know well that the manufacture of false documents intended to bring ruin upon an adversary who cannot be defeated otherwise has been regularly practised in ancient as well as modern times), it is certain that, while it was the immediate cause of the tragic end of 'Othmân, events had already begun to move. A regular siege of 'Othmän's house was set up; the conduct of the old Companions who remained in veiled opposition was of the most hypocritical character; without having the courage to share in the depositions of the caliph by violence, and without the desire to help him against the rebels, they, 'Ali in particular, maintained an attitude of malevolent neutrality. 'A'isha, the widow of the Prophet, who had conducted a violent campaign against 'Othmân, preferred to slip away at the last moment on the pretext of a pilgrimage to Mecca. Reduced to the last extremity, 'Othmân mustered all his dignity and refused to abdicate. After a siege, the length of which is given differently in the different sources, a number of men penetrated into the house in the last days of 35 (June 656) led by Muhammad b. Abî Bakr (the son of the first caliph and brother of 'A'isha) who raised his hand against 'Othmân. We do not know if it was he or another (tradition gives several names and it is evident that the exact details were of course altered to give place to the caliph. His blood bowed, it is said, upon the copy of the Kûr'ân which he was reading when attacked; his wife, the Khalî Nâ'ila bint al-Furâ'îs, was wounded. The house was pillaged. During the night the body was buried with the greatest secrecy by his wife and some friends. The troops sent by Mu'âwîya from Syria (too late, says tradition, accusing him of duplicity) received the news of the murder when half way there and quickly returned home.

We know how the new caliph was elected in the midst of tumult and terror (cf. Caetani, Annali, ix., 321–342); it shows, the author of this article thinks, that there was no previous arrangement among the principal Companions, each of whom probably thought he could deal with events as they arose. The election of 'Ali was without doubt due, even more than to the prestige given him by his close relationship and alliance with the Prophet, to the support of the Anṣâr who in the confusion in the Umayyad party had resumed control over their own town. But the new government from the first was destined to be challenged either by the unsuccessful rivals or by Mu'âwîya, the only one of the Umayyad governors who had remained master of his province. Political unity, and soon also the religious unity, of Islam was now at an end and the period of schisms and civil wars had begun. The caliphate of 'Othmân and its bloody end mark a turning point in Muslim history and give to the third caliph an importance which his true personality, a somewhat mediocre one at best, would never have merited.

Bibliography: The sources and earlier works are collected and summed up in Caetani, Anna's dell'Islam, VII. and viii., Milan 1914–1918 (cf. also by the same author Chronographia Islamica, p. 279–388). The only historical text of importance still unpublished, the Anmâb al-Ashraf of al-Balâdhuri, is in course of publication by the University of Jerusalem. The part relating to 'Othmân, edited by D. S. F. Goitein (who has lent the writer in his notes corrections and complements in many points the material already available but does not supply much that is new. We may also expect shortly the publication of the long biography of 'Othmân in the Tarikh
O'THMÁN b. 'AFFÁN — O'THMÁN ABD BAKR DIGNA

1011

(Levi Della Vida)

O'THMÁN b. MAẒÚN b. ḤABÍB . . . ABU ḬÁṢŠÁH of the Kuráish clan of Djumáh, one of the earliest Companions of Muḥammad, the thirteenth man to adopt Islaâm. He took part in the hajjra to Abyssinia, returned, like some other refugees, on the false news of a reconciliation between Muḥammad and his pagan enemies and became for some time the client of al-Ḍáli b. al-Muqghira. Soon he renounced this privilege, because he preferred to bear his share in the insults offered to his co-religionists in Mecca. On a quarrel between O'Thmân and the poet Labid see Ibn Hishâm, p. 342—344.

O'Thmân took part in the hajjra to Medina where he found lodging with Umma al-Ṭâbi'a. When Muḥammad formed pairs of "brothers" between the Muḥammad and Anṣār, O'Thmân was associated with Abu ᬏ' Ḥārîb b. al-Taiyŷhân. He took part in the battle of Badr and died in the following year, 3 A.H., according to all accounts in the year 4. He was the first Muslim buried in Baqţ al-Qaqrâd. This affection in which Muḥammad held him was seen in the grief he showed at the sight of his corpse. Nevertheless Muḥammad is said to have reproved his widow Khawâila bint Ḥakîm al-Sulamiyya for using language, more natural than theological, and saying her dead husband was one of the inhabitants of Paradise.

In Tradition O'Thmân is the most characteristic representative of the ascetic tendencies which were not entirely foreign to primitive Islaâm. He abstained from wine before this beverage was prohibited. He neglected his wife who did not fail to complain to Aţîsha whereupon Muḥammad tried to divert him from a too rigorous asceticism by suggesting that he should follow his example. The tradition is also very well known according to which he asked Muḥammad to permit him to castrate himself, a request which the Prophet did not at all consider with favour.

O'THMÁN DAN FODIO. [See Pul.]

O'THMÁN ABD BAKR DIGNA (Dikna), governor and general of the Mahdîya in the Eastern Sudan from 1883 onwards, born in Sawâkîn about 1830 (cf. Shukair, ii, 200; Dietrich, P. 509), was according to some a descendant of Kurîd b. Diyar Bakr who had come in 1517 under Sulîmân Selim to Sawâkîn and intermarried with the Hadenowa. The resulting family of the Dignâ (Dikna) settled in Erkowit (Arkowit) west of Sawâkîn. Shukair mentions several relations of O'Thmân: two brothers, Muḥammad and the slave dealer 'Ali, a half-brother Ahmad Digna, two nephews, Madani b. 'Ali and Muḥammad Fâ'î, emir of Kassala. O'Thmân gave them appointments in the army and in the administration. Ahmad Digna and Madani both fell in fighting in the Eastern Súdân.

Down to the outbreak of the Mahdist rising, O'Thmân was a trader, dealing especially in slaves between the Ḥajjâra and the Súdân. The prohibition of the slave-trade by the Egyptian government in 1877 affected not only his livelihood and his liberty — he and his brother 'Ali suffered a period of imprisonment in Djidda — but also his religious conviction that the slave-trade was a permitted one. Even then his religious fanaticism displayed itself in his joining the Egyptian besieging force of the Majdisdî. On hearing of the coming of the Mahdi Muḥammad Ahmad [q.v.], "he migrated to him" (hadinâra), met him shortly after the fall of el-Obeid (al-Usâiyid) in 1883 and took the oath of obedience to him (bâjûr). Henceforth he was blindly devoted to the Mahdîya and retained his allegiance to it until his imprisonment.

It is evidence of the Mahdî's keen judgment that he at once recognised O'Thmân's extraordinary abilities and in a proclamation to the tribes of the eastern Sudan on May 8, 1883 (in Shukair, iii, 203 sqq.) appointed him governor-general (Ca'mit 'Anna, over the till then peaceful tribes of the Beidjâ, between the Atbara and the Red Sea (with the towns of Sawâkîn, Tôkar and Kassala). These tribes who did not speak Arabic and had never been ruled by an Arab, readily gave obedience to their kinsman O'Thmân who was not only well known to them through years of friendly commerce but also knew their language and ways.

O'Thmân's activity from 1883 to 1900 falls into two periods. In the first (1883—1891) as leader of the Mahdist rising in the eastern Sudan he carried out the important task of protecting the eastern frontier of the Mahdîya against the Anglo-Egyptian government, which made it possible for the Mahdî to concentrate his forces on the Nile. In the second period (till 1900) after the loss of the eastern Súdân, he was still general of the Mahdîya along with others in the service of the Khalîfâ 'Abdullâh against the English under Kitchener.

I. The events of the first period which he opened from Erkowit with the encounter at Sinkât on Aug. 5, 1883, were at first concerned with Sawâkîn. The details of this fighting are given by Shukair, iii 200 sqq., 233 sqq., 400 sqq., 518 sqq., 601 sqq. The main object was not so much the taking of Sawâkîn and other towns as the command of the roads between Sawâkîn and Berber, the shortest and most convenient route to the Nile. O'Thmân is entitled to the merit of having for seven years successfully closed this road to the government. In contrast to this, the results of the actual fighting were of little significance on either side. O'Thmân defeated the Egyptians under Maḥmûd Pâshâ at el-Téb (Nov. 5, 1883), destroyed an Egyptian expedition at al-Tamânî (Dec. 1883), undertook the siege of Sawâkîn, Sinkât and Tôkar, defeated Bâker Pâshâ in a second battle at el-Téb (Feb. 4, 1884), on Feb. 8 forced Sinkât to surrender and on Feb. 24 Tôkar, but on Feb. 29, 1884 suffered a severe defeat at el-Téb and again itself on March 13 and 27 at Tamâl at the hands of General Graham, which checked him for a time but did not cause him to withdraw. It was not until March 1885 that he began new operations from Tamâl, Tell Hâshîm and Tôkar, with little success.
because the tribes which composed his army threatened to disperse, fearing English intervention. Nevertheless, he succeeded again and again in inspiring the undisciplined masses with enthusiasm, not by the fact that he transferred the centre of his activities to Kassala and Abyssinia. The years 1854—1855 mark the zenith of his career. He incited the people of Kassala by Mahdist pamphlets; after the death of the Mahdi on June 22, 1855 and the fall of Kassala he was sent there by the Khalifa 'Abdallahi, as the only higher official of the Mahdi (not related to the Khalifa) who had remained in his position, and from there waged war on the Amārēr and the Abyssinians. He compensated himself for the failure of his Abyssinian campaign by a savage treatment of the people of Kassala. As he was continually threatening Sawākinn and even went so far as to draw trenches round the town and begin a regular siege from Handīb, Kitchener, who was then in command at Sawākinn, forced him after a series of defeats to retire to Tūkār. Othmān's population then took refuge in a desert, alienated by his strictness and severity and the continual warfare. The exhaustion of the Mahdists was so great that the Khalifa allowed Othmān to resume trading between Sawākinn and the Mahdiya via Handīb, but this was stopped on the opening of the final struggle between the Mahdists and the Anglo-Egyptian government, and the result was famine among the Mahdists. The oppression of Kassala by Muhammad Fāi, sent there as emir by his uncle Othmān, induced the Khalifa to summon Othmān to Omdurman ['q. v.]. He returned with full approval of his conduct with his conquests, and was made a prince, and his army, which had been scattered, Othmān fled abandoned by everyone to the mountains between Kassala and Berber. The country between the Atbara and the Red Sea was lost to the Mahdists; Berber and Kassala were open to the English and Italians. Othmān was taken by the Khalifa to Adārāma on the Atbara, where in addition to buying himself with agriculture he endeavoured to raise a new army which was to hold the Atbara line.

II. When at the beginning of the decisive campaign against the Mahdiya, Kitchener conquered Berber in 1897, Othmān came to the front again. He led an army over the Nile at Shendi and joined his fellow-general Mahmūd. They were both defeated and Mahmūd was taken prisoner. In the battle that followed at Omdurman (Sept. 2, 1898) he attempted in vain to check the flight of the dervishes with a strong force between the Surghām hills and the Nile. After the defeat he accompanied the Khalifa on his flight until the latter's death at Gadid (Nov. 24, 1899), refused to surrender, escaped across the White Nile and Atbara into the Werriha mountains and endeavoured with the help of the Shaikh of the Dāmilāt to cross the Red Sea into the Hidjaz. Through the treachery of the Shaikh he fell into the hands of the authorities of Sawākinn on Jan. 18, 1900, and was sent to prison in Damietta where Shukār saw and spoke with him in 1903 (see 'Bibliography'). To the kindness of the Royal Egyptian Embassy in Berlin I owe the following data of Othmān's later career: Othmān's imprisonment took place on Jan. 12, 1900; he was brought to Rosetta, from there to Tūrūn near Wāḍī Hālā. After some years his lot was relieved; he was allowed to retain his property in Berber, but did not take any interest therein. In 1924, at a great age, he made the pilgrimage to Mecca; after his return to Wāḍī Hālā he settled outside the town, where he died in 1926; he was buried there. Othmān Digna was the model of a primitive unbroken nature. He was the type of the fanatical Mahdī, noteworthy as the only non-Arab to hold high office in the Mahdiya. He was an imposing figure as described by Shukār, iii. 200 (German by Dietrich, p. 49). Not only did he know the languages of the tribes placed under him but he also spoke and wrote Arabic fluently (a specimen of his concise style is given by Shukār, iii. 206 sqq.). Courage verging on foolhardiness and cleverness which seized upon the slightest advantage, strictness to the verge of cruelty, and a stubbornness in following up his goal, from which even the severest defeats could not turn him, were combined in him with an ecstatic piety—Shukār described his ecstatic fits in prison (iii. 204). He lived almost exclusively on a vegetables diet. From the time of the coming of the Mahdi he went without sandals and shoes and used riding-beasts only for longer journeys. He was therefore, along with Wādī Nadjīm and Abu 'Andalā, the most important Mahdī general and the most dreaded enemy of the government.

'Othmān, the chief town in a 'gâd of Amasiya in the wilāyēt of Siwas ['q. v.] in Turkey in Asia, lies in a picturesque position at the foot of a volcanic hill which rises straight out of the plain and is crowned by a castle which formerly commanded the celebrated bridge said to have been built by Bâyazīd I. The settlement is probably very old as is evident from the numerous rock chambers cut out of the cliffs. The number of inhabitants according to Maercker (1893) was about 5,000 and they lived in 920 houses. It is connected by road with Merzifūn in the east and with Tosia in the west. The importance of the place however lies entirely in the part it has played in history. The name Othmān is connected with that of Othmān I ['q. v.], the founder of the Ottoman dynasty, and it is said that Othmān I took his name from this place which had been granted him as a fief. This suggestion, which is found as early as the 15th century, is probably for the first time in the Geschichte von der Türkise von Meister Jör. v. Nürnberg, Memmingen n.d. but about 1496, and again in Spandugino, von Busbeck etc.), has little claim to credibility although it has been revived in modern times e.g. by Cl. Huart, in 'J.A., ser. 11, vol. ix., 1917, p. 345 sqq. and by H. J. Kramers, in Acta Orient., vi., 1927, p. 242 sqq.; cf. thereon W. L. Langer and R. P. Blake, in American Historical Review, xxxvii. (1932), 496, note with other references. It is probable that Othmān is the arabised form of a Turkish name which may have sounded something like Atman, Asman and we must not forget Ibn 'Abdūl's assertion that the founder of the dynasty called himself Othmānikī, i.e. 'Little Othmān' to distinguish himself from the third caliph. The
Turkish sources are contradictory: Hâdîdd Khâlîfâ says that the town of 'Othmânîn signals its name from the fact that in the 8th (h) century a leader named 'Othmân conquered it. Elvîsî Çelebi (1647-1648) says (ii. 180 sqq.) that many see in 'Othmânîn the birth-place of the emir 'Othmân. This opinion had become the current one about the middle of the xviiith century, as may be seen from a passage in Les Voyages et Observations of François le Gouz (Paris 1655, p. 65). The place does not appear in the clearer light of history till 1392 when it was taken by Bâyazid I from the lord of Kastamuni, Bâyazid Kutumân, and definitely incorporated in the Ottoman empire. The fact is worth mentioning that there was evidently a considerable Bektash settlement here at an early date and the tomb of the famous Bektash saint Kûyun Baba (q.v.) in 'Othmânîzê has always been much visited. The inhabitants according to Hâdîdd Khâlîfâ belonged almost entirely to the order of the Bektashis. Cf. on this point in 1546 Le Voyage de Monsieur d'Aramon, ed. Ch. Schefer, Paris 1887, p. 66 (where Cochyin Baba should be read Kûyun-Baba). — Makarins of Antioch mentions a place called 'Othmânîk near Ma'înash. He visited the site where there was said to have been formerly a large town of this name also mentioned Osman Dada (= 'Othmân Dede) (Travels, ii. 453 sqq.).

'ÔTHMÂN-ZADE AHMAD TÀHIR, a notable Ottoman poet, scholar and historian of the end of the xviiith and first third of the xviiiith century. The son of the rûmûnmâ (müslîm tzcrrêdîfi) of the pious foundations, 'Othmân Efendi, he took up a theological career. The year of his birth is not recorded. From 1609 (1687) he held the post of mûdîrîs in various medreses in Constantinople. At intervals he worked also in other places. For example in 1607 (1665) he went to Damascus with Kemânkeh Mehmed Pasha when the latter was appointed governor there. In 1124 (1712) he was appointed mûdîrîs at the Sultanîyé, a post he had aimed at from the very beginning. He then went as chief judge (Hâlîb mollaî) to Aleppo in 1126 (1716) and lastly as Mîr mollaî (chief justice of Cairo) to Cairo, where he died at the end of his year of office on the 2nd Râmâdzân 1136 (May 25, 1724). According to Brusali Mehmed Tahir, there is in existence a biography of 'Othmân-zade composed by Ibn al-Emîn Mahmîd Kemîl Bey.

'Ôthmân-zade was regarded by his contemporaries as the most important poet of his period. He was particularly celebrated for his chronograms (kâ'îlî) and kîfî. A chronogram on the birth of prince İbrâhîm (1133 = 1720-1721) made such an impression on Sultan Ahmed III (1115-1143 = 1703-1730) that he gave 'Othmân-zade the title kîng of poets (mûrîite [sûlûan] al-hâdîthî) and granted him a special hâdîî. 'Othmân-zade left behind him a divân of the usual type (muretteb divân) which consists of 12 kašîdas, 32 chronograms and 77 ghazels. Along with these are isolated poems, e.g. a satire (hâdîî) on Şakîk Efendi composed in 1124 (1712). He also wrote in verse a commentary on the 40 hadîîs entitled Şarîh-İ Hâdîî-İ 40, which, although also known as Şarîh-İ 40, it was written in 1125 (1715).

It is however to his prose works that he owes his fame with posterity, especially his historical works, some of which are still popular and valuable at the present day. The most important is his biographical collection Hâdîkat al-Wusûrâ, a most estimable and still important collection of lives of the first 92 grand viziers of the Ottoman empire, from 'Alî al-Dîn 'Ali Pasha to Râmi Mehmed Pasha who was dismissed in 1115 (1703). The work was composed six years before his death. It was printed at Constantinople in 1271 (1854). 'Othmân-zade's idea was later taken up by others. His biographical collection was continued by: Dilâwîr Ağa-zade 'Omar Efendi (Omar Wahtî), a friend of Rûfîhî Pasha's who wrote a Hâdîkat al-Wusûrî, also called Hâdîkat Munâmîbî-Ü Wusûrî-i 72, or Gullî Zîhî, which covers the period from the grand vizier Kowanos Ahmed Pasha to Şâd Mehmed Pasha; also by Ahmed Dâwûd Bey, who compiled a continuation entitled Wîrd al-Muṣîrû which covers the period 1172-1217 (1758-1802), from Rûfîhî Pasha to Yusuf Ziya Pasha, the conqueror of Egypt; finally by 'Abd al-Fettâh Şefkatî-Baghîddî entitled Berkî-û Feelî, covering the period 1217-1271 (1802-1854), from Ziya al-Dîn Yusuf Pasha to 'Alemdâr Muşfîl Pasha.

All three continuations are printed as an appendix to the Hâdîkat of 'Othmân-zade, while the later continuation with Rûfîf Efendi: Wîrd al-Hâdîtî appeared in a lithograph separately while the continuation with Mehmed Şâd Şerhi-zade entitled: Hâdîkat al-Wusûrî, or Gullî Zîhî or Gullîkûn-i Muîlûk, which deals with 31 grand viziers from Nihâzîmdî Ahmed or Sûlîhîdar Mehmed Pasha, to Şâd Mehmed Pasha, is still only available in MSS.

The two sketches of Turkish history by 'Othmân-zade also attained great popularity. The longer: Hâdîkat Munâmîbî (or Tewûrîhî) or Şâdîfâ-î Âlî 'Othmân deals with the first 24 Ottoman sultans, from the founder of the dynasty to Ahmed III. The shorter version: Fikristi Şihhân or Fikristî Şihhân-î Âlî 'Othmân or Muht大咖-î Tâvîkhî Şâdîfâ-î or Şâdîfâ-î Muîlûk or Hâdîkat al-Muîlûk covers the period from 'Othmân to Muşfîa II. The number of varying titles shows the popularity of the work. The book, sometime quoted as Fâdîlî-î Âlî 'Othmân, dedicated to Pândâm İbrâhîm Pasha, seems to be only a variant title of one of these books.

In the year of his death (1136 = 1724) 'Othmân-zade wrote a history of Fâdîl al-Mehmed Pasha entitled: Tâvîkhî Fâdîl Ahmed Pasha, which like most of his works is only accessible in MSS. The Munâzâra-i Dâwelethî (struggle between the two kingdoms) in the form of questions and answers is also dedicated to İbrâhîm Pasha (MS. in Vienna).
and is an interesting contribution to the very highly developed muğāra literatures.

As further independent works may be mentioned: Iğdır Nâşîh al-Hikâmâ and Taḥfât al-Nu'mân. Here we may mention his anthology Dhâmil al-Leqâ'il (a collection of anecdotes, jests etc.). His stylistic collection Muğâla'tâ Taḥf Efendi was intended for practical purposes; it is a collection of letters in three parts and a concluding chapter.

His extracts from and editions and translations of other works are very numerous. The greater part of his work is collected in his Kulliyât with an introduction by Āhmâd Ḥanîf-zâde. Some titles cited by von Hammer and Brassal Meşmed Tâhir which apparently go back to Ḥanîf-zâde, the compiler of the Kâṣîf al-Ẓamînî of Ḥâdîjî Khîlîfah, are probably not correct and refer to double or subsidiary titles. Translations by him are: Shamsîr al-Anwar and Shamsîr Sharîf, the latter entitled: Tağwîl al-Muṣâfîrî on Ḥadîth. — Extracts from or versions of other works are: Aḥkâm-i Muṣâfîn (or Muṣâhaṣa-râr-i Aḥkâm-i Muṣâfîn or Khâlîṣat al-Aḥkâh) from the works of Ḥunain b. Ṭāhâ-ghifîn, who is known as Wâdî al-Herewî (d. 910 = 1504). The actual work which was written in Persan for Mîrzâ Muḥsin b. Ḥusain al-Bâirakâra was translated by Pîr Meşmed known as Ḡhârimî, with the title Anis al-Arîfîn in 974 (1566); Aḥkâm-i ʿAlî, an extract from the work of ʿAlî b. ʿAmr ʿAlîn, known as Ibn Ḥanîfî (Kânîl-zâde) which was written for the ʿEmîr al-ʿUmârî of ʿShâm, ʿAbî Pâshâ, and therefore called after him. The Manâṣîh-i Ḳîmû-i ʿarâm, i.e. of ʿAbî Ḥanîfah. We also have from his pen a synopsis of the Ḥumâyûn-nâmê. The Anwar-i Suhaîlî, the Persian version of Ibn Maḳâfî's Arabic version from the original Indian (Pahlavi) of Ḥîdîpî was the work of Ḥusain Wâdî ʿAlînâfî, court-preacher to Ḥusain Bâirakâra of Herât. This Anwar-i Suhaîlî was translated into Ottoman Turkish by ʿAbî al-Wâṣîfî (ʿĀlî Mollâ ʿĀlî Ĉelîh b. Ṣâlih, known as ʿĀlî Wâṣîfî or Ṣâlih-zâde al-Rûmî with the title Humâyûn-nâmê and dedicated to Sulțân Sulaimân. ʿOthmân-zâde abbreviated the Humâyûn-nâmê to about a third of its length. This version was printed in Constantinople in 1256 under the title Tâmâr al-Āṣmâ. In the Kulliyât this extract is entitled Zubât al-Nâṣîhî.

The version of the Naṣîhîh (Naṣîhât al-Muṭâbîk of Re's Efendi Sarî ʿAbî ʿAlînî entitled Taḥfîṣ al-Hikam is also described as a synopsis of the Humâyûn-nâmê. A synopsis of the Maqālisîs al-Aḥkâh of ʿAlî is also attributed to ʿOthmân-zâde. OTRÂ, a town on the right bank of the Sir Darya (Saḥûn), a little south of its tributary the Aris. The name is found as a geographical term for the first time in Vâqît (i. 310) as Uṭrâr but Tabari (iii. 815-816) already knows of a prince called Uṭrâr-banda as a rebel vassal of the Caliph al-Maʿmûn. The place that Maḳâdisi calls Taḥrâr Zârîk (B G A, iii. 263, 274) in the district of Isbâhân must be quite a different place. Uṭrâr may perhaps be the same as the capital of the district of Fârâb [q. v.], a town which replaced the older one of Kadar (mentioned by ʿĪsâ Ḥâfîzî and Ibn Ḥâfîzî) and called Fârâb by Maḳâdisî (Bârâb on p. 273). The town of Uṭrâr acquired a melancholy fame through the part it played at the time of Čingîz Kâhân's invasion. It was then a frontier town of the empire of the Khârîzmdâh Muhammad, who had captured it in 1210 from the Čirâh Kâhû. The town was at that time under the command of Taşi-dîn Bîlî-ḡî Kâhân who was giving trouble to his new ruler. In 1218, there came to Uṭrâr a great caravan of 450 people (Djuwainî), all Muslims, sent by the conquering Mongol to open up commercial and peaceful relations with the Muḥammadian empire. Detained at first by the commandant Inâlîk, either because he thought they were spies or simply because he coveted their wealth, they were later all massacred and the commandant seized their merchandise. One source (Nasawî) throws upon the sulṭân a part of the responsibility for this deed; in any case when an ambassador came from Čingîz Kâhân to complain of the outrage and demand the surrender of Inâlîk, he refused to hand him over and put the envoy to death. This made war inevitable. In 1219, Čingîz Kâhân appeared with a Mongol army on the Sir Darya and laid siege to Uṭrâr. The town was taken after several months' siege and Inâlîk was captured and sent to ʿAṣurarûm to be executed. It was from Uṭrâr that the Mongol armies set out which conquered the empire of the Khârîzmdâhs. Uṭrâr still existed at the beginning of the xvth century for Timûr Lâng died there in 1405 ('Ali Yârdî, Zafar-nâmê, ii. 646). The site of Uṭrâr is now only indicated by ruins.

OUĐH (AWADH), a district now forming part of the United Provinces of modern India, has an area of 24,154 square miles and a population of 12,794,979, of which 11,870,266 are to be found in the rural districts (Census of India, 1931).

From very early times Oudh and the neighbouring countries of the great alluvial plain of northern India have been the peculiar home of Hindu civilization. The ancient Hindu kingdom of Kosala corresponded very nearly to the present province of Oudh. Its capital, Ayodhya, the modern Adi-Jodhya, on the river Gogra, is supposed to have been the residence of Daqarath, the father of Rama whose
exploits are recorded in the Rāmāyana. Here too arose a number of religious reactions against the sacralotalism and the social exclusiveness of Brāhma-
nism.

The Apart from plundering raids, such as Maḥmūd of Ghaznū's attack upon Manasī and the doubtful exploits of Sāhir Maṣūd Ghāzī recorded in the Mirāž-i Maṣūd of 'Alīd al-Raḥmān čishti, it was not until the last decade of the twelfth century, in the days of Kūth-al-Dīn Aḥbāb [sic Aḥbāb], that the Muslim invaders established themselves in Oudh and annexed it to the Dīlī Supānāt. It definitely formed a province of Muḥammad b. Ṭughlūk's extensive empire, but, towards the close of the fourteenth century, it was absorbed by the Shāfīi kingdom of Dīawnpūr [q. v.]. Under the Ṭodīs [q. v.] it was once more part of the Supānāt.

In the days of Akbar [q. v.] it formed a gōra of his empire, extending from the Ganges on the south-west to the Gadak on the north-east, and from the river Sai in the south to the Tarāl of Nepāl in the north. According to Abu 'l-Fadl, it was divided into five sarkārs and thirty-eight parganas (Ādāb Aḥbāb, in Bibliotheca India, ii. 170—177 [vol. Jarrett], 1864). Local traditions in Oudh, however, agree with the Muslim accounts and declare that the Rādjiut chiefs maintained their authority practically intact throughout the Moghul period (W. C. Benett, The Chief Clans of the Roy Bareilly District, 1893). The weakness of the central government under Awrangžīb's successors gave the nawāb of Oudh an opportunity of asserting their independence, although nominally they still acknowledged the authority of the Moghul emperor.

Saḥādat Khān Bāhān al-Mulk, the real founder of the Oudh dynasty, was descended from a respectable Sayid family of Nishāpūr (Muḥammad al-Lutūd of Khāfī Khān, ii. 902). During his nawāshīp (1722—1739) he both maintained internal order and extended his dominions so as to embrace Benares, Ghāzāpur, Dīawnpūr and Čunār. His successor, Saḥīl Dīang (1739—1754), was appointed wazīr of the empire in the year 1748. It was he who invited the Mārāchās to assist him against the Rohillas, the engagements entered into at that time forming the basis of future Mārāchā claims on Rohilkhand. His son and successor, the nawāb-wazīr Shudijī al-Dawla (1754—1775), came into conflict with the rising power of the English East India Company and was totally defeated at Baksar in 1764. This left Oudh at the disposal of the Company. By the treaty of Allahābad (1765) Oudh was restored to Shudijī al-Dawla with the exception of Kora and Allahābad, which were given to the emperor for the upkeep of his dignity. British relations with this buffer state between Bengal and the Mārāchās were placed on a firmer footing by the treaty of Benares (1773) which fixed the subsidy for British troops at 210,000 rupees a month. At the same time Kora and Allahābad were sold to the ruler of Oudh for fifty lakhs of rupees, because the emperor had deserted the Company and surrendered these districts to the Mārāchās.

The ascension of the incapable Āqā al-Dawla (1775—1797) enabled the hostile majority on Warren Hastings's council to raise the subsidy to 260,000 rupees per mensem and to force the new nawāb to cede Benares, Dīawnpūr and Ghāzāpur in full sovereignty to the Company. At Čunār, in 1781, Hastings attempted to reform the wazīr's administration and to afford him relief by reducing the number of English troops in Oudh. His share in the resumption of the dīvos and in the sequestration of the fāgūn of Oudh formed one of the charges against him on impeachment.

In 1801 Lord Wellesley forced Saḥādat 'Ali Khān (1798—1814) to cede the whole of Rohilkhand and part of the 108th, the revenues of which were devoted to the payment of the subsidiary force. Saḥādat 'Ali Khān was succeeded by his eldest son, Ghāzī al-Dīn Hīdar, who was the first ruler of Oudh to assume the title of king. The remaining kings of Oudh were Nāṣir al-Dīn Hīdar (1827—1837), Muḥammad 'Ali Shāh (1837—1842), Amīndād 'Ali Shāh (1842—1847) and Wādīdī 'Ali Shāh (1847—1856).

It was a provision of the treaty of 1801 that the ruler of Oudh should introduce into his country a system of administration conducive to the prosperity of his subjects and calculated to secure their lives and property. In spite of repeated warnings nothing was done and misgovernment continued unchecked. On these grounds Oudh was annexed by Lord Dalhousie in 1856. Wādīdī 'Ali Shāh received a pension and was allowed to reside at Calcutta where he died in 1887, his title expiring with him.

On annexation Oudh was controlled by a Chief Commissioner, until, in 1877, both Agra and Oudh were placed under the same administrator, who was known as the Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh. The title of Chief Commissioner was dropped on the formation of the United Provinces of Agra and Oudh in 1902. It was not, however, until 1921 that this administration was raised to the status of a Governor's province.

The first land revenue settlement after annexation was carried out with a lack of consideration for the great taluqdāris families of the province, who were ousted from the greater part of their estates. This was reversed after the Mutiny when Canning reverted to a talukdāri settlement and confirmed the rights of the taluqdāris by sanads.

To-day in Oudh Muḥammadans are to be found chiefly where they held sway in the past, their preference for urban life explaining their presence in the chief towns. Although the population is predominantly Hindu it is interesting to note that in the last decade Muslims have increased nearly twice as rapidly as Hindus. This is largely the result of social customs which permit Muslim widows to remarry and do not favour early marriages. Conversion has not affected these figures, for the tabīla movement on the part of Muslims was countered by the shudhī and sanāgan movements on the part of Hindus.

(COLIN DAVIES)

OUDJA (WAJDA), a town in Eastern Morocco, eight miles from the Algerian frontier in the southern part of the vast plain of Angad. It was founded in 394 (994) by Ziri b. 'Atiya chief of the great Zenata tribe of the Maghribi. We shall give a résumé of the events that led up to its foundation. In the course of the fighting between the Sanhaja and the Zenata, the latter had been driven towards the extreme Maghrib. Supporters of the Umayyads of Cordova, they had loyally defended their imperial policy in Barbary, especially in the time of the great minister Ibn Abi 'Amir al-Mansur. Ziri b. 'Atiya al-Maghrawi, who had proved himself a particularly valuable ally, was allowed to occupy with his tribe the environs of Fas. He seized the opportunity to expel from the city the Banu Ifran, another important tribe, who had established themselves there. Not however having full confidence in the Umayyad minister, of whose policy he disapproved, and not feeling secure in the vicinity of or in the town of Fas, and wishing to be in touch with the central Maghrib which was the real country of his tribe, he founded the town of Oudja and garrisoned it with his troops; he brought his possessions there and put one of his relatives in it as governor. The foresight of the founder was justified; in 424 (1033) the Banu Ifran having reoccupied Fas the emir Hammanama, one of the successors of Ziri, took refuge in Oudja.

According to al-Bakri, about the middle of the xth century (after 440—1048), a new quarter surrounded by a wall was added to the original nucleus by a chief of the Outaghnîm (r). The great mosque was outside of the two towns.

During the period of Umayyad expansion Yusuf b. Tashfin occupied Oudja in 472 (1079). In the middle of the xth century it became an Almoravid town. In the reign of the Almoravid al-Nasir, when the Banu Ghaniya, hoping to restore the power of the Almoravids, came from the south of Tunisia and extended their ravages into the region of Tlemcen, the fortifications of Oudja were repaired and strengthened (Kifr, p. 203; transl. p. 194).

It was however mainly after the installation of the 'Abd al-Wadillah in Tlemcen [q. v.] that the town of Oudja "the bulwark of the extreme Maghrib" (Ibn Khaldun) was summoned to play an important strategic part. Belonging to the kingdom of Tlemcen, it was the first place encountered by the Marrakhis of Fas when they invaded the lands of their hereditary enemies and the first victim of their attacks. In 670 (1271) the Marinid Abû Yusuf having defeated Yaghmurâsân, the king of Tlemcen, near Oudja, laid the town in ruins. In 695 (1260) the Marinid Abû Ya'kûb having fortified his own frontier town of Tahtirr seized Oudja and destroyed its defences. In the following year he seems to have wished to make Oudja a base for his future expeditions. He rebuilt it; he erected a palace there, a citadel which he called the "great Maghrib" (probably that which still exists) and began the siege of Tlemcen which lasted eight years. In 714 (1314) the Marinid Abû Sa'id delivered a fierce attack on Oudja which resisted and, presumably leaving troops in front of it to immobilise the garrison, he went on towards Tlemcen. In 735 (1335) Abu 'l-Hasan besieged Oudja: it was taken and the fortifications dismantled. In 772 (1371), Tlemcen being occupied by the Marinids and Oudja being also in their hands, the Arab tribes of the region took the side of the dispossessed 'Abd al-Waddis and laid siege to the town.

Of these Abu 'Abd Allah of the great tribe of Ma'kili, were on this occasion supporting the cause of Tlemcen, it was not always so. They were for a long time on the side of the Marinids and were a serious danger to the 'Abd al-Waddis on whose frontiers they were.

The tribes of the region, Arab as well as Berber, were also closely involved in the fighting in the xvi th down to the xix th century between the Turks of Algeria and the Moroccan suljans. In the town itself there were clans which supported each side. Authority passed from one side to the other, but it was only a relative authority, enjoyed precariously and intermittently. The dispute between the Maghrib and the suljan's orders were fully carried out, Oudja formed part of his empire; if on the other hand the country was troubled and the power of the sovereign weakened, Oudja went with the province of Tlemcen and belonged to the "Turks" (Voinot). One of the few periods during which the authority of the sherif was firmly established in this remote province was the reign of Moulay Isma'il (1082—1139 = 1672—1727), who brought to Oudja Arabs from the south of Marrakesh, formed them into a dîlah [q. v.], strengthened the defences of the town, built several kasbas around it and organised the tribes of the plain. After his death the country lapsed into insecurity and anarchy. The Turks reappeared. Finally in 1795, a Sherifian force again took possession of Oudja which henceforth remained under Moroccan rule. An 'amil (governor) represented the suljan in it.

In 1844 after the battle of Isly, the town was temporarily occupied by the French as a punishment for the help given to 'Abd al-Kadir by the suljan. The French troops reappeared (there in 1859 and finally occupied it in 1907.

Oudja, a town of old Morocco, where local government was non-existent had become a haunt of smugglers and fugitives from Algerian justice; it has been cleansed of all suspicious elements. The town, surrounded by its wall which however only dates from 1866, is surrounded by modern suburbs and beautiful gardens. The population is now about 30,000 of whom half are Europeans.

Bibliography: al-Bakri, Description de l'Afrique septentrionale, ed. de Slane, Algiers 1911, p. 77—78; transl. in F.A., 1859, ii. 160; Ibn Khaldun, Histoire des Berbires, ed. de Slane, ii. 44; transl., iii. 243 and passim; Ibn Abi
P[chrift]; bā-'i ʿārum or bā-'i ʿārum: the bā with three points subscript, invented for Persian as supplemental to the soft Arabic bā and to represent the hard labial. It is sometimes interchangeable with ba (e.g. ʾash and ʾash, ʾabūr and ʾabūr) and more frequently with fā (e.g. ʿafīl and ʿafīl, ʿaṭrā and ʿaṭrā). The regular use of the letter in manuscripts is comparatively modern, but it is found in good copies of some of the ninth-tenth century while at the same time it is often omitted in manuscripts of much later date (G. I., p. 112, p. 74).

(Re. LEVY)

PĀDĪSHĀH, the name for Muslim rulers, especially emperors. The Persian term pā-dī-
šāh, i.e. (according to M. Bitner in E. Oberhamer, Die Turken und das Osmanische Reich, Leipzig 1917, p. 105) "lord who is a royalty" in which the root pad is connected with Sanskrit pad, lord, husband, fem. padī. Greek pādēs, Lat. padus (G. Correa, Griech. Etymol., p. 377), was originally a title reserved exclusively for the sovereign, which in course of time and as a result of the long intercourse of the Ottomans with the states of the west also came to be used in the south-west of Europe. In the correspondence of the Porte with the western powers, the grand vizier Kuyucu Muṣṭafā Pasha (d. Aug. 5. 1612) probably for the first time applied the title pādīshāh to the Austrian emperor Rudolf II. At the conference of Nemirow (1737) Russia demanded the title for its Czars (cf. J. de Peyster, G. O. R., vi. 498) and claimed it again at the negotiations at Bucharest (1773; cf. ibid., viii. 412). When pādīshāh came to be applied to the sultan, the pādīšāh-i ʿolūmān, does not seem to be exactly known. In any case it is found in conjunction with all kinds of rhyming words as early as the beginning of the xviith century in Ottoman documents. Pādīshāh therefore may have come to be used towards the end of the xviith century, presumably instead of ḥājāt (from ḥājāt; cf. ʾalā, ser. ii., vol. xx., p. 276 and 572), an obsolete word, as well as suḥāf (cf. ʾalā, xi. 70) already found in dervish Sūfism, and was regularly used as the end of the sultān (cf. the ety. of pādīšāhīn: ʾin or bi ʿanā, with which the sultan was until quite lately greeted by his troops and subjects).

Horn, Grundriss der neupersischen Etymologie, Strassburg 1893, p. 61, No. 266 (where however another derivation is given, from Old Persian pad, protector, and šāh, ruler; cf. thereon Horn, in G. I., p., i, 112, 309 and i, i, 41, 88, 97, 159, where the Old Persian, Pahlavi etc. forms are given).

(Franz Baringer)

PADRĪ or PADRĪS, also "Pedaries" is the name given in Dutch literature to the people who wished to carry through by force a reformation of Islam in the early decades of the xviith century in Minangkabau (Central Sumatra). In explanation of this expression it may be said that, according to one opinion, the word is connected with Padrī, a harbour on the north coast of Sumatra, while, according to another, it corresponds to the word padrī (Port. padrē) used in several Indonesian languages meaning "Christian clergyman", whether Roman Catholic or Protestant. The last derivation cannot be supported, but the second is probably correct. It may be that Malayans, when asked by Dutchmen after the troubles, accommodated themselves to the linguistic level of the interrogators by designating the instigators as padrī as they laid special stress on the religious life. Such a case would not be unique in dealings of Dutchmen with natives. The Dutchmen then adopted the word and retained it; it also occurs sometimes as padrē in native sources. The usual native name however for the people called padrī by us was uang patich- "white men", a common term among Indonesian peoples for those who take their religious duties with particular seriousness and are distinguished by their white robes (van Runkel, in Indische Gids, 1915, ii. 1103). In the official reports and Dutch Colonial literature of the time, those who did not join the Padris are called "Malays", a misleading designation as the Padris were also Malays. Padris and non-Padris were of the same stock. A better name for those who held by the old custom is the "Adat party"; they formed the party who on every occasion tried to base their action on the traditional usage.

The Minangkabaus or Minangkabau Malays inhabit the central Sumatran highlands between about 1/2° N. lat. and 1/2° S. lat. From this mountainous country they have extended eastwards over the highlands which form the transition to the eastern Sumatran lowlands. To the west they reached the coast of the Indian ocean. Here there are several harbours which gave a connection with the outer world. It is generally supposed that the country was converted to Islam from Aijeh. The Achehnese held several points on the coast when the Dutch and English Trading Companies established themselves here.

Islam was firmly established in the country when the activity of the Padris began. There was a burning zeal for the faith, in certain circles at
least. In 1785, a spiritual leader came down from the mountains with some thousands of followers and disciples in order to circumcise the Christian population of the port of Padang, then the principle possession of the Dutch, and force them to adopt Islam (T. B. G. K. IV., v. 55). The Minangkabauans managed to combine a strongly Muhammadan outlook with the retention on a large scale of their old popular institutions. Matriarchy still prevails among them. The administration of a village is conducted by the leading heads of families, the various _uku_, i.e. union of families of different descent in common council. The form of government is republican. Every matter of any importance is considered by all the prominent families, their chiefs and other leading men ( _mupakè_. Ar. _muwasaţ_). It is a wearisome process, not calculated for speedy decisions. A society organised on these lines is naturally at a disadvantage against vigorous and powerful attacks.

In the beginning of the sixteenth century three Minangkabau pilgrims came home. They had seen Wahhabí rule in Mecca (after 1806). Filled with the puritan zeal of the Wahhabís, they set out to purify the religion of their own land. They were able to win over to their views a prominent theologian of the central district of Agam named Tuanku nan Rënjëh ( _tuanku_ is a title for a theologian). He at once set to work. He first of all insisted on the exact observance of the law, particularly in ceremonial. Popular customs which in his opinion were contrary to the _ghara_ were attacked, such as cock-fighting, which was associated with betting and was the most popular pastime of the people, dice, drinking of palm-wine, opium-smoking, betel-chewing, filing the teeth, wearing long nails, smoking tobacco. All these were forbidden. The prohibition of interest was insisted upon. The men were to cut their hair, let the beard grow and wear white clothes in the Arab style. The women were to wear veils. Finally the Padris dealt a blow to the matriarchal institutions by taking their women into their houses with them, (de Stuers, i. 183, footnote 3). The prohibitions of tobacco were directly taken from Wahhabí practice, while the other prohibitions and commands all find a place in the Shâfi'í school. It is also evident from Tuanku nan Rënjëh's attitude that he did not intend to institute Wahhabism. In the same district of Agam lived a highly respected and very influential teacher: Tuanku Kotâ tuâ; he was _guru_ tascat (Ar. _javâb_), a master of mysticism; to what order he belonged is not known. Mysticism of a popular kind is much cultivated in Minangkabau; Tuanku nan Rënjëh turned to him, not to quarrel with him but to seek his cooperation. The Tuanku Kotâ tuâ agreed that a strict observance of the law should be aimed at; but when Tuanku nan Rënjëh insisted that if any one did not perform the _gâfût_ correctly he was a _murā'id_ and was liable to the penalty of death as _hadd_, Tuanku Kotâ tuâ met him with the milder doctrine that the _murā'id_ should not be put to death, unless every effort to bring him to the true faith had failed, a case which however did not exist and was not to be expected. Tuanku nan Rënjëh now went his own way. After the Minangkabau custom, he summoned an assembly which was to approve his views. He met with enthusiastic approval from the theologians but with opposition from the chiefs; for the latter recognised at once that the Padri demands attacked their positions and would overthrow the whole social system. Tuanku nan Rënjëh went vigorously forward. With his own hand he stabbed his mother's sister whom he caught smoking; the body was thrown into the forest and not allowed to be buried. The effect was considerable; his followers applauded the deed, his silent or open enemies shrank back; he who had done such an unprecedented thing as not to heed the bonds of blood must be acting under a higher inspiration; it was not cruelty but self-sacrifice; the reformation went on with fanatical zeal. Whoever omitted a _qâlât_ had to pay a fine; for a second offence the punishment was death. Opponents were overcome by force, their villages burned, themselves killed or made slaves or at least made to pay an indemnity. Soon the greater part of Agam and of the district of Tuanku Kotâ tuâ were in his power. Several villages which had already yielded to pressure and adopted the stricter teaching of Tuanku Kotâ tuâ were also plundered and burned. In the end the doings of his followers were too much for the leader and he retired after about eight years. It was only at a later date when the Dutch troops entered the country that he again placed himself at the head of the movement. He died in 1832.

The procedure adopted by Tuanku nan Rënjëh was as follows: after a village had been taken, he appointed on his own authority an _imâm_ and a _kâli_ (Ar. _kâfî_); the former was head of the mosque and had control of all religious matters; the sphere of activity of the _kâli_ is not quite clear. In any case, this proceeding was revolutionary; by constitutional law the offices were hereditary with certain limitations; important decisions could only be made by _mupakè_ (see above).

Another teacher, Tuanku Pasaman, also called Tuanku Lintau, was active in the south east in the district of Lintau. Less well known than Tuanku nan Rënjëh he in no way yielded to him in fanatical ardour. Lintau was soon in his power. He then entered the adjoining territory of Tanah Data(t). Here in the old capital lived in the once faded glory of their former greatness the descendants of the royal house of Minangkabau. Well led, their power might have resulted in a restoration of their former greatness. Tuanku Lintau had them all murdered, except one who escaped across the frontier. Burning and murdering, he brought the whole land under his rule.

A third centre of Padri activity was Alahanpandjang in the north. The movement began here at the same time as in Agam and Lintau. Very soon there came to the front here a man who is best known by his later name of Tuanku Imam, first as an adviser and then as the leading figure. We possess exceptionally a native source for the life and deeds of this important figure. Quite recently a Malay work, a kind of biography written by one of his sons, has been discovered and published (see Konkel, _Indische Gids_, 1915). The Padris of Alahanpandjang began by building a fortress which they called Bondjol. Here the strict doctrine was observed and it was the central position of their power from which they sent out expeditions in all directions. Invited by sympathisers they would go to a village, subject it, appoint a _kali_ and _imâm_, as Tuanku nan Rënjëh did, and return to Bondjol with rich booty. The bio-
graphy relates that campaigns were undertaken at intervals of about a year. This was the period of Tuanku Imam's rise to be 

"... for in many matters he was imam, imam in religion, imam in all matters requiring intelligence and reflection so that all quarrels and disputes were finally brought to him." — Four men were sent to Mecca to guarantee the purity of the doctrine After a long time they returned, even more strict. There was not yet regular spiritual intercourse with Mecca. Pilgrims were very few in number.

As soon as the Padris had overcome or driven away the supporters of the Adat, the latter tried to involve the English, who had occupied Padang in 1793 in their agitation, but they could get no help from them. It was not till 1818 that the first post was established on the highlands by Sir Stamford Raffles. But its weak garrison could effect nothing; it was attacked by the Padris but without success. When in 1819 Padang was again handed over to the Dutch, they maintained and strengthened this post. In 1822 the offensive was assumed and lasted with some interruptions for 15 years. The Dutch colonial government troops were as a rule superior to the natives in the fighting but the attacks of the latter were continually resumed. Finally in 1832 all activity by the Padris stopped. Tuanku Imam, who had till then held out in Bondjol, surrendered. He then secretly prepared a rising which broke out in the beginning of 1833. The Dutch colonial troops who were distributed in small detachments over the entire country were almost wiped out. It soon became clear that members of the party who had invited the foreigners into the country were on the side of the Padris. Historians have shown that errors of policy by the military leaders and the not always tactful conduct of officers and men contributed to produce this misfortune. The truth of this cannot be disputed, but it should be pointed out to explain the altered attitude of many Malays that the very strict rules laid down by the Padris of the early period had become less rigid in course of time. The strength of the movement had been weakened by internal quarrels. Tuanku Koutu had, at one time attacked by Tuanku nan Rentjeh's successors, was revered as a saint in 1827, soon after his death. Padri and non-Padri pilgrims continued to his tomb. With the presence of the Dutch-Indian troops the Padris could no longer deal so harshly and arbitrarily with their fellow-countrymen. Their popularity had increased. It is said in the biography of Tuanku Imam of Bondjol, the bulwark of extremism: "the country was governed according to the shari'ah; the tribal chiefs relied upon it: when disputes arose the matter was brought before the four legists, in matters of common law however, the decision was left to the chiefs". Tuanku Imam a little later told his son: "the authority of the common law shall be recognised by you, and follow as faithfully as possible the shari'ah!" [4 v.]. During the pause in the siege of Bondjol the Padris used to exchange tobacco with the soldiers; Padri and non-Padri had drawn nearer to one another. When the Padris summoned their companions to fight against the unbelievers, the appeal found a wide echo.

After the rising the colonial troops again assumed the offensive. Gradually the conquerors enforced their authority. Only the Padris of Bondjol still resisted, they now formed the war party; any one of like views joined them. When the fortress was finally stormed in 1837, the Padri movement came to an end. Tuanku Imam finally surrendered and was banished.

The object which the Padris had originally aimed at was not attained; the matriarchal institutions still survived. If the movement had exerted any influence at all, it was in the direction of a more accurate and general observance of the law, especially of ceremonial. Nothing very definite can be said about it. We have no information about the situation in the country before the rise of the Padris. The movement can hardly have passed without leaving any trace at all.

**PAHANG.** [See MALAY PENINSULA.]

**Pāi** (Hind.), anglicé pie, the smallest copper coin of British India = 1/24 of an anna. Originally, in the East India Company's early experiments for a copper coinage, the pie as its name implies, was the quarter of an anna on piece [cf. PAISI]; since the Acts of 1835, 1844 and 1870, however, the pie has been 1/2 of a piece.

(J. Alias)

**PAISĀ** (Hind.), anglicé pice, a copper coin of British India = 3 pies or 1/4 anna. Under the Moghuls the name paisa became applied to the older dama, introduced by Sher Shah, 40 of which went to the rupee, as the unit of copper currency; the name found on the coins however is usually simply *paisa* or *pērāṇi*. Paisā is the general name for the extensive copper coinage coined in the xvnth and xviith centuries by the numerous native states which arose out of the Moghul empire (cf. J. Prinsep, *Useful Tables*, ed. E. Thomas, London 1858, p. 62 sqq.).

(PALÁHENG, P.AHLING (v.), lit. string, rope, halter, cord, is applied to the cord worn by dervishes around the neck, at the end of which hangs a many-rayed star of carnelian, the size of a crown piece, called *teslim tash*, which is given to the young dervish at the end of his discipleship. With some, especially the Bektaşıi dervishes [cf. BEKTAŞI], a number of olive-shaped, whitish-grey, transparent stones are strung on the cord; these are found in Mesopotamia and called *durri Nefjef* ("Pearls of Nefjef"). The jasper (Turkish *yedikum*) from which the *teslim* stones of the Bektaşıi maves are made is said to be found in the neighbourhood of the tomb of Hâddij Bektaşı.

PALANPUR, a Muslim state in India now included in the Western India States Agency. The territory incorporated in this agency includes the area formerly known as Kathiawar together with the Cutch and Palanpur agencies. Its creation in October 1924, marked the end of the political control of the Government of Bombay and the beginning of direct relations with the Government of India. The old Palanpur Agency with its headquarters at the town of Palanpur was a group of states in Gudarjat [q. v.] lying between 23° 25' and 24° 41' N. and 71° 16' and 71° 46' E. It was bounded on the north by the Rājput states of Udaipur and Sirohi; on the east by the Mahā Kāntha Agency; on the south by the state of Baroda and Kathiawar; and on the west by the Rann of Cutch.

The state of Palanpur was conquered towards the end of the sixteenth century by Lohānī Pathāns, subsequently known as Dīthloris. A short account of its history under the Mughal emperors will be found in the Gazetteer of Bombay, v. 318—324, and in the Mirāt-i Aḥmadī (Ethê, No. 3599, fol. 741). British relations with this state date back to the year 1809, when, through British influence, arrangements were made for the payment of tribute to the Gaekwar of Baroda (Aitchison, vi., Ixxxix.). This engagement was further strengthened by an agreement signed on November 28, 1818 (see cit., xcl.). In 1819, an agent from the Gaekwar was abolished and the finances of the state remained under British supervision until 1874 when the ruler of Palanpur was entrusted with the management of his own finances.

Palanpur is still ruled by Lohānī Pathāns. It has a population of 264,179, of whom 245,000 speak Gudarinjāt. The distribution of population according to religion is as follows: Hindus, 222,714; Muhammadans, 28,690 and Jains, 12,542.

PALMYRA, Tadmur, now Tadmur, the ancient Tadmor, called Palmyra by the Greeks probably a corruption of the older name by a popular etymology; cf. Hommel, in Z.D.M.G., xlv. 547; M. Hartmann, in Z.D.P.V., xxii./ii. 128 sqq.) lies northeast of Damascus in the great desert in an oasis watered by two springs. The water is sulphurous but drinkable after it has settled. The climate is unfavourable, having great differences of temperature between day and night and being unbearable hot in summer and sometimes having snow in winter. What lacked in climatic conditions was compensated for by its situation which made Tadmur an important junction on the caravan routes connecting east and west, notably that from the Euphrates to Damascus. The natural supposition that the place was already of importance and settled in early times has been confirmed by several inscriptions of Tiglat-Pileser I of the sixth century B.C. because the "town of Tadmor in the land of Ammurru", which the Assyrian king mentions, can hardly be anywhere else (R. Meissner, in J. L., Z., 1923, p. 157; Dhorine, in R., B., 1924, p. 106). Otherwise the city is not mentioned till shortly before the beginning of the Christian era and in the Old Testament only in a peculiar gudproquo. While in 1 Kings ix. 18 in the accepted text it is said that Solomon built Tamar (in southern Palestine) among other towns, the Chronicler (ii. 8, 4) followed by the variants and by Josephus, *Antiquities*, viii. 6, 1, gives Tadmor instead. From this it appears that the latter in his time must have been of some fame and size and also that the later widely known legend according to which Solomon built the wonderful city, was already in existence. This story was known at a later date to the Arabs among whom it was related, in keeping with the fantastic elaboration of the legend of Solomon, that the qīnīn helped the king in the building (cf. Nasaf, v. 22, 13). In the seventh century, p. 514 and several of the Arab geographers mentioned below; according to Ibn al-Athīr, ed. Tornberg, i. 166 the queen Bilkis visited Solomon in Tadmur and is buried there.

Its incorporation in the Roman empire was of the greatest importance for Palmyra. Its already busy trade increased enormously and great wealth poured into the town, surrounded by the dry sand desert (on the roads connecting Palmyra with the other world see Dussaud, *Topographie historique de la Syrie antique et médiévale*, 1927, p. 248—270). From this period dates the brief but accurate account of Palmyra by Pliny (*Hist. nat.*, v. 25). The merchants were able cleverly to use the enmity between Rome and Parthia for their own advantage, and the conditions, when the emperor Hadrian, by the clever stroke of policy of leaving Assyria and Mesopotamia to the Parthians, inaugurated a long period of peace, contributed still more to the prosperity of the town. The customs tariff of the year 136 written in Aramaic and Greek gives a vivid picture of the business life of the Palmyrene republic in this period, while the splendid ruins of the temple of the sun and of several other fine buildings show how highly developed was the artistic sense of its citizens under Greek influence. In the third century, further prospects opened up which induced the Palmyrenes for a brief period to dream of a new power in the east with their city as its centre. At the beginning of the third century arose the new Persian dynasty of the Sassanians which revived the ancient bitter feud with the Romans so that the Palmyrenes again had an opportunity to use their diplomatic ability. The Palmyrenes under Odenathus (Udhaina) II at first wanted to join the Persians under Shāpur (241—272) but, when his offer was rejected, he joined the Roman general Ballista in Asia Minor and inflicted a heavy defeat on the retreating Persians. Under Gallienus he became the actual ruler of the whole of the east and was given the title Augustus by the emperor. When in 266—267 he was murdered, his dignity passed to his son Vaballathus, but the real power was in the hands of his widow Zenobia (Zainab), a highly gifted lady who extended her kingdom, notably by the conquest of Egypt. This was done with the approval of the emperor Aurelian, but Palmyra soon rebelled against the Romans and in 270 a battle was fought in which Zenobia was
defeated. Palmyra then surrendered. When it rebelled again, Aurelian had the city with its fine buildings destroyed. Zenobia fled, was captured and brought to Rome. This queen, distinguished alike for her beauty and intellect, made a great impression on her contemporaries and her memory survived among the Arabs under the name of al-Zâdâkāi although only in fabulous tales in which little of history remains. She is said to have enticed the Arab king Dhulgharma [q.v.], and the article hitka to her and then killed him by opening his arteries. His nephew 'Amr b. 'Ahi wished to evade his obligation as avenger of blood but was forced by the cunning Kaṣr to do so and when the latter by stratagem got the cunning queen in his power, she took poison which she always carried in a ring she wore, in order not to be put to death by him.

With the fall of Zenobia, Palmyra lost its importance. The walls however were rebuilt although not on the former scale but the trade, the source of the town's livelihood, began to dry up. In this period Christianity began to spread in the town; bishops are mentioned and Justinian among others built a church there. Palmyra remained under Roman rule for about 3½ centuries until the Arab conquest put an end to it. When Khalid b. al-Walid approached the town on his celebrated campaign, the inhabitants thought of defending the town against him but abandoned the idea and capitulated voluntarily in order to secure the status of diammis [q.v.]; they seem however to have rebelled against it for it was only when Yazid sent Dihya against it, after taking the Damascans, that it was finally subjected.

Palmyra never regained its former prosperity under Muslim rule. It was inhabited mainly by Kalâbâš and was one of the towns which rebelled against Marwan II who set out with an army against it. An agreement was come to however, but according to Ibn al-Faḳīh (298 = 902), Marwan had a part of the walls destroyed. According to the legend, he abandoned the idea of destroying the town completely when he came upon the corpse of a richly dressed woman on whose forehead was a plate of gold with an inscription warning him against doing so.

Several Arab geographers mention Tadmur but very briefly. Some of them speak of the wonderful buildings and ruins, and as a rule they repeat the old legend that the town was built by Solomon with the help of the djinn. Yākūt makes the intelligent observation that people are everywhere inclined to attribute great buildings to this king. The terrible earthquake of 1157 affected Palmyra. Benjamin of Tudela (1173) makes the rather remarkable statement that no fewer than 2,000 Jews were able to bear arms in the town. Dimishk mentions along with incomparable ruins the djinn's roof of which was formed of 15 stones. The strong citadel of Kal'at al-Man north of the town is ascribed by the inhabitants to the famous Druse king Faṭḥr al-Dīn [q.v.] but this is doubtful. Palmyra disappeared in the period of great decline in the east; its inhabitants finally lived in a wretched village built on the court of the temple of the sun, quite forgotten by the west.

Not till 1678 was the once so famous city again discovered by members of the English factory at Aleppo and in 1751 it was more closely explored by Robert Wood and described in a handsome volume. When traffic began to revive again, Palmyra resumed its importance as a station on the caravan routes and in quite recent times new life has been given it by the motor, the means of transit across the desert; these give a rapid and comfortable connection between Palmyra and the cities of east and west.

(FR. BUHL)

PAMPULUNA. Sp PAMPLONA, Ar. BANBALUÑA, a town in the north of Spain, capital of the province of NAVARRE, has at the present day about 30,000 inhabitants. It was conquered by the Arabs in 121 (738) during the rule of the walī 'Oṯbā b. al-Hadjiḏād; but the occupation of the town and its territory was of very short duration. It soon became the capital of the province of Navarre when García Iūgō tried to found a small independent state; later at the beginning of the tenth century, it was the capital of the first king of Navarre, Sancho Abarca. Several expeditions were sent against Pampuluna by the 'Umayyad emirs of Cordova, in 228 (843), 240 (860), and in 260 (874). 'Abd al-Raḥmān III succeeded in taking it for a time in 312 (924) in the course of his campaign against Navarre and destroyed it. Other attempts against Pampuluna were made by the Muslims in 322 (934) and during the rule of the two 'Aмиr b. Harb b. al-Masāf [q.v.] and al-Muẓafar [q.v.]

(E. LEVI-PROVENCAL)

PANDJĀB, the land of the five rivers, is a province of modern India which, together with the North-West Frontier Province and Kashmir [q.v.], occupies the extreme north-western corner of the Indian Empire, and, with the exception of
the recently-constituted Delhi province, comprises all of British India north of Sind and Râjpûtâna and west of the river Dijama. Geographically therefore it includes more than its name implies, for, in addition to the country watered by the Dijehluin, Cina, Kâwi, Beas, and Sâlejeh, it embraces the table-land of Sirhind between the Sâlejeh and Dijama, the Sind-Sâgar Dôâb between the Sâlejeh and the Indus, and the district of Dera Ghâzi Khân. Administratively the province is divided into two parts, British territory and the Pandjâb States. British territory, which has an area of 99,265 square miles and a population of 23,580,552, is divided into 29 districts, each administered by a deputy commissioner. These districts are grouped into the five divisions of Amilâ, Lâjûndur, Lahore, Râwalpindi, and Multân, each under a commissioner. The Pandjâb States have an area of 37,699 square miles and a population of 4,910,005. The conduct of political relations with Dâjdjâna, Patawdi, Kalsi, and the 27 Simla Hill States is in the hands of the Pandjâb Government. The remaining states of Lohâna, Sirmûr, Bilsâpur, Mandi, Suket, Kapurthâla, Maler-Kotla, Faridkot, Cambâ, Bahâwâlpur, and the Phûlkiun states of Pâttali, Dînd, and Nabhâ, are directly under the Government of India.

The history of this area has been profoundly influenced by the fact that the mountain passes of the north-west frontier afforded access to the Pandjâb plains. For this reason it is ethologically more nearly allied to Central Asia than to India. The recent excavations at Harappa in the Montgomery district are evidence of a culture which probably flourished in the Indus valley about 3000 B.C., and which bears a general resemblance to that of Elam and Mesopotamia (Sir John Marshall, *Mohenjo-Daro and the Indus Civilization*, 3 vols., 1931). But the first migration of which we have any evidence is that of the Aryan-speaking peoples who established themselves on the Pandjâb plains in prehistoric times. Centuries later successive waves of invaders swept like devastating torrents through the mountain passes of the north-west. Persian, Greek, and Afghan, the forces of Alexander and the armies of Mahmûd of Ghâzni, the hosts of Timûr, Bûbur, and Nâdir Shâh, and the troops of Âhmad Shâh Durrânî [cf. these articles], all advanced by these routes to lay waste the fertile plains of the Pandjâb. All these migrations and invasions added to the heterogeneity of the existing population in the land of the five rivers. The history of invasions from Central Asia proves that the Pandjâb and the frontier zone from the banks of the Indus to the Afghan slopes of the Sulaimân range have never presented any real barrier to an entering general. The Sulaimân range itself has seldom formed a political boundary, for the Persians, Mauryas, Graeco-Bactrians, Sakas, Pahlawas, the Kshâs branch of the Yueh-chi, and the Hansu all besride this mountain barrier.

The capture of Multân [q.v.] by Muhammad b. Kâsim [q.v.], in 713 A.D., extended Arab power to upper Sind and the lower Pandjâb, but the real threat to Hindustân came from the direction of modern Afghanistan. The Ghâznawî invaders found the powerful Hindûshâhiya dynasty of Waghând ruling between Lamâghan and the Cînâb. The power of this Hindu state was completely shattered by Mahmûd of Ghâzni who annexed the Pandjâb, which became a frontier province of his extensive empire and the sole refuge of his descendants when driven out of Ghâzni by the Shâhsâbâni sulûtans of Ghôr [see Ghôrîun]. Multân and the surrounding country had remained in Muslim hands since the days of the Arab conquest, but the fact that its rulers were heretical Karâmaân [q.v.] was one reason for Mahmûd’s attack in 1006 A.D. Muhammad Ghôri annexed the Pandjâb in 1186 A.D. and on his death in 1206 A.D. it definitely became a province of the Sulûtane of Dihli under the rule of Kûrât el-Din Aîbar. With the exception of occasional rebellions and raids from Central Asia it remained under the Sulûtans of Dihli until the defeat of Itrâm Lodi [q.v.] by Bâbur at Panipat [q.v.] in 1526 A.D. paved the way for the foundation of the Moghul empire. Under Akâbar [q.v.] the modern province of the Pandjâb was included in the sîhab of Labûr, Multàn, and Dihli, a detailed description of which will be found in the *Ain-i Abkâr* (transl. Jarrett, ii, 278–341).

The persecuting policy of Akbar’s immediate successors led to the growth of Sikh political power in the Pandjâb and transformed a band of religious devotees, founded by Guru Nânak in the second half of the fifteenth century, into a military commonwealth or Khâlîa animated with undying hatred toward Muslims [cf. the art. sikhs]. The weakness of the central government and the unprotected condition of the frontier provinces under the later Moghul exposed Hindu斯坦 to the invasions of Nadir Shâh [q.v.] and Âhmad Shâh Durrânî [q.v.]. On the bloodstained field of Panipat, in 1761, the Marâthâs, who were aspireing to universal sovereignty, sustained a crushing defeat at the hands of the Afghan invader. In the following year, at Barmâla near Ludhîna, Âhmad Shâh disastrously defeated the Sikhs who had taken advantage of his absence in Kâbul to possess themselves of the country around Lahore. The Sikhs, however, soon extended their sway to the south of the Satlej and ravaged the country to the very gates of Dihli, but their further advance was checked by the Marâthâs who had rapidly recovered from their defeat at Panipat. It was the defeat of the Marâthâs by Lord Lake, in 1813, which facilitated the rise of Ranjit Singh and enabled him to found a powerful Sikh kingdom in the Pandjâb. His attempts to extend his authority over his co-religionists, the cis-Satlej Sikhs, brought him into contact with the British, and, by the treaty of 1809, he pledged himself to regard the Satlej as the north-west frontier of the British dominions in India (Atchison, viii, No. iiii.). After the death of Ranjit Singh, in 1839, his kingdom rapidly fell to pieces under his successors. Revolution succeeded revolution, and during the minority of Dalip Singh the Khâlsah soldiery became virtually rulers of the country. Unprovoked aggression on British territory produced two Sikh wars which ended with the annexation of the Pandjâb in 1849.

At first the newly-conquered territories were placed under a Board of Administration. This was abolished in 1853, its powers and functions being vested in a Sikh Commissioner. In 1859, after the transfer of the Dihli territory from the North-Western (now the United) Provinces, the Pandjâb and its dependencies were formed into a Lieutenant-Governorship.

The annexation of the Pandjâb by advancing the British administrative boundary across the Indus
brought the Government of India into closer contact with the Pathan tribes of the north-west frontier and the Amir of Afghanistan [q. v.]. Because this frontier was too long and too mountainous to admit of its being defended by the military alone, much depended upon the political management of the tribes. At first there was no special agency for dealing with the tribal tracts, and relations with the tribesmen were conducted by the deputy-commissioners of the six districts of Hazara, Peshawar, Kohat, Bannu, Dera Ismail Khan, and Dera Ghazi Khan. In 1870, the three northern districts formed the command of Peshawar, and the three southern ones that of the Derajat. The system of political agencies was not adopted until 1878, when a special officer was appointed for the Khyber during the Second Afghan War. Kurram became an agency in 1892, while the three remaining agencies of the Malakand, Tochi, and Wana were created between 1895 and 1896. The Malakand was placed under the direct control of the Government of India from the outset, all the other agencies remaining under the Punjab Government. This was the arrangement until the creation of the North-West Frontier Province in 1901.

The Punjab attained its present dimensions in 1911 when Dihlī became a separate province. It was not however until 1921 that it was raised to the status of a governor's province. To-day it contains 14,930,000 Muhammadans, 8,600,000 Hindus, and 4,072,000 Sikhs. Unfortunately the spirit of communal antagonism has been fanned in the province by the activities of the tazlīm, Ṣuḥāṭi ʿUlamā, and tablíqh movements organized by Muslims for the purpose of combating the proselytizing activities of the Hindu community known as the ṣuddih movement. In 1926 Swami Sharanandā, a leader of the ṣuddih movement, was murdered in Dihlī by a Muslim. Communal relations were further embittered by the murder in Lahore of a Hindu bookseller who had published a libellous attack on the character of the Prophet of Islam in his book entitled the Rangīla Rasul. Far more serious than this communal strife were the political disturbances culminating in the Diallāgo Bahā Banūgī invasion of 1919 (Sir M. O'Dwyer, India: It is Now, 1883—1925).

At least 90 per cent. of the total population live in villages and 60 per cent. is supported by agriculture, for the Punjab is a country of peasant proprietors. But the bulk of the cultivators are born in debt, live in debt, and die in debt. Almost the whole of this money has been advanced by Hindus and Sikhs who are not debarred from religion from the taking of interest, but, unfortunately, well over half of this debt has been incurred by Muhammadans. No community can hope to thrive under a system of banking and some organization to combat this evil is essential to the prosperity of the Muhammadan community.

PANDJĪDĪ, (Pandjīdeh) a village in the Turkoman republic of the U.S.S.R., situated to the east of the Kushtı river near its junction with the Murghab at Pul-i Kḥštī. The fact that the inhabitants of this area, the Sarik Turkomans, were divided into five sections, the Sotkis, Harzagis, Khurāsānīs, Baiāq, and the ʿAli Shāh, has been put forward as a possible explanation of the origin of the name Pendjeh, but it carries no weight as the Sariks were only nineteenth century immigrants whereas the name was in use in the fifteenth century.

This obscure oasis owes a somewhat melancholy importance to the "Pendjeh Incident" of 1885, when an Afghan force suffered heavy losses in an engagement with Russian troops. History proves that an ill-defined boundary is a potential cause of war. It was a knowledge of this and the Russian occupation of Merw, in 1884, that gave the necessary impetus to negotiations which ended in the appointment of an Anglo-Russian Boundary Commission for the delimitation and demarcation of the northern boundary of Afghanistan. Trouble immediately arose in this quarter for while the Russians contended that the inhabitants of Pendjeh were independent the British held the view that they were subjects of the Amir of Afghanistan. According to the British, the district of Pendjeh, which comprised the country between the Kushtı and Murghab rivers from the Band-i Nadir to Ak Tepē, together with the rest of Badghis, formed part of the Herat province of Afghanistan. During the first quarter of the nineteenth century Pendjeh had been occupied by Djamshīdīs and Hazaras. Towards the end of this period some Turkomans of the Erarsi tribe, whose settlements were scattered along the banks of the Oxus between the Čardjū and Balkh, moved to Pendjeh and obtained permission to settle there. Sarik Turkomans had also settled in this area. About 1857 the Ersaris migrated from the oasis of Pendjeh and soon afterwards the Sarik Turkomans, forced southwards by their more powerful neighbours, the Tekkes, occupied Usaband and Pendjeh and compelled the Sarik families to migrate elsewhere. Although, therefore, Pendjeh had from time to time been occupied by various tribes, they had all, whether Djamshīdīs, Hazaras, Ersaris, Sariks or Sariks, acknowledged they were on Afghan soil and paid tribute to the naʿīb or deputy of the Afghan governor of Herat. The Sarik Turkomans had even supplied the Amir with troops. The British therefore contended that the district of Badghis, of which Pendjeh formed a part, had long been under Afghan rule (Foreign Office MSS. 65; 1205).

The Russians on the other hand contended that
the people of this oasis had always enjoyed independence. Lessar, a Russian engineer, who visited Pendjeh in March 1884, discovered no trace of Afghan authority, but a Russian doctor, named Regel, who visited it in June of the same year reported the presence of an Afghan detachment. In their opinion therefore Pendjeh had only recently been occupied by Afghan troops.

The fact that the Afghans had not permanently given up this area was no proof of its independence. On the contrary, it was only natural that, in the Russian occupation of Merv and Pul-i Khutan, 'Abd al-Rahman Khan should have taken steps to indicate his sovereign rights over this area. When, therefore, an Afghan garrison occupied Pendjeh, the Russian Government immediately protested and disputed the Amir's claim to the territory. While negotiations were taking place between London and St. Petersburg events moved swiftly on the frontiers of Afghanistan. On March 29, 1885, General Komarow sent an ultimatum demanding the withdrawal of the Afghan garrison. The Afghans resolutely refused to withdraw whereupon the Russians attacked them driving them across the Pul-i Khihti with the loss of some 900 men. It must be admitted that the posting of Afghan troops in Pendjeh, and the Russian advance to Yulatan on the Murghab and to Pul-i Khutan on the Hari Rud, were regrettable actions with far-reaching results. The whole incident should have been avoided, but the confusing reports of Lumsden, the British Commissioner, to the Foreign Office, and the delay of Zelenoi, the Russian Commissioner, in arriving at Sarakhs complicated matters still more.

At the time this incident seemed likely to embroil Russia and Britain in war, but, fortunately, the good sense of the Amir, who was at this critical moment on a visit to the Viceroy, and the diplomatic skill of Lord Dufferin prevented this, for even the pacific Mr. Gladstone had proposed to Parliament that £11,000,000 should be expended on preparations for war.

It was finally agreed that Pendjeh should be handed over to Russia in exchange for Dhl'l-Fikar, and by the year 1886 the northern boundary of Afghanistan had been demarcated from Dhl'l-Fikar to the meridian of Dukul within forty miles of the Oxus. After a dispute as to the exact point at which the boundary line should meet the Oxus, the process of demarcation was completed in 1888. This recognition of a definite frontier between Russia and Afghanistan led to a decided improvement in the Central Asian question.

Pangulu (Jav.), pangulu (Sund.), pangolo (Madur.), literally "headman, director" used in the east Indian Archipelago as the name for secular and religious chief administrators, in the islands of Java and Madura the name of a mosque official, namely the chief in his area. The official representatives of religion are organised there on the same scheme as the native administrative officials. Alongside of the regent, the highest administrative official, is the pangulu of the regency, alongside of the head of the district is the pangulu of the district, called the pangulu naib or briefly naib, and so on. The officials of the mosque are graded in a hierarchy; the pangulu at the capital of the regency is at the head of all the personnel of the mosques of the regency. The village official in charge of the divine services is of a different origin. He is a member of the village authority for attending to the religious requirements of the villagers. He is not related to the status of the mosque. This man is exceptionally called pangulu in Bantun (Western Java); elsewhere he is known by other names.

The pangulu is the director of the mosque and the chief of its personnel; according to a juk law, he is appointed, like the rest of the staff of the mosque, by the regent, usually being chosen from the staff of his own or another mosque. This procedure does not always guarantee that the man appointed is specially qualified (see below).

Theological training is quite free from special prescriptions. The student of theology, whether he intends to take up an official position or remain a private student, studies at schools (all private institutions of which there are many in the land). Each studies as he pleases, for shorter or longer period, just as he likes; an effort is made to attend lectures at several schools.

The funerals of the pangulus are very varied, but not uniform throughout the whole regency. The office of director of the mosque has already been mentioned; in larger villages, especially at the capital of the regency, the staff is large: there the pangulu does not himself take part in the work. The pangulu has charge of marriages which are concluded in his presence: jahāb and ruqūf are pronounced by him and marriages are registered by him. The pangulu of a regency only performs this office in the case of very prominent families; in this case it is the custom to conclude the marriage in the house of the family. The pangulu also performs the ceremony when the wali of the bride appoints him wakil, a regular custom, observed by the majority without the reason being quite clear to them; to the popular mind the pangulu is the person who binds in marriage. It is therefore a very old custom to have the marriage performed in the mosque by the pangulu: this unwritten custom has now been given the force of law by a colonial enactment (since 1895, the law in question is of 1889). This law also regulates the fees to be paid at marriages, proclamations of jahāb and ruqūf, taking the old customs as the guiding principle. These fees form the most important part of the income of the pangulu and his staff; the latter also receive their share; if properly qualified they frequently act as deputy for the pangulu at marriages. Women who have no wali are married by the pangulu as walī hākim. The number of pangulus with this qualification is always less than the number of officials appointed to perform marriages. In some districts the regent appoints himself wali hākim but in practice he leaves the exercise of his rights to the pangulu.

The djakat (Ar. sakit) is of course not collected in Java and Madura by the authorities; it is, if it is levied at all, a free-will offering and in many places insignificant. Only in Western Java was the collection at one time organised and in the

hands of the mosque officials. The revenue went to them. To this day the djbabat is still a con-
siderable source of revenue for the panguol, especially in western Java. 

The panguol — this is true only of the panguol of the regency — is also the kend; but his jurisdiction is limited to family law and the wukab (Ar. waqf.) estates. The office of kend is his main sphere of activity. These judicial functions of the panguol have a curious history. The 
colonial authorities thought from the official position of the mosque officials that they were priests; 
they further thought that they had to deal with a collegium because the panguol sits with some 
of his subordinates to assist him when in legal session. This misunderstanding was perpetuated 
50 years ago in colonial legislation. The panguol was made president of a bench of judges; his 
assessors were appointed by the authorities and chosen from the subordinates of the panguol and 
private individuals learned in law. In this way a panguol of lower rank may be a member of a 
"priestly college". It is now intended to restore the old state of affairs. The "college" is to be 
abolished and the panguol's court i.e. one in which the panguol, sitting with assistants, will be 
sole judge, will take its place. The law is 
prepared but has not yet been put into operation (1934). The "priestly college" holds its meetings 
in a room in the mosque. Most of the cases are 
brought by women. In Western and Central Java 
it is the regular custom for the husband immedi-
ately after the wedding to be forced to pro-
nounce the tawzik in a way which, from the 
legal point of view, is not quite free from ob-
jection. If he does not fulfill the obligations which 
he takes upon himself in the tawzik formulae and 
if the wife is not satisfied she brings the matter 
before the "college" and the latter pronounces that a tawzik has taken place. These are the most 
common cases. In Eastern Java and Madura a facilitated faikk takes the place of the tawzik. We 
also find cases in the rest of Java where the "priestly college" decides questions of faikk. Women 
who are refused nafaka also apply to the "college". 
If there are difficulties after a divorce about the 
division of property acquired during marriage, or 
if the heirs to a property are dissatisfied with the 
decisions of an ordinary panguol, the matter is 
referred to the "college" for decision. The method 
of procedure is as follows. The "college" gives 
its verdict as to how the property should be 
divided according to the sharfa. If the parties 
prepare to carry this out but all are not ready to 
do so, the scheme can only be legally enforced 
when the secular court has given authority. This is 
always done if the verdict of the "priestly college" is 
formally in order; no test is made of its material 
correctness. Fees have to be paid whenever ap-
lication is made to the "college"; a considerable 
revenue is gained from the division of estates as 
in such cases the "college" gets a percentage of the 
objects in dispute, often up to 10%; hence the name 
maran. The "college" is consulted also in other matters 
of family law but these are of less importance. 
Finally there are wukab foundations the founders of which intended the revenues for mosques, schools of religion, or cemeteries. It is the task of the 
"priestly college" to decide according to the sharfa 
such disputes as arise and in general to supervise the 
administration.

The Encyclopaedia of Islam, III.

The panguol in the native states are appointed by the princes; their sphere of activity is the same. 
Whenever a new panguol is appointed he is given 
his appointment as kend by an edict "in confirmation 
of my oral command", as the phrase is, in order 
to comply with the demands of the sharfa. In 
this edict the phraseology suggests that the ruler 
hands over his jurisdiction to the panguol. 

The Netherlands Indies colonial law requires the 
presence of the panguol when Muslims appear 
in the government courts as accused in civil or 
criminal cases. A number of such assessors are 
attached to each court according to its requirements. 
They are appointed by the government and chosen 
from the personnel of the mosques. It is arranged 
that the director of the mosque is at the same 
time an assessor. The right of appointing panguoL 
has thus gone out of the hands of the regents 
into those of the colonial administration. As 
the panguol is usually chosen from the lower staff, 
the government has been able to secure influence over 
the appointment of these minor officials so far as 
they are capable of being panguol. The object is 
to choose as competent men as possible, so that 
the prestige of the panguol has increased in the 
Muslim community. This is less true of their 
position as assessors at the courts; the colonial 
law intended that the court should be advised regarding 
the adat (traditional) law. The choice of the panguol 
was therefore a mistake, as the latter goes by the 
akhir books.

The word panguol as the name of a mosque 
official is not unknown outside the islands of Java 
and Madura. In some places there are panguol 
whose work resembles that of the panguol of 
Java, e.g. in the centre of the former sultanate of 
Palembang (Sumatra). The colonial authorities have 
retained the name; they have also given the name 
to the court assessors appointed by them in districts 
where the name was not previously in use.

PANIPAT, a town and kend in the 
Karnāl district of the Pandžāb [q. v.]. On 
three occasions has the fate of Hindustân been 
decided on the plain of Panipat: in 1526, when 
Bābur [q. v.], the Barās Turk, defeated Ibrāhīm 
Lodi; in 1556, when Akbar [q. v.] crushed the 
forces of Hīmā; and lastly, in 1761, when the 
Marāths where defeated by Alīmd Shāh Durrānī 
[q. v.]. The geographical factor combined with 
internal decay and a weak system of frontier defence 
has been chiefly responsible for this. From 
the strategic background of Afghanistan the path for 
invaders lay along the lines of least resistance, 
The Khyber, Kurram, Tochi, and Gomal passes, 
to on the Pandžāb plains, for the Indus has never 
proved an obstacle to an enterprises general. 
Checked on the south by the ports of Rādipūnā, 
incoming armies were forced to enter the Ganges 
and Djamna valleys through the narrow bottle-
neck between the north-eastern extremity of the 
desert and the foot of the Himalāyas.

Bābur's success over Ibrāhīm Lodi, in 1526, has 
long been regarded as resulting from the extensive 
employment of artillery. The source of this error 
is to be found in an inaccurate translation of the 
word 'arūbah. It is true that 700 'arūbas were used

65
by Bābur, but it is incorrect to regard these as gun-carrigges, for the word simply means "carts". There is no textual or circumstantial evidence for supposing that Bābur had guns in such numbers as to demand 700 gun-carrigges for their transport. Indeed, from Bābur’s "Autobiography" it may be inferred that he possessed two guns only and Bābur himself makes his victory a bowman’s success. The importance of the first battle of Pānpat is that it decided the fate of the Lodi dynasty. Far more formidable was the resistance offered by the Rājpats at Kāhna in the following year.

The second battle of Pānpat, in 1556, when Akbar defeated Hājīm, is of outstanding importance in the history of India, for there was no Moghal empire before Akbar, only the attempt to create one. After his victory over the Marāthas in 1761, Aḥmad Shāh Durrānī made no attempt to consolidate his position in Hindustan but returned to Afghanistan. The Marāthas were only temporarily crushed, for they rapidly recovered from this defeat and, by 1771, were once more a menace to the peace of India. The importance of this battle is that it facilitated the growth of British power.

Pāra, a Turkish coin, originally a silver piece of 4 akēs, first issued early in the sixteenth century; it soon replaced the akē as the monetary unit. The weight, originally 16 grains (1.10 grammes), sank to one quarter of this weight by the beginning of the sixteenth century and the silver content also depreciated considerably. The multiples of the silver pāra were 5 (beşlik) pāras, 10 (emlik), 15 (oveşlik), 20 (yigimparalik), 20 (paralik) and 40 şirvān or piastre. Higher denominations were 60 (almilik), 50 (tehtlik) and 100 (yuluk) pāras were occasionally issued.

In the new Medjidieh currency of 1260 (1844) the pāra became a small copper coin with multiples 5 (beşparalik), 10 (onparalik), 20 (yigimparalik) and 40 (şirvān). In the later years of the Turkish empire, the larger copper pieces were replaced by nickel. The pāra under the republic is a money of account, the 100 pāra or 2 1/2 piastre piece of aluminium bronze being the smallest denomination issued.

When Serbia became independent it retained the same para for its smallest coin as did Montenegro also. The name survives in Yugo-Slavia, where the nickel 5 para piece is the smallest coin issued. During the Russian occupation of Moldavia and Wallachia in 1711-1744 copper coins were issued with the value in paras and copceans.

Pārgana, the Indian name for an aggregate of villages. The first reference to this term in the chronicles of the Sullāmaste of Delhi appears in the Ta‘līkārī Fīrūz Shāhī of Shams-i Samā‘ī ʿAffi (Bibliotheca Indica, 1891, p. 99), for it is not used by Hasan al-Nṣāmī in his Ta‘līkārī al-Marā‘ṣir or by Muhammad al-Din in his Ta‘līkārī Naṣīr. Although it first came into prominence in the sixteenth century partially superseding the term ḥātha, it is, in all probability, based on still more ancient divisions in existence before the Muslim conquest. The exact date of its creation is therefore uncertain.

An account of the internal working of a pārgana occurs in the chronicles of the reign of Shīr Shāh who learned the details of revenue administration in the management of his father’s two pārganas at Sasrām in Bihār. When he became ruler of Hindustān he organized his kingdom into administrative units, some of which were divided into villages termed pārganas. Each pārgana was in charge of a āmin or military police officer who supported the amin or civil officer. The āmin had for his civil subordinates a āmin-i āhad or treasurer and two kārāns or clerks, one for Hindi and the other for Persian correspondence. It does not seem correct to hold the view that in this respect he was an administrative innovator, for the provincial officials and institutions which he has been credited with creating were already in existence before he ascended the throne. This remained the administrative system until Akbar organized the Moghal empire into sāhs (provinces) which were divided into sarārs (districts) The smallest fiscal unit under Akbar was the pārgana or mahāll. Thus, for example, the sāḥ of Oudh was divided into five sarārs and thirty-eight pārganas (Āmin-ī Akbari, in Bibliotheca Indica, ii, 170-177 [tr. Jarrett, 1891]). Under the Moghal emperors the chief pārgana officials were the sāḥnāg, the āmin, and the āmin-i wakil, who were responsible for the pārgana accounts, the rates of assessment, the survey of lands, and the protection of the rights of the cultivators. Similarly in each village a patwāri or village accountant was appointed whose functions in the village resembled those of the sāḥnāg in the pārgana. It must not be imagined that the pārgana was a stable and uniform unit. Not only did it vary in area in different parts of the country, but often a new land settlement was followed by a fresh division and re-distribution of these fixed areas. The extentiveness of a pārgana with the possessions of a clan or family has given rise to the suggestion that it was not only a revenue-paying area, but that it was founded on the distribution of property at the time of its creation.

The Twenty-four Pārganas: a district of Bengal lying between 21° 31' and 22° 57' N. and 88° 21' and 89° 06' E. It derives its name from the number of pārganas comprised in the zamindāri extended to the English East India Company in 1757 by Mir Jafar, the Nawb of Nāgin of Bengal. This was confirmed by the Moghal emperor in 1759 when he granted the Company a perpetual heritable jurisdiction over this area. In the same year Lord Clive, as a reward for services rendered to him by Mir Jafar, was presented with the revenues of this district. This grant which amounted to £ 30,000 per annum, made Clive both the servant and the lord of the Company. The sum continued to be paid to him until his death in 1774, when, by a deed sanctioned by the emperor, the whole proprietary right in the land and revenues reverted to the Company.

Bibliography: given in the article. (C. Collin Davies)
PĀRŚĪS. Under this name (Pahl. pāršīk, Mod. Pers. pārsī literally “inhabitant of Pār”) are known the Zoroastrian Iranians, who, after the Arab conquest, refusing to adopt Islam per se and after various vicissitudes finally settled in India in Guḍarj, where they now form an ethnical and religious group of 100,000 persons (105,778 according to the census of 1921). At the present day the name Pārīs is beginning to be used also for the Zoroastrians remaining in Iran instead of āfa, the somewhat contemptuous significance of which [cf. Mārg.] is no longer in keeping with the spirit of tolerance which is increasing every day in Iran.

What we know of the wanderings of the Pārīs before their arrival in their present abode in India is based principally on two narratives: Kīšāb-i Sandjān, written in verse by a Zoroastrian priest named Bāman Kābūd of Nawsāri in the year of Yazdagird 569 (1600 A.D.) and Kīshāb-i Zir-tahtyin-i Hindustān ou Bayān-i Aṭāt-i Bābār-i Nawsāri, a work written at the end of the xvith century by the Dastur Shūpūrdji Manockdji Sandjāna (1735–1805).

According to these sources, the first group was composed of Zoroastrians who about a century after the Arab conquest went from Khurāsān, where they had sought refuge, to the south, reaching the island of Hormuz at the mouth of the Persian Gulf (754 A.D.). After a short sojourn there they crossed to Īrān on the Gulf of Cambay to the south of the coast of Khūshāvar (756) and remained there 19 years. Continuing their journey southwards they landed at Sandjān (785) and installed the sacred fire there. According to the tradition of the Pārīs priests, before obtaining permission to settle there they drew up for the lord of Dūr, Uṣdhūdī Rānā, a series of 16 šokbas the principal articles of their faith. In these šokbas, of which several versions exist in Sanskrit and Guḍarjī, several points of contact between Hinduism and Zoroastrianism are cleverly brought out. At Sandjān they were twice joined by other bodies of refugees and these formed a community which prospered rapidly and spread to Cambay, Barīw, Bānākān and Ankleśwar. After the year 1000 Pārīs are also found in upper India, but it is probable that these were isolated bodies who came directly from Iran.

In 1490 A.D. the Pārīs who had made common cause with the Hindus were forced by the troops of Sulṭān Mahmuḍ Bigara to abandon Sandjān and take refuge with their sacred fire among the mountains of Barhūt. When the Muslim pressure ceased, the Zoroastrian community resumed its development. According to the date given in Kīshāb-i Sandjān, the sacred fire was installed at Nawsāri in 1491 after the sack of Sandjān, and after a brief period at Barhūt and Bānād it was brought back in 1516.

The sacred fire was installed at Sūrat in 1733 as a result of the raids of the Pindāris but the settlement of the Pārīs in the town dates from the second half of the xvith century. We do not know the exact date when the Pārīs went to Bombay, which is now the principal centre of the Pārīs community in India.

The Pārīs were able to settle in India without meeting any opposition mainly owing to the excellence of the moral principles of the Mazdæan religion observed in the threefold rule of kūstān, hūsta, hvarshīt—“good thoughts”, “good words”, “good works” — which is found in the Avesta. Although they have always abstained from any proselytising activities, they had the good fortune to attract the great emperor Akbar to the Mazdaean religion. Trustworthy and active, assisted by the fact that the social character of their religion does not prevent adaptation to the forms of western life, they are at the present day a flourishing and well organised community much appreciated for the high standard and dignity of their lives.

The old religious inheritance of Zoroastrianism has been preserved by the Pārīs with remarkable piety. In the xvith century on the initiative of the dāstār Cāngā Ass of Nawsāri a mission was sent to Persia to obtain from the Zoroastrians who had remained there information regarding certain details of the religion. As a result the study of the manuscripts of the Avesta and of the exegetical literature was intensified and at the present day Pārīs scholars are displaying a laudable activity in the publication of the old texts.

The sacerdotal class still occupies a predominant place in the community; its hierarchy (dastār, mohād, hūrd) is a hereditary one.

The interests of the community are managed by a board (khānūd) composed of 6 dastārs and 12 mohāds but with incorporation in the public life of British India the functions of such a committee are gradually diminishing.

The mass of the faithful (bhākū) conform — with a few concessions to the demands of modern life — fully to the ritual prescription of Zoroastrianism. Birth must take place on the floor of the house to show detachment from the things of the world. At the age of 7 there is the investiture with the kūstān, the sacred cord formed of 72 threads which winds three times round life. The funeral rites consist of exposure of the corpse on the tower of silence which is frequented by vultures (dāshīm). In the ceremony of marriage, which tends to monogamy and the marriage of full rights (Pahl. zānīk-i fāšihshāvah) to the exclusion of secondary marriages, Hindu customs have prevailed.

The prohibitions regarding contamination of the sacred elements of fire, water, earth are still scrupulously observed and the greatest care taken in purification after contact with impure objects, especially corpses. The Zoroastrian principles of morality are faithfully observed in all activities of life; hatred of falsehood, honesty in all dealings, assistance of the poor are the regular rules of piety.

The Zoroastrian community in India is keenly interested in the lot of their co-religionists in Iran and it was through the intervention of the Pārīs “Persian Zoroastrian Amelioration Fund” that the drisya paid by the Zoroastrians of Yazd and Kirrān was abolished in 1882 by the Persian government. As a result of the decline of religious intolerance in Persia, there has been an increasing intercourse with the Zoroastrian communities still existing in Iran and the Pārīs community has frequently sent appeals to the Muslims of Persia to ask them to return to the ancient religion.

While as regards doctrine perfect harmony still exists in the community, as regards ritual controversies have not been wanting and are not lacking within it. In 1686 the question of precedence was raised between the priests of Nawsāri and those
of Sandžán. Another question which has been a subject of controversy even since the xviii\textsuperscript{th} century, is the question whether the use of the padān — i.e. a kind of veil placed in front of the mouth to prevent the sacred fire from being contaminated by the breath — should also be put on the dying, thus violating the laws of piety.

Much more serious however is another controversy, that regarding the calendar; it goes back to the xviii\textsuperscript{th} century and divides the community into two sects: the Shahenshāḥi and the Kādīmās.

According to the Avestic calendar adopted by the Pārsis, to make up for the loss of a quarter of a day each year, a month is added every 120 years but this system was not observed during the period of persecution following the Muslim conquest. In 1745 a group of the faithful felt the need for a reform of the calendar; but this group, which took the name of Kādīmās, was opposed by those who wished to adhere to the Hindu system of calculating the months and who took the name of Shahenshāḥi. The result is that the calendar adopted by the latter is a month behind that adopted by the Kādīmās. The Pārsis follow the era of Yazdīgīr which dates from the accession of the last Sāsānīd (June 16, 632).

then have their midday meal, the santri of each pondok forming one mess; this is practically speaking their only meal. All then go to chapel to the salat al-juhr. They are summoned to three further salat in the course of the day. The intervals between them are devoted to lectures and study. The more advanced students are taken together by the teacher; he reads the Arabic text, translates it and adds any necessary notes of explanation. After the salat al-ghfir the day's work is over and the students retire for the night. Some santri may still be engaged on little tasks which may bring them in something, soon these also stop and quiet reigns over all.—Friday brings a variation in this monotonous round; all go to the nearest Friday mosque to attend the salat ad-djunum. Harvest is also a busy time for the santri; they work in the rice-fields or beg for zakat. Many santri go home in the month of the fast.

Fiqh is the primary subject of study in the pasantrens; the Arabic works used are those in use in other Shafi'i lands. There are also a large number of Javanese works; those based on Arabic sources or theological works taken from Arabic are known as kitab. Javanese is the language of the pasantrens; in the Sundanese speaking districts (western Java) Javanese works are more and more replaced by Sundanese. At the same time dogmatics are also studied. Here no particular maqalhab is followed, nor are the works used written only by Shafi'i. Orthodox mysticism is less studied. There is, it is true, a popular form of mysticism tinged with pantheism; but this is less and less taught in the pasantrens. The santri calls the main fiqh book used by him in the pasantren kitab pethik without further qualification (he hardly knows its title) and work on dogmatics kitab usul. Small books for elementary instruction on the duties of religion and dogmatics are also called kitab usul.

The method of instruction is one peculiar to the pasantren. As soon as he has finished the elementary text-books, the student is introduced to more important Arabic texts. He reads them, sentence by sentence, under the supervision of the teacher who himself has perhaps never studied Arabic properly and has only his memory to rely upon for the vocalisation. The sentence is translated into Javanese and paraphrased by the teacher. Finally the student is so far advanced that he can translate easy texts from Arabic into Javanese (a list of the texts most used [at the time] is given in T.E.G.K., W., xxxii. [1886], p. 518 sqq.). This takes a long time; the joy however at seeing his knowledge steadily increasing and the pleasant feeling of being able to read texts in the original spurs the student on. Under Mecca and Hajjramawt influence, however, this method is being gradually driven out by another which begins with Arabic grammar. It certainly seems the more logical; one disadvantage, however, is that the study of Arabic offers so many difficulties to the Indonesians that many lose heart before they succeed in reading texts.

Study at the pasantrens is quite free. Diplomas are neither sought nor given. The student comes and goes as he pleases. The majority when they enter the pasantren have already had an elementary education at home. The desire to increase their knowledge of the faith, the wish among rich and prominent families to see one of their sons devoting himself to the study of religion and among others the hope of gaining a livelihood, bring young men into the pasantren. The santri endeavour to attend the lectures of a number of teachers, each on his special subject. They therefore go from one school to another; some indeed travel about all their lives studying. Others when they think they have acquired sufficient learning settle somewhere, but not in their own districts, as teachers or become assistant teachers in a pasantren or they may prefer to remain "independent scholars". There are no offices for which study in a pasantren is a requisite preliminary; in general the theologians are averse from anything official or belonging to the state but the higher mosque officials have usually studied for a time in a pasantren.

It is considered very reprehensible to give instruction in sacred learning for an agreed fee. Nevertheless, most of the teachers are well to do. Pious gifts are liberally given to them on account of the blessing they bring. The teacher is a most welcome guest at religious feasts, of which there are many in Javanese life. All appeal at all times to his learning or for his intercession; gifts accompany these appeals. New arrivals among the students, if they can afford it, make their offerings; sons of the better situated parents bring back presents when they go home, and poor students work in the teacher's fields.

The majority of the students are poor and indeed live by begging. On certain days they go round the district; their begging is not considered a nuisance; they are assisted readily for they are acquiring sacred learning; to give to them brings a blessing. Work on the land, the copying of Qur'an etc. also bring them in the little they require for their frugal life. The colonial government only troubles about the pasantren in so far as it exercises a general supervision over them; the foundations of new ones are reported to the authorities and the principal has to keep a register of the names of the students and of the titles of the books used.

The spread of schools on the European model has dealt a blow to the pasantrens in recent years. Only the pasantrens could give religious instruction as the public schools instituted by the colonial authorities gave none. On the other hand, only the latter prepared for everyday life. This has resulted in the growth of private schools intended to do both. These are called madrasas and are intended to be schools for all. Attached to the madrasas are schools for higher education; in these religious instruction plays a very prominent part. In these schools which owe their origin to circles influenced by modern ideas, the method of instruction is taken from European models; but their outlook is not by any means broader than that of the old pasantrens. The name madrasa points to Egypt or perhaps Arabia; the organization, apart from the religious instruction, is modelled exactly on the government schools.

In the country of the Minangkabau Malays (Central Sumatra) there are theological seminaries which correspond on the whole with the pasantrens; they are called surau, a name also given to elementary schools, chapels, houses for men, and also to the separate buildings of the institution called surau. The students' houses are not divided into cells; the occupants have a common lecture- and sleeping-room.

Atjeh also has seminaries comparable with the
Javanese. The method of instruction however, which in Java may be called the new one, is the only one here; Malay takes the place of Javanese there; a knowledge of this language is therefore indispensable for students in Atjeh. The lodgings of the students (ranggang) have the same plan as the pondok of Java; just as the pondatens are also called pondok, so the name ranggang in Atjeh is also applied to the whole institution.

**PASE, the name of a district on the north coast of Atjeh (Sumatra) which according to the prevalent native view stretches from the Djambō-Ajē river in the east to the other side of the Pasē river in the west. The whole area is divided up into a number of little states each with an adilulang or chief. Pasē at one time was a kingdom known throughout eastern Asia. The north coast of Atjeh was in the middle ages on the trade route by sea from Hindustan to China. Islam followed this route and firmly established itself from India on this coast, the first point in the east Indian archipelago which it reached. In the xiiith century we know there were already Muslim rulers here. One of these was Malik al-Ṣalīḥ (d. 1297), according to native tradition founder of the state and the man to make the country Muslim; his tomb made of stone imported from Cambay (India) has been discovered along with several other gravestones on the left bank of the Pasē river, not far from the sea. The capital of the kingdom is said to have been here; it was a second capital rather more to the west was Sumadra; it was the royal residence when Ibn Baṭṭūṭa in the middle of the xiiiith century twice visited the land, on his way to China and on the return journey. The present name of the island of Sumatra, by which it is known in the west, comes from Sumadra — in Ibn Baṭṭūṭa: Sumatra. Pasē was then a flourishing country on the coast; the ruler was king of the port; who himself sent out trading-ships; a ship belonging to him was seen by Ibn Baṭṭūṭa in the harbour of Phukien (Fukien) in South China. Life at the court was modelled on that of the Muḥammadan courts of India. The ruler at this time was an ardent Muslim, who took a great interest in learning. He waged a victorious dīkāh on the natives in the hinterland. Leaders coins struck in the country and Chinese crude gold were the means of exchange. The chief food was rice.

Shortly after Ibn Baṭṭūṭa left the country the king had to recognise the suzerainty of the Javanese Hindu empire of Madjapātī (before 1365). A tomb of a queen or princess found near Lhōd Sukan has an Arabic inscription, dated 791 (1389) at the top of the stone and at the bottom an inscription in much weathered old Javanese script. It has not yet been read. The Chinese envoy Cheng Ho remarked in 1416 that the land was involved in continual war with Nago (Pidie). He mentions rice, silkworms and pepper as its products. The last-named attracted the Portuguese there. From 1521 they had a fortified settlement in Pasē but in 1524 they were driven out by the sultan of the rising kingdom of Atjeh (i.e. Great Atjeh). Henceforth Pasē was a dependency of Atjeh. The tombs of the rulers of the former kingdom were still an object of pilgrimage to the most famous sultan of Atjeh, Iskandar Sbēnī, as late as 1048 (1638–1639); at the present day even the memory of the old kingdom is extinct. The mouth of the Pasē river is silted up and the place where the capital stood is no longer recognisable.

Pasē exercised through the years a considerable influence in the Malay Archipelago through its Muslim scholars and missionaries. Javanese and Malay tradition have preserved their memory.

(R. A. Kern)

**PASHA (T., from the Pers. pādišāh, probably by Turkish başbā), the highest official title of honour (umwān or laḥāf) in use in Turkey until quite recently and still surviving in certain Muslim countries originally parts of the Turkish empire (Egypt, Ḳaṣr, Syria). It was always accompanied by the proper name like the titles of nobility in Europe but with this difference from the latter, that it was placed after the name (like the less important titles of bey and efendi). In addition, being neither hereditary nor giving any rank to wives, nor attached to territorial possessions, it was military rather than feudal in character. It was however not reserved solely for soldiers but was also given to certain high civil (not religious) officials.

The title of pasha first appears in the xiiiith century. It is difficult to define its original use exactly. The word had in any case early assumed and lost the vague meaning of "seigneur" (*dominus*) (cf. Diwān-ī Ṭurkī-i Sulṭānī Wālī, p. 14; text of the year 712 = 1313, where Allāh himself is invoked in the phrase *Ey Pāshā*!). At this same period the title of pasha like that of sulṭān was sometimes given to women (cf. Ismā‘īl Ḥakīm, *Ḳūtibeh*, 1927, index, s.v. Kadim pasha, Seljuk pasha), a practice which recurs only once again, and then exceptionally, in the xivth century in the case of the mother of the Khedive (cf. Wālīde Sulṭān).

Under the Saljūḳs of Anatolia the title of pasha (in as much as it was an abbreviation of pādišāh and always by analogy with that of sulṭān) was given occasionally to certain men of religion who must also have at the same time been soldiers and whose history is not yet well known. To judge from the genealogy which ʿAṣhir-pasha-zađe claims for himself, the title of pasha was already in use in the first half of the xivth century. Mḥltī Ḳulābī al-Dīn Mūsā Baha, alias Shāhī Mūkhlīs or Mḥltī Pasha had, according to ʿAli Efendi, seized the power before the Kāramāñghmū and in the same region, after the defeat of the Sulṭān Ghiyāth al-
In the provinces they were, and became, more numerous, and two classes of pashas were distinguished: 1. the pashas of 5 horse-tails (ługh) or ważir (a rank which became more and more one of honour and extending to the provinces gradually absorbed that of beylerbey); 2. the pashas of 2 horse-tails or mir-mirân (rank at first the Persian synonym for the Turkish beylerbeyi and the Arabic amîr al-ûmara but gradually became a lower rank). Besides, the old sandzâk-beys had in principle a right to only one horse-tail were promoted mir-mirân and thus became pashas in their turn.

After the Tanzimat the title of pasha was given to the four first (out of 9) grades of the civil (1. ważir, 2. bâlî, 3. iltî, 4. sâhîye şefî ewevet) or military (1. mûshir, 2. birîngi ferî, 3. ferî, 4. ilvî) hierarchy and to the notables (3. râmet beylerbeyi, 4. mir-mirân), with in practice unjustified extension to the fallen mir-al-ûmara, in this case to the purely honorary rank of the sixth grade.

The table of ranks having been abolished after the fall of the Ottoman Empire, the Turkish Republic retained the title of pasha for soldiers only. It has just been abolished by the Grand National Assembly of Ankara (Nov. 26, 1934). Instead of pasha one now uses general and in place of mûshir, mareşal.

In western usage the word was at first pronounced başha (the pronunciation pasha does not appear till the xvith century): Ital. bascia, Low Latin basca, Fr. bacha or bassa, Eng. bashaw, to say nothing of variant spellings. In Greek on the contrary, the form pasha is the oldest (xvith century) but probably under western influence we also find başha (xvith century); cf. Ducange, Glossarium medicæ et intimæ Graecitatis, s. w. pashas.

The pronunciation as başha by Europeans is due either to the influence of Arabic in Egypt or to a confusion with the old Turkish title of başha (cf. at the end of the article).

The etymology of the word pasha: we shall examine the various etymologies that have been proposed.

1. Pers. pâshâ “foot of the sovereign”. This explanation, which was based on the fact that in ancient Persia there were officials called “eyes of the king”, is found already in Trévoux’s Dictionary (s. v. bacha) and was revived by G. v. Hammer. — It is to be rejected.

2. Turk. baş “head, chief” already suggested by Antoine Geffroy (Brieve description de la Cour du Grand Turc, 1542) and by Leunclavius (Lowenklau), Pandæstæ historiae turciciæ, suppl. to his Annales (1588). Cf. also Trévoux’s Dict. and Barbier de Meynard, Sûppl. — It is to be rejected. — Cf. the following word.

3. Turk. baş-ašha taken (for the purposes of proof) in the meaning of “elder brother”. This is the etymology accepted in Turkey until lately (Mehmed Thureyya, Sûdûl-i Othmânî, iv. 738; Shams al-Dîn Şâmi, Kâmîsî türkî, s. v. pasha) and based on the fact that Sultanāmeh Pasha and Ala‘î al-Dîn Pasha were the elder brothers of Orkhan and Othmân respectively. ‘Ali Efendi in his Kûthi ul-Abhâr written in 1593–1599 (v. 49, 29) and Othmân-zade Ahmed Tâhir (d. 1724) called attention to this use of the word pasha among the Turkomans (Hâdîkah al-Wâzarâ‘, Istanbul 1271, p. 4, 16). Heidborn (Manuel de Droit Public et Administratif Ottoman, Vienna 1908, p. 186, note a) also says that pasha
means “elder brother” among the Greeks of Karmania, but there seems to be nothing to confirm these isolated statements. Some Turkish lexicographers like Ahmâd Wefik (under شَكَّ) and Şaliánh have admitted this etymology but by two stages: pašâ comes from the Turkish title başka which is for başkâş. The title of başka to be discussed below does really seem to come from başka-şâh but, contrary to what I at first thought, has nothing to do with pašâ.

4. Pers. دَبَّسَ “sovereign”. — Etymology, the only admissible one (with however the possibility of the influence mentioned under 5), proposed by the Turkish-Russian dictionary of Bougakov (1869) and later revived by the Russian Encyclopaedia of Brockhaus and Efron. It had previously been proposed by d’Hebelot (under pašâ, à propos of the spelling with final h). This explanation is based on the use of the words șultân and șâdâr, as the titles most often placed after the names when applied to individuals of high rank in the religious world (dervishes). Cf. Giese, in Türkîyât Muşâmidî, i., 1925, p. 164. It seems that one can even explain by șâdâr the obscure phrase used by Orkhan to șâh at-Alî d’In Pašâ in șâh-i șâh-șâh-șâh (ed. Giese, p. 34–35) before the latter asks leave to retire (cf. above). Orkhan says “You will be pašâ for me” Now a few lines earlier he had asked him to be a șâh-șâh-șâh, i.e. a shepherd for his people. On the other hand, it will be noted that the title of pašâ is often used not only as an alternative for șâdâr but also for șâh. Here are a few examples:

Shudâ- at-Alî d’In Sulamân, of the dynasty of Kızîl Aḥmedî, is called Sulamân șudâr in Ibn Bahâjî as (ed. Defremery and Sanguineti, ii. 343) and Sulamân Pašâ in Şâhî at-Alî d’In b. al-Őmari at-Tûsî fi l-l-Muqtašâl al-ṣârîf, Cairo 1312, p. 4; written șâbî, following the Arabic script) and in Movâmîdîn Bašî (iii. 30). The son and successor of this ruler, Ibrahimî, is called Şâhî in Ibn d’Alî-Őmari and Pašâ in Movâmîdîn Bašî. — In the Dastür-nâme-i Enâver (ed. Mukrîm Khâlid, p. 83–84) Sulamân Pašâ, son of Orkhan, is called Şâhî Sulamân (with poetical inversion). — șâh b. Čîçek (Čeçek), the Iklîânî governor of Baghdâd (dl. 1336), is called șâh Pašâ by Ibn d’Alî-Őmari. According to Navîzîdî (Gulshîn-e Khâliťa, Constantinople 1143), he is also found in some MSS as șâh Şâhî. He is also called șâh Pašâ (Şâhî, Histoirie de Bagdad, p. 10). — In the original dialects the title of șâh is taken in the form, not to pašâ but of paša (Kırghiz) and șâhâ (Ozbek).

5. Turk. başka (variants başkaş ș. başkaş ș.) “governor, chief of police” (Dictionary of Pâvet de Courtelle and under başkaş in that of Bougakov). This word of the “Khârîzîmî language” according to Vullers came into use in Persia (Ikhânîd). Among the Mongols it meant the commissioners and high commissioners sent by them to the conquered provinces (of the west only); notably in Russia. The accepted etymology is from the verb başkaş, “to press, crowd, oppress, impress”, whence the meaning “oppressor, extorter” for başkaş; an official, it is noted (cf. the Russian and Polish encyclopaedias), whose main duty was to collect taxes and tribute. However extraordinary such an explanation of an official title may appear it seems to be confirmed by the parallelism with the Mongol equivalent of başkaş which is daruqâha or daruqâha [q.v.] and which may be compared with daruqâh, a Mongol verb, synonymous with basmaš in the sense of “to impress”. These may however be popular etymologies.

Schefer in his edition of the Voyage de M. d’Aramon (p. 238, note 3) says “The etymology of the word pašâ given by Geoffroy (from the Turkish back) is wrong. Pašâ is a softened form of the word basqaq or pašqāq which means a military governor”.

Carpini renders the Mongol başkaş by baschati (variants in the MS; bascato, bastaci; cf. The texts and versions of John de Pl. Carpini…, London, Hakluyt Soc., 1903, p. 67 and 261 notes). In the edition of 1598 (Hakluyt) there is a marginal note “Basha, vox Tartarica qua utuntur Turci”. This also implies a confusion between the words başkaş and pašâ.

It is not impossible that there was actually some confusion among the Turks themselves between șâdâr (pašâ) and the title başkaş, the synonym of the Mongol daruqâha. We had thought of this even before we saw the notes of Schefer and Hakluyt. It may be noted that the title of pašâ (which is not found in Persian sources, as Muhammâd Kâzîmî kindly informs us) was applied either to Anatolians, subject in fact or in theory to the Mongols, or to officials of the Mongol İklîanî (like the governor of Baghdâd mentioned above; cf. also șâh-ș. Iklî Pašâ alluded to in the Bezm-u Kema of Azîz b. Arâdšâh Astâbâdî [ed. Kopula, p. 249, 8]). The confusion could be explained the more easily as one finds (I think it is true) the form başkaş (Djuwântî, Tavishi-i İklînân-Qâhî, 1260, ed. Muhammâd Kâzîmî, ii. 83, note 9; in this passage there is a reference to a Khârîzîmî official of 609, i.e. before the Mongol conquest).

It may be suggested that but for the influence of this confusion with the title başkaş that of pašâ would never have attained such importance.

The Turkish title of başkaş. — This title which is not to be confused with the preceding, nor with the Arabic or old eastern pronunciation of it, was also put after the proper name but was applied only to soldiers and the lower grades of officers (especially janissaries) and it, seems, also to notables in the provinces [Meninski, Thesaurus, i., col. 662 and 294, l. 18, Onomasticon, col. 427; d’Herbelot, s. v. pašâ; Viguier, Éléments de la langue turque, 1799, p. 218, 309, 327; Zenker, p. 164, col. 2 (probably following Meninski); De La Mottayre, Voyages, 1727, i. 180 note 1; cf. Ewliya Čelebi, v. 107, 218; Naîmî, v. 71; Ismî‘îl Haşkı, Kiâvetî, s. v. pašâ, 27, 41 and 8)]. De La Boulaye-Le-Gouz (“Le Voyages, 1657, p. 59 and 552”) also distinguishes the title of başkaş (given by Chloros, s. v. paša) it comes from the spelling paşâ (cf. e.g. Aḥmad Wefik Paša, Zaraki Taḥh, act ii., sc. 2, ironically applied to a woman) but Meninski pronounces başaş, even with this spelling.

As the lexicographers have sometimes confused
basha and pasha, some have thought that basha also meant "elder brother" (Mehmed Şalāh, Kamûsi-i ʾothmânî, ii. 291 sqq. followed by Çloros). I think we have two separate problems and that basha is really for basha-ağa but with the meaning of "aga (the shah, or sultan). The Janissaries or yatâbâ (according to Roehrig). On the other means of basha-ağa and in general for more details on some of the points dealt with here see Deny, Sonmaire des Archives turques du CAIRE.

Note on the accentuation.—In the word pasha the tonic accent is on the last syllable (pasha). In the word basha it is on the first (basha) as is shown by the weakening of the final vowel in the pronunciation bâšî, already mentioned.

(J. Deny)

PASHALIK (r.), means 1. the office or title of a pasha (q. v.); 2. the territory under the authority of a pasha (in the provinces).

After some of the governors called sanjak-beyi (or mir-ievê) had been raised to the dignity of pasha, their territories (sanjak or ievê; q. v.) also received the name of pashalik.

Early in the sixteenth century of 158 sanjakas 79 were pashaliks. Of these 25 were pasha sanjakas, i.e. sanjakas in which were the capitals of an eyalet, the residence of the governor-general or wali of a province. For further details, cf. Mournadéa d’Ohsom, Tableau général de l’Empire Othoman, vii. 307.

(J. Deny)

PASHTO. [See ARZIHNISTAN, i. 149 sqq.]

PASIR. The sultanate of Pasir in S. E. Bornœ comprises the valley of the Pasir or Kendilo river, which, rising in the north on the borders of Kuate runs in a southeasterly direction along the eastern borders of the Beratos range and turning east finally reaches the straits of Malacca through a marshy district. The country, about 1,125 sq. km. in area, is still covered by primitive forest, in so far as the scanty population, which is found mainly in Pasir, the residence of the sultan, and in Tanah Grogot, that of the official administration, has not cleared the trees to make ricefields. Although some gold, petroleum and coal are found in Pasir, Europeans have not exploited them, still less do they practice agriculture. A European administrative official was first stationed in 1901 at Tanah Grogot at the mouth of the Kendilo river. Pasir is therefore a good example of the Bornœ coast state which as regards Islam has developed independently of European influence. The population of the sultanate is estimated roughly at 17,000. It consists of-dayaks who live by growing rice, of immigrant Bandjarese and Buginese from Celebes, who control the trade; they are found chiefly in the flat country at the river mouth. On the coast the Badjoes, a people of fishermen, live in their villages built on piles in the sea. Of the 9,000 Dayaks, about 4,000 have adopted Islam, while 5,000 in the highlands are pagans. The 5,000 Buginese have a predominating influence in view of their large numbers and their prosperity: the 1,200 Bandjarese are of less importance. There are very few Europeans and about 50 Chinese and Arabs in Pasir.

Half of the population are therefore foreigners, but like the Dayaks they belong to the Malay race and mix with one another.

Pasir is despotically ruled by the sultan and the members of his family; the people have no voice in the government. Alongside of the sultan and his presumed successor there is a council of five notables which the sultan consults on important occasions; this is also the highest court of the country. These notables and a number of other members of the sultan’s family have estates as fiefs. Since 1844 each sultan on his accession has concluded a treaty with the Netherlands Indian authority. In 1906 they declared themselves vassals of the Netherlands Indian government. In 1900 the right to collect duties on imports and exports and taxes, as well as the monopoly of opium and salt, was ceded to the government in return for compensation. This amounts to 16,800 gulden yearly of which 11,200 go to the sultan and 5,600 to the notables.

The sultan still collects the following taxes: a poll-tax from adult males; 1/10 of the yields of the rice-fields and forest products, 2 cocoanuts from each fruit-bearing tree; also military service. He also has an income from the administration of justice in the capital.

From the very legendary history of the country it may be gathered that this despotic government which is foreign to the Dayaks was introduced from eastern Java. Under the ruling caste are the chiefs of lower rank, priests and landowners and freemen as a middle class. At the beginning of this century there were still slaves and debtorslaves as the lowest class in Pasir; although slavery had long been abolished in other states of the Indies under Dutch influence. As is usual among other Dayak tribes, slaves go about like free men, take part in all festivities and games, may own property and are not even distinguished by dress. If their debt is paid to their master by some one, they go over to the latter. Slaves are not sold.

As the social condition of the Muslim Buginese, Bandjarese and Badjoes have already been described elsewhere, the following remarks are confined to the pagan Dayaks and their Muslim relatives, the Pasirese.

According to tradition, an Arab (Tuan Said) brought Islam to Pasir. His marriage with the daughter of the reigning chief did much to further the progress of Islam in the country.

As to the Pasirese, their social life was only superficially affected by Islam. In their daily life a pagan conception of the worship of the deity and of the world of spirits still prevails. The old belief in the important influence of spirits on the fate of man and reliance upon their signs are evidence of this. The fact also is significant that throughout Pasir there is only one muisizit and a few smaller places of worship. The number of Muslim priests and hajjis is also small nor is the enthusiasm to make the pilgrimage to Mecca great. On important occasions appeal is made for assistance to the spirits; this is particularly the case with illness among the Pasirese, who hold the pagan biaun feasts, which are also celebrated in South Bornœ. Amid a great din of gongs and drums which can be heard a long way off, the pagan priest (balian) becomes possessed by the spirits which then communicate to him the remedy for the illness. Even in the capital Pasir, exclusively inhabited by Muhammedans, the advice of the balian is sought; only during the month of Ramadân the sultan forbids this.

How attached the upper classes of Pasir still
are to animistic views is evident from the legend still current according to which Sultan Adam in the middle of the last century used to isolate himself for several days in the year on the mountain of the spirits, Gunung Melikat; he had concluded, it was said, a marriage there with a female djinn from which a son named Tendang was born. This son, who has the gift of making himself invisible, is said to live on the island of Madura where he married a princess of the djinn. He appears from time to time in Pasir, when he is invited by a great sacrificial feast (formerly also human sacrifice). These feasts are still celebrated occasionally, especially in order to free the land from misfortune and sickness. In the village of Jusun a house has been built for Tendang with a roof in three parts, which is built on a large pole and thus resembles a dove-cote.

The revenues of the priests consist of what they collect at the end of the month of fasting in cæleri and pancia, everyone giving what he can and the chiefs exercising no control. A priest also receives a small fee at a marriage or divorce.

The calendar now in general use in the sulphate is the Muhammedan. As elsewhere among the Dayaks the tilling of the fields begins when a particular constellation becomes visible in the heavens.

The family life of the Pasirese has developed to some extent according to Muslim ritual. Among the followers of Islam, marriage is performed through the intermediary of a priest, with the father or another man as wašli, but only after an agreement has been come to about the very considerable dowry. This is paid to the parents of the bride; she herself only receives a small part of it. According to Dayak custom young people are allowed to meet very freely before marriage. A marriage feast is marked by a very considerable consumption of palm-wine. The man remains for at least a year in the home of his parents-in-law before he can take a home of his own. Divorce is very frequent because attention is seldom paid to the wishes of the woman in the negotiations between the parents. Man and woman retain their property after marriage; after a divorce this goes back to the family. Property acquired during marriage is divided into two equal portions between husband and wife. After the death of one or the other the survivor inherits all. Only a few families follow the Muslim law. The followers of Islam are buried with Muhammedan rites.

PASSAROWITZ. [See Pozarevac.]

PASWAN-OGHULU (written پیاسن اوغلی; cf. Kamis al-‘Alam, ii. 1467) or Paswan-Oghulu (پژفان اوغلی) in ‘Abd al-Rahman Sharaf, Tarikh, ii. 280) or, according to the new orthography, Pasvantoğlu (Hüyük ve Mahsin, Türkiye Tarıhi, p. 423) but on his own seal “Paswan-zade ‘Othmann” (in Oreşkən, see Bibl.), the rebel Pasha of Vidin (1758–1807). His family originated in Tuzla in Bosnia, but his grandfather Paswan Agha, for his services in the Austrian wars, was, granted two villages near Vidiu in Bulgaria about 1739. Othmann’s father ‘Omar Agha Paswan-Oghulu not only inherited these villages but as bairakar etc. was also a rich and prominent man (ajân); on account of his defiant attitude, however, he was put to death by the local governor.

Othmann himself only escaped death by escaping into Albania, but after taking part in the war of 1787–1789 as a volunteer, he returned to his native town. Very early he was in the field again and fought with distinction, returning to Vidin in 1791. From there he organised with his men raiding expeditions into Wallachia and Serbia. When the sultan wanted to punish him for this, he cast off his allegiance in 1793, took to the mountains and at the end of 1794 captured Vidin with his robber band and became the real ruler in the pasha’s there. Vidin, which he fortified again, thus became a meeting-place for robbers and discontented janissaries who were driven out of Serbia in 1792, and he himself became the popular leader of all those who opposed the reforms of Selim III.

In 1795 Paswan-Oghlu even attacked the governor of Belgrade, Hadji Muṣṭafâ Pasha, a supporter of the reformers, who had been given the task of disposing of him; strong bodies of troops were sent by the Porte but without success. In consequence negotiations were begun at the end of 1795 but Paswan-Oghlu remained practically independent in the whole of Upper Bulgaria.

But since the Porte did not also formally recognise him, Paswan-Oghlu drove the official governor out of Vidin and in 1797 attacked the adjoining pashaliks: in the east his forces occupied or threatened a number of places in Bulgaria (but they were defeated at Varna) and in the south they attacked Nish [q. v.] without success; in the west they advanced up to Belgrade, occupied the town but were driven back from its fortress by the resistance of the Turks and Serbs whom Hadji Muṣṭafâ had armed. As a result of this and because of Paswan-Oghlu’s negotiations with France and Russia the Porte in 1798 sent an army of 100,000 men against him under Admiral Kulek Husain Pasha. He besieged Vidin in vain until October and had to withdraw with heavy losses. This defeat and Napoleon’s invasion of Egypt induced Turkey to come to terms, nominally at least, with Paswan-Oghlu and give him the rank of Pasha of three tails (1799).

Nevertheless he declared himself against the reforms, against the central government and even against Selim III; he also sent several expeditions to plunder Wallachia (1800 and 1801) and incited the janissaries who had in the meanwhile returned to Belgrade to occupy the fortress (in the summer of 1801) and to murder Hadji Muṣṭafâ Pasha (at the end of the year).

At this time he repeatedly asked the Czar to number him among his faithful subjects and also offered his services to France. The Porte, which shortly before had forgiven Paswan-Oghlu everything, from 1803 declared war on him again, but the Serbian rising of 1804 diverted their attention. Paswan-Oghlu himself had to fight in the western part of his territory against Pintzo’s rising (1805). The appearance of the Russians on the left bank of the Danube (1806) induced him to offer his services to the Porte but the latter instead gave the supreme command to the commander of Rusiçk. This embittered him so much that he resolved to defend only his own territory against the allied Russians and Serbians but he died soon afterwards on Jan. 27, 1807.
That Paswan-Oghlu was able to hold out so long was due to the state of the Ottoman empire at the time, to his personal ability and foresight (he never abandoned Vidin!) but for the most part to luck. Within his area he collected customs and taxes, ruled strictly and despotically, although not entirely without mildness and justice. Although his health was rather poor as a result of too great mental strain, ambition led him to aim at independence as evidence of which we have the coins struck by him and known as Paswanleta.

(Fejih Bajraktarević)

**PATANI, an administrative district of Siam in the extreme south of the kingdom on the east coast of the peninsula of Malacca; it is bordered on the south by the Malay states of Kêlantan and Kélah, both under British protection. The whole district is made up of seven Malay petty states, each with its own native chief who is assisted by a Siamese official. Malay forms of government are allowed to remain. In the capital of the same name resides the Siamese High Commissioner of the district. His advice has to be obeyed by the rulers of the states.

The native inhabitants are Muslims. Friday and other mosques are distinguished. The latter are called *surau* and have their own staffs. All the states have law-courts: the *shari'a* is followed in matters of family law, Siamese law in other cases.

Patani is a very mountainous country. There is only a strip of plain on the coast. The area is about 13,000 sq. km. and the number of inhabitants about 350,000; the great majority are Malays, the remainder being Siamese and Chinese. There are few roads. The railway which connects the Siamese Southern railway with the English lines in Malacca cuts through the country a short distance from the coast. Agriculture is of little importance; only in the environs of Patani and in Nawng-Chik rice is cultivated. A large number of the people live by fishing; the fish caught are salted with salt obtained locally. Tin-mining is increasing. The exports include dried fish, salt, cattle, elephants and tin. Intercourse with Bangkok and Singapore is maintained by small steamers. The revenues amount to £45,000, of which one third is allotted to the Malay rulers as private income for themselves and their families, one third goes to administration, and a third set aside for special purposes, is also as a rule used for administrative purposes.

Fra Odorico of Pordenone in 1323 mentions a place called *Pater* in this region, which he identifies with Thalamasy. It is doubtful whether the reference is to Patani. The first certain occurrence of the name is in the xvth century when the Portuguese began to come here to trade. Patani has for centuries belonged to Siam. Advancing southwards the Thai reached Ligor about 1284 (on the coast, a little N. W. of Patani; Sukhotai inscription); in 1350 the whole of the peninsula of Malacca was under Siamese rule; the conquest of Patani took place between those dates. The *Nāgarakṛāgamā* in 1355 mentions Djähr, the modern Djiring, one of the seven states of the district with its capital on the sea, a little east of the town of Patani, as conquered by the Javanese kingdom of Madjapati. Soon after the conquest of the town of Malacca in 1511, the Portuguese began to trade in Patani. Many Portuguese settled here. About 1600 the Dutch and English appeared; Patani at this time was a prosperous centre of trade, a station between Malacca and China and a depot for the exchange of goods from China on the one side, and the most important harbours of the East India Archipelago on the other. When this last activity began to decline about 1620, the place lost its importance and the Europeans abandoned their settlements.

It is not definitely known when Patani became converted to Islam. About 1600 it was a Muhammadan country; the queen ruling at this time had succeeded her husband fifteen years before; in all probability the country was already Muhammadan at an earlier date when Mendez Pinto (1534, 1540) visited it. According to native tradition, the conqueror of the land, Chow Sri Bangsa, a son of the Siamese king, converted the country to Islam, after adoptting it himself and taking the name and title of Sultan Ahmad Shah. He is said to have acknowledged the suzerainty of Malacca; this suggests that Malacca was the power that caused the conversion. Malacca, as is well known, was during the xvth century the predominant power in the Malay peninsula.

(R. A. Kern)
PATHAN. [See AFGHANISTAN, I. 149 seq.]

Paula, the name given in the Moghul Emperor Akbar's monetary system to the 1/4 din (1/4 paisa). (J. ALLAN)

PECENEGS, a people of Turkish stock of the middle ages. Their name occurs in numerous variants (Bağınak, Paçan, Paçošiazt, Paçošaž, Paçošaxa, Paçinaclae, Patzinacae, Pecinigi, Un-cemakiti, Pecenaci etc.; also Bysseni, Besi, in Hungarian Besenyő, etc.). There is no longer any doubt that they were a branch of the Turkish race. Rashid al-Din (xiii century; see AFGHANISTAN) and Mahmud Kâşghari (1073) number them among the Ghuzz (q.v.); the latter (Dirîm Luchîd al-Turk, i. 27; cf. K. Cr. A., i. 36) puts them in the northern group of Turkish peoples, to which the Kipčak, Oghuz, etc. belong and describes them

as next to the Khomaens" i.e. the most westerly Turkish tribe.

In all probability the Peceneqs separated very early from their brethren in the original home of the Turks in Turkestan. Their early hotme is said to have been the Embar-Ural-Volga region, which according to Bakri and Gardinzi was a "days' journey in length and breadth. Where they remained probably for a considerable time, their neighbours being the Khazars in the S.W., and the Oghuz in the S.E., and they traded with Persia and Kazima.

But by 860 the Oghuz began to move westwards and to drive the Peceneqs from the Ural region. Towards the end of the ixth century the Oghuz (Uzen, Oônga) came to terms with the Khazars and drove the main body of the Peceneqs from their old home, so that in 922 Ibn Fadlan found only a small remnant of the Peceneqs there; according to De administrando imperio (p. 166), the latter remained there of their own accord.

The fugitive Peceneqs came up against the Magyars, drove them into Hungary and occupied their lands, at first the territory between the Don and the Dniester and later as far as the Danube. Constantine Porphyrogenitos (c. 950) says that this took place "fifty years ago"; but the chronicler Regno (d. 915) dates it exactly in 889. The power of the Peceneqs in the end extended from South Russia over Besarabia and Moldavia up to the Eastern Carpathians.

Warlike and powerful as they were the Peceneqs were a constant danger to their neighbours. Here however we can only briefly mention their relations with Hungary, Russia and Byzantium. In the course of the ixth and xith centuries they frequently attacked Hungary from the Eastern Carpathians or settled peacefully in various Hungarian districts (cf. the map of their settlements in Németh, Die Inschriften des Schatzes von Nagy-Szent-Miklos, l. Editage). In the xiith century the Peceneq settlements in Hungary still enjoyed certain special political privileges. They finally became merged in the Komans.

With the Russians, the Peceneqs were early on friendly terms (according to the De administrando imperio, p. 69, they sold them cattle, horses, and sheep); sometimes they were their allies against Byzantium and Bulgaria (in the time of Igor, 941), but more frequently they were attacking the Russians. In the year 968 they besieged Kiev, in 971 they killed the Grand Duke Sviatoslav on his way back from Bulgaria and the Russians had to build a number of fortifications against them. Their last attack (1034) was completely repulsed. A little later (1065) they were being hard pressed by the advancing Uzen and moved more and more towards the Danube and later also back to the Balkan peninsula.

The Byzantine imperial historian in De adm. imp. (p. 68) recommends the maintenance of peaceful relations with the Peceneqs and there was actually an alliance with them but by 970 we find them fighting with the Russians against Byzantium. Henceforth the Peceneqs were continually at war with the Byzantines until the emperor Alexius I in 1091 routed them completely at the mouth of the Maritza and in 1122 John II inflicted another heavy defeat upon them. Of the remnants of the Peceneqs some were taken into the military service of the Byzantines and some settled in the Balkan, especially in Bulgaria.

The Gagauz (q.v.) are sometimes regarded as what was left of them but their present language gives very little evidence of this (cf. vol. iv., p. 932). Nevertheless a number of Balkan place-names still recall the fact that the Peceneqs were once there.

With the nomadic nature of the Peceneqs it is obvious that the tribal organisation was an important factor. According to C. Porphyrogenitos the Peceneqs were divided into eight tribes (four beyond and four on this side of the Dniester) with as many great chiefs and into 40 clans with petty chiefs. The names of the tribes according to Németh were mainly derived from the names of horses and from titles of the supreme chief e.g. Seromuakthi = siru Kalhey, i.e. "the tribe of Kül-hey, with grey horses". The three tribes who were prominent for bravery and distinction are called Kangar (Kâgâyq) by Porphyrogenitos. Of the names of chiefs of that of the tribe of Julia (Ilia), namely Korkut (q.v.), is probably the most remarkable.

In the time of Kedrenos (ii. 581–582) there were thirteen Peceneq tribes "each of which had inherited its name from its ancestor and chief".

We know very little about the religion of the Peceneqs. According to Bakri they were formerly fire-worshippers (Magians) but according to other sources there were already a considerable number of Muslims among them by the beginning of the tenth century.

As to the Peceneq language, Anna Comnena (xiith century) already asserts its identity with that of the Komans [see KİVÇAK]. Until recently its scanty remains consisted almost entirely of the names of the Peceneq tribes, chiefs and fortresses listed by C. Porphyrogenitos. But even in 1931 Németh succeeded in deciphering the inscriptions of the treasure of Nagy-Szent-Miklos, it became evident to him that the gold and silver vessels contained in it belonged to the Peceneq chief Botu-al Calban (c. 900–920) and that we had here further specimens of the Peceneq language; for these he concluded that the language of the Peceneqs was closely connected with that of the Komans in Hungary and that of the Codex Cumanicus. The characters of these inscriptions may be called Peceneq runes, which belong to the family of the Kok-turk script and are closely connected with the Hungarian runes.

In conclusion, from the fact that there are two baptismal fonts in the treasure of Nagy-Szent-Miklos it may be assumed that several Peceneq chiefs were converted to Christianity. Very
little more is known of the Pechenegs; cf. however the index to K. Dieterich (s. Bibl.).

Arabic: 'Al-Bakri (Ibn Rusta and Bakri) and Persian (Gardisi) records of the Pechenegs are based on Djiâmi (tenth century) and on a source of the first half of the twelfth century so that they only refer to the earlier home of the Pechenegs; Mas'ud’s account however includes the period after they were driven from the Volga region. Both groups of sources have been used by J. Marquart and W. Barthold. — Also: Constantinios Porphyrigenetos, ed. Bonn, vol. iii. (1840) see index historicus (the whole of ch. 37 deals with the Pechenegs); P. Golubovskiy, Pecheny, toriki i polevoj do najavstvogo tatar, Kiev 1884; Sh. Sâmi Bey, Kâmil es-Salam, ii. 1906; K. Krumbach, Geschichte der byzantinischen Literatur, 1897, p. 1105; G. A. Encyklopädisches kritisches. Byzantinische Eprom, vol. xxiii.; St. Petersbserg 1808, p. 538 sq.; M. Malinov, Osowieczdânská war i osowieczdânská. Ścieżka, Leipzig 1903, ed. index; K. Râvi Nâgi Léxibona, vol. iii., Budapest 1911, s. v. Besenyö; K. Dieterich, Byzantinische Quellen zur Land- und Volkerkunde, 1912, part ii., esp. p. 51–58. 147 and 186; N. 'Âsim and M. 'Ârif, 'Othmâni Târîkhi, vol. i., Constantinople 1335. p. 75 sq.; E. Oberhumer, Die Türken und das Osmanische Reich, Leipzig and Berlin 1917, s. index; Z. Gombovec, Über den Volksnamen besenyo, in Turán, Budapest 1918, p. 209–215; W. Bang, Über den Volksnamen besnyo, op. cit., p. 436–437; G. Fehr, Die Petschenegi und die ungarnischen Hunsungen in K. C. A., i. 123–140 (assumes among other things that the royal family of the Abas is descended from Cseba or from the Pecheneg tribe Tûzû). Gy. Czebe, Turco-byzantinische Mischten (x), in K. C. A., i. 209–219 (rejects Fehr’s hypotheses, approves Német’s linguistic deductions and analyses once more the Pecheneg chapter in Porphyrogenetos); W. Barthold, Orta Asya Türk Târîkhiine hakkinda Dersler, Istanbul 1927, p. 23 and 92 sq.; J. Német, Zur Kenntnis der Petschenegi, in K. C. A., i. 219–225; do., Die petschenegischen Stammsnamen, in Ungarische Jahrbücher, vol. x., 1930, p. 27–34; do., Die Inschriften des Schatz von Nagy-Szent-Miklos, Budapest-Leipzig 1930, especially p. 36 and 45–59; Huseyn Namik, Pêçenêlek (Turkish), Istanbul 1933.

Pecheni, intham, Ottoman historian. Ibrahim was born in 982 (1574) in Fundkirchen (Hungary, Hung. Pásztor, Turk. Pçêvêt, i. e. Pierrevolt) whence his epithet Pèçeveti (cf. Pechevi, Tûrîkhi, i. 268 and ii. 433; also J. v. Hammer, G.O. R., iv. 5, note). His ancestors were holders of fiefs in Bosnia and Hungary. Pechevi has not recorded his father’s name (cf. Tûrîkhi, i. 87); he was in any case already domiciled in Fundkirchen. His mother was a member of the celebrated family of Sokolović (Sokolovi). Of Pechevi’s early years, we know that at the age of 14 he was taken as an orphan into the house of his uncle Ferhâd Pasha, governor of Ofen, and later went to another relative Lâlâ Mehmed Pasha (cf. his Tûrîkhi, ii. 323); he spent 15 years in the latter’s entourage. In 1602 (1593) he joined the army, took part in the Hungarian campaigns of Sinân Pasha, was an eye-witness of the siege of Gran (cf. Tûrîkhi, ii. 136, 180), of the Erlau campaign and the siege of Peterwardein. The next few years he spent mainly on the staff of Lâlâ Mehmed Pasha who had been grand vizier since 1613 (1604). He gives a detailed account in his history of the various offices which he held. After the death of his patron Lâlâ Mehmed Pasha (1624 = 1615) he was sent by his successor to Anatolia where he had to prepare a description of several sanjâjs. He was next defterdar for a short period in Tokât, went in the same capacity to Rumelia and finally was given the office of Anatolia as ‘alams’. He spent the rest of this life in his native district. He became muteşgal of Stuhlweissenburg, then defterdar of Temesvár. In 1641 (1631) he retired from office and went to Ofen. He spent his last years here and in his native town engaged in writing his history. The date of his death is not exactly known. He must however have died about 1660 (1650).

Ibrahim Pechevi, who from his youth upwards displayed a marked turn for history, is the author of a work which is one of the best Ottoman sources for the years 926–1049 = 1520–1639. While for earlier events he relies upon the accounts of his Turkish predecessors, and as N. v. Istvânyi and K. Heltai have shown, also Hungarian sources, for the later period he writes from his own observation or information. His work, which is written in lucid and simple language, survives in numerous manuscripts (to those detailed by Babinger, G. O. W., p. 195 may now be added two others in Upsala, University Library, cf. Zettersten, Katalog, p. 335 and a manuscript in Rhodes in the possession of Hâfit Ahmâd, No. 445), but so far we have no critical edition. Several preliminary drafts seem to exist which vary considerably in the periods covered and were presumably later expanded. The Stambul printed edition of the Tûrîkhi-Pêçeveti in two parts (1553 and 1554 pp. and 7 + 487 pp., printed 1285; cf. J. A., 1688, i. 471 and 481 and F. v. Kraelitz, in Ist., viii. 259) covers the period from the accession of Sulaimân the Magnificent to the death of Murad IV in 1049.

PECHINA, Arab. Bâdjiûnâ, formerly an important town in the south-east of Spain, to the north of Almeria (q. v.) (originally Mârijât Bâdjiûnâ), from which it is about six miles distant. Towards the middle of the ninth century it was the centre of a kind of maritime republic founded by Andalusian sailors, who had also a colony on the Algerian coast at Tenes (q. v.). It consisted of several quarters separated by gardens, becoming the capital of a âanat of the same name. Pechina was later supplanted by its neighbour Almera, to which its inhabitants soon migrated.

(E. LEVI-PROVENÇAL)
PELEH ład, Muhammud B. Íldegíz, Shams al–Dín, A'ábesg of Adhár báidján. His father Íldégíz [q.v.] had in course of time risen to be the real ruler in the Saljúq empire; the widow of Sultan Tughhril [q.v.] was Pelewán’s mother and Arsán b. Tughhril [q.v.] his step-brother. In the fighting between Íldégíz and the lord of Maágha, Ibn A’ás Sânjúr al–Amáldíz, Pelewán played a prominent part [cf. the article MÁÁGHa].

From his father he inherited in 568 (1172–1173) Arís, Á🏻xáábarádáján, Ádádán, Hamáádáján, Isááfádán and al–Ráí with their dependent territories and after a few years he also took Tughhril, which he gave to his brother Kísíl Arís [q.v.]. Like Íldégíz, Pelewán also became the real ruler. Sultan Arís b. Tughhril was completely under his control as was also his young son Tughhril [q.v.] whom Pelewán put on the Saljúq throne, after Arísán had been disposed of by poison. Pelewán died in Dhu ‘l–Hádáján 581 (Feb.–March 1186) or the beginning of 582 (1186) and his brother Kísíl succeeded him.

Ibn al–Áfhir (xi. 346) pays a high tribute to Pelewán’s statesmanlike qualities and during his tenure of office peace and prosperity prevailed in his governorship. After his death however, bloodshed and unrest broke out. In Isááfádán the Sháfíis and Hanáfís fought one another and at al–Ráí the Sunnís and Sháfíís until order was gradually restored.

III. MODERN PERSIAN LITERATURE.

(E. Berthels)

I. HISTORICAL AND ETHNOGRAPHICAL SURVEY.

NAME. The name PERSIA is of Western origin and probably only in the Middle Ages began to be used for the countries occupying the Iranian plateau (in Plautus Persia is found once instead of Persis). It is derived from the Greek–Roman appellation “Persae” for the Achamanids, an appellation that goes back to the name of the region of Persis in the west–south, named in its turn after a tribe that is probably identical with the Parsu, known by the Assyrian inscriptions as having occupied formerly a part of Media (oldest mention 844 B.C.). The name Fárís (New Persian: Pásr) in the Middle Ages was applied to the same region of Persis only, but Faráí was already at an early time used for one of the types of language spoken in the Iranian provinces (cf. Fáhrís, ed. Flügel, p. 13), which language since the 6th century became the written literary language that we call Persian.

Equally the appellation al–Furs, found in early Arabic literary sources, denoted the whole of the people of Persia, but was restricted in use to the Persians of pre–Islamic times or to those who had kept to their ancient traditional and religious views. This meaning is often synonymous with the Arabic expression al–ísháám.

The form Irán is of Pehlevi origin and goes back to an earlier form Arian, originally an adjective (á invoke in the younger Avesta) meaning “Aryan”, that was the name of a tribe of the state of the Sásánids, who styled themselves “kings of Ístán and Anárán”, and it occurs in the early Arabic historical and geographical sources in the form Irán–sháh, meaning the country of Irán (cf. i. a. Yákút, i. 417 sqq.).

In Muhammadian times the name became popular again by the revival of the ancient traditions in the Sháh–náma, but the use of the word Irán for the modern kingdom of Persia is probably not older than the sixth century, when the Persians began to call themselves Irániyán (about 890 there existed already a newspaper called Irán). Nor does the use of the words “Iranian” or “Iranisitic” in scientific publications appear to be older than the second part of the sixth century (Spiegel’s Etrusche Altertumskunde was published since 1871, and Darmesteter’s Études iraniennes in 1883).

Geographical survey. Throughout the Middle Ages Persia was neither a geographical nor a political unity. In treating the Persia of Muhammadian times we therefore must choose an arbitrary delimitation of the country, namely the territory comprising present Persia, Afghanistan and Balúčistán and in addition the region of Marw as far south as the present Persian frontier. The territory thus circumscribed may represent the actual Achaemenid and later the Sásánid empires, excluding the territories of al–Irák, Mesopotamia and Armenia, which during both periods belonged to those empires; Babylonia was called even in Sásánid times Dílí Iránsháh (B. G. A., vi. 5).

The greater part of Persia thus circumscribed consists of a plateau, very mountainous in parts, with the coastal regions of the Caspian and the Persian Gulf. With the exception of these coastal regions the waters of Persia have no outlet to the sea. The consequence is that there are hardly any great streams, the only rivers deserving that name being the Hílmand, which falls, like many smaller streams, into the depression of the Sístán lake, and the Herí–Rúd, which ends in the northern steppe. The many small streams allow only of a limited cultivation in the mountain valleys and on the fringes between the mountains and the deserts. This circumstance gives even to the inhabited mountainous stretches of the plateau the character of a series of oases, which are larger or smaller as the irrigation system (mostly effected by the subterranean aqueducts called kahríz) is more or less developed. The territory between the oasis towns and villages is steppe, which, in central Persia, become real desert, the soil of which is more or less saltish. The steppes, as also the higher mountain regions, support nomad life only, as they are only habitable during certain periods of the year, to which cause is added the very considerable variation of temperature in many regions. Nomads or semi-nomads have therefore
always lived together on the Iranian plateau with the settled population; the proportion has considerably varied on account of the frequent invasions of nomad peoples. Persia consists of a number of regions of very different character, which accounts for the lack of political unity during long periods of history. Each of these regions has formed occasionally an important political and cultural centre and the Islamic geographers in describing Persia give for each of them its own description. Their division is mainly traditional and at the same time geographical, but disregards the very variable and ephemeral political frontiers.

The regions may be divided into a western and an eastern group, separated by the great central Iranian desert, which extends from the Caspian Sea south-eastwards practically as far as the Indian Ocean in Mārkān. This desert, called by the geographers Mafṣafat Khorāsān, Mafṣafat Fāris, Mafṣafat Kirmān or Mafṣafat Sīstān, depending on the parts particularly taken into consideration, varies in breadth and character. Its level is on the whole considerably lower than the eastern and western parts of the Iranian plateau. The northern part is a large salt desert, where vegetation is hardly possible. To the south, to the east of Fāris, begins the region called on modern maps Dasht-i Lū; here, and further to the south-east there are not a few oases, which form important resting points on the many caravan ways that have linked up since olden times Fāris and Kirmān with Khorāsān and Sīstān. In the southern regions of Tūrān and Mārkān, with which it linked the large desert to the south of the Hīmand river, the desert or steppe character is prevalent. This series of deserts, though not forming an impassable barrier between east and west, has often coincided with political frontiers; only in the north in the region of Kūmās, east of al-Ra’i (later Teheran) and along the Caspian coast, a more continuous cultivated stretch links up Media with Khorāsān.

The central part of the western regions is Media, called al-Dījābīl in Muḥammadan times and later ʿIrāk, consisting of a plateau all covered by mountain ranges running mainly from E. to S. and bordered on its south-western side by the Zagros mountains; the most important towns are here Hamadān and Isfahān. To the north-west Aḏharbājīdān forms a continuation of al-Dījābīl, from which it is separated by the desertlike region of Ardabīl. Aḏharbājīdān is still more mountainous, being a transition to the Armenian and Caucasian mountain systems; it is also richer in water-courses; the river Araxes (al-Rass) may be considered its northern boundary. Its chief geographical feature is the big salt lake of Urmīya. In early Muḥammadan times Ardabīl was here the most important place, succeeded in modern times by Taβriz. The small coastal border to the east of Aḏharbājīdān belongs to the South Caspian regions, known in Islamic geography as al-Dīl, al-Dalīl, and further Tābārīstān, now Gīlān and Mīzandārān. This region consists of a narrow coastal stretch, widening somewhat towards the east and contrasting with the rest of Persia by its moist climate and rich vegetation; to the south it slopes rapidly upwards to the high range of the Elburz that forms the northern border of the central plateau; alongside the southern slope of this range stretches a narrow cultivated and inhabited area, in which al-Ra’i was the most important town and through which ran the main route to Khorāsān, passing, after al-Ra’i, Sāmān, al-Dīmāgāhān and Bīstān. At the south-eastern corner of the Caspian the route passed south of the mountain region of Dūrājān, which region, owing to the fact that its waters — the rivers Dūrājān and Atrek — flow towards the Caspian, does not belong geographically to Khorāsān.

In the south of al-Dījābīl the Lurīstān mountains are a transition to the low country of Kūzīstān, the ancient Elam and the modern Ṭūbāristān. It is very similar to al-Irāk, from which it is separated by desert stretches. The river of Ahwāz, now the Kūrān, fed by its tributary the Kerḵān, in the early Middle Ages flowed directly into the Persian Gulf, and later into the Shāṭ al-ʿArab. To the east of Kūzīstān and south-east of al-Dījābīl begin the mountain ranges of Fāris with their many mountain lakes and their fertile valleys, which find their continuation in the similarly shaped mountain region of Kīrmān, where, however, the desert areas are not so numerous. The chief town of Fāris in medieval and modern times, Shāṭ al-ʿArab, has replaced the ancient towns of Dūrājān and Lizākh, which the medieval towns of Kīrmān, al-Sīrādān and Dījrūf, have disappeared. The present town of Kīrmān being comparatively young. The coastal region of Fāris and Kīrmān is barren; here were the very important ports of Tawwaja, Sinīz, ʿIrāf and Hurmūz, now replaced by Būshīr and Bandar ʿAbbās. The geographers distinguish in Fāris and Kīrmān a southern hot zone (gūrārūn, gardak) and a northern colder zone (gūrārūn, isarad), a distinction important to nomads and pertaining to the climate and the vegetation; “hot regions” are found, however, also in the north-eastern parts of Kīrmān, where the land descends to the level of the central desert. The oasis of Yazd and environs is generally counted a part of Fāris. The country east of Kīrmān as far as the Indus, occupied by several mountain ranges, is poor in cultivated areas and has not much importance as a passage to the Indus region. It consists of the coast region of Mārkān and the parallel inner zone of Tūrān, forming together the present Balucūstān.

The north-eastern part of the Iranian plateau consists of three main regions, of which Sīstān with al-Rukk kād (Arachosia) is formed by the basin of the Hīmand; these waters flow into the Sīstān lakes, which have considerably changed their form in the course of history. The principal medieval towns were Zaranj and Bust. The mountain ranges become higher towards the north of this region and run mostly north and south; the eastern border is the water-shed of the Indus valley. To the north of Sīstān stretches the large region of Khorāsān. Its main features are a series of mountain ranges running east and west, bordered in the east by the Hindū Kush; between these mountains flow a number of rivers, mainly from the south-eastern ranges to the north-west or the north, where they lose themselves in the desert bordering the south bank of the Lījahān (Amū Darya) and continuing in a western direction towards the Caspian. The largest river is the Her-Rūd, on which is situated Herān, then the Marghāb with Marv al-Rūd and Marvān, and the river of Balkh. The westernmost section of Khorāsān with Isfārāyīn, Nīsābūr and Tūs (Meshhed) receives its waters from the western mountains that form a
not quite complete watershed between Khūrāsān and Djuhrān. Though certainly presenting a geographical unity, the large extent of Khūrāsān allows the division into smaller regions, such as Bādghīs, al-Djezhādān, Tūkhrīstān and others. The present frontier between Persia and Afghānistān cuts from north to south right through Khūrāsān and Sīstān. Finally the basin of the Indus and its tributaries forms a region of its own, although the part with Kābul to the south of the Hindū Kūsh and Ghazna (Zābulistān) was often counted by the Islamic geographers to Khūrāsān. The more southern part of the Indus valley is separated from the Hilmand system by the Sulaimān range and the deserts of Wazirīstān and is, owing to climate, poor in cultivated areas.

All over the Iranian plateau a system of secular caravan roads links up the many cultivated centres. The chief connections with the surrounding countries were the passage of the Araxes towards the eastern Caucasus (al-Kīn), the passes west of Urmia to Armenia, the pass-ways of Shahīrizā and Hulavān to Mesopotamia and al-Irāk, and the road from al-Baṣra to Aḥwāz. The sea-ports on the Persian Gulf maintained regular intercourse with the coast towns of Arabia, India and even Eastern Africa. Towards Ṭamoxanā (Mīr wārī al-Nahr) the chief passage was by Tirmīd on the Oxus, while the roads from Kābul and Ghazna to Mūltān were the chief connections between the Iranian plateau and the Islamic parts of India. The Caspian ports maintained a small traffic with the Volga mouth.

Historical survey. The relations between Arabia and Persia date from long before Islamic times. Arabs settled in southern Persia from the time of Shāhīr I, and the Sāsānids were masters of southern Arabia up to the time of Muḥammad. Then began, under the caliph ʿUmar, the Arab conquest of Persia, which inaugurated the Islamic period in the history of that country. The political and psychological prelude to this conquest was the taking of the capital of the Sāsānian empire, al-Madāʾin, in 637, after the battle of al-Kādisiyā. Although the exact dates of the different conquests and battles are not known, the early historical sources allow a reliable survey of the phases of the amazingly rapid progress of the Arabic invaders all over the Iranian plateau. For, with the exception of Mūrḵan and Kābul, all regions had been reached, as far as Balāz̄, before the death of the caliph ʿOṯmān (656). We may distinguish different chief expeditions that were directed primarily from Madīna, and secondarily from Kūfā and Medina; and the governors of those two garrison towns. The first expedition under Muḥammad, however, the conquest of the greater part of al-Djīdāl and south-eastern Adhārbaḏān, was the immediate consequence of the capture of al-Madāʾin by the army of Saʿd b. Abī Waḵṣās. It was followed, probably in 638, by the battle of Djallūlā and the conquest of Ḥulavān, Karmāsin (Karmāsinī), and, after reinforcement had been sent from Kūfā, by the famous battle of Nihāwand. These events caused the flight of king Zeidegerd by the way of Isfahān, Isfāhān, Kirmān, Sīstān, to Marv, where he was killed by the Masʿūb Māḥūya (651). Immediately after Nihāwand came the capitulation of Ardabīl (about 641), together with raids into Djuhrān. The further conquest of Adhārbaḏān, however, started from Mūsul, taken in 641 by ʿOṯbā b. Fārḵad, who, in the course of his expedition, took Shahīrizā, Urmīya and several other places in Adhārbaḏān. Nihāwand remained the base from which, under the direction of the first governors of Kūfā, were conquered al-Rāy and the towns of Kūmīn (after 641), and about the same time Hamadān, Ḵazwīn and Zābul. In the following years several expeditions were necessary in this region against the Dailamīs and other mountaineers. From Kūfā started also the first invasion of Kūhūzīstān under the governor al-Muẓhir b. Shuʾbā, but the real conquest of this region began in 638 under the famous governor of Baṣra ʿAbd Mūṣā al-ʿAṣārī. The subjugation of this very near neighbour did not take much time, the most serious resistance being met at Tawadī (Ṭūṣā). Kūhūzīstān remained ʿAbd Mūṣā’s base, from which he conquered the remaining towns of al-Djīdāl, namely al-Sīrwan, al-Ṣaimara, Kumm and Kaḥṣaṭā, an. Finally, in 644, by means of his lieutenant ʿAbd Allāh b. Būt, al-Iṣfāḥān.

The latter was also the first to move in the direction of Khūrāsān by forcing the towns called al-Ṭabāsān to capitulate. About the same time took place the first invasion of Fāris, not, however, from Kūhūzīstān, but from the opposite Arabian province of al-Bahrān, whose governor ʿOṯmān b. Abī ʿAṣ was an encounter with the marṣūbān on the island of Abarkawīn and subsequently took Tawadī, from where he began raids on the other towns of Fāris. His brother al-Ḥakam defeated the marṣūbān of Fāris near Kīshahr on the coast, in 640, in a great battle, which, according to al-Ḥalābīshī, was equal in importance to that of al-Kādisiyā. Then ʿAbd Mūṣā was ordered to join forces with ʿOṯmān b. al-ʿAṣ. Together they conquered between 644 and 647 a number of towns: Arradān, Shāhūr, Kirmān, Sīnīs, Dārkalīd, Fasā; ʿAbd Mūṣā penetrated far into Kirmān. Shāhūr became here the principal Arab garrison. It was from here that, in the caliphate of ʿOṯmān, started the great campaigns of ʿAbd Allāh b. ʿAmīr, after his appointment as governor of Baṣra. In 649 he took the not yet conquered towns of Iṣfahān and Djuhrān, and in 650 he set out for the conquest of Khūrāsān; the reason of this is said to have been an invitation by the marṣūbān of Tūṣ, addressed equally to his colleague of Kūfā, Saʿd b. al-ʿAṣ; but while Saʿd did not go beyond Ṭabārisṭān and Djuhrān, where the mulkā was made tributary, ʿAbd Allāh became the real conqueror of Khūrāsān. He had already dispatched his lieutenant Muḏḏštīb b. Masʿūd towards Kirmān, in pursuit of Yezdegerd; this first expedition having failed, Muḏḏštīb was sent a second time to Kirmān in 650, where he conquered the principal towns: al-Sīrwan, Barmān and Djuhrān. Battles were fought near Kīshahr and in the Kūf mountains. A similar minor expedition was sent by ʿAbd Allāh to Sīstān, under the-Rabīʾ b. Ziyād, who crossed the desert from Ḵafādī and conquered with considerable difficulty Zarandī, the capital of Sīstān, where he remained several years. His successor having been expelled from Zarandī, ʿAbd Allāh dispatched ʿAbd al-Raḥmān b. Samūra, who reconquered the country and penetrated as far as Dāwar, Bust and Zābul. In 650 ʿAbd Allāh had in the meantime proceeded to al-Ṭabāsān, already conquered, and sent from there al-ʿAḥnāf b. Kaws to the conquest of Kūhūzīstān. He himself reached Nisībūr, which surrendered after a siege. From there several
towns were subdued by him and by his lieutenants, and with the marzubān of Tūs a treaty was concluded. Marw capitulated without a fight. A secondary expedition to Herāt under Aqs b. Thā'labā resulted in the capitulation of the ruler of that town, while finally eastern Khurāsān was raided by al-Aḥnāf b. Kāis, who fought a decisive battle near Marw al-Rūgh and conquered the region of al-Dhujajdān and the town of Bakh, continuing from here this advance as far as Khwārizm. When ʿĀmir b. ʿĀmir returned, he left Kāis b. al-Hāfīz as the first governor of Khurāsān.

This was the military situation at Ōṯmān’s death. The conquests were by no means secure, least of all in Sīstān and Khurāsān, but the placing of garrisons in Nihāwand, al-Ahwāz and Shīrāz, enabled the Arabs to complete their conquests after the civil wars were over. The people and the authorities with whom the Arabs had to deal in Persia were very different. After the royal army had been destroyed at al-Kādisiya and Nihāwand, it was chiefly the marzubāns who opposed the Arab invaders with their local troops and concluded on their own account treaties (wangībābā), which guaranteed freedom of religion and the possession of private property against payment of kharāj. Where a town or a region had been taken by force, the Arabs became proprietors of the soil, as in the Medīn regions Māh al-Kūfa and Māh al-Bayra. Wholesale acceptance of Islām, as is reported of Kāzin, was rare; the Zoroastrians continued the practice of their religion, notably in Fāris and Aḥbarbāḏjān, but from Fāris many of them took refuge in Sīstān and Mārkūn, and about 700 took place the first emigration of Zoroastrians to Kathiawar in India. In the town of Dārābāḏjār it was the local herβāš who treated with the Arabs. On the other hand, many Persians were taken as captives to Irāk and Arabia, where they became mushāli, while also entire groups, such as many knights (astavirā) of Yezdgerd’s army, and different elements of the population of southern Persia (the Zog, Sayhūdja and others) joined forces with the Arabs. The mountaineers, however, in Fāris and al-Dūbāl, and especially those of al-Dīlān and Dailam, long remained unconquered, living under petty local dynasties. In Kūhāsān and Khurāsān, the Arabs had to deal with remnants of the Hephthalites (Hyaṭṭa), still further east with polytheists (mushyrākān), probably Buddhists and, in Khurāsān, often with Turkish auxiliaries. On the other hand, the conquests introduced a contingent of Arab Muslims in the Persian towns, where they generally began by establishing a mosque; they increased by colonisation in Umayyad times and among them were many bearers of the traditions (hadith) about the Prophet and other religious matters and in this way was prepared the gradual islamisation of the population, favoured at the same time by economic conditions.

The civil war, in which not a few Persians took part in Irāk, crippled for some time the Arab progress; the emissaries of ʿAli’s governors in Kūfa and Bayra had great difficulty in maintaining themselves and the whole of Khurāsān rebelled, in spite of the reported visit of the marzubān of Marw to the fourth caliph. Bakh was even for some time under Chinese control. It was only under the energetic governors of Irāk under the Umayyads, Ziyād and al-Hadjajdāj, that the conquest was taken up with renewed vigour. Under Muḥāwiya ʿAbd Allāh b. ʿĀmir had been again appointed governor of Baṣra (662) and he sent again ʿAbd al-Rahmān b. Samura to Sīstān, and then the Arabs reached Kūhāl, although he and his successors experienced greater difficulties in their dealings with the Kūhāl-Siḥā and the different rulers of Zabūlīstān who are called zambl (according to Marquart, Eränisahr, p. 248). These difficulties continued throughout the Umayyad period and became less only when Sīstān was joined administratively to Khurāsān, and the Arab domination grew stronger in the latter region. Ibn ʿĀmir was also the first to begin the reconquest of Khwasān by his lieutenant al-Kāis b. Hāfīz (contemporary of Ibn ʿĀmir’s buthead); it was continued by Ziyād b. Abī Sufyān (from 666), under whom Marw was made a strong Arab garrison, and shortly afterwards 50,000 Arab colonists were established with their families in Khurāsān. Al-Hadjajdāj operated in Khurāsān through his able generals al-Muhallab b. Abī Sufra, Yazid b. al-Muhallab, and finally Kūtābī b. Muṣlim. One of the greatest difficulties was, in his time as many times afterwards, the clearing of the main road to Khurāsān by al-Raṣī, Kūmīs and Tābaristān, where many battles were fought with the mountaineers. The transfer of a considerable Arab contingent to Khurāsān under Ziyād had been a consequence of tribal wars that had started during Muḥāwiya’s reign. The new comers soon began to infect the Arab soldiers of the garrisons, while at the same time the political and religious parties born from the civil war began to gain adherents in Persia, first among the Arabs and soon among their Persian clients. Prominent were the Khāṭiris, who, under their leader Kaṭari b. al-Fudjā’a (killed ca. 697), found a refuge in Kirmān and made from there raids to the north and the west. And towards the end of the Umayyad period, Ḥašāfān with parts of Fāris and Kūhāsān were temporarily in the power of ʿAbd Allāh b. Muḥāwiya (744–746). The main object of the Umayyad administration was the collection of the ḍiyā and the kharāj and, until the time of al-Hadjajdāj, the books were kept by native scribes in Persia, after the custom of the Sīsānids. Under al-Hadjajdāj the language and the script of the administration were changed to Arabic in Irāk, and we must assume that gradually Arabic came to be the administrative use in the Persian provinces; nevertheless the first Arab governors, and among them Kaṭari, had coins struck with Pehlevi and Arabic legends. A considerable advance in the islamisation of Persia was due to the financial policy of ʿUmar b. ʿAbd al-Aziz and Ḥiṣām; after ʿUmar’s edicts had induced many Persians to adopt Islām in order to get rid of the ḍiyā, the taxing of Muslims and non-Muslims alike by Ḥiṣām brought about an assimilation of the different elements of the population, from which there emerged at this time a reliable class of Islamic-Persian functionaries. Only the mountain people under their local chiefs remained unruly. But notably the remote province of Khurāsān, though revolts were not rare, and notwithstanding the continuous tribal feuds of the Arabs, remained under firm government control, owing to the presence of the strong garrison at Marw, where the governor resided, and in a not less degree to the successes of the Muslims in Transoxania under Kūtāba.

This makes comprehensible why the anti-Umayyad propaganda, directed by al-Abbasids in Syria, chose Khurāsān as the field of operation for their
emissaries. Making use of the animosity between the Arab tribes and of the general dissatisfaction with the existing rule, this propaganda resulted fairly in the revolt of Abū Wālid in 747 and his victorious entrance into Marw and soon afterwards into Nāṣīrābād. So it was to the Arab legions in Persia and their Persian helpers that the 'Abbāsids owed their final victory in 750. This, of course, brought about a completely new orientation of Persia within the empire of the new dynasty, the more so as the 'Abbāsids transferred their residence to 'Irāq, where the centre of the last national Persian dynasty was formerly situated. Persian attitude to life and Persian tradition became dominant in the new centre of Arab political power and soon of Islamic civilization in the newly founded Bagdād (762). A symptom of this Persian cultural influence is the translation into Arabic of products of Philippine literature by authors like Ibn al-Muṣaffā. Further, powerful families of Persian origin, gained as the Barmakids, and afterwards the Ismā'īlids, such influence as viziers on the affairs of state. This was also the time when the racial sentiment of the Persians began to assert itself in the šāh niyāṭa movement and when the manifestations of the Persian szindik aroused the anxiety of religious circles. The caliphs themselves showed more interest in their Persian provinces than the Umayyads had ever done; they were moreover compelled to do so, as events had shown what a powerful commander might be available to undertake against the central authority. In the south-western provinces — al-Djhālā, Kūhārān and Fāris — revolts of this kind were not to be feared, but farther away and in the mountainous authority could only be maintained by repeated expeditions. So when the governor of Kūhārān showed signs of disloyalty, the caliph al-Mahdi sent his son al-Mahdi with the general Kūhānī b. Kūzama to restore order and afterwards to subjugate a local dynasty in Tabaristān. Then al-Mahdi took up his residence in al-Ra'ī until his accession. Hārūn al-Rašīd undertook himself at the end of his life an expedition against Kūhārān and Transoxania, during which he died at Tūs (809). His son al-Ma'mūn, who had accompanied him, remained in Kūhārān, even after he had become caliph (813), until 817. During this time the expedition of the imām 'Ali al-Kāda [q.v.]. In the same early 'Abbāsid period the tentative nature of the Persian population towards Islam had changed in so far as notably the revolt of Abū Muslim had induced many Persians of the better class (the dīkhānīs) to become Muslims, but at the same time the lower classes were liable to outbreaks of religious fanaticism, in which Islamic and pre-Islamic views were intermingled. In Kūhārān a number of false prophets made their appearance: Šōbālan, the Magian (754—755), Ostādāb (760—765), Yūsuf al-Bām, al-Muḥamadāb (777—780). To the same kind of religious movements belonged the prolonged rebellion of the Khurramites under Bālak (816—838) in Adharbājān. The caliphs were justified in repressing these movements with great severity, because they were generally accompanied by aspirations towards political independence. The revolt of the Abī Yaḥṣāb b. 'Abd Allah in Daulān in 793 showed likewise that it was already possible to operate in Persia with Islamic devices, and for this reason the caliph Harūn had to proceed with much circumspection in its repression.

Under al-Ma'mūn begins the political loosening of Kūhārān and neighbouring provinces from the 'Abbāsīd caliphate, not by the action of the ancient Persian nobles or princes, nor by the popular movements already described, but by the Kūhādīs or 'Abbāsid propaganda, but by the action of 'Abbāsīd, Muḥammadān, governors, not of ancient noble lineage, but nevertheless animated by national feelings, preparing in this way the Persian Muḥammadān political and cultural renaissance. Tāhir b. al-Husayn, general of al-Ma'mūn, was appointed in 820 governor of Kūhārān. His descendants, the Tāhirīs, were nominally governors of the caliphs, but the latter had to leave to them an almost independent authority over Kūhārān with the regions to the east as far as the Indus and to the west as far as al-Ra'ī. Those regions never came back under the caliphs' full authority, for the Tāhirīs lost their power, and their territory in 873 in the struggle against the 'Abbāsīds, a dynasty of still less noble descent, who in 867 had begun to make themselves masters of Sīstān under Yaḥyā b. al-Ḥaith and his two brothers. Their territory comprised for some time Kūhārān with the regions of Kābul and al-Rukh- kābūd — where the 'Abbāsīd power had never been well established — and even Kīrmān and Fāris, but the position of the Tāhirīs as leading power in Persia soon came to an end, when they were beaten in 879 in Kūhārān in their endeavour to attack the caliph in Bagdād. The cultural and religious position of the Tāhirīs is not well known, but their exploits remained famous in Persia long after their extinction. During the same period the caliphs had to suffer the establishment of other more or less independent dynasties, such as the Dulāfīs in al-Karadž in the southern part of Media (842—897), and the Rudānī family in Adharbājān. Far more important is the rise of the Sāmānī dynasty in Kūhārān and Transoxania. This dynasty originated in Kūhārān: they had been at first faithful servants of the Tāhirīs and occupied already a powerful position in Transoxania when the troubles in Kūhārān, after the fall of the Tāhirī power, enabled them to establish their power in Kūhārān in 892, under the nominal suzerainty of Bagdād. Under Naṣr b. Almā'ét (913—943) they governed also in Sīstān, Kīrmān, Lūrdjānī, al-Ra'ī and Tabaristān. The immense cultural importance of this dynasty for Persia lies in the fact that a revived national but Islamized Persian spirit found an opportunity to develop itself in Kūhārān, as is revealed to us by the beginnings of the New Persian Islamic literature [cf. infra, i. 11]. This development certainly goes back at least as far as the time of al-Ma'mūn. The Sāmānīs, residing in Transoxania and had Kūhārān governed by governors, so that they were not the neighbourhood of the brilliant court alone which favoured the Persian form of Islamic culture; this was due rather to the general prosperity which began to reign and which brought into existence a class of wealthy landowners who were able to patronize literary and scientific activity, for Arabic literature also began to flourish in Kūhārān (al-Pākūr and others). It is further noteworthy that the Persian renaissance did not take place in the traditional centres of Persia, Fāris and Adharbājān, where about this time the ancient conditions had not much changed, but rather in a (culturally speaking) new country, where new forms could more easily come into existence.

In western 'Īrān the manifestation of the Per-
sian national spirit took other, less refined forms, as the promoters were the never entirely subjected peoples of Dailam and Džilân. Here the Zaidite ʿAlid propaganda, begun under Hârûn al-Rašîd, had supplied popular opposition to the Caliphate with an Islamic badge. Several petty local dynasties were still in existence in Dailam at the beginning of the 8th century and from here started predatory expeditions, whose first aim was the town of al-Raïy. The brigand chiefs became generals and some of them became rulers of countries with continuously changing frontiers, owing to their warfare with each other and with the Sâmânids. The most stable of the dynasties thus formed were the Ziyyârîs (928–1042), who ruled for some time in al-Raïy, Isfâhân and Ahwâz, but were replaced in the end in the territories of ʿTabaristan and Džurdžân. In al-Džibâl, Fâris and Khûţîstân they were soon replaced by the much more successful Buʿyîds, their former Dailamite confederates. The independent rise of the three brothers ʿAli, ʿHasan and Ahmad, sons of Bûya, began about 935 and soon nearly the whole of western Persia had ceased to pay taxes and tribute to the Baghdad government, where, moreover, the caliphs were dominated by military commanders. This situation enabled Ahmad b. Bûya, already master of Khûţîstân, to occupy Baghdad in 948 and to incorporate the seat of the caliphate in his possessions. The caliphate was allowed to survive under the political power of this Persian Shî`ite dynasty. The other Buʿyîd brothers resided at al-Raïy and at Shîrûzâ, and the most brilliant reign was that of Aṣud al-Dawla, son of ʿAli of Shîrûzâ, who in his turn became master of Baghdad in 978 and reigned until 983, while his son Bahî b. Dawla (989–1013) continued to reign in ʿIrâq, Fâris and Kirmân. At the same time the north-western part of Persia had fallen, after the semi-independent reign of the governors of the Sâdîd family in ʿAbharbâdûn (890–929), into the hands of Kurdish dynasties, such as the Musâhirîs, the Shâdîddîs, the Kawwâdis and others.

On account of these grave political disturbances which slowed somewhat the process of assimilation of the specifically Persian cultural development that had started in Khurāsân, but towards the middle of the 8th century, when conditions became more settled, there clustered around the Buʿyîd courts and in other large centres a class of Persian-Islamic writers—such as Ḥamza al-Iṣâfânî (d. c. 970)—and scholars, among them such brilliant personalities as the Buʿyîd wazirs Abu l-Faṭîr b. al-ʿAmîl and ʿIsâʾîl b. ʿAbbâd. At the same time the different religious currents of the time filtered through into the classes of the continually increasing Islamic population, one centre preferring Shî`ite doctrines, another Muʿtaṣûlim, another traditionalism (ahl al-hadîqâ), and so on (cf. the geographers passim). Karâmatism was, however, severely suppressed, when it appeared in Khurāsân at the end of the 8th century, and though the Karâmat propaganda had been strong in south-western Persia, its political successes were realised only on the opposite coast of al-Bahrîn. Shûfîsm likewise became widespread in its different forms, developing peculiar types of Persian Shûfî as early as the 8th century; the life story of al-Hallîjî shows equally the fertility of south-western Persia for Shî`i propaganda. All these gers were destined to bear fruit in later centuries, but on the whole the political distribution of forces had already brought it about that western Persia, situated between Sunni Eastern Persia and Sunni ʿIrâq and Mesopotamia, tended towards the Shî`a.

The 8th century witnessed the rise of the Turks in Persia. Turkish troops had already formed large contingents in the armies of the governors and princes who disputed with each other parts of Širvânian soil, not excluding the mountaineers who needed horsemen alongside their local foot-soldiers. It is true that already in Sâmânîd times sections of Turkish tribes had been established south of the Džurdžân in Khârâhîstân, but the main role of the Turks in Persia had always been that of soldiers and military commanders in the service of local governors and princes. In the Sâmânîd state several Turks had risen to high military and administrative functions, and, as the military power of the Sâmânîd began to weaken, these Turkish commanders aspired to political leadership, relying on their Turkish troops and using their natural capacity for military organisation. In this way the Turkish vassal of the Sâmânîd, Subûkchâk, founded his independence in the newly conquered region of Ghaznav and Kâbul, where until then local Hindu rulers had been able to maintain themselves; his power soon became a menace to the Sâmânîd themselves, who, in Transoxania, were continually losing ground to the Turkish Tîkânâs. Subûkchâk had been a Sâmânîd governor in Khurasân, and it was after his death (997) that his son Mahmûd of Ghaznav (990–1030) took the opportunity of establishing an independent power in Khurasân, choosing Bahkh for his capital at the outset. He extended his sway in Persia over Sîstân and as far as eastern Media, while his conquests in India and Transoxania gave a strong backing to the consolidation of his power in Iran. Mahmûd had asked the caliph for a diploma of investiture and was noted as a champion of Sunnîsm. Under his reign the new cultural Persian-Islamic tradition of the Sâmânîd was continued; his court was a centre of Persian court poets and his personal relations with Firdawsi may have been, they show at any rate that his states were to the congenial soil for the renaissance of Persian traditions. The name of al-Bîrûnî is sufficient to show also that the noblest and highest form of Islamic scholarship could flourish under his reign. And his immense popularity in later Persian Shî`i poetry has made this Turkish ruler a cultural Persian hero. The final islamisation of the Kâbul country was the work of the Ghaznavids. In western Iran in the meantime, the later Buʿyîds were able to maintain themselves with less brilliance; apart from the Ghaznavids they were seriously weakened in Fâris by the Shâbânkâra Kurds in the first half of the 8th century. Yet conditions did not hinder the prosperity of Persian literature and science (Avicenna).

The rise of the Ghaznavids was only the prelude to the Turkish invasion under the house of Selîdîk, by which Selîdîkîd rule became established in Persia and beyond. This time the Turks, mostly called Ghuzz, had begun, since 1029, to migrate into eastern and southern Persia, in spite of the opposing measures of the Sâmânîd and the Ghaznavids. Within seventeen years from his first appearance in Khurasân (1035), their leader Taghhrî Bek had overrun the whole north of Persia, and made his entrance into Baghdad (1055).
At the same time the power of the remaining Ziyārids and of the different Būyid dynasties was entirely crushed; the Iranian possessions of the Ghaznavid power were considerably reduced, and thus nearly the whole of Persia was united again under the Turkish dynasty of the Seljūks, whose members divided amongst them the different provinces: Khorāsān, Sīstān with Herāt, Kirmān, Fāris, and Ardabīlān. Tughril Bek fixed his residence at Ray and his successors being called the Great Seljūks, in contrast to the minor Seljūk dynasties. The last Great Seljūk, Sanjar (1117–1157), though an able ruler, was real master only in Khorāsān and had already to face new factors in Persia, which, after his death, brought about a political disintegration that could only be arrested by the Mongol conquest.

The Turkish invasion, which brought nomadic Turks into nearly all parts of Persia, where they found conditions suited to their mode of life, and which in many respects may be compared with the Arab invasion, did not make of Persia a Turkish country, as it was the case with Transoxiana and Afghanistan, but the Seljūks were only the ruling Seljūk dynasty. The young Persian cultural Renaissance had gathered enough vital force to assimilate the ruling Turkish elements, and this to such a degree that, until the xiiith century, the Seljūks continued to spread Persian culture in Asia Minor. The nomadic Ghuzz did not find the opportunity, as elsewhere, to assert themselves otherwise than as a very turbulent element, which in the xiiith century became threatening even to the Seljūks themselves. The influence of their certainly not very orthodox Islamic religious views on the religious history of Persia has certainly not a little contributed to the spreading of Shiʿite ideas. The Seljūks themselves continued the tradition of the Sāmānids and Ghaznavids by becoming champions of Sunnism. The minister Niẓām al-Mulk is an outstanding figure among the many personalities of Persian descent who were the pillars of the political, religious and literary currents of the time. Under his patronage worked al-Ghazālī, the scene of whose later activity was Niẓāhpār in Khorāsān. Persia had acquired at this time an importance as a seat of Islamic culture equal to that of Iran and other parts of the Islamic world. The theological colleges founded by Niẓām al-Mulk (Baghdad and Niẓāhpār) were the crowning work of the Sunni Islamic civilisation, but involved at the same time a consolidation by which religious and cultural ideals were fixed and anchored for the centuries to come. The early Seljūk period shows also a continuation of the best of Muhammadan scientific activity in Persia, for which we have to quote only ʿUmarī Khiyām.

Western Persia, however, asserted her non-Sunnite tradition by the Ismāʿīlī propaganda which resulted in the capture of the stronghold of Alamūt near Kāzvin by Hasan-i Sabbat in 1091. The sources of this propaganda were in the East (Nāṣir-i Khusraw) and the West (Egypt) alike, but both its real political effects were concentrated, as far as Persia is concerned, in al-Dījābāl, Fāris and Kūstāinān and, in a less degree, in the east in Kūstāin, where about the same time a number of fortresses were acquired by the Ismāʿīlīites. Hasan-i Sabbat and his successors became a political power in western Iran, especially in al-Dījābāl, against which the Seljūks were more and more powerless, and which was crushed only by the Mongol invasion.

The Seljūks had established in their dominions a system of hereditary military fiefs (ābāk) with the object of being able to dispose of an army commanded by reliable chiefs. The consequence of this system was the loosening of the central power which was supplanted in course of time by a number of independent military governors, who are known in history as ābākūs. On Persian soil the chief ābāk dynasties were those of Ardabīlān (since 1146), of Luristān (since 1148), of Vazd (since 1170), and the ābāk dynasty of the Salgharids in Fāris (since 1137), who annexed also Kirmān after the extinction of the ruling Seljūks of Kirmān. In the southern parts of Fāris and Kirmān the Shahānkuš continued their irregular authority. In Khorāsān the Seljūks were eclipsed after Sanjar's death by the Khwārizmshāhīs, and simultaneously these rose into prominence the Ghūrid dynasty, originating in the mountains of al-Ghor and al-Dīyarwar. It was the Khwārizmshāhīs who, by taking Ghazna in 1149, put an end to the Ghaznavid influence in Persia, except for the province of Fāris, and the country of Būst, and to the north, Bāmīyān and eastern Khorāsān. Later on they too lost the greater part of their possessions to the Khwārizmshāhs. Sometimes the Ghūrids were allied with the wandering Ghuzz, and sometimes they fought the latter; on the whole the devastations wrought by the Ghūrids and their temporary allies mark the beginning of the cultural decline in north-eastern Iran.

This decline was hastened by the Mongol invasions. After the Khwārizmshāh Muhammad had come into conflict with Čingiz Khān (1218), the Mongols first took possession of his lands in Transoxiana, of which their appearance in Khorāsān was the political and military consequence. In the campaign of 1220–1221 the Mongol generals Ujbe and Subutai conquered Khorāsān and the northern part of western Persia as far as Ardabīlān, driving the Khwārizmshāh Muhammad to the island of Abūbūn in the Caspian, where he died, and forcing his son Ujjaal al-Dīn to cross the Indus. The great towns of Khorāsān were devastated in a way that made it impossible for them to recover their ancient splendour; the population must have been considerably reduced by the wholesale massacres, and the works of art and literature were destroyed. The conquered cities were immediately placed under Mongol administration; where the population revolted, as in Hamadhan, there followed a pitiless massacre. The conquered territories were annexed to the part of the Mongol empire given to Čagha Khān. Southern Persia was spared for the moment; in Kirmān the Mongol emmissary Burāk Ḥadjitīb founded in 1224 an almost independent state. Soon afterwards Djalal al-Dīn reappeared from India to make his turbulent way to Ardabīlān and Armenia without being able to drive out the Mongols. Then, in 1256, came the second invasion of Mongol armies under Hulagu, brother of the reigning Khān Mangū. This expedition had been carefully prepared and was directed against the Ismāʿīlī heretics in Persia and against the caliphate in Baghdad, which was exterminated in 1258. Whatever the real political and religious motives for the expedition of Hulagu, the friend of the Christians may have been, its results were of immense consequence for eastern Islam in general.
Persia was entirely subdued and came to form the greater part of the dominions of the non-Islamic Mongol dynasty of the Ilkhan s, who resided most of the time in Adbharbadjian (after 1306 in Sulthaniya). By the end of the xivth century the smaller existing dynasties, such as the Salgharid, tabeks of Fasis and the Kutugh Khans of Kirm mân were also extinguished.

By the terrible devastations in Khurassan these regions ceased to be a hearth of national Persian Islamic culture and this role now was taken over by the west. At the same time these political events had loosened the ties with the western Islamic centres which at the time were wholly absorbed by the action against the Crusaders. Moreover by the extermination of the Ismâ'îlîs power and the uncertain attitude of the Ilkhâns towards Islân and its different aspects, Persian Islâm passed in this period through a profound crisis, and many conflicting currents were at work. In this period lived in Ardâbîl the Shaikh Safi al-Din (1252—1334), the ancestor of the Shàfawid dynasty. Still the Persian national character maintained itself and assimilated the many new foreign elements, mostly Turkish, so far as these were capable of advance to a higher cultural level. Great Persian poets (Sa'di) flourished, and the Ilkhâns showed an interest in the achievements of Islamic science (Naqîr al-Dîn Tusì) and literature (Rashíd al-Dîn).

During the Ilkhân period (1265—1337) Persia was considered by the European Christian powers as their ally against Egypt, now the chief champion of Islâm in the west. But although the political opposition between the Ilkhân empire and western Islâm became a living reality, any attempt to organize and propagate Christianity in Persia by the institution of bishoprics was fruitless. Persia was opened, however, to closer contact with the European world than ever had been the case in Islamic times, not so much by the series of well-known travellers who passed through Persia on their way to the centre of the Mongolian Empire, as through the establishing of commercial settlements by the Italian republics in Adbharbadjian for the overland commerce from their establishments on the Black Sea (Trebizond) through Armenia and Persia to Central Asia.

After the death of Abû Sa'id (1335) the dynasty of the Ilkhâns came to an end in the quarrels between the Djalâ'îr and Cubân families. Abû Sa'id had already had great difficulty in maintaining the unity of his state, especially in his struggle against the influential amir Cubân. Further the later Ilkhâns had already had to suffer the existence of semi-independent dynasties, such as the Kure dynasty at Herât, the only large town in Khurassân that had escaped Mongol devastation. Other powerful commanders, who had served the Ilkhâns, found during the troubles after Abû Sa'id's death opportunity to aspire to political independence; the most successful were the Muzaffarids of Fasis and Kirmân, a dynasty of Arab extraction, who from about 1340 until their destruction by Timür in 1392 held sway in southern Persia and for some time as far as Persia (Ihrâb) and Adbhurbadjian. Further Adbhurbadjian was now in the power of the Khân of the Golden Horde and in that of the Djalâ'îr dynasty of Baghdad. Eastern Persia was mainly divided between the Kure dynasty of Herât already mentioned and the Serbedjar clan who had their centre in Sebezwâr.

In these chaotic times, when the authority of political power was waning, the more popular and, in a way, democratic elements in Persia, gained more opportunity of asserting themselves, as may be seen from the rather independent way in which the citizens of different towns behaved in the quarrelling rulers. This self-assertion of democratic elements is also to be observed in Asia Minor, but on the culturally more fertilized soil of western Iran, it bore the fruit of a brilliant literary development in the xivth and xvth centuries, which at first sight may seem astonishing in such unfavourable political surroundings. This development was accompanied by an intensification of the religious currents that were at work among the population, where it was strongly influenced by the lower forms of Shàfism as propagated by derwishes. In the case of the Serbedjar in Khurassan the derwish activity had even political consequences and here also is a striking parallel with conditions in Asia Minor. Higher Shàfism was confined to the upper classes and expressed itself in literature, by which we are able to follow the different trends of thought. From the poems of Hâfiz we learn that the Shàf睿 creed of the i'tbâna atshâriya was already widely spread and that the tomb of 'Ali al-Ridâ in Meşhed had become an object of national veneration.

At the end of the xivth century followed a fearful political reaction in the conquest of Persia by Timür Lang, another foreign intervention which for the last time held up the development of a national state in Persia. Timür, after conquering for himself an empire in Central Asia, founded on his descent from Çingiz Khan a claim to the domination of Persia. In 1370 he had already conquered Balkh; in 1380 he subdued Khurassan, Sistan and Mazandaran, and in 1383—1384 he completed the conquest by taking Adbharbadjian, Persian I'rák, and finally Fasis by exterminating the dynasty of the Muzaffarids (1392). The Serbedjarôs had already been swept away and in 1389 disappeared the Kure dynasty at Herât. The most bloody event during this conquest was the sack of Isfahan in 1387. Timür never resided for long in Persia, but confined his government to some of his sons, notably Shàhrûkh, who became "king" in Khurassân and Sistan as early as 1397. In Adbharbadjian reigned Mirânghân, not altogether to the satisfaction of his father. After Timür's death (1405) the political unity of the empire was on the whole preserved under Shàhrûkh (d. 1447), who sought to repair much of the devastation wrought by his father's campaigns. Shàhrûkh still recognized nominally as his suzerain the emperor of China. After his death different descendants of Timür, the Timurîs, disputed with each other parts of Persia, while after 1450 the dynasties of the Kara Koyulu emerged from the west to dominate large parts of Persia. The best known Timurîs in Persia was Sultan Husain Bahârî, who ruled from his capital Herât over Khurassân, Sistan and Djûrân from 1468 to 1506.

Timür's reign in Persia meant also a Sunni reaction, but in western and middle Persia this reaction was not lasting. Among the many heterodox religious manifestations of this time is the appearance of the Huîfî sect, one of whose adherents tried to murder Shàhrûkh in Herât in 1426. This religious movement was suppressed by the government, but it had, like similar currents,
strong connections towards the west, through Ḍāhīrābādjān into Asia Minor, where at this time the Sunni power of the Ottomans was re-establishing and strengthening itself to oppose the heterodox influence emanating from Persia. Mean-time Persian cultural life continued to manifest itself in the important literature produced in western Persia, while also in the Caucasian countries and Muḥammadānādī Asia Persian cultural and literary influence was reaching its climax. This was not the case in Khorāsān; here, in the intellectual centre of Herāt, developed at this time the eastern Tur-khish Caghatay literature, promoted by Ṣāḥib Shīr Naufī at Hāsain Baḵīrā’s court at Herāt. Although the Persian-Islamic tradition continued, its influence in these regions, eastern Persia begins to be culturally separated from the west under influence of the Turkish and local elements; a development similar to that witnessed at the same time in Asia Minor and the regions of Arabic tongue in Mesopotamia and Ḥiraḵ.

The events that preceded the rise of the Šafawid dynasty have Ḍāhīrābādjān as their chief scene of action. It was in Ḍāhīrābādjān that Kār Tūsī, the Kār Koyunlu dynasty began its career by taking Tabriz in 1406, and that his successors had the centre of their empire, which, under Ḍjāhān-shīr (1435–1467), extended over nearly all western Persia and in the east as far as Herāt. And it was through Ḍāhīrābādjān that ʿUzun Ḥasan of the ʿAk Koyunlu penetrated Persia, after his victory over Ḍjāhān-shīr in 1467. Then he defeated the last Timurīd Abī Ṣafīr and became master of western Persia, inaugurating in the meantime the series of wars with the Ottoman Turks, that were to last for three centuries. The successors of ʿUzun Ḥasan had already come into conflict with the Šafawid leaders. Shāh Ṣafīr and Sultan ʿAlī, who about this time had acquired enormous influence in Ḍāhīrābādjān and Asia Minor. The Šafawid movement began indeed in a much more democratic way than the preceding dynasties. Its chief adherents belonged to seven tribal groups of Turkish origin, amongst whom Shiʿite convictions had been spread by means of Sufī propaganda methods. This ever-increasing flock acquired at this time the celebrated nickname of ʿḲīzīl-Baḵsh. Thus their political rising under Shāh ʿImārī was again a reaction against the official orthodoxy of the ruling classes, a reaction in which it was not difficult to enlist the Persian town population of western Iran, since old times ready to accept non-official and unorthodox religious views, by which at the same time they showed their dis-like for foreign rule. These different elements gave a Persian “national” character to the Šafawid dynasty, although their leaders were Turks from türceizados Ḍāhīrābādjān. Shāh ʿImārī, on emerging from his hiding place in Ḏiylân, gained his first success in the Caucasus against the king of Shirvān, and this made him strong enough to turn his arms against the last ruler of the ʿAk Koyunlu, whom he defeated in the battle of Shurār (1501). By 1510 he was master of western Persia, and in addition of Armenia, Mesopotamia and Ṣarḵāz (Baghdād taken in 1508) with the holy tombs of the imāms in Naṣāf and Karbālā. He then turned to eastern Persia, where a new invasion from Transoxania was threatening, after the death of Sultan Ḥusain Baḵīrā at Herāt (1506), by the rise of the ʿUzbek power under Shāh-bān Khan. The latter had already invaded Khorāsān, and had not been defeated and killed in the battle of Marw (1510) by Shāh ʿImārī, Persia might have experienced a fourth wave of conquest from Central Asia. Then followed in 1514 the famous battle of Cādirān; the defeat suffered here by Shāh ʿImārī from the army of Selim I showed where the political frontiers of the Šafawis were henceforward to be; the wave of sympathy that had spread west from Ḍāhīrābādjān far into Asia Minor was ruthlessly suppressed by the Ottoman Sultan and Cādirān showed that any political extension of Persia in this direction was impossible.

Thus the important events of ʿImārī’s career determined the field of action of the Šafawī dynasty, which was to last until 1736. Religious and cultural traditions and geographical necessity gave this dynasty the character of a “national” dynasty, and the long period of its existence, together with the religious isolation of their empire, contributed not a little to the coming into existence of a real Persian “nation”, that overcame the troublesome period of the xviiith century and asserted itself ever more vigorously during the xixth. The nature of the country, however, was not favourable to a rapid development in this direction. The many nomadic elements of Ḫurānī, Turkish and Arab origin kept much longer to their own traditions, and the dis-connectedness of the various inhabited centres could not but weaken the authority of the government. Throughout Šafawī rule, the kings had to reckon with the existence of half independent governors and tribal formations, from which came the powerful nobles and courtiers. In the time of Tāḥmāš I some Geşānīgī nobles, relatives of the king, were in a dominant position, but on the whole it was the ʿḲīzīl-Baḵsh clans who formed at times a dangerous power in the state, while nevertheless the kings were dependent on these elements for the defence of the country. It was only during the reign of ʿAbbās I that something of a royal militia (the Shīta-sewan) could be formed, while on the other hand the army was reinforced by European artillery. Therefore the civil and military administration of the country never acquired even such a regularity and a cohesion as is witnessed in the Ottoman Empire; the Šafawids had to suffer for instance the permanent establishment of the Portuguese in Hormuz (1507–1622) and afterwards of the English, but this did not yet conflict with the state conceptions of that time. Governmental authority could only be maintained in the interior by the utmost severity, as was practised notably by ʿAbbās I. For the same reason the frontiers of the Šafawid empire in east and west were never very stable, although gradually a demarcation takes place. The eastern part of Khorāsān and the regions to the south of it, long since culturally disconnected from western Persia, never returned to the Šafawids. Bahāk and Marw were under the almost unbroken domination of the ʿUzbeks (ʿAbbās I only temporarily occupied Bahāk in 1598), while Kābul and Kandāhar belonged from the beginning to the empire of the Great Mughals of India, Kandāhar being only temporarily held by the Šafawīs. Only Herāt was for most of the time under their control and was far more than in the xixth century Persia had not abandoned her claim to this town. All this makes clear why eastern Iran, after the extinction of the ʿUzbek and the Mughal power did not return to Shīta Persia, but came to form at last an independent state
under the Afghan rulers. Only western Khorasan, with the shrine of Meshhed, and Sistan remained an integral part of Safavid and consequently of modern Persia. In the west the Ottoman Turks and the Persians disputed with each other in a continual series of campaigns, interrupted by temporary peace, the large band of territory stretching from the Persian Gulf to Georgia. In the 16th century the Turks won and occupied Adharbaijian, Mesopotamia and Iraq. Under Abbas I most of the lost territory was recovered, but the recapture of Baghdad by Murad IV in 1638 made an end of Persian domination in the Tigris valley, while Adharbaijian and parts of Armenia and Georgia remained to Persia. In 1668 took place the first conflict with Russia through a descent of Cossacks upon Mazar-ul-Rahim.

Since the beginning of Ismail's career the Sh'ite creed had been forcibly imposed on the settled population and a regular persecution of all Sunni theologians had begun. This persecution was accompanied by a repression of all Shi'a manifestations, whereby the newly established religion took at last the aspect of a fanatical and intolerant church, whose ministers, the Sh'ite divines, repressed all utterances of free thought. Browne ascribes to this development the sudden poverty of literary production in Safavid Persia. In these circumstances Persia became much isolated from the surrounding Islamic countries, but on the other hand the enemies of the Ottoman power in Europe looked upon Persia as a valuable ally in their common efforts to crush that power. To this was due the forming of friendly diplomatic connections with European powers, such as Venice and Spain, who, in addition, sought to profit by commercial relations. These relations, together with the political necessity of securing their colonial establishments in India and beyond, led other European states also to take up friendly relations with the Safavid court, namely the English, the Dutch and the French, after the Portuguese had been driven from the Persian Gulf. The European envoys, amongst whom the Shelley brothers are most notable during 'Abbās I's reign, were well received, and established the first real contact between Persia and European civilization. These relations also provoked the sending of some memorable Persia embassies to Europe. The political reasons that had brought the European sea powers to the Persian Gulf prevented Persia, however, from ever becoming a maritime power; even the endeavour of 'Abbās I to make of the newly founded Bender 'Abbās a great maritime commercial town remained unrealized.

Most of the Safavid kings had very long reigns, for which the not uncommon practice of killing possible pretenders amongst the royal family was probably responsible. The most brilliant reign was that of 'Abbās I (1587–1629), who transferred his residence from Kazvin to Isfahan, which, by his buildings, became a splendid royal city. His successors profited by his work. After the middle of the 17th century Persia was passing through a peaceful period, owing mainly to the weakening of its neighbours. Conditions at this time are well known by a series of European travel accounts. The same peaceful conditions had allowed, however, the establishment at Kandahar in 1709 of a Sunni rebellious movement, which was opposed in vain by the Safavid king Husain and was the beginning of the Afghan state. In 1722 the Afghan army of Mir Muhammad conquered Isfahan, after which the Afghans were masters in Persia for about eight years. At last the Safavid successors of Husain were able to liberate the country through the help of their general Nādir Kuli of the Afshar tribe who, in 1736, made himself king of Persia as Nādir Shāh. At that time he had already restored to Persia the cities in Adharbaijian and Georgia that had been taken by the Turks and likewise Rasht and Baku, occupied by Russia. After his coronation he set out on his invasion of India and the Afghan country, but his reign had brought so little stability that, after his murder in 1747, there followed a period of general lawlessness in Persia. The Afghans regained strength, but allowed Nādir's blinded grandson Shāhukh to reign over Khorasan.

The failure of Nādir Shāh to establish a lasting dynasty was also due to his endeavours to abolish the Sh'ite religious practices, but in this he met a determined opposition from the people and their spiritual leaders. After Nādir's assassination there was hardly any question of restoring a Safavid to the throne. The real power devolved on Karim Khan Zand, who resided mostly in Shiraz and who succeeded in uniting Persia during a benevolent reign; in his time the troubles on the 'Irāq frontier led even to the conquest of Başra.

His death in 1779 occasioned a dispute for the throne among his descendents. Agha Muhammad Khan of the Kajar tribe round Ashtarabad profited from these troubles by bringing with much cunning and much cruelty the entire empire under his control. He was finally enthroned in Tehran in 1796 and was assassinated in 1797. With him began the Kājar dynasty, which reigned until 1925.

At the beginning of Afghan rule Russia had occupied Derbend and Rasht, while Turkey had invaded the country as far as Hamadhān; the Afghan ruler Ashraf, however, and after him Nādir Shāh succeeded in recovering the occupied territories. A second Turkish attack in 1740 was equally thrown back by Nādir. During the second half of the century Russia and Turkey were too much occupied with each other to pay attention to Persia. The political development in the north-east had eliminated direct danger from the Uzbek states, but now the lawless Turcomans in the north of Khorasan had become by their raids the terror of the Persian population; Agha Muhammad Khan inflicted serious blows upon them. With the coming of the Kājars, however, the international situation grew more difficult, owing to Persia's becoming involved in world-wide political struggles. Until 1814 the alliance of Persia was an object of dispute between England, whose position in India made Persian friendship a vital question, and the France of Napoleon, who schemed an invasion of India with the aid of the Russian army. In 1814 the French threat disappeared and England concluded a treaty with Persia. But the struggle with Russia for the possession of Georgia, which had begun already in 1812, soon led to military disasters and finally to the loss of all territory to the north of the Araxes by the peace treaty of Turkmenčai (1828). From this time on began the rivalry between Russia and England, the latter country's policy being to prevent Persia, now politically under strong Russian influence, from gaining strength. Great Britain opposed for this reason any extension of Persian territory in
Afghanistān; it prevented the capture of Herāt — a cherished Persian ideal — in 1838, and, when Herāt was really taken in 1856, went even so far as to declare war on Persia and to land troops in the Persian Gulf; at the peace treaty of 1857 in Paris, Persia had to abandon her claims. In the meantime Russia’s position grew ever stronger; a Russian naval base was founded in the bay of Astārābād, and by the Russian conquest of Khiwā and Būkhārā, completed by the subjugation of the Tekke Turkomans in 1881, and the acquisition of the Marv oasis, the Russian Empire had attained an enormous military and political ascendency over Persia, to which was added the Russian influence in northern Afghanistan and Turkish Armenia. Persia was not able to assert entirely its political freedom, but it gained for the first time well-defined frontiers; difficulties with Turkey in Trāk (massacre of Persians at Kerbelā) had led to the fixing of the Turkish-Persian frontier in 1843 (followed by a rectification in 1913), while the eastern frontiers with Afghanistan and Baluchistān were defined by the Anglo-Persia-Afghan boundary commission in 1872; these measures had been mainly necessitated by the establishment of a telegraph line through Persia to India. During the long reign of Nāṣir al-Dīn Shāh (1848–1894) international conditions remained stable, to which the on the whole untroubled domestic situation also contributed, but when, under his successor, conditions became less secure, owing to internal political and financial troubles, the intervention of the two great Powers became more menacing. It took the shape of the Anglo-Russian treaty of 1907, which practically divided Persia into a northern and a southern sphere of influence. During the 19th century indeed the Kāḏjār dynasty had been able to rule Persia in the traditional way, succeeding in checking the action of the troublesome tribes and their chiefs by profiting from their eternal discord. The influence of the higher Shī‘ī religious leaders, over whose nomination the government had no authority whatever, and who resided for the greater part in the religious centres of Kerbelā and Najaf, was supreme among the population, although some divergent theological trends had developed, such as the Shaḵī’s, since the beginning of the sixteenth century. This more spiritualized sect finally paved the way for the appearance of the Bāb in 1844; the Bābī movement for some years took the aspect of a religious-political rebellion, which the government had to suppress with bloody measures. Since then Bābism and afterwards the movement of the Bahāʾī’s to which it gave rise, disappeared from the surface, but remained all the time a living factor in the national-religious life of the Persians. This contributed not a little to the awakening of a more independent political attitude among the more educated classes of the population, who generally found the higher divines at their side in their increasing criticism of government actions. The pan-Islamic propaganda of Djamāl al-Dīn al-Afghānī also furnished elements to the awakening public opinion. Thus the bad inner conditions that had developed under Muzaffar al-Dīn Shāh and the consequences of the foreign loans contracted by that ruler brought about a popular action that led to the granting of a constitution and the opening of the first National Assembly (Mādžlis) in October 1906. The succeeding Shāh’s reactionary policy ended with his dethronement in 1909, but the troubles connected with the accompanying revolutionary movement gave opportunity to the Russians to occupy Tabrīz and Kāzwīn, while at the same time the Persian government was obliged to use foreigners in different branches of its administration (gendarmerie, finances, customs). During the world war Persia was officially neutral, but the German scheme of attacking Great Britain in India gave rise to an at first successful German propaganda in Southern Persia in 1915. On the other hand Russian troops were landed at Enzeli and these opposed the Turkish advance into Persia, which had begun in 1916 by the taking of Kirmānshāh. In this same year began the British counter-action in Southern Persia by the formation of the South Persian Rifles. When by the Russian revolution the action of the Russian troops was crippled, British troops landed in the Gulf and succeeded in checking the Turkish advance in the western frontier region and in repressing, together with Russian troops, the local opposition of the Jangalis in Gilan. Finally in 1918 the British had great difficulty in opposing a similar national rising in Shāhrūz, headed by the Kāshkāy tribe.

Persia was evacuated after the war and became from the outset a member of the League of Nations. A treaty with Great Britain in 1921 re-established British influence, but the coup d’état of that same year suddenly changed Persia’s internal and external policy. Saʿīd Diyāʾ al-Dīn and Riāż Kān assumed forcibly the leadership of the government. Riāż Kān became minister of war and proved to be the strong man needed. His chief achievement during the following years was the subjugation and disarmament of the turbulent tribes, and the forming of a reliable army of 40,000 men. In 1923 he became Prime Minister, Aḥmad Shī‘ī Kāḏjār left the country and was deposed in October 1925 by the Mādžlis, whereby the Kāḏjār dynasty was brought to an end. At the end of the same year the scruples of many sections of the population against a new dynasty were dispelled and the dictator became king of Persia under the name Pahlāvī; he was crowned on April 25, 1926.

Persia’s internal situation has been much improved by the action of the present king, while the exploitation of the oil wells in ‘Arabistān has secured the government a profit that has not a little contributed to its financial liberty of action. The finances have been moreover controlled by an American adviser since 1925 and since 1928 by a German adviser. As to the currents of spiritual culture, the intellectual classes are abandoning the traditional religious views and this secular movement is favoured by the government; in connection therewith the influence of the divines is declining. On the other hand, the interest awakened towards the history of the sixteenth century for pre-Islamic Persia has given a new direction to national sentiment, expressing itself amongst others in literary occupation with ancient Iranian subjects and a great interest in excavations, the results of which are no longer allowed to leave the country.

The present ethnographical structure of Persia is quite different from what it was before the Arab conquest, owing to the repeated invasion of foreign elements during the thirteen centuries of its Islamic history. The combined existence of a sedentary and a nomadic or semi-nomadic population, however, is a feature proper to the geographical conditions of the country and has continued up to the present
day. The general tendency of the nomadic elements to become settled, which can be observed all the time, was repeatedly countered by fresh invasions of nomads, chiefly from the north-east. At present the proportion of the nomads to the settled population is estimated to be 20%. The development of urban settlement is a feature proper to Islamic times; it began with the expansion of the population outside the walls into the rababs (cf. al-Baladhūrī, p. 324). From that time on the Persian name for a town became ṣaḥr, which word has designated originally an entire region or country. The Arabs often placed their garrisons in less important places, which subsequently overshadowed the ancient centres. In the course of history many towns were devastated, but were generally rebuilt on or near the site of the ancient ruins. Since the later Middle Ages great Islamic towns like al-Raiy and the towns of Kirmān have disappeared, to be replaced by formerly less significant places; among the latter are Teherān, Tabriz and Mašhad, at present the largest towns of Persia. The townspeople, composed of craftsmen and merchants, have been in history the passive and suffering element, together with the rural population of the villages clustered together in the oases. This settled population was generally regarded with scorn by the tribesmen, who were the aristocrats, and from whom until modern times were recruited the ruling classes and the high officials. From the tribes have also been recruited the best soldiers in the armies.

At present the largest towns in Persia are Teherān (210,000 inh.), Tabriz (300,000), Iṣfahān (90,000) and Mašhad (70,000). The town population has been constituted in the course of centuries from the very different invading ethnic elements. They now constitute the most stable element in Persia and speak, with local dialectic variations, the New-Persian language, which runs more or less parallel with the written New Persian. Only in Adharbājjaḵ Adhari Turkish is the language of the townsfolk and the peasants.

The rural population of the villages around the towns have kept many particular local features of their own and amongst them many remnants of other Iranian dialectal groups have been preserved, a fact which is already noted in ancient Islamic historical and geographical sources. In north-eastern Persia the different dialectal groups of these peasants are called Tāj, while in southern and eastern Persia they are often designated as Tājījkaḵ. Among the rural population, however, and in a less degree amongst the townsfolk, there are many elements that are conscious of their allegiance to tribal formations, mostly so in regions where the population of the neighbourhood still possesses the tribal organisation. These settled members of the tribes are often called ṣaḥr-nisḵšā, dīn-nisḵšā and ṣaḥrā-nisḵšā.

As to the tribes themselves, called ʿilājār in Persia, they nearly always occupy a definite territory nowadays, on which many members of the tribe have become entirely settled, while the others are no more than semi-nomads who, in summer, go with their cattle to the higher mountain regions. Nomadism is not extinct, however, and anywhere in the Persian steppes the black tents of nomads may be seen occasionally.

The origin of the tribes is an extremely complicated problem. In almost every region they have resulted from a mixture of pre-Iranian, Frā man, Arabic and Turkish-Mongol elements. In northern Persia the Turkish element is no doubt the dominating, as judged by the language; here the redoubtable mountainers of the Dailing and the Djil, who so long withstood Islamization and had still in the Middle Ages a language of their own, have mostly been türkized, in so far as they have not been assimilated by the Iranian settled population. In the mountain region stretching from Aḏharbājjaḵ to Fāris and Kirmān, the Iranian element is largely prevalent, again so far as we can judge from the languages spoken there. The local traditions circulating among those tribes, and about those tribes among the neighbouring populations, have often preserved the memory of extensive migrations that betray a part of Turkish or Arab origin. Some groups are even known as Turkish, although they speak Iranian dialects. Other tribes are still conscious of their Arab origin, although they no doubt have already been türkized for centuries; only a few tribes in Kūhīstān and Khorāsān have preserved the Arabic language. But those local traditions, which never go back more than a hundred years at most, often do not square with what we may regard as established facts from historical sources. It is true, however, that even in recent historical times more or less important migrations of Iranian tribes have taken place. The movement of the Balūći from the North-West to Kirmān and afterwards to modern Balūcīstān had already begun in the early Middle Ages. In addition, reasons of military policy induced several rulers of the Avākīb and sixth centuries to transplant some Kurdish tribes to the North-East; best known is the settlement of Kurdish tribes by Nādir Shāh on the Khorāsān frontier around Kučān and in Māzandārān, where they have still preserved their own features and their language. The only possible description of the tribes in Persia has therefore to be based on their geographical distribution.

With the mediaeval Arab geographers all the tribes in al-Djībāl and Fāris are included under the designation of Aḵrād, i.e. Kurds, but this general term has hardly any ethnographical value. At the present day the name of Kūrds is generally restricted to the tribes inhabiting the environs of Kirmānshāh and further to the north into western Aḏharbājjaḵ. South of Kirmānshāh begin the Lār tribes, to the west of whom, in the mountains between Persian ʿIrāk and Aʿrabīstān live the Bāḵtiyārīs. The northern mountains of Fāris are occupied by the Kūrgel and the Māmāsīn tribes. South of these, round Shīrāz, live the Kāshkāyā, who still speak a Turkish dialect. In Aʿrabīstān, where in the Middle Ages the local bāšāt language was not yet extinct, the Aʿrab element of the settled population is strong; the Arab tribes here belong to the Kāb division and consist for the greater part of Aʿarbīs transferred here from Naḏī under ʿAbbās I. The tribes on the Gulf fringe, in Persian Balūcīstān, and in Sīstān are Balūcı who, since their immigration, have absorbed such considerable local elements as the Kūfs, known from medieval sources. Further to the north there are Aʿarbīs in Kūhīstān, notably around Kān. There is further a not unimportant part of the population, who claim descent from the Prophet, and consequently an Arab origin; these sayids abound especially in Māzandārān, where there were ʿAlīd dynasties at an early period. In Persian Khorāsān there are also Aʿarbīs,
a few Afghan elements and the already mentioned Kurds on the frontier. Finally there live all along the northern frontier of Kürsün Türkish tribes, some of whom have been there since the later Middle Ages, such as the Afgahs and the Kâdîjas (found Asterabâd), while the more recent element is composed of Turkomans.

Other ethnic elements are the Armenians in Persian Armenia in Adharbâjûn, and the large Armenian colony in the suburb Djalma of Isfahân transplanted there by 'Abbâs I. The Nestorian Christians east of the Urmiya Lake have nearly disappeared as a result of the war. In Arabistan there are still remnants of Mandaics, and finally there are reported to be about 40,000 Jews in Persia, who for the greater part are probably descendants of the Jews who lived already in Persia in the beginning of the Islamic period and among whom notably the Jewish colony of al-Yahudiya at Isfahân was well-known.

The great mass of the inhabitants of Persia, including in the first place the townspeople and the settled population, but also many members of the tribes of ancient Turkish origin, belong to the Iranian (Shi'ite) or the IKhâni 'Ashâyi (and follow the madkhâl called Dîfâr). Their number is estimated at little less than 7 millions. About a million of them are the so-called AKBârîyân, living in Hamadhân and al-Ahwâz and environs, who recognize only the authority of the traditions of the Prophet and the Imams. Other Shi'ite sects are the Shâhiyya (about 250,000) and the Nuktâyîya (about 100,000 in Gilân, of Zaidite origin). The Babis and the far more numerous Bahâ'is are represented in all towns and reach together about the number of 700,000. The extreme Shi'ites called 'Aliâhâ or Ahl al-Hâkî are found among the Kurds round Kirmânshâh, among the Lurs, and partly in Mâzandaran and Khurâsan; their number amounts to 500,000. Half that number is given for the adherents of the Ismâ'ilî Hurufî sect, spread all over Persia. There are also some Yazidis on Persian soil near Mîrê Sanûn (Shîrûkî) Muhammedan are found only among the Kurds, the Arabs, the Turcomans and the Afghans, these latter being (Jânâfîtes about 85,000). Finally there are still remnants of the Zoroastrian creed at Yazd, Kirmân, Teherân, Shâh and Kâdîjân.

The entire population of Persia is given as 12,000,000. This last figure is given on the authority of the last edition of the Encyclopædia Britannica; the other figures given are derived from the Annuaire du Monde Musulman, 3rd edition 1929.

Bibliography: In view of the general character of the above article it is sufficient to refer for all detailed bibliographical information to the historical, geographical and ethnographical articles dealing with Persia, and to the general bibliographical works on Persia: M. Schwab, Bibliographie de la Perse, Paris 1875, and A. T. Wilson, A Bibliography of Persia, Oxford 1930. (J. H. Kramer)

II. LANGUAGE AND DIALECTS.

Introduction. The Persian language is one member, now the most widely extended member, of a group of languages which are spoken over a region stretching from the River Euphrates to the East of the Hindu Kush, with branches in the Caucasus and in the Masandam Peninsula, 'Oman. It is convenient to group these languages, which in turn form one group within the Indo-European languages, under the name Iranian, a designation from Iran, the modern national name of the Persians, as it was also earlier, in Sasanian (avâ}ân, 伊朗), and Achaemenid times (avâ}št), and which is used also by the Ossetes (lr., 伊朗), Formerly these Iranian dialects were more widely extended, to the north of the Caspian Sea, from Chorasmia (Khwârizm) to the west of the Black Sea (see M. Vaser, Vermischte Mittheilungen über die altesten Wohnsitze der Slaven, in: Die Slavonische Sprache in den älteren Schriften, 1923), and also to Sogdian colonies in Northern Mongolia (see O. Hansen, Zur sogdischen Inchrift auf dem dreisprachigen Denkmal von Kuyalshagama, in: J. S. F. O., xxiv., 1930).

Earliest Sources. 1. Saka. Three divisions of the Saka are referred to in the Achaemenid inscriptions: Sakâ hamusvargâ, Sakâ tigravandâ, Sakâ bârâ pravastraya (on the tomb inscriptions published in J.R.A.S., 1932, p. 374: Saka pravrâstraya). They are the Sakas of Herodotos, and the Sacae of the Latin writers. At a later period they are attested in Sakastân (modern Sistân), and in the Saka kings of India. Names of Sakas are preserved in Old Persian, and the Middle Saka dialect is now largely known.

2. Chorasmia and Sogdiana. Both these countries are named in the Avesta (xviruzm, 俘虏) and the Old Persian inscriptions (xwardnistan, 俘虏), but the dialects are known only in later times.

3. Media. The Medes (Madaî, Amadâ) appear first 835 B.C. in the inscriptions of Shulmanu-ashtâdî II. (see H. Hommel, Ethische und Geographie des alten Orientes, 1926, p. 194). Names and some words are known in Greek (Herodotos quotes spâka 'sheep'), and there are loanwords in Old Persian (vîspâana, cf. the danâ-îch of the Elamite version).

5. The Avesta. To avoid too definite implications, it is usual to employ the designation 'language of the Avesta' (Pahl. ʃīr r, 'language', avâ}št, avâ}št, Arab. abastât, abastât, abastât, abastât, bstâh) for the language preserved in the oldest Zoroastrian texts. The considerable extent of these texts makes them the most important witness to the Old Iranian stage of the dialects, although they have been preserved in a late orthography (a).

In spite however of continued discussion (see P. Telesco, in: M. O., xxv. 55 sqq.; H. Reichelt, Iranistik, p. 29, in: Geschichte der indogermanischen Sprachwissenschaft, ii., 1927; G. Morgenstierne, (a) For convenience the transcription of the G. 1. Ph. is here followed, but a revised orthography, more conformed to that of the Old Persian texts and the Greek and Akkadian transmissions, would represent the Old Iranian form more satisfactorily (as e.g. ahta for aityh).
The Kāfīr dialects of Kātī, Ashkun, Prasun, Wāqīgal, are known only in a modern form from the sixth century, and adequately only this century (see Morgenstierne, Report on a Linguistic Mission to Afghanistan, 1926, p. 59 sqq.; do., Report on a Linguistic Mission to North-Western India, 1932, p. 46 sqq.; do., The Language of the Ashkun Kāfīrs, in N.T.S., ii, 192–289). The evidence of the Kāfīr dialects is important for the Indo-Iranian period, in particular for the history of the sounds represented by the Kāfīr 7 and 3, corresponding to the Avestan 7 and Old Persian 3, respectively. Thus Kātī has dātā ‘ten’, dasta ‘autumn’, dast, uts ‘I’.

Periods of the Iranian dialects. The extant documents, of widely different character, and in many scripts, are sufficient to allow the distinction of three periods: Old, Middle and New Iranian. In the west of the Persian empire, the change to the Middle Iranian stage (marked by loss of large part of the old inflexion) is attested already in the later Achemenid inscriptions.

Old Iranian. The Old Iranian stage of development is known in the Old Persian inscriptions, the Avesta, and the names of Medians and Sakas. The two dialects Old Persian and Avestan, in spite of the restricted number of texts, and hence little known vocabulary, agree closely, but yet are clearly distinct. In phonology Old Iranian has p, 3 unchanged before and between vowels (i.e., ‘to run’, ‘to be hot’, ‘to fly’, ‘to make’, ‘aha ‘bad’), but they are represented by spirants before consonants (boksha ‘true’, rasfin ‘sleep’, nasta ‘spoken’); before and between vowels 7 is represented by h (Old Persian hada ‘with’). In comparison with the Northern-Western dialects is excluded.

It is possible that other dialects developed in the cities of Carmania (Strabo, xv. 2. 14 speaks of the dialects of the Caspian), Arachosis, Aria and Margiana, but nothing survives.

Relationship with Indo-Aryan and Kāfīr dialects. The Old Iranian dialects stand in close connection with the Indo-Aryan languages of India, which are known in their oldest form (apart from the words of uncertain position within Indo-Iranian history preserved in the Mitanni and Hitite documents, see N. D. Mironov, Aryan Vestiges in the Near East of the Second Millennium B.C., in Acta Orient. 1933, 3. Freedstein, Reallexikon der Assyriologie, 1929, i. 144 sqq.; A. Christensen, Die Iranier, 1933, p. 209 sqq.) in the Vedas, and with the modern Kāfīr dialects of Kāfīrīstān. The vocabulary of Indo-Aryan and Iranian is largely identical (āp ‘water’, vak ‘speak’, marvandik ‘man’, kar ‘do’, ā ‘up to’, pār ‘around’, invan ‘though’, ka ‘who’), so also is the morphology of verb and noun. Differences do however exist in vocabulary (Iranian yar ‘year’, gārd ‘speak’, gād ‘pray for’, snāt ‘to snow’), and in morphology (Iranian -st 2 sing. pret. middle, as Greek -se). In phonology the two groups have diverged in the oldest texts. To Sanskrit 7 ch j h (dasta ‘hundred’, chand ‘to appear’, jam ‘to know’, deh ‘to form’) correspond Avestan s e (sato, san, dari ‘to appear’, dam ‘know’, dēturn ‘fortress’); Sanskrit g ḍh, d ḍh, b b, to Avestan, Old Persian g ḍh b; Sanskrit hh th ph to Avestan, Old Persian x ḍh f; Sanskrit ed ḍh, i ḍh, u ḍh to Avestan oṣḍ, iḥḍ, uṣḍ; Sanskrit t dḥh to Avestan rd ḍh.
with personal terminations in singular, dual and plural, and in addition participles present, aorist, future, and perfect. These cannot all be illustrated here. The following Avestan forms may be quoted: baraiti 'he bears', yasaite 'he worships', conj. pres. barat 'he will bear', opt. pres. ayat 'he shall be', opt. perf. jarymyn 'I would have come', imperat. bara 'bear', baratu 'let him bear', idi 'go', khrysta 'make'. The infinitive has no single form, but is expressed by oblique cases of verbal nouns of action: avazastō 'fall down', azlīyō 'to choose', apayhastē 'remove'. There is an aorist passive (vält 'was spoken', jaini 'was struck), confined to the 3rd sing. The personal terminations differ in pres., perf., and imperat. In the present are found: barāmī, barakhi, baraiti, dual 3 barātī, plur. barāmasti, zayāštī, barotiti; in the imperfect: barom, jazom 'thou canest', barat, dual 1 jāvē 'we two live', 3 jazastī 'they two came', plur. barāmā, jazastī, barōm. The present base was formed either with or without suffix, or by reduplication: asti 'be ix', dadati 'he gives', bavasti 'he becomes', horostē 'they remove', ūrīnīmi 'I bless', har∽nōiti 'makes', irināxiti 'leaves', hināxiti 'pours out', jōyēnixi 'I pray for', tīpāyēti 'heats'. The aorist was formed direct to the base (vādlē 'he created') or with the suffix -s (dārētē 'he held'), the perfect was either reduplicated (vāsala 'has spoken') or not (vādlē 'has known') with special terminations, the pluperfect was expressed by the use of preterite endings to the perfect base (vāsolt 'had said'). The active present and perfect participle was formed by the -ant- suffix, and the passive preterite participle usually by the suffix -ta-. Of these present bases and of these and other participles examples are preserved in New Persian. The comparison of adjectives could be expressed in two ways (suffixes -yah, -iata- and -tara-, tama-): vahn- 'good', vayhak-, vakhiata-; and -dād-, akhara, hastam 'best'. Three morphological series (mas, fem., neut.) are expressed in nouns and adjectives. Of the many suffixes may be named the noun of agent in -tar-, noun of action in -dēt-, abstract noun in -īt-. Compounds are of many forms: aspatā- 'horses and men', irānā- 'slaying men', dakhypati- 'lord of a country', pūrnhārāta 'possessing many brothers', axīnu- 'up to the knee', dāryavastāta 'holding a chariot'. This of whole elaborate Old Iranian system but small part has survived to the present day.

Middle Irānian. Since 1904 when F. W. K. Müller published the Handschriften-Reste in Estrangeld-Schrift aus Turfan, Chinese-Turkestan, 1. (S. B. Pr. Ak. W., 1904), ii. (Abh. Pr. Ak. W., 1904), the middle period of Irānian linguistic history has been increasingly enriched with new material. It is now possible to describe five forms of Middle Irānian, of which Middle Persian forms one, from numerous documents in a variety of scripts. Early loanwords are preserved in Aramaic (see Hubschmann, Aramische Grammatik, i., 1897; R. Gautschi, Iranica, M. S. L., xix. [1915]; A. Meillet, in M.N.L., xviii. [1916]; H. S. Nyberg, Hilfsbuch des Persischen, ii., Glossar, 1931). These are particularly important as being written in a script possessing vowels. A document dated 22-21 B.C. was found at Awramān (Minns, in J.H.S., 1915, p. 38 sqq.; Urvāla, in B.S.O.S., l. [1920] 125-144; H. S. Nyberg, in M.O., xviii. [1925] 182-230; E. Herzfeld, Paikuli, 1924) is known, accompanied by another document dated 88 B.C. with almost illegible writing. Coin legends of Fārs (about 250 B.C. and of the later Parthian and Sasanian kings, Kushano-Sasanian coins, Sasanian royal and official inscriptions in two dialects, and on gems and seals, a large Zoroastrian literature, mostly religious but including some secular pieces (in Pahlavi), and texts in two western dialects from the Manichean documents of Central Asia, some being in the Chinese script (F. W. K. Müller, loc. cit.; K. Salesmann, Manicheische Studien, i., 1908, and other texts in Manichaica, illi, Ischola Acad. Nauk., 1912; Andreas-Hennig, Mitteleuropäische Manichaica aus Chinesisch-Turkestan, i., S. B. Pr. Ak. W., 1932, ii., ibid., 1933, iii., ibid., 1934; Waldschmidt-Lenz, Die Stellung Jesu im Manichäismus in Abh. Pr. Ak. W., 1926; do., Manichaica Dogenkat aus chinesischen und iranischen Texten, 1933) fragments of a version of the Psalms with the Canons of Mar Ābā translated from Syriac into Middle Persian (Andreas-Barr, Bruchstücke einer Pseudo-Übersetzung der Psalmen, in S. B. Pr. Ak. W., 1933) have combined to disclose the character of the Western dialects. The Zoroastrian texts are written with an historical orthography, through which the phonetic development rarely appears, with the exception of the frequent transcription of "Pahlawi" words into the fully vocalised Avestan alphabet. The Manichean writers rejected the old orthography. Eastern dialects are represented by Sogdian texts, letters of the 6th century a.d. (H. Reichelt, Die soghischen Handschriftenreste des Britischen Museums, ii., 1931) found in Chinese Turkestan, and other letters not yet published, found in Sughd (preliminary report by A. Freiman, in Sogdissi sbornik, in Acad. Nauk. S. S. R., 1934), besides many Buddhist texts (Gautschi, J. A., 1912; M. S. L., xvii., 1912; Gautschi-Beveniste, Le Sūtra des Causes et des Effets, 1926; H. Reichelt, loc. cit., i-iii; F. Rozenberg, Un certain genre de lontaines bouddhique du moyen-orient, in Ischiola Acad. Nauk., 1927; R. Gautschi's Essai de grammaire sogdienne, 1914-1923 was completed by Beveniste 1929), by Manichean Sogdian texts first made known in F. W. K. Müller's Handschriften-Reste, ii., and later in Waldschmidt-Lenz, loc. cit, and by Christian Sogdian texts in F. W. K. Muller, Sogdische Texte, i., Abh. Pr. Ak. W., 1913 and Muller-Lenz, Sogdische Texte, ii., 1934; and by Saka texts, business letters (A. F. R. Hoernle, A Report of the British Collection of Antiquities from Central Asia in J. A. S. Bengal extra-number to LXV, 1902; do., Manuscript Remains of Buddhist Literature found in Eastern Turkestan, 1916), an official document from Sācū (F. W. Thomas and S. Konow, Two Medieval Documents from Tun-huang, 1929), and Buddhist translations and original compositions (E. Leumann, Zur nord-iranischen Sprache und Literatur, 1912; do., Buddhistische Texte und die Originalquellen der Lützow, 1920; do., Das nordiranische [saka]ische Lehrgesicht der Buddhismus, 1933-1934; S. Konow, Saka Stuudios, 1932, with reference). Certain words of the dialect of the Saka invaders of India are known (S. Konow in S. B. Pr. Ak. W., 1916 p. 799 sqq.). On the Sogdian and Saka phonology it must suffice to refer to the books cited: Sogdian ʌtā 'fire', ʰāž, pāl 'foot', yotā 'to praise', kara- 'city,zewān 'life', asv 'I'; Saka kanthā 'city', yānde 'he knows', hastama- 'best', satī- 'year', baurā- 'snow', ayu 'I'.

1052 PERSIA
The Sogdian verbal system has present (durative expressed by adding 'sk'on, 's'om, and future by adding 'km', 'k'n), imperfect (n'qos 'thou hearest'), ē-preterite (g'ar'i 'they bore'), durative kīrṣ- with 'sk'ōw (n'qos askārān 'they went'), conj. present (wānān 'I will do'), perfect (zēnāk dārām 'I have given'), āyātim 'I have come'), optative (g'ārī l. sing.), imperative (g'ār, gāwār, infinitive (wēnak 'to pull', wārt 'to eat'), participles active present -ān, -āk, -andk, passive preterite -t (g'ārāt 'given'), adjectival form -tak (māgātak 'prepared'). The augment -a is prominent, see H. Reichelt, Beiträge zur sogdischen Grammatik, 1931. In Saka there is present (dīte 'he sees'), pres. injunctive (hautta 'he will know'), pres. conj. (hāmāc 'he will be'), optative (yānīyī 'he would do'), imperative (tu 'go'), the preterite is expressed by imperfect participle (vītī, fem. vītā 'was', plural vītā, fem. vītī 'were'), compound tenses (dīṣī yē 'he was seated'), participles (mānātu- 'resembling', ṣāmā- 'lying down', jātā- 'slain', kūnā- 'to be spoken'). The noun is fully inflected in Saka in three genders, and in Sogdian traces of nominal inflexion are preserved (see P. TeDESCO, in Z.f.L., iv. 94 sqq.; E. Benveniste, Gram. sogd., ii. 77). Since the Indian Brāhmi script is used in writing Saka, vowels as well as consonants are fully known.

Chorasmian is still little investigated. Apart from words quoted in Arabic writers, particularly from the calendrical teras to be found in al-Būrānī (Chronology, ed. Sachau, p. 47, 173, 192), material has been collected by Ahmet Zeki Validi (Hūrārīmsche Sätze in einem arabischen Fihh-Wörter, in Islamica, iii., 1922). Here ẁā'ī 'milk', cf. Sogdian aṣēf 'milk'; ẁaḏ 'deep', cf. Avestan yafra- 'deep'; ẁt 'nose', cf. Sogdian nē' 'nose'. An exhaustive study is still awaited.

Middle Ossetic is known in names (see Ws. Miller, Ossetenisch: Etymol., iii. 39 sqq.; M. VASNEX, loc. cit.) such as Boroipet, Bakaratop, Xaratan, and in loanwords in Hungarian (circa 800 A.D.) such as govt 'care', būdad, gazdag 'rich', kara 'sword', réesg 'drunk' (see H. Skold, Die ossetischen Lehrwerke im Ungarischen, 1925). They suffice to indicate the phonology of this period.

In the West two Middle Iranian dialects are known, which can be assigned to North and South respectively. The southern dialect is closely related to literary New Persian. Phonology and vocabulary distinguish these two dialects sharply (see P. TeDESCO, Dialektologie des nordwestiranischen Turfanfragmente, in M.O., xx., 1925; W. Leutz, in Z.f.L., iv. 251 sqq.): in the North 'san 'woman', das 'ten', ḍhī 'three', qāfar 'four', bāwī 'second', kirā 'reave', kāwā 'kawa (ašušmān, 'make' with the South: san, daḥ, ḍhī, ṣāhār, ḍnā, ḍl, kān). Other dialect influence can be detected, as e.g. in the change ṡī- to gu- (cf. New Persian gānū 'sin'). Nominal inflexion is absent from the Manichean texts. It is possible that the frequent final -y of the Sāsānian inscriptions represents the remains of the old oblique case in -s. The ān ending (in Old Persian -ānān is gen. plur.) appears as nom. plur. (ardvān 'the righteous'). The verbal system of the southern dialect agrees largely with that of early Persian of the Muslim texts (see Henning, Das Verb zu den Mütterbischeyen der Turfan texte, in Z.f.L., ix., 1933). The Old Iranian present bases are represented by klī- 'leave', sīv- 'live', qāvar- 'fly', zan- 'strike', ḍrā- 'shine', vind- 'find', dān- 'know', kūn- 'make', ṁīn 'gather', sāy- 'bring forth'. The trans. preterite is expressed by the participle in -t in passive sense: qāvarān kōm 'and you have clothed me', but the form kīnd kōmd 'they have done' (as in New Persian kārdānd) is found. A passive is expressed by -yxh: -iṣāyīkā is 'raised'. Beside the present indicative with the endings -ām, -etk, ḍh, -ām (and -on), -tā, -ānd (and -and), a full present conj. is attested with the endings -ān, -yā, -āk, -ām, -ād, -ānd. An optative 3rd sing. in -ēt occurs. The infinitive is in -tan, the present participles in -ān, and (adjectival) -andāy. The vocabulary has many words lost to New Persian lexicography.

New Iranian. The third period may be dated from the introduction of a new orthography by the writers in Arabic. In the early Arabic books many Iranian words and names, Persian, Sogdian and Chorasmian, are recorded, stripped of the old historical spelling.

The Arabic alphabet was long insufficient to represent the Iranian sounds, while certain signs were superfluous (ṣ y t s). Hence some symbols had double employment: ƿ f j ɻ ɢ f v (beside  gerçekten) In final position, the guttural (which was written, e.g. in Pahlavi kt 'house', Turfan texts gd 'house', and has moreover survived in some New Iranian dialects, Kummārī hawū 'fuel', as in Turfan texts 'yang 'fuel', Balōzī W. hāmāg, E. īmārī 'raw') was indicated by ɻ or ɻ (sfnān- 'jag' and medially by ɻ (sfnān- 'jag'). To indicate vowels a new system was adopted in accord with Arabic usage. The older Aramaic system did not distinguish the quantities of i a (and only partially of v), nor the qualities of ẓ ẓ. Alif y v, served to express ṭ t ṭ. But in the Arabic script alif ra, served mediately for ṭ (sometimes ṭ, ṭ, ṭ (the Arabic diphthongs ai, au).

New Persian, with which is closely connected the colloquial language, deviating widely from the literary norm, of the western cities, and the Ṭadjik of the eastern Iranian region, Afghanistan, the Pamirs, Turkestan (see the references in W. Leutz, Pamiër-Dialekte, i. 29 sqq.), is in strict accord with the language of the Old Persian inscriptions (Old Persian pṣa- 'son', dān- 'know', New Persian pū, dān-), and the southern dialect of the Sāsānian inscriptions and the Manichae texts, but from its earliest monuments after the introduction of Islam it appears as a dialect largely mixed with forms of other dialects. The mixture had been brought about already in Sāsānian times. As successors of the Parthians whose dialect was northern type the Sāsānians took over part of the official vocabulary (e.g. sahr 'country', ṣahr- 'king's son' as proper name). Forms of both dialects occur in the Zoroastrian books and among the loanwords in Armenian. A few words entered from the eastern dialects (sfgīr 'divine son' as title of the Chinese emperor). Hence New Persian has two forms side by side: bāz, bīj, bāz 'tribute', dānā, farzānāh 'wise', zāmīn, dānīk 'earth'. In the vocabulary of New Persian, the Iranian verbs have been greatly reduced in number. Verbs which are found still
in use in other dialects have disappeared or survive only with preverbs or in nominal derivatives. Such is the case with *a-* 'breathe', *va-* 'speak' (in *šun ciš, manad nomaštan, darb cient, darsafan, sew* [in dars *dast, darš *taylor, dil *enclosure], *vor- *send, *yag-* 'lead', *val-* 'lead', *daw-* 'bind', *build', *vind-* 'find', *barr-* 'hold', *vaid-* 'throw', *shoot', *gund-* 'dress', *daw-* 'throw', *mank-* 'put on', *bawm-* 'weep', *ar-* 'griaf', *gan-* 'come upon', *fand-* 'find', *hakt-* 'make wet', *vaz-* 'pull out', *kap-* 'fall' (cf. kuku *old', Turfan Texts kosfom, *ke*-*see', snag-* 'snow', *vor-* 'perish' (in gunah *sin*), *tirp-* 'steal', *harr-* 'go', *tard-* 'split' (in šifallan 'to split'), *zod-* Old Persian *yadd-* 'take away' (in zidan 'loss'), *vor* 'to wind'. Nominal forms have also been lost: Farsi dialect of Büringgan pok 'small cattle', Ossetic sred 'bridge', Balšč *gir *house', Zikda *vir *milk', Pashto *vir *known'. These and others are not represented in New Persian. Arabic has continually encroached upon the vocabulary. The Italic character of New Persian is however still easily recognised in its morphology (plur. of nouns *an-, hā-*; pronouns *man, tu, mi*, mā, inā, kēh, iš, an, in; verbal forms, pers. tense *kunun, kunad, kunim, kunand*, pret. *kard*, the verb substantive *am, i, ast*, and). New Iranian dialects have been preserved by their isolation, although, except Ossetic and Kunzāri by reason of their position, they are everywhere yielding to the prestige of New Persian. Recent research has brought knowledge of most of the existing Iranian dialects. Isolated places may, as perhaps in the Khal-i Tafsūn region, still conceal unknown dialects, elsewhere and especially in the Fâmir's information has been largely increased. These dialects have so widely diverged from Old Iranian that the whole complex development cannot be indicated here. It must suffice to point out in the various groups certain developments in phonology and morphology.

**Phonology.** The developments of Old Iranian *w*, *hir-, der-, *z-, *z-, *f-, *r-, *r*, may be here selected to illustrate the divergence.

1. Ossetic (in two dialects, Digoron and Iron, in Ossetia in the Caucasus): (Digoron) nad 'storm', *vor-* 'self', *door =* 'door', *zar-* 'heart', *zun-* to know *; wun-* 'hundred', *yad-* 'window', *dakhar* 'open-eyed', *mard-* 'dead', *zarta* 'three', *surt-* 'son'.

2. Yaghân (in the Yagâh valley between the Zaubâng and Hâng ranges): *vott* 'willow', *vatt-* 'wind', *sep-* 'self', *diwâr* 'door', *bizz-* 'to know', *pa-* 'to cook', *vusted* 'I live', *ñî* 'flour', *ti-* 'three', *pul-* 'son'.

3. Shugāni (in the Pâms): *vott* 'willow', *kurn-* 'to eat', *dev-* 'door', *yâng-* 'food' (Yânglaitum dev-), *ogpor- *gir, *dev- ñan-* 'to know', *wun-* 'I, *piz-* 'to cook', *sîd* 'knife', *pul-* 'son'.

4. Ishkâmî (in the Pâms, closely with Sang, *kîn*): *vin-* 'to see', *xar-* 'to eat', *var-* 'door', *piz-* 'to know', *sîr-* (Sangâlî *sir*) 'brother', *sûj-* 'woman', *kîf* 'knife', *pul-* 'three'.

6. Mundzî (in Mandzân, in the Pâms, related to Vâdghâ): *zvon-* 'I see', *vîsî-* 'willow', *sîr-* 'I eat', *woni* 'mother-in-law', *bîl-*

'door', *wô-* 'to know', *purâ** - 'to sow', *zî* *Zun* 'I strike', *kîrî* 'knife', *sirî* 'three', *pul* 'son'. A development peculiar to Mundzî (and Vâdghâ) is that of *sî* to *sî*: *men* *likem* 'I saw'. Initially and medially replaces *dîr* 'daughter', *kîli* 'when'.

7. Pashtî (in several dialects, with a more isolated dialect Wânêti): *sîlâ* 'willow', *wini* 'he sees', *swâd* 'sweet', *wini* 'mother-in-law', *sîr-* 'door', *sî* *Zun* 'I, *sir-* 'heart', *pîr-* 'father', *sîm-* 'day', *sûj-* 'life', *sûj-* 'knife', *wûn-* 'dead', *sî-* 'three', *sû-* 'fire'.

8. Ornûri (in two dialects, of Logar and Kâniuram, Afgânastân): *vor-* 'to rain', *wâci* 'self', *bîr-* 'door', *bîz-* *other*, *sî* *Zun* 'I, *sir-* 'heart', *sûj-* 'fire', *pîr-* 'father', *sîm-* *mor* 'day', *sûj-* 'life', *sûj-* 'knife', *wûn-* 'dead', *sî-* 'three', *sû-* 'fire'.

9. Parâtî (in the Hindu Kush): *sî* *wind*, *sî-* *willow*, *sî-* 'to eat', *bîr-* 'door', *sir-* 'heart', *bî-* 'bridge', *rûsî* 'smoke-hole', *piz-* 'to cook', *sî-* *mor* 'to kill', *bûr-* 'bore', *sûj-* *mor* 'flour', *sî-* 'three', *sû-* 'son'.

10. Balâšî (in several dialects: the following forms are from the western dialect): *gûâr* 'wind', *sîlun* 'to choose', *wârâg* 'to eat', *wâci* 'self', *sûm-* 'son-in-law', *sûj-* 'heart', *bîr-* 'brother', *sîr-* 'day', *piz-* 'to cook', *sîm-* 'to strike', *sûj-* 'dead', *sî-* 'three', *sû-* 'fire'.

11. Khûrî (in the district of Bûkhân, Central Persia): *gûâr* 'wind', *sîlun* *I see*, *sûm-* 'sun', *dûr-* 'to eat', *bîr-* 'door', *sîr-* 'heart', *sûj-* 'fire', *bûr-* 'tree', *bû-* 'burn', *sûj-* 'woman', *bûhurdun* 'I bore', *sû-* 'son'.

12. Yazdî (from material written down in Yazd, at the dictation of a Zârudy in 1932): *sâj-* 'I see', *sûm-* 'willow', *sû-* 'I,xre', *sû-* 'I eat', *bîr-* 'other', *bîz-* 'again', *mî* *mor* 'I know', *sûj-* 'white', *sî-* *mor* 'day', *sûj-* 'life', *sûj-* 'knife', *sû-* 'self', *sûj-* 'needles', *pîr-* 'women', *sû-* 'bowstring', *mîsûr-* 'I bore'.

13. Nâîni (closely connected with Anârak and Yazdî): *mî* *mor* 'I see', *sû-* 'I,xre', *sî-* 'I eat', *bî-* 'other', *mî sî-* 'I know', *sî-* 'wind', *sû-* 'hundred', *mî* *mor* 'I say', *mî *mor* 'I burn', *bû-* 'borne', *sû-* 'I,ast* 'he had', *sî-* 'son'.

14. Nâtânzi (closely with the dialects of Yaran and Farizând): *sî-* 'willow', *sû-* 'I see', *sû-* 'I,xre', *bîr-* 'door', *bî-* 'other', *sû-* 'son', *sî-* 'wind', *sû-* 'I say', *sû-* 'woman', *bî-* 'bore', *sî-* 'self', *pîr-* 'son'.

15. Sî (from material collected in Isfâhan and Sûh in 1932): *mî* *mor* 'he has eaten', *bî-* 'other', *sû-* 'he knows', *sûj-* 'white', *sû-* 'he says', *sû-* 'he,cooks', *sû-* 'woman', *sû-* 'he,strikes', *sû-* 'he,flies', *sû-* 'he,has done'.

16. Khûnsâri: *bî* *mor* *I see him*, *bî-* 'I,xre', *sî-* 'I eat', *bîr-* 'door', *mî sî-* 'I know', *sî-* 'wind', *sû-* 'I burn', *bû-* 'he struck', *mî-* 'man', *bî-* 'bore'.

17. Gâzî (near Isfâhan): *sû-* 'he sees', *sû-* 'he eats, falls', *bî-* 'other', *sû-* 'he, knows', *sî-* 'white', *bû-* 'he,arived', *sû-* 'he pours', *bû-* 'he burns', *bû-* 'he,cooks', *sû-* 'he, alive', *sî-* 'gum', *bû-* 'he,looked', *sû-* 'he, had', *sî-* 'son'.

18. Sâwândî (in Fâs): *sî-* 'wind', *sî-* 'willow', *sû-* 'small', *bû-* 'door', *sî-* 'yesterday', *mî-* *mor* 'I cook', *sû-* 'woman', *bî-* 'he made'.
19. Simnâni (in North Persia, east of Tihrân):

via 'willow', 
vi 'wind', a munârân 'I eat',
bar 'door', ma wâm 'I know', rûz 'day', a dumârân 'I pour', janâla 'woman', zâna 'wife',
kârd 'knife', ma babârân 'I bore', fîr 'son', hârî 'three'.

20. Sangâri (related to the dialect of Lâzârî):

evi 'willow', bâxâr 'I eat' (Aor.), sînê 'knee', sa hundrân, rûz 'day', bûsü 'I say' (Aor.),
zen 'woman', bekûn to 'strike', ârê 'four', sa 'three', fîr 'son'.

21. Talâtî (on the west of the Caspian Sea):

va 'snow', han 'sleep', hânê to sing', ha 'door', as t 'one to know', daraan 'needle',
ka 'house', sîpî 'white', rûz 'day', tê 'to live',
en 'woman', bard 'bridge', ka'ro to do.'

22. Gilaki (closely connected with Mâzârânâni and the dialect of Gôrâkhôn): varf 'snow', sêrêm 'I eat', sâmâ 'son-in-law', hârân 'brother',
sonam 'I burn', pâm 'cooking', wân 'to strike', baz 'I bore'.

23. Gûrân of Kandûla (dialects of Kandûla, Pîwa, Aurâmân, Rîjûd, Bâjûlân, Talahedeshk are recorded):

wân 'rain', wârv 'snow', wûr 'sun', wîrm 'sleep', zî 'heart', sâmâ 'son-in-law',
mûrân 'he pours out', rôwân 'window', zî 'bowsting', zân 'woman', sî karâ 'he made'.

24. Kurdi (in several dialects: the following is from the Mukh):

bâfr 'snow', xwârê 'eat',
dark 'door', daxâmân 'I know', sipî 'white',
rûz 'day', daxâmân 'it is burnt', zîn 'woman',
kirt 'done', bûmk nûr 'I sent', se, sê 'three'.

25. Zârâ (dialects of Siwerek, Bîxâd, Cabûshkûr, Kîshî, Kûr, Cemûqûl and Palû are recorded): xawar 'snow', wûyô 'wind', wârê 'to eat', bar 'door',
zûn 'to know', xêrê 'fire', rûz 'to flow', rûz 'day', pamm 'to cook', wîf, wêz 'to say', jand 'to strike'.

26. Kumârî (in the Masâmân Peninsula, Omân):

bûram 'rain', gûnây 'hunger', xir 'the ate',
xwûrân 'sleep', dezâmân 'winter', sur 'anger', zamiyo 'earth', sîpî 'white', bur 'happened',
sînên 'needle', rôwân 'window', zank 'woman', bûz 'strike', mûrân 'man', xûrin 'food', dûs 'sickle', fêz 'son'.

27. Têti (on the Ashêrân Peninsula): varf 'snow', bûyô 'widow', xwar 'sister, dar 'door',
dûmân 'son-in-law', duzûmân 'to know', zu-
mustân 'winter', zuhân 'tongue', bûran 'be',
dûvân 'to see', bûrân 'brother', por 'autumn',
xwûlân 'I sift', rûz 'day', sa'n 'woman', zîn 'to live', xûrân 'to eat'.

28. Farsi (dialects of Somghân, Pûpûn, Mâsarn, Bûrûngîn and Iwâmân Isfâhân):

mûnân 'I see', bîz hûrân 'to send', xwûlân 'I sleep', nûvîn-
âmân 'I do not know', sînê 'knee', dûz 'given',
pîmûzân 'I cook', sa 'struck', bûn 'bure'.

29. Luî, Bakhtûrû: bûfr 'snow', bûhû 'ent',
swûânân, xûrân 'to eat', dûzê 'son-in-law', sî 'tongue', xwûlân 'white', dî 'smoke', bêd, bêl 'willow',
bes- 'to sift', rûz 'day', sa'dân to 'strike', zîn 'woman', or 'four'.

pûzan 'I cook', bûzân 'I sift', sêd 'four',
kûrd 'made', mûrd 'died', sin 'three', pûs 'son'.

The following general tendencies may be especially noticed: t 'it' is replaced by a guttural in

Balû, Khûrî, Ormûrî, Parâcî and partly also in New Persian; 2. the correspondence of Ossetic h-
(Iron dialect g), v, d, Yâghnîbî g, v, d, Shughî and Yâzgûlûmî g, v, b, Mûndî g, v, l,
Paštû g, v, l. In contrast to Ossetic and Parâcî g, b, d, marks a distinction within the eastern group; 3. g tends to be modified in the eastern dialects: Ossetic has, gis 'ear', Ormûrî gos, Parâcî gos, Mûndî gos, Paštû gos, Wagíp gos, Shughî gos, Iškabûmî gos, Sarîkûl gos, Rûshânî gos, Barîngûlî gos, Yâzgûlûmî gos, contrasting with New Persian gos (gû).

Relationship of the Dialects. The larger divisions among the New Iranian dialects are results of old differences, originating in the earliest period. Two great groups, an Eastern and a Western, are distinguished by phonology, morphology and vocabulary (see G. Morgenstierne, Report on a Linguistic Mission to Afghanistan, p. 31 sqq.). The eastern group is itself divided by old differences into subordinate groups. Ossetic, isolated in the Caucasus, has developed a morphology which separates it sharply from the Yâghnîbî, with which however it shares, for example, the plural -te, Yâghnîbî -t. Yâghnîbî is in turn isolated as the only surviving Sogdian dialect. In the Pamirs Shughî forms a group with Oroshori, Yâzgûlûmû, Rûshânî, Barîngûlî, Sarîkûl, and the now extinct Wanûl; similarly Iškabûmû and Sangîlî. Mûndî in several dialects (see the classification by G. Morgenstierne, Report on a Linguistic Mission to North-West India, p. 70) has close relations with Yudhû. Wakhû stands alone, noticed by its phonology (3 in 'in dog' = yûdôg, zu 'iron', in murî 'dead', in pîr 'son') from Ossetic and Parâcî, though now widely different, yet have common phonological traits, in particular b, g, d, and the replacement of g by y. Paštû is known in several dialects (G. Morgenstierne, Report on a Linguistic Mission to Afghanistan, p. 11).

In the Western group subdivisions are similarly to be recognised. Zâzâ, Gûrânî, Kurdi, Khûrî, Balû, Gilaki (with Talâtî, the dialect of Gôrâkhôn, and Mûzârânûn) form sharply distinct groups. The southern dialects, Luri, Farsi, Kumârî, and the literary New Persian show clear descent from a dialect similar to, and probably identical with, the Old Persian. To these Têti belongs as the dialect of garrisons settled in the region of Darbâd.

In the central district lying between Tihrân, Isfâhân, Hamadân and Yazd, are found a number of dialects which have not yet all been fully investigated. They share a common vocabulary. The formation of the present affords a means of grouping them. The Sangîsâri, Lâzîrî and Shamanzârî agree in forming the present with the infix of a nasal -n, -nd (possibly representing the Old Iranian -an/participle; similarly in Zâzâ): Sangîsâri sinendî 'I strike', Lâzîrî kam zândâm 'we say', Shamanzârî kâfûn 'he falls'. Shahanzârî to the present mûznân 'I know'. The dialects of Wonishûn (Wânîshân), Mahallât and Khûnsûr agree in having its (ats, -t) in the pres.: Wonishûn xtemérûn 'I break', Mahallât âtîwân. Khûnsûr îthamûnûn. Nâtnanî, Fatirzandî and Yaranî form one group: in the pres. Nâtnanî koren 'I do', Fatirzandî akarôn, Yaranî akarôn. Sî (akeron), Meimeî (akero 'the does'), Kohrudî (akerûn), Keshi...
Verb. The divergence from the Old Iranian system, already marked in Middle Iranian, has developed further in New Iranian. New verbal systems have been evolved. In spite of independent growth, a general resemblance is found, for example, between New Persian and Ossetic. In New Persian means are to hand to express active and passive, indicative, conjunctive, optative, imperative, infinitive, present (punctual and durative), imperfect, perfect, perfect (punctual and durative), pluperfect, future, and conditional.

Present tense. In Old and Middle Persian indic. and pres. conj. are clearly separated. Both modes of thought are expressed in New Persian. Conj. pres. inflexion, distinct from indic. pres., is preserved in Yaghbiji (kunti ‘he does’, conj. kunna) and Ossetic (kuni ‘does’, conj. kama). Other dialects have one form of present inflexion, which therefore serves to express both present and aorist (with meanings of fut. and conj. pres.). In certain dialects, as in early New Persian kunna ‘do’, Mundji xarim ‘I eat’, Yaghbij xarim ‘I plur., Oroshori kiniim ‘I do’, Shughnut xarim ‘we eat’, I plur., Sangisari xarim ‘I plur., this form appears alone in both senses. But greater precision was attained by use of prefixes, suffixes and periphrastic forms marking off the present. So in Khuri (the verb ‘I eat’), Kurdi Malik d-a (dahki-pan ‘I fall’), Kurmandi a (abaron ‘I fall’), Abdi ti (tiyaron ‘I bear’), Khurani (ti (tiyaron ‘I bear’), Mehali (a) (a) (a) ‘I come’, Nami a (mi (a) (a) ‘I bring’), lez (leza (a) (a) ‘I run’,) Luri Bakhtiaran (ti (tiyaron ‘I do’), Varani a (abaron ‘I bear’), Farzand a (abaron ‘I bear’), Soi a (a) (a) (a) (a) ‘he grinds’), Guriun Kandilai ma (makar ‘I make’, New Persian hami, mi (mikunim ‘I do’), Yaghbij ye (me vipe (a) (a) ‘I cook’), Gazi (a) (a) (a) ‘he grinds’), Zazai of Siwerek (a) (a) (a) (a) ‘I weep’,) Lazgiri (a) (a) (a) ‘I say’, Zowar ‘they say’, Sangisari (a) (a) (a) (a) (a) (a) ‘I say’, Orurui ku, b (a) (a) (a) ‘I take’, bu ku ‘he makes’). Periphrastic forms are used in Parahi: d-nem xarim, in xarmin ‘I eat’. Gilaki has amondaram ‘I am coming’ (infinite amon ‘to come’ with daram), beside the durative preterite amonite harr ‘I was coming’, and Balochi kanyaa ‘I am doing’, Zazai kurtyan ‘I am doing’. Natanzi boren ‘I bear’ and Gilaki birem have no prefix. The aorist (in meaning fut. and
conj., pres.) may equally be defined. Parātī jačem (‘I strike’) is without preverb but the present indic. is formed periphrastically. Similarly in Zāzā the aor. I sing, birān is distinct from the indic. bānān; in Gūrānī (Kanduliā) I sing, birā beside indic. mākārū; in Gāzī birān I sing, beside indic. bārāne. But most commonly the aor. is marked by the preverb be-: New Persian (colloquial) bākānām, Gilaki bābāram, Zāzā bābārām, Simnānī bābārān; Murki Māk bēkām ‘I do’, Pāštō has su (su krm, but also krm, beside the indic. kawm). Shughnī has a preverb tso: (tā sāwī ‘if thou go’), Sanglécti a suffix -a: as lom-a ‘I go’, Wakhī and Sarikoli many suffix -ā. Apart from Yaghma which has a preterite with augment (akwunm ‘I did’), all New Iranian dialects employ forms of the -i participle (representing the Old Iranian -a-part.) to express the preterite. In accordance with the original distinction of this participle in transitive and intransitive, a twofold form of expression was developed: for transitive verbs passive in construction, for intransitive active, as, for example, in Gāzī bimāl ‘I saw’, but bēbūyān ‘I became’. This passive transitive preterite is well maintained in the dialects Tālīšī, Simnānī, Gāzī, Sū, Kūrdī, Gūrānī, Wakhī, Nātanzī, Nānī, Sivandī, Fārsī dialects, Bālūchī, Ormūnī, Pātāl, Pashtō, Mundī, Wakhī, and others, and is known in early literary New Persian (girfēsā ‘he took’). When the personal suffixes accompanied the participle, they usually preceded, but in some cases tended to be affixed, as in Gāzī hadī ‘thou sawest’, but dārūt ‘he had’, Simnānī tā bākārdāt ‘thou madest’, Aurāmānī dāt ‘thou gavest’, dāt ‘he gave’, Mundī mā līm ‘I gave’, tā ṭay ‘thou gavest’. The intransitive was expressed by the participle with the verb substantive. The two forms remained then sharply distinct. But in New Persian (and traces of the development are found in the Middle Persian of the Turfan texts) the transitive preterite is modeled on the intransitive, and both are made identical: kardām ‘I made’, kōrd, kōrd as āmād, āmād, āmād ‘I came’, etc. In the original passive construction there is no affix to the participle, as in Zāzā mīn (ū, a, mā, ūmā, ūdān) kārd ‘I made’, etc., but ādām ‘I came’, ūmā, ūmā, mā ūmād, ūmā ‘I have done’, ūmādāk bādām ‘I have done’, but in New Persian the perfect and perfect, alike transitive and intransitive, are identical in form: kārdah am ‘I have done’, kārdah bādām ‘I had done’, as ūmādah am ‘I have come’, and ūmādah bādām ‘I had come’.

1) See K. Barr, in Iranische Dialektuntersuchungen aus dem Nachlass von F. C. Andreas, herausg. und bearbeitet von Arthur Christensen, K. Barr und W. Henning, Kürdische Dialekte, Gurrāl, § 37, note 1. THE ENCYCLOPÆDIA OF ISLÂM, III.
with Persian. Persian became the language of the upper classes of these peoples, just as French became in the xviii\textsuperscript{th} century for various peoples in Europe. The result is that Persian literature in the wide sense includes not only the literature of Persia, but also the literature of Central Asia, and to some extent of Turkey, India and Afganistan. Although down to the xvi\textsuperscript{th}—xvii\textsuperscript{th} century these literatures were very slightly differentiated, in modern times the differences between them have become so strongly marked that their literatures can no longer be considered as a single whole. This circumstance makes a comprehensive survey of all the literature which may be called Persian an impossible task and forces the student to set more precise limits, which must also apply to this article. Here therefore by Persian literature we mean only the literature of Persia, and such writers as belong to Central Asia, India or Afganistan will be more or less disregarded.

The beginnings. It has so far not been possible to trace the initial stages of Persian literature exactly. There is, it is true, no lack of speculations relating to these first steps but they are so obviously unreliable that they are hardly worth consideration. It is of course natural that these early stages could only have been recorded by chance, as from the point of view of later ages they appeared of very little value.

Nevertheless the fragments that have survived make it possible to put forward certain hypotheses which are probably not too far from the actual truth. The early centuries after the Arab conquest saw a gradual decay of Pahlavi literature. At first sight it might appear that literary activity in Persia ceased completely. But this was not the case. If we turn to the Arabic literature of this period we find that a large number of Persian poets and scholars were writing in Arabic. The valuable anthology of al-Tha\‘alibi (d. 1038), Yatmat al-Dahr (pr. 1885), contains most interesting information which shows that already in the ix\textsuperscript{th} century Arabic had become the literary language of the upper classes in Khur\‘as\‘an and Transoxania. But at the same time there were signs of activity in the opposite direction. The political situation of Persia, whose rulers were trying to cast off the Arab yoke, and the gradual exhaustion of the caliphate demanded not only political opposition to the Arabs but also the ending of the domination of the Arabic language in the field of literature. But the 150 years of the supremacy of Arabic did not pass without leaving a trace. Pahlavi had become a dead language; there was therefore only Persian to oppose to Arabic as a literary language. On the other hand, there prevailed, especially in poetry, Arabic forms (ka\‘shi, ghazal) and the Arabic quantitative metre (\textit{ara\‘ud}), which so firmly established rhyme, probably foreign to Pahlavi, that a return to the poetical technique of the Sasanian period was impossible. Arabic poetry had however to submit to certain changes, such as the introduction of the very long syllable into prosody, which was not possible in Arabic at all and probably arose in the process of inserting Persian words into Arabic lines. How and when the first lines of verse entirely in Persian arose it will hardly be possible to ascertain with certainty. Persian sources profess to consider the fragments that survive of a ka\‘shi by ‘Abb\‘as Mar\‘w\‘az said to have been composed in Marw (Sog) in honour of
Ma'mūn, son of Hārūn al-Rashīd, as the oldest poet in Persian. Unfortunately it is still somewhat difficult to express a definite opinion on the genuineness of these lines. The anthologies (tāḥkīra) and dictionaries (notably Asādī's valuable Lughat-i Furs) contain isolated lines from poets like Abū Ḥafs Sughdī, Ḥanẓala Bādgīshī, Maḥmūd Warrāḵ Harawī, Firūz Mashtikī, Abū Sallīk Gurgānī, etc. of whom some may possibly be as early as the viith century. These fragments however are but miserable remnants, which give evidence of the existence of poetry but do not enable us to obtain a clear idea of Persian verse in its earliest period.

xth—xiiith century. As early as the tenth century we find these early efforts attaining a very high degree of artistic perfection. The courts of the various princes around whom the poets gathered formed centres of literary activity. But as the poets were usually directly dependent on their patrons and had to some extent to adapt themselves to their taste, it is quite natural that almost every dynasty in Persia was surrounded by a group of poets who present a certain unity, especially from the point of view of style, so that the classification of Persian poets by dynasties, as has been usual in Persia from early times, has a certain amount of justification in literary history. In order to give some lucidity to our account of the rather complicated process of the literary evolution of Persian poetry, we shall retain this classification, at the same time subdividing our account according to the various kinds of poetry so that the links may not be broken. In the first section the following kinds of poetry are mainly concerned: a. lyrical court poetry, b. epic, c. mystic. Prose hardly comes into consideration at all in this section, as the older Persian literature scarcely ever uses prose for belles-lettres. Prose is for old Persia the language of scholarship only. But it is to be noted that for the pre-Mongol period the language of scholarship is predominantly Arabic so that even in this field a higher degree of development of Persian prose is only slowly attained.

a. The Court Lyric. While as early as the time of the Tāhirīds and Saffārīds we can recognize the first approaches to the formation of a characteristic court style, we do not see it in its full perfection till the time of the Sāmānīds (875—999), whose capital was Buḫhārā. Although here also the devastation wrought by time has left us only a few remains, it is still absolutely clear that at this time a flourishing literary activity in Buḫhārā was in full swing. Round the Sāmānīd court gathered a large number of distinguished poets, who on the one hand were engaged in singing the praises of the rulers in sonorous kaṣidas and on the other in titulating themselves with one another for pre-eminence, a struggle carried on with poetic weapons also, i.e. satires (khaṭīra, ḥāzi'a). Of all these poets the greatest was the celebrated Rūdāki [q. v.] of Samārḵand. His kaṣida Mādār-i muṣī is an unsurpassed masterpiece. Rūdāki seems to be the first creator of the type of the Persian poet which all others endeavoured to copy: poet, aristocrat, liberal, frivolous, amorous, wine-loving, chivalrous, devoted only to the joys of life, never touching its gloomier sides. In the field of didactic poetry also he won great fame by a version (which has unfortunately not come down to us) of the Kāfīla wa-Dīmān. But he introduced another theme into Persian poetry, the lament for lost youth, which he expressed in moving language. His younger contemporary Kīsā'i [q. v.] (b. 953) of Marw dealt with the same theme. It may be assumed that these lamentations were not simply exercises in style but had a genuine foundation in the circumstances of the Persian poet. His duty was to adorn the court of his prince, to share his pleasures and to amuse him; a sour old greybeard was not suited for this and was no doubt, little appreciated in spite of former services. No less characteristic are the laments of the famous Shāhīd of Bālkh who is said to have been the first to collect a complete Diwān. He laments principally the injustice in the distribution of the world's goods, which clearly points to his lack of success at court. The language of all these poets is clear and lucid; they are still very moderate in the use of poetic artifices and observe the limitations of poetry. Of second class (or perhaps by chance less known) names of this circle of poets the following may be mentioned: Ma'rūfī Bālkhī (c. 954—961), Abū Shu'āb Harawī, Abū Zarrā'a Djugānī, Abū-Farīr Khurāwānī, Djūyā'bī, Bakhrā'tī, Abū Aghādžī, Bakhrā'tī, Rawnaqī, Ma'navt, Abū-'I-Fath Bustī (known also from his poems in Arabic) and 'Ammāra Marwāzī.

After the fall of the Sāmānīds a new literary centre arose in Ghazna at the court of the celebrated Sulṭān Maḥmūd (q. v., 998—1030) and his successors. This school received its key-note from the famous poet 'Uṯūrī (q. v., d. 1050) of Bālkh. His kaṣidas, which celebrate the sulṭān and his campaigns and endeavours to prove his claim to the throne of Persia by theological hair-splittings, are very fine examples of the more serious court poetry. Rūdāki's frivolity would have been out of place at the court of the rigidly orthodox sulṭān. Two other poets who were mainly active at the court of his brother Amīr Naṣr recall in their joie de vivre more the poetry of the Sāmānīd period. They are Mīnūčhīrī (q. v., d. c. 1050) of Dāmghān, who has given us in several poems fine specimens of bilobed humour and liked to make allusions to pre-Islamic legends, and Farrukhī of Sistān (q. v., d. 1037—1038), whose Persian literary historians are fond of comparing with the master of the Arabic kaṣīda al-Muṭanabī [q. v.]. The glowing colours of his descriptions of nature are really marvellous expressions of the imagination. As a theorist also he is known for his treatise Tarjumān al-Balāẓa. No less important is Asādī (q. v., d. between 1030—1041) of Tūs, who was the first to enrich the varieties of court poetry with the munzara or disputations (like the tenzone of Southern France). Two poets of this name are usually distinguished; the younger, author of the Garḥoq-nīma, is said to be a son of the elder. But there are reasons for thinking such a distinction unnecessary and the existence of two Asāsīs doubtful. Under the successors of Sulṭān Maḥmūd, who were no longer able to hold together their father's gigantic empire, poetry was still held in high honour. Of the poets who adorned their courts the master of the kaṣīda Abū 'I-Farād Rūnī (d. the end of the viith = xiiith century) and his pupil Ma'sud-i Sa'd-i Salmān (d. 1131) were specially prominent. The latter in particular, who spent a great part of his life in prison, created a new kind of poem, the Ḥabīṣīyāt (prison kaṣīdas), in which he lamented his cruel
endevoured to check Anwari's influence with the work of Rashid al-Din Wafts (q.v.; d. 1182-1183). This poet, who is also entitled to credit for his work as a theorist, is distinguished by unusually caustic language but as a poet he can scarcely be compared with Anwari, beside whom only the characteristic figure of Kha'kani (q.v., d. 1199), who sang the praises of the Shafs of Shir
dan, remains unfaded. The difficulty of the language of this original poet is proverbial in the east but nevertheless he is recognised to this day as the greatest master of the kashida. Sama'ani of Samarkand (d. 1173-1174) was alo a occasional panegyrist of the Saljuq but he was known chiefly for his satires and parodies which are often obscene but very witty. Women also wrote poetry; for example we have a few lines by Sultan Sandjar's friend Mahisti, which show great talent although they unfortunately contain unusually cynical expressions. Nizami Arudi (q.v.) of Samarkand was a poet at the Ghurid court; he is chiefly notable for his Cabir Mahalla, one of the most important sources for the biographies of poets. The end of this period is marked by the two last great poets of kashidas, Zahir al-Din Faryabi (q.v., d. 1202), whose poems in spite of facility of technique show in comparison with Anwari a certain decline of the court style, and Kamal-i Ismai'il called Kalilak al-Mal'ami or "Creator of Spiritual Ideas" (d. 1237). This last poet turned in his later years from the court style and preferred the contemplative life of a Sufi shaikh to success at court. His best work is already full of the spirit of Sufi mysticism and in this field also he succeeded in creating real masterpieces.

b. Epic. The first essays in epic poetry, a genre which had been practically unknown to the Arabs and which, so to speak, represented the Iranian national element in Persian literature, were made by Persian poets even before the time of the Sasanids, in the period of the first wars against their Arab poetical masters. In this field therefore the Persians had no foreign models and were completely dependent on pre-Islamic tradition and to some extent on popular poetry. Unfortunately once more only fragments of the oldest works have come down to us, which do not permit us to gain anything like a clear idea of their character. In this field it was again the old master Rukaki who created the first work of any size, namely the celebrated version of the Kalila wa-Dimna of which only some 50 baits have come down to us. At the same court the talented young and vivacious poet Dakhiki (q.v.) undertook a larger work, namely a metrical version of the official Sasanian book of kings, the Khudai-nama. His premature death prevented him from carrying out this grandiose scheme. All that he left was about 1,000 baits, which seem to have given the stimulus to the greatest achievement of Persian poetry, the Sheh-nama of the celebrated Abu 'l-Kasim Firdawsis (q.v.) of Tus (born c. 934, d. between 1020-1026). This gigantic work, which according to the poet himself contains 60,000 baits and combines the whole epic tradition of Persia into an artistically perfect whole, became the foundation for a long series of later poems or matnakashi, as this genre is called, from an Arabic technical term. Firdawsis's second work, finished when he was well over seventy years of age, namely his Yamaq n-Zulakhba, is from the artistic point of view little

late. No less important is Ummun Mihri (d. about the middle of the viii - xth century) in whose poems the learning of his time gradually penetrates into poetry. The other dynasties who shared the power with the Ghaznavids, but were hardly on the same level, also endeavoured to attract poets of talent to their courts. Mention must thus be made among the poets of the Buyids (932-1055) of Kamal al-Din Bundar of Raify, who in addition to literary Persian used the dialect of Raify for his poems. The celebrated Katuran Djabili (q.v., d. 1072-1073) also sang the praises of the Buyids, but he was for the most part in the service of the rulers of Daudal of his poems were long thought to be the work of Kudaki. Even beyond the Oxus among the Turkish Ilak-Khan (931-1165) Persian poetry flourished. The best poet of this school was the brilliant Amak (d. c. 1148), who shared his fame with Rashidi and Naghibi Farghana. Amak's kashidas are especially distinguished by their unusual freshness and joyous nastrin, which are full of unexpected turns of speech.

As already mentioned, prose played very little part at this period in the life of the court. But we must mention at least three works of the greatest importance for the history of the development of Persian prose style, namely the universal history in Persian of the Somanid vizier Aba 'Ali Balam (q.v., d. 996), the highly interesting history of the Ghaznavids by Aba 'l-Faqir Bahiaki (q.v., d. 1077-1078) and the Kha
inferior to his masterpiece. The story of Joseph, which with later poets ( fís) became a song of songs of mystic love, becomes in his hands a moving lament of the boy carried off to a strange land, which may well describe the feelings of the aged and homeless poet in Baghdad. Firdawsi's first successors followed his example closely and wrote regular epics, among which the already mentioned Gargâr-nâmâ of Asâfâr and works like the Barâb-nâmâ, Sâm-nâmâ etc. may be particularly noted. But very soon the character of the epic changes and it gradually becomes a romance of chivalry. Thus for example the Wâmîk wa-Adhrâ, now lost, of the already mentioned 'Unsârî, in spite of its many descriptions of fighting, is mainly concerned with the love-story of the hero and heroine. This transformation is still more evident in Fa'âr al-Dîn Gurgânî's [see FURJânî] celebrated Wîs u-Râmîn (written about 1048), the Persian counterpart of the European Tristan story, in which the hero, regarded from the point of view of the heroines of old Persia, is almost entirely devoid of knightly qualities. The court epic attains its zenith in the quintette (Khamîn) of the great Nižâmî [q.v.] of Gânda (about 1125). Some of his poems have really very little connection with the old epics and are, like Lâlî u-Mašîqânîn, predominantly lyrical and romantic in tone. After Nižâmî the Persian court poets hardly ever attempted to treat of new subjects and remained within the bounds already laid down for them.

c. Mysticism. We have so far been mainly concerned with the court poetry, but the other current in Persian literature has its source in very different circles. Sûfîsm [see TÁŠAWWU], arising on Arab soil, entered Persia also and spread among the artisans and to some extent also among the merchants who populated the towns of Persia. In its quite early stages Sûfîsm became connected with the fûtûwâ movement [q.v.] and the mystical tone became more and more emphasised. So far as we can judge, the oldest Sûfî lyric arose from the demand for a poetry of their own which should brighten the public meetings of the Sûfî bodies. Isolated lines, quatrains and kâ'âs of pronounced Sûfî colouring arose as early as the tenth century, but the first more or less extensive collections belong to the first half of the x1th century. While the famous Bâbâ Tâhir 'Uryân [see TÁHÎR; d. 1019] expresses pronounced Sûfî views only in his prose works and in his quatrains follows the model of the popular poetry (even in language, for a number of them are written in dialect). Bâbâ Kuhrâ Shirâzî [d. 1050] is already a mystic through and through in the full sense of the word. His Divân which has come down to us is, it is true, much corrupted, but the theories of the x1th century are quite apparent from his verses which are interspersed with kûrân verses and hadîths. Until quite recently it was generally thought that the earliest Sûfî poet was the celebrated Shâhîb Abû Sa'id of Ma'hâna. But there is no longer any doubt that he only once in his life composed a quatrain on the spur of the moment. All the other poems ascribed to him are either forgeries, or possibly were really declaimed by him during his sermons without having been composed by him. The mystical lyric attains a higher degree of perfection in A跋sâr [q.v.] also called Pir-i 'Anşâr or Pir of Herât (1006—1088), whose principal work is the celebrated Mumâjdât, ardent prayers full of feeling in rhymed prose. The soil was now sufficiently prepared and Persian mysticism began to bear its finest flowers, which have given Persian poetry world-fame. But before we pass to these great masters we must briefly mention two names which it has hitherto been the custom to mention in connection with Sûfîsm. These are the famous scholar 'Omâr Khâyâm [q.v.; d. 1123] and the preacher of Ismâ'îlî Mâ'sîr-i Khâshâ'î [q.v.]. To return to orthodox Sûfîsm we must first mention Sânâyî [q.v.; 1048/1049—1141], the poet of Ghazna. If his Divân, half secular, half mystical, reveals further development along the path laid by 'Anşâr [q.v.], his didactic poems, among which we may mention the Ḥadîthat al-Ḥâfizû, represent the first attempt to enliven the theories of Sûfîsm by inserting parables of a popular character. This device, only sparingly used by Sânâyî, is brilliantly exploited by his successor, the celebrated Fârîd al-Dîn 'Âţîr [see Â'TÂR; 1119—1230]. In his poems the inserted tales attain full development and frequently display the greatest artistic perfection in their simplicity. The climax of this ascending series is formed by the parable and gigantic work of the great Djâlîl al-Dîn Râmî [q.v.; 1207—1273] also known as Mâwî-yi Râmî. His didactic poem, which bears the proud title of Majmû'at, i.e. "the poem" par excellence (perhaps with allusion to al-Kûrân), is the finest thing that Oriental mysticism with its unlimited riches has produced. The famous Sa'di [q.v.; 1184—1292] is also usually reckoned among the mystics, although really only a few of his works have a distinctly mystical tinge. Sa'di is rather a teacher of practical wisdom; he endeavours to show his readers the way by which in his troubled period the all too heavy blows of fate could be softened.

d. Prose. We have already observed that classical Persian literature was accustomed to clothe belles-lettres with a metrical garb, and preferred to repeat for learned works. The prose literature of this period is therefore not so rich as the poetry is. Along with the already mentioned work of al-Qâ'âfâr we may also note the famous Aâbû 'Ali b. Sâ'im (Avicenna; [q.v.]), who in addition to his works in Arabic wrote an encyclopedia of philosophy in Persian, the Dânînh-nâmâ-yi 'Âţî'. The dialect of Tabaristan was used at the end of the tenth century by Mâzbân b. Rustâm [q.v.] for the Marzbân-nâmâ, a version of the Kalîla wa-Dimnâ [q.v.]. Unfortunately this work is now lost and known only from Sa'd Warâwînî's Persian translation (written between 1210—1215). The Siyâsat-nâmâ of the Salâdî wazîr Nižâm al-Mulk [q.v.; d. 1092] is an important book, which besides containing valuable historical material well reflects the political ideas of the period. This list of the most important works shows quite clearly that there is practically no belles-lettres proper. The first work that we can put in this class is the Persian translation of the Kalîla wa-Dimnâ finished in 1144 by Abu 'l-Mâ'âlî Nâşr Allîh [see NÂŞR AL-LÎH]. But here again it must be pointed out that the book was not then regarded as light literature but as a kind of "mirror for princes", that is to say as a learned work. The aim of the Persian translation of the Farâdî bâ'ld-al-Shâdâ completed in 1155 by Hûsâîn al-Mu'âyîdî was similar, but with particular stress on the didactic element. The end of the x1th century
brings a series of romances of chivalry and versions of pre-Islamic material, the greater part of which is known only in later versions, often only in the form of popular romances. We may mention here the romance *Kitāb-i Samakʿ Yār* by Ṣadāka Ẓirāzī composed in 1189, the fantastic and enormous romance of Amir Ḥamza, the *Bāghhūrān-nāma* and the romance of the Bedouin hero *Jāzīm Tāyīr*. To conclude this section, we may mention that in this period we already find a certain development of historical writing, a series of works on poetics, and the first attempts at anthologies (*taḏḥīḥāra* among them *ʿAwrī* [q.v.] valuable *Lubāb al-ʿAlhāb*). But as this compressed survey of Persian literature is forced to confine itself to belles-lettres such works cannot be dealt with here.

From the Mongols to the sixteenth century.

The early years of Mongol rule were a period of tribulation for Persia. Although later Mongol rulers took an interest in the restoration of the country the destruction done in the early invasions was so vast that the land could only recover slowly. In the general havoc it could hardly be expected that Persian literature would continue on its earlier lines. Yet it is this period that produces the great series of eminent historians whose works form the foundation of all research by European scholars. Without going into further details we must at least briefly mention the more important names. These are *ʿAṭṭā Malik Dūwainī* [see Dūwainī], *Wāṣfū* [q.v.], the great *Rahūd al-Dīn* [q.v.], *Fadl Allāh* and *Ḥamīd Allāh Mustawfi Kādī al-ʿAlī* [see Kādī al-ʿAlī]. Poets on the other hand became rare and they seek comfort mainly in mysticism. Court poetry after the destruction of the brilliant court life survived mainly in outlying parts of the country which had suffered less in the general destruction. But this poetry could not, for the most part rise above the level of the classical period and seeks to surpass its predecessors in dexterity of technique. Several poets who knew that they possessed a certain perfection of style left their native land and sought refuge with the rulers of India. For example *Badr-i Cācā*, a fairly skilled master of the *kāštā* dialect, left Central Asia to become court poet of Muḥammad b. Tughluq (1325—1351); there he was followed by Ḍānī Ṭūḥ who however afterwards went to Asia Minor. An endeavour to give new life to the court language, which had become arid and formal, by the addition of Mongol and Turkish loan-words was made by *Pūr Bāhā-yi Djāmī* Ṣafā al-Dīn Kāshānī (c. 1207), who also can claim mention as the author of several treatises of a philosophical character. Among all these quite a special position is occupied by *Nizārī Kūhīstānī* (d. 1320). Although an Ismāʿīlī, like Nisārī Khūrawī at an earlier date, he is distinguished from the latter by sarcastic outbursts against orthodox Islamic scholars with such drastic effect that almost all authorities declared his writings heretical and hostile to religion. As a result manuscripts of his works are very scarce. Some of his longer poems (like *Mushir u-Azhār*) read like deliberate parodies of *etymology of Saʿdī* and the court epic.

If Persian literature in the Mongol period had fallen into a kind of lethargic trance, under Timūr and his successors (1370—1405) it experienced a renaissance. The reason for this is probably that, with the decline of Mongol sovereignty, a large number of petty local dynasties arose who were all anxious to restore the ancient usages of court life and to adorn their courts with poets. This period therefore became a new flowering-time of Persian poetry and it may well be called the second classical period. Although the greater part of its poetry lacks the freshness and vigour of the pre-Mongol period, some of its poets succeeded in surpassing their predecessors. Of the masters of this period the following may be mentioned: *Ibn Yāmīn* [q.v.], *Zākānī* (d. 1371), one of the most original figures of Persian literature, whose occasionally rather bold parodies contain ruthless criticism of and contempt for the Persian aristocracy. *Salīm* [q.v.], *Ṣāwādji* (d. 1376), celebrated for his difficult play on words, witticisms and technical skill, and lastly *Lūsīn al-Ghāib Khwādja Ḥāfīz* [q.v.] Shirāzī (d. 1389), the incomparable master of the ghazal, who was able to combine the greatest freshness and depth of feeling with the elegance demanded by the taste of the age and brought the ghazal to the height of its development, never again reached by any one after him. Two less talented parodists must be mentioned as characteristic representatives of the period: *ʿAbū ʿIṣāhāk ʿAṭīma*, the poet of cooking, and *Kārī Yazdī* (second half of the xvth century), the tailor poet. Their works show that the grand style of the court poetry was already in decline and a new wave was about to break which revealed its weaknesses and made new "etiological" objects the subject of its art. Among the prose writers we may here mention *Diyā al-Dīn Nakḥshābī* [see Nakhsī], whose book of the parrot (*Tūṭī-nāma*, 1330), a version of the old and now lost *Sinūdīd-nāma*, had a great success and was utilised by several later writers. His short prose romance *Gulvāz* should also be mentioned.

Under Timūr's successors the striving after artificiality increases still further. The poet's object is not to be generally understood. On the contrary his aim is to write only for a few select connois-
seurs who are able to appreciate his difficult tours de force. Outwardly this aim finds expression in the widespread use of a new form of poem, the mu'ammāt [q.v.], a kind of riddle on names in verse. The best poets of this period were not ashamed to devote their attention to the mu'ammāt and even the mystic Dālī, who had cut himself off from the world, wrote a treatise on the theory of it. The authors of this period are all more or less influenced by Ṣūfīsm, which was probably a result of the years of trial and of the great invasions, which had clearly shown even to the great ones of the earth the transitoriness of worldly fortune. The famous shaikh and much honoured saint Ni'mat Allāh Kirmānī [see Ni'mat Allāh Walī; d. 1431] who founded a dawrā order which bore his name, left, in addition to some 500 short prose treatises, an extensive Dīwān which is not without a certain beauty. The mystic Kāsim al-Anwār [see Kāsim al-Anwār; d. 1435-1434] is important; in his Dīwān he used not only Persian but also Turkish and even the dialect of Gīlān. Kālibī [q.v.] Niḥāpūrī (d. 1434-1435) rejoiced in the scheme of the mu'ammāt but almost all five of his parts are pervaded by mystical allusions and endeavour to conceal a certain adherence to stereotyped pattern by artifices of technique. 'Arifi of Herāt (d. e. 1449) achieved great fame by his celebrated Hāfīn-nāma also called Gūy u-Ca Médān. Iṣmāl Buḥārā'ī (d. 1425-1426), who was able to work up an old Sūfī legend in his Adham-nāma to a beautiful work of art, is also of interest. Husain Wā'iz Kāshfī [see Kāshfī] (d. 1504—1505) occupies a prominent place; he achieved great fame by his version of the Kitāba wa-Dīnma called Awnār-i Suhālī and set the pattern which has never been equalled for a highly artificial and unusually difficult prose style. The greatest master of this period is undoubtedly 'Abd al-Rahmān Dīmā'ī [see Dīmā'; d. 1492], a prolific poet who in addition to great maḥn-numāt an extensive Dīwān and many treatises. In spite of great versatility and a certain depth of feeling (as, for example, in his celebrated Vīsūf u-Zulaikha or Lailī u-Madīnīn) all his work shows traces of decline, which is especially apparent when his poems are compared with works of the classical period. In this period also the writing of history flourished, and out of a number of distinguished historians we may mention Ḥāfīz-i Abrū [q.v.], 'Abd al-Razzāk [q.v.] Samarkandi (d. 1482), Mirkhwand [q.v.; d. 1498] and Khwāndamir (d. after 1534).

It has been the custom in Europe to close the history of Persian literature with the Timūrid period. The Šafawī period is, it is quite true, a period of great decline in Persian poetry. As these rulers did not encourage praise of the secular government, the poets of this period sought in their ḵaṣāds to celebrate the supposed ancestors of their rulers, the ʿimāms of the Šāhī, who gave the poet Muḥtaşām Kāshānī (d. 1588) the opportunity to compose his famous Hafīlān in honour of the ʿimāms. Many other names could be mentioned such as Ḥāfīz [q.v.; d. 1520-1521], Bābā FIGHĀNĪ [see FIGHĀNĪ; d. 1519],ūmīdī (d. 1519 or 1523-1524), the two Aḥlīs, Tūrsīzī (d. 1527-1528) and Shīrāzī (d. 1555-1556), Hilālī [q.v.; d. 1528-1529], Līsānī (d. 1533-1534), Wakhshī [see Wāzhīk] (d. 1583). But it must be confessed that very little attention has so far been paid by orientalists to these poets and practically nothing has been written about most of them. It seems however that isolated works, such as the Farkhād u-Shīrin of Wakhshī, deserve attention and might afford quite interesting material for the student.

A characteristic feature of the xviith and also of the xviiith century is the migration of Persian poets to India, attracted by the brilliant court of Akbār and his successors. The result was that a second centre of Persian poetry arose in India and gradually a peculiar Indian style developed, which in turn exerted a considerable influence on the literature of central Asia. The best known of these Indo-Persian poets are 'Urī [q.v.] Shīrāzī (d. 1590—1591), who endeavoured to replace bombastic rhetoric by impressiveness and "sweetness" (halawat), and his teacher Faidī (d. 1595), a distinguished scholar, who studied the religious doctrines of India and even translated several works from Sanskrit into Persian. The xviiith century again shows a long series of names, among which we mention those of Saḥābī (d. 1601-1602), the last great master of the aquanian, Zulīf [q.v.; d. 1613]. Among the most longish poems of which the most notable is Makānī u-Ayyāz, Tālib-i ʿĀmulī (d. 1626—1627), the author of an interesting romance of adventure in verse, and lastly the Ḥāfīz of the xviith century: Shābī [q.v.] Tabrīzī (d. 1677—1678) who is still much read in India and Central Asia. Ṣūfīsm, which was mercilessly persecuted by the Šafawīs, falls almost completely into the background in this period, but instead a very copious theological literature also was considerably enriched by the works of the great Mollā Šādār (see ŠADR AL-DIN; d. 1640—1641) and his successors.

The Kādjār a n d m o d e r n P e r s i a. The Kādjār monarchy established at the end of the xviith century brought with it a literary revival in Persia. While Fath Āli's court poets still followed the old traditions and produced little of value, a distinct change becomes apparent in the second half of the xixth century, the result of a closer contact with the European powers who were vying with one another for predominance in Persia. Fath Āli's court poets, like Naṣāt [q.v.; d. 1828—1829] with his tender lyrics, Šābā (d. 1822—1823) with his Shāhān-shāhnāme, an imitation of Firdawī, which celebrates the wars of ʿAbbās Mīrzā with the Russians, or the "Dīmān of the xixth century", Wīsāl, all have much that is admirable in their credit, but nevertheless they are only epigones who lack originality completely. Quite a new note is struck in the works of the three great masters of this period: Kānī (d. 1853—1854), Šahībānī [q.v.; d. 1888] and Vaghabān [q.v.; d. 1860]. Although Kānī studied both French and English and translated several books from these languages, his ḵaṣāds are still, broadly speaking, repetitions of the long obsolete court style. But in the nasīls of these bombastic exercises in style there are many wonder-
fully realistic scenes which would be quite impossible in the "golden age". Şahîbânî, who suffered great injustice from the Ködjhâr, strikes a gloomy and pessimistic note and bitterly laments the rottenness of the whole structure of the Ködjhâr monarchy. Yaghmâ, perhaps the most interesting of all three poets, whose life was an unbroken chain of sorrows, attacked the Persian notables in bitter satire and ended with even blacker pessimism and a complete denial of the possibility of a happy life. His efforts to purify the Persian language of Arabic loanwords is of interest. A great influence on later development was exercised by the Dar al-Funun (1852), the first educational institute intended to further the study of western learning, the teachers in which were almost exclusively Europeans. The work of this institute required the translation of a series of western textbooks. This task however revealed that the rhymed prose of the classical period could not be used for such a purpose. The works of these first translators, who in addition to the textbooks also translated several novels, chiefly from the French, was of tremendous importance for the literary language of Persia and prepared to some extent the way for the literature of contemporary Persia. The Dâr al-Funun was also of great significance for learning in Persia. Its first director Rîdâ Kûlt Kân (q.v.; d. 1871), who used the taḥakkûl Hîdâyât for his poetry, was one of the greatest literary historians of Persia. Among his pupils were the famous historian Šâmâl al-Dawla, later known as Îltihâm al-Saltâna (d. 1896), whose works are still one of the most valuable sources for the history of modern Persia. The efforts of the Dâr al-Funun also produced a widespread desire to help in making known the achievements of European science. Remarkable in this respect is the work of Mirzâ 'Abd al-Rahmân Nadjîdîr-Zâda who under the name of Tâlib of published a series of popular works which dealt with the most varied subjects. Of these works the most important are the Kîrahî Ahdâr and Mâlîkî al-Mushînîn. Of the greatest importance for Persian literature of the xixth century was the introduction of printing (first print in Tabriz in 1816–1817), which also made newspapers possible. But the first newspapers were intended only for court circles. It was not till 1851 that the first newspaper of any size appeared. The press made remarkable progress during the great struggle for the constitution (mâzârîf) especially after the opening of the Majdîs.

This struggle hastened the literary revolution, which had been prepared for by the work of the writers of the xixth century. The political struggle made quite new demands upon the participants. Literature was no longer to be the special property of the aristocracy but had to speak clearly and intelligibly to the masses. Satirical poetry, which was particularly cultivated during these years (1906–1909), therefore broke away from the old tradition; instead of the old literary language which was difficult to understand it uses the language of the street and of the bazaar, instead of the dry old classical forms it sets out to imitate the street ballad (tâzîf). The vernacular also found its way into prose. 4 Ali Akbar Dîkhûdâ (Dâkhûdâ), the great master of the feuilleton, wrote his biting and humorous pamphlets Ėrând-parând, which brightened the revolutionary paper Sûrî Irâfîl. This style was also adopted by later writers and influenced two of the best satirical works of recent years, namely the incomparable collection of stories Yâkû biy yâkû na-biy ("Truth and Fiction") by Âghâ Saiyîd Mûhammad 'Ali Djamâl-zâda (1922) and the trilogy by Mûhammad Mâsûd (M. Dîhâlî) the last part of which appeared in 1934 under the title Ashraf-î Mârîbâqâ ("the Crown of Creation").

In the war against the antiquated, the dramatic form, unknown to the classical literature, was also used. While old Persia had had only scenes (wandering poets) and religious mysteries (tâzîva [q.v.] or zâzâ), the comedy after the European model made its appearance in the form of Persian translations of the famous works of the Adhrbâidînî author Fath 'Ali Aitchen-kân, which were translated by Mirzâ Dîfâr Kârajdâghî. These plays obviously served as models for the original plays by the well known politician and founder of freemasonry (farâmîsh-khânâ) in Persia, Mirzâ Malkûm-Khân. If the theatre was influenced on the one hand by Adhrbâidînî literature, on the other acquaintance with the Turkish drama made possible the appearance of versions of Molîère's plays, among which we may mention Le médecin malgré lui, Le Misanthrope and Tartuffe. The lack of a regular stage in Persia however made the further development of the drama impossible for the time being. Only in recent years have tragedies appeared in Persia, among which the historical Dâssînî-ê Khâmîn (1926) by Saiyîd 'Abd al-Rahîm Khâl-khâlî, Akhtîrân yad-dîr Nâdir-dâkh (1927) by Saiyîd Nafisi and Farûnî (1931) by Sâdîk Hîdâyât may be mentioned. The wave of satire in the first decades of the xixth century also produced the first satirical novel Sîyâhât-nâmê-i Irâhîm-khâ at Hâdjî Râzîn al-'Abdîn of Marâghâ (d. 1910). This work, planned in three parts on the model of the Divina Commedia, had a fabulous success and is still of value as a characterisation, exaggerated it is true, of the defects of old Persia.

The Presen Day. In order not to destroy the continuity we have already been compelled to mention some of the most recent works. It would be very difficult to give at this time a comprehensive sketch of the last few decades. The period after the War and the great changes that have taken place in Persia naturally have also had their influence on literature. Yet it is not so easy for Persian literature, particularly poetry, to cast off the thousand-year-old traditions of the classical literature. The struggle with these traditions found expression mainly in two ways: on the one hand prose attempts to gain predominance over poetry and thus to reverse the old proportions, and on the other the new poetry endeavours both in form and matter to break through the old limitations. This second task is the more difficult as it requires unusual ability to prevent the efforts of the innovators appearing as mere schoolboys' work alongside of the perfection of the classics. For this reason the greatest of the modern poets still adhere rather tenaciously to the traditional forms, even if as regards matter they are far removed from the old models. The greatest of the modern poets, Saiyîd Mûhammad Adîb-i Pîshâwâri (d. 1931), can hardly be distinguished as regards form from the classical poets, of whose
technique he has a complete mastery, but as regards matter his poems with their glowing hatred of England and echoes of the World War are something quite new for Persia. The same may be said of the celebrated Malik al-Shu'ara' Bahār, whose great ḵaṭādas in spite of their traditional style are almost entirely political in content. On the other hand, Aбу-1-Kāsim ʿArif Ḫaẕimī (born c. 1879–1880) has cast off the old tradition to a considerable extent. Of classical forms he prefers the ghazal, but has attained his greatest fame by popular īsfānīs, some of which played a great part during the fighting in the Persian Revolution. The poems of Ḳrādjmīrā (d. 1926) are very famous; his main theme was the fight for the liberation of the Persian woman. Unfortunately his works are characterised by a repulsive cynicism which is quite irreconcilable with the loftiness of his ideals. Among the younger poets first place must be given to Ṣafīd Yāsīmī (born 1897), whose tender lyrics distinctly betray the influence of European poetry. Yāsīmī has also distinguished himself as a literary historian. Ṣimā is endeavours to create new forms and in his Māḥāz ("prison") he succeeded in impressively depicting the tragic lot of the Persian peasant. Mention must also be made of Ḳājār Wāfā, author of two short maṭnkhānās which the European reader will feel to be too sentimental. The Ṣarguḏḵašti-ʾArdsāḏ is interesting; its author, Ṣahīd Daṣḵtārdī, is editor of the Ḥamgānān, the best Persian literary monthly. There are also women-writers and the rather naive verse of the poetess Parwīn shows that we may hope for success in this field also.

Revolutionary tendencies in Persian poetry are represented by Mīr-żāda ʾIštāḵī (killed in 1925), noted for his poem Šaḵā-ḵo Ḯimarrān-i Dīḵānā, and Ḳāsim Ĺāḥūtī, now working in the USSR (b. 1887), who has with great skill been able to overcome the old traditions and to give his revolutionary poems artistic forms most effectively.

If the Persian poetry of recent years is still feeling its new way only very tentatively, the prose can show remarkable achievements. The first years after the War gave the Persians their first historical novel Vįk u-Salṭānat (printed 1919) by Shāhīk Mūṣa Ḥamadānī, the chief hero in which is the Achaemonid Cyrus. The episode of Ḫishān and Manṭiz from Firdawīsī's Šāh-nāma was worked up into a long novel by Aghā ʿIr̄za Ḥasan-Qān Čaḍī; the story of Masdak was used by Ṣanʿatī-zāda Kirmānī, who also wrote a novel from the life of Mānū (pr. 1927). The most interesting of all these historical novels is the Šams u-Tāfghā (in three parts: written in 1909) of Muḥammad Bāker-ʾIr̄za Khushrāwī, who describes the condition of Fārs under Mongol rule (13th century). Kāmālī's novel Jāzāk (1931) is outspokenly nationalist. If the historical novels are intended to remind the Persian reader of the departed greatness of his country and arouse his national pride, the second group of modern novels is devoted to the criticism of present conditions. The difficult position of women in Persia is dealt with by Aḥbāb Ḫalīlī in his Rīgīrār-i siyāsā (2nd ed. 1925). The same author has written a number of shorter novels and stories, among which we may mention Intīḵām, Ḥanadān and Ḳoṣār-i Ṣūrā. The hard lot of the working classes and the criminal conduct of the Persian bureaucracy before the revolution of 1921 are described by Ṣafā Mūṣfīḵ Khāzimī in his Thīrān-maḥṣūf (2nd ed. 1924). The same author has also published several shorter novels, Aḥmad-ʾĀl-Ḵān Khudādād deals with the sufferings of the peasant in his Ṣūzī-stīḵāh-kūrgār (1927). The novel Madjīmā-ʾĪwānān (1925) of the already mentioned Ṣanʿatī-zāda is fanciful and Utopian; the same author in 1934 published another Utopian novel, Rustām dar Kār-i bīst mordwīnum, in which he endeavours to demonstrate the inadequacy of the old ideals of chivalry.

This compressed survey, which can only mention more important works, shows that modern Persian prose has developed much more vigorously than poetry. If we consider the difficulties which the Persian moderns had to overcome, there can be no doubt that the next few years must produce an ever greater literary revival and that new Persia will soon produce works of art, which will be able to take their place beside the noble creations of the classical period in the literature of the world.

(E. Berthels)

II. PERTEW MEHMED SADR PASCHA, OTTOMAN dignitary and poet. He was of Tatar descent and was born in the village of Daridja near Umia. In his early youth he came to the capital Stambul and entered upon an official career. In Maharram 1240 (Sept. 1824) he became beshikci efendi, i.e. State referendary and in Shaban 1242 (March 1827), head of the imperial chancery (hâris al-kutübat). Two years later he lost the post of chancellor and went on a special mission to Egypt. On his return he became in 1246 (1830) assistant (kāmāna) to the grand vizier. On the 23rd Dhu-l-Ka'da 1251 (March 12, 1836) he was appointed minister for civil affairs (muftiyye nizîr) and given the title of marshal (muçik) in the spring of 1836 he was given the title of Pasha but was dismissed by the autumn. In the beginning of Sept. 1836 he was banished by Mahmud II to Scutari in Albania. Pertew Pasha set out a few weeks after his banishment to his place of exile but did not reach it. He died in Adrianople three hours after a banquet which the governor there, Mustafa Pasha, gave in his honour (according to Gibb, H. O. P., iv. 333: Emin Pasha). No one doubted that his sudden death was due to poison and public opinion ascribed the crime to Mahmoud himself. On his family see Sidiqli-i othmani, ii. 38. His son-in-law, who shared his views, was the intriguing private secretary to Mahmud II, Wazif Bey, a highly educated man but lacking in character and accessible to bribery, who lost his office about the same time as Pertew Pasha and was banished to Tokat in Anatolia; cf. G. Rosen, Geschichte der Türken, i. Leipzig 1866, p. 255 sqq. Pertew Pasha's successor was his political opponent Akit Pasha, cf. Babinger, G. O. W., p. 357 sqq. — As a statesman Pertew Pasha took up a pronounced anti-Russian attitude and was no less hostile to the Christians, whom he oppressed with long obsolete and forgotten laws. His feeling against the Christians increased with advancing years.

As a poet, Pertew Pasha composed a Divân, which was esteemed as a model of the poetical art of the period of Mahmud II. There are two editions of it: Bâlâk 1253 (89, 91 pp.) and Stambul 1256 (88, 130 pp.). On other works by Pertew Pasha see Brussâf Mehemeth Tahir, Othmanli Mu'eltefire, ii. 114 sqq. — His valuable library, rich in manuscripts, is now in what was formerly the Selimiye monastery in Scutari.

Bibliography: G. Rosen, Geschichte der Türken, i. Leipzig 1866, p. 255 sq.; Gibb, H. O. P., iv. 332 sqq. with references to Johannin and J. van Carver, Turquie, Paris 1843, for an account of the death of Pertew Pasha in Adrianople; Mehemeth Thureiyi, Sidiqli-i othmani, ii. 38; Sâmi Bey Frâsheter, Kûmînî al-A'lam, p. 1494 sq.; Brussâf Mehemeth Tahir, Othmanli Mu'eltefire, ii. 114. — This Pertew Pasha is not to be confused with the statesman and poet Pertew Edhem Pasha who died on the 17th Dhu l-Ka'da 1289 (Jan. 6, 1873) as governor of Kastamoni [q. v.], a number of whose poems have been published e.g. a Shâhnâme and Lâhiq, i. (= Stambul) n.d., and İsfâhân al-Afkâr fi 'Abd al-'Abîr, Stambul 1304. On him cf. Mehemeth Tahir, op. cit., ii. 114 sqq. (Frantz Babinger)

PESANZREN. [See PESANZREN.]

PESHAWAR, a district, tahsil, and city in the North-West Frontier Province of British India. The district which lies between 71° 25' and 72° 47' E. and 33° 40' and 34° 31' N. has an area of 2,637 square miles and a population of 947,321 of whom 92 per cent are Muslims (1931 Census Report). It is bounded on the east by the river Indus, which separates it from the Pindars and Hazara, and on the south-east by the Nibal Ghagra range which shuts it off from the district of Kohat. Elsewhere it is bounded by tribal territory. To the south lie the territories of the Hasan Khel and Kohat Pass Afriðis; westwards, the Khaiser Afriðis and Mullaghars. Farther north, across the Kabul river, the various Mohmand clans stretch to the Swat river. The northern boundary of the district marches with the territories of the Ümân Khel, the Yúsufzais of Swat and Buner, the Khudum Khel, Gaduns and Uñmánzais. Mountain passes famous in frontier history connect it with the surrounding tribal tracts. In the north-east, the Mora, Shâko, and Malakand passes lead into Swat. The historic gateway of the Khaiser connects it with Afghanistan, while to the south, the Kohat Pass runs through a strip of tribal territory, known as the Dżwâki peninsula, into the neighbouring district of Kohat.

References to the district occur in early Sanskrit literature and in the writings of Strabo, Arrian, and Ptolemy. It once formed part of the ancient Buddhist kingdom of Gandhâra, for, from the Khaiser Pass to the Swat valley, the country is still studied with crumbling Buddhist stupas. Here, too, have been unearthed some of the best specimens of Graeco-Buddhist sculpture in existence, while one of Aśoka's rock edicts is to be found near the village of Shâhâzgardar in the Yúsufzai country. Both Pachien, in the opening years of the sixth century A.D., and Huen Tsang, in the seventh century A.D., found the inhabitants still professing Buddhism. It is also on record that Purushapura was the capital of Kanîshka's dominions. Through centuries of almost unbroken silence we arrive at the era of Muslim conquest, when, between the thirteenth and sixteenth centuries, numerous Pathân tribes from Afghanistan spread over and conquered the country roughly corresponding to the modern North-West Frontier Province (T. C. Flodven, Kal-i Afghâni, chap. i. —v., Selections from the Târikh-i Murâ'ga).

Towards the end of the fifteenth century, according to local tradition, two large branches of the Pathân tribes, the Khakhai and the Ghûrîya Khel, migrated from their homes in the hilly country around Kabul to the Džalâlahâl valley and the slopes of the Safid Köh. The most important divisions of the Khakhai were the Yûsufzai, Gusâyi and Târkâmî; the Ghûrîya Khel were divided into five tribes, the Mohmands, Khellis, Dâ'ûdzais, Carkânâs and Džarzâns. The Yûsufzais, advancing into the modern Peshâwar district, expelled the inhabitants, known as Diläzaks, and finally conquered the country north of the Kabul river and west of Hoti Mardân. By the opening years of the sixteenth century, the Ghûrîya Khel had also reached the Khaiser area. Eventually these powerful tribes dispossessed the original inhabitants, driving some to the Swat Köhistan and forcing the Diläzaks across the Indus. Later, the Ghûrîya Khel attempted to oust the Khakhai
branch but were signally defeated by the Yúsfúzis.

Since the modern Peshawar district lay athwart the route of invading armies from the direction of Central Asia, much of its history resembles that of the Pándjáb. The Pásháns of this part of the frontier proved a thorn in the side of the Muslim rulers of India, and although nominally incorporated in the Mughal empire, they were never completely subjugated, even Akbar and Awanzíb contenting themselves with keeping open the road to Kábul. With the decline of Mughal power this area became a part of the Durránt empire founded by Ahmad Shah Abdárí. Disintegration set in under his weak successors and eventually in the early nineteenth century Peshawar was seized by the Sikhs of the Pándjáb. Sikh rule was of the loosest type, and Peshawar groaned under the iron heel of the Italian General Avitaile. With the annexation of the Pándjáb in 1849, the Peshawar valley came permanently under British control and remained an integral part of the Pán vlah until the formation of the North-West Frontier Province in 1885. (A detailed examination of British administration and of the various expeditions against the frontier tribes will be found in The Problem of the North-West Frontier by C. Collin Davies.) In recent years this area has been the scene of the activities of Abad al-Qáffár Káñan, the founder of the “Red Shirt” movement, which, although ostensibly based on Gandhi’s creed of non-violence, has seriously disturbed the peace of the Peshawar valley.

Peshawar City, the capital of the North-West Frontier Province, has a population of 87,440 and is situated near the left bank of the Bárá river about 13 miles east of the Kháiber Pass. Its importance as a trading centre on the main route between India and Afganístan has increased since the construction of the Káiber railway in 1925. It has 16 gates which are closed every night and opened before sunrise. The richest part is the Andarshahr where the wealthier Hindus have taken up their abode. In this quarter, conspicuous on account of its high minarets of white marble, stands the mosque of Mahábat Káñan who was governor during the reign of Sháh Díshán. On the north-west the city is dominated by a fort known as the Bálá Híshár. The Sháhi Bégí with its spacious and shady grounds is a favourite resort of the inhabitants in the spring. The fame of the Kísa Khání or Storytellers Bazaar is known throughout the length and breadth of the frontier and beyond.

Two miles to the west of the city are the cantonments (population 34,426), the principal military station in the province. Some three miles to the west of the cantonments is the famous Islamia college which, although essentially a Muslim college, opens its doors to students of all castes and creeds.

(C. Collin Davies)

**Peshwa.** [See Peshwa.]

**Peterwardein.** [See Petrovaradin.]

**Petrovaradin** (Hungarian Pétervárad, Turkish Varadin), a famous fortress and town in Sirmia (Yugoslavia) on the main railway line Belgrad—Petrovaradin—Novi Sad—Subotica—Budapest, lies on the right bank of the Danube opposite Novi Sad (Neusatz), chief town and headquarters of the Danube banate, with which it is connected by two bridges and since 1929 also administratively. There are two fortresses, an upper one which rises 150 feet above the Danube on rocks of serpentine surrounded on three sides by the river (forming the most northerly spur, 400 feet high, of the Fruska Gora) and a lower one which stands at the foot of the cliffs on the north. In the upper fortress there are no private houses but only military buildings, including the celebrated arsenal with many trophies from the Turkish wars, while the other fortress has a fine market, a main and two side streets. Numerous trenches have survived within the area of the two fortresses which have room for 10–12,000 men. The town proper lies half on the Danube and before its union with Novi Sad it had over 5,000 inhabitants (1921). There are many vineyards in the vicinity.

There was a settlement here even in Roman times called Cumus in which definite traces of the cult of Mithra have been found. According to one legend, the settlement received its later name Petricum from Peter the Hermit, who assembled the armies for the First Crusade here. In any case the town was known as Petrikon in the wars of the Byzantine emperor Manuel Commenos (1143–1180) with Hungary. After belonging for a brief period to Byzantium, Petrovaradin returned to the kings of Hungary, and Bela IV in 1237 presented the town and the royal palace to the Cistercian abbey there of the B. M. V. Belefontis de monte Varadinipetri. This abbey survived throughout the middle ages until 1521 but from 1436 it and the town of Petrovaradin passed under the control of the ban of Maća.

In Sulaimán I’s second campaign against Hungary, the first blow was dealt at Petrovaradin: the grand vizier and brother-in-law of the sultan, İbrahim Pasha (cf. Süjjid-i ‘othmání, i. 93–94), stormed the town on the 15th and the fortress after a brave resistance on the 27th July. The Turks held Petrovaradin till 1687 when they began to withdraw gradually after the fall of Oefen. Soon afterwards the town was occupied by the Austrians (finally in 1691) and after Surmeli ‘Ali Pasha had besieged it in vain for 23 days in 1694 (from Aug. 29) it was definitely ceded to them by the peace of Carlowitz 1699. But it is from the war of 1716—1718 that Petrovaradin is best known. The grand vizier Shahid ‘Ali Pasha (on him cf. ‘Abd al-Ráhman Sharaf, ii. 138 and Süjjid-i ‘othmání, iii. 528–529) with an army of 150,000 men encountered Prince Eugène de Savoy near the town and tried to begin
a regular siege. The Austrian general however foiled this attempt and instead fought a five hours pitched battle with his 64,000 men which ended in the defeat of the Turks (Aug. 5, 1716). This battle, in which ‘Ali Paša himself fell, with the fall of Temesvár and Belgrade (1717) brought about a decision in the war and led to the peace of Požarevac [q.v.] which established the Turkish frontier much farther south of Petrovaradin (indeed over the Save). A little later the empress Maria Theresa built the new fortress. In the Hungarian war of independence (1848–1849) Petrovaradin was for over nine months in Hungarian hands until it surrendered to the Austrians in Sept. 6, 1849. On the dissolution of the Austro-Hungarian monarchy in 1918 the town passed to Yugoslavia.

FEHMÍ BAJRAMAŘEVIC

**PHARAO.** See [FINRAH].

**PIJLE PAŠA.** Ottoman Grand Admiral, came according to St. Gerlach, *Tagge-Buch* (Frankfurt a/M. 1674, p. 448), from Tolna in Hungary and is said to have been the son of a shoemaker probably of Croat origin. Almost all contemporary records mention his Croat blood (cf. the third series of the *Relazioni degli ambasciatori Venezi al Senato*, ed. E. Alberì, Florence 1844—1845, and esp. iii/ii. 243: *di nazione croato, vicino ai confini d’Ungheria*; p. 357: *di nazione croato*; iii/iii. 294: *di nazione ungherese*; p. 418). Following the custom of the time his father was later given the name of ‘Abd al-Rahmân and described as a Muslim (cf. F. Balinger, in *Litteraturdenkmale aus Ungarns Turkenzeit*, Berlin and Leipzig 1927, p. 35, note 1). Pijle came in early youth as a page into the Seraî in Stambul and left it as *kapuši pashâ* [q.v.]. The year 961 (1554) saw him appointed Grand Admiral (kapudan pashâ: [q.v.], with the rank of a *şeyhâbed* and four years later he was given the status of a *heverîel* (J. v. Hammer, *G.O.R.*, iii. 406). He succeeded Sinán Paša, brother of the grand vizier Rustan Paša [q.v.], in the office which he had held from 955—961 (1548—1554). When following his capture of Djerba and other heroic achievements at sea he thought he might claim the rank of vezir with three horse-tails, Sultan Suleiman, thinking it too soon for this promotion and regarding it as endangering the prestige of the vezirate (cf. Hâddji Khalîf, *Tabût al-Kijr*, first edition, fol. 36 and J. v. Hammer, *G.O.R.*, iii. 406), married him to his grand-daughter Djuwher Sultan, a daughter of Selim II (cf. J. v. Hammer, *G.O.R.*, iii. 392: summer of 1562). It was not till five years later that he received the three horse-tails as a vezir related by marriage (dâmuâd) like Mehmed Şokollu Paša. In the meanwhile he had carried out several of his great exploits at sea and attained the reputation of one of the greatest of Ottoman admirals. Along with Torghud Reis, at the instigation of the French ambassador d’Aramon, he had harassed the coast around Naples, besieged and taken Reggio and carried off its inhabitants into slavery. In 982 (1555) he endeavoured in vain to besiege Elba and Piombino (cf. J. v. Hammer, *G.O.R.*, iii. 418) and finally took the fortified harbour of Oran in Algeria with 45 galleys. In the following year with 60 warships he occupied the port of Bizerta (Bent-Zert) and a year later ravaged Majocca with 150 galleys and burned Sorrento near Naples. In 985 (1558) he lay inactive with his fleet, 90 in number, before Valona in Albania in order to watch the enemy fleets there which were preparing an enterprise against Djerba and Tripolis. July 31, 1560 saw his greatest exploit at sea, namely the capture of Djerba which had shortly before been taken by the Spaniards: this he did with 120 ships setting out from Modon. On Sept. 27, 1600, he held his triumphal entry into Stambul, to which he had come in advance of the news of his victory by a galley (cf. J. v. Hammer, *G.O.R.*, iii. 421 sqq.). The Grand Admiral did not take the sea again till four years later when in Aug. 1564 he took the little rocky peninsula of Peñón de Vélez de la Gomera from the Spaniards and in order to prepare for the conquest of Malta, which the sultan’s favourite daughter Mihrimâh [see *KUSTEM PAŠA*] was conducting with all her resources. This time however fortune no longer favoured him, for the siege of Malta in June—July 1565 failed against the heroic courage of the Christian defenders who performed miracles of bravery and inflicted heavy losses on the Ottomans. During the Hungarian campaign of Sulaimân in the spring of 1566 Pijle Paša was placed in charge of the harbour and arsenal of Stambul (cf. J. v. Hammer, *G.O.R.*, iii. 438), after previously undertaking a successful raid on Chios and the Apulian coast (ibid., iii. 506 sqq.) in which the island of Chios and its harbour passed into his hands (Easter Sunday 1566). Under Selim II, his father-in-law, he was disgraced and deprived of office of Grand Admiral because, it was alleged, he had kept the greater part of the booty of Chios for himself (according to the report of the embassy of Albrecht de Wijys of May 1568 in J. v. Hammer, *G.O.R.*, iii. 782) and replaced by Mu‘ezzin-râde ‘Ali Paša. He at once endeavoured to regain the imperial favour by new exploits at sea. In April 1570, he set sail with 75 galleys and 30 galleots, landed first of all on the island of Tine which he captured and next took part in the conquest of Cyprus. On January 20, 1578 — according to the Ottoman sources on the 12th Dhu ‘l-Qa’dâ, 985 (Jan. 21, 1578) — he died in Stambul according to Stephan Gerlach (cf. his *Tagge-Buch*, Frankfurt a/M. 1674, p. 448). His vast estates passed some to the imperial treasury and some to his widow and children. His widow later married the third vezir Mehmed Paša and his second son became Sandjak Bey of Klis (Clissa) above Split (Spalato in Dalmatia) in 1584 (cf. the Italian record quoted by J. v. Hammer, *G.O.R.*, iv. 104, note 1: *La*
PIÄLE PASHA — PIÎK MEHMET PASHA

Sultana fo moglje di Piale ora di Mobmedusa terzo vezir, ha ottenuto dal Sign. il Sangiaco di Clissa per il secondo suo figlio con Piale. Piale Pašha is buried in Stambul in the Kâsim Pašha quarter in the mosque founded by him (cf. Hâfiz Ûsayin, Hâdiṭkât al-Djawâmi‘i, ii. 25 sqq.).

PIÄLE STR. [See GURŠI.]

PIE. [See PÂI.]

PINANG or Pulau Pinang, an island on the western shore of the Malay Peninsula, lying in latitude 5° 24' N. and longitude 100° 21' E. The area is 276 km²; it is separated from the mainland by a channel from 3 to 16 km. broad. The town of Pinang is built on the northeastern promontory, 4 km. off the shore of the mainland. The official names, Prince of Wales' island and Georgetown, never became popular and exist only in official documents. — The island was acquired in 1786 for the East India Company against a yearly payment from the Sultan of Kedah by an agreement with Capt. Light, who founded the colony in the same year. He hoped the place would become an emporium of the eastern seas. It was practically uninhabited at the time and was made a penal settlement shortly afterwards. It remained the penal station of India till 1857. In 1805 it became a separate Presidency. When in 1826 Singapore and Malakka were incorporated with it, Pinang continued to be the seat of government; in 1837 Singapore was made the capital. In 1867 the Straits Settlements were created a Crown Colony; since that year Pinang has been under the administrative control of a resident responsible to the Government of the Straits. He is assisted by officers of the Malay Civil Service. Unofficial members of the legislative council of the colony, which holds its sittings in Singapore, are appointed with the sanction of the Secretary of State for the Colonies to represent Pinang. — Pinang has an excellent harbour and is important as a port of call; there is regular steamer-communication with the Dutch East Indies, Singapore, (British) India etc. The terminus of the Federated Malay States' railways is on the mainland opposite. Trade is adversely affected however by the proximity of Singapore, there are not port duties. — The island is now well opened up, the population has rapidly increased; it is largely Chinese and Tamil, though Malays and well presented from the Peninsular and Sumatra; all of them are Muḥammadians of the Şāhî’s rite. — Wellesley Province, a strip of land opposite on the mainland, forms part of the settlement of Pinang. It was acquired in 1800 from the Sultan of Kêdad against a yearly sum paid for it and includes a district which was purchased in 1874 from the Sultan of Perak. The soil is well cultivated; there are large estates owned by Europeans and Chinese. Until recently a second strip of territory on the mainland and adjoining islands, known as the Dindings, formed part of the settlement; it was ceded by Perak and has now been restored to that state. — The population of the whole settlement, Dindings included, was 304,000 according to the census of 1921, that of the town 123,000; the number of Muḥammadians is not known.

(R. A. KERK)

PIR (P.), elder. In the Sūfī system he is the murâdî, the "spiritual director". He claims to be in the direct line of the interpreters of the esoteric teaching of the Prophet and hence holds his authority to guide the aspirant (murâdî) on the Path. But he must himself be worthy of imitation. "He should have a perfect knowledge, both theoretical and practical, of the three stages of the mystical life and be free of fleshly attributes". When a pir has proved — either by his own direct knowledge or by the spiritual power (wilâyat) inherent in him — the fitness of a murâdî to associate with other Sūfîs, he lays his hand on the aspirant's head and invests him with the kîrşâ. The murâdî need not necessarily receive his investiture from that pir who gave him instruction, who is called the pîr-i şuhat. Pir also is the title given to the founder of derwish orders.

(R. LEVY)

PIÎK MEHMET PASHA, an Ottoman grand vizier, belonged to Amasi and was a descendant of the famous Djalal al-Dîn of Akârîy and therefore traced his descent from Abû Bakr. He took up a legal career and became successively kâdi of Sofia, Siliwî and Galâta, administrator of Mehmed III's kitchen for the poor (simûret) in Stambul and at the beginning of the reign of Bâyazîd II attained the rank of a first defterdâr (baş defterdâr). In the reign of Selim I he distinguished himself by his wise counsel in the Persian campaign (cf. J. v. Hammer, G. O. Rü, ii. 412, 417 sqq.), was sent in advance to Tabriz to take possession of this town in the name of the sultan, and at the end of Sept. 1514 was appointed third vezir in place of Muṣṭâfa Pašha who had been dismissed (cf. J. v. Hammer, G. O. Rü., ii. 420). He temporarily held the office of a kâ’ınmaḵâm of Stambul and after the end of the Egyptian campaign was appointed grand vizier in place of Yûnus Pašha, who had been executed on the retreat from Egypt in 923 (1517). In this capacity he took part in the conquest of Baghşî in 1521. Soon after the occupation of Rhodes, Pirî Pašha fell from the sultan's favour as a result of the slanders of the envious Ağmâd Paša who coveted his office, and was dismissed with a pension of 200,000 aspers on the 13th Shâhîn 929 (June 27, 1523). His successor was İbrahim Paša [q. v.], a Greek from Parga. Pirî Mehmed lived another ten years and died in 939 or 940 (1532-1533) at Siliwî, where he was buried in the mosque founded by him. One of his sons, Mehmed Beg, had predeceased him in 932 as governor of Iç-il. Pirî Mehmed Pašha created a number of charitable endowments, among them a mosque in Stambul called after him (cf. Hâfiz Ûsayin, Hâdiṭkât al-Djawâmi‘i, i. 308), a medrese and a public-kitchen as well as what was known as a tâb-khâné. — While his laḫab was Pirî, he used Resmi as a makâhî for his
poems, which are of moderate merit (cf. J. v. Hammer, Geschichte der Osmanischen Dichtkunst, ii. 337 sqq. with the wrong year of death and also i, p. 157 under Piri without the identity of the two being recognised, also Latifi, Tazhikria, p. 168 under Reis).

Bibliography: Mehmed Tharayia, Siyilli Siyammai, i. 43, more fully in "Othmanzade Mehmed Tahir, Hadjiat al-Wuzur", Stambul 1274, p. 22 sqq and the Ottoman chronicles of the xvith century. — Brusil Mehmed Tahir, "Othmanli Muhellifleri", i. 111 sqq. deals with Piri Mehmed Pasha as a literary man. According to him he wrote a small collection of poems (Divanize) and an exposition of a part of the Mehlmedar and of the Shahidi entitled Tuhfi Mit but both works are described as still in MSS.

PIRI MUHYI L-DIN REIS, OTTOMAN NAVIGATOR AND CARTOGRAPHER, was probably of Christian (Greek) origin and is described as nephew of the famous corsair Kemal Reis (on the latter see the Bonn dissertation by Hans-Albrecht von Buski. Kemal Reis, ein Beitrag zur Geschichte der türkischen Flotte, Bonn 1928 and especially J. H. Mordtmann, Zur Lebensgeschichte des Kemal Reis, in M. S. O. S., xxxii, part 2, Berlin 1929, p. 39-49 and p. 231 sqq.), who was probably a renegade. His father is said to have been a certain Hadji Mehmed, while he himself in the preface to his sailing-book calls himself the son of Hadsji Hadji, which is perhaps only to be taken as a name chosen to rhyme with Piri (cf. Sinan b. Abd al-Manman or Dawad b. Abd al-Wadad and similar rhyming names of fathers of renegades usually formed with "Abd"). As Hejari cannot be an "adam" but at most a maşqalay, the pure Turkish descend of Piri is more than doubtful, if he was not called simply Hejari Mehmed, i.e. borne a name for which there is evidence, for a later period it is true, in the Siyilli Siyammai, i. 239. The same source (ii. 44) says that the corsair's full name was Piri Muhyi l-Din Reis. In any case it may safely be assumed that Piri is to be taken as a tashkala, while the real name ("adam") was probably Mehmed — the combination Piri Mehmed was quite customary in the xvith century — i.e. an "adam" to which Muhyi l-Din corresponded as khatib (cf. Ist., xi, 1921, p. 20, note 3). Of the life of Piri Reis, who made many voyages under his uncle Kemal Reis (d. 16th Shawwal 916 = Jan. 16, 1511) and later distinguished himself under Khair al-Din Barbarossa (q.v.; July 4, 1546) we only know that on these raids he had acquired an unrivalled knowledge of the lands of the Mediterranean. He afterwards held the office of kapudan of Egypt and in this capacity sailed from Suez on voyages to the Persian Gulf and the Arabian Sea. In 945 (1547) he occupied Aden (cf. Die osmanische Chronik des Rustem Pascha, ed. by Ludwig Forrer [Turk. Bild., xx., Leipzig 1923], p. 174 sqq. with full commentary). In 959 (1561) he lost on the coast of Arabia several of his 50 ships, took the port of Masha'ar and carried off a number of its inhabitants as slaves. He then laid siege to Hormuz but raised accepted bribes and so set sail (according to Peçewi, "Ah, Hadji, Khala, Tawfat al-Khur, first edition, fol. 28 according to J. v. Hammer, G. O. K., iii. 415). A report that an enemy fleet was approaching decided him to return hurriedly home with only 26 galleys but with all the treasure he had collected. He was wrecked on the island of Bahrain, but succeeded with two ships in reaching Suez, then Cairo. Khâlid Pasha, the governor of Baṣra, had in the meanwhile reported to the Porte that the expedition had been a failure, which resulted in an order for the execution of Piri Reis being sent to Cairo. He was beheaded there, in 962 (1554-1555), it is said, but probably rather in 959 or 960 and his estate sent to Stambul. After his death envos are said to have arrived from Hormuz representing the plundered inhabitants to demand the return of the treasure he had carried off; they were naturally not successful. The post of kapudan of Egypt was given to another noted corsair, Murâd, the dismissed sandjak-bey of Katif (probably the same as survives in the proverb, according to H. F. v. Diez, Denkwurdigkeiten von Ägypten, part i., Berlin 1811, p. 55, as Murad kapta). Piri Reis is generally known as the author of a sailing-book of the Aegean and Mediterranean known as Bahriye in which he describes all the coasts he had voyaged along with an account of the currents, shallows, landing-places, bays, straits and harbours. Piri Reis had already begun the work in the reign of Selim l (d. Sept. 1520) although he says in the preface that he did not begin it till 927 (end of 1520), in order to make the dedication to Selânum the Magnificent more impressive. He presented the completed atlas (as the latter in 930 (1523). Paul Kahle has published an edition with text and translation based on the known manuscripts, entitled Piri Reis, Bahriye. Das türkische Segelhandbuch für das Mittelmeer und die Welt von Jahren 1521 von dem so far (middle of 1935) vol. i., text, part 1 and vol. ii., part L section 1-28 have been published, Leipzig and Berlin 1926. Separate sections had been previously published, e.g. H. F. v. Diez, op. cit.; E. Sachau, Stiilien, in Centurion delle Nascita di Michele Amari, ii., Palermo 1910, p. 1 sqq.; R. Herrog, Ein türkisches Werk über das Ägäische Meer aus dem Jahr 1520, in Mitteilungen des Kaiserl. Deutschen Archäolog. Instituts, Athenische Abteilung, xxvili., 1902, p. 417 sqq.; E. Oberhammer, section Zypern, in: Die Insel Zypern, Munich 1903, p. 437-434 — Other sections in Carlier de Pinon, ed. E. Blochet (with pictures) and K. Foy, in M. S. O. S., part ii., xi, 1908, p. 234 sqq. Cf. thereon E. Taeschner in Z. D. M., lxvii. (1923), p. 43 with other references.

The so-called " Attempts, found in October 1929 by Khalil Edhem Bey in the Seray Library in Stambul, according to his signature on it of the year 1513, seems also to go back to Piri Reis; it is in Turkish in bright colours on parchment, 85 by 60 cm., and represents the western part of a map of the world. It comprises the Atlantic Ocean with America and the western strip of the Old World. The other parts of the world are lost. It has been supposed that this is the same map as Piri, according to a statement in his Bahriye, presented to Sultan Selim in 1517 which would explain its preservation in the Imperial Library. On it cf. Paul Kahle, "Un mapa de América hecho por el turco Piri Reis, en el año 1523, basándose en una mapa de
PIRI MÜHYİ 'L-DIN RETİŞ — PİŞHWÄ

(P. RAEINER)

PİŞHWÄ, the title given to one of the ministers of the Bahmani sultans of the Deccan; the chief minister of Shiwâdji; the head of the Marâthâ confedâracy.
(Persian "leader"; Pahl. pîshâpay; Arm. pishapoy.
For older forms see Husbachmann, Armenische Grammatik, i. 230.)

Shiwadji, the founder of Maratha political power in the Deccan, was assisted by a council of ministers known as the Ashna Pradhan, one of whom was the Pishwâ or Muhhya Pradhan. The office of Pishwâ was not hereditary and the nature of Shiwadji’s autocratic rule can be gauged from the fact that his ministers were not even permitted to select their own subordinates or nâibs, all of these being appointed by Shiwadji himself. Next to Shiwadji the Pishwâ was the head of both the civil and military administration, placing his seal on all official letters and documents. During the reign of Râdjaram the power of the Pishwâ was eclipsed by that of the Pant Pratinidhi. It is usual to regard Bâldiştî Visvanâth (1714—20) as the first Pishwâ because he was the real founder of a line of rulers who gradually supplanted the râdjas of Sâtara as heads of the Maratha confedâracy. But there were really six pîshwâs before his time, namely, Shâmârdî Nilkanth Rozekar, Moro Trimbak Pingle, Nilkanth Moreshwar Pingle, Pratibhrâm Trimbak Pratinidhi, Bhario Moreshwar Pingle, and Balkrishna Vásudev.

Bâldiştî Visvanâth Bhat (1714—1720), the founder of the dynasty of the pîshwâs, was an able Çitpâ or Konkanast Brahman whom Shâtâ (1708—1749) appointed as chief minister. The difficulties facing Shâtâ, the political confusion in Maharashtra, and the weakness of the later râdjas of Sâtara were the chief factors underlying the growth of the power of the pîshwâs. The imprisonment of the Pratinidhi Dâdoba (Djadji-vanâro) at the time of Shâtâ’s death removed another obstacle to their advancement and marks the end of Deshast Brahman political influence in the Deccan. Bâldiştî Visvanâth found the country torn by civil war: he left it peaceful and prosperous. By complicating the revenue accounts he increased Brahman control over the state finances. During his period of office the Mughal emperor, Muhammad Shâtâ, recognized the right of Shâtâ to levy laksh, a contribution of one-fourth of the land revenue throughout the Deccan, and permitted him to supplement this levy by an additional tenth of the land revenue, called surdeniâkâ. His son, Bâldiştî Râo I (1720—1740), adopted a policy of territorial aggrandizement. The year before his death, a treaty, principally of a commercial nature, was concluded with Law, the Governor of Bombay (Aitchison, vi., N°. 3). The third Pîshwâ, Bâldiştî Râo (1740—1761), entrusted the government to his cousin, Sâdshîv Bhat, the Bhishma, and the command of his armies to his brother, Râgchnâth Râo, better known as Raghoba. His period of office was marked by the rapid extension of Maratha power, his armies ravaging the country from the Carnatic to the Pañjab until their crushing defeat at Pâñipat [q. v.] in 1761. As a result of an agreement in 1755 an Anglo-Maratha expedition crushed the power of Angria, a pirate chief whose depredations were a constant menace to the shipping of the Konkan coast. At the end of this expedition a treaty (Aitchison, vi., N°. 9, iii.) was made with the Pîshwâ which provided for the exclusion of Dutch traders from the Maratha territory. Dissenions broke out after the death of this pîshwâ which seriously impaired the strength of the Marâthâs. Power now passed to the Maratha generals, Sindha of Gwâtior, Bhosla of Naçpur, Holkar of Indore, and the Gaekwâr of Baroda.

During the rule of Mâdhu Râo (1761—1772) Sindha, in 1771, once more re-established Maratha influence in northern India, and Shâtâ Alam, the Mughal emperor, who had deserted the English, became a puppet under Marâthâ control. Mâdhu Râo was succeeded by his brother, Narâyân Râo (1772—1773), who was murdered at the instigation of his uncle Raghoba. For a time the Maratha confedâracy was divided into two hostile camps, the supporters of Raghoba, who was a pretender to the pîshwâship, and the Court Party under Nânâ Phadnavis, who supported the claims of Mâdhu Râo Narâyân (1774—1795), a posthumous son of Narâyân Râo. The action of the Bombay Government in supporting the claims of Raghoba led to war between the English Company and the Marâthâs which ended, thanks to the exertions of Warren Hastings, with the Treaty of Sâlbâ in 1782. This treaty which virtually recognized the independence of Sindha secured peace between the English and the Marâthâs for twenty years. Maratha history now becomes a struggle between Nânâ Phadnavis (Bâldiştî Djanardhan), who attempted to bolster up the power of the pîshwâ, and Mahâdâjdi Sindha, who strove to control the Pîshwâ in order to use him as a cloak to cover his aggressions.

The seventh and last Pîshwâ was Bâldiştî Râo II (1796—1818). During the governor-generalship of the Marquis Wellesley, after the death of Nânâ Phadnavis, in 1800, there followed a struggle for supremacy at Pânî between Holkar and Dâwlat Râo Sindha who had succeeded Mahâdâjdi Sindha in 1794. During this struggle the Pîshwâ fled to Bassein where they threw himself upon the protection of the English. In 1802, by the Treaty of Bassein (Aitchison, vi., N°. 13) Wellesley constituted himself protector of the Pîshwâ who agreed to accept a "subsidiary" force and to permit the
English to mediate in his disputes with the other Indian princes. This naturally did not prove acceptable to the other members of the Marathā confederacy. Unfortunately Bādgī Rāo came under the influence of an unprincipled favourite, Trimbakdā, who was privy to the murder of the Gaekwar’s emissary who had been invited to Pūna under a guarantee from the English of his personal safety. When Elphinstone, the Resident, reported that the Pishwā was secretly conspiring to form a Marathā coalition against the English, the Pishwā was forced to come to terms and sign the Treaty of Pūna (1817), which completed the work of Basseyn. But Bādgī Rāo’s promises were written in water, for when Lord Hastings proceeded to crush the Marathās, the Pishwā rose in revolt and plundered the British Residency. Eventually his forces were defeated and the pishwāshāp was abolished. Bādgī Rāo, however, was granted a pension and allowed to reside at Bīthūr where he died in 1851. His adopted son, Nānā Sāhib, disappeared in 1858.

**Bibliography:**

**PIST** (P), a kind of food compounded of the liver of gazelles or almonds etc. A daily portion of the size of a pistachio (pistāh) is taken long enough and others who undertake long fasts, go to the bāla or forty-day fast, and is sufficient to maintain life.

**Bibliography:** Vullers, Lexicon Persico-Latinum, s. v. pist, sīla. (R. Levy)

**PLATO.** [See Aflāṭūn.]

**PLEVEN** (Plevna, Plevna, Turkish Plevne 담라위, an important town in Northern Bulgaria, 350 feet above sea-level, in a depression formed by the little river Tăčenica (c = tz), which flows not far from the town on the right into the Vid, the right bank tributary of the Danube. Surrounded by hills and at the intersection of the high roads to Vidian, Nikopol, Sofia and the passes of the Balkans, Plevna has long been a place of strategic importance; it is now also crossed by one of the main railway lines (Sofia–Plevna–Sumen–Varma). This busy town, the capital of a circle, where the chief business is in cattle and wine, and which has museums, which recall the Russo-Turkish War, is rising rapidly and in 1926 had 29,063 inhabitants.

Although in the vicinity of Plevna there are the remains of Roman settlements, the town really arose only under the Turks. We have however very little definite information about this period of the town’s history. Ewliyā Celebi’s statement that Plevna was built by the Wallachian ban Ladka (ليدى) has of course to be taken with caution; on the other hand, his assertion that “in the year 720 (1320) in the time of the Ghāzi Khudāwendīgīr it was taken by Mīhāl-Beg”, is not free from objections on chronological grounds. According to the same writer, Plevna after the conquest was an arpašet-āb of the sons of Mihāl-Beg and at a later date was still within the sphere of influence of the noble family of the Mīhāl-oglu [q. v.], who had several buildings erected there. According to Ewliyā Celebi and other Turkish sources (cf. vol. iii., p. 495a and Glašnik Slovenske narodne družbe, xiii. 73 and 81), the town was the last resting-place of Mehmed Beg, a son of Kose Mīhāl, who died in 825 (1422), as well as of the celebrated Ali Beg Mihāl-oglu who is said to have died about 1507. According to Ewliyā Celebi, Ali Beg was buried in the mosque founded by him. That Plevna was the capital of a district in the sandjak of Nikopol we know not only from Ewliyā Celebi but also from Ladka Khaliya (Rumei und Bosna, transl. by v. Hammer, Spomenik, xvi. 23). In the xviiith century, when Ewliyā Celebi visited the town, it had 2,000 houses, a ruined fortress, a college founded by the above mentioned Ali Beg, 7 schools, 6 tekkes and 6 inams etc. — In the first days of Turkish rule, Plevna had, according to Sh. Škini (Kūmās al-Ālam, ii. 1532—1533), 17,000 inhabitants and 18 mosques but, as many Muslims migrated after the Russo-Turkish war, the population sank to 14,000 and most of the mosques were described in 1889 as in ruins.

But it was not till the Russo-Turkish war of 1877—1878 that Plevna became world famous. When the Russians after crossing the Danube on July 19, 1877 appeared before Plevna, they met with the unexpected resistance of Othmān Pasha, who had come up from Vidian. They attacked unsuccessfully on July 20 and 30 and suffered heavily. As Plevna was not fortified, Othmān Pasha now had strong and extensive earthworks thrown up around it. On Sept. 11 and 12 the Russians with the help of the Rumanians, whom they had summoned to their assistance, made a third attempt to take Plevna by storm and were again repulsed with great losses. After all these and further failures (on Sept. 18 and Oct. 19) the allies decided upon and began a regular siege of the town which was conducted by Tottleben, the defender of Sebastopol, in person.

In spite of all Othmān Pasha was not yet shut in on his west side and received munitions and supplies from there until Oct. 10. In the middle of November he was completely surrounded and on the morning of Dec. 10 he undertook a last desperate sortie in an attempt to break through the western lines of the besieging army of 120,000 men (including the Czar). This bold effort was accompanied by success for a few hours but in the meanwhile the heroic Othmān Pasha (the “Lion of Plevna”) was himself wounded, and towards midday on the same day was finally forced to surrender with some 40,000 men. The Russians
had already forced their way into Plevna, the five
months' siege of which had cost them and the
Rumansians over 40,000 men. This name was only given to
Serbs converted to Islam; the truth seems to be however
that this name is limited to Turks in the
two countries (cf. H. Vasilevich, Muslimani..., p. 34 and Elezović, in Srpski književni glasnik, xxviii., 1929, p. 610—614 and in Rednikslovsko-
metoškog dijajek; ii. 449). No more correct is the
statement that apovci is the name given to
Serbian Muslims in Southern Serbia; for this seems
to be a name applied to one another only by
Albanians who are closely related to one another
(brothers and cousins, according to H. Vasilevich,
Muslimani..., p. 34).

The origin and the etymology of these names
are in part more or less obscure and arbitrary.
The usual explanation that the name Pomak comes
from the verb pomoci “to help” and means helper
(pomogati) i.e. auxiliary troops of the Turks,
was first given by F. Kanit (Donau-Bulgar
der Balkan, vol. ii., Leipzig 1882, p. 182) but
was soon afterwards (1891) declared by Jireček
(see Bibl.) to be inadequate. Another equally im-
probable popular etymology is that which explains
Pomak by the Bulgarian word mok = “torment, force”;
and justifies this etymology by saying that the
conversion of the Bulgars to Islam on a
considerable scale was carried out by force and con-
strain (Ichirko, ii. 15). Quite recently I. Lekov
(see Bibl.) has explained the name Pomak from
poturnjak (lit. “one made a Turk”). Whether the
word potomak which in Turkish means “club, cudgel”,
in Uigur “Muslim” and in South Russia “pedlar”
(cf. Barthold, Orta Asia... , p. 82—83), is in any
way connected with Pomak, or has been influenced
by the Bulgarian poturnjak or confused with it
has still to be investigated.

The history of the conversion of the “Pomaks”
or “Torbesi” is very little known in detail. In
any case the adoption of Islam did not take place
everywhere at once but was gradual and at different
periods. A beginning was made immediately after
the battle of Marica (1371) and after the fall of
Tnovo (1393): many Serbs and Bulgars at this
time, especially as Jireček thinks, the nobles and
the Bogomils among these, adopted Islam. After
these first conversions under Bayazid II considerable
numbers of converts were made according to
native tradition in the reign of Selim I (1512—
1520); for this purpose he is said to have sent
his ‘favourite Sinan Paša’ into the territory of the
Šar-mountains. The highlands of Čepino (in the
Rhodopes) were converted according to local
histories in the beginning of the xviiith century,
according to Jireček (Fürstenthum, p. 104) however,
not till the middle, in the reign of Mehmed IV
(1648—1687); the grand vizier Mehmed Koprulu
is said to have taken a leading part in the work.
The conversion to Islam of the Danube territory
(Loče etc.) is put in this period. Towards the
end of this century (xviiith) further conversions
took place among the Serbs in the Debar region.
In some districts Islam only gained a footing on
a large scale in the course of the xixth century
and sometimes not till the beginning of the xixth
(e.g. in Gora, south of Prizren).

Until recently one was very often inclined to
believe that these conversions to Islam were made
under compulsion, even by force of arms, but now
the view is beginning to prevail that the authorities
sometimes to be said (most recently by A. Urošević,
in Glasnik Srpskog naučnog društva, vol. v., 1929,
a 319—320) that this name was only given to
never took any direct steps to proselytise them or to convert their subjects; conversion was on the contrary voluntary and for quite different reasons except in a few exceptional cases (cf. e.g. H. Vasilević, *Muslimi...*, esp. p. 53-61).

Towards the end of the sixteenth century when the process of conversion had ceased for decades everywhere, the great majority of the Slav Muslims (Bulgars and Serbs) were to be found in the Rhodopes and the mountains of eastern Macedonia and in groups of considerable size up and down Macedonia as far as the Albanian frontier, a wide area which stretched from the north of Plovdiv (Philippopolis) to Salonika in the south and in the east from the central course of the Arda over the Vardar and even beyond the Cni Drim, i.e. across the districts of Ohrid, Debar, Gotovac, and Prizren to the west. At that time only a small part of this territory which was interspersed with Christian areas belonged to the principality of Bulgaria; the greater part was still Turkish and only after the Balkan War passed to Serbia or after the World War to Yugoslavia. — In addition to the main body of Muslim Bulgars in the Rhodopes mountains, there were at the same time also sporadic groups north of the Balkan range in the Danube territory, in the circles of Loveč, Pleven (Plevna) and Orheovo (Rahovo).

Since then however the boundaries of the “Pomaks” have receded considerably. During the siege of Plevna almost all the Bulgarian Muslims fled from the Danube districts to Macedonia; although they returned in 1880 they soon afterwards migrated into Turkey. After the union of eastern Rumelia and Bulgaria in 1885 the Rhodopes “Pomaks” also began to emigrate. — The frontiers of the “Torbesi” likewise were not unaffected. The Balkan War and the World War brought about certain changes which resulted in the migration of some bodies of Serbian Muslims out of Southern Serbia.

As a result of various wars and the territorial changes that followed them, the statements regarding the number of Muslim Slavs in Bulgaria, Macedonia (in Southern Serbia) and Thrace as well as about their total number differ considerably and are often unreliable. For example Jireček (1876) estimated the total at about 500,000 including 100,000 in Loveč and Plevna (see *Bibliya*). At the beginning of the twentieth century Gavrilović (see *Bibliya*) estimated the total at only 400,000 and Ishirkoff at about the same (1917).

As regards the distribution of these Muslim Slavs according to countries the following statistics may be quoted. In what used to be the principality of Bulgaria Jireček estimated (1891) their number at most 28,000 souls and before the Balkan War there were within the old frontier of Bulgaria (according to official statistics of 1910) 214,143 (0.49% of the population). In the lands acquired in the Balkan War in Southern Bulgaria there were however many more Pomaks, mainly in the regions of the rivers Arda, Mesta and Struma so that the official census of 1920 makes their number 88,399 (1.82% of the whole population). A somewhat higher figure is given by the *Annuaire du Monde Musulman* for 1929 (p. 305), namely 16,000 Pomaks in Bulgaria proper and 75,337 in Thrace, i.e. 91,337 in all. Finally the latest published statistics (1926 census) give 102,351 Bulgarian speaking Muslims in Bulgaria, i.e. 1.87% of the population, while the number of Muslims in Bulgaria without distinguishing their languages was then 759,296 or 14.41% of the population. — Of these 102,351 Bulgarian speaking Muslims only 5,799 lived in the towns and the remaining 96,552 in the villages; the proportion of men to women was 1,000 to 1,065.

Literate Pomaks in the whole of Bulgaria in 1926 numbered only 6,659 in 1926 (of whom 5,534 were men).

The number of Pomaks (in reality of Muslim Slavs) in Macedonia was according to S. Vercović (1889; see *Bibliya*) 144,051 men (this figure is therefore doubled in *Dernier travaux sur l'ethnographie de la Macédoine*, publ. by the Comité national de l'Union des organisations des émigrés macédoniens en Bulgarie, Sofia 1928, and amounts to 288,092 [with an error of minus ten souls]), according to G. Weigand (*Die nationalen Bestrebungen der Balkanvolker*, Leipzig 1898) 100,000 men, according to V. Kančov (1900; see *Bibliya*) 148,800 and according to VI. Sis (Macedonien, Zürich 1918) 150,030 souls.

As regards the number of Serbian speaking Muslims in Southern Serbia, they were estimated by H. Vasilević (*Musulmani...*, p. 11 sqq.) whose calculations are however to some extent based on the situation before the Balkan War, at 100,000 souls; now (1935) the figure is put at 60,000 and the number of Serbo-Croat speaking Muslims in the whole of Yugoslavia at about 900,000 (exact figures cannot be given because the statistics according to religions have not been published).

For Thrace the figure of 75,337 Muslim Bulgars has already been given from the *Annuaire* and in Western Thrace there were according to the intercalated census (of March 1920) 11,739 (cf. *La question de la Thrace*, ed. by the Comité suprême des refugiés de Thrace, Sofia 1927).

On these statistics the following observations may be made. The Bulgars (e.g. Kančov) usually include as “Pomaks” all the Macedonian Slavs of Muslim faith, i.e. including Serbs from Southern Serbia. On the other hand its account on their religion these Muslim Slavs are sometimes carelessly counted with the Turks. Moreover some statistics are not completely free from chauvinistic and political bias. The European estimates finally are based on approximations or are quite arbitrary.

In spite of the fact that the Pomaks and Torbesi are occasionally included among the Turks and in spite of the fact that they sometimes call themselves Turks, they are nevertheless the purest stratum of the old Bulgarian or Serbian population as the case may be who have preserved their Slav type and Slav language (especially archaic words) very well, sometimes even better — as a result of their being cut off from the Christians and their isolation in outlying districts — than their Christian kinsmen, who have been constantly exposed to admixture from other ethnic elements. They have a certain feeling of aversion for the Turks whose language they do not understand. It is only in the towns that we find that in course of time some of these Slavs have adopted the Turkish language. What bound them to the Ottomans was not language but principally a common religion with its prescriptions and customs (e.g. the veiling of women) which along with Turkish rule naturally imposed upon them many Arabic and Turkish.
words. In spite of this there survived among them many pre-Islamic customs and reminiscences of Christianity (observation of certain Christian festivals etc.).

That the Bulgarian Muslims in particular occasionally (esp. in 1876–1878) fought with the Turks against the Christian Bulgars may be ascribed to the fact that as a result of their low cultural level they made no clear distinction between nation and religion and that their Christian fellow-countrymen treated them as Turks and not as kinsmen. These mistakes were repeated in the Balkan War when the victorious Bulgarian troops and the orthodox priests were led to so far as to convert the Pomaks in the Rhodopes and other districts to Christianity mainly by pressure and force of arms. But on the conclusion of peace they returned to Islam again. This is frankly admitted by the Bulgarian geographer Isirkov (Ishirkoff) and the Bulgarian writer Iv. Karaynov (in his Bulgarian periodical *National Education*, Kusnetz 1931, according to Cemalović [see Bibliography]).

Fifty or sixty years ago the songs and ballads of the "Pomaks" were the subject of much dispute. A Bosnian ex-cleric, Stefan Verković (1827–1893), an antique dealer in Seres, published under the title of *Veda Slavona* (i.e. the "Veda of the Slavs") Belgrad 1874, vol. i) a collection of songs which were alleged to have been collected mainly among Pomaks and which celebrated "pre-Christian and pre-historic" subjects (the immigration into the country, discovery of corn, of wine, of writing and legends of gods with Indian names, of Orpheus etc.). A Chodzko, A. Doron (Chants populaires bulgares infilites, Paris 1875; cf. also *Recue de littorale comorić*, xiv, 1934, p. 155 sqq.) and L. Geiter (*Poesie et folklore Thrakien i Bulgarie*, Prag 1878) also strongly supported belief in this "Veda": it was even assumed that the Pomaks were descended from the ancient Thracians, who had been influenced first by Slav culture and then by Islam.

But of ballads on such subjects neither the Muslim nor the Christian Bulgars knew anything and Jireček, who investigated the question on the spot, repeatedly described this "Slav Veda" as the fabrication of some Bulgarian teachers (*Fürstenthum*, p. 107). We now know that Verković’s chief collaborator was the Macedonian teacher Iv. Gologanov (cf. Pentscho Slawejkoff, *Bulgarike Volkslieder*, Leipzig 1919, p. 15).

In view of the fact that the Muslims in question consist mainly of conservative dwellers in the mountains and villages — who are very industrious, honourable, and peaceful — they are for the most part illiterate and there could be no possibility of any literary activity among them. The only people among them who can write are the köhdjas, who frequently use the Turkish language and Arabic alphabet when writing. They also frequently use the latter alphabet when writing their mother tongue. Of earlier generations of Bulgarian Muslims who distinguished themselves in the Turkish army or otherwise in the Turkish service. The modern generation who have been educated in the state schools have more national consciousness and are more progressive but are too few in number to make themselves felt in politics or otherwise.

**PONTIANAK, the name of a part of the Dutch residency "Westert-Afdeeling" of Borneo, also of the Sultanate in the delta of the river Kapuas and of its capital.**

As a Dutch province Pontianak includes the districts of Pontianak, Kubu, Landak, Sanggau, Sekadau, Tajan and Meliau. The administration is in the hands of an assistant-resident whose headquarters are in Pontianak where the Resident of the "Westert-Afdeeling" also lives. The Dutch settlement is on the left bank of the Kapuas, where also is the Chinese commercial quarter. The Malay town lies opposite on the right bank. The sultanate of Pontianak with its capital of the same name is independent under the suzerainty of the Netherlands and is 4,545 sq. km. in area. In 1930 the population consisted of 100,000 Malays and Dayaks, 562 Europeans, 26,425 Chinese and 2,378 other Orientals. The term Malays includes all native Muhammadans among them many descendants of Arabs, Javanese, Buginese, and Dayaks converted to Islam. The Dayaks
in the interior are still heathen. Roman Catholic missions are at work among the latter and the Chinese. This very mixed population is explained by the origin and development of Pontianak.

The town was founded in 1772 A.D. by the Sharif 'Abd al-Raḥmān, a son of the Sharif Ḥusayn b. Ahmad al-Ḵāḏrī, an Arab who settled in Matan in 1735 and in 1771 died in Mampawa as vizier revered for his piety. In 1742 'Abd al-Raḥmān was born, the son of a Dayak concubine, and very early distinguished himself by his spirit of enterprise. He attempted to gain the ruling power, successively in Mampawa, Palembang and Bandjarasmin, from which he had to retire with his band of pirates, although the sultan had been his patron, after he had taken several European and native ships. By this time he had married a princess of Mampawa and Bandjarasmin and possessed great wealth. On his return to Mampawa his father had just died. As he met with no success here, he decided to found a town of his own with a number of other fortune-seekers. An uninhabited area at the mouth of the junction of the Landak with the Kapuas, notorious as a dangerous haunt of evil spirits seemed to him suitable. After the spirits had been driven away by shots of cannon fire he was the first to spring ashore, had the forest cut down and built rude dwellings there for himself and his followers.

The favourable position of the site and the protection which trade enjoyed there soon attracted Buginese, Malay and Chinese merchants to it so that Pontianak developed rapidly and Sharif 'Abd al-Raḥmān was able by his foresight and energy to hold his own against the neighbouring kingdoms of Matan, Sukadana, Mampawa and Sanggau.

He appointed chiefs over each of the different groups of people and regulated trade by reasonable tariffs. He was able to impress representatives of the East Indian Co. in Batavia to such an extent that they gave him the kingdoms of Pontianak and Sanggau as fiefs after the company had bought off the claims of Banten to Western Borneo. As early as 1772 the Buginese prince Radja Hádžih had given him the title of sultan. After his death in 1808 his son Sharif Kāşim succeeded him. He was the first to change the Arab ceremonial at the court for more modern ways.

According to the treaty concluded with the Dutch Indies government in 1855, the sultan receives a fixed income from them while they administer justice and police of the country. The relationship to the Dutch Indies government has now been defined in a long agreement of 1912, which also settles the administration of justice and the taxes. From the local treasury, then constituted, the sultan receives 6,800 gulden a month; he also receives 50% of the revenue on agriculture and mines.

In keeping with the nature of its origin Pontianak is predominantly Muslim in character and a relatively large number take part in the pilgrimage to Mecca. For these pilgrims who are known as Djāwa Punītiana, the sultan when he performed the pilgrimage in the 80s founded several ḫabīf houses in the holy city.

The main support of the whole population is agriculture and along with it trade in the products of the jungle. The exports are copra, pepper, gambir, sago, rubber and roten, especially to Singapore and Java. Rice, clothing and other articles required by Europeans and the more prosperous Chinese and Arabs are imported. The import and export trade is mainly in the hands of the Chinese. They live together in the Chinese quarter in the European half of Pontianak on the left bank where also the other foreign Orientals have settled. This is therefore the centre of trade and commerce in the valley of the Kapuas.

The Chinese traders maintain with their own steamers connections with the Chinese merchants farther up the river and also over seas with Singapore, both in competition with the Royal Paketfairt Co.

In the swampy lands of Pontianak, intercourse with the outer world is almost exclusively by water. Only in recent years have motor-roads been laid over the higher ground from Pontianak to Mampawa and Sambas, to Sungei Kakap and from Mandor to Landak.

It may be particularly mentioned that Pontianak is a healthy place for the town is very often inundated and it is so far from the sea that there is no malaria.

POON. [See PUNA.]

PORT SA'ID, a Mediterranean seaport of Egypt at the entrance of the Suez Canal on its western bank, in 31° 15' 50" N., 35° 18' 42" E. 145 miles from Cairo by rail via Zagzig and Ismāʿīliya, 36 and 125 miles from Damietta and Alexandria respectively along the coast. It was founded in 1859, as soon as the Suez Canal was decided, during the reign of Sa'id Pasha [q. v.], Viceroy of Egypt, and was named after him. Except for the strip of sand which, varying in width between 200 and 300 yards, separates Lake Manzala from the Mediterranean, the site of the present town was under the water. This site was selected by a party of engineers under Laroche and de Lesseps, not on account of being the nearest point across the isthmus to Suez, but because the depth of the water there corresponded most favourably to the required title of sultan. As soon as work was started on the Canal, fine wooden houses were constructed above the water, supported on massive piles and equipped with a bakery and a water-distiller for the use of the pioneers. A year later, dredgers began to deepen the waters of the newly established harbour, and the mud thus raised was immediately utilized for more buildings which soon numbered 150 houses, 150 cottages, one hospital, one Catholic and one Orthodox Church, and one Mosque, besides the workshops, covering 30,000 square metres in all. This, however, did not suffice for the rapid growth of the population to keep up the work on the Canal progressed towards Ismāʿīliya. To meet this emergency and in the absence of stone quarries within reasonable reach of Port Sa'id, the manufacture of artificial stones capable of resisting the action of sea-water was begun by Messrs. Dussaud in 1865. Details of this process are given in 'Ali Pasha Mubārak's Kitāb (x. 38–40). These stones weighed about 22 tons each and were used both for the construction of the two huge breakwaters of the outer harbour and for the creation of further building ground. In the same year, mail boats sailed up the Canal to Ismāʿīliya while others brought imports to Port Sa'd. In 1868 the breakwaters were finished, and in 1869 the Canal was completed. As a result,
the town was thronged by consuls and representatives of many nations, and the population reached 10,000.

Like most Eastern foundations of this period, Port Sa'id was from the beginning markedly divided into Egyptian and Turkish quarters. The town has grown up in the west and south-west around the mosque, officially inaugurated on Friday 14th Sha'bân 1300 (1883); and the second is situated near the Canal entrance and the beach towards the north and north-east. A regular water-supply now comes from the Nile by the Ismâ'îliya Canal and the pipes leading to a large reservoir (château d'eau) capable of holding several days' supply. The rapid growth of the town may be illustrated by the increase of its population, numbering 49,884 in 1907.

The town quickly rose to eminence as an emporium of Egyptian trade — second only to Alexandria in that country, and it also became one of the most important stations for sea-borne traffic between the East and the West. Its outer harbour, covering an area of 570 acres, its two moles or breakwaters built in such a way as to protect the Canal from the continuous onrush of sea-water and sand-drifts, and its docks numbering originally 30 on the western bank, all had to be extended. A large floating dock (259 ft. long, 85 ft. wide and 18 ft. deep, with a lifting capacity of 3,500 tons) was constructed; and, further, in the years 1903—1909, new docks were established on the eastern bank. To accommodate the workmen on these docks, the new town of Port Fu'âd, named after the present King of Egypt, has sprung up on the east side.

To safeguard the ships approaching the Canal by night, the Khedive Ismâ'îl ordered four lighthouses to be erected at the expense of the Egyptian Government at Rosetta, Burullûs, Burjî el-Îzba near Damietta, and Port Sa'id. The last is 174 ft. high and its beam is distinct from those of the other three and is visible at a distance of 20 miles. It lies at the base of the western mole which, at its seaward extremity, carries a colossal statue of Ferdinand de Lesseps by E. Fernier, unveiled in 1899.

Among the notable buildings of Port Sa'id are the offices of the Suez Canal Company. The town has a very cosmopolitan population and is noted for no special industry. Small dealers live on the sale of Oriental wares and curios to tourists on their passage to the East or to the West.

POTIFAR. [See KITFIR.]

POZAREVAC (pronounced Pôzhârevatz; in the French orthography Pojarévât; Passarovitza is a corruption like the Turkish Pasarofça), a rising commercial town in Yugoslavia (in the Danube banate), headquarters of the district of the same name in the fertile plain between Morava and Mlava, only 10 miles from the Danube port of Dubrava with 13,731 inhabitants (1930).

The town, the name of which is popularly connected with the Serbo-Croat word pôžar ("fire") (M. D. Milicević, Književna Srbija, Belgrade 1876, p. 172 and 1058), is first mentioned towards the end of the 17th century. It must however have been previously in existence and have been Turkish like the surrounding country in 1459. According to the Turkish treasury registers of Hungary of 1565 (A. Velic, Magyarországi török köztársaság, Budapest 1890, p. 734), Pôzârevac belonged to the Turkish sandjak of Semendre (Semendria, Smederevo), and in the middle of the 17th century Hâddîji Khalîfa describes it as the seat of a judge (bâbî, cf. Spomenik, xviii, Belgrad 1892, col. 26). Towards the end of the century many Serbs migrated from Pôzârevac and at the beginning of the 18th century it is sometimes mentioned as a village.

Pôzârevac was however destined soon to become famous through the peace which ended the Austro-Turkish war of 1710—1718. At the end of 1714 Turkey had already, declared war on Venice on the pretext that the peace of Carlowitz was not being observed and in 1715 occupied Morea and some of the Ionian Islands, Austria, which at first intervened to negotiate as an ally of Venice, in 1716 entered the war herself and her armies led by Prince Eugene won three great victories, at Peterwardein, Temesvár and Belgrad, so that England intervened to secure peace. After long preparations (cf. von Hammer, G. O. R. 2, iv. 159—164) the congress of Pôzârevac was convoked. The negotiations at which the plenipotentiaries of Turkey, Austria, Venice with England and Holland as mediators took part began on June 5, 1718 and the Treaty was signed on the 21st July.

Peace was concluded on a basis of the country actually held by the opponents at the time (uti possidetis): Austria retained the eastern part of Sirmia, the banate with Temesvár, the whole of N.E. Serbia, with Belgrad, Pôzârevac etc. and Little Wallachia; Venice also retained a few places she had taken on the Dalmatian and Albanian coasts, received certain commercial preferences and the island of Cerigo (Turkish Kişçö) and had to restore to Turkey the whole of the peninsula of the Morea and the south-eastern districts of the Herzegovina. By a commercial agreement which was also concluded in Pôzârevac on July 27 Austria secured certain trading and other privileges in the Ottoman Empire.

Following the traditional formalities observed after the conclusion of a treaty of peace the first Turkish plenipotentiary Ibrahim Pasha went to Vienna with his retinue and Count Wirmont, the Austrian representative in the negotiations, to Constantinople. A member of the Turkish embassy wrote in 1726 an interesting account which has been published by Fr. van Kralitz in text and translation (Bericht über den Zug des Gross-Botschafters Ibrahim Pasha nach Wien im Jahre 1725, in S.B. Ak. Writ., vol. 158 [1908]; in T.O. E.M., v. ii, [1832—1916], 211—227, the Turkish text of this edition was reprinted by A. Reifka.)

During the Austrian occupation (1718—1739) Pôzârevac was the most important place in this territory. In the Serbian war of independence against Turkey it was besieged for a long period, and had finally to surrender to the Serbs (1804). In 1813, the town again fell into Turkish hands but became Serbian again in 1815.
In the years of peace that followed (1815—1915) Požarevac developed. Prince Miloš in 1825 made it his second residence and had two konaks (palaces) built there. Shortly afterwards a Prussian officer visited the town and left interesting notes on the conditions there (Otto v. Pirch, Reise in Serbien im Spätherbst 1829, Berlin 1830, part i., p. 119—171). In the second half of the sixteenth century the population increased steadily but otherwise the town offered "little of interest" (F. Kanit, Serbia, Leipzig 1868, p. 13).

At the beginning of the sixteenth century Požarevac was one of the most important towns in Serbia. In the Great War it was occupied by the Germans in 1914 and by the Bulgarians (from Oct. 1916) but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia.

PRANG SABIL, the name of the dhīhād [q. v.] in the East Indian archipelago; prang (Indon.) = war.

The course of history has made it impossible for Muslims to fulfill their duties with respect to the dhīhād. The representatives of the law however still teach and the masses readily believe that arms should only be allowed to rest against the kāfr so long as any success must be despaired of. In a Muslim country under non-Muslim rule, like the Netherlands Indies the teachers however prefer to be silent. At most they say that under the prevailing conditions there is no legal inducement to conduct the dhīhād in view of the superior forces and the comparative freedom enjoyed by believers. Or on the other hand, they expound particularly those texts which remove the more serious feuds between Muslim and kāfr to the next world. — When political events, cata- strophes, misfortunes of any kind result in disturbances, it is not at all uncommon for the Muslim population of the East Indian Archipelago to look at these things from a religious point of view. It may happen on such an occasion that the feeling of being bound to fight the unbeliever is aroused again. If the leaders utter the war-cry "prang sabil", it finds a ready answer. It is true that according to the law, the signal for the dhīhād should be given by the imām. There is now no imām; but even in the time when the sultān of Turkey was still recognised as imām any misgivings were easily overcome if the imām remained inactive. Outside the boundaries of the territory in which the holy war is proclaimed, the silent sympathy of the believers is with the fighters. Any forcible conversion which takes place, anywhere in the Archipelago is generally praised by Muslim chiefs and represented as a fulfillment of the more solid obligations of the dhīhād.

This practical teaching of the prang sabil was of particular importance in Atjeh in the last quarter of the sixteenth century. Circumstances were very much in its favour. The Atjehese were a self-satisfied people, convinced of their own superiority and also of a warlike disposition. Non-Muslims were everywhere hated or at least despised. At the same time those individuals who were in any way connected with divine worship were held in great honour. These qualities were however not in themselves sufficient to conduct a prang sabil with success against a disciplined attacking power. A military leader was necessary. There was indeed a sultān in Atjeh but he was a negligible factor as regards the situation in the country. The chiefs, the real rulers of the land, preferred to confine themselves to their own territory; they were not fitted for co-operation. Bands of armed men ravaged the country doing the kāfr as much damage as possible but they could raise no claim for general co-operation and assistance as they were not waging war in the way Allah had willed. The law lays down the sources from which the costs of the dhīhād can be met; pillage and plundering, as was the practice of these bands, could never be blessed by Allah. In addition the organisation of these bands was such that they never held together long. In these circumstances it was the 'ulama' (also used as a singular) who took in hand the organisation of the war; among these the most prominent were the 'ulama' of Tiro, from olden times a centre of study of sacred lore. They reproached the chiefs with their sloth- fulness and the people with preferring worldly advantages to heavenly rewards. Going up and down the country they preached the doctrine of the dhīhād and there was no one who could openly oppose them; indeed they represented the divine law. In order to be able to wage war a war-chest was needed. The 'ulama' claimed the share of the zakāt set aside for Allah's purpose, the 'ulama' of Tiro in particular used it to train a strong force of duly converted recruits. The 'ulama' were for a long time the soul of the war. It is however clear that the authority which they had gained over the secular rulers could only last so long as they were able to inspire the people to continue fighting. When the war was over, they returned to their old still very influential position as representatives of the holy law. — Various writings which together form a regular war literature, proved an effective means of inspiring their warriors with enthusiasm. They were an accompanying feature of the prang sabil. 'Ulama' wrote pamphlets and tractates in which attention was called to the duty of waging the holy war; emphasis was laid on the heavenly reward that awaited the shahid, and the kāfr to be overcome were painted in the blackest colours. An elaborate poem, the Hikayat Prang sabil(s), of which there were many versions, was specially intended to be declaimed in order to increase the courage and contempt for death of those who heard it.

Bibliography: C. Snouck Hurgronje, De Atjehers, Batavia 1893—1894, i. 183 sqq.; ii.

PUL (FULBE), a West African tribe, originally pastoral nomads, now to a large extent settled and agricultural. Fulbe, their name for themselves, is the plural of Pulo; they are called Fulani by the Hausa, Felata by the Kanuri, and by French writers Peul. Their language is called by themselves Fulfulde.

They appear to have come in from the northeast, perhaps ultimately from Fezzân, but their lines of migration in more recent times have rather been from west to east. Migeod, in 1923, found them in what is now the British Mandated Territory of Camerouns, which they had penetrated during the lifetime of persons whom he met. Their main centres of distribution are Futadjallon in French Guiana and Massina in Haut-Sénégal-Niger.

Ethnographically, though various theories have been advanced, they are now accepted as Hamitic by race. Meek (vol. i, p. 94) points out that they have a strong resemblance to the Proto-Egyptians. Delafosse was disposed to class them as hybrids between some mysterious Beni-Israel (not yet satisfactorily accounted for) and the tribe or tribes whom they found already in occupation: according to one account, the Tek气氛 (now the Toucouleur [q. v.]), Frobenius (Op. cit., p. 165) says they migrated to the S. W. from Fezzân in order to escape the oppression of the “Garai”, identified by himself and others with the Garamantes of Herodotus. He finds them spoken of in Soninke tradition under the name Bororo (still retained by the Nomad Fulbe in Adamawa at the time of Passarge’s visit in 1893) or Borowgo, as a despised subject race. He finds no originality in the legends collected from their “singing men” (mabube), but holds that, so soon as they become independent they adopted the traditions of their former overlords. In passing, it may be remarked that Frobenius in 1915 expressed a hope when he says (1915): “Schon Barth identifizierte sie mit den Leucaethopien”.

Barth’s own words are (ii. 505): “Darum aber mochte ich sie nicht (!) fur die Leucaethopien der Alten halten.” Barth’s own view is that they are half-way between a mixed Arabo-Berber and a pure negro stock. His reference, in the same passage, to indications of a connection between their language and that of the “Kaffer Sudafrika” is must be based on the existence of noun-classes in both, a fact which will be dealt with in a later paragraph.

Meek, after considering various hypotheses, comes to the conclusion (i. 98), that “the Fulani are probably a very ancient Libyan tribe whose original home was Egypt or Asia.” He considers the nomad Fulbe as the purest representatives of the Hamitic element in Nigeria (i. 26).

Their physical characteristics are perhaps best summed up in the following quotation from Meek (i. 26), which agrees in the main with the accounts of Mungo Park, Barth, Nachtigal, Passarge and other travellers:

*Their colour varies from a light to a reddish brown*; — Passarge says “heirlößlich gelb” —
*their physique is slender and sinewy, and sometimes even effeminate; the face oval, the lips thin, the head dolichocephalic, the forehead rather receding towards the temple, the nose straight or even pouting, and often slightly rounded at the tip. There is little or no prognathism; the hair is ringlety and often straight…” On his chin a man wears a scrappy tuft of beard. The eyes are almond-shaped and overhung by long black silken lashes. The beauty of countenance and graceful carriage of Fulani women are well known. In character the Fulá is distrustful and shy, shrewd and artful. No African native can equal him for dissimulation and finesse”.

This estimate coincides on the whole with that of the observers previously mentioned. Passarge calls them “eine ritterliche Nation”, in the sense that they despise both manual labour and trade, regarding war, the chase and the care of cattle as the only occupations worthy of a man. They have more dignity and force of character than the negro; at the same time, “traue ich dem Fulla (sie) mehr überlegte Hinterlist zu. Er ist der grösste Charakter, aber auch im gegebenen Moment der grössere Schurke”. Barth, also, says (ii. 505): “Die liebenswürdige Seite im Charakter der Fulbe ist ihre Einsicht und ihre Lehnhaftigkeit, während sie andererseits einen ausserordentlichen natürlichen Hang zur Bosheit haben und bei weitem nicht so gutmütig sind wie die eigentlichen Schwarzen”.

Passarge describes them as “fanatical in religion”, but, as the nomad Fulbe are still, at any rate to some extent, pagan (Meek, i. 200 and elsewhere), this must refer to the settled Fulbe, called by the Hausa Fulanin Gidda, who would seem to have been converted to Islam, like the other tribes of Nigeria, about the eleventh century (Meek, ii. 1—11). Those settled Fulbe are “by free inter-marriage and wholesale concubinage with the races whom they have conquered, fast being absorbed by the negro. Their noses are broadening, their lips are thickening, their hair is curling, their build is coarsening, and the prophallosmouth of the Negro type is beginning to appear. While they have profoundly modified the Negro type of those with whom they have settled, this modification must, in the absence of fresh infusions of Fulani blood, tend rapidly to disappear… they do not intermarry with the nomad pagan Fulani” (Meek, i. 28).

According to Labouruet, nomad Fulbe are scattered over the country in small colonies “généralement installées à côté des villages sédentaires pour en garder les troupeaux”. They supply the settled population with dairy products: Fulbe women selling milk and butter are a familiar sight to travellers.

The Fulbe reached the Upper Senegal region about 1500 A.D., when the Ghana empire was at the height of its power. About 1400, a section of the tribe, coming from Termes in the north-west, established themselves in Masina, under chiefs of the Djallo family. This kingdom was conquered by Askia Omar, the Songhai chief, in 1494. About the same time or not much later, a Pulo chief (arabs) named Tengaella revolted against Omar, but was killed in 1512. His son, Koli, set up an independent pagan kingdom in Badiar, on the Upper Gambia, and his descendants, known as the Deniânke dynasty, remained in power from 1559 to 1776.

The Fulbe entered Bornu during the xvith century and, as they had done elsewhere, gradually penetrated
the country in the guise of inoffensive herdsmen, until, watching their opportunity, "by a sudden coup, they made themselves its political masters" (Meek). Towards the end of the xviii century, Shehu Usman dan Fodio (born 1754) initiated a religious revival which ended in the conquest of Northern Nigeria. Usman established his capital at Sokoto (built by his son Belo in 1810) and before his death in 1817 was acknowledged as Sarkin Musulmi or spiritual head of the Muslims within his empire. He was succeeded by his son Belo, the "Sultan Belo" visited by Denham, Clapperton and Oudney in 1821. He had his capital at Sokoto and later at Warno, while his uncle Abdulahi ruled at Gando.

Meanwhile, in the west, a Pulo marabout, Seku Hamadu, had converted the Masina Fulbe to Islam about 1810. seized Djenne and even (1826) made himself master of Timbuktu; but the dominion founded by him was short-lived, his grandson being overthrown by al-Hajj Omar in 1862. Before this, in 1776, the Muslim Tekron, in Futa Toro, had revolted against the Fulbe Denianke and established a "theocratic elective monarchy" (Delafosse) which lasted till the French annexation in 1881. - Omar, at the head of another section of the Tekron, had conquered the local Fulbe and continued to give trouble to the French authorities till his death in 1864 (Delafosse).

The settled Fulbe do not differ greatly in customs from other Islamized tribes, though even these appear to retain some traces of their pagan ancestry. Animal tabus, which may or may not be connected with totemism, are observed by some Muslim families (Meek, i. 174); apparently Hausa are meant, but it would seem as if the statement were intended to include at least one "Fulani Muslim sub-tribe". Moreover, when Muhammad al-Tunsi says (Meek, i. 99): "In Sudan it is related that they descend from a chameleon", this, so far from being "a fable invented for the purpose of contempt" may reflect a real totemic belief.

One system of casts, otherwise unknown in Negro and Bantu Africa is common to the Fulbe, Wolof, Malinke, Marka and Bamana, with this difference that, with the Fulbe, the "casts" originated in tribal distinctions ("werden durch bestimmte Völker gebildet"); Frobenius, p. 166), and therefore are rigid, whereas, among the Mande, "werden die Kasten durch Sippen gebildet, die in ihrer Kastenzugehörigkeit schwanken". The casts of the Fulbe are:

- **Nobles**: Rimbe (plural of Dinu)
- **Serfs**: Rimaibe
- **Traders and Herdsmen**: Diawanke
- **Singers and Weavers**: Mabube
- **Leather-workers**: Sakebe (elsewhere Gargassabe)
- **Wood-workers**: Laobe (elsewhere Sekeabe)
- **Smiths**: Wailbe (plural of Baulu)

It is noteworthy that the Fulbe, unlike the other tribes mentioned, did not recognise a separate class of slaves. The serfs (called "Horige" by Frobenius) were the descendants of the Rimbe by captive women. The wood-workers' and traders' casts are peculiar to the Fulbe; the rest are common to all the other tribes.

In contrast to the Galla, Somali and other pastoral Hamitic tribes, the Fulbe do not seem to have any special customs or ritual connected with milk. They keep two distinctive breeds of cattle, one or both of which they are believed to have brought with them in their southward migration. Some particulars concerning their cattle are given by Meek (i. 115—118).

The Fulfulde language was long thought to be absolutely unique. If Barth found in it "Andeutungen eines Zusammenhanges dieses Stammes mit den Kaffern Südafrikas", he must have had in mind the system of noun-classes, which, in some respects, resembles that of the Bantu speech-family, though both more complete and more logical than the latter. F. Müller placed the language in a class by itself, forming one division of the "Nuba-Fulah group", for which he could discover no other affinities. A. W. Schleicher (1891) attempted to connect it with Somali, relying chiefly on verbal coincidences, entirely disregarding the system of noun-classes, and admitting that one important grammatical feature of Fulfulde is not to be found in Somali. In so far as he classifies the language as Hamitic, he is partly in agreement with Meinhold, who, somewhat later, came to the conclusion that it represents a pre-Hamitic stratum, from which were developed, on the one hand, the Hamitic languages as known to-day (Shilha, Saho, Galla, etc.) and on the other, the Bantu family.

In addition to the class-system already mentioned (in which the plural is formed by a change, not, as in Bantu, of prefix, but of suffix), Fulfulde exhibits a remarkable cross-division into a. human and non-human; b. large objects and small objects. Here, the plurals are formed by a change of initial consonant according to certain fixed rules summed up by Meinhold as the Law of Polarity. From this latter classification, Meinhold worked out a hypothesis as to the origin of grammatical gender, which has much to commend it. This is set forth in his *Sprachen der Hamiten* (1912). More recently, however, he has found reason to modify his view of Bantu origins, and considers it at least possible that the class-system is not a primitive feature in Fulfulde, but might have been taken over from some Bantu or "Semi-Bantu" language (Westermann prefers the term "Klassensprachen" for the latter and would extend it to include those languages that have been enumerated in H. H. Johnston's *Comparative Study*). It has also emerged that Fulfulde is less of an isolated phenomenon than had at first appeared. It has points of contact with Serer and other adjacent languages, and in particular, with the little-known Biafada of Portuguese Guinea, studied by G. A. Krause as long ago as 1895. Two important essays by A. Klingenheben in *Ztschr. f. Eingeborenen- 
sprachen, 1923—1924 and 1924—1925 are calculated to shed new light on a complicated problem. Fulfulde, like Hausa, possesses a written literature, for which the form of Arabic script, locally known as *ajemi* (Ar. 'adjami), has been used, probably, since the introduction of Islam. This script has peculiarities which cause it to differ markedly from that in use by the Swahili.

Some excellent facsimiles are to be found in Captain F. W. Taylor's *Fulani-Hausa Readings*.

PUÑA, a city and district of British India in the Central Division of the Bombay Presidency. The district has an area of 5,332 square miles and a population of 1,169,798 of whom 54,997 are Muslims (Census Report, 1931) It was included in the powerful Andhra kingdom of the Dakhan which came to an end about the middle of the third century A.D. The available evidence also points to the fact that later the Western Câlukyas, the Rashtrakutas, and the Deogiri Yadavas ruled over this area. With the Khalâjî and Tughluk [see MUHAMMAD TUGHLUQ] invasions of the Dakhan it came under Muslim control. An interesting account of Puña when it formed part of the Bahman kingdom has been recorded by the Russian traveler Athanasius Nikitin (1468-1474), who appears to have been the first foreign traveller whose impressions have been preserved for us since the visit of the Chinese pilgrim, Fa-hien, in the beginning of the fifth century A.D. (R. H. Major, India in the Fifteenth Century, Hakluyt Society). Puña remained under Muslim rule until the growth of Marâthâ power in the latter half of Arawangâ's reign. The district is therefore associated with the beginnings of Marâthâ history and closely connected with the career of Shiwâdji. Under the Pishwâs [q. v.] it became the centre of Marâthâ power until the British conquest in the early nineteenth century.

Puña city, which is situated at the confluence of the Mu[hâ] and Mula rivers, has a total population of 250,825, of whom 28,925 are Muhâmâdans (Census Report, 1931). When but a village it was included in the jâgir of Mâlôdji Bhonji, the grandfather of Shiwâdji. Later, Shiwâdji finding Puña too exposed transferred his capital to Râiggâd where his coronation took place. Puña was the scene of his daring attack upon Shâyista Khân. With the growth of the power of the Pishwâs Puña once more became the capital and centre of the Marâthâ kingdom. The fortified palace of the Pishwâs, known as the Shânavâri, was destroyed by fire in 1827. It was at Puña in the year 1885 that the first meeting of the Indian National Congress took place.

PUST or POST (P), skin; Turkish: póstak; a tanned sheepskin, used as the ceremonial seat or throne of a pîr or shâkh of a dervîsh order. The head, sides and foot had mystical significances ascribed to them. It corresponds to the Arabic bâšt. According to Ewliyâ Celebi (Stambol, i. 495), the murid, after passing the test by the pîr, is called shâkh pust. On ceremonial occasions amongst the bâktaši order, the hall or convent was set out with twelve pûsts of white sheepskin in remembrance of the twelve imâms.

PUWASA (Skr. ४४४६४४४४४), in the East Indian Archipelago the name for the month of Ramadâân and for fasting in this month or at other times. The Arabic names however are not unknown. Fasting is in Indonesia generally a favourite pious practice not only on the days prescribed or recommended by law but also as a means of attaining a desired end. The observation of the fast in Ramadân is here as elsewhere
regarded as the most important of the pillars of Islam; here also we find the popular belief prevailing that it can atone for the sins of the whole year. Not all however continue the fast to the end of the month; if any one finds it difficult he satisfies his conscience by fasting on the first and last days of the month. Nevertheless, such people as even those who do not fast at all have the same elevated sentiment which fills all and which stamps Ramadān as the Muhammadan month like no other. Students, merchants, all whose business takes them away from home endeavour to spend this month at least in the family circle. In many districts the approach of puwasa is remarkable for the increase of slaughtering in the last days of the preceding month. The meat is preserved for use; meals in puwasa are somewhat heavier than usual in order to strengthen for the strain of fasting. The markets are also more animated towards the end of the month; this is the time to make purchases in view of the approaching end of the fast. The beginning of the month is publicly notified; e.g. the drums which form part of the equipment of the houses of prayer are beaten in a special way. The beating of the drums is repeated throughout the whole month at particular times of day, especially after sunset and shortly after midnight in order to warn the faithful that the time for eating is nearly over so that they can prepare the morning meal (Ar. ṣalāḥ). Finally at the end of the month when the period of abstinence is over, the drums are beaten with particular vigour. The ascertainment of the end and beginning of Ramadān usually leads to friction every year. Those who are free-thinkers in religious matters use the calendar and do not hesitate to announce the end of the fast in advance; all who demand that the law should be strictly followed and these include the modernists, stick to ṣaʿāda (evidence of the senses). The tawāzuh (Ar. tarāzūl) service is held in the public houses of prayer immediately after the ṣaʿāda; it is also eagerly attended by people who on other occasions do not observe the legal obligations of religion. The lack of seriousness and the unifying conduct of many participants induces the devout to avoid this tawāzuh service and to observe it elsewhere with a small company of similarly minded people. It is worst in Atjeh; the tawāzuh service here is simply a caricature (Snouck Hurgronje). A special importance is usually attached to the last five odd nights of the month devoted to religious exercises in connection with the ṣalat al-khudār. They are not agreed as to which of these nights is most probably the correct one; but 25th and 27th are preferred but the practice varies in different localities. Part of the ceremonies of the observation of these nights consists in having illuminations in front of the dwelling-houses. In Java special emphasis is laid on the eating of meals together. Every one, if he can at all do it, gives a religious feast every evening. Later they go round their friends; open house is generally kept and time spent in rejoicing until far into the night. Besides these private entertainments there are meals of an official nature. The people of the village come to the house of the village headman to a religious feast; every one brings his share. The higher officials, especially the administrative officials, give a feast to their subordinates. The most splendid observance of these five nights however is found in the palaces of the Javanese princes. According to ancient custom, these feasts took place in great splendour after sunset; the broad forecourts of the palaces give an excellent opportunity for them. These feasts known as maʿālūman, with which many legends are associated, follow one another in a hierarchical succession. First the prince has his on the 25th; next come the crown-prince, the princes of the blood, the governors and ministers; the dishes are intended for the host's subordinates. In recent years these maʿālūman have become restricted so that only the first of them retains its official character. The "little" feast is a day of rejoicing far surpassing the "great" feast. After the fitra has been performed on the last day of Ramadān or even earlier and ablations have been taken with special care, in which the Javanese sometimes includes his cattle, a feast is prepared in the house in the evening after the breaking of the fast. The more devout make a modest meal precede this within the month of the fast to take farewell of the spirits of the deceased who wander about during Ramadān and now return to their abodes. The ceremonial feast on the last Shawwāl is little observed in Atjeh but is a great ceremony in other places; there is no ṣalāt in the whole year which is better attended; many, who otherwise never enter a mosque never fail to be present on this occasion. In Java the regents, the highest native government officials accompanied by the whole of the staff of the regency, all in full dress go in the early morning before sunrise from the regent's house to the mosque in order to take part in the ṣalāt there. After the end of the ṣalāt they return in the same way. The regent then receives the homage of all. The same custom prevails in the southern Celebes; except that here the native princes take the place of the regents. On this day the young people let off fire-works. After the ceremonial ṣalāt people set out in new clothes to visit relations and friends; congratulations are given or the successful conclusion of the fast and pardon is asked for any sins committed deliberately or involuntarily in the past year. It is a widespread custom to visit on this day the tombs of ancestors which have previously been cleaned, and there to spend some time scattering flowers and incense in pious devotion. In Java again we have the custom for the higher officials to treat their subordinates to what are called "mountains of food" (dishes of all kinds arranged in artistic forms). In the native states, at the end of the fast, one of the three public holidays is observed, the essential feature of which is the public representation of the unity of the kingdom in the person of the prince. The three feasts are on the 23rd, 25th and 27th of Ramadān. The prince appears in oriental splendour and shows himself in the outer court of the palace before the assembled people. Large supplies of food have already been prepared in the royal kitchens and are ceremonially piled up into mountains of food of exactly defined form and preparation. These "mountains" which are so large that it takes several persons to carry one, are carried to the place of audience as soon as the prince has taken his seat and at his command taken on to the mosque. Here the food is distributed after the chief supervisor of the mosque has offered a prayer for prince and country. On account of the blessing associated with it it is lucky to get any of the food. The six days' fast in Shawwāl recommended by law is only observed
by a few very pious people; a minor festival is observed on the 8th of the month to mark its conclusion.

(R. A. Kern)

QUETTA (Pashtu: Kwatta), a toshgil and town in the Quetta-Pishin district of British Baluchistan [q. v.]. The district, which contains the toshgils of Quetta and Pishin and the administrative sub-division of Chaman, has an area of 4,806 square miles and a population of 147,541, of whom 197,415 are Muslims. Nearly all these Muslims are Pashtu speaking Puthans, only a very small minority speaking Brahui and Baluchi. The district, which is very mountainous, is bounded on the north-west by Afghan territory, on the east by the Zhob and Sibi districts, and on the south by the Baluchistan Pass district and the Sarawan division of Kalat.

The toshgil of Quetta, which is held on lease from the Khan of Kalat, has an area of 548 square miles and a population of 76,649. The town of Quetta was destroyed by earthquake in 1935. In 1931 it had a population of 60,272, of whom 25,391 lived in the cantonment (Census of India, 1931, vol. iv., Baluchistan).

Until the middle of the eighteenth century, when Quetta finally came under Brahui control, the history of Quetta-Pishin is probably identical with that of Kandahar [for early history see the art. BALUCHISTAN and KANDAHAR]. Quetta was temporarily occupied by the British during the First Afghan War, 1839-1842 (see W. Hough, A Narrative of the march and operations of the army of the Indus in the expedition into Afghanistan, 1840). Its strategic importance was first recognized by General John Jacob who urged Lord Canning, in 1856, to garrison this important point of vantage (Views and Opinions of General John Jacob, ed. Pelly, p. 349). The proposal was rejected on the grounds that, surrounded by hostile tribes and cut off from its true base, the isolated position of the garrison would be extremely precarious. Ten years later, Sir Henry Green, the Political Superintendent of Upper Sind, seeking to improve the British scheme of frontier defence, proposed that Quetta should be garrisoned and connected by rail with Karakul. Unfortunately for those who desired an advance into Baluchistan the proposal had to face the united opposition of Lord Lawrence and his Council, all of whom were champions of non-intervention. Ten years passed. The exponents of "military inactivity" were no longer predominant in the Viceroys council chamber; Khiwa [see KHIWA] had fallen before the Russians, who were drawing nearer and nearer to the gates of India; and, more dangerous still, the estrangement of Sir Ali had brought the Amir of Afghanistan and the Government of India to the brink of war. It was therefore decided, in 1876, to occupy Quetta. The British right to despatch troops into Kalat territory had been recognized by the treaty of 1854 (Aitchison, xi. 212-213). Chiefly owing to the efforts of Major (afterwards Sir Robert) Sandeman, this treaty was renewed and supplemented on December 8, 1876, by the Treaty of Jacobabad (Parl. Papers, 1877, lxiv., c. 1808, p. 314-316). In return for an increased subsidy the Khan granted permission for the location of troops in, and the construction of railways and telegraph lines through, Kalat territory. This was followed by the formation of the Baluchistan Agency, for on February 21, 1877, Sandeman was appointed Agent to the Governor-General with his headquarters at Quetta.

The strategical importance of Quetta is now almost universally recognized. Protected on the south-west by the lofty Chiltan range and on the north-east by the Zar Qen plateau, it dominates all the southern approaches to the Indus valley.

(C. Collin Davies)
RĀ, tenth letter of the Arabic alphabet, with the numerical value of 200. For its paleographical evolution see the article ARABIA, plate i. It belongs to the group of the liquids and is frequently interchanged with ḥ and n. It regularly corresponds to the r of other Semitic languages. It is not guttural but lingual.

(A. J. Wessinck)

RĀBĀB, the generic name in Arabic for the violin, or any stringed instrument played with a bow (kaww). The origin of the name has been variously explained: a. from the Hebrew lābab (lād r being interchangeable); b. from the Persian rubāb (rāwāwāwā), which was played with the fingers or plectrum; and c. from the Arabic rabāb (to collect, arrange, assemble together). The first derivation is scarcely feasible. The second has a rasion d’être, although the mere similarity in name must not be accepted without question. In spite of the oft repeated statement that the Arabs admit that they borrowed the rabāb from the Persians, together with the word kamūn for the bow, there is not the slightest evidence for it. No Arabic author (so far as the present writer knows) makes an admission of this kind, nor have the Arabs adopted the word kamūn for their bow, their own term kaww having been considered sufficient. It is true that we read in the Maṣūḥ al-Ujm (xth century) that “the rabāb is well-known to the people of Persia and Khūrāsān” (237), but this author was writing in hither Persia, and we know from al-Fārābī that the rabāb was also well-known in Arabic lands. One argument against the alleged borrowing from Persia is that the rubāb with the Persians has ever been a plucked and not a bowed instrument. Still, the Arabs may have borrowed the plucked instrument and adapted it to the bow. On the other hand, the Arabic root rabha as the patent of the word rubāb has much in its favour. As the Arabic musical accousticians point out, plucked instruments such as the ʿūd (lute), ʿumbūr (pandore), etc. gave short (manṣuk) sounds, but bowed instruments such as the rabāb gave long or sustained (manṣuq) sounds. It was application of the bow which “collected, arranged, or assembled” the short notes into one sustained note, hence the term rabāb being applied to the violin (see Farmer, Stud., i. 99).

The rabāb is mentioned as early as the Arabic polygraph al-Dābiq (d. 685) in his Maqāmāt al-Raṣūl. Yet we cannot be sure whether this was the bowed rabāb or the plucked rubāb. At any rate, it already had a legendary history when he wrote. According to the Kašf al-Hamīm (xvth–xvith century) it is first found in the hands of a woman of the Banū Tayl (fol. 263). Turkish tradition ascribed its “invention” to a certain ʿAbd Allah Fārābī (Ewliyā Celebi, Siyāhat-nāme, i/ii. 226, 234). An Andalusian legend places its invention within the Iberian peninsula (Delphin and Guin, Notes sur la poésie et la musique arabes, p. 59). One thing is certain even if we have iconographic evidence of the violin in the viiith or ixth century (cf. infra), the earliest literary evidence of the use of the bow comes from Arabic sources, i.e. from al-Fārābī (d. 950), the Ikhwān al-Safā (xth century), Ibn Sinā (d. 1037), and Ibn Zaīlī (d. 1048), as I have fully demonstrated elsewhere (Stud., i. 101–105).

Seven different forms of viol are known to Islāmic peoples, viz.: 1. The Rectangular Viol, 2. the Circular Viol, 3. the Boat Shape Viol, 4. the Pear Shape Viol, 5. the Hemispherical Viol, 6. the Pandore Viol, and 7. the Open Chest Viol.

1. The Rectangular Viol. This consists of a wooden frame, more or less rectangular, over the face (wāṣf) and back (ṣahr) of which is stretched a membrane (djīla). The neck (ṣīnāk) is cylindrical and is of wood, whilst the foot (riḍf) is of iron. It has either one or two strings (astūr), generally of horsehair. Al-Khallīl (d. 791) says that “the ancient Arabs sang their poems to its [the rabāb’s] voice [or sound]” (Farmer, Stud., i. 100). In the Kašf al-Hamīm (fol. 267) we read that it was used to accompany the pre-Islāmic ḥaṣīda and the elegiac poēm. Probably the pre-Islāmic rabāb was of this rectangular form. Lane (Lexicon, p. 1005) held this latter view. Ibn Ghaibī (d. 1435) [q.v.] describes this viol of the bedouin as rectangular (murābāb) and with a membrane face and back and one string of horsehair (fol. 78v). Niebuhr (l. 144) says that it was still called the murābāb in the xvith century. We certainly have a rectangular instrument shown in the frescoes of Kuṣār ‘Amra (Musil, pl. xxxiv), but it is played with the fingers and not with a bow. Yet even in modern times the rabāb of the desert was to be found played in this way as well as with a bow (Crichton, ii. 380; Burckhardt, Bedouins, p. 43; do., Travels in, i. 389; Burton, Personal Narrative, iii. 76). Niebuhr (Tab. xxvi, F) delineates a rectangular viol of two strings, although he says that he saw a viol of one string in Cairo. Villette (722–724: 913–918) distinguishes between the two instruments. In Egypt, he says, the rabāb al-ṣāfīr (poet’s viol) had one string, whilst the rabāb al-mughamānī (singer’s viol) had two strings. Lane (Med. Egypt., chaps. xviii, xxii) also describes them. These instruments never form part of a concert orchestra, being relegated to the folk. For other delineations of the instrument see Félix (Hist., ii. 145), Engel
2. The Circular Viol. The modern instrument of this form consists of a circular wooden frame or pan, the face, and sometimes the back, being covered with a membrane. There is no foot. There is no special reference to this form in Arabic literature nor is there any definite iconographic evidence of it earlier than the xvith century when it is described and delineated by Niebuhr (i. 144; Tab. xxvi, G) who found it at Baṣra. It had but one string. It is still found among the folk of Palestine (Sachse, p. 30, 40, Tab. 3, 17) and the Maghrib (Chottin, p. 50) where it is still known as the rabāb or riḥab. For other delineations see Lavignac (p. 2790) and Chottin (pl. vi). 3. The Boat Shape Viol. This form is confined to the Maghrib. It consists of a piece of wood hollowed out into the shape of a boat. The chest (ẓadr) is covered with thin metal or wood pierced with ornamental rosettes (muṣawwar), whilst the lower part is covered with a membrane. The head (rub') is at right angles to the body, and it is generally furnished with two strings. It seems to have been used by the Arabs and Moors of Spain since their invasion of the peninsula. It is praised by their poets and singers. The neck is of wood, generally cylindrical, and there is a foot of iron, although sometimes there is no foot. It is often known in Arabic as the kāmānja or more rarely as the ḥāshāk. The former is derived from the Persian kāmān (dim. of kāman, "bow") whilst the latter is derived from the Persian and Turkī ḥāšāk, ḥāthāk, ḥīshāk, ḥīlāk, ḥīlāk, ḥīlāk, etc., which may have had their origin in the Sanscrit ḍhāṣāka, an instrument mentioned in the pre-Christian Nāṭya-chōtra (cap. xxxiii.). I believe that the words ḥāšāk and ḥūnān mentioned in the Iṣkāwān al-Ṣafad (Bombay ed., i. 97) and al-Ṣalah (fol. 12) respectively, are copyist's errors for ḥāšāk and ḥīlāk. The work kāmānja is first mentioned in Arabic by Ibn al-Fakih (ca. 903) who says that it was used by both the Copts and the people of Sind (B. G. A.). Of course this need not mean that the instrument was a hemispherical viol, because, being a Persian by origin, the author may have used the word kāmānja in its Persian generic sense meaning a viol. That Egypt had an early liking for the kāmānja is borne out from various sources. Although in Egypt the hemispherical viol is nowadays called the rabīb miṭrī (Egyptian viol), in earlier days it was acknowledged that Egypt borrowed the instrument from Persia (Kašf al-Humūm, fol. 106). The kāmānja was certainly popular at the courts of the Ayyūbid al-Kāmil (d. 1235) and the Mamlūk Baibars (d. 1277); see al-Maqrīzī, i/1, 156; Lane-Poole, Hist. of Egypt, p. 249. In the Persian Karn-'At-hāf (xvith century) the hemispherical viol is described and figured as the ḍhāšāk, but in Ibn Ghāthi (d. 1435) where both the ḍhāšāk and the kāmānja are described, the former is a larger type of the latter, having, in addition to its two ordinary strings, eight sympathetic strings (Karn-‘At-hāf, fol. 261); Ibn Ghāthi, fol. 78). In the xvith century the kāmānja is delineated by Russell (i. 152-153, pl. iv.), and Niebuhr (i. 144, Tab. xxvi., E). Both Villette (p. 900, pl. BB) and Lane (Mod. Egypt', chap. 18) give minute details.
of the construction and accordion. Mushāka also describes the Syrian ḫamarqā (kamārqa) of his day (M. F. O. B., vi. 25, 81). For the modern Persian instrument see Advielle (14 and pl.) and Lavignac (p. 3074). Turkomanian instruments are given by Fittat (p. 45) and Belneve (p. 54). For Malaysia see Kaudern (p. 178); for India Lavignac (p. 349) and Féret (ii. 295). For other designs see Farmer (Stud., i. 76); Féret (Hist., ii. 136-137), Chouquet (p. 203), Sachs (Reallex., p. 207).

6. The Fandore Viol. This form is practically a tambur, stîrî, or the like, which is bowed instead of being plucked by the fingers or a plectrum. The two best known examples from India are the ērī and ērī. The former is a membranophone, its face and has five strings played on with the bow together with a number of sympathetic strings. The latter is practically identical with the former but is adorned with the figure of a peacock (hence its name) at the bottom of the body of the instrument. See Lavignac (p. 351) and Mahillon (i. 131) for designs and details. With the Persians and Turkomans we see various kinds of pandoros used with the bow. See Advielle (p. 14), Lavignac (p. 3074), Mironov (p. 27), Kinsky (p. 26).

7. The Open Chest Viol. This is unknown to the peoples of North Africa and the Near East, although it is popular in the Middle East. Unlike the preceding forms of the viol, the upper part of the face of the body or sound-cast is left open. The best known example of this is the ṣārīnā of India which has three strings. See Féret (i. 296), Lavignac (p. 351), Mahillon (i. 157) and Mironov (p. 27), for designs and details. In Turkomania a similar instrument known as the ḫūdīs is very popular. It has two strings. See Belnav (p. 52), Mironov (p. 25), Fittat (p. 43).

RABĀD (A. pl. arbaʾā), district of a town, quarter, situated outside the central part or şehrā of [q.v.]. The term, which is very frequently found in the Arab historians of the middle ages in east as well as west, is the original of the Spanish word arrabal which means the same. Rabād also means the immediate vicinity of a town. The rabād usually had a name of its own. This is how there have been preserved for the Cordova of the caliphat of the 8th century the names of twenty-one of the suburban districts. Rabād ʾAlaṣqunda [q.v.] or al-Rabād (for short) was the southern quarter of Cordova, on the other side of the Guadalquivir where in 1908 (914) the famous "reburb of the suburb" broke out which was stifed in blood by the emir al-Ḥakam I [q.v.] and earned him the epithet of al-Rabādī. The name rabādī was also given to the exiles who migrated at this time to the rest of al-Andalus, Morocco and to the east. In the castles (ṣijīn or ṣahāra) of Muslim Spain the name rabādī was given to the Muslim janissaries and the strictly military quarters. Rabād was also the name given in the towns of the west to the lepers' quarter and to that of the prostitutes.

(E. LÉVI-PROVENÇAL)

RABAH. Zubair-Pasha, Egyptian governor of Bahr al-Ghazal in 1875, being recalled to Cairo left his son Sulaimān in charge. The latter thinking he was threatened by the hostility of Gordon, then Governor-General of the Sudan, joined Hārin, the dethroned sūlīn of Dār-Fūr, in order to rebel against Egypt. His chief lieutenant was a certain Rabāh, son of a negro who had been his father's nurse and was therefore his foster-brother. Gessi-Pasha, sent by Gordon inflicted a severe defeat on Sulaimān and Rabāh took to flight with the remnants of his master's army and to revictual his forces began a series of raids on the tribes of the northwest of Bahr al-Ghazal (1878). Then pushing westwards he entered the land of the Banda in 1879 and in 1883 fell back on the Dār-Kūtī, installed a native chief named Sanīsī there as sūlīn, attacked Bagirmi in 1892 and in 1893 seized its capital which then was Bugūman. In the same year he attacked Hāsim, sultan of Bornū [q.v.], defeated and slew him (Dec. 1893). He then attacked Gober or Tassāwa where Abū Bakr, nephew and successor of Hāsim, had taken refuge; checked by the army of the sūlīn of Sokoto he turned against the small forces in the south of Lake Chad, took Gulley from the Buso, Kusri from the Mandara, Logone from the Koto, again invaded Bagirmi in 1898, burned Maseīya, the old capital, pursued the king.
or mbang as far as Kuno, was there held up with his 8,000 men by some thirty Senegalese soldiers under the district commissioner Bretonnet and only overcame the resistance of this handful of heroes after eight hours fighting (July 18, 1899). On April 22, 1900, he was defeated at Kusri on the lower Chari by Commandant Lamy: Rabah and Lamy both fell in the battle. His extraordinary career had lasted 22 years and ruined a whole region of the Central Sudan.

(Maurice Delafosse)

RABAT, AR. RIBAT, VOLG. RHIBAT (ethnic Ribât, vulg. Râbat), a town in Morocco, situated on the south bank at the mouth of the Wadi Abû Rakrâk (Wed Bu Regreg) opposite the town of Sale [cf. Sâla]. Since the establishment of the French protectorate it has been the administrative capital of the Sharifian empire, the usual residence of the sultan of Morocco, and the headquarters of the madkhen [q.v.] and of the French authorities. The choice of Rabat as the administrative centre of Morocco has brought this town considerable development in the place of the somnolence in which it was sunk a quarter of a century ago.

The foundation of Ribât al-Fath was the work of the Almohads [q.v.]. The site of the “Two Banks” (al-Idwâtan) of the estuary of the Bu Regreg had previously been the scene of Roman and pre-Roman settlements; the Phœnician later Roman Sâla was built on the left bank of the river higher up at the site of the royal Marinid necropolis of Chella (Shâlla; q.v.). The Muslim town of Sâla on the right bank had, from the beginning of the tenth century, to protect itself against the inroads of the Berghawâta [q.v.] heretics at the time when it was the capital of a little Ifnânid kingdom, fortified on the other side of the Bu Regreg a ribât [q.v.], which was permanently occupied by devout volunteers who in this way desired to carry out their vow of djihâd [q.v.]: the geographer Ibn Hâwâl is authority for its existence at this date (cf. R. G. A., i. 56). But we know very little of the part played by this ribât in the course of the sanguinary wars later fought between the Berghawâta and the Almoravids. It is not even possible to point out its exact situation. It was perhaps the same fortified spot that is mentioned in the middle of the xith century under the name of Kes Bani Targh by the geographer al-Fârâbî.

The final and complete subjugation of the Berghawâta meant that a different part was to be played by the ribât on the estuary of Bu Regreg. In 545 (1150), the founder of the dynasty of the Muʿminid Almohads, ʿAbd al-Muʿmin, chose the fort and its vicinity as the place of mobilisation for the troops intended to carry the holy war into Spain. A permanent camp was established there and he provided for a supply of fresh water by bringing a conduit from a neighbouring source, ʿAin Ghâbûla. The permanent establishments, — mosque, royal residence — formed a little town which received the name of al-Mahdiyya. On several occasions very large bodies of men were concentrated around the ribât, and it was there that ʿAbd al-Muʿmin died on the eve of his departure for Spain in 558 (1163).

The development of the camp went on under ʿAbd al-Muʿmin’s successor, Abû Yaʿkûb Yûsûf (558—580 = 1163—1184), but it was the following prince of the Muʿminid dynasty, Abû Yûsûf Yaʿkûb al-Manṣûr, who at the beginning of his reign gave the orders and opened the credits necessary for its completion. In memory of the victory gained in 1195 by the Almohads over Alfonso VIII of Castile at Alarcos [q.v.] it was given the name of Ribât al-Fâṭî. The camp was surrounded by a wall of earth flanked with square towers enclosing with the sea and the river an area of 450 hectares. The wall is still standing for the most part and is nearly four miles in length; two monumental gates, one now known as Bab al-Kuwâlah (Bahr Er-Rûbul), the other which gives the title of ḥasaba (Kasha of the Oudaya), date from this period. It was also Yaʿkûb al-Manṣûr who ordered the building inside Ribât al-Fâṭî of a colossal mosque which was never finished; rectangular in plan it measured 610 feet long by 470 feet broad; the only mosque in the Muslim world of greater area was that of Sâmarra [q.v.]. It was entered by 16 doors and in addition to three courts had a hall of prayer, supported by over 200 columns. In spite of recent excavations more or less successfully conducted this mosque still remains very much a puzzle from the architectural point of view. But the minaret, which also remained unfinished and was never given its upper lantern still surprises the traveller by its unusual dimensions. It is now called the Tower of Hassân (burj Hassân). Built entirely of stones of uniform shape it is 156 feet high on a square base 55 feet square. Its walls are eight feet thick. The upper platform is reached by a ramp two yards broad with a gentle slope. This tower in its proportions, its arrangement and decoration is closely related to two Almohad minarets of the same period: that of the mosque of the Kutubiyya at Marrakesh [q.v.] and that of the great mosque of Seville [q.v.], the Girâlda.

Yaʿkûb al-Manṣûr’s great foundation never received the population which its area might have held and the town opposite, Sale, retained under the last Almohads and in the xith and xith centuries all its political and commercial importance. Rabat and Sale in 1248 passed under the rule of the Marinids and it seems that Rabat in those days was simply a military station of no great importance, sharing the fortunes of its neighbour which had gradually become a considerable port having busy commercial relations with the principal trading centres of the Mediterranean. But a chance circumstance was suddenly to give the town of the “Two Banks” a new aspect. The expulsion of the last Moriscos [q.v.] decided upon in 1610 by Philip III brought to Rabat and Sale an important colony of Andalusian fugitives who increased to a marked degree the number of their compatriots in these towns who had previously left Spain of their own free-will after the reconquest. While the population of the other Moroccan cities, Faz and Tétouan principally, in which the exiles took refuge, very quickly absorbed the new arrivals whom they had welcomed without distrust, the people of Rabat and Sale could not see without misgivings this colony from Spain settle beside them, for they lived apart, never mingled with the older inhabitants and devoted themselves to piracy and soon completely dominated the two towns and their hinterland. Rabat, known in Europe as “New Sale” in contrast to Sale (“Old Sale”), soon became the centre of a regular little maritime republic
in the hands of the Spanish Moors who had either left of their own accord before 1610, the so-called "Hornachuelas", or had been expelled in 1610, the so-called "Moriscoes", the former however being clearly in the majority. This republic, on the origin and life of which the documents from European archives published by H. de Castries and P. de Cenival have in recent years thrown new light, hardly recognised the suzerainty of the sharia who ruled over the rest of Morocco. While boasting of their ghāād against the Christians, the Andalusians of the "Two Banks" really found their activity at sea a considerable source of revenue. They had retained the use of the Spanish language and the mode of life they had been used to in Spain. They thus raised Rabat from its decadence. Their descendants still form the essential part of the Muslim population of the town and they have Spanish patronymics like Bargāṣ (Vargas!), Palámito, Moreño, López, Pérez, Chiquito, Dinya (Span. Dénia), Runda (Span. Ronda), Múllin (Molino) etc.

The spirit of independence and the wealth of the Spanish Moors in Rabat soon made the town a most desirable object in the eyes of the sultāns of Morocco. Nevertheless the little republic with periods of more or less unreal independence, was able to survive until the accession of the 'Alīd sultān Sa'īyidī Muḥammad b. 'Abd Allāh in 1171 (1757). This prince now endeavoured to organise for his own behalf the piracy hitherto practised by the sailors of the republic of the "Two Banks". He even ordered several ships of the line to be built. But the official character thus given to the pirates of Sale very soon resulted in the bombardment of Sale and Larache [q.v.] by a French fleet in 1765. The successors of Muhammad b. 'Abd Allāh had very soon to renounce any further attempt to wage the "holy war" by sea. The result was a long period of decline for Sale which found expression not only in the gradual diminution of its trade but also in a very marked hatred of each town for the other. At the beginning of the 19th century, Rabat like Sale had completely lost its old importance. They were both occupied by French troops on July 19, 1911.

Rabat is one of the towns of Morocco, the population of which is both Naqashīya, i.e. essentially town-dwelling, and maqāshanīya, i.e. used as residence by the sultān of the Sharīfīn empire. The non-European population has increased in a marked degree since the establishment of the protectorate and its choice as permanent capital of the sultān. The number of inhabitants at the census of 1931 was 27,986 Muslims and 4,218 Jews (20,452 and 3,676 in 1926; Sale wich is a separate municipality had in 1931 22,145 Muslims and 2,837 Jews). They live almost entirely in the madīna, which is in the shape of a trapèzoid, and its annexes formed by the Jewish mellāāq [q.v.] and the ḫashba of the Īdāyā, a separate walled area with its own mosque, originally inhabited by contingents of the gīdh tribe [q.v.; Ar. ǧāis]. of this name (Kašba of the Oudaya). The chief mosques of Rabat are the foundations of 'Alīd sultān, Mawlāī al-Rashīd [q.v.] and Mawlāī Sulaimān (Moulāi Slimān); the mosque near the imperial palace, the Dījānī al-Sunna, was built in the second half of the 18th century. Besides the monumental gates there are several other entrances in the Almohad enceinte: the Bāb al-Ullī (Bāb al-Alou) admits from the madīna to the cemetery and the cliffs which rise up from the ocean; the gate called Za‘rī (Bāb Za‘īr) is in the immediate vicinity of the Marinid royal cemetery of Chella (Shella).

The French town of Rabat built outside the madīna is developing rapidly: the palace of the Resident-General, the public offices, fine esplanades, villas surrounded by gardens give the new town a particularly attractive appearance. French Rabat at the present day is a masterpiece, famed throughout the world, of successful town planning and architecture. It is connected by railway to Casablanca and Marrakesh in the south, Tangier in the north, Fas and Algiers in the east. Since October 1935 it has been the final resting-place of Marshal Lyautey to whom it owes its position as capital and its reconstruction.

(E. LÉVI-PROVENÇAL)

RABB (A.), lord, God, master of a slave. Pre-Islamic Arabia probably applied this term to its gods or to some of them. In this sense the word corresponds to the terms like Ba'āl, Adon in the Semitic languages of the north where rabb means "much, great". — In one of the oldest sûras (ev. 3) Allāh is called the "lord of the temple". Similarly al-Lat bore the epithet al-Rabbī, especially whenever she was represented in the image of a stone or of a rock. — In the Kur'ān rabb (especially with the possessive suffix) is one of the usual names of God. This explains why in Ḥadīth the slave is forbidden to address his master as rabbī, which he must replace by sayīda'tī (Muslim, al-Asfīzī min al-Adāb, trad. 14, 15, etc.). — The abstract rubūsīya is not found in either Kur'ān or Ḥadīth; it is in common use in mystic theology.

Details about his administration are scanty, but it is certain that he was an able, industrious, temperate and tactful man of affairs. Even al-Mahdi, who was never lavish in showering favours on al-Rabi', once described him as the model of a good administrator (Ya'qūbī, ii. 456). The literary sources, however, do not single him out as a patron of letters, a quality which both his Abbasid masters and his Barmak successors possessed with distinction.

RĀBI'A AL-'ADAWĪYA, a famous mystic and saint of Bāṣra, a freedom woman of the Āl 'Atik, a tribe of Kāṣī b. 'Adī, known also as al-Kaisiyā, born 95 (713—714) or 99, died and was buried at Bāṣra in 185 (801). A few verses of hers are recorded: she is mentioned, and her teaching quoted, by most of the Sūfī writers and the biographers of the saints.

Born into a poor home, she was stolen as a child and sold into slavery, but her sanctity secured her freedom, and she retired to a life of seclusion and celibacy, at first in the desert and then in Bāṣra, where she gathered round her many disciples and associates, who came to seek her counsel or prayers or to listen to her teaching. These included Malik b. Dīnār, the ascetic Rābāh al-Kāṣī, the traditional Sufyān al-Thawri and the Sūfī Shākiṭ al-Balikhi. Her life was one of extreme asceticism and otherworldliness. Asked why she did not ask help from her friends, she said, "I should be ashamed to ask for this world's goods from Him to Whom it belongs, and how should I seek them from those to whom it does not belong?" To another friend she said, "Will God forget the poor because of their poverty or remember the rich because of their riches? Since He knows my state, what have I to remind Him of? What He wills, we should also will". Miracles were attributed to her as to other Muslim saints. Food was supplied by miraculous means for her guests, and to save her from starvation. A camel which died when she was on pilgrimage, was restored to life for her use; the lack of a lamp was made good by the light which shone round about the saint. It was related that when she was dying, she bade her friends depart and leave the way free for the messengers of God Most
High. As they went out, they heard her making her confession of faith, and a voice which responded, "O soul at rest, return to thy Lord, satisfied with Him, giving satisfaction to Him. So enter among My servants into My Paradise" (Sura lxxxix. 27-30). After her death Rabi'a was seen in a dream and asked how she had escaped from Munkar and Nakir, the angels of death, when they asked her, "Who is your Lord?", and she replied, "I said, return and tell your Lord, 'Notwithstanding the thousands and thousands of Thy creatures, Thou hast not forgotten a weak old woman. I, who am with Thee in all the world, have never forgotten Thee, that Thou shouldst ask, Who is thy Lord?'"

Among the prayers recorded of Rabi'a is one she was accustomed to pray at night upon her roof: "O Lord, the stars are shining and the eyes of men are closed and kings have shut their doors and every lover is alone with his beloved, and here I am alone with Thee." Again she prayed, "O my Lord, if I worship Thee from fear of Hell, burn me therein, and if I worship Thee in hope of Paradise, exclude me thence, but if I worship Thee for Thine own sake, then withhold not from me Thine Eternal Beauty". Of Repentance, the beginning of the Sufi Path, she said, "How can anyone repent unless his Lord gives him repentance and accepts him? If He turns towards you, you will turn towards Him". She held that Gratitude was the vision of the Giver, not the gift, and one spring day, when urged to come out to behold the works of God, she rejoined, "Come rather inside to behold their Maker. Contemplation of the Maker has turned me aside from contemplating what He has made". Asked what she thought of Paradise, Rabi'a replied, "First the Neighbour, then the house" (al-djër thumma 1-l-djër) and Ghazâlî, commenting on this, says she implied that no one who does not know God in this world will see him in the next, and he who does not find the joy of gnosis here will not find the joy of the Vision there, nor can anyone appeal to God in that world if he has not sought his friendship in this. None may reap who has not sown (Ihyâ', iv. 269). The otherworldliness of her teaching is shewn in her declaration that she had come from that world and to that world she was going, and she ate the bread of this world in sorrow, while doing the work of that world. One who heard her said darsively, "One so persuasive in speech is worthy to keep a rest-house" and Rabi'a responded, "I myself am keeping a rest-house; whatever is within, I do not allow it to go out and whatever is without, I do not allow to come in. I do not concern myself with those who pass in and out, for I am contemplating my own heart, not mere clay". Asked how she had attained to the rank of the saints, Rabi'a replied, "By abandoning what did not concern me and seeking fellowship with Him Who is eternal".

She was famed for her teaching on mystic love (mashâ'ikh) and the fellow with God (musk) which is the pre-occupation of His lover. Every true lover, she said, seeks intimacy with the beloved, and she recited the lines:

1. have made Thee the Companion of my heart,

But my body is present for those who seek its company,

And my body is friendly towards its guests.

But the Beloved of my heart is the guest of my soul".

(Ihyâ', iv. 358, margin)

She demonstrated the need for disinterested love and service by taking fire in one hand and water in the other and saying, when asked the meaning of her action, "I am going to light fire in Paradise and to pour water on to Hell, so that both veils may be taken away from those who journey towards God, and their purpose may be sure and they may look towards their Lord without any object of hope or motive of fear. What if the hope of Paradise and the fear of Hell did not exist? Not one would worship his Lord or obey Him" (Alfâkî, Mânâbîb al-ârîfîn, India Office, No. 1070, fol. 114a). Questioned about her love for the Prophet she said, "I love him, but love of the Creator has turned me aside from love of His creatures", and again, "My love to God has so possessed me that no place remains for loving any save Him". Of her own service to God and its motive-force she said, "I have not served God from fear of Hell, for I should be but a wretched hireling if I did it from fear; nor from love of Paradise, for I should be a bad servant, if I served for the sake of what was given me, but I have served Him solely for the love of Him and desire of Him". Her verses on the two types of love, that which seeks its own ends and that which seeks only God and His glory, are famous and much quoted:

"In two ways have I loved Thee, selfishly, And with a love that worthy is of Thee. In selfish love my joy in Thee I find, While to all else, and others, I am blind. But in that love which seeks Thee worthily, The veil is raised that I may look on Thee. Yet is the praise in that or this not mine, In this and that the praise is wholly Thine".

Ghazâlî again comments, "She meant, by the selfish love, the love of God for His favour and grace bestowed and for temporary happiness, and by the love worthy of Him, the love of His Beauty which was revealed to her, and this is the higher of the two loves and the finer of them" (Ihyâ', iv. 267). Like all mystics, Rabi'a looked for union with the Divine (waâf). In certain of her verses she says, "My hope is for union with Thee, for that is the goal of my desire", and again she said, "I have ceased to exist and have passed out of self. If I have become one with God and am altogether His"

Rabi'a, therefore, differs from those of the early Sufis who were simply ascetics and quietists, in that she was a true mystic, inspired by an ardent love, and conscious of having entered into theunate life with God. She was one of the first of the Sufis to teach the doctrine of Pure Love, the disinterested love of God for His own sake alone, and one of the first also to combine with her teaching on love the doctrine of Kadhî, the unveiling, to the lover, of the Beatitude Vision.

When the vizier Abū Shūqār Muhammad al-Rūdhāwari [q.v.] made the pilgrimage to Mecca in 481 (1089) he appointed his son Rabīb al-Dawla and the naṣibi al-mukhabār Tiṭūd b. Muhammad al-Zainabi his deputies and in 507 (1113-1114) on the death of Abū l-Kāsim ‘Alī b. Fakhr al-Dawla Muhammad b. Djiḥār [see the article Ibn Djiḥār, 3] Rabīb al-Dawla was appointed vizier of the caliph al-Mustaʿẓir [q.v.]. In Dhu l-Hijja 511 (April 1118) the fourteen year old Mahmūd b. Muhammad succeeded his father as Saḥīḥ satāfīt and, when he was looking around for an able vizier, he was recommended to choose someone who had had the necessary training in the service of the caliph (min tarbiyat dār al-Djiḥārī), because there was no suitable man in the train of the young sitāfīt. The choice therefore fell upon Rabīb al-Dawla who was at once summoned from Baghdad to Isfahān and, as we know from al-Bundari also, proved himself in every way fit for his difficult task. But his tenure of office was of short duration; he died in Rabī‘ I 513 (June-July 1119); according to another statement he died as early as 512 (1118-1119).

RAPĪTṬA. [See RāṭṬa.]

RADĀ‘ or Radd, also Radda (A.), sucking; as a technical term, the sucking which produces the impediment to marriage of foster-kinship. It is to be supposed that the idea of foster-kinship was already prevalent among the ancient Arabs (cf. Robertson Smith, Kinship and Marriage in Early Arābīs, p. 176, 196, note 1); this is evident from, among other things, the way in which the prescription of the Kurān regarding this is interpreted in Tradition. In Sūra iv. 23, among the female relatives with whom marriage is forbidden are the foster-mother and the foster-sister. This must correspond exactly to the old Arab usage, which regarded blood-relationship also in these two degrees as an impediment to marriage (cf. Robertson Smith, loc. cit.). But as the Kurān in the passage quoted extends the circle of prohibited relationships beyond that of blood-relationship, foster-kinship was treated accordingly contrary to the unambiguous language of the passage. To justify this, it is frequently laid down in traditions, in keeping with the principle of the old Arab attitude, that foster-kinship is an impediment in the same degrees as blood-relationship. The isolated case, which is decisive for the principle, that of the prohibition of marriage with the daughter of a foster-brother, is brought into close personal relationship with the Prophet. Through the prohibition of marriage laid down in Tradition between the foster-children of two wives of the same man, relationship by marriage becomes included in foster-relationship, and in the tradition which expounds the verse of the Kurān quoted, foster-kinship is given among the impediments to marriage on the ground of relationships in law. As a justification for this prohibition it is stated that the semen genitalis (which the milk has produced) is the same; against the view that blood-relationship is not to be combined with foster-kinship, so that the brother of the husband of the foster-mother is not to be regarded as a foster-relations, there is a polemic in a tradition (Kans al-Ummāl, iii., No. 3911). The question of the amount of sucking necessary to produce foster-relationship is a very old point of dispute; some traditions do not consider isolated sucks by the sucking or one or two acts of sucking as sufficient, others demand not less than seven acts of sucking, others again say that the child must be fed entirely; on the other side, one group of traditions says the prohibition of marriage is the same whatever the amount of sucking that has been given. There is even said to have been a passage in the Kurān which in the older, later abrogated, version demanded ten feedings and in the later version five. This story which was obviously only intended to support this view is not trustworthy (cf. Noldeke-Schwalbe, Geschichte des Qurāns, i. 253 sq.; Kans al-Ummāl, No. 3,923 sqq.). That the practice of sucking adults in order to establish an artificial foster-kinship existed is certain; it is recognised by several traditions and by others directly or indirectly denied (by the legal maxim: al-raḍā‘a min al-maḍā‘a, “sucking demands hunger”). The chief case for the validity of such an act of sucking is described as a privilege granted by the Prophet personally (Kans al-Ummāl, No. 3,919) and even the sucking of children to establish an impediment to marriage is in an isolated case described as illegal (ibid., No. 3,885). To prove foster-kinship many traditions are content with the testimony of the foster-mother or even without oath or with the testimony of a woman simply or with that of a man and of one woman; in refutation of this anomalous practice, however, at one time permitted, another group of traditions demands the normal testimony of two men or of one man and two women. These points of difference found in tradition are continued in the differences of opinion among the older jurists. The views of the principal authorities are given in al-Shawkāni, Naṣil al-Aʿwarī, Cairo 1345, vii. 113 sqq. The most important new point in dispute, discussed in this later period but scarcely touched upon in the traditions, is the period within which foster-kinship can be established by a child; sometimes it is said to be the period till weaning, sometimes the whole of childhood without an exact limitation, sometimes the fixed period of two years, or 3 or 7 years; for the period of two years the authority of the Kurān is quoted, Sūra ii. 233 (“Mothers shall suckle their children two full years if they wish to carry through the sucking to its end”) (on the details of al-Shawkāni, op. cit., p. 129). The four regular Sunni law-scholars are agreed that foster-relationship exists between a man and all his descendants on one side and his nurse, all her foster- and blood-relatives, her husband and all his foster- and blood-relations on
the other; on the other hand, no foster-relationship is assumed between a man and the ascendants or lateral relatives of his foster-brothers and sisters and between the nurse and the ascendants or lateral relatives of her foster-child. The Hanafis and the Malikis demand no definite minimum period, the Shafi's however five acts of sucking. The period for feeding is in either the Malikis (unless previously weaned), the Shafi's and Hanbalis two years, with the Hanafi 2½ years; the Zahiris also recognised the sucking of an adult. To establish the foster-relationship the Shafi's are content with the testimony of four women, the Malikis with the evidence of two, if the fact is well known, and the Hanafi with the evidence of one woman. Prominent Meccans have retained since before Islâm to the present day the custom of having Beduin nurses for their children (cf. Lammens, La Mosquée à la veille de l'hégire, p. 101). The custom very common in the early period of Islâm of hiring nurses in return for food and clothing has resulted in this arrangement, which is not in itself in accordance with the demands of the law, becoming recognised. In one tradition it is recommended that gratuity should be given to a nurse by giving her a slave, male or female. The sucking of children by the mother or a hired nurse in a case where the marriage is dissolved is fully regulated on the basis of the Kur'anic passage, Sûra ii. 233.

Bibliography: Wensinck, A Handbook of Early Muhammadan Tradition, s. v. Nursing; Juyboll, Handbuch des islamischen Rechts, p. 219; do., Handlindung, p. 185; Santillana, Istituzioni di diritto musulmano malechita, i. 161; for the Imâmis: Querry, Droit musulman, i. 657 sqq.

Râdhânpûr, a Muslim state in India now included in the Western India States Agency and situated in the south-west of Fâlanpur.

The rulers of Râdhânpûr trace their descent from a Muslim adventurer who came to India from Isphâhan about the middle of the xvith century. His descendants became fawqîbâtars and farmers of revenue in the Mughal province of Gujârat [s. v.]. Early in the xvith century Djiwân Mard Kûhâ Bâbî, the head of the family at that time, received a grant of Râdhânpûr and other districts (Mirâ'î Ahrâmî, Ethê, N. 3599, fol. 742). With the decline of the Mughal empire these districts passed into the hands of the Mariâsâm, but the Bâbî family were confirmed in the possession of Râdhânpûr by Dâmâdî Râ'î Gāekwâr.

British relations with Râdhânpûr date back to the year 1813 (Aitchison, vi., c.). Some years later the British were called upon to aid Râdhânpûr of plundering tribes from Sind who were committing serious depredations in the Mâwhâ's territories. In return for this the nawâb agreed to become a tributary of the British government, but a few years later this tribute was remitted because it was felt that the state was unable to bear the expense. After the Mutiny, in 1852, the ruler of Râdhânpûr received an adoption sonâd from the governor-general (op. cit., cii.). It was not until 1900 that the Djirowâ 'risi, currency previously in use was discontinued and replaced by British currency.

To-day Râdhânpûr covers an area of 1,150 square miles and supports a population of 74,530, of whom only 8,435 are Muhammadans. The town of Râdhânpûr, the capital of the state, has a total population of 11,225, of whom 3,694 are Muhammadans (1911 Census Report).

Bibliography: see Râdânpûr.

(C. Collin Davies)

AL-RâDI BI LLâH, ABU 'L-'ABBâS AHRAM (MUHAMMAD) b. AL-MUKHTâR, THE twelfth 'Abbâsîd caliph. He was born in Râbi' II 297 (Dec. 909); his mother was a slave named Zâlam. He was proposed for the caliphate immediately after the assassination of his father al-Mukhtâr [s. v.] but the choice fell upon al-Kâhir [q. v.]. He was subsequently chosen, after the fall of al-Kâhir, he was released and put upon the throne (Djumâdâ I 322 = April 934). As his adviser in this difficult period al-Râdi chose al-Mukhtâr's vizier 'Ali b. 'Isâ [see the art. IBN AL-DJâKKARî, 2] who however asked to be excused on account of his great age, whereupon Ibn Mûkla [q. v.] was given the office. The most influential official however continued to be Muhammad b. Yâkût [q. v.] and only after his fall in Djumâdâ I 323 (April 935) did Ibn Mûkla gain control of the administration while the caliph himself fell completely into the background. But Ibn Mûkla's position did not last long; in Djumâdâ I 324 (April 936) he was seized by al-Musaffâr b. Yâkût, brother of the above-mentioned Muhammad, and the impatient caliph had to dismiss him and in the same year summon the governor of Wâsît and Bayra, Muhammad b. Râ'î [q. v.], to Baghâd and entrust him with complete authority as amîr ul-muwattâ'. This meant a complete breach with the past; the caliph was only allowed to retain the capital and its immediate vicinity and to abandon all influence on the business of government, while Ibn Râ'î in combination with his secretary decided all the more important questions. Ibn Râ'î held power for nearly two years; his name was actually mentioned in the al-mu'âdthra for the reigning dynasty along with that of the caliph; in Djuh âl-Kâ'da 326 (Sept. 938) however, he was replaced by Bedjîkem [q. v.].

To the financial difficulties and the constant quarrels of the viziers and emirs there was now added war with foreign foes. In 323 (935) al-Râdi endeavoured to remove from office the governor of al-Mavûl Nâsîr al-Dawla [q. v.], but failed, and a few years later Bedjîken, accompanied by the caliph, attacked the Hamdânis in order to force them to pay tribute levied upon them but had to make peace because the fugitive Ibn Râ'î suddenly appeared in Baghâd. The war with the Byzantines was also continued; the Hamdânis however in this war came forward as defenders of Islâm. In Egypt Muhammad b. 'Uthmân founded the dynasty of the Khâhidâs [q. v.] and at the same time Bedjîken had to fight with the Bûyids who were advancing on several sides and a few years later victoriously entered Baghâd.

In the capital itself al-Râdi had to take measures against the fanatical Hanbalis (323 = 935), who had many followers among the common people and committed all kinds of excesses. They entered private houses, destroyed musical instruments, ill-treated women singers, poured away wine that they found, interfered in business, annoyed passers-by in the streets, beat Shâfi'is and generally behaved as arbitrarily as if they represented a kind of tribunal of the Inquisition.

Al-Râdi died in the middle of Râbi' I 329 (Dec. 940) of dropsy. The Arab historians praise his
piety, justice, clemency and generosity as well as his interest in literature and it is said of him, for example (Ibn al-Tikājā, al-Fābīrī, p. 380): *He was the last caliph, by whom a collection of poems exists, the last who retained his independence as a ruler, the last to preach a sermon from the pulpit on Fridays, the last to mix freely with his friends and to welcome men of learning, and the last who followed the principles of the earlier caliphs as regards rank, tokens of favour, servants and chamberlains*. This characterisation may well be correct in its main lines but al-Rādī was not independent; he was on the contrary a ready tool in the hands of his vizers and emirs.

**RADIF.** [See REDIF.]

**RADJA.** [See REDJ.]

**RADIJAB (A.), the name of the seventh month in the Muslim calendar.** In the Djarīliya it introduced the summer half year until, as a result of the abbreviation of the intercalated months, the months ceased to fall regularly at the same season of the year [see al-Muḥārram and Ṣaḥīl]. The month was a sacred one; in it the 'umrā (q.v.), the essentially Meccan part of the pre-Muhammadan ceremonies of pilgrimage, took place. The peace of Allah therefore prevailed in it; the forbidden war which was fought in Radjab between Kurāsh and Hawāzin and in which the young Muḥammad took part is called Fādūr (perīdū) (q.v.).

In the Kurān, as recorded in the article al-Muḥārram, only the "holy month" is mentioned and not the four which have become traditional from the sole reference ix. 36. If the reference in Sūra v. 2, is to the 'umrā we can therefore understand why the commentators in part identify the holy month mentioned in this verse with Radjab.

In Islam the month attained great importance through the memory of the Prophet's night journey to heaven which in later times was put on the 27th of the month (on the original dates see Mihrāj). This night is therefore called Lailat al-Mīrāj and is celebrated with readings of the legends of the ascension.

(M. Plessner)
and return in procession to Mecca (ifaṣa). This last rite prepares the sexual deconsecration; the three others together abolish the prohibitions of the ḥadīṣ but the legists are not agreed on the order in which they have to be accomplished. The ḥadīṣ say that the Prophet replied to the pilgrims who were worried, not having followed the order in which he had himself followed them: 'iṣṣa haraḍa: "no harm (in that)"' (Bukhārī, Ḥadīṣ, b. 125, 150 etc.). It is explained that the Prophet on this day of rejoicing did not wish to hurt the feelings of the ignorant Beduins. We may imagine that these 'Arab did not follow the customs of the Kuranī and that Muḥammad had neither the time nor the inclination to impose his own choice between the varying customs.

Muḥammad began with the lapidation at al-ʿAḵaba. After the ḥalq, the sacrifice and the ifṣaḥa, he returned to spend the night in Minā. Then on the 11th, 12th and 13th, he cast 7 stones at the three ʿdjamarat ending with that of al-ʿAḵaba. The pilgrims imitating him ought therefore to throw 7 + (7 × 3) = 70 stones. But in general they take advantage of the liberty (ruktah) given them by the ḥadīṣ to leave Minā finally on the 12th and therefore only to throw 7 + (7 × 2) = 49 stones. It is probable that there was no ancient usage; the presence of the bodies of the sacrificial victims made Minā a horrible place. It is difficult to see how Wavell (Pilgrims, p. 202) threw 63 stones, i.e. (7 × 3) 3; this is however the number of victims which, according to tradition, Muḥammad sacrificed with his own hand, one for each year of his life.

The stoning of al-ʿAḵaba is done on the 10th by the pilgrims in ḥirām; those of the three days following by the deconsecrated pilgrims. The whole business is not a fundamental element of the pilgrimage (ruktah).

Little stones are thrown, larger than a lentil, but less than a nut, what the old Arabs called ḥaṣa 'l-khaddāf which were thrown either with the fingers or with a little lever of wood forming a kind of sling (mikkhaba: Tirmidhī, iv. 123). A ḥadīṣ forbids this dangerous game, which might knock out an eye but is not strong enough to kill an enemy: it must therefore have had something magical or pagan in its character. The stones have to be collected of the proper size and not broken from a rock. Gold, silver, precious stones etc. are condemned; but some texts allow, in addition to date-stones, a piece of camel-dung or a dead sparrow which we find are the means used by the women of the Ḥijābiyya at the end of their period of isolation to remove the impurity of their widowhood and prepare a new personality. — It is recommended that the 7 stones for the lapidation of al-ʿAḵaba should be gathered at the masqar al-karam at Muzdalīfa, outside of Minā. As a rule the 63 others are gathered in the valley of Minā, but outside of the mosque and far from the ʿdjamarat to avoid their having already been used (Ibn Tainīya, p. 383). Besides it is thought that stones accepted by Allāh are carried away by angels. — Stones collected but not used should be buried; they have assumed a sacred character which makes them dangerous.

The model pilgrimage of the Prophet fixed the time of the ʿdjamarat al-ʿAḵaba for the day of the 10th. It shows him beginning the ifṣaḥa of Muzdalīfa after the prayer at dawn (faḍr) and casting the stones after sunrise. But by survival of an ancient custom more than for reasons of convenience other times are allowed by law. Al-Ṣaḥḥī, against the three other imāms, permits the ʿAḵaba ceremony before sunrise (Risāla, i. 115); in general, the time is extended to the whole morning (dhuḥr), till afternoon (zawāl), till sunset, till night, till the morning of the day following: these infractions of the normal routine are atoned for by a sacrifice or alms, varying with the different schools. — The ʿdjamarat of the three days of the tashriḳ take place in the zawāl: here again there are various opinions (Bukhārī, Ḥadīṣ, b. 134). — In fixing the time of the lapidations the law has always endeavoured to avoid any Muslimube, e.g. prayer, coinciding with one of the three positions of the sun by day, rising, noon, setting. A. J. Wensinck has shown (E. L., ii. 200) the probability of the solar character of the pagan ḥadīṣ.

Muḥammad made his lapidation at al-ʿAḵaba from the bottom of the valley, mounted on his camel, turned towards the ʿdjarna, with the Kaʿba on his left and Minā on his right, standing at a distance of five cubits (eight feet). But there are other possible positions. — Risāla (i. 328) gives the ʿdjarna the following dimensions: 10 feet high and 6 feet broad on a rock 5 feet high (see the photographs, ibid). It is said to have been removed at the beginning of Ḥisām and replaced in 240 (854—855) (Azraḳ, p. 212). — Muḥammad made the lapidations of the other two ʿdjamarat on foot turning towards the kaβla. In brief, the stones are cast in the attitude one happens to be in. The position facing the Great Devil is explained by the nature of the ground, but would also be in keeping with the idea of a curse cast in the face of a fallen deity. The position which makes the pilgrim turn towards the Kaʿba is due to the Muslim legend of the tempter Satan and to the rule of the takbīr which will be explained below.

According to the suuana, the stones are placed on the thumb and bent forefinger and thrown, one by one, as in the game of marbles. However the possibility of the stones having been thrown together in a handful has been foreseen and it was decided that this should only count as one stone and that the omission could be made good. — The stone should not be thrown violently nor should one call "look out! look out!" (Tirmidhī, iv. 136), a pagan custom which the modern Beduins still retained quite recently (Risāla, i. 89). It seems that Muḥammad put some strength into it for he raised his hand "to the level of his right eyebrow" (Tirmidhī, iv. 135) and showed his armpit (Bukhārī, Ḥadīṣ, b. 141).

In Ḥisām the casting of each stone is accompanied by pious formulæ. It is generally agreed that the takbīra is no longer pronounced at ʿArifa or at least before the lapidation of al-ʿAḵaba (Bukhārī, Ḥadīṣ, b. 101); some writers however approve of it after al-ʿAḵaba. The takbīrī and takbīrī are permitted, but it is the takbīr which is recommended (Ibn Tainīya, p. 382; Bukhārī, Ḥadīṣ, b. 138 and 143). The spiritual evolution of the rites even sees in this the essential feature of the rite, the throwing of the stone and the figure formed by throwing of the thumb and forefinger forming an 'ukb which represents 70, being no more than symbolical and mnemonic figures. "The throwing of the stones was only instituted to cause the name of God to be repeated" (Tirmidhī, iv. 139).
To Ghazālī (Ihya', i. 192) it is an act of submission to God and of resistance to Satan who seeks to turn man away from the fatigue of the ḥadīṯ but the rite is without rational explanation min ghairi ḥaṣi′n li l-ʿaṣīl wa l-nafs ṣāḥi (cf. Goldziher, Richtungen, p. 252). — The devout man adds a prayer (duʿāʾ) which is as a rule quasi-religious. The usual one is: Al-aḥkam ḥaddijān mabrūrān wa-dhakhan maghfīrān wa-sāfān maghfīrān “Lord, make this pilgrimage a pious one, pardon our sins and compensate our efforts”!. There is, as matter of fact, after the stoning a halt, a wukāf, before the two higher djamarāt, that at the second being especially long: the duration is calculated by the recitation of the sûra of the Cow (II), or of Joseph (XII), or of the family of Ḣūmān (III) by altering the indication in the hadith (Bhukārī, Hadīẓ, b. 135, 136 and 137). This would take the place of an ancient ceremony of imprecation.

Breaches of the rules for the performance of these diverse ceremonies, especially as regards the number of stones thrown and the time when they are thrown (Uṣūr, iv. 767 sqq.; Rīfī, i. 113), are punished by admonitions the exact nature of which the legislators delight to vary from the sacrifice of a victim to the giving of a maddi of food in alms.

The Muslim teachers have sought to explain the lapidations of Minā. Some exegists (e.g. Ṭabarī, Tafsīr, xxv. 167) have seen quite clearly that they represent ancient rites and have compared the rām of the tomb of Abū Ridaḍ. Others are known: for example at the well of Dhu ʿl-Hulās (Lammens, Betyles, p. 94). The works quoted (E. I.) show the spread of this rite and the cases in which we are certain that it is a question of the driving away or the expulsion of evil; they might be further added to. Stones used to be thrown behind an individual whom one wished never to return (Hamadhānī, Maḥammad, ed. Bārīrī, p. 23). At Alexandria, tired people used to go and lie down on a fallen pillar, throw seven stones behind them on a pile “like that of Minā”, then go away, returning to the place of sacrifice which is their own way to the explanation of Sūra lxvii. 5 (cf. above).

One would like to be able to locate the lapidations among the rites of the pre-Islamic pilgrimage. One would first have to have a clear idea of the meaning and details of the ceremonies and of the part played by lapidations and sacred piles of stones in Semitic and Mediterranean antiquity. — Stoning seems to have been a rite of expulsion of evil which coincided with the consecration of the pilgrim and seems to have returned to everyday life. It is possible that lapidations at one time followed the sacrifices which perhaps took place at ‘Arafa and Muzdalīfah.

**Gudefrov-Deombynes**

Rāḍḍāṭūs, inhabitants of India, who claim to be the modern representatives of the Kṣatriyas of ancient tradition. (From the Sanskrit rāḍḍāṭra "a king's son". For the connection between Rāḍḍāṭa and Kṣatriya see Macdonell and Keith, Vedic Index, i, s. v. Kṣatriya). The term Rāḍḍāṭā has no racial significance. It simply denotes a tribe, clan, or warrior-like class, the members of which claim aristocratic rank, a claim generally reinforced by Brahman recognition.

The origin of the Rāḍḍāṭa is a problem which bristles with difficulties. The theory which at present holds the field is that propounded by Bhandarkar, Smith and Crooke. According to this theory the Rāḍḍāṭas can be divided into two main classes, the foreign and the indigenous. The foreign clans, such as the Cauhāns, Cāluṣyas, and Gurdjāras, are the descendants of invaders of the vi and vii centuries of the Christian era. The indigenous Rāḍḍāṭas include the Gāndhārīs of the Deccan, the Rādhars of Rāḍḍāṭa Bahar, the Dandīs and Bundelas of Bundelkhand.

The theory that certain Rāḍḍāṭ clans are of foreign extraction is chiefly based on Rāḍḍāṭ legends and folklore. It is based on the assumption that there are two branches of Rāḍḍāṭs: the Sūrāṭs, or Solar race; the Cāṇḍāla, or Lunar race; and the Agni Kula, or Fire-group. The legend relates how the Agni Kula Rāḍḍāṭs, that is, the Cauhāns, Cāluṣyas, Parīhās (Prathīrās), and the Prāmaṇa, originated in a fire-pit around Mount Abu in southern Rāḍḍāṭa Bahar. From this it has been concluded that the four clans in this group are related and that the fire-pit represents a rite of purification by which the taint of foreign extraction was removed. Since these writers believed the Parīhās to be invaders of Gūdjar stock, it was concluded that the other three Agni Kula clans were also invaders.

According to Smith the Gurdjaras were invaders who founded a kingdom around Mount Abu. In the time of the ruler of this kingdom who were known as Gurdjaras, Prathīrās conquered Kānawād and became the paramount power in northern India about 800 A.D. Smith contends that the Prathīrās were a clan of the Gurdjar tribe. This seems to be the chief evidence produced by these writers for the foreign extraction of certain Rāḍḍāṭ clans.

It seems wrong to base this theory of foreign descent principally upon the Agni Kula legend, for Waidya and other writers have proved this to be a myth first heard of in the Prathīrās rāṭān of the poet Cānd who could not have composed this work before the xii century A.D. Recent research has brought to light the fact that the inscriptions of the Prathīrās and Cauhāns before the xii century represent them as Solar Rāḍḍāṭs, while the Cāluṣyas are represented as of the Lunar race. The Agni Kula legend does not therefore deserve the prominence given to it by Smith and other writers. Even the contention that the Prathīrās were a branch of the Gurdjar tribe has met with much hostile criticism.

According to the orthodox Hindu view the Rāḍḍāṭs are the direct descendants of the Kṣatriyas of the Vedic polity, but this claim is based on fictitious genealogies. The Kṣatriyas of ancient India disappear from history and this can probably be explained by invasions from Central Asia which shattered the ancient Hindu polity. It is accepted that these invading hordes, such as the Vībhu and Hūnas, became rapidly Hinduized, and that
their leaders assumed Kshatriya rank and were recognized as such. Out of this chaos arose a new Hindu polity with new rulers, and the families of invaders who became supreme were recognized as Kshatriyas or Rādjputs. In later times many chiefs of the so-called aboriginal tribes also assumed the title of Rādjput.

It is therefore safe to assert that the Rādjputs are a very heterogeneous body and probably contain some survivors of the older Kshatriyas. A mass of legend arose assigning to the various septs a descent from the sun and the moon, or from the heroes of the epic poems. These are the legendary pedigrees recorded in great detail by Tod. The main argument which can be brought forward in support of the foreign descent of certain Rādjput clans is the incorporation of foreigners into the fold of Hinduism to which the whole history of India bears testimony. Even though the Agni Kula legend be discredited it is still possible to argue that the Rādjputs are not a race. Anthropologically they are definitely of mixed origin. That some Rādjputs were of foreign origin can be proved by the acceptance of the Hīnas in the recognized list of Rādjput tribes.

Whatever may be the origin of the Rādjputs we know that disorder and political disintegration followed the death of Harsha, and that until the Muslim invasions of northern India the chief characteristic of this period was the growth and development of the Rādjput clans. Except for about two hundred years, when the Gurjara-Pratihāras were the paramount power in Hindustan, there was constant internece warfare between the various Rādjput kingdoms. This weakness considerably facilitated the Muslim conquest. It was not however until the days of Muḥammad of Ghōr that the Rādjput dynasties in the plains were finally overthrown [see above, iii. 742 b]. Driven from Dhillī and Kanwād they retreated into modern Rādjputāna where they eventually built up a strong position and were able to resist the Muslim invader, for it cannot be said that the Sultans of Dhillī ever really subdued the Rādjputs of Rādjputāna. Nevertheless, throughout this period there was constant warfare, fortresses and strongholds frequently changing hands. The Rādjputs nearest to Dhillī were naturally the weakest because the eastern frontier of Rādjputāna was exposed to attack. The Sultans of Dhillī appear to have realized the value of communications with the western coast and we find that the route between Dhillī and Gudjrāt via Adjamār was usually open to imperial armies. The chief menace to the Rādjputs was not from Dhillī but from the independent Muslim kingdoms of Gudjrāt [q. v.] and Mālwā [q. v.].

The outstanding feature of the period from the end of the so-called Saiyid rule to the final invasion of Bābur was the growth of Rādjput power in northern India under Rāṇa Sanga of Mewār. Taking advantage of the weakness of the Lodis under Ibrāhīm [q. v.] and of the war between Gudjrāt and Mālwā he had extended his sway over the greater part of modern Rādjputāna. The battle of Khaṇna in 1527, when Bābur shattered his powers, marks a turning point in the history of Muslim rule in India, for the Rādjputs never again attempted to regain their lost dominions on the plains and contented themselves with remaining on the defensive. After Khaṇna the place of the Sesodias in Rādjput politics was taken by the Rāthsors, the growth of whose power under Mālwā of Mārwār was facilitated by the struggle between Humāyūn [q. v.] and Shāh Shāh. Akbar’s Rādjput policy was based on conquest and conciliation. The fall of Cītār and Ranthambhōr made him master of the greater part of Rādjputāna, with the exception of Mewār which was not completely subdued until the reign of Dāhāngir [q. v.]. The reversal of Akbar’s conciliatory policy produced the great Hindu reaction of Awrangzīb’s reign, when, faced at the same time with the Rādjputs of the north and the Marāthās of the Deccan. Awrangzīb [q. v.] was unable to concentrate on either campaign. But internal dissensions once more prevented the Rādjputs from taking advantage of the decline of Mughal power, and, in the second half of the eighteenth century, they proved no match for the Marāthās who easily overran their country. It was not until the beginning of the nineteenth century when the British were at war with the Marāthās that they entered into political relations with the Rādjput states. Before the end of the year 1818 the group of states which now comprise Rādjputāna had been taken under British protection.

To-day India contains 10,743,091 Rādjputs distributed throughout the country as follows: United Provinces, 3,756,936; Pandījāb, 3,561,560; Bihār and Orissa, 1,214,240; Rādjputāna, 669,516; Central Provinces and Berār, 506,087; Gwāljūr, 393,976; Central India, 388,942; Bombay, 352,016; Dīnmū and Kashmir, 256,020; Western India States, 227,153; Bengal, 156,978; Baroda, 94,893; and Haidarābād 88,434 (1931 Census Report). It will be noted that in Rādjputāna only 669,516 Rādjputs are to be found out of a total population of 11,225,712. The states of Rādjputāna are ruled by Rādjputs, with the exception of Tonk which is Muslim, and Bharatpur and Dholpur which are Dījāt. The chief Rādjput clans in Rādjputāna are the Rāthrā, Kačhwāhā, Čauhān, Dādān, Sesodia, Ponwar, Parhār, Tonwar and Dāhā. Rādjasthān is the mother tongue of 77 per cent. of the inhabitants of this area. It is interesting to note that in some parts of India Rādjputs have embraced Islam, as for example the Manhas, Kaṭūls, and Sahlāria of the Pandījāb.

(C. Collin Davies)
RAF - AL-RĀĞHBĪB AL-ISFĀHĀNĪ

RAFĪ al-Dīn, MAWLĀNĪ SHĀH MUḤAMMAD, B. SHĀH WALĪ ALLĀH B. "ABD-AL-RAḤĪM AL-"OMĀRĪ (after the Caliph 'Omar b. al-Khaṭṭāb), was born in 1163 (1750) in Dihlī, in a family which enjoyed the highest reputation in Muslim India for learning and piety, from the xviiith century onwards, and produced a number of eminent "ulama" up to the "Mutiny" (see Sīdīk Ḥasan Kāhnī, Ḥadīs al-Yubūsī), Cawnpur 1285, p. 296 sq. J. A. S. B., xiii. 310). He studied hadith with his father, who was the most celebrated traditionist in his time, in Dihlī.

After the death of his father in 1176, he was brought up by his elder brother Shāh "Abd al-"Azīz (1159—1239 = 1746—1823) with whom he completed his studies in the usual sciences, being specially interested in hadith, kalām and ʿusūl. When about twenty, he entered upon his career as muḥti and mudarris, and later succeeded in these capacities his brother and teacher, who, in his old age, had lost his eye-sight, and had indifferent health. He died on the 6th Shawwal 1233 (Aug. 9, 1818), at the age of 70 (lunar years), of cholera, and was buried in their family graveyard outside the city of Dihlī.

He wrote about 20 works, mostly in Arabic and Persian, and a few in Urdu. He is praised for the subtility of his ideas and the conciseness of his style. Among his works are:

In Urdu: 1. a translation of the Kurān, interlinear to the Arabic text, which it follows closely and faithfully. He and his brother 'Abd al-Kādīr [q.v.] were the pioneers in this field, though their work was considerably facilitated by their father, Shāh Walī Allāh's Persian translation of the Kurān (entitled Fath al-Rahīmīn fi Tārīqat al-Kurān). The first edition of Shāh Rafī al-Dīn's translation appeared in Calcutta in 1254 (1838—1839) and another, in 1265 (1849—1850). For some of its numerous editions (from 1866 onwards) see Blumhardt, Cat. of the Hindustānī Printed Books of the Libr. of the British Museum, London 1889, p. 290 sq., and the Supplement to the same, London 1900, p. 403.

In Arabic: 2. Tākūmīl al-Sīra or Tahkīl li-Sīra all-'Aḥdānī, dealing with a. logic, b. täkhīl, i.e. principles of dialectics, teaching, learning, authorship and self-study, c. Makhāthīn min 'Alīr al-'Asma (some metaphysical discussions) and d. Tābīth al-Ārū (i.e. an inquiry into the causes and the criteria for judging conflicting opinions in religious matters). A considerable portion of the work has been quoted in the Aḥkām al-Ulmīn, p. 127—135 and 235—270; 3. Muxāṣāmat al-ilm, see Aḥkām al-Ulmīn, p. 124; 4. Risālat al-Muḥabbā, a discourse on the all-pervading nature of love; see Aḥkām al-Ulmīn, p. 254; 5. Tafsīr Ayat al-Nīr, a commentary on Sūrā xxiv. 35; 6. Risālat al-'Arūd wa l-Ka'yā: see Aḥkād, p. 915; 7. Dāmaq al-Muṭīl, dealing with some abstruse problems of the ilm al-lākūfi; 8. a gloss on Mr. Zāhid al-Ḥarawī's commentary on Kūf al-Dīn al-Raūzī's Risālat al-Tauqawwūl wa l-Tașrīḥ (see Brockelmann, ii. 209); 9. Bihāṣ al-Barāšīn al-ḥikmīya ʿalī Īr al-Ulmīn. Nrs. 4—9 are unpublished.

In Persian: 10. Rizāmat Nāmēh (Lahore 1339; Haidarābād, undated ed.), on the last judgment, also called Maḥṣar Nāmēh (see Browne's Supplementary Handlist, p. 189). For the two poetical versions, in Urdu, of this popular work, viz. Aḥkām-i Muḥabbā (chronogrammatic name, which gives 1250 as the date of composition), and Aḥkām-i Kaṣīm, see Sprüner, Oudh Catalogue, p. 624, and Blumhardt, Cat., p. 290, and for an Urdu prose version, Kāvāmat Nāmēh or Dāl al-Aṣrār, see Blumhardt, loc. cit.; 11. Fudāʾīnī, Dihi 1232; 12. Madīnati Ta'sī Rālī, Dihi 1314, small treatises on religious and mystical topics; 13. Šāh al-Ṣūdār bi-Shāh Ḥāl al-Maftūh wa l-%ubār, an eschatological work, covering ff. 2002 of a small size, in a MS. copy in the Dār al-Ulmīn, Deoband, which institution also possesses the MS. of his 14. Ḥāfīz al-Kāmīs, a mystical work (ff. 32).

MUHAMMAD SHAFFI

AL-RÂĞHBĪB AL-ISFĀHĀNĪ. ḤABU' L-KÂSIM AL-HĀJIRI B. MUḤAMMAD B. MUḤAMMAD-AD (according to others: al-Fadl, in al-Suyūṭī, ib. cit., wrongly: al-Muḥaffāẓ b. Muḥammad), a rab theo logical writer, of the details of whose life nothing is known beyond that he died at the beginning of the viith (xiith) century, perhaps in 502 (1108). Some regarded him as a Muʿtazili but Fakhr al-Dīn al-Rāzī in his Asār al-Tafsīrī established his orthodoxy. His work was concerned with Ḳūṣīnic exegesis and edifying literature. His studies on the Kurān from which al-Baṣrīawi is said to have taken a great deal were opened with a Rūṣūd munâbīhī ʿalī ʿFāwi ʿalī al-Kurānī now lost, perhaps identical with the Muxāṣāmat al-Tafsīr, pr. at Cairo 1329 at the end of Abd al-Dhāḥābīl Tanzīl al-Kurānī ʿl-Majīdīn. He next compiled an excellent dictionary of the Kurān arranged alphabetically according to the initial letters entitled Kitāb Muṣāfat Al-Fazīl al-Kurānī, which in addition to the MSS. mentioned in G. A. L. i. 289, survives in many others in Stamul (see e.g. M. O., vi. 106, 127) and in Bankore (Cat., xviii. 1454) and under the title al-Muṣāfat fī Khāriṯ al-Kurānī was printed on the margin of Ibn al-Athir's Vihāya, Cairo 1322 and edited by Muhammad
al-Zuhri al-Ghumrāwī. Cairo 1324. In the preface he holds out the prospect of a second work which was to deal with the synonyms of the Kurān (al-Alfāz al-mutaraddaša‘a la‘l-Muṣa‘a wa-l-wāḥiḍ va-nā bainahā min al-Furūq al-ğhimmā). The Tafsir al-Kurān, Aya Sofā 212, perhaps came to be compiled in this way. The reference might however be to the Dārārat al-Toṣūl, on the Kurān verses found in more than one passage although expressed differently, Br. Mus. Or. 5784 (Descriptive List, by A. G. Ellis and E. Edwards, p. 3) which is probably identical with the Hall Mutaddabīhāt al-Kurān, Stamπoul, Raghib 180. As a quotation in the preface shows he had already written his principal work on ethics Kitāb al-Dhārah ‘alā Makārim al-Sharī‘a, before the Kitāb Munfradāt; al-Dhazzālī is said to have always had a copy of this by him. In addition to the MSS. mentioned in G. A. L. it is also preserved in Br. Mus., Or. 7016 (Describ. List. No. 62) and in Stamπoul (see e.g. M. O. B. vii. 101—102; M. F. O. B., v. 469) and printed Cairo 1299 (‘Sarkis 1899), 1324. The Kitāb Tafsīr al-Na‘qūdīn wa-Tafsīr al-Sā‘īdūtīn, pt. Cairo n.d., ed. by Tahir al-Da‘īrī from the Jerusalem MSS. Khalidiyya, No. 734, ed. of 963 A.H. Barāḍī 1319, 1323 is a companion work on both works, see also Alpacįnos, Ateherzam de Córdoba, i. 19. His most popular book was the work on ādab: Muḥāḍārat al-Uṣūl wa-Muḥāḍārat al-Shīkārī wa-l-Bulaqah or simply Kitāb Muḥāḍārat, which is divided into 25 ḥuṣud, which are again divided into 77 ḥuṣud and ābāwāb, which deal with the usual ādab themes beginning with human and stupidity and ending with angels, djinn and animas in quotations in prose and verse; in addition to the MSS. mentioned in G. A. L., it is also preserved in Stamπoul Selīm Āghā, No. 987; Damascus, ‘Umulma‘īs, Siyāṣī, 86, v. 7; in Cairo, Fihrist 2, lit. 334. A synopsis by al-Suyūṭī, ibid., p. 345; an anonymous Berlin, No. 8250 and Damascus, loc. cit., 86, v. 8. In Europe the work was first made known in the part edited by G. Flügel as "Der vertraute Gefahr des Einsamen in schlagenden Gegenden: von Abu Mansur Abdulmelmik ben Mohammed ben Ismail Ettevilias aus Nisabur mit einem Vorwort von Jos. v. Hamme", Vienna 1829 (see Gildemeister, Ö. D. M. G., xiii. 171). The work (with Ibn Ḥijdijīnas ‘Zāmarāt al-‘Awāb on the margin) in 2 vols., is printed in Bāzik 1284, 1287, 1305; Cairo (without the edition on the margin) 1310, 1324, 1326. ‘Ībrāhīm Zādān published in Cairo in 1902 a synopsis, which only contains 12 ḥuṣud, which lacks 10 and 13 of the Vienna Mss., and is abbreviated in other ways. A Persian translation entitled al-Nawādir by Mu‘ammad Sāliḥ b. Mu‘ammad Bā‘kīr al-Kazwini is in Teheran (see Y. Etessami, Cat. de la Bibliothèque du Madjīres, ii. 308). Lastly there is also an ādab al-Shīrāzī in Kāsan (see Menzel, in Lit., xvii. 94). The work on ādab: Taḵkīs al-‘Awāy (language and writing, ethics, dogmatics and philosophy, ‘ اللغة والمؤلفات‘ cited in the preface of the Kitāb al-Shīrāzī is found in Maqḥād, 5 (Οκτά), Fihristi Kutubhārīn-numb.941-Astāni Kudi Ridāvi, 1845, l. 24, No. 56).

RAGUSA (Ramsūn), a town in Dalmatia, formerly a free state (now Dubrovnik), on the south side of a peninsula which runs out into the Adriatic, picturesquely situated (50 feet) at the foot and on the slopes of Mount Sergius with about 14,500 inhabitants, mainly Croats, was founded in the viith century by Romance fugitives from Epidaurus which had been destroyed by the Slavs, later belonged to Byzantine Dalmatia which had been settled by a Romance population. At the end of the tenth century the town, which had become strong and rich through its prosperous maritime trade, was paying homage to the Venetians under whose suzerainty it remained after various interludes continuously from 1204 to 1358. In this year Ragusa passed to Hungary and soon attained such power through its flourishing trade that it formed a free state with an aristocratic form of government. Authority was in the hands of the nobles (Grand Council) who chose the Senate (45 members). The latter chose the Little Council (10, later 7 members) which chose every month a Rector (rettore) as head of the state. Al-Idrisī [q. v.] mentions Ragusa in his Kitāb al-Rodger as (other readings: كوس, روس) and is evidently quoting Frankish sources (cf. thereon Wihl. Tomascek, Zur: Kunde der Hamus-Halbinsel: II. Die Handelswege im XII. Jahrh. nach den Erkundungen des Arabers Idrisi, Vienna 1887 = S. B. Ak. Wiss., phil.-hist. Kl., vol. xxiii., fasc. 1). In the Ottoman period the Slav name Dubrovač is found exclusively, in place of Ragusa. Ragusa’s relations with Islam, at first completely hostile, go back to a remote date. When the Arabs in the ninth century conquered Sicily and established themselves on the mainland in Bari (Apulia) they besieged Ragusa on one occasion which defended itself bravely and was relieved by the navy of the emperor Basil I (867—886). Under the emperor Romanus III (1028—1034) the Ragusans distinguished themselves in the seafights between Byzantines and Arabs. It was not till a later date that relations became more peaceful when Ragusan commerce, which extended to Egypt and Syria, to Tunis and as far as the Black Sea, began to flourish. As early as the thirteenth century, corn was exported and goods from Ragusa from the harbours of Anatolia and the relations to the petty states (يئرنيا, يئرنيا) in Anatolia were well established. The first documented relations between Ragusa and the Ottoman empire belong to the period of Bayezid I. Vildiriri (1389—1402; q. v.) as the relations of the free state to Orhan [q. v.] and Murad I [q. v.] mentioned in later Ragusan histories will not bear serious investigation. It is however certain that at quite an early date it became necessary for the Ragusans to remain on good terms with the Ottomans, who were advancing westward, for the sake of their trade. They were able to deal with tact and skill with their new neighbours. Ragusan trade in Turkey developed considerably as the many frontiers and customs offices of the numerous petty rulers of the Balkans, who had been disparaged by the Turks, disappeared and the Turkish duties were uniform and low. Articles manufactured in Ragusa itself, like cloth, metal, soap, glass, wax etc. or goods imported from Italy for the Balkan peninsula were taken into the interior on safe roads. There was a caravan trade which went from Ragusa via Trebinje, Tien-
tiste, Foča, Goražde, Plevje, Prijopej, Trgoviste, Novibazar [q. v.], Niš, Sofia, Philippopolis to Adri-anople and later to Stambul (cf. C. J. Jireček, Die Handelstrassen und Bergwerke von Serbien und Bosnien während des Mittelalters, Prag 1879, p. 129). Von Ragusa nach Niš). In the interior of the Peninsula there were the factories of the Ragusans like Rudnik, Prizren, Novy Brod, Pristina, Zvornik, Novibazar, Skoplje, Sofia with many other settlements extending as far as the mouths of the Danube. On May 12, 1392 the Little Council of Ragusa gave the nobleman Teodoros Gisla in Novy Brod orders to travel to the Turkish sultan and to make representations about the capture of some Ragusan merchants. There is a Turkish safe-conduct (literna securitas) of June 20, 1396 prepared for Ragusan merchants. In 1397 Sultan Bayazid I allowed the Ragusans to trade unhindered in the Ottoman empire, and a few years later (1399), the first Ottoman embassy led by Kelifa Feriz (Firiz)-Beg arrived in Ragusa from the citadel of Zvitan (in Kossovo) (cf. F. v. Kraizlet-Greifenhorst, op. cit., p. 272). The first embassy from Ragusa to the Sublime Porte was however not sent until 1430. It was received by the sultan in his court at Adrianople and received from him the first extant charter of trading privileges, dated Adrianople, Dec. 6, 1430 (cf. Čiro Truhlček, Turtsko-slovenski spomenici dubrovačke arhite, in Glasnik zemaljskog muzeja u Bosni i Hercegovini, Sarajevo, vol. xxiii. [1911], No. 2). To protect her widespread trade on the Balkan Peninsula Ragusa, after the first temporary conquest of Serbia by the Ottomans, found herself forced to offer the Porte an annual present of 1,000 ducats in silver plate (argentarius) but when Georg Branković restored the independence of Serbia in 1444 this promise was promptly withdrawn; on the final subjection of Serbia by the Turks in 1459 this tribute (šarādat) became a regular institution. From 1459 it was 1,500 ducats and gradually increased to 15,000 ducats. From 1481 it was 12,500 ducats and was annually brought to the imperial court by special pratori tributi with very detailed instructions (cf. the text of one of these commissiones for the Paladiani Marino de Gondola and Pietro di Luccari of 1458 and of a later one for the ambasciatori del tributo Gior. Mar. di Resti of 1572 in Lujo knez Vojnović, Dubrovnik i osmań-ko carstvo, Prva knjiga: Od prvog ugovora s portom do usvojenja Hercegovine, Belgrad 1898, p. 118—155 and p. 256—266); cf. C. J. Jireček, Die Bemühungen von Ragusa etc., note 49. A number of the earliest documents relating to these missions have been published by F. Kraizlet-Greifenhorst, in his Osmanische Urbekunde in türkischer Sprache aus der zweiten Hälfte des XV. Jahrhunderts (S. B. A. Wiss., phil.-hist. Kl., vol. 197, Vienna 1922); they come without exception from the archives of Ragusa, south of the Turkish portion of which is still present in Belgrad.

On their journey the envoys had to give all kinds of presents, for example to the Sandjakbeys of the Herzegovina in Sarajevo [q. v.] and the Beglerbeg of Rumelia whose headquarters were in Sofia. The readiness with which the Ragusans adapted themselves to the requirements of dealings with the infidel Turks did not at first find approval at the Holy See. Paul II in 1468 gave the Ragusans express permission to trade with the heathen Ottomans (cf. W. Heyd, Histoire du commerce du Levant, ii., Leipzig 1885, p. 347 sq. with further references to Ragusan trade with the Ottomans). The lands of the free state of Ragusa which stretched from the mouth of the Neretva to the Gulf of Cattaro (Kotor), thanks to the skilful policy of its leaders, thus remained intact till its end in 1808. Only occasionally the Ragusans had to suffer from the covetousness of Ottoman rulers, e.g. about 1667 when Kara Muṣṭafâ [q. v.] demanded from the Ragusan envoys 150,000 talers "blood money" for the Dutch ambassador G. Crook who perished in the great earthquake in Ragusa (April 6, 1667) (cf. J. v. Hammer, G.O. K., vi. 201 sq.), or when ten years later the same grand vizier endeavoured to extort the same sum and threw the ambassadors of the free state into prison (cf. J. v. Hammer, G.O. K., vi. 346). When Ragusa had fallen several years behind with the tribute, it had in 1695 to pay a considerable sum in compensation (cf. J. v. Hammer, G.O. K., vi. 616). In 1722 a similar case occurred (cf. J. v. Hammer, G.O. K., vii. 313 sq.) which was paid within three years in arrears. It is however a fact that Ragusa cunningly used every opportunity to avoid its oppressive obligations (cf. the significant saying in the Levant quoted by von Hammer, G.O. K., vii. 29: Non siano Christiani, non siano Ebrei, ma povery Ragusi), until the peace of Carlowitz (1699) made it possible for the Ottomans to collect the tribute again (cf. J. v. Hammer, G.O. K., vii. 29). From 1703 it was paid every three years and in 1804 delivered for the last time in Stambul by the envoys Paul Gozze and Blasius Menze.

In the Turkish wars of 1683—1699 and 1714—1718 the Venetians occupied the hinterland of Ragusa and Trebinje but at the peace of Carlowitz and Passarowitz the Ragusans, protected by Austria and the Porte, negotiated so skilfully that Turkey was not only left the land as far as the Ragusan frontier but also two strips of territory on the coast (Klek and Sutiorina) so as not to become direct neighbours of Venice. This was the last great coup of Ragusan policy.

With the decline in Ragusan trade, which came about for the same reasons as the general decline of Italian trade in the Levant, the political decline of the republic set in. In 1808, Napoleon sent General Marmont, afterwards Duc de Raguse, to dissolve the Senate and a year later made Ragusa a province of Illyria. In 1815 the town passed to Austria and since 1918 it has belonged to Jugo-Slavia.

The Ottoman traveller Ewliya Celebi [q. v.] in his Siyahname (vi. 443 sqq., esp. p. 445—453) gives a full description of Dobro Vodnik which he contrasts with Bundužani Venetoli, i.e. Venice (cf. on these terms F. Babinger, Aus Südosteuropas Türkentin, Berlin 1927, p. 38 note and H. v. Mähl, Beiträge zur Kartographie Albaniens, in Geographia Hungarica, series geologica, tomus III, Geograph 1929, p. 159 = 19, note 88). In 1874 (1663) he came via Livno to Popovo Dubrovnik from which he went on to Castelnuovo (Hercegnovi). On Hungarian and Serbo-Croat translations of this section cf. Babinger, Ewliya Celebi's Reisezwege in Albanien, Berlin 1936, p. 1 and note 8.

Statistics regarding the population of Ragusa in the older period are not available. The town had 800 houses. The whole district had 50,000 inhabitants. With the prosperity and long period of peace, a literary life began: poetry — Latin
and Slav — was definitely cultivated from the end of the xvith century. Latin was used in the offices for over 1,000 years, in recording the proceedings of the Senate till 1808. Within its walls Ragusa frequently sheltered illustrious fugitives from Turkish persecution (e.g. Skanderbeg).

The archives of Ragusa, kept in the Rector's palace, still await thorough study and contain a large number of unpublished Turkish documents and countless documents of value for the history of Turkish rule in S.E. Europe. Cf. Friedrich Giese, Die eisenacht-turkischen Urkunden im Archiv des Rektorenpalastes in Dubrovnik (Ragusa), in Forschungen für Georg Jacob zum siebzigsten Geburstag, Leipzig 1932, p. 41—56. Cf. also J. Gelich (Djelich), Dubrovacki arhiv, in Glasnik zemaljskog muzeja u Bosni i Hercegovini, xxii., Sarajevo 1910, and Milan v. Resetaer, Dubrovacki arhiv, in Narodna enciklopedija, i. 584 sqq.

Ragusa had busy commercial relations with other Muslim states besides Turkey. In 1510 for example, Ragusa received from Kâşûl al-Qâbrî [or Vlahar (now which gave its trade with Egypt) protection and freedom (cf. Giacomo Luccari, Copio ristretto degli Annulli di Ragusa, Venice 1605, p. 126 and thereon Fr. M. Appiendi, Notizie sulle istorico-critiche antichità, storia e letteratura de’ Ragusani, Ragusa 1802, i. 213 with erroneous conclusions). The relations were, this is true, not always of a peaceful nature as the “state of war” in 1194 (1780) between Ragusa and Morocco showed (cf. thereon F. Bihanger, Ein marokkanisches Staatschreiben an den Freistaat Ragusa vom Jahre 1194 (1780), in M. S. O. S., xxx., Berlin 1927, part ii., p. 191 sqq. and ibid., xxxi., p. 95 sq.). The archives of Dubrovnik contain further unpublished Moroccan documents of the end of the xvith century, e.g. a government document of the 9th Rabi II. 1195 (April 4, 1781).

Bibliography: In addition to the works mentioned in the text cf. also the older travellers in so far as they describe the road through the Balkan Peninsula (Slavonia), especially Jean Cheseau, Les Voyages de Monseigneur d’Aravon (1542), Paris 1857, ed. by E. Scherer: Sieur D’Hayes de (Fourmein), Voyage du Levant fait par le commandement du roy en l’an 1621 par le Sieur D. C. F. Paris 1632; Les Voyages de M. Quillet à Constantinople par terre, Paris 1664 and frequently; Sir George Wheler, Journey into Greece, London 1682 or French translation Voyage de Dalmatie, de Grece et du Levant, Amsterdam 1689, 2 vols. — A scholarly account, particularly one based on the documents, of the relations of Ragusa with the Ottoman Empire is still lacking as is a full commercial history of the republic. — The principal work on the history of Ragusa is the Geschichte des Freistaates Ragusa, Vienna 1807, by Johann Christ. v. Engel (1770—1814). On other relations between Ragusa and the lands of Islam see Vladislav Mažuranić, Sudslaven im Dienste des Islam, X. (bis ins XVI. Jahrhundert), transl. into German and pub. by Camilla Lucerna, Zagreb-Leipzig 1928, 55 p., a work which however does not on every point stand the test of strict examination. — On the coinage of Ragusa see Milan v. Resetaer, Dubrovačka numismatika, 2 parts, 1924—1926. — Of the Ragusan historians of the older period in addition to S. Razzi, La storia di Ragusa, Luca 1588 and Jun. Resti, Chronica Ragusina (in the Monumenta Slav. Merid., vol. xxv., Agram 1893), Giacomo di Pietro Luccari (= Jakov Lukarević [1551—1615]) most deserves mention, but a thorough study of the probably unreliable sources of his Copio ristretto degli annulli di Ragusa (Venice 1605, xxxvi., 176 p., 4° and Ragusa 1790, xxiii., 325 p., 8°) is still a desideratum; cf. for the present Vl. Mažuranić, Izvori dubrovačkoga historika Jakova Lukarevića, in Narodna Starina, Zagreb 1924, No. 8, p. 121—155. — An excellent and exhaustive bibliography on Ragusa is given in the introduction to the work of Ivan Dučev, Avvisi di Ragusa. Documenti sull’Impero turco nel secolo XVII e sulla guerra di Candia, Rome 1935, which is also of great importance for the history of relations between Ragusa and Turkey. — There is no collection or edition of the surviving reports of Ragusan envoys on their journeys to the Porte on the lines of the long available Venetian relations. The only possible exception is the Relazioni della religione nelle parti d’ Europa sottoposte al dominio del Turco of Matthäus Gundulić (Gondola) who was in Turkey for 28 months until July 1674 written in Rome in 1675, ed. by Banduri, Imperium Orientale, Paris 1711, vol. ii. Annotazioni in Constant. Porphyrog. de administrazione imperii, p. 99—106 (cf. thereon Drinov in Periodisch Spisanje van Braia, ii. 65, who did not know this edition and published extracts from another manuscript). Nor is there a list of these envoys available (cf. J. von Hammer, G. O. R., ix. 318) among whom we find representatives of almost all the noble families of Ragusa, like the Bona, Caboga, Gozze, Gondola, Menze, Pozza, Resti etc. Ragusa being a tributary country the Porte never sent ambassadors to it but only commissioners (cf. J. v. Hammer, G. O. R., ix. 331), so that we have no Turkish reports at all.

(FRANZ BAHINGER)

AL-RAHBA, RAHAT Mlik B. TAVK OF RABAT AL-SHAM, A TOWN ON THE RIGHT BANK OF THE EUFRATES, THE MODERN AL-MIYADIN.

Hardly anything definite is known about the history of this town before the Muslim era. In the middle ages it was usually identified as the Rehobot han-Nāḥah of the Bible (Gen. xxxvi. 37) i.e. Rehobot on the river (Euphrates) especially in the Talmud and by the Syriac authors (e.g. Mich Syr., cf. index, p. 64: T. Barbeccus, Chron. syr., ed. Bedjan, p. 273 and passim), who usually call it Rahab, Rahab (M. Haithman in Z. D. P. V. xxii., p. 42 note 1). A. Musli (The Middle Euphrates, New York 1927, p. 340) takes it to be the Thapsakos of Ptolemy, which he — certainly wrongly — wants to distinguish from the well-known town of the name at the bend of the Euphrates (ibid., p. 315—320) instead of seeing only an erroneous location by the Alexandria geographers (cf. the article THAPSAKOS in Pauly-Wissowa, R. E., v., A. col. 1272—1280). The name al-Rahba is explained by Yaḥyā (Muḥjam, ed. Wustenfeld, ii. 764 following the grammarians Naṣīr b. Shumail as the flat part of a wādī, where the water collects (E. A. Hering, Archäolog. Reise in der Euphrat- und Tigri-Gebirge, ii. 382: cf. A. Socin, in Z. D. P. V., xxii. 45).

According to Arabic accounts it seems at one time called Furdat Nu‘um (al-Tabari, ed. de Goeje, i. 917) or simply al-Furda (Ibn Miskawayh, Taqrib, ...
ed. Caetani, p. 87); in the vicinity was a monastery, Dair Nu’um (Yākūt, ii. 704; iv. 797).

According to al-Balādhūrī (ed. de Goeje, p. 180), there was no evidence that al-Raḥba below Ḫarrān, Sarūq, al- Ra’ākha and al-Khābir to Muḥammad b. Ǧharaf al-Dawla (Ibn al-Atlīr, x. 105). In 849 (1065) Karbūkha of al-Hila seizes and plundered the town (Ibn al-Atlīr, x. 177). After his death it passed (1103–1105) to Ǧayyūmī, a former general of Aḥmad b. Ḫurṭ, then to the Ṣarḥan. It was taken from him by the sūltān of Damascus, who sent the Ṣhaibānīd Muḥammad b. al-Ṣabbās to govern it (Ibn al-Atlīr, x. 249). On May 19, 1107 Džawwāl, the general of Ǧamāl al-Dīn Ṣanjl, took the town through treachery (Ibn al-Atlīr, x. 297; Ibn al-Ḳalānīsī, ed. Amedroz, p. 156 sq.; Michael Syrus, transl. Chabot, iii. 193; iv. 592; Barhebræus, Chron. syr., ed. Bedjaj, p. 273). Ǧiz al-Dīn Māsūd b. al-Burjūkī took it in 1127 shortly before his death (Ibn al-Atlīr, x. 360 sq.; Mich. Syr., ii. 228 = iv. 610; Barhebr., Chron. Syr., p. 287). His successors killed one another fighting for the succession and al-Raḥba then passed to Ǧiz al-Dīn’s young brother for whom Džawwāl governed it as vassal of Ṣanjl (Ibn al-Atlīr, x. 453 sq.). Ǧubb al-Dīn, son of Ǧanjl, in 544 (1150) occupied the town (Ibn al-Atlīr, x. 439). On Aug. 12, 1157, al-Raḥba with Ḫamāh, Shāizar, Salamyā and other towns were destroyed by an earthquake (Ibn al-Ḳalānīsī, ed. Amedroz, p. 344; Mich. Syr., iii. 316; Barhebr., Chron. Syr., p. 325 sq.). The Ḳasfādī tribe who in 1161 had plundered the district of al-Ḫilla and al-Ḳūf returned to Raḥbat al-Ṣaḥam followed by the government troops where they were reinforced by other nomads and scattered the enemy (Ibn al-Atlīr, xi. 182 sq.). Nūr al-Dīn granted the Kurū Ḫādī al-Dīn Širkhā b. Aḥmad b. Ḫādī of Dīn, Salādīn’s uncle, in 559 (1164) al-Raḥba and Ǧimṣ (Mich. Syr., iii. 325; Barhebr. Chron. syr., p. 330). The latter entrusted the government of al-Raḥba to an officer named Yūsf b. Maṭliḥ. Širkhā built Raḥbat al-Ḵadīdī with a citadel about a farsākh (3 miles) from the Ephrates because the town of Raḥbat al-Ḵālī was in ruins (Abu ’l-Fida', Taḏkir al-Bulūḥ, p. 281; Ḥadīṯ al-Khālīfa, Liphān-nun, p. 444). The new town of Raḥbat al-Ḵālī became an important caravan station between Syria and the Ḥark, as we learn from Ibn Baṭṭūta among others (Ṭahf, ed. Défrémery and Sanguinetti, iv. 315) who travelled from there via al-Sukhna to Tadmūr.

The town remained for a century in Širkhā’s family until in 1264 Baibars installed an Egyptian governor there (Ibn al-Atlīr, xii. 189; Abu ’l-Fida’, Annales Musulm., ed. Reiske-Adler, iv. 142; v. 16). Sonṣor al-Šākhar of Damascus who rebelled against Ǧalā’ān in 678 (1279) fled after a defeat to al-Raḥba to the emir Ǧisā and from there appealed to Abaḵa for protection (Barhebr., Chron. syr., p. 543).

The Mongols under Ḫarḥānba besieged Raḥba in 712 (1212–1213) on their way to Syria. On his return Ḫarḥānba left his siege-artillery behind; hereupon was taken by the defenders of the town into the citadel (Abu ’l-Fida’, v. 268 sq.; al-Ḥasan b. Ḫabīb b. Ǧūyār, Duwar al-Aslāk fi Duwal al-Airāk, in H. E. Weyers, in Oriëntalia, ed. Juyboll, ii. Amsterdam 1846, p. 319). Its governor at the time, Ibn al-Arkaqī, died in 715 (1315–1316) in Damascus (Abu ’l-Fida’, v. 300). Muḥanna and his family, the Ǧisā, were driven from the district of Salamiyā in the spring of 1320 and pursued by the Syrian troops as far as
Rahba and Ana (Abu ‘l-Fida’, v. 340 sq.); the town was perhaps destroyed on this occasion.

In 1331 the Euphrates inundated the country round al-Rahba (Ibn al-Athir, Vienna MS. in Musil, The Middle Euphrates, p. 3, note 3).

According to the Muslim geographers, al-Rahba lay on the Euphrates (Kauhdh, in B. G. A., vi. 233; al-‘Akhdh, in B. G. A., iii. 138; al-Idrisi, transl. Jaubert, ii. 137 sq.; al-Dimishki, ed. Mehren, n. 93; Abu ‘l-Fida’, ed. Reinaud, p. 51) and also on the canal which led off from it at Fam ‘as near the right bank, which rejoined the Euphrates below the town, the gardens of which it watered, and above al-Dailiya also called Dailiyat Malik b. Tawq (Suhaili, ed. v. Mi‘zik, in Bibl. arab. Histoire de Gogouv, v. Leipzig 1930, p. 123; Yakuti, iv. 840; Abu ‘l-Fida’, Ta‘izziya, p. 281). The town lay 3 farsaks from Karkisiya (al-Azizi, in Abu ‘l-Fida’, ed. Reinaud, p. 281) and, according to al-Makdisi (B. G. A., iii. 149), a day’s journey each from this town, al-Dailiya and Bira (the latter statement is quite inaccurate; cf. Musil, op. cit., p. 253 sq.). Musil (ibid., p. 250) wrongly takes al-Dailiya to be al-Sidhiya, which is impossible as 8—10 miles above it the Euphrates flows close to the foot of Lijbal Alu ‘l-Kasim, so that the Sa’id canal must have flowed north of it back into the Euphrates (cf. the Karte von Mesopotamien of the Prussian Survey, Feb. 1918, i. 400,000 sheet 5c; ‘Ana; Cumont, Fouilles de Doura-Europos, Paris 1926, Atlas, pl. i.: Cours de l’Euphrate entre Circeium et Doura-Europos d’apres l’Aéronautique de l’Armée du Levant on the same scale and the map in Sarre-Hezfeld, Arch. Reise). The town of al-Rahba was a Jacobite bishopric (a list of the bishops in Mich. Syr., iii. 502); that it — for a time at least — was also a Nestorian bishopric is shown from a life of the Katholikos Eliya I (on him see Baumstark, Geschichte der syr. Literatur, p. 286 sq.) who shortly before his death on May 6, 1049 appointed a bishop to this town (Assemini, in B. O., iii. 263).

In the statements of the Arab geographers, it is clear that the old Rahbat Malik b. Tawq lay on the bank of the Euphrates (al-‘Akhdh, in B. G. A., i. 13, 72; Ibn Hawqal, B. G. A., ii. 138; al-Makdisi, B. G. A., iii. 138; Yakuti, Mus‘jam, iii. 860; Ibn Khuradhdhibh, B. G. A., vi. 235) i.e. presumably corresponded to the modern al-Miyadín (plur. of mu‘addan) (G. Hoffmann, Auszüge aus syr. Akten pers. Martyris, p. 165; E. Herzfeld, Arch. Reise, iii. 382, note 1; A. Musil, The Middle Euphrates, p. 233, 240) while the new al-Rahba, as we saw, was built a farsakh from it, where in the S.W. of al-Miyadín there still are the ruins of the citadel al-Rahba or Raha. According to Abu ‘l-Fida’ (ed. Reinaud, p. 281), towers were still standing among the ruins of the old town. Opposite al-Rahba on the left bank of the Euphrates stood a fortress, taken by Marwan II (744—750) in the fight with Hisham b. Manbij, by Marwan II, Kitab al-‘Ursawin, ed. Vasuher, in Patr. Oriental., vii. 517 sq.). In this fortress Musil (op. cit., p. 338 sq.) has recognised al-Zaituna (al-‘Abdallahi, ed. de Goeje, p. 180; Tabari, ii. 1457 sq.; Ibn Khuradhdhibh, ed. de Goeje, p. 74) and the ancient Zadd which is still called al-Marwaninya after this caliph, but really is not opposite al-Miyadín, but fourteen miles farther down.

Ibn Hawqal (B. G. A., ii. 155) praises the fertility of the well-watered region of Rahba, where the orchards on the east bank of Euphrates also produced date-palms; their quinces were also famous (al-Makdisi, in B. G. A., iii. 145). The Karte von Mesopotamien (i: 400,000 map) at ‘Mejdina’ (the first (most northerly) palm) dates only too well in specially favourable weather in the region of Albu Kamal (Musil, op. cit., p. 342). According to al-Istakhri (B. G. A., i. 77), Rahbat Malik b. Tawq was larger than Karkisiya; al-Makdisi (B. G. A., iii. 142) calls it the centre of the Euphrates’ district (camal al-‘Farat or nahiyat al-‘Farat) as in the early Mohammedan period the fertile plain from Dair al-Zawr to Albu Kamal with the towns of al-Rahba, Dailiya, Ana and al-Hadiitha was called (Herzfeld, op. cit., ii. 382). According to him the town was built in a semi-circle on the edge of the desert and defended by a strong fortress.

Yakuti visited the town, which according to him was eight days’ journey from Damascus, five from Halab, 100 farsaks from Baghdad and a little over 20 farsaks from al-Kaṣṣa. In al-Dimishki (ed. Mehren, p. 202) it is called Rahbat al-Furaitya. In the time of Khalil al-Zahiri (Zahiri, ed. Rashid, p. 50) it belonged to Halab. According to al-Umari, Syria, to be more exact, its eastern marches with the capital Hims, reached as far as al-Rahba; he mentions there “a citadel and a governorship and there are Bahri’s, cavalry, scouts and mercenaries stationed there” (al-Umari, transl. R. Hartmann, in Z.D.M.G., lxx., 23, 39). Ibn Battuta (op. cit.) calls the town “the end of al-‘Irak and the beginning of al-Sham.” Ḥadidjî Khalîfa reckons from ‘Ana to al-Rahba three days’ journey and from there to al-Dair one day’s journey (Ziakhân-numa, Stambul 1145, p. 483; cf. thereon Musil, op. cit., p. 257).

Piero Delli-Scipioni (Viaggi, Venice 1544, p. 571) saw the town of “Rachba” at some distance from the Euphrates and heard that there were some old buildings there. Tavernier (Les six voyages, i., Paris 1676, p. 285) mentions a place called “Machel-raba”, i.e. Maşhad al-Rahba (six miles S.W. of al-Rahba).

In modern times al-Miyadín and the ruins of al-Rahba (the usual formation) have been repeatedly visited (see Bibl.). The plan of the castle forms a triangle with flattened angles; pictures of the castle will be found in Musil, The Middle Euphrates, p. 7, fig. 2 or Sarre-Hezfeld, Arch. Reise, iii., pl. lxiv, sq. (Bibliography: al-Istakhri, in B. G. A., i. 77; Ibn Hawqal, B. G. A., ii. 155; al-Makdisi, B. G. A., iii. 142, 145; Yakuti, Mus‘jam, ed. Westenfeld, ii. 734, 744; Saff al-Din, al-Mardid al-‘Irdris, i. 464; al-Baladhuri, Poste al-Baladun, ed. de Goeje, p. 180; Ibn Djabir, ed. Wright, p. 250; Kalkashandi, Daw’i, Cairo 1324, p. 291; cf. Gaudefoy-Demobynnes, La Syrie à l’époque des Mamelouks, Paris 1923, p. 77—80, 183, 245 sq., 254, 259; R. Hartmann, Die geographischen Nachrichten über Palastina und Syrien in Khalil al-Zahiris Zubdat Kashf al-Mamalik, dissert. Tubingen 1907, p. 62; K. Ritter, Erd-
RAH巴NIYA (A.), monasticism. The term is derived from rähbî [q.v.]; it occurs in the Kur'an once only, in a passage (sûra livi. 27) that has given rise to divergent interpretations:  
"And we put in the hearts of those who followed Jesus, compassion and mercy, and the monastic state, they instituted the same (we did not prescribe it to them) only out of a desire to please God. Yet they observed not the same as it ought truly to have been observed. And we gave unto such of them as believed, their reward; but many of them were wicked doers".

According to some of the exegists the verb "we put" has two objects only, viz. compassion and mercy; whereas the words "the monastic state" are the object of "they instituted". Accordingly the monastic state appears here as a purely human institution, which moreover has been degraded by evil doers.

According to others, however, the object of the words "and we put" is: compassion, mercy and the monastic state. According to this exegesis monasticism is called a divine institution. Professor Massignon has pointed out that this exegesis is the older one; the younger one expresses a feeling hostile to monasticism, which coined the tradition "No rahbäinya in Islam".

This tradition does not occur in the canonical collections. Yet, it is being prepared there. When the wife of Ösmân b. Ma'âlûq [q.v.] complained of being neglected by her husband, Muhammad took her part, saying: Monasticism (rahbäinya) was not prescribed to us (Ahmed b. Hanbal, vi. 226; Dîrîmi, Nikâh, bâb 3). The following tradition is less exclusive: Do not trouble yourselves and God will not trouble you. Some have troubled themselves and God has troubled them. Their successors are in the hermitages and monasteries, "an institution we have not prescribed to them" (Abû Dâwûd, A'dâb, bâb 44).

Islam, thus rejecting monasticism, has replaced it by the holy war: "Every prophet has some kind of rahbäinya; the rahbäinya of this community is the holy war" (a tradition ascribed to Muhammad in Aḥmad b. Hanbal, iii. 266; to Abû Sa'îd al-Khadrî, ibid., iii. 82). Cf. also Târiqâ, Zuhd.

RAHîl (A., plur. râhîn, râhîbûn, râhîbîn, râhîbâna), a monk. The figure of the monk is known to pre-Islamic poetry and to the Kur'an and Tradition. The pre-Islamic poets refer to the monk in his cell the fight which the traveller by night sees in the distance and which gives him the idea of shelter.

In the Kur'an the monk and the eisîs, sometimes also the âkhîr, are the religious leaders of the Christians. In one place it is said that rabbis and monks live at the expense of other men (Sûra ix., 34) and that the Christians have taken as their masters instead of God their âkhîr and their monks as well as al-Masîh b. Maryam (Sûra ix. 31). In another passage the Christians are praised for their friendship to their fellow-believers which is explained from the fact that there are priests and monks among them (Sûra v. 87). In Hadîth the râhîb is frequently encountered in stories of the nature of the âbiyâ al-âniyâ (cf. Bukhârî, Abû-yi, bâb 54; Muslim, Zuhûr, Tr. 73; Tawûbû, Tr. 46, 47; Tirmîdî, Taṣfîr, Sûra 85, Tr. 2; Nâqîbî, Tr. 3; Nasîrî, Masâbîqû, Tr. 11; Ibn Mâdî, Fiânûn, Tr. 20, 23; Dîrîmi, Šafa'il al-Kurân, Tr. 16; Aḥmad b. Hanbal, i. 461; ii. 434; iii. 357; 347; v. 4; vi. 17 bîc). From the fact that in the Muhammadan literature of the early centuries A.H. the epithet râhîb was given to various pious individuals it is evident that there was nothing odious about it. Cf. however the article RAHBAâNYA.

Bibliography: cf. that of RAHBAâNYA.

(A. J. Wensinck)

RAHîl, in the Bible Rachel, wife of Jacob, mother of Joseph and Benjamin, is not mentioned in the Kur'an. There is however a reference to her in Sûra iv. 27: "Ye may not have two sisters to wife at the same time; if it has been done formerly God now exercises pardon and mercy". This is said to allude to Jacob's marriage with Liyâ and Râhîl; before Moses revealed the Tora, such a marriage was valid. Tabari gives this explanation in the Annals, i. 356, 359 sq. Ibn al-Âthîr, p. 90, adopts it. But already in Taṣfîr, iv. 210, Tabari explains the verse correctly: Muhammad forbids for the future marriage with two sisters; but he does not dissolve such marriages concluded before the prohibition. — Islamic tradition generally adopts the view that Yâkûb only married Râhîl after Liyâ's death. So already in Tabari, i. 355, Zamakhshârî, Ba'idâwî, Ibn al-Âthîr etc. Al-Kisâ'î even thinks that Yâkûb only married Râhîl after the death of Liyâ and of his two concubines. Here again Muslim legend differs from the Bible, in making him not marry Râhîl until after 14 years of service; in the Bible, Jacob serves seven years, marries Leah and after the wedding week Rachel
and serves another seven years. — Yâkûb's wooing and Laban's trick by which he substitutes Liya for Kahlil as "neither lamp nor candle-light" illuminate the bridal chamber, is embellished in Muslim legend.

Kahlil is also of importance in the story of Yûsuf. Yûsuf inherits his beauty from Kahlil; they had half of all the beauty in the world, according to others two-thirds, or even according to the old Haggadic scheme (Kiddushin, 40b), nine tenths (Thalâbi, p. 69). — When Yâkûb left Lâban, he had no funds for the journey; at Rachel's suggestion, Yûsuf steals Lâban's idols. — As Yûsuf, sold by his brothers, passes the tomb of Kahlil he throws himself from his camel on the grave and laments: "O mother, look on thy child, I have been deprived of my coat, thrown into a pit, stoned and sold as a slave." Then he hears a voice: "Trust in God." The old Haggada does not know this touching scene. But it has found its way into the late medieval book of stories Sefer Hayazhar (ed. Goldschmidt, p. 150). The Jewish-Persian poet Shahin (5th century) adopts this motif from Firdawsi's Yâsîq u-Zâmîqî in his book of Genesis.

RAHMÂN. [See ALLAH, i. 303b, 304.]

RAHMÂNIYA, Algerian Order (farîka) called after Muhammad b. 'Abd al-Rahman al-Gushtalî al-Djingûrî al-Ãzahrî Alû Kibrînîn, who died 1208 (1793-1794). It is a branch of the Khalwatiya and is said to have at one time been called after Muḥâfîz al-Bakri al-Shahî. At Nefta, in Tunisia, and some other places it is called "Arzûyana after Muḥâfaṣâ b. Muḥammad b. 'Azîzû.

Life of the Founder. His family belonged to the tribe Ait Smâîl, part of the confederation Gash-tula in the Kabylia Djurdjura; having studied at his home, and then in Algiers, he made the pilgrimage in 1152 (1739-1740), and on his return spent some time as a student at al-Ãzahr in Cairo, where Muḥâfîz b. Sâlim al-Hafawî (d. 1181: Sîlîk al-Dwâr, iv. 50) initiated him into the Khalwati Order, and ordered him to propagate it in India and the Sudan; after an absence of thirty years he returned to Algeria, and commenced preaching in his native village, where he founded a zâwiya; he seems to have introduced some modifications into Khalwati practice, and in his Seven Visions of the Prophet Muḥammad made some important claims for his person and his system. Immunity from hell-fire was to be secured by affiliation to his order, love for himself or it, a visit to himself, stopping before his tomb, bearing his dirâr recited. His success in winning adherents provoked the envy of the local murâbiṭîn, in con-

sequence of which he migrated to Hamma in the neighbourhood of Algiers. Here too his activities met with opposition from the religious leaders, who summoned him to appear before a madîjîs under the presidency of the Mâlikîte Mufît 'Ali b. Amin; through the influence of the Turkîsh authorities, who were impressed by the following which he had acquired, he was acquitted of the charge of unorthodoxy, but he thought it prudent to return to his native village, where shortly afterwards he died, leaving as his successor 'Ali b. 'Iṣâ al-Maghribî. His corpse is said to have been stolen by the Turks and buried in a great pomp at Hamma with a febbâ and a mournful song over it. The Ait Smâîl however maintained that it had not left its original grave, whence it is supposed to have been miraculously duplicated, and the title Aîû Kibrînîn "owner of two graves" was given him.

History and propagation of the Order. 'Ali b. 'Iṣâ al-Maghribî was undisputed head from 1208 (1793-1794) to 1251 (1836-1837); his successor died shortly after, and from the following year, though the Order continued to win adherents, it divided into independent branches. This was owing to the objections raised by the Ait Smâîl to the succession of al-Haḍîjî Bahšîr, another Maghribî; in spite of the support of 'Abd al-Kâdir (the famous enemy of the French) he had to quit his post, which was held for a time by the widow of 'Ali b. Iṣâ, who, however, owing to the dwindling of the revenue of the zâwiya had ultimately to summon Bahšîr back. Meanwhile the founders of other zâwiya were assuming independence. After the death of Bahšîr in 1259 (1843-1844) her son-in-law al-Haḍîjî 'Ammâr succeeded to the headship. Finding his influence waning owing to his failure to participate in the attack on the French organized by Bû Baghla he in August 1856 called his followers to arms and obtained some initial successes; he was however compelled to surrender in the following year, and his wife (or mother-in-law) at the head of a hundred ßhûân shortly after. Bahšîr retired to Tunis, where he endeavoured to continue the exercise of his functions, but he was not generally recognized as head of the order, and his place among the Ait Smâîl was taken by Muhammad Amîlân b. al-Hâddâd of Sâddâkîn, who at the age of 80 on April 8, 1871 proclaimed jâhîd against the French, who had recently been defeated in the Franco-Prussian War. The insurrection met with little success, though it spread far, and on July 13 Ibn al-Hâddâd surrendered to General Saussier, who sent him to Bougie. The original zâwiya was closed as a precautionary measure.

His son 'Azzîn, who had been transported to New Caledonia, succeeded in escaping to Djidda, whence he endeavoured to govern the community; but various muqaddâmîns who had been appointed by his father, as well as other founders of zâwiya, asserted their independence. Lists are given by Depont and Coppolani of these persons and their spheres of influence, which extend into Tunisia and the Sahara. In their work the numbers of the adherents to the Order have been reckoned at 1856, 1804 (1807). Rinn notices that the Rahâniya of Tâfa regularly maintained good relations with the French authorities.

Practices of the Order. The training of the murîd consists in teaching him a series of seven
character of the security is in general allowed; but exceptional cases are recognised in which the debt is extinguished by the disappearance of the security i.e. the risk passes to the taker of the pledge. While the ownership of the pledge remains with the debtor, he has no power of disposal over it and possession passes to the creditor; the latter has the right to sell it to satisfy his claim if the debt becomes overdue or is not paid. Mortgage is unknown as well as a graded series of rights to the same object of pledge. To be distinguished from the pledge is the detention (habis) of a thing to enforce fulfilment of a legal claim, which represents a concrete right afforded by the law in individual cases so that it has contacts with the legal right to pledge.

RAIS AL-KUTTAB, RA’IS Efendi. [See Refs.]

RAIY, the acent Ragha, a town in Media. Its ruins may be seen about 5 miles S.S.E. of Teheran [q.v.] to the south of a spur projecting from Elburz into the plain. The village and sanctuary of Shā‘Abd al-‘Arîm lie immediately south of the ruins. The geographical importance of the town lies in the fact that it was situated in the fertile zone which lies between the mountains and the desert, by which from time immemorial communication has taken place between the west and east of Iran. Several roads from Mazandarân [q.v.] converge on Raiy on the north side.

In the Astvâ, Widzodată, i. 15, Ragha is mentioned as the twelfth sacred place created by Ahura-Mazda. Yasna, xix. 18, calls it ša‘nur tâs Ragha zarâbudistī “Zoroastrian Ragha possessing four degrees of hierarchy” because at Ragha the representative of the prerogatives going back to Zoroaster (Zarâbudist) held also the powers of a prince (ratâs dahyûrûmû) while elsewhere these two dignities with the three categories of chief subordinates, formed five degrees of hierarchy. The Middle Persian commentary deduces from this that Zoroaster must have belonged to Ragha. The town is also called bia-satni (Wîdžodât, i. 15), which Bartholomae interprets as possessing “three districts” (drei Gaste besitzend) although the explanation of the Middle Persian commentary is: “possessing three estates (social classes) for the priests, warriors and cultivators there were good” (cf. Bartholomae, Altinan. Worteüch, col. 579, 811, 1497; cf. Marquart, op. cit., p. 122). The later commentators put Raiy in Atropatene in conformity with the late tendency to localise events in sacred history in this province.

In the Old Persian inscriptions (Bh. 2, 10-18) Ragâ appears as the province of Media in which in the autumn of 521 B.C. the false king of Media Frawartish sought refuge in vain; from Raga also Darius sent reinforcements to his father W≪phispa when the latter was putting down the rebellion in Parthia (Bh. 3, 1-10).

Rages is also mentioned in the apocrypha. Tobit sent his son Tobias from Niniveh to recover the silver deposited in Rages with Gabael, brother of
Gabrias (Tobit, i. 14). The book of Judith (i. 15) puts near Ragau (if it only were Ragha') the plain in which Nebuchadnezzar defeated the king of Media, Arphaxad (Pharoetes').

In the summer of 330 B.C., Alexander the Great following Darius III took 11 days to go from Ecbatane to Rhagae (Arrian, 3. 20, 2). Dio-dorus relates that Antigonus passed near Rhagae after his victory over his rival Eumenes (316 B.C.). According to Strabo, x. 9, 1, and xii. 13, 6 Seleucus Nicator (312–280) rebuilt Rhagae under the name of Európos (in memory of his native town in Macedonia) and that near Európos the towns of Aeadica, Apamaea and Heraclea were placed with Macedonians. After the coming of the Parthians the town was renamed Arsakia. It is however possible that all these towns although situated in the same locality occupied slightly different sites for they are mentioned side by side in the authorities. Rawlinson (J. G. S., x. 119) would put Európos at Wartimn [q.v.]. Athenaeus in Deipnosophistae, says that the Parthian kings spent the spring at Rhagae (in Tavăi Suppose) and the winter at Babylon (see the details in A. V. W. Jackson, and Weissbach). The Greek popular etymology which explain the name Rhagha as alluding to earthquakes seem to reflect the frequency of this phenomenon in this region so close to Damawand.

In the Sasanian period Yazdagird III in 641 issued from Raï his last appeal to the nation before fleeing to Khurâsân. The sanctuary of Bibi Shahr-Bâna situated on the south face of the already mentioned spur and accessible only to women is associated with the memory of the daughter of Yazdagird who, according to tradition, became the wife of Ťusian b. 'All. In the years 486, 499, 553 A.D. Raï is mentioned as the see of bishops of the Eastern Syrian church.

Arab conquest. The year of the conquest is variously given (18–24 = 639–644). It is possible that the Arab power was consolidated gradually. As late as 725 (646) a rebellion was suppressed in Raï by Sa'd b. Abi Waqqas. The Arabs seem to have profited by the diversions among the noble Persian families. Raï was the fief of the Mihran family and, in consequence of the resistance of Siyavaksh b. Mihran b. Bahram Cushân, Nu'amir b. Muqarrin had the old town destroyed and ordered Farruqân b. Zainab (Zainidi)  b. 'Ula (cf. MAŠMUXXN) to build a new town (Tabari, i. 265/5).

In 71 (690) again a king of the family of Farruqân is mentioned alongside of the Arab governor.

The passing of power from the Omayyads to the 'Abbasids took place at Raï without incident but in 136 (753) the 'Abd Allah ibn Majid, seized the town for a short time. The new era for Raï began with the appointment of the heir to the throne Muḥammad Mahdi to the governorship of the east (141–152 = 758–768). He rebuilt Raï under the name of Muḥammadiya and surrounded it by a ditch. The suburb of Mahdi-ibâb was built for those of the inhabitants who had to give up their property in the old town. Hârûn al-Râshid, son of Mahdi, was born in Raï and used often to recall with pleasure his native town and its principal street. In 195 (910) Ma'mûn's general Tâhir b. Husain won a victory over Amîn's troops near Raï. In 250 (865) the struggle began in Raï between the Zaidi 'Alids of Tabaristân and first the Tâhirids and later the caliph's Turkish generals. It was not till 272 (885) that Adhgu-'tegin of Kazvin took the town from the 'Alids. In 261 (804) the caliph Mu'tamid wished to consolidate his position appointed to Raï his son, the future caliph Muktaфи. Soon afterwards the Sâmânis began to interfere in Raï. Isma'il b. Ahmad seized Raï in 289 (922) and the fact accompli was confirmed by the caliph Muktaфи. In 296 Ahmad b. Isma'il received investiture from Muktafinity in Raï (Gardizi, p. 21–22).

In the tenth century Raï is described in detail in the works of the contemporary Arab geographers. In spite of the interest which Baghdad displayed in Raï the number of Arabs there was insignificant and the population consisted of Persians of all classes (akhib, Ya'kubî, in B. G. A, viii. 276). Among the products of Raï Ibn al-Falîkhi, p. 253, mentions silks and other stuffs, articles of wood and "lustre dishes", an interesting detail in view of the celebrity enjoyed by the ceramics "of Rhages". All writers emphasise the very great importance of Raï as a commercial centre. According to Iṣâkhi, p. 289, the town covered an area of 1 1/2 by 1 1/2 farsakhs, the buildings were of clay (gaz) and the use of bricks and plaster (gâzi = gaz) was also known. The town had five great mosques and eight large bazaars. Mûkaddasî, p. 391, calls Raï one of the glories of the lands of Islam and among other things mentions its library in the Rûdha quarter which was watered by the Sûrkhân canal.

Dailami period. In 304 (916) the lord of Adhâbârshân Yusuf b. Abû 'Udâd occupied Raï out of which he drove the Dailami Muḥammad b. 'Ali Şuṭûk who represented the Sâmânis (Ibn al-Âthîr, viii. 74). This occupation, commemorated in coins struck by Yûṣûf at Muḥammadâya, was the beginning of a troubled period. Raï passed successively into the hands of the Dailâmi 'Ali b. Waḥâbshân, Waṣîf Bektâmûrî, the Dailâmis (Ibn Ahmad b. 'Ali and of Muḥîf, slave of Yûṣûf (in 513 = 925; cf. R. Vassier, O monétagh Sâdîjod, Baku 1927). Lastly the Sâmânis encouraged by the caliphs succeeded in bringing Raï again within their sphere of influence but soon their general Asfâr (a Dailâm) became independent in Raï. In 318 (930), Asfâr was killed by his lieutenant Mardâwîdî (q.v.) (a native of Gîân and one of the founders of the Ziyârirî dynasty) who took over his master's lands (C. Huart, Les Ziyârirîs, 1922, p. 363 [= 11]).

After the assassination of Mardâwîdî (123 = 925) the Bûyids established themselves in Raï, which became the fief of the branch of Ruḵân al-Dawla which held out there for about 100 years. In 390 (1000) the last Sâmânis al-Muntasâk made an attempt to seize Raï but failed. In 420 (1027) the Bûyd Majd al-Dawla was ill-advised enough to invoke against the Dailâmis the help of Muḥyîd of Ghaznî, who seized his lands (cf. Muhammad Nazim, Sulûk Muḥyîd, 1931, p. 80–85). The brief rule of the Ghaznawids was marked by acts of obscenity, like the destruction of books on philosophy and astrology and the atrocious persecutions of the Karmâshâns and Mu'tazîlis (Gardizi, p. 91; Ibn al-Âthîr, ix. 262).

The Sâdîjodks. The Ghizis laid Raï waste in in 427 (1035) and in 434 (1042) the town, where Majd al-Dawla still held out in the fort of Tabarâk (Ibn al-Âthîr, ix. 347), fell into the power of the Sâdîjodks and became one of their principal cities. The last Bûyd al-Malîk al-Râhîm died a prisoner.
in Tabarak in 450 (1058) (or in 455; cf. H. Bowen, in "J. R. A.S.," 1929, p. 238) and the new lord Tughril [q. v.] also died at Raiy in 455 (1063). Henceforth Raiy is constantly mentioned in connection with events relating to the great Saldjuks and their branch in Persian 'irāk.

From the reign of Ghiyāšt al-Dīn Masʿūd (529-547 = 1133-1152) Raiy was ruled by the amir Inandj, whose daughter Inandj-Khatun became the wife of Pahlawān, son of the famous atabeg of Adharbādjūn, Ildegiz. When the latter put on the throne Sulṭan Arslan-Shāh (whose mother he had married) Inandj opposed this nomination but was defeated in 555 (1160). Inandj withdrew to Bušān but with the help of the Khvārezmshāh il-Asrāl he recaptured Raiy. He was finally murdered at the instigation of Ildegiz who gave Raiy as a fief to Pahlawān. Later the town passed to Kutluğ Inandj b. Pahlawān who, like his maternal grandfather, brought about the intervention of the Khvārezmshāh Tughril III who killed Kutluğ Inandj but the country remained with the Khvārezmshāns. In 614 (1217) the atabeg of Fars ʿAfdal b. Zama succeeded in occupying Raiy but was almost immediately driven out by the Khvārezmshāh Djalāl al-Dīn (cf. Nasawi, ed. Houdas).

Civil wars. Muqaddasī, p. 391, 395-396 mentions the dissensions (ʿaqābyār) among the people of Raiy in matters of religion. Under 582 (1186-1187) Ibn al-ʿAthir, xi. 237, records the damage done in Raiy in the civil war between the Sunnis and Shīʿis: the inhabitants were killed or scattered and the town left in ruins. Vāḵšt who, fleeing before the Mongols, went through Raiy in 617 (1220) gives the results of his enquiry about the three parties: the Hanafis, the Shāhīs, and the Shīʿis of which the two first began by wiping out the Shīʿis who formed half the population of the town and the majority in the country. Later the Shāhīs triumphed over the Hanafis. The result was that there only survived in Raiy the Shāhī quarter which was the smallest. Vāḵšt describes the underground houses at Raiy and the dark streets difficult of access which reflected the care of the inhabitants to protect themselves against enemies.

The Mongols. The Mongols who occupied Raiy after Vāḵšt's visit dealt it the final blow. Ibn al-ʿAthir (xii. 184) goes so far as to say that all the population was massacred by the Mongols in 617 (1220) and the survivors put to death in 621 (1224). It is however possible that the historian, echoing the panic which seizing the Muslim world, exaggerates the extent of the destruction. Djawaini (ed. Muḥammad Ḥān Kārazwī, i. 115) only says that the Mongol leaders put many people to death at Khvārezm and (in the country inhabited by Shīʿis?) but in Raiy they were met by the (Shīʿī?) Kāši who submitted to the invaders (il ʿaṣhl), after which the latter went on. Rashīd al-Dīn (ed. Bèrèzine, in "Truṭl V. O.," xv. 135 [transl. p. 89]) admits that the Mongols under Jelje and Subuday killed and plundered (kūkhīk wawgūrat) at "Raiy" but he seems to make a distinction between Raiy and Kūm, in which the inhabitants were completely (ba-kulli) massacred.

The fact that life was not completely extinguished at Raiy is evident from the dates of pottery which apparently continued to be made in Raiy (cf. Guest, "A dated Raoy bowl," in Burlington Magazine, 1931, p. 134-135; the painted bowl bears the date 640 = 1243). The citadel of Tabarak was rebuilt under Ghāzān Khān (1295-1304) but certain economic reasons (irrigation?) if not political and religious reasons, must have been against the restoration of Raiy and the centre of the new administrative Mongol division (the timarān of Raiy) became Warāmīn [q. v.] (cf. Nūḥāt al-Kulīb, in G.M.S., p. 55). After the end of Hūlagū's dynasty, Raiy fell to the influence of Tughrā-Timur [q. v.] of Āstārābād. In 1354, Timur's troops occupied Raiy without striking a blow but this must mean the district and not the town of Raiy, for Clavijo (ed. Srezenovsky, p. 187) who passed through this country in 1404 confirms that Raiy (Xaharārpay = Shahr-i Raiy) was no longer inhabited (agera deshabitata). No importance is to be attached to the mention of "Raiy" in the time of Shāh-Rukh (Maṭlaʿ al-Sulṭān, under the year 841 = 1437) or of Shāh Ismāʿīl, Ḥabīb al-Siyār.

The ruins of Raiy. Olivier in 1779 sought them in vain and it was Trulhiher and Gardane who first discovered them. The earliest descriptions are by J. Morier, Ker Porter and Sir W. Ouseley. The first has preserved for us a sketch of a Sassanian bas-relief which was later replaced with a sculpture of Fath 'Ali Shāh. The description and particularly the plan by Ker Porter (reproduced in Sarre and A. V. W. Jackson, "Persia," are still of value because since his time the needs of agriculture and unsystematic digging have destroyed the walls and confused the strata. Large numbers of objects of archaeological interest and particularly the celebrated pottery covered with paintings have flooded the European and American markets as a result of the activity of the dealers. Scientific investigation was begun by the universities of Philadelphia and Boston in 1934 (cf. The Illustrated London News, June 22, 1935, p. 1122-1123; E. F. Schmidt, The Persian Expedition [Raiy], in Bulletin University Museum, Philadelph. -v., 1935, p. 41-49; cf. p. 25-27). In the citadel hill, Dr. Erich Schmidt found a great variety of pottery and the remains of buildings among which the most interesting are the foundations of Mahdi's mosque (communication by A. Godard to the Congress of Persian Art at Lenin-grad in Sept. 1935). In an interesting passage, Muqaddasī, p. 210, speaks of the high domes which the Būyids built over their tombs. According to the Siyāsat-nāma, p. 145, in the time of Fāḵr al-Dawla a rich Zoroastrian built an ašōbān with double roof (sulūdān ʿa-du pūzhīt) on the top of the hill of Tabarak, above the domed tomb (gūbad) of Fāḵr al-Dawla. The ašōbān, turned to a new use received the name of dīda-yi stāḥpārdārān "fort of the commandants" and was still in existence in the time of Nīẓām al-Mulk. The two towers now to be seen among the ruins of Raiy [both are round in plan, but the one repaired under Naṣir al-Dīn Shāh has rubbed flanks] are attributed to the Saldjuks but may continue the Dailami type of building. The hill of Tabarak on which was the citadel (destroyed in 588 [1192] by Tughrīl III) according to Vāḵšt was situated to "the right" of the Kūrāsān road while the high mountain was "the left" of this road. Tabarak therefore must have been on the top of the hill opposite the great spur (hill G in Ker Porter's plan: *fortress finely built of stone and on the summit of an immense rock which commands the open

**RAKY**. (See *)

**RAKĀSH**. (After *Abān b. 'Abd al-Hamīd*.)

**RAKIM**. (See *Aṣḥāb al-Karb*.)

**Raḵā**, capital of Diyyā Muḍar in al-Dzara on the left bank of the Euphrates, shortly before it is joined by the Nahır al-Balikh (Bābāsi, Bābāsi, Bābāsi). The town was in antiquity called Kallikinos. Kallikison is to be located in the same region (Strabo, xvi. 747; Isidoros of Charax, in *Geoq. Græci Min.*, ed. Müller, p. 247; Dio Cass., x. 13; Pliny, *Nat. Hist.*, v. 86; vi. 119; Ptolemy, *Geoq.*, v. 17; Stephen Byz.); but its usual identification with Kallikinos is certainly wrong and it may be a case of two adjoining towns as with the “black” and “white al-Raḵā” of the middle ages. Kallikon was, according to Appian (Syra., p. 57), a foundation of Seleucus 1 Nikator; later it was ascribed to Alexander the Great (Pliny, *Nat. hist.*, vi. 119; Isid. Char., c. 1) who can hardly have been here and is hardly likely that towns were founded so shortly before the battle of Gaugamela (cf. Pauli-Wissowa, *Re. E.,* v., A., col. 1274, s. v. *Thapakhe*).

Kallikinos owed its name to Seleucus II Kallikinos, who founded the town in 244 or 242 B.C. (Chron. Pasch., ed. Dindorf, i. 330; Mich. Syr., ed. Chatob, iv. 78). Libanius (*Epíst.*., p. 21, 5; *Opera*, ed. Förster, x. 19, 8—9) wishes to derive the name from the suffix Kallikonos who was murdered there; it is however hardly likely that the town's name, the name of which (Syrac. Kalonikos, Kallikonos) the Christian Syrians retained in the middle ages, was called after a pagan orator, and in any case, if it were so, we would expect a name like Kallinikela. In any case the site of Kallikonos corresponds to that of the mediaeval al-Raḵā, with which the Syrian historians always identified it. In the time of the emperor Julian, Kallikonos was a strong fortress and an important commercial centre (Amnian. Marcell., xxi. 3). In the year 393 a Jewish synagogue was burnt in the *Castrum Callinicum*; the emperor Theodosius therefore ordered the bishop of the town to rebuild it (Ambrosius, *Epíst. ad Theodosium*; Migne, *Patrol. Lat.*, xvi., col. 1105 sq.). The emperor Leo in 777. Sel. (466 A. d.) rebuilt Kallikonos in Osroene, called it Leontopolis and appointed a bishop there (probably the successor of the Damianos mentioned in 451 and 458) (Edessene Chronicle, ed. Hallier, in *Texte u. Untersuch.,* i, 1, Leipzig 1893, p. 116, 152; Barhebr., *Chron. syr.*, ed. Bedjan, p. 77; Leontopolis: Hierokl., *Synkêmem.,* p. 715; *Geoq. Cypr.*, ed. Gelzer, p. 897). Towards the end of the year 503, Timostates bravely defended the fortress against the Persians and took one of Kawādš 1’s officers prisoner but had to release him as the king threatened to destroy the town completely (Joshua Stylites, ed. Martin, in *Abb. K.-M.*, vi, 1, Leipzig 1876, p. 1xv.). The Persian church historians from the beginning of the 8th century frequently mention the monastery at al-Dair Zakki, Arabic Dār Zakki, the angle formed by the Nahır Balikh and the Euphrates or the Nahır al-Nīl Canal not far from Kallikonos (Vitae viror apud monophysites celebr., ed. Brooks, in *C. S. C. O.,* ser. iii., vol. xxv., Paris 1907, p. 38; Mich. Syr., iv. 414 sq.; Shaboushti, *Khāb al-Diyārār*, cod. Berol., fol. 95v; Yākūt, *Muṣjam*, ed. Wustenfeld, ii. 664; iv. 862). Between al-Raḵā and Bālîs lay the celebrated monastery of Dair Ḥannîn not far from Surra (G. Hoffmann on Zacharias Rhetor, transl. Ahmed-Krumey, p. 159, 201; Johann. v. Ephes., iv. 22; Mich. Syr., iii. 361; iii. 453 and *passim*; Barhebr., *Chron. ecelz.,* ed. Abbelous-Lamy, i. 244, 250; F. Nau, in *R.O.C.,* xv, 1910, p. 63, note 1; Yākūt, iii. 350 and *passim*; often wrongly called “monastery of Ḥanā’ah”, e.g. in Musil, *The Middle Euphrates*, p. 329). In 529, Justinian enacted that trade with the Persians should be conducted at the frontier towns of Nisibis, Kallikonos and Artaxata (*Cod. Iust.,* ed. Kruger, iv. 65, 4, p. 188; Bury, *History of the Later Roman Empire*, ii, 1923, p. 3). Khusraw I on his third campaign against Syria (542) took the town without difficulty (Procop., *Bell. Pers.*, ii. 21, 31; *Anecd.,* iii. 31) because at the time the walls had been partly taken down in order to be rebuilt. The town was destroyed but later fortified again by Justinian with walls and bulwarks and “made impregnable” (*Proc., De aed.,* ii. 7; James of Edessa, *Chronol. Canon.,* ed. Brooks, in *Z.D.M.G.*, iii. 300; Mich. Syr., ed. Chatob, iv. 287). The *sēhās* *Arashā* Maurikios in 580 had to retire to Kallikinos before Abdarmahmur but put him to flight there (Theophyl. Sim., iii. 17, 8 sq.; Chapot, *La Frontière de l’Euphrate*, p. 289; Barhebr., ed. S. Hertsfeld, *Archäol. Reise*, i. 159 make the “emperor” Maurikios flee to the fortress before Hormisdae.

The Arabs in 18 (639) or 19 (640) under ʿĪyād b. Ḥannencamped before the N. W. gate of the town, Bāb al-Ruḥā; after 5 or 6 days the Patriarchs who governed the town asked for peace and surrendered it to him and the inhabitants
were promised security of life and property. Their churches were not to be destroyed or occupied so long as they paid their tribute and committed no act of hostility; on the other hand they were not to build new churches or sacred places and not to observe Christian customs or festivities publicly (al-Balādhrī, Futūḥ al-Balād, ed. de Goeje, p. 173 sq.; Ibn al-Athir, ed. Tornberg, ii. 439). On the death of 'Iyāḍ, Sa'īd b. 'Amr b. Djičiyam became governor of al-Djazira; he built a mosque in al-Rāfiq (al-Balādhrī, p. 178; Hersfeld, Arch. Reis., ii. 353). It was built of bricks of clay and marble taken from ancient buildings (Hersfeld, op. cit., with fig. 324–329); its Manārat al-Manṣūrīr still marks the ruins that represent the ancient al-Rāfiq.

In the great battle of Sīfīn in 636 (656) 'Ali crossed the Euphrates at al-Rāfiq on a bridge of boats, which he ordered the inhabitants to build, with his infantry and whole equipment to the Syrian bank (al-Tabarī, i. 3459; Ibn Miskawayh, Tağārīb, ed. Caetani, p. 771). According to the Dīwān of 'U바bā Allāh b. Kais al-Rukayyjāl, who died in 690 (ed. Rhodokanakis, in S. B. Ak. Wies., cxliv, x., Vienna 1902, p. 222), al-Rāfiq and al-Kalas (?) were then in ruins and practically uninhabited but this is poetic exaggeration (Musul, The Middle Euphrates, p. 329 sq.). He calls the town (p. 283) al-Rāfiq al-Sawdā' to distinguish it from al-Rāfiq al-Bailad, which is mentioned in the Dīwān of al-Akhtal for example (ed. Sāhlī, p. 304). The name al-Rāfiq itself may be of Arabic origin ("swampy marshes on a river with periodical inundations"); the similarity of the names of al-Rāfiq and al-Rāfiq to those of two Arab tribes of the Assyrian period, Rakhiqū (sic!) and Rapiqū (Hersfeld, Arch. Reis. i. 159, note 9), is no doubt quite accidental.

On the south bank, opposite the town between two canals (al-Hāni 1a 'I-Mart), 372 were the suburbs of Wāṣit al-Rāfiq, where Hāshāb b. 'Abd al-Malik built two palaces and a bridge over the Euphrates (Yākūt, ii. 802; iv. 880, 994; Ps.-Dionys. of Telmahrē, ed. Chatot, p. 26, 31; Mich. Syr. iv. 457; Barhebr., Chron. syr., ed. Bedjan, p. 118). The governor of al-Rukayyjāl, the Kais Manṣūr b. Dji'wana b. al-Hāfīth al-'Amīri, after whom Hisn Manṣūr was called, was executed after his rebellion in 141 (758–759) by the amīl of Abu 'l-Abbās, al-Manṣūr, in al-Rāfiq (al-Balādhrī, p. 192).

The caliph al-Manṣūr in 155 (772) built along side of al-Rāfiq a new town al-Rāfiq and settled Khurāsānians there who were devoted to his dynasty (Ibn al-Fakhri, in B. G. A., i. 132). The superintendence of the building of the new town was given by him to al-Mahdī, the heir-apparent. It was planned in the shape of a horse-shoe and was in many respects modelled on the round city of al-Mansūrīr in Baghūr (al-Tabarī, i., 372 sq.; Ibn Hawkal, in B. G. A., ii. 115; al-Ya'qūbī, Kitāb al-Buldān, in B. G. A., vii. 238; Tārīkh, ed. Houtsma, i. 430; Ibn al-Fakhri, in B. G. A., v. 132; Yākūt, Muṣā'jam, ed. Wüstenfeld, ii. 734 sq.; Mich. Syr., i. 526. ii. 10. 297 = iv. 476, 483, 640; Ps.-Dionys. of Telmahrē, p. 120 sq.; Hersfeld, op. cit., i. 160). Two canals were led from the Euphrates and from the region of Sarādjīq to supply the new town with water (Mich. Syr., ii. 10). This new town to which the name al-Rāfiq came to be transferred from the old town now falling into ruins, had, according to Arab authors (e. g. al-Balādhrī, p. 179), no remains of antiquity and indeed the modern al-Rāfiq, the "horse-shoe city", except for a few fragments built into the walls seems to possess no ancient ruins. The ancient Raklinicos has therefore wrongly been located here (Sachau, Reise in Syrien u. Mesopot., p. 242; Chapot, La Frontière de l'Euphrate, p. 259 sq., where fig. 8 "Nicephorium-Catilinicum" is really the plan of the mediaeval al-Rāfiq).

Between al-Rāfiq (al-Hamār of Musli's map) and al-Rāfiq there soon rose a suburb with bazaars to which the markets of al-Rāfiq (including the largest, Sāk Hāshām al-'Atīk) were transferred by 'Ali b. Sulaimān b. 'Allī, governor of al-Djazira, and as a result the two adjoining towns gradually developed into a twin city (al-Rāfiqātān) (al-Balādhrī, p. 179; Yākūt, ii. 734, 802; Ibn Hawkal, B. G. A., ii. 115). This suburb was burned in 1123 Sel. (812) by the rebels 'Amr and Naṣr b. Shabath along with the adjoining pillared monastery (Mich. Syr., iii. 26). 'Abd al-Malik b. Sāliḥ [q.v.] died in the same year in al-Rāfiq. In the fighting that followed, the 'Afdāyī (of al-Rāfiq) became lords of al-Rāfiq and the Persians of al-Rāfiq (Mich. Syr., iii. 30). In the reign of Ma'mūn in 816 Tāhir built a wall between al-Rāfiq and al-Rāfiq (Mich. Syr., iii. 36).

The walls of the old town fell into ruins almost a year's date (Aḥmad b. al-Ṭayib al-Sarākhī in Yākūt, loc. cit.), and in 795 (985–986) the old al-Rāfiq was only a suburb of the western town. As the name al-Rāfiq came into use for the latter (Yākūt, loc. cit.), in the end it became no longer possible to distinguish between al-Rāfiq and al-Rāfiq (also al-Maṣḍis, cf. F. Hersfeld, Arch. Reis., i. 160, note 7, p. 161). At the beginning of the xiiith century the old al-Rāfiq was completely in ruins (Yākūt, iii. 31; ii. 802; Ibn Rusta, p. 90; al-Maṣḍis, p. 20, 54, 141). It was also called "crooked al-Rāfiq" (al-Aḍāgā) and corresponds to the present ruins of al-Rāfiq al-Samrā. Badr al-Din 'Abd al-Raḥmān al-Ṭalabakki (Ahlwardt, v. 413, on No. 6104) wrote a Risāla on al-Rāfiq.

According to Hersfeld, the following larger groups of ruins lie in the area of al-Rāfiq in addition to Hiraqār which is in the neighbourhood:

1. The "horseshoe town" with high walls, still standing, which form a semicircle on the north, while in the south they run in a straight line along the banks of the Euphrates and enclose an area of 1.92 sq. km. (Hersfeld, Arch. Reis., 356 sq.: plan: plate lixii.). It corresponds to al-Rāfiq founded by Maṣḥūr, to which the name al-Rāfiq was later transferred. Roughly in the centre of the northern round part of this part of the town lie the ruins of a large mosque, the "mosque intra muros" the front of the court of which with a round minaret (Sarre-Hersfeld, ii. 359; iii., pl. lxxv.–lxxvi. and fig. 33–340), according to an inscription, was restored by the Zangid Nūr al-Dīn Mahāmūd in 616 (1165–1166) (van Berchem in Sarre-Hersfeld, i. 4–6). Nūr al-Dīn occupied al-Rāfiq in 554 (1159) and gave it from 562 (1167) to 566 (1171) to his brother Māwddā
(Ibn al-Athir, ed. Tornberg, xi. 167, 216; Kamāl al-Dīn, transl. Blochet, in R. O. L., iii. 532, 550.) Yākūt mentions a gate called Bāb al-Djinmān (Yākūt, i. 443; ii. 125). The gate on the S. E. corner of al-Faṣlī, a brick building on the inner side of the ditch, is still standing (Hersfeld, ii. 358; iii., pl. lxv.; fig. 330—332). Not far from it is the so-called palace, a plaster-covered brick building with cramps of wood without inscriptions (Hersfeld, ii. 363; pl. lxix. sq.; fig. 342—344). On the S. W. corner of this area of ruins is the modern village of al-Raḳḳā.

2. East of the S. E. corner of the preceding area is a smaller site (called al-Ḥamrā‘ on Musil’s map) the feature of which is a high quadrangular minaret called Ma‘dīn ham Matnū‘īrīq which belonged to the “mosque extra muros” (Hersfeld, i. 156; ii. 354, fig. 327). This area of ruins corresponds to the ancient town.

3. An hour farther east on the Balikh are the ruins of “grey Raḳḳā” (Raḳḳā al-Samra‘).

4. A little further north, still on the left bank of the Balikh is the high Tell Zādīn now Tell Zēdān, according to Hersfeld (i. 157, note 3; ii. 350) and Musil (The Middle Euphrates, p. 91, note 9) certainly the ancient Zenodotion.

In the area of these ruins are a number of Muslim saints’ graves including those of the tābi‘ī [q. v.] ‘Uways al-Ḳarant and ‘Umrār b. Yāsir, whose names however were differently given to Sachau (Reise in Syr. u. Mesop., p. 242 sqq.) and Hersfeld (i. 157; ii. 350) in some cases.

The area of the “horseshoe town” is, according to Hersfeld, “burrowed through and through by treasure-seekers who search here for the Raḳḳā ceramics which fetch exceedingly high prices” and also find glass and bronze, pieces of marble etc. (Hersfeld, i. 158). The blue glazed antique vases which look as if they were enamelled, in the form of amphorae in the Louvre, said to have been found in al-Raḳḳā, therefore certainly came from the eastern old town (Sarre in Sarre-Hersfeld, iii, and iv., cf. Littérature; H. Rivière, La céramique dans l’art musulman, 2 vol., 1912—1913; F. Cumont, Fouilles de Doura-Europos, Paris 1926, text, p. 460 sqq.).

RAḳḳĀDA, residential city of the Aghlabid emirs of Ifriqiya about 6 miles south of Kairawān, was founded in 263 (876) by Ibrāhīm II, seventh prince of the dynasty. Until then the Aghlabids had resided in ʾAbhāsīya [q. v.] nearer the capital. A chance trip into the country by Ibrāhīm, it is said, determined the site of the new residence. The emir was suffering from insomnia and on the advice of his physician, Iṣḥāq b. Sulaimān, went out to take the air. Stopping in a certain place he fell into a deep sleep and decided to build a palace there which was called Raḳḳāda, the “soporific”. The story is probably based on a popular etymology of the name, which is found elsewhere in North Africa. Another explanation, equally suspect, is that which attributes the name to the memory of a massacre of the Warfalajūn by the ʾIbādī chief Abu l-Khaṭṭāb [q. v.] in 141 (758) and the many dead left lying there.

In the same year that the work of building was begun, Ibrāhīm settled in Raḳḳāda in the Castle of Victory (Kaṣr al-Fath). He was to live there the rest of his life, as were his successors, except for the stays the emirs made in Tunis. Raḳḳāda became a regular town as al-ʾAbhāsīya had been before it. Besides Kaṣr al-Fath (or Kaṣr Abī l-Fath) there were several other castles in it: Kaṣr al-Bāḥr (the castle on the lake), Kaṣr al-Saḥn (castle of the court), Kaṣr al-Mukhtār (castle of the elect) and Kaṣr Bāgh-dād, a large mosque, baths, caravanserais and sūqās. Al-Bakrī says that it had a circumference of 24,040 cubits (over 6 miles), al-Nuwaib makes it smaller (14,000, nearly 4 miles). A wall of brick and clay surrounded this vast area, and this wall was renovated by the last Aghlabid with a view to a final effort at resistance. Al-Bakrī further tells us that the outer part of the enceinte was filled with gardens. The soil was fertile and arable. The emirs and their followers enjoyed in Raḳḳāda a liberty of movement which would have caused a scandal in Kairawān. The sale of nabīldī [q. v.], forbidden in the pious old city, was officially permitted in the royal residence.

It was from Raḳḳāda that Ziyādāt Allāh III, the last of the Aghlabids, fled on the approach of the Ǧīḥātīs. The victorious Abū ʿAbd Allāh [q. v.] installed himself in Kaṣr al-Saḥn. His master, the Mahdi ʿUbaīd Allāh, lived in Raḳḳāda until 308 (920) when he moved to al-Mahdiyya. After being deserted by the ruler, Raḳḳāda fell into ruins. In 342 (953) the caliph al-Muʿizz ordered what was left of it to be razed to the ground and ploughed over. The gardens alone were spared.
A few traces of the Aghlabid foundation are still to be seen at the present day. A great rectangular reservoir with thick walls strengthened by buttresses may be identified with the lake (ba'dr) which gave its name to one of the palaces. A pavilion (l) of four stories stood in the centre. Nothing is left of it, but on the west side of the reservoir may be seen the remains of a building which must have been reflected in the great mirror of water. Three rooms may still be distinguished with their mosaic pavements. The technique and style of decoration closely connect these Muḥammadan buildings of the third century a. h. with the Christian art of the country.

RAMADĀN (A.), name of the ninth month of the Muḥammadan calendar. The name from the root r–m–r refers to the heat of summer and therefore shows in what season the month fell when the ancient Arabs still endeavoured to equate their year with the solar year by intercalary months [see Naft].

Ramādan is the only month of the year to be mentioned in the Kurān (Sūra ii. 185; eastern numbering): “The month of Ramādan (is that) in which the Kurān was sent down”, we are told in connection with the establishment of the fast of Ramādan. The discussion on the origin of this edict cannot yet be considered ended; what has been said in the article Şawm have to be added the researches of F. Goitein, Zur Entstehung des Ramādan, in Isr., xviii. (1929), p. 189 sqq., who in connection with the above mentioned verse of the Kurān calls attention to the parallelism between the mission of Muhammad and the handing of the second tablets of the law to Moses, which according to Jewish tradition took place on the Day of Atonement (‘Ashūrā, the predecessor of Ramādan’) and actually was the cause of the institution. Goitein suggests that the first arrangement to replace the ‘Ashūrā’ [q.v.] was a period of ten days (al-waḥm bi'-dār, Sūra ii. 184), not a whole month, which ran parallel with the ten days of penance of the Jews preceding the Day of Atonement and survives to the present day in the 10 days of the ‘tikāf’ [q.v.].

If we consider further that the Muslim ideas of the Lailat al-Kadr which falls in Ramādan, in which according to Kurān lxixii. 1, the Kurān was sent down, coincide in many points with the Jewish on the Day of Atonement, we must concede a certain degree of probability to Goitein’s suggestions, in spite of the undeniable chronological difficulties (alteration of the length of the period of the fast, within a very short time) and although the final settlement of the term as a whole month is not thereby satisfactorily explained. On the other hand to strengthen Goitein’s position, it ought perhaps to be pointed out that the Lailat al-Burā’ [q.v.] precedes Ramādan in the middle of the preceding month of Sha’bān. The ideas and practices described by Wensinck in the article Şawm, which are associated with this night really to some extent resemble Jewish customs associated with the New Year—which precedes the Day of Atonement by a rather shorter interval than the Lailat al-Burā’—Ramaṭi—Ramādan—that the connection between the latter and the Day of Atonement is thereby strengthened. If we try to connect the so far unexplained word Burā’a with the Hebrew burā’a “creation” and reflect that according to the Jewish idea the world was created on New Year’s Day (numerous references in the liturgy of the festival) we have perhaps a further link in the chain of proof; but first of all the age of the ideas associated with the Lailat al-Burā’a must be ascertained.

The legal regulations connected with the fast of Ramādan are given in the article Şawm [cf. also Tabāwi]. Of important days of the month, al-Bīrūnī, among others, mentions the 6th as birthday of the martyr Ḥusain b. ‘All, the 10th as the day of death of Khadīja, the 17th as the day of the battle of Badr, the 19th as the day of the occupation of Mecca, the 21st as the day of ‘All’s death, and of the Imam ‘Ali al-Ridā’s, the 22nd as birthday of ‘Ali and finally the night of the 27th as Lailat al-Kadr [q.v.].

The name of this night is Kurān; Sūra xcvi.2, is dedicated to it. It is there described as a night “better than a year’s months” in which the angels ascend free from every commission (bi-idn Allah min kull amr) and which means blessing till the appearance of the red of dawn. The revelation of the Kurān, as already mentioned, is expressly located in it. The same night is obviously referred to in Sūra xliv.2 as a “blessed” one. The date, the 27th, is however not absolutely certain, the pious therefore use all the odd nights of the last ten days of Ramādan for good works, as one of them at any rate is the Lailat al-Kadr [cf. ‘Titikīf].

Trade and industry are largely at a standstill during Ramādan, especially when it falls in the hot season. The people are therefore all the more inclined to make up during the night for the deprivations of the day. As sleeping is not forbidden during the fast, they often sleep a part of the day; and the night, in which one may be merry, is given up to pleasures. In particular the nights of Ramādan are the time for public entertainments, the shadow of festivities [cf. Khāvāl-i Zill] and other forms of the theatre.

On the termination of the fast by the “little festival”, cf. ‘Id al-Fitr.

(M. Plessner)
RAMADĀN-O GhULLARĪ, a petty Anatolian dynasty. The earlier history of the Ramadān-Oghullarī is, like that of most of the minor Anatolian principalities (tevâ pigment), wrapped in obscurity. According to tradition, this Turkoman family came in Ergöhrül’s time from Central Asia to Anatolia where they settled in the region of Adana and founded their power. Their territory comprised the districts of Adana, Sis, Aysăs, a part of the territory of the Warskah Turkomans. Tarsūs, etc. The date of the earliest known prince of the dynasty, Mir Ahmad b. Ramadān (see below), is put at 780–815 (1379–1416). Nothing definite is known about the real founder, Ramadān-Beg. The French traveller Bertrand de la Broquière thus characterizes Mir Ahmad b. Ramadān: “lequel estoit tresgant personne d’homme et treshardy et la plus vaillante espée de tous les Turcz et le mieux ferant d’une mache. Et avoit esté fils d’une femme crestienne laquelle l’avoir fait baptiser à la loy gregisique pour luy enlever le flair et le senteur qu’ont ceux qui ne sont point baptisées. Il estoit nebon creolien ne bon sarazin” (cf. Le Voyage d’Omerter de Bertrand de la Broquière, ed. Ch. Schefer, Paris 1892, p. 90 sq.). Mir Ahmad was succeeded by Ibrāhīm Beg (810–830 = 1416–1427). The beginning of his reign is put by some, e.g. Mehmēd Nūzhēt Bey, as early as 810, while its end is put in 819. Khalīl Edhem Bey was the first to propose a new chronology, which is here followed. Ibrāhīm Beg was deposed before his death (831) by his eldest son İzz al-Dīn Ḥamza-Beg, who reigned from 830. He was succeeded by his uncle Mehmēd Beg b. Mir Ahmad and the latter’s brother-‘Ali, who seem to have reigned jointly. Of his successor, his nephew Ayslān Dāʾūd b. Ibrāhīm, we only know that he fell in 885 (1480) in a battle in the vicinity of Dīyarbakr. His body was brought to Aleppo and buried there. The history of the Ramadān-Oghullarī now becomes a little better known. His son and successor, Gharṣ al-Dīn Khalīl, known from a number of inscriptions (cf. Max v. Oppenheim and Max van Berchem, Inschriften aus Syrien, Mesopotamien und Kleinasien, Leipzig 1909, p. 109 sq., Nrs. 141–145 of the years 898, 900, 906, 913) ruled for 34 years with his brother Mahmūd-Beg and died in battle in 916 (1510). The date of his death (beginning of Djamādī I 916 = beginning of Aug. 1510) is known with certainty from his epitaph in Adana, in M. v. Oppenheim and Max van Berchem (op. cit., p. 110, No. 145). His son Piri Mehmēd Paşa, who appears as ruling from 916–976 (1510–1568), distinguished himself as an Ottoman vassal, fighting against the rebels of Tc-el (Anatolia; cf. J. v. Hammer, G. O. R., iii. 71) in May 1528 (Sha‘bān 934) as well as in the civil war between the princes Bāyazid and Selim at Konya (May 1559; cf. J. v. Hammer, G. O. R., iii. 368 sqq.). He died in 972 (1568) in his capital Adana. He had an equal command of Persian and Turkish and composed a Divān. His son Derwīs-Beg, who had been mutezarif of Tarsūs in his father’s life-time became after his death governor (ważīl) of Adana but died young in 986 (1578). He was succeeded by his eldest brother Ibrāhīm Beg, who had previously been sandjak-beyd of ‘Aintāb. He acted as governor at his father’s capital till his death in 1002 (1594). His son Mehmēd Beg was the last dynast of the Ramadān-Oghlu but he can only have had a nominal rule. The family of the Ramadān-Oghlu however has survived to the present day. The following is the genealogical table:

**Ramadān**

1. **Ahmad**

2. Ibrāhīm I

3. Hamza

4. Mehmēd I

5. Daʿūd

6. Khalīl

7. Mahmūd

8. Piri Mehmēd

9. Derwīs

10. İbrahim II

11. Mehmēd II

12. Khalīl

(Franz Binger)
AL-RAMĀDI, whose full name was Aḥū 'Umar (wrongly Aḥū 'Amr) Yūsuf b. Ḥabīn al-Kindī al-Kurṭubī al-Ramādī, poet of Muslim Spain, who lived in the fourth (tenth) century and died early in the fifth (eleventh) century in 403 (1013), on the day of the 'Alawīya or Feast of St. John (June 24), according to Ibn Haiyān (in Ibn Bashkwāl, cf. Biṣb.), in 413 (1022—1023), according to al-Makkiṣī (quoting the same Ibn Haiyān); he was buried in the cemetery of Cordova known as Makkārat Kala'.

The ethnic al-Ramādī is explained in two ways: 1. the poet is said to have come from al-Ramādā, a little town between Alexandria and Barqa; this explanation is to be rejected for al-Ramādā (with gemination of the mim — and this orthography is attested by the geographers who mention the place, e.g. al-Ya'kūbī, al-Bakrī and al-Idrīsī —) would not give an ethnic like al-Ramādī (with one m); 2. the second explanation which derives Ramādī from rāmād: "ordinary ashes" or "ashes for washing", is the only possible one; the poet perhaps in his youth followed the trade of an ash-merchant; in confirmation of this we may call attention to the Romance surname which was originally given him: Aḥū Qamis (wrongly Aḥū Sāḥib in the Yatimāt al-Dahr), i.e. padre centus, "father cinders" or "cinderman".

Ar-Ramādī, a native of Cordova, spent all his life in his native town except for a brief period of exile in Saragossa. His life was dominated by three great factors: his attachment to Aḥū All al-Kalī, his devotion to the cause of the ḫājdīb Aḥū 'l-Ḥasan al-Muṣḥafī and his love for Khalwa. Aḥū 'Ali al-Kalī, summoned from the east to Spain by the Umayyad caliph 'Abd al-Raḥmān III al-Nāṣirī (300—350 = 912—961) had from his arrival in Cordova in 330 (942) no more faithful disciple than al-Ramādī who studied under him. His direction the Kitāb al-Nāwādatīr ("the book of philological rarities"). The young scholar's admiration found expression in a poem which has remained famous (rhyne li, metre kāmil) of which some thirty lines are preserved in the Yatimāt al-Dahr of al-Thālībī and the Muttāḥ al-Anfus of al-Ṭahīb b. Ḥāfṣūn (cf. Biṣb.). It is a poem which gained him the title of Mutanabbī al-Gharb (which had already been given to Ibn 'Hānī al-Andalusī and which was later to be given to Ibn Darrādī al-Kalītī and to Aḥū Thālib 'Abd al-Djabbār). Al-Ramādī studied also under an Andalusian scholar named Aḥū Bakr Yahyā b. Hudajjī al-Kaffī or al-A'mā ("the blind"), of whom we know very little. What we know of his powers, al-Ramādī became laureate to the Umayyad caliph al-Hakam II al-Muṭṭasirī (350—466 = 961—976), then to his son and successor Ḥākim II al-Muḍayyad (366—399 = 976—1009), but his attachment to the cause of the ḫājdīb Aḥū 'l-Ḥasan Djaḍfar b. 'Ubdūn al-Muṣḥafī and his participation in the plot fomented by the envious Djaḍwar to overthrow Ḥākim II and proclaim another caliph under his son Ḥākim brought down upon him the wrath of the great minister al-Maṣrūk Ibn Abī 'Amīr. Thrrown into prison at al-Zahrā', he suffered all sorts of ill-treatment: during his imprisonment, he wrote the most touching verses (including a poem in ḫī, metre fawil, and another in ḥuṭa, metre fawil) and he prepared a poetical work on birds, the description of which concluded with a poem in praise of the heir-presumptive Ḥīghām II. Liberated through the intercession of friends he had to go into exile. He went to Saragossa to the governor 'Abd al-Raḥmān b. Muḥammad al-Tudjībī whose merits he celebrated in a poem in miṣm. Amnestied by al-Maṣrūk he was able to return to Cordova, but on condition that he did not go into society. Finally pardoned, he entered the entourage of the all powerful hājīb as a pensioner (muṣṭaṣīf) and it was in this capacity that he took part in an expedition against Barcelona in 375 (985). During the ṣīnā which was to lead to the collapse of the Umayyad caliphate and the formation of petty independent states ruled by the mūḍāk al-ṭawāfīf, al-Ramādī led a miserable existence and it was in the greatest distress that he died in the early years of the fifth (eleventh) century.

Al-Ramādī became celebrated chiefly for his chaste love for the enigmatic Khalwa (wrongly: Halwa or Hu'lwa) whom he met one Friday in the public gardens of the Banī Marwān on the left bank of the Guadalquivivir at the end of the bridge but was never able to see again. It was Abū Muḥammad Ibn ʿAbd al-Zāhirī, whose ascetic tendencies on this subject are well known, who did most to spread this love-story; but it seems that the memory of Khalwa occupied the heart or mind of the poet only very little; if it still possessed him at Saragossa to the extent of inspiring all the nasīb of the panegyric in honour of the Tudjibī governor, on his return to Cordova, it disappeared completely for we see al-Ramādī henceforth completely overwhelmed by a new passion, the object of which is not a woman but a Mozarab boy to whom the poet gives the name of Yahyā (John) or Nusair (Victor?).

The Dirāwīn of al-Ramādī never seems to have been collected; of his book on birds, Kitāb al-Ta'īr, written in prison, there survives only the Lamiya in which he described the falcon hunting; the more important fragments that have survive have already been mentioned. A pupil of Aḥū 'Ali al-Kalī, al-Ramādī is inclined to imitate the poetry of the east, but after Ibn 'Abd Rabbībi and before 'Ubāda b. Mā al-Samā', he shows a marked fondness for the muwaqkaḥ into the construction of which, he introduced several innovations. In spite of its classical structure, his verse has a very personal character, especially when he calls upon Khalwa or describes his sufferings in the prison at al-Zahrā'. The few lines in which he alludes to the weakness of Ḥīghām II and to his complete domination by his mother Šudīb and by the hājīb al-Maṣrūk, those in which he speaks of Djaḍwar's plot are not without historical interest; finally the information which he gives about Mozarabs (worship and costume) in connection with his favourite enable us to check what Aḥū 'Amīr Ibn Shuhaid says on the same subject and for this reason of some documentary importance.

executed in Rām-Hormuz, but Taβāri, i. 834, says that Mānī was exposed on the “gate of Mānī” at Dūndū-Šāhīr (cf. also al-Birūnī, Chronology, p. 208). The Nestorian bishops of Rām-Hormuz are mentioned in the years 577 and 587 (Marquart, Eränjahr, p. 27, 145). Mukaddasi, p. 414, says that ʿAḍud al-Dawla built a magnificent market near Rām-Hormuz and that the town had a library founded by Ibn Sawwār (according to Schwarz, the son of Sawwār b. ʿAbd Allāh, governor of Bāṣra, who died in 157 = 773), and was a centre of Muʿtazilite teaching. According to Ibn Khurdābdīhī, p. 42, Rām-Hormuz was one of the 11 kūras of Kūzīstān (Kūdāmā, p. 242, and Mukaddasi, p. 407: one of the 7 kūras). Its towns (Mukaddasi, pp. 243, 245; sanabil-ī Ḥaḍrāt (q.v.), Tyruq (f.), Bāzān, Lādh, Ghurāw) (f.), Bābādji, and Kūzāk, all situated in the highlands. To these Vādīt, i. 185, adds Arbuk (with a bridge, 2 farsaksas from Hāwīz). On the other places in the kūra of Rām-Hormuz (Āsak, Bīstān, Sāsān, Tāshān, Īr) see Schwarz, op. cit., p. 341—345. According to Mukaddasi, p. 407, Rām-Hormuz had palm-groves but no sugar-cane plantations (in the sixth century however, Mustawfī, Nuṣḥat-ī Kūlī, p. 111, says that Rām-Hormuz used to produce more sugar than cotton); among the products of Rām-Hormuz (q.v.) mentions silks (ṭiyāb abrīsam) and Dimishkī, p. 119 (transl. p. 153) the very volatile white naphtha which comes out of the rocks. At the present day the Anglo Persian Oil Company possesses deposits above Rām-Hormuz.

V. MI[NORSKY]

Al-Āmārī, whose full name was Ḥasan b. Muḥammad Sharaf al-Dīn, a Persian stylist. No details of his life are known; even the few chronological references that we possess are rather vague. His importance lies in his well known work Anis al-ʿUṣūlā-k, a treatise on the most common poetical figures for describing the different parts of the human body. According to his own statement, the author made up his mind to compile this work while he was in Mārāgha on a visit to the observatory of the famous Naṣīr al-Dīn Tūsī. The book is dedicated to Sultān Abu l-Faḍl Uways Bahādūr (1356—1373). Ikhwān al-Ḥarābīdānī, and according to Ḥādīdī Khlīfā (ed. Flügel, i. 488) was finished in Shawwal 826 (Sept. 1423) —this is in obvious contradiction to chronology for at this date Ḥarābīdānī had belonged to the Timūrid Shāhrukh since 823 (1420). The author further mentions in this work the poet Aḥwādi (d. 738 = 1337) as his contemporary and a certain
Hasan b. Mahmūd Kāshfī (d. 710 = 1300) as his teacher. It may therefore be assumed that Hājdījī Khālīfa’s statement is based on a misunderstanding and that the version was written not later than 1373.

The work is divided into 24 chapters which begin with the hair of the head and end with the feet and deal with the human body from head to foot. Besides this book, which is of great value for the study of classical Persian poetry and was used by the great Turkish commentator Muṣṭafā b. Shaḥbāz Surūrī (d. 909 = 1561) in his Bahr al-Maʿrif, Shāraf al-Dīn Rāmī also prepared a commentary on the well-known work on poetries of Rashīd al-Dīn Waṣwāt, Hādījī al-Sīr (new edition of the Persian text by ‘Abbās Ikhlāsī, Teheran 1930) entitled Hādījī al-Hadījīāt or Sanā’ī al-Badā’ī (Hājdījī Khālīfa, iii. 77), a work called Hulūl al-Muddā’ah of which nothing else is known (Hājdījī Khālīfa, iii. 112) and a Divān, which consisted of qaṣidas, ḵītās and qaṭrins, but as early as Dāwlatshāh’s time it could only be found in the Īrāk, Ashgharbadjān and Fārs. Nothing of all these works has come down to us except the Anis al-ʿUdshāḥā. There is said to be a ḵūstā of Rāmī’s in the Dīwān al-ʿArūs (compiled in 840 = 1438-39) of Shaikh Adhari (d. 886 = 1481-2), which is called the Dīwān of Dāwlatshāh (Dāwlatshāh, Taḏkārat al-ʿArūs, ed. E. Browne, p. 308).

Rāmī Muḥmēd Pasha, an Ottoman grand vizier and poet, was born in 1065 or 1066 (1654) in Eiyūb, a suburb of Stambûl, the son of a certain Hasan Agha. He entered the chancery of the Reʾs Efendi as a probationer (chayva) and through the poet Vissuf Nābī (q.v.) received an appointment as maʿṣūf khāja (i.e. secretary for the expenditure of the palace). In 1095 (1684) he was appointed to the ʿām of the state and in 1102 (1699) he became Reʾs Efendi. He took part in his chief’s journeys and campaigns (against Chios) and on his return to Stambûl became Reʾs khālib (i.e. overseer of the viziers). In 1102 (1699) he was appointed Beylkīdī, i.e. Vice-Chancellor and four years later Reʾs Efendi in place of Abû Bakr, in which office he was succeeded in 1108 (1697) by Kūzūk Muḥmēd ʿĀbā. After the battle of Zenta (Sept. 12, 1697), he became Reʾs Efendi for a second time and was one of the plenipotentiaries at the peace of Carlowitz by the conclusion of which “he put an end to the ravages of the Ten Years War but also for ever to the conquering power of the Ottomans” (J. v. Hammer).

As a reward for his services at the peace negotiations he was appointed a vizier of the dome with 3 horse-tails (rūz ghé) in 1114 (1703) and in Ramaḍān 6, 1114 (Jan. 24, 1703) appointed to the highest office in the kingdom in succession to the grand vizier Dātal-bān Muṣṭafā Pasha. In this office he devoted particular attention to the thorough reform of the civil administration, through the structure in which he saw the security of the state threatened (cf. J. v. Hammer, G. O. R., vii. 64). “By lessening the burden of fortresses on the frontiers in east and west, by raising militia against the rebel Arabs, by securing the pay of the army from the revenues of certain estates, by making aqueducts, by restoring ruined mosques, by taking measures for the safety of the pilgrim caravans and for the security of Asia Minor, by settling Turkmen tribes, by ordering the Jewish cloth manufacturers in Selânik and the Greek silk manufacturers in Brīzā in future to make in their factories all the stuff hitherto imported into Turkey from Europe” (J. v. Hammer), he exercised a most beneficent activity, which however soon aroused envy and hatred, and, especially as Rāmī Muḥmēd Pasha as a man of the pen entirely and not of the sword, was unpopular with the army, particularly the Janissaries, finally was bound to lead to his fall (cf. J. v. Hammer, G. O. R., v. 72). In the great rising in Stambûl which lasted 17 weeks, beginning with the imprisonment of Sulṭān Muṣṭafā and ending with his deposition (9th Rabiʿ ii, 1115 = Aug. 22, 1703), his career came to an end. He was disgraced, but pardoned in the same year and appointed governor, first of Cyprus, then of Egypt (Nov. 1704). His governorship there terminated as unhappily as his grand viziership (cf. J. v. Hammer, G. O. R., vii. 133 succeeding Rāshīd and La Mottraye). In Lujmādā i 1118 (Sept. 1706) he was dismissed and sent to the island of Rhodes, where he died in Dhuʾl-Hijdījā 1119 (March 1707) either under torture or a result of it (cf. J. v. Hammer, G. O. R., vii. 134 quoting the interminutus Talman). Rāmī Muḥmēd Pasha is regarded as a brilliant stylist, as the two collections of his official documents (inshāʾ) containing no less than 1,400 pieces, distinguished by their simple clear and elevated style, amply show (cf. the MSS. in Vienna, Nat. Bibl. Nos. 296 and 297 in G. Flugel, Die arab., pers. u. türk. Hiz., i. 271 sq.). Rāmī Muḥmēd Pasha also left a complete Divān of which specimens are available in the printed Tārīkh of Salīm (cf. F. Babinger, G. O. W., p. 272 sq.: Stambol 1315). His poetical gifts were inherited by his sonʿAbd Allāh Reʾf (cf. Brūsāl Muḥmēd Tāwīr, ʿOthmānī Muʾāṭṭir, ii. 187). His son-in-law was the tāhir of Salīm (q.v.).

(Franz Baringer)

**AL-RAMLĂ, capital of Filāṣṭīn.** 25 miles E. N. E. of Jerusalem. The Umayyad caliphs liked to choose little country towns, usually places in Palestine, to live in rather than Damascus. Muʾāwiyah and after him Marwān and others frequently resided in al-Ṣinnābra on the south bank of the Lake of al-Taḥbārīya, Yaḥyā I in Hawwārin, Abīrāt, Abī al-Malik in al-Dābiya, Walid in Usāis (now Tell Sais S. E. of Damascus) and al-Kāratain and his

In the reign of al-Walid his brother Sulaimān was governor of Fīlaṣṭīn. Stimulated by the examples of ‘Abd al-Malik, the builder of the Kūbat al-Ṣakhr in Jerusalem, and of his brother who had restored the mosque of Damascus (Ya‘qūb, *Muṣafām*, ed. Wustenfeld, ii, 818), he founded the new town of al-Ramla and removed to it the seat of the provincial government which had been in Ludd since the “plague of Amūsā” [q. v.] in 18 (638–639). As caliph also he continued to live in al-Ramla (96–99 = 715–717).

The whole population of Ludd was transferred to the new capital of the ḪAN of Fīlaṣṭīn and the latter fortified, while the city was allowed to fall into ruins. Sulaimān first of all built his palace (fār) then the “house of the dyers” (dūr al-ṣabāḥāqin) which was provided with a huge cistern; at a later date it was confiscated for the use of the Umayyad caliphs and came into the possession of the heir of the Ḫābāsid, Sālīḥ b. ‘Ali b. ‘Abd Allāh. Sulaimān also began to build the mosque and continued it when caliph. It was finished under ‘Omar b. ‘Abd al-Azīz although not on the scale originally intended. The financial management of the building of the palace and of the chief mosque was in the hands of a Christian of Ludd, al-Batrīk b. al-Naka (al-Baladhūrī), ed. de Goeje, p. 143 sq.; var.: Batrīk b. Bakka in Ibn al-Faḳīh, *R.G.A.*, v. 102, and Ibn Batrīk in Ya‘qūb, ii, 818). According to Ya‘qūb (ii, 817) the latter asked the people of Ludd to give him a house near the church, and when they refused, he decided to pull down the church; according to al-Maḏṣīsī (*B.G.A.*, iii 164 sq.), the caliph Hīṣam threatened the people of Ludd that he would destroy their church if they did not hand over the marble columns, which they had intended for a splendid building and concealed. Sulaimān also began to bring a canal called Barada to the new town and to dig wells of fresh water, as it was 12 miles distant from the nearest river, the Abī Ṣufūr (Ya‘qūb, *R.G.A.*, vii, 328). The considerable cost of keeping up the canal was later taken over by the Ḫābāsid Caliphs and at first voted annually but from the time of al-Mu'tasim included as current expenditure in the budget.

The advantages and disadvantages of the new town are vividly described by al-Maḏṣīsī. Rich in fruits, especially figs and palms, good water and all foodstuffs, it combined the advantages of town and country, those of a position in the plain with the proximity of hills and sea, of places of pilgrimage like Jerusalem and coast fortresses. It had a splendid chief mosque, fine ḥanām, comfortable baths, commodious dwellings and broad streets. On the other hand in winter, it was like a muddy island, in summer a sandbank and as it was not on a river the ground was hard and without grass, and the lack of ample running water was the chief defect of this otherwise so favoured town; for the little drinking water in the cisterns was not accessible to the poorer part of the population. The town covered an area of a whole square mile. Its buildings were of fine building stone and brick. The town’s wares were exported chiefly to Egypt.

The chief gates of al-Ramla were: Darb Bit’ al-Askar (called after the al-Askar quarter; cf. Ya‘qūb, iii 674; Sāfī al-Dīn, *Marāji‘*, ii, 258). Darb Maṣjīd ‘Annāba (as it was called, as de Goeje conjectured, from the town elsewhere however called ‘Annāba 4 miles E. of al-Ramla), Darb Bait al-Maḏdīs, Darb Bit’ al (i.e. Bī‘a‘ or Bīlgha‘ or Kārīyat al-Ta‘b, the ancient Kīrat al-Ba‘ala now Abū Qawāh‘), Darb Ludd, Darb Yā‘fā, Darb Māṣr and Darb Dāḏjūn, the latter called after a neighbouring town with a mosque, mainly inhabited by Samaritans (Bī‘a‘ Dagon, now Bait Dāḏjūn).

In the centre of the market-place of al-Ramla was the chief mosque (ṣbī‘a) al-Abyāḍ, the miḥrāb of which was regarded as the largest of all that were known, the pulpit of which was second only to that in Jerusalem and whose splendid minaret was much admired.

Whether there had been an older town on the site of al-Ramla is problematic. The old attempts to identify it with Arimathia, Ramathu or Ramathaim have now been generally abandoned. An ancient *παραμύθιον*, “Camp”, should rather be considered, a place-name particularly frequent in Palestine, which was borne for example by the camp of Jerusalem (Ḥebra, xii, 11, 13; Act. Apost. xxii, 35–xxvii, 35) and bishoprics in Palestine (now Bit’ al-Zara‘a, cf. Féderin in *Gén.*, *Vie de S. Euthyme le Grand*, p. 104–111) and in Ibuq and Abyla (R. Aigrin, art. *Arabes*, in *Dict. d’hist. et de géogr. eccl.*. iii, 1194–1196); for the Egyptian al-Ramla 4 miles N.E. of Alexandria corresponds to an ancient Nicopolis and later Parembole. But the Arabic writers say there was no town previously on this site but only a sandy area after which the town was named (al-Baladhūrī, p. 143 sq. et al.).

The population of al-Ramla was in the time of Ya‘qūb (B.G.A., viii, 327 sq.), a mixture of Arabs and Persians (on the settlement of Persians in Syria cf. al-Kindi, *Governors of Egypt*, ed. Guest, p. 19); the clients were Samaritans.

The great cistern of ‘Uṣayyitī (ʿAnṣiyī) to the N.W. of al-Ramla near the road to Ya‘fā, known as the cistern of St. Helena, has a Kufic inscription of Dhu Ḥijjah 172 (May 789), i.e. of the time of Hārūn al-Raṣīd (van Berchem, *Inscr. arabes de Syrie*, Cairo 1897, p. 4–7; M. de Vogué, *La citerne de Ramla*, in *Comptes rendus de l’Acad. des Insct. et Belles-lettres*, xxxix, 1911, p. 362 sq.–493 sq.).

By the Frankish pilgrims the town is first mentioned in 870 as ‘Ramula’. The Crusaders made it a bishopric. In the 12th century was built the beautiful church of the Crusaders, now the mosque (*Qāmār al-Kabīr* in the east of the town) with its noble Gothic portal, which was later added a very skilfully an inscription of Sulṭān Katbūgha. It also has an inscription, according to which its square tower (now replaced by a round minaret) was built or restored in 714 (1314–1315) by Sulṭān Muḥammad.

The old “white mosque” was restored by Saladin in 587 (1191) and given by Bāhrūs in 666 (1267–1268) two domes, above the minaret and the mihrāb, and the gateway opposite it (Muḍjir al-Dīn, *Biltûk*, p. 418; transl. Sauvage, p. 207; the inscription in van Berchem, *op. cit.*, p. 57–64). The minaret, the so-called “tower of al-Ramla” or “Tower of the 40 martyrs”, was, according to Muḍjir al-Dīn and an inscription over its gateway, rebuilt in
Al-Ramla — Rampur

Shebān 718 (Oct. 1318) (Zwei arabisch Inschriften in Jerusalemer Werte, ixix., 1913, p. 100 sqq.): the mosque as well as the minaret have both been wrongly taken for the work of the Crusaders (cf. against this van Berchem, op. cit., p. 63 sqq.).

Nasîr-i Khushraw who visited al-Ramla in Ramūsān 438 (1047), calls it a large town with high and strong walls of stone and gates of copper; the inhabitants had a receptacle for the collection of rain-water at the door of each house. There was also a large ditch for general use in the middle of the Friday mosque.

An earthquake of Mubarram 15, 425 (Dec. 10, 1605) destroyed a third of the town and its mosque fell into ruins (cf. also Ibn al-Athir, ix. 298).

Most of the public and private buildings were built of marble and adorned with fine sculptures and ornaments. Figs were the chief export of al-Ramla. The name of the province of Filastīn was also given to the capital al-Ramla (Clermont-Ganneau, Recueil d'Arch. Orient., vi. 101).

Saladin in 583 (1187) destroyed the town so that it might never again fall into the hands of the Franks and it remained in ruins (Yākūt, i. 818; Sāfi al-Dīn, Marqājd, i. 483). Ibn Baṭṭūṭa visited it in 756 (1355); he mentions the Ḏumān-i Al-Abayd in which, he was told, 300 prophets were buried. A Latin monastery was founded in 1420 in al-Ramla by Duke Philip the Good, and restored at a later date by Louis XIV.

In 1798 the town was Napoleon's headquarters.

The modern al-Ramla has about 6,500 inhabitants; it has a healthy climate and fertile country round it.

(R. H. Ongmanz)

**Rampur, an Indian state in Rohilkhānd under the political supervision of the government of the United Provinces. It is bounded on the north by the district of Nainī Tal; on the east by Bareilly; on the south by the Bissauilī tāqṣīl of Budān; and on the west by the district of Morādābād.

The early history of Rampur is that of the growth of Rohilla power in Rohilkhānd. After the establishment of Muslim rule in India large bodies of Afgān or Pathāns settled down in the country. So powerful did they become that they were twice able to establish their rule in northern India, under the Lodis [q. v.] in the second half of the 15th century, and under the Sūrs [q. v.] in the time of Shīr Shāh. After the death of Awrangzīb and with the decline of the Moghul empire Afgān settlements increased until in the words of the Sīyar al-Mulūk al-Khārjīn they seemed to shoot up out of the ground like so many blades of grass. The name Rohilla was applied to those Afgāns who settled in what is now known as Rohilkhānd.

The real founders of Rohilla power were an Afgān adventurer, named Dāūd Khān, who arrived in India immediately after the death of Awrangzīb, and his adopted son, 'Ali Muḥammad Khān, who succeeded him as leader of a band of mercenary troops. It was during the lifetime of 'Ali Muḥammad Khān that his possessions came to be called Rohilkhānd or the land of the Rohillas. In course of time 'Ali Muḥammad Khān became so powerful that he refused any longer to pay his revenues to the central government, in which course he was encouraged by the anarchy consequent upon the invasion of Nādir Shāh [q. v.]. The growth of his power so alarmed Sāfīr Dāng of Oudh [see Oudh] that he persuaded the emperor to send an expedition against him, as a result of which 'Ali Muḥammad Khān surrendered to the imperial forces and was taken prisoner to Dihlī. After a time he was pardoned and appointed governor of Surhind. In 1748, according to the Gultāns-i Rhāmat, he was transferred to Rohilkhānd, but it seems more probable that he took advantage of the invasion of Aḥmad Shāh Durrānī [q. v.] to recover his former possessions. Two factors contributed to the growth of Rohilla power: the weakness of the central government and the fact that they were able to take advantage of the internal struggles between the various Rajput chiefs and zamindārs of Rohilkhānd.

'Ali Muḥammad Khān left six sons, but the absence of the two eldest in Afgānistan, combined with the extreme youth of the other four, meant that all real power remained in the hands of a group of Rohilla vārdārs, the most important of whom were Hāfīz Raḥmat Khān, and Dūnd Khān. This naturally produced intrigues and disputes and eventually weakened the Rohilla power.

In 1771 the Mārāthas turned their attention to the conquest of Rohilkhānd, whereupon the Rohillas applied for aid to Shudžā al-Dawla, the nawāb-wazīr of Oudh. It was agreed that Shudžā al-Dawla should receive forty laks of rupees for his services (Alteison, i. 6-7), but the Rohillas later refused to abide by their pecuniary engagements. In accordance with his promise at the Conference of Benares in 1773, Warren Hastings agreed to assist the nawāb-wazīr in expelling the Rohillas from Rohilkhānd, for which he was to receive forty laks of rupees. On April 23, 1774, the Rohillas were defeated and their leader, Hāfīz Raḥmat Khān, slain. At the end of this war Fāsulālah Khān, a son of 'Ali Muḥammad Khān, concluded a treaty with Shudžā al-Dawla at Lal-dang (India Office MSS., Bengal Secret Consultations, October 31, 1774; see also extracts from the Persian interpreter's journal, February 14, 1775).

By this treaty Fāsulālah Khān received a dāng consisting of Rampur and other districts with a
revenue estimated at approximately fifteen lakhs of rupees. To prevent him from becoming a menace to Oudh he was not allowed to retain in his service more than 5,000 troops. After the death of Shuddha al-Dawla, in 1775, Faizullah Khan was informed that his engagements with the late nawab-wazir still continued in force with his son, Asaf al-Dawla (Bengal Secret Consultations, April 17, 1775). Draft correspondence with the Country Powers, No. 34).

In 1780 the English Company needed additional troops and Hastings urged Asaf al-Dawla to demand from Faizullah Khan the 5,000 horses he had engaged to supply by treaty. This demand for cavalry was an unwarrantable interpretation of the Treaty of Laidang for which no justification has ever been attempted. In 1781 Hastings empowered Asaf al-Dawla to resume Faizullah Khan’s jagir but fortunately this order was never carried out, and it was eventually decided to solve the problem by means of a fresh agreement whereby the obligation to provide troops for the nawab-wazir’s service was commuted under the Company’s guarantee to a cash payment of fifteen lakhs of rupees. In 1801, on the cession of Kohilkhând to the British, Faizullah Khan’s descendants were continued in their possessions. For his services in the Mutiny of 1857 Muhammad Yusuf Ali Khan, the ruler of Râmpôr, received a grant of land and was assured by sanad that, on the failure of natural heirs, any succession in his state, which might be legitimate according to Muhammadan law, would be upheld by the Government of India.

Modern Râmpôr has an area of 893 square miles and supports a population of 452,223, of whom 217,297 are Muhammadans (1931 Census Report). It is divided for administrative purposes into six tahsilis: the Huqor, Shakhbazar, Mitak, Bilsupur, Suar and Tanda (Administration Report, 1932-1933). Its rulers are patrons of Oriental learning. The celebrated Madrasa ‘Aliya, an Arabic college, which is maintained from state funds, attracts students from all parts of India and even from Central Asia. Râmpôr city, which has a population of 74,080, possesses a fine library containing an exceptionally valuable collection of manuscripts. Almost every Pathan clan is represented in modern Râmpôr, the most numerous being the Yûsufzais and Orzkais. There are also large numbers of Khattaks, Bunerwals, Muhammadzais, and Afridis.

RANGIN. Several Indian poets have used this taqâllûs. The Râyîd al-wasâf of Dhu ‘l-Fikr ‘Ali, biographies of Indian poets who wrote in Persian, and the Tadkhira of Yusuf ‘Ali Khan (analysed by Spranger, A Catalogue of the Arabic, Persian and Hindustani Miss. of the King of Oudh, i. 168 and 280) mention live of them. The first, a native of Kashimir, lived in Dihli in the reign of Muhammad Shah (1719–1748); his gazeyes were sung by the dancing-girls. The most celebrated, however, was Sa’âdat Vâr Khân of Dihli. His father, Tahtâsî Beg Khân Târânî, came to India with Nadir Shah and settled in Dihli where he attained the rank of khaft-basârî and the title of Muâshkîm al-Dawla. In his turn, Sa’âdat Vâr Khân entered the service of Mirzâ Sulaimân Shikhu, son of the emperor Shâh ‘Alam, who lived in Lucknow. He was a good horseman and able soldier; for a time he commanded a part of the artillery of the Nizâm of Haidarâbâd but he gave up this post to go into business. He was in his youth a friend of the poet Inshâ in Lucknow; a pupil of the poet Muhammad Hotim of Dihli (cf. Ram Babu Saksena, A History of Urdu Literature, p. 48; Spranger, op. cit., p. 233), he afterwards submitted all his poems to the criticism of Nîshâr (cf. Spranger, p. 273), then of Muṣafîr Saksena, p. 90; he died in 1251 (1835) aged eighty (or a year later; cf. Garcin de Tassy). — The following are his works in Urdu: Malhotnâ Dâfsir, a poem of romantic adventures (1213 = 1798); Lîjdî-i Rângin, a makhânwâ of fables and anecdotes (Lucknow 1847 and 1870); another makhânwâ of anecdotes: Mâghar al-’Aṣârîb or Ghârâb al-Maṣżûr (Ith. Agra and Lucknow); four divâns collectively known as Naw Katan (the Nine Jewels), the two first lyrical, the third humorous and partly in râkhti (language peculiar to women), the fourth in this same language with a preface by Rângin explaining the principal words (on the development of râkhti and Rângin’s skill in this licentious genre, cf. the article Urdu in vol. iv., p. 1026), 1. i–11, and Saksena, op. cit., p. 94); in prose treatise on horsemen (Fa’arâ-nâm, 1210 = 1755; several times edited); a collection of critical observations on a number of poets, entitled Majdîl-i Rângin. In Persian (if the work is really his; cf. Spranger, op. cit., p. 54, No. 462), Rângin under the title Mîhr u-Mâh, sang of the adventure of a son of a saiyid and of a daughter of a jeweller, based on an incident that occurred in Dihli in the reign of Djahangir (cf. Gr. I. Ph., ii. 254).

RANGOON, a city in the Pegu division of Burma lying on both sides of the Hlaing river at its point of junction with the Pegu river and the Pazundaung creek, twenty-one miles from the sea.

Legend, not entirely undocumented, relates that the great pagoda at Rangoon (Mon, Kyak Lagun; Burmese, Shwe Dagon) was founded during the lifetime of the Buddha and was repaired by the emperor Anpo (J. B. R. S., xxiv. 4 and 20).

History proper begins with the establishment of Pegu as the capital of a Mon kingdom in 1369.
A convenient port was required for this kingdom. Bassein, which had been the chief port of Burma in the early middle ages, was too distant and too difficult to control. Martaban on the Gulf of Sittang was nearer but had no good river connection with Pegu. It was natural, therefore, that the Rangoon or Hlaing river, of which the Pegu river is a tributary, should come into prominence as a line of approach for over-seas trade. Syriam, to the southeast of Dagon at the mouth of the Pegu river, and Dhalá, now part of Rangoon on the opposite bank of the Hlaing, were the chief ports. But the Shwe Dagon pagoda standing on the last spur of the Pegu Yomas was a landmark to shipping coming up the river and was chosen by a succession of kings for the exercise of their petty.

An inscription on the Dagon pagoda hill, engraved by order of King Dhammazedi in 1845 A.D., records additions to the pagoda by his royal predecessors for a century back, as well as by himself (J. B. R. S., xxiv. 8). Similar works of merit by subsequent kings are recorded in the histories (by this period fairly reliable) culminating in the rebuilding of the pagoda by King Bay in Naung after it had been damaged by an earthquake in 1568 A.D. There are also frequent references by early travellers, such as Ferdinand Mendez Pinto, Caesar Frederick, and Gasparo Balbi to Dagon and its celebrated pagoda.

It was the customs revenue of the Rangoon river that financed the Portuguese adventurer de Brito, who rose to power in Syriam between 1660 and 1612. Later in the xviith century the Dutch, French and English had time to time maintained trading stations at Syriam.

The capital was transferred from Pegu to Ava in 1635 and royal authority gradually declined, but even the weakest kings contrived to keep control of the Irrawaddy and the now important customs station of Syriam. With the seizure of Syriam by the Pegu rebels in 1740 the kingdom of Ava, deprived of its revenues, necessarily came to an end.

The recovery of Syriam was one of the first objects of Alaungpaya, the founder of the dynasty which ended with King Thibaw. His siege operations were for some time unsuccessful and he had to be content with the capture of Dagon in 1755. It is recorded that as he had been successful over all his enemies (yan okon) he changed the name of the town to Yangon (Rangoon). Syriam fell in 1756 and was destroyed. A governor was appointed at Rangoon, which now replaced Syriam as the principal sea-port of Burma.

The policy of the early kings of the Alaungpaya dynasty was to encourage foreign trade. A British factory was established at Rangoon and maintained till 1782. Parsi, Armenian and Muslim traders settled here and flourished. But with the weakening of the local government the exactions of the local officials increased and constituted a serious discouragement to commerce. Symes describes Rangoon, as a flourishing port in 1795 and estimates its population at 30,000 (p. 214).

Rangoon was first captured by the British in 1824 during the first Burmese war but was evacuated in accordance with the terms of the Treaty of Yandabo at the end of the war. According to the Kon-baung set Maha-yazawangji (vol. iii., p. 15), a Burmese history of the Alaungpaya dynasty, King Tharawaddy visited Rangoon in 1841 (1205 B.E.) and founded a new town south and west of the Shwe Dagon pagoda, to which the population of the old town on the banks of the river was ordered to remove. The order was not at once obeyed, but, by the outbreak of the second Burmese war in 1852, the transfer of the population was pretty complete and the British government was unimpeded in the measures, which it lost no time in undertaking, for the reclamation and lay-out of the riverine area. In the space of three years Rangoon rose from a squalid collection of huts into a thriving and populous town. [For improvements to Rangoon and development of Pegu, see Kythe's Early Past and Present, ii., appendix G). To-day it is the capital of Burma and has a population of 400,415, of whom 70,791 are Muhammadans (1931 Census Report).

(C. COLLIN DAVIES)

RAPAK (Jav.; Ar. raf') is a technical term used among the Javanesse, in this one case only, for the charge made by the wife, at the court for matters of religion, that the husband has not fulfilled the obligations which he took upon himself at the t'iv'ik of talâk [see TALÂK]. These obligations are of a varied and changing nature. Among the conditions the following always occurs: "If the man has been absent a certain time on land or (longer) over seas" i.e. without having transmitted nafaqa [q.v.] to his wife. A clause that is never omitted is the following: "If the wife is not content with this". She is therefore at liberty to be quite satisfied with the husband's non-fulfilment of his vows, without taking steps for a divorce. The work of the court is only to ascertain the fulfilment of the condition and the arising of talâk. As above, the talâk is still entered in a register. — It is evident that this procedure guarantees the integrity of the law otherwise endangered.

(R. A. KERN)

RAS AL-'AIN ('AIN WARDA), a town in al-'Alîjizra on the Khâbûr. In ancient times it was already known as Resain-Theodosiopolis (Netitia dignitatum, or. xxxvi. 20) or P'ousa (Steph. Byz.), Syriac Râf 'Ainâ. On account of its position at the sources of the Khâbûr it has been identified with the road-station Fons Scabara of the Tabula Peutingeriana (fons Chabura in Pliny, Nat. hist., xxxi. 37; xxxii. 16) (E. Herfeld, Reise im Empiriat-
u. Tigrio-Gebiet, i. 191; A. Poidebard, La Traite de Rome dans le duché de Syrie, p. 151 sq.). According to Ioannes Malalas (Bonn, p. 345 sq.) in whom the form Πανκρατία is probably due to a confusion with the Syrian Kaphaneia, the town in 383 (according to the Edessene Chronik, ed. Haltert, in Texte und Untersuch., 7. Gesch. d. altchristl. Literatur, 1841, p. 102, 149, No. 27, 1) as early as 692 Sel. = 380–381) received from Theodosius I city rights and the name Theodosiopolis, a name borne also by the Armenian town of Karin (Erzrūm) probably from the time of Theodosius II. As its new name was generally used without any distinguishing epithet, it is sometimes difficult to distinguish which of the two towns is intended. For example the siege of Theodosiopolis by Bahram V Göur in 421 (Theodoret, Hist. eccl., v. 37, 2) which Weisbach (Paulus-Wissowa, K. E., v. A, p. 1925, s. v. Theodosiopolis, No. 2) refers to the Armenian town, is told by Michael Syrus (transl. Chabot, ii. 13 = Barhebr. Chron. syr., ed. Bedjan, p. 70) of Rās ʿAmān; the Syrian chronicler (Mich. Syr., ii. 372; Barhebraeus, Chron. syr., p. 92) further records that Khosrow II gave back to the Byzantines Dārā and Rās ʿAmān, while the other sources mention only Dārā and Martyropolis in addition to Armenia. The Persian general Adharnasian thrice (578 and 580) destroyed the city of this town (Mich. Syr., ii. 322 sq.). In the reign of Phocas the Persians took Rās ʿAmān from the Byzantines (The Chronological Canon of James of Edessa, transl. Brooks in Z. D. M. G., i., 1899, p. 323, No. 284). In the year 19 (640) 'Īyād b. Ǧīhān was shortly after the participation of Oshoehne marched against the province of Mesopotamia and by ʿOmar's orders sent ʿUmar b. Saʿd against the town of ʿAin Warda or Rās al-ʿAin, which was besieged and stormed by him (al-Baladhuri, ed. de Goeje, p. 175–177). When a portion of the town had abandoned it, the Muslims confiscated their property. Among the rebels who rose against the caliph ʿAbd al-Malik about 700 was ʿUmar b. Ḥuṣab of Rās al-ʿAin (Abū ʿArād), Kīrāb al-ʿĀgbīl, Ḫūra; xx. 127; Ibn al-ʿĀbir, ed. Tarnitz, iv. 254 sq.; Mich. Syr., ii. 469; Barhebraeus, Chron. syr., ed. Bedjan, p. 111). In the reign of Māmūn, Ḥubab took the town in 1125 Sel. (814 a.d.) (Mich. Syr., iii. 27; Barhebraeus, op. cit., p. 137). The Jacobite patriarch Yūḥannān III died on Dec. 3, 873 in Rās ʿAmān (Mich. Syr., iii. 116; Barhebraeus, Chron. eccl., ed. Abboeos-Lamy, i., Lyons 1872, coll. 357). After their campaign against Dārā and Ṣafīb (942 a.d.) the Byzantines in 943 took Rās al-ʿAin, plundered it and carried off many prisoners (Ibn al-ʿĀbir, viii. 312). A man from Rās al-ʿAin, ʿAlmād b. al-Ḥusayn ʿAṣāf Tagḥībī, called al-ʿAṣāf, disguised as a dervish, in 935 (1005) with a body of Arabs made a raid into Byzantine territory as far as Ṣuḫarāz arid Maḥrūz near Ṣuḫarāz but was driven back by thePartucios Blāhās. The governor Nicephorus Uronos in the same year undertook a punitive expedition to the region of Ṣuḫarāz, defeated the Bāb Nūmār and Kīlāb and had al-ʿAṣāf thrown into prison by Luʾluʾ, lord of Ḥalab in 397 (1007) (Yahyā b. ʿAbd al-ʿAntākī, in Patrol. Orient., xxiii., 1932, p. 466 sq.; Georg. Kedren-Skytiz., Bonn, ii., 454, 81; Barhebraeus, Chron. syr., ed. Bedjan, p. 229). About the year 523 (1129) the Franks were lords of the whole of Syria and Dīyār Mūjiʿār and threatened Amid, Nisibin and Rās al-ʿAin. The latter was taken by Joscelin and a large part of the Arab population killed and the remainder taken prisoners (Mich. Syr., ii. 228; Barhebr., Chron. syr., ed. Bedjan, p. 289). But the Franks cannot have held the town for very long.

Saʿf al-Dīn of Mawṣīl and ʿĪz al-Dīn Masʿūd of Ḥalab in 570 (1174–1175) attacked Ṣaḥār al-Dīn and besieged Rās al-ʿAin but were soon afterwards defeated by him at Kaṭrūn Ḥamā. In 581 (1185–1186) Saladin crossed the Euphrates and marched via ʿAbd al-ʿAin and Dārā to Ḥalab on the Tigris. His son al-Mustāfī in 597 (1200–1201) received from al-ʿĀlid the towns of Samaṣīt, Sarāḏī, Rās al-ʿAin and Dūmānīn; when he then marched on Damascus, Nūr al-Dīn of Mawṣīl and Kūṭ al-Dīn Muḥammad of Senādīr again took the Djazīra from him but fell ill in Rās al-ʿAin in the heat of summer and concluded peace again. In 599 (1202–1203) al-ʿĀlid took from al-Mustāfī the towns of Sarāḏī, Rās al-ʿAin and Dūmānīn (other fortresses also are mentioned). When the Kurṭī (Georgians) who had advanced as far as Ǧīḥāt in 609 (1210–1210) learned that al-ʿĀlid had reached Rās al-ʿAin on his way against them, they withdrew (Kamāl al-Dīn, transl. Blochet, in R. O. L., vi. 46). Malik al-Asḥāfī, who had defeated Ibn al-Mashṭūh in 616 (1219–1220) forgave him for rebelling and gave him Rās al-ʿAin as a fief (Kamāl al-Dīn, op. cit., p. 61; according to Barhebraeus, Chron. syr., p. 439, however, Ibn al-Mashṭūh died in prison in Ḧarrān). Saladin's nephew al-ʿĀṣfīr in 617 (1220–1221) was fighting against the lord of Mārdīn. The lord of Amidt made peace between them, when Rās al-ʿAin was ceded to al-ʿĀṣfīr, Muwazzar and the district of Ǧubakhtān (around Dūnaisīr) to the lord of Amidt. In exchange for Damascus, al-Asḥāfī, in 626 (1229) gave his brother al-Ḵāmil the towns of al-Ruḥā, Ḥarrān, al-Raḵṣā, Sarāḏī, Rās al-ʿAin, Muwazzar and Dūmāīn (Kamāl al-Dīn, in R. O. L., vii.; Barhebraeus, Chron. syr., p. 458) who occupied them in 634 (1236–1237) (Kamāl al-Dīn, op. cit., p. 92). After the defeat of the Khwārizmīs at Dīǧab al-Daulamūn near al-Ruḥā, the army of Ḥalab in 638 (1240–1241) took Ḥarrān, al-Ruḥā, Rās al-ʿAin, Dūmāīn, al-Muważzur, al-Raḵṣā and the district belonging to it (Kamāl al-Dīn, in R. O. L., vi. 12). But in 639 (1241–1242) the Khwārizmīs, who had made an alliance with al-Malik al-Muṣaffar of Māriyāḏīrīn, returned to Rās al-ʿAin, where the inhabitants and the garrison, including a number of Frankish archers and crossbowmen, offered resistance. An arrangement was made by which they were admitted to the town by the inhabitants, whose lives were promised them, and captured the garrison. When al-Malik al-Manṣūr had returned to Ḥarrān and Muṣaffar had retired to Māriyāḏīrīn with the Khwārizmīs, they sent their prisoners back (Kamāl al-Dīn, in R. O. L., vi. 14). In the same year also the Tatars came to Rās al-ʿAin (ibid., p. 15). When the Khwārizmīs and Turkmens raided al-Djazīra, the lord of Ḥalab under the emir Djamāl al-Dawla in Dūnāmūlī II 640 (1242–1243) went out against them and the two armies encamped opposite each other near Rās al-ʿAin. The Khwārizmīs combined with the lord of Mārdīn and finally a peace was made by which Rās al-ʿAin was given to the Ortōqīd ruler of Mārdīn (Kamāl al-Dīn, in R. O. L., vi. 19).
In a Muhammadan cemetery in the North of Râs al-'Ain, M. von Oppenheim found an inscription of the year 717 (1317–1318). The Syrian chroniclers mention Rêsh 'Ain as a Jacobite bishopric (11 bishops between 793 and 1199 are given in Mich. Syr., iii. 502) in which a synod was held in 684 (Barhebraeus, Chron. eccI., i. 287). Towards the end of the sixth century the town was sacked by Timûr.

Râs al-'Ain is built at a spot where a number of copious, in part sulphurous, springs burst forth, which form the real "main source" of the Khabûr (al-Dimashqî, ed. Mehrein, p. 191). The Wadî al-'Urdjîb, which has not much water in it and starts further north in the region of Wîrûbêhîr, and which may be regarded as the upper course of the Khabûr, only after receiving the waters from the springs of Râs al-'Ain becomes a regular river, known from that point as the Khabûr. According to M. von Oppenheim (cf. his map in Petrie and Maitland, 1911, ii. pl. 19), the springs at Râs al-'Ain are called Ain al-Hasan, Ain al-Kebîr, and Ain al-Zarkûz; according to Taylor (J.R.A.S., xxviii. 349, note) "Ain al-Bâjdâ" and "Ain al-Hasan are the most important; he also gives the names of 10 springs in the N.E. and 5 in the S. of the new town.

The Arab geographers talk of 360, i.e. a very large number of springs, the abundance of water from which makes the vicinity of the town a blooming garden. One of these springs, "Ain al-Zâhîriya, was said to be bottomless. According to Ibn Hawâšel Râs al-'Ain was a fortified town with many gardens and mills; at the principal spring there was according to al-Makdisi a lake as clear as crystal. Ibn Rusta (B.G.A., vii. 106) mentions Râs al-'Ain, Karkîsîya, and al-Rakkâ and as districts of al-Djazira. Ibn Djibarîn in 580 (1184–1185) saw two Friday mosques, schools and baths in Râs al-'Ain on the bank of the Khabûr. According to Hamd Allah al-Mastuflî (xivth century) the walls had a circumference of 5,000 paces; among the rich products of Râs al-'Ain, he mentions cotton, corn, and grapes. The historical romance Fathûdîn Râbi' of "Ardîyûr Banû (xivth century) wrongly ascribed to al-Wâkû, which contains much valuable geographical information, mentions at Râs al-'Ain a plain of Muthakhab and a Murdj al-Tir (var. al-Durî); it also mentions a Nestorian church in the town and several gates (in the translation by B. G. Niebuhr and A. D. Mordtmann, Schriften der Akad. von Hamburg, i. part iii., Hamburg 1847, p. 76, 87: the "gate of Istacharem in the east and the "Mukthaius or gate of Chabur" not precisely located. I have not been able to see the Arabic text of Psa-Wâkîdî, ed. Ewald, (Gottingen 1827)."

Râs al-'Ain were the Jacobite monasteries of Bîth Tirai and Spekoulos (speculâr; Ps.-Zacharias Rhet., viii. 4, trans. Ahrens-Krüger, p. 157; so also for Asphulos in Mich. Syr., iii. 50, 55, cf. ii. 513, note 6; Saphyllos in Mich. Syr. iii. 121, 449, 462; Barhebraeus, Chron. eccI., ed. AbboIlos-Lamy, i. 281 sq.; Soophelis, ed. 397 sq. probably so to be read throughout)."

(E. Hönigmann)

On the 2nd Rabi‘ I, 513 (July 13, 1119) the caliph Al-Mustâshid [q.v.] had homage paid to his twelve-year-old son Abû DJâ'far al-Mânsîr as the heir-apparent and in Ðubu l-Kadhâba 529 (Aug.– Sept. 1135) the latter was acclaimed caliph under the name Al-Râshid bi 'llâh. When the Saljuq Sultan Mas'ûd b. Muhammân [q.v.] soon afterwards demanded 400,000 dinars from him, Al-Râshid refused, because, as he said, he had no money. Mas'ûd's envoy then attempted to search the caliph's palace and seize the money for his forces; but the resided the Sultan's troops were scattered and his palace plundered. Several emirs also withdrew their homage from the sultan. His nephew, Dâwûd b. Ma'âtnûd, advanced from Aḏâbâr and reached it in the beginning of Safar 530 (Nov. 1135). In the meanwhile the number of the caliphs supporters increased. He was joined among others by the Atâbeg of al-Mawjîl 'Imâd al-Din Zengî [q.v.] and Dâwûd was proclaimed sultan in Baghêdîd. On hearing this Mas'ûd prepared for war, advanced on Baghêdîd and laid siege to it; he did not succeed in taking it, so after some fifty days he withdrew to Nahrawân [q.v.] and then went to Hamadân [q.v.].Toronto, governor of Wâsît, then appeared and placed a sufficient number of boats at his disposal so that he was able to cross the Tigris and occupy the western bank. The result was that the allies separated. Dâwûd returned to Aḏâbâr and Zengî with the caliph to al-Mawjîl, while Mas'ûd in the middle of Ðubu l-Kadhâba 530 (Aug. 1136) entered the ancient city of the caliphs, where he forbade looting and other excesses and restored order. He then summoned an assembly of judges and lensmen who declared the fugitive caliph unworthy of the throne. The latter was accused among other things of having broken his oath to the Sultan; he was said to have solemnly promised Mas'ûd never to take up arms against him nor to leave the capital; he was also accused of other crimes. In his stead, his uncle Abû 'Abd Allah Muhammân Al-Muktafî b. Al-Mustâshîr [q.v.] was appointed commander of the faithful.

The Encyclopaedia of Islam, III.
Al-Rašid however did not stay long in al-Mawsīl but went to Adharbājān where he joined Dāwūd. Several emirs, dissatisfied with Māsūd, also made common cause with Dāwūd with the object of restoring al-Rašid to the throne; the latter however took no part in the military operations [see also the article Māsūd]. On Ramaḍān 25 or 26, 532 (June 6 or 7, 1138) the former caliph, who had not quite recovered from an illness, was murdered by Assassins near Isfāhān.

(K. V. Zettersten)

**Rašīd, Mehmed**, an Ottoman imperial historiographer, belonged to Stambul, where he was born as the son of the Kaḍī Mūlī Mustafā, a native of Malātiya. He completed his studies in his native city where he was appointed official historiographer (waqāʾīt muwāṣ, q.v.) in 1126 (1714). He held this office till his appointment as Kaḍī at Aleppo in 1134 (1720). Later on he went as ambassador to Persia with the rank of Kaḍī of Mecca, became in Şahrāb 1142 (Feb. 1730) Kaḍī of Stambul, was dismissed a few months later and on 1st Djamād 1147 (Oct. 1734) appointed ʿāshir of Anatolia. He died on 18th Shawr 1148 (July 10, 1735) in Stambul (cf. Subhi; Taʾrīkh, fol. 13, 22, 66 (remarkably brief) and was buried opposite the mosque of Atfālāzāde in the Kāra Gurnaș Street. On his tombstone see Braşalî Mehmed Tāhir, ʿOthmānî Miʾellεfîi, iii. 55 note.

Mehmed Rašīd in continuation of Naʾmā [q.v.] wrote a history of the Ottoman empire from 1071 (1660) to 1134 (1721) usually called briefly Taʾrīkh-i Rašīd (cf. Hāṣid Maḥfīls, No. 14, 1526) which is the authoritative source for this period. His successor in the office of imperial historiographer was Ismāʿīl ʿAṣim, known as ʿUkūl Ceiling-žade (cf. Rašīd, Taʾrīkh, iii., fol. 114).

In addition to numerous MSS. (cf. F. Babinger, G.O.W., p. 259 to which we have to add ʿUṣūla, No. 667—668 [Rašīd’s autograph] and Stambul Lāla ʿĀmilī, No. 378) Rašīd’s history has been twice printed (folio, Stambul 1153; 4 vols.; octavo, 6 vols., Stambul 1282; cf. thereon ʃ. 4., 1868, i. 477). Portions have been translated by M. Norberg, Türkische rikets annaler, Hernossand 1822, ii. 635—1079, and J. S. Sekowska, Collectanea d. Deisipovw Tureckhi, ii., Warsaw 1825, p. 1—208.

**Bibliography:** cf. F. Babinger, G.O.W., p. 269 sq. (Franz Babinger)

**Al-Rašīd.** [See ‘Abd al-Wahhāb, Ḥarūn.]

**Al-Rašīd (Mawla) b. al-Sharīf b. ‘Ali b. Mūḥammad b. Allī b. ʿAlī al-Sulṭān of Morocco and the real founder of the dynasty which still rules the Shaṭṭān empire. He was born in 1040 (1630—1631) in Taṭfīlāt [q.v.] in the south of Morocco, where his ancestors, the Ḥasanī Shaṭṭānis (Sharīfī [q.v.] of Sidjīmāṣā [q.v.], had founded a flourishing ʿāmilī [q.v.] and gradually acquired a fairly considerable political influence, which increased with the decline of the ʿAṣāʾirī [q.v.] dynasty.

Morocco being at this time plunged into anarchy, the Sharīfī of Taṭfīlāt were able rapidly to become masters of the great tracts of steppe-like country to the north of the cordon of oases which formed their appanage. The eldest son of the chief of the ʿāmilī, Mawla Maḥmūd, having successfully fought the marabout of the ʿāmilī of Ilīh in al-Ṭāṭārwalāt (S. W. of Morocco), ‘Alī Abū Ḥāṣin, who had political ambitions of his own, assumed a royal title in 1050 (1646). He did not however yet succeed in crushing the power of the marabouts of the ʿāmilī of al-Dīlāʾ in central Morocco; he had to be content, after a very brief occupation of Tāzā and Fās in 1650, with effective sovereignty over eastern Morocco only.

On the death of Mawla al-Sharīf in 1069 (1659) his son, Mawla al-Rašīd, not trusting his brother, Mawla Maḥmūd, left the ancestral ʿāmilī for the rival ʿāmilī of al-Dīlāʾ where, in spite of a superficially warm welcome, he was soon given to hint to go; he proceeded to Azīr, then to Fās, which, regarded as an undesirable by the lord of the city, the adventurer al-Durāṣī, he was not allowed to enter. He next went to western Morocco, and very soon succeeded in gaining a large number of followers, particularly, in the important tribe of the Banū ʿIznāṣīn (Beni Snassen), the Shaṭṭān al-Lawātī, a religious dignitary, then of great influence. At the same time he attacked a very rich Jew, who played the regular lord and lived in the mountains of the Banū ʿIznāṣīn, at the little town called Dar Ibn Maḥfīl; al-Rašīd slew him and seized his wealth. This coup vividly impressed the imagination of the people of the district and was to give rise, as P. de Ceuval has brilliantly shown, to a legend, the memory of which still survives in the annual festival which follows the election of the “ṣulṭān of the ʿāmilī” at Fās. Mawla al-Rašīd by this murder not only acquired considerable material resources, but also a real ascendancy over the people of the neighbourhood. In 1075 (1664) the large tribe of the Angād rallied to his authority, and he set up in Uṣūla [q.v.] as a regular ruler. On the news of the proclamation of al-Rašīd, his brother Mawla Maḥmūd, much disturbed, hurried from Taṭfīlāt to eastern Morocco; his troops were met by those of al-Rašīd, and Mawla Maḥmūd having been killed early in the battle, his men then went over to the surviving prince. Thenceforth Mawla al-Rašīd went on from success to success.

He very soon seized Tāzā without difficulty, and directly threatened Stambul, but he first of all took care to secure his power solidly at Taṭfīlāt, the cradle of his line, and added to his lands the mountains of the Rif [q.v.] on the shores of the Mediterranean, which were then ruled by an enterprising individual named Abū Ṭāhir Muḥammad Abū Allāh Aʾarrāṣ. This shaikh had made an agreement, first with the English and then with the French, for the establishment of factories on the Rif bay of Alhucemas (transcribed in the documents of the period as Albourême). Mawla al-Rašīd deprived him of the Rif in March 1666, just when the Maréchaüs Roland Fréjus, having obtained from the King of France the privilege of trading in the Rif, was landing on the Moroccan coast. Fréjus then went to see Mawla al-Rašīd at Tāzā, but the negotiations into which he endeavoured to enter with the shaikh soon collapsed.

Al-Rašīd without delay turned his attention to...
the capital of northern Morocco, Fas, which still withstood his authority. He laid siege to it and took it by storm on the 3rd Dhu 'l-Hijjah 1076 (June 6, 1666); the adventurer in command there, al-Duraidi, took to flight. Al-Rashid took vigorous steps to punish certain of the notables of the town, and the people proclaimed him sultan. He was at the same time able to rally to his side the important group of Idrisid Shorfa in the capital.

The years that followed were used by Mawli al-Rashid to extend his possessions towards west and south. He first made an expedition against the Gharb, out of which he drove the chief al-Rahiq Chahlab, and seized al-Kas al-Tabib (Alezarquvair [q. v.]); he also took Meknes [q. v.] and Tetuan [q. v.] as well as Taza, the inhabitants of which had rebelled. In 1079 (1668) he took and destroyed the Sufiyya of al-Dul in having routed its chief Muhammad al-Hadjid at Ba från al-Rumman. The same year, Mawli al-Rashid seized Marrakesh and put to death there the chief 'Abd al-Karim al-Shabani, surnamed Karun al-Hadjid. In 1081 (1670) he undertook an expedition into Sus [q. v.] where agitators still disputed his authority. He took Toudant [q. v.] and the fortress of Iligh and returned to Fas, now lord of all Morocco. At this time, says the chronicler al-Frani, "all the Maghrib, from Tiemcen to the Wadi Nal on the borders of the Sahara, was under the authority of Mawli al-Rashid."

The next year the sultan went from Fas to Marrakesh where one of his nephews was endearing to set up as a pretender to the throne. During his sojourn in the southern capital, Mawli al-Rashid, not yet 42, died as the result of an accident on the 11th Dhu 'l-Hijjah 1082 (April 9, 1672): the horse he was riding having reared, he fractured his skull against a branch of an orange-tree. He was buried at Marrakesh, but later his body was brought to Fas where he was interred in the chapel of the saint Ali Ibn Hirzihim (vulg. Sidi Harram). His brother, Mawli Isma'il [q. v.] who succeeded him, was proclaimed sultan on the 15th Dhu 'l-Hijjah in the following year.

The brief political career of Mawli al-Rashid was, we have seen, particularly active and fruitful. The Muslim historians of Morocco never tire of praising this ruler whose memory is still particularly bright, especially in Fas. It was he who built in the town the "Madrasa of the Rope-makers" (Madrasat al-Sharrati'n), the bridge of al-Rasif, the kasa of the Sharada (Casba of the Cherares) and 2/2 miles east of Fas, a bridge of nine arches over the Wadi Sarbil (Sebou).

RASHID AL-DIN SINAN (or, as the Isma'ili themselves usually call him, Sinan Rashid al-Din), the famous leader of the Syrian Isma'ilis in the second half of the xiiith century, is better known to the world as Shaikh al-Djibal, or the "Old Man of the Mountain". His full name was Abu 'l-Hasan Sinan b. Sulaiman b. Muhammad. He was born near Bassra, educated in Persia, and, in 558 (1163), was appointed by Imam Hasan of Alamut as the head of the Syrian Isma'ili (Nizaris) community. This post he occupied till his death at an advanced age in Ramadan 589 (Sept. 1193), at Masjaf. He played a prominent part in the Syrian and Egyptian politics of his time, successfully defending his people from the continuous pressure of the orthodox Muhammadan rulers, especially the famous Saladin [q. v.], on the one hand, and against the Crusaders on the other. The fact that this small community still continues to exist (in the villages near Hamah), in spite of the persistently hostile attitude of its neighbours, must to a great extent be attributed to the solid foundations laid by him. References to him are to be found in the works of all historians who deal with the events of his period, but the most detailed account is given in the paper by Stanislas Guyard, Un grand maître des Assassins, au temps de Saladin (J. A., 1877, p. 324-489). It gives the original Arabic text of the Fa'il, a genuine Isma'ili work probably by a contemporary of Sinan, containing the maqamid about him, i.e. various anecdotes based on the oral tradition of the sect. This text is accompanied by a French translation and an introduction containing a detailed review of the historical information about Sinan, and the Isma'ili sect in general, which, in the main, still preserves some value. The Fa'il appears to be now unknown to the Syrian Isma'ili; they do not appear to have any reliable and genuine histories of their own community. The recently published al-Fadak al-dawwari fi Sima'il al-Ismi'mat al-ahmar, by an Isma'ili author, Abu Allah b. al-Murtada from Khwābī (Aleppo 1352=1933), shows no trace of such local tradition, and the account of Sinan given in it is entirely based on well-known general histories, such as those by Ibn al-Aqhir, Abu 'l-Fidā', etc.

The stories connected with Sinan chiefly centre around his organisation of maqama, which he used as an instrument for removing his political opponents by assassination. Undoubtedly there is some grain of truth in these stories; but it is obvious that excited bazaar rumours greatly exaggerated them, wrongly attributing to him and his organisation many exploits for which they were not responsible. Many historians state that
he was regarded as the supreme and superhuman head of the sect. Unfortunately, he is never referred to in any available genuine works of the Persian Isma'ilis, and it is difficult to ascertain what was his real position in the sectarian hierarchy. Most probably he occupied the highest rank after the Imām, i.e. that of the ḫudūqrat, which, according to the reformed Nūzāri doctrine, implied a considerable "dose" of the superhuman. In any case, there is no reason to think that he either claimed to be, or was regarded as an Imām, although, just as in the case of other eminent Isma'ilis, such as Nāṣīr-i Khusraw and Ḥasan b. al-Sabbāḥ, popular tradition furnished him with noble descent from 'Ali himself.

Bibliography: given in the article.

(W. Ivanow)

RASHID AL-DIN TABIĪB, one of the greatest historians of Persia. Fadl Allah Rashīd al-Din b. 'Imād al-Dawla Abu l-Khair was born in Hamadān about 1247. He began his career in the reign of the Mongol ruler Abaqa Khan (1265—1282) as a practising physician. But as in addition to a remarkable knowledge of medicine he was an exceedingly talented and farseeing statesman, he rose under Ghāzān Khan (1295—1304) from his earlier position to the rank of a sadr (and also grand vizier) which was given him after the execution of Sādir-i Djiḫān Sa'd al-Din Zandjānī (May 4, 1298). In 1303 he accompanied his sovereign in this capacity on a campaign against Syria. Under Uljaiṭū (1304—1316) Rashīd attained the zenith of his career. He used his enormous income for a number of charitable buildings. For example in order to beautify the new capital of the Mongols in Persia, Sulṭānābād, he built a whole new suburb, called after him Rub-i Rashīdīya, which consisted of a mosque, a madrasa, a hospital and several thousand houses. At the same time he was working steadily on his history of the world, the first volume of which he presented to his sovereign on April 14, 1306. At this period there was no limit to his influence. He even succeeded in converting Uljeiś to the teaching of the Shāfi'is. Two eminent Baghdad scholars, Shīhāb al-Dīn Ṣahrūwārdī and Djamāl al-Dīn, who were accused of negotiating with Egypt and were expecting death, were rescued by him. In 1309 he resumed his building activity and erected a new suburb near Ghāzānīya, east of Tabriz, the water for which he provided by a great canal from the Sarasād. But his high position now procured this great man a number of enemies. In 1315 he experienced considerable unpleasantness through the shortage of money which prevented the soldiers being paid. After Uljaiś's death his enemies exerted every effort to destroy Rashīd al-Dīn. In October 1317 he was dismissed from his high offices and the death of his patron Amir Sāvandjī (Jan. 1318) deprived him of his last support, until finally he was executed with his young son Khwaḍja Ibrāhīm on a false charge of having poisoned his former master Uljeiśū (July 18, 1318). His corpse was exposed to every contumely, his pride, the Rub-i Rashīdī, destroyed and plundered. His elder son Ghiyāth al-Dīn, however, succeeded in retaining a high office even after his father's death, but in 1336 he also was sentenced to death. Even after death Rashīd's body was not allowed to rest in its grave, for eighty years later Timūr's son, the mad Mirām-

shāh (1404—1407), had his bones dug up and buried in the Jewish cemetery (1399).

As already mentioned, Rashīd owes his fame to his immoral history, Djamāl al-Tawūrīshī, a history of the Mongols which he began by command of Ghiyāth Khan (wherefore it is sometimes also known as the Tāruśshī Ghiyāthī). Uljeiśū ordered the work to be continued and to be completed by a general history of the world of Islam and a geographical appendix. The work, according to the original plan, was to consist of two main parts: 1. History of the Mongols and II. General History and Appendix. But when the work was finished in 1310—1311 it took the following form:

Vol. i. 1. History of the Turkish and Mongol tribes, their divisions, genealogy and legends. 2. Cingiz-Khan, his predecessors and successors down to Ghiyāthī.

Vol. ii. Preface, Adam, the Muslim and Hebrew Prophets.

1. The old Persian Kings.
2. Muḥammad and the caliphs to 1258. History of the ruling dynasties of Persia. The eastern and western Isma'ilis. The Oghuz and the Turks, Chinese, Jews, the Franks, their emperors and Papes, India, Buddha and his religion.

Rashīd had intended to add the history of Uljaiśū's reign also, the beginning of which (1306—1307) was to open the second volume and the end to close it. Whether he did so is not yet known, as that portion as well as the geographical appendix is lacking in all extant manuscripts. The most remarkable feature of this great work is the conscientiousness with which Rashīd went to work and endeavoured to find the best and most reliable sources. Although the Mongol chronicles, the celebrated Altān daştār, could hardly be accessible to him as a Persian, he obtained the necessary facts from them through his friend Pālād-čink-sank and partly from Ghiyāthī himself, who had a remarkable knowledge of his people's history. The information about India was furnished him by an Indian bāḥīkā, about China by two Chinese scholars. The many-sidedness of Rashīd al-Dīn's learning is simply astounding in a medieval scholar of this time. He knows of the struggles between Pope and Emperor, even knows that Scotland pays tribute to England and that there are no snakes in Ireland.

Rashīd al-Dīn was well aware of the importance of his work and endeavoured in all possible ways to ensure its survival. He ordered copies to be made for his friends and for different scholars; the works, written in Persian, were translated into Arabic and vice-versa. Every year he sent copies to the libraries of the great cities and allowed anyone to copy them freely. Yet all these measures proved in vain, for no single complete copy has come down to us.

Besides his great history, he also wrote: 1. Kitāb al-Āhāy wa l-Āḥār in 24 chapters, which discussed questions of meteorology, agriculture, beekeeping, suppression of snails and other pests, etc., and also notes on architecture, fortification, ship-building, mining, and metallurgy. No copy has yet been found. 2. Tawūrīshī, a mystic theological tractate in 19 chapters. 3. Mīrāf al-Tafṣīṣīr, on the eloquence of the Kur'an, its commentaries etc. 4. al-Risālāt al-sulṭānīya (finished on March 14, 1407), the result of a theological disputation in the presence of Uljaiśū. 5. Lajūf al-Ḥašāīb,
Already in his last years at school he showed a fondness for art and literature and therefore decided to become a writer, and to this profession, or, as he himself calls it: the Sublime Forte Road (Bāb-i 'alā Qiāddesi), he has remained faithful, untroubled by all the political changes that have taken place. Like many other writers he began as a journalist, and almost all the more important Turkish papers received contributions from his pen, such as the Lürder-i Hawâdî, Teryümân-i Hâkûhâ, İhâm, Şahâ, Tarîb, Şedêde, Mâlûmât, Taşvîr-i Aflûk and Hâkûhâ, and periodicals like Tharmet-i Fânun and Reimli Gazette. He afterwards collected his numerous articles and essays, for example in the two volumes “Articles and entertaining Sketches” (Mašâliyat ve-Mufrâhât, 1325) and in the four volumes “Life of a man of Letters” (Cemâri Edebi, 1315—1318). The latter is not an account of his life but reflects his spiritual development and his feelings and emotions reflected in publications of different years.

Ahmad Râsim's output became in time very extensive; in all there are said to be over 500 works of larger or smaller size from his pen. Nevertheless he was not a polygraph in the bad sense of the word, but before he dealt with a subject he always first studied it thoroughly and then wrote on it seriously, sometimes also in the lightly humorous fashion of which he is a master, or again in a pleasing conversational way, but always with artistic feeling and in a particular style which is his own. He always well knew the taste of his readers and he had great success with them. His style was a new one and independent of existing schools and coteries; he created a school himself and his influence must long and strongly be felt in Turkish literature.

His literary work covers the fields of the novel, long short story and tale, e. g. his early novels, “Heart’s Inclination” (Mail-İ-Dil, 1890) and “Life’s Experiences” (Tağâbir-i Hayât, 1891; short analysis of both in Horn, Geschichte der türkischen Modernen, p. 46 sq.), also his patriotic novel “The Difficulties of Life” (Motâhhâ-ı Hayât, 1908), the stories “Inexperienced Love” (Têşîb-i Îşık, 1311), “My School-friend” (Mekteb Arîkûzâhîm, 1311), a little later “The Unfortunate Man” (Nâkâm, 1315) and another patriotic novel “A Soldier’s Son” (Asker Oğlû, 1315) and somewhat more lyrical “The Book of Grief” (Kîâbî-i Gham, 1315) and “Nightingale” (Anâlîz, in verse).

At the same time he had from the first a preference for history. He does not, of course, in any way claim to further the study of history by independent research but rather sees it his duty to use his name in history among his countrymen by presenting it in popular form, and from this point of view his historical writings may be regarded as carefully prepared compilations. In his early period he wrote a history of ancient Rome (Æski Komâltar, 1304), a short history of civilisation (Tâ'ârikh-i muqâbat-i Beşker, 1304), on the progress of knowledge and culture (Târekâyât-i 'ilmiyye ve-mîldeyî, 1304). later essays on similar subjects entitled “History and Author” (Tâ'ârikh ve-Muhrîr, 1320 = 1911), a history of Turkey from Selim III to Murâd V, entitled İstihdâm-i hâkimî-ı millîye in two volumes, 1341—1342, and a meritorious general survey of the history of Turkey, ‘Othmânî Tâ'ârikh in 4 volumes, 1326—1330. A valuable supplement to these historical works is
formed by the four volumes of "City Letters" (Sheikh Mekâlî, 1328–1329), in all 216 epistles, which we have an unsurpassed description of: all South Persia and the land's heart, written moreover in a very stimulating and vivid, sometimes bantering, fashion which makes it one of his best works. In "Islam's Pages of Honour" (Manâbh-i Islam, 1325), the Muslim festivals, mosques and other religious matters are dealt with.

It seems to be only recently that our author has turned to the history of literature, e.g. in his book on Shiism [q.v.], which is intended to be an introduction to the history of the Turkic Moderns (Mabûyat Ta'Rikhine Memlu! Îb bûyûk Muhammur-rilerden Shiismi, 1927), while his personal recollections of Turkish writers are collected in another book (Mabûyat Kâbul-i Ritmân, Muhammur-r, 1924), also recollections of his own school days and the old system of education in general, in his "Bastinado" (Fatâkah, 1927).

Ahmad Râsim was also prolific as a writer of schoolbooks on grammar, rhetoric, history etc. He also wrote a letter-writer (İslâmi Khatirn-i Mekâtî yahod murkemmel Muhâfizât, 5th impression, 1318). In all his works are to be found translations, and a large collection from his early period is called "Selection from Western Literature" (Mabûyat-i hârbiyeden bir Nâbû, 1887).

For this great literary activity Ahmad Râsim required considerable freedom, such as did not exist under 'Abd al-Hamid and such as he could hardly have had at all as a state official. He was however twice a member of a commission of the Ministry of Education, Conseil de l'Instruction Publique (Endûmümeni Tefsîr ve Mu'tâyana), but only for a very short time. He showed his interest in religious matters in 1924, when after the abolition of the caliphate he wrote an article in Wa'lî on March 4, 1924 on the relics (amâni, muhabbâ) of the Prophet, cloak (hârka), banner (hâ_ATTRIB), praying-carpet (sanduq'da), etc., which also appeared in Cairo and Damascus in Arabic. He proposed to make these relics accessible to the public in a Museum (cf. Nallino, in O. M., ii, 1924, p. 230 sq.).

In recent years Ahmad Râsim has so far been politically active as to be a deputy for Istanbul along with men like 'Abd al-Hâjî Hamid and Khalil Edhem (cf. O. M., vii, 1927, p. 416 and xi, 1931, p. 227 and Mehemmed Zeki, Encyclopédie biographique de Turquie, i., 1928, p. 23 and ii., 1929, p. 88).

RASSIDS, name of a dynasty. Zaidi historians make no distinction between the Zaidi imams in Dailâm [q.v.] and those in the Yaman [q.v.]; this article deals only with the Yaman. For some periods the Zaidi historians are detailed.
At the beginning of the rule of the Tahirids an imam in San'a fought against them; he was at last beaten, was captured as he fled by some townspeople, and handed over to Mu'tahhar. Another imam. The Tahirids took San'a and made a son of the imam governor of towns and castles. In 869 (1164-1165) the imam Muhammad b. al-Nasir retook San'a and in the following year al-Malik al-Zahir al-Tahirid was slain there.

Vašyī Sharaf al-Dīn began in a small way in 912 (1506-1507). Later he called in Egyptian troops from Kamarān [q.v.] to help him against the Tahirids. They took Ta'izz [q.v.] and San'a, but at the end of the year they then left Egypt broke their spirit, they were soon driven out again. In spite of the Tahirids and recalcitrant sharifs the imam conquered most of the highlands and even took Dījjān and Aḥbār 'Arish [q.v.] but failed to take Aḍan [q.v.] and Aḥbār [q.v.]. Soon the Turks took Dījjān, Ta'izz and San'a, being helped by quarrels between the imam and his sons. The Karmatians (i.e. Ismā'īlīs) were still dangerous enemies; eleven camel-loads of their books were captured and the imam's chief followers studied them so as to warn the common folk of the dangers in them. In 953 (1546-1547) the imam divided his realm among his sons. Though one of them, Mu'tahhar, had submitted to the Turks he led an insurrection against them in 974 which was at first successful. This provoked the Turks to a systematic conquest. Al-Mu'tahhar was defeated and obliged to retire to Sa' đa with a Turkish garrison. Then an imam from a different family rose and maintained himself for seven years till he was taken prisoner. In 999 (1590) the conquest was complete. In 1006 however al-Kāsim, the ancestor of the present imams, declared himself. After varying fortunes his son drove out the Turks in 1045 (1635-1636) and since then the government has remained in this family. Sometimes a disputed succession has been settled by argument and some-times by the sword, an unworthy imam has been deposited, and a son has taken the place of his deceitful father. About 1150 (1737) Aḥbār 'Arish broke away from the Yaman and in 1219 (1804) the imam in San'a became independent. The history of the imams from this point is in the article YAMAN. Now the Wahhābi king has confined the imam to the Yaman in a narrow sense of the name, and 'Asir is under the influence of Najd. Many of the imams were industrious writers on things religious.

(A. S. TRITTON)

RASUL (A., plur. rasūl), messenger, apostle. The word is found in Arabic literature with the profane sense of envoy, messenger. Here we are only concerned with its religious acceptance. According to the Kur'an, there is a close relation between the apostle and his people (ummat; q.v.). To each umma God sends only one apostle (Sūra x. 48; xvi. 38; cf. xxi. 46; xl. 5). These statements are parallel to those which mention the witness whom God will take from each umma at the Day of Judgment (Sūra iv. 45; xxviii. 75 and cf. the descriptions of the rasīl who will cross the bridge to the other world at the head of his umma: Buhkārī, Adhān, bāb 129; Kiftāk, bāb 52).

Muhammad is sent to a people to whom Allāh has not yet sent an apostle (Sūra xxviii. 46; xxi. 2; xxiv. 43). The other individuals to whom the Kur'an accords the dignity of rasīl are Nūh, Lūt, Iṣrā'īl, Mūsā, Shū'āb, Hūd, Šālīh and Iśa. The list of the prophetic Messiahs [cf. Sūra lxxvi] was a longer one; it contains, besides the majority of the apostles, Biblical or quasi-Biblical characters like Ishhām, Ishāk, Ya'kūb, Hārūn, Dāwūd, Sulaimān, Ayyūb, Dhu 'l-Nūn. Muhammad in the Kur'an is called sometimes rasīl, sometimes nabi. It seems that the prophets are those sent by God as preachers and nādir to their people, but are not the head of an umma like the rasīl. One is tempted to imagine a distinction between rasūl and nabi such as is found in Christian literature: the apostle is imagined to have the power of God in a time that is at the same time a prophet, but the prophet is not necessarily at the same time an apostle. But this is not absolutely certain, the doctrine at the basis of the Kur'anic utterances not being always clear.

As to the close relation which exists between the rasûl and his umma, it may be compared with the doctrine of the Acta apostolorum apocrypha, according to which the twelve apostles divided the whole world among them so that each one had the task of preaching the Gospel to a certain people.

As regards the term rasûl, account must be taken of the use of the word apostle in Christianity, as well as of the use of the corresponding verb (shahad) in connection with the prophets in the
Old Testament (Exodus, iii. 13 sq.; iv. 13; Isaiah, vi. 8; Jeremiah, i. 7). The term rasul Allāh is used in its Syriac form (gēlēkēv drafta) pāsim in the apocryphal Acts of St. Thomas.

Post-Karānic teaching has increased the number of apostles to 313 or 315 without giving the names of all (Ibn Sa'd, ed. Sachau, i/2, 10: Fikh Akhbar III, art. 22; Reland, De religione moham- medica, sec. ed., Utrecht 1771, p. 40).

The doctrine that they were from mortal sin is part of the faith [see ʻima]. For the rest, the difference between rasul and nabi—apart from the considerable difference in point of numbers—seems in later literature to disappear in the general teaching about the prophets. Thus, in the ʻAṣida of Abū Ḥāṣm ʻUmar al-Nasafi the two categories are treated together and the author makes no difference between rasul and nabi. Similarly al-Idji deals with prophets in general, so far as can be seen, including in them the rasulis. If one difference can be pointed out, it is that the rasulis, in contrast to the prophet, is a law-giver and provided with a book (commentary on the Fikh Akhbar II by Abu l-Mantaha, Ḥaḍarabah 1321, p. 4). According to the catechism published by Reland (p. 40–44), the rasul-lawgivers were ʻAdān, Nāḥ, ʻIbrahīm, Mūsā, ʻIsā and Muḥammad.

In the catechism of Abī Ḥāṣm ʻUmar al-Nasafi, the sending of the apostles (riṣāla) is called an act of wisdom on the part of God. Al-Taftūzaa’s commentary says what iṣdāb, not in the sense of an obligation resting upon God but as a consequence arising from his wisdom. This semi-rationalist point of view is not however shared by all the scholastics: according to e.g. al-Sanṣāf (cf. his ʻImām al-Bo- ṭāla) it is ʻadās in itself but belief in it is obligatory.

RASULIDS, name of a dynasty. The family of Rasul came to the Yaman [q. v.] with Turānsāh, the Aiyūbīd [q. v.] conqueror. Rasul was probably a Turkmen though descent from the royal house of Ghassān [q. v.] was claimed for him; he got his name because a caliph employed him as ambassador. ʻAli b. Rasul and his three sons became important. The last Aiyūbīd Masʿūd put two of the sons in prison in 624 (1227) but the third Nūr al-Dīn ʻUmar, who had already been governor of Mecca, was made ṣāḥib [q. v.] and, on the death of Masʿūd, governor of the Yaman. Masʿūd died on his way to Egypt so ʻUmar prepared to make himself independent. ʻAbd b. Rasul had captured many places in the hills, such as Ṣanʿāʾ [q. v.], Taʾizz [q. v.], and Kawkabān [q. v.]. After two temporary successes he took Mekka in 658 and held it for fifteen years. In 628 he made peace with the ʻAzīdī šarifs and there was little fighting till the imām Ahmad b. Ḥusain declared himself in Ṣaḥa [q. v.] in 646 (1248–1249). ʻUmar may have declared himself independent in 628 but he was not recognised by the caliph till 632. In 645 his nephew, Asad al-Dīn Muḥammad, quarrelled with his uncle and fled to Dhamār [q. v.]. He allied himself with the imām but was soon reconciled to his uncle and fought against the ʻAbbāsīs, the descendants of the imām ʻAbbās Allāh b. Ḥumāz. ʻUmar was murdered in 647 by mamliks in al-Djanad. His kingdom stretched from Mecca to Ḥaḍramawt though many places in the hills were independent. He was a great builder of schools and mosques and a patron of letters like most of his family. His reign is an epitome of the dynasty; family quarrels, wars with the imām and the šarifs, who were often at variance with the imām.

The murderers won over the rest of the mamliks, proclaimed a nephew of the dead man, and marched on Zabīd. Palace intrigues had banished al-Musaffar ʻYūsuf, the sulṭān’s eldest son, to Mahdijam. With 450 horse he too marched on Zabīd where he was inspired resistance to the pretender. He gathered troops as he advanced and the mamliks surrendered to him the murderers and the pretender. He had to reconquer the country, for his two brothers each hoped to be sulṭān, Asad al-Dīn Muḥammad was in a strong position at Ṣāḥa, and the imām, Ḥamād b. ʻUsān was active; even the caliph was disturbed at his power. At the end of three years Ṣāḥa, Taʾizz, and the strong fortress of Dumlū’u had been retaken and peace made with the imām, who broke it by joining Asad al-Dīn: though the latter soon returned to his duty. In 648 he joined many of his kin in prison, staying there till his death. ʻAbda was taken in 652 but could not be held. The imām Ahmad had been appointed with the approval of the family of his predecessor but dissensions arose so the šarifs with the help of the sulṭān fought and killed him in 656. One imām was captured in 658, another was taken and blinded in 660, and a third was proclaimed in 670. The šarifs were tribal or territorial chiefs, sometimes the enemies and sometimes the allies of the sulṭān. In 674 rebel mamliks in Ṣāḥa joined the imām and šarifs but the combination was signally defeated. ʻAzāf [q. v.] in Ḥaḍramawt was taken in 678 and an embassy came from China. ʻYūsuf was a strong and successful ruler, and al-Kharrajī calls him cabīr at the end of his reign. He died in 694 (1294–1295).

His son and successor reigned only three years and encouraged the cultivation of palms round Zabīd where others had tried to introduce. His brother, the governor of Shihār [q. v.], took ʻAden [q. v.] and tried to make himself sulṭān but was defeated and imprisoned. From prison he was called to rule as al-Muʿayyad Dāwwād in 696. His reign was a succession of small fights both in the hills and the plains, the same places and opponents recurring again and again. In 697 (1247–1248) he took two castles from the Karmaṭjīn [q. v.]. In 709 the Kurds in Dhamar rebelled, joined the imām and attacked Ṣāḥa and later some of the Kurds killed some of the Ghuzz. In 712 peace was made with the imām Muḥammad b. Mushir for ten years at a price of 3,000 dinārs yearly. Five years later the sulṭān broke the treaty. Warfare was savage and usually accompanied by the destruction of houses and trees; the heads of the slain were cut off. In 718 the army was reorganised on the Egyptian model. Towards the
end of the reign governors were changed frequently, perhaps a sign of weakness. It was easy for a foreigner to rise to high rank. More than once the same man was chief minister and chief kaši. In 721 a son, al-Mu‘ājžid ‘Ali, succeeded but he was soon in prison where he stayed four months only till he was set free by his friends and the usurper took his place. In 724 he was a small kingdom; ‘Aden was lost, one cousin al-Zāhīr was independent for ten years, other relatives set up for themselves in Bait al-Fakhti [q. v.], mamliks attacked Ta‘izz and took Zabīd; it was not till they had been in rebellion some months that their pay was stopped. Sharifs defeated the mamliks; troops came from Egypt but did so much damage that all were glad when they soon left. The imām’s death in 728 removed a dangerous enemy, and the small kingdom re-established some sort of order. Sons and other relatives rebelled as did the mamliks because their pay was in arrears. The small kingdom crushed the Ma‘āzib, a tribe of the plains or foothills, and made a woman chief of what was left. In 736 (1335–1336) the peasants fled from the district of Zabīd because of a combination of taxes and a new coinage. An officer touring to collect taxes used his Ghuzz escort to put to death an insubordinate chieflain. The small kingdom went on pilgrimage in 751 and was carried off to Egypt, being allowed to come back a year later. From this time on the Arabs of the plain gave trouble. Normally the tribes kept each other in check but the small kingdom had so weakened one side that now the Ma‘āzisba could raid at will, they even cut communications between Zabīd and the north. The government policy was to deprive them of their horses. A tyrannical governor was killed and the murderer was not punished. Mahdīm was captured by a sharif, a rebel governor deposed the small kingdom for two years, and three sons of the small kingdom rebelled. Al-‘Afdal al-Abbās succeeded in 764. One of his sons joined the imām, attacked Hārad, and later ‘Abd al-Malik was taken by the Arab tribes, other places by sharifs, the small kingdom Ṣa‘īd al-Dīn raided as far as Zabīd, there was fighting round Dhamār, and the small kingdom died in 778. Al-Aṣraf Ismā‘īl was chosen as successor. The mamliks mutinied, a sharif was lord of Ṣa‘īd, and the small kingdom was actively hostile till his death in 793. His son ‘Ali was driven out of Ṣa‘īd by a rival and made Dhamār his capital. The imāmate seems to have been hereditary in one family for at least five generations. In 798 the small kingdom’s Ali sent presents to the small kingdom. It is clear that much of the highland was lost and there was continual trouble in the plains. Yet the small kingdom was still powerful; he kept a firm hand over his officials and received letters, presents, and embassies from India and Abyssinia. He died in 803 and is called a good ruler. The next small kingdom, al-Nāṣir Ahmad, worthily upheld the state. In the north he made Hall [q. v.] accept him as overlord, in the south he defeated the small kingdom who had attacked his vassals, the Banū Tāhir, and in Bawāth he captured forty castles. Rich gifts came to him from Mecca and China. A brother rebelled and was blinded. At his death in 827 the state rapidly went to pieces. A series of short reigns with many rebellions of the mamliks ushered in the end. The land was ravaged by plague, the small kingdom died of it in 840 leaving his authority to a daughter. In the same year died another small kingdom, Ahmad b. Yahyā, who was a prolific writer. Civil war was complicated by attacks by the Arabs, who sacked Zabīd in 846. A new imām, al-Nāṣir Muḥammad, strengthened his position by marrying a granddaughter of ‘Ali of Ṣa‘īd. The Banū Tāhir joined in the fighting and took Bawāth and ‘Aden, till in 858 (1454) the last small kingdom abdicated before them and went into exile at Mecca.

Most of the small kingdom were builders of mosques and madrasas, some were writers. In the heyday of the dynasty the small kingdom regularly spent a holiday in the palm groves of Zabīd (these were called sultāt) and at the sea. The land was governed by officials or by vassal chiefs who paid tribute. In all big towns were two officers, one called wālī or amīr and another called nāṣir, simām, or musḥidd. High officials regularly went on tour to collect the taxes. The army consisted of the cavalry of the gate, mamliks both Khurs and Ghazz, and levies. A thousand horse and ten thousand foot made a big army. A man’s horses were sometimes slain at his funeral.

Rātib (A. pl. rawātīb), a word meaning what is fixed and hence applied to certain non-obligatory sālāts or certain litanies. The term is not found in the Ǧūrān nor as a technical term in Ḥadīth. On the first meaning see the article Nāfīla, p. 826. As to the second, it is applied to the dāhir which one recites alone, as well as to those which are recited in groups. We owe to M. Snouck Hurgronde a detailed description of the rawātīb practised in Athchin.

Rāṭl, unit of weight dating from pre-Islamic times, varying with countries and periods. Māṣrī (p. 3, 5) says that, except for the mitja‘l, which had remained uniform, the pre-Islamic weights were equal to the Islamic ones, and that the rāṭl contained 12 ʿūqīya or 144 dirhems. In medieval Damascus it equalled 600 dirhems and in Aleppo 720 dirhems. In modern Egypt it is uniform = 1/100th ḫanṭar = 12 ʿūqīya = 144 dirhems = 0.449 kg. = 0.99 lb. avdp. 2.75 rāṭl = 1 ʿōkka = 1.248 kg. = 2 lb. 11 oz.

Rāwalpindi, a division, district, tahsil, and town in the north-west of the Punjab. The division has an area of 21,347 square miles and a population of 3,914,849 of whom 3,362,260 are Muhammadans. The district, which is divided for administrative purposes into four
RAWALPINDI — RAWANDIZ RUIYNDIZ

This section discusses the geography and history of Rawalpindi and Rawandiz Ruiyndiz. It mentions the city's location, historical significance, the Muslim invasion, and the territories under British control.

**Bibliography:** In addition to the works cited in the article on Rawalpindi, a few key references include: J. H. Marshall, *Archaeological Discoveries at Taxila*, 1913; *Guide to Taxila*, 1918; *Rawalpindi District Gazetteer*, 1907; A. A. Rose, *A Glossary of the Tribes and Castes of the Punjab and North-West Frontier Province*, 1919, and others.

**Rawandiz Ruiyndiz** (the first word is composed of two elements: *rawandiz* of uncertain etymology and *ruiyndiz* meaning fortress; the second means "fortress of iron"). Capital of the *kābār* of this name in the *wilāyāt* of Mawṣil on the caravan route, halfway between this town and that of Sāwdī-Bulāk [*q.v.*], including the following *mahalls* (the names and figures given in brackets are those of the corresponding Kurd tribe and the number of the hearths: *n.* nomad; *s.* settled): Halwa (Zarrā, *n.*, 500); Ḥarir (Helfi, *n.*, 800; Māmsāl, *n.*, 2000; Māmsāl, *s.*, 500); Wellās (Bālek, *s.*, 2000); Dergel (Dergelī, *s.*, 700); Dēshī Dīyān (Dīyānī, *s.*, 800); Pīresniyān (Pīresni, *s.*, 1000); Rawundūk (Rawundūk, *s.*, 600); Darādost (Darādost, *s.*, 1000); Beresīyān and Mergesīr (Mīris, *s.*, 2000). The *Sidān* and the Serbāt, two subdivisions of the powerful tribe of the Herkī, number about 6,000 hearths and have their winter-quarters between Rawandiz Ruiyndiz and Arbil (IV in Kurdish) while the Mūdān, the third section of this tribe, spend the winter around Ākrā. The summer pastures of all three are in Persia at Mergawar. Under the Kurd feudal system the district of Rawandiz Ruiyndiz contained the following subdivisions: Hēvdīyān, Shētehēn, Dūlemerī, Sidekān, Ḥakārkī, Pīresni, Dēshī-Sīrān, Bālpishīyān, Rawundūk, Akīān, Bālekān. After the League of Nations (Dec. 1925) had given Mawṣil to the Ḥawr Rawandiz Ruiyndiz became definitely a part of the mountainous Kurdish zone running along the Persian frontier which was given the name of Southern Kurdistan at the establishment of the British mandate. The figures given for the population here are only approximate, the tribes having in some cases been decimated by war and influenza in 1918—1919. According to the census of 1935 the town of Rawandiz Ruiyndiz had 2,176 inhabitants and the *kābār* 35,342.

**Topography:** The district of Rawandiz Ruiyndiz, which roughly speaking lies on the other side of the bend made by the Great Zāb when it leaves the mountainous part of its course (running westwards to the Tigris), consists of parallel valleys and chains which rise gradually as they approach the Persian frontier and which have a general orientation from N.W. to S.E. The average height may be put at over 1,500 feet. The two principal watercourses of the region, the Rūbār Rawandiz and Rūbār Rūkūrūk, left bank tributaries of the Great Zāb, have their sources on the Persian frontier. The roads are naturally more practicable in the direction N.W. to S.E. except the passages in the vicinity of the Great Zāb with its deep gorges. The Great Zāb is 500 feet above the level of the sea. Rawandiz Ruiyndiz, at the present day an insignificant little town, owes its importance mainly to its position with relation to the roads of Kurdistan.

**Road system.** It would be in a way wrong to mention, in the matter of high roads which from all time have connected the Iranian plateau with the adjoining countries in the west, only 1. the silk route in the north (Justi, *Geschichte Iran's*, p. 476) going from Trebizond via Khi to Lithinos Pyrgos (the modern Tağh Kurgan), and 2. the southern road, that from the Median gate or the defile of the Gyandes (Diya). Besides these two main arteries of traffic, axial to the route always taken by commercial and cultural relations and in time of war, and lying between them is the road which went from Niniveh to Media and forked twice at Arbīl and Rawandiz. At Arbīl the road entered Persia by the pass of Gomesbān, Khi Sandīkā, Rāniya, Serdest and thence by the pass of Kurtek at Sāwdī Bulāk [*q.v.*] via Afān.

The Achaemenid royal road also passed this way (Justi, *op. cit.*, p. 475). It was, we believe, the southern section, running towards the land of Elam, while, according to Th. Reinach (*Un peuple oublié, les Mattiennes, in Rev. des Et. Gr.*, vii., 1894), the main highway from Sardes ran through modern Armenia and central Kurdistan, although we cannot say exactly on which side of the Zagros it lay. Among the Arab geographers, Yākūt alone gives a few notes on the road through Rawandiz Ruiyndiz (ed. Wustenfeld, p. 441). The road Arbil-Margḥā was known to the Mongols after their occupation of Arbil (1258). The itinerary by the pass of Garū Shīkā (Zinwe-Shaikā) has been described by Perkins (*J. A. O. S.*, ii., 1853, p. 83 sq.) and Thielmann (*Streifzüge im Kaukasus*, Leipzig 1875, p. 321 sq.). The latter (cf. Yākūt) mentions as stages, starting from the pass: Rāyaṭ; Dergala (ruins of a fortress); Rawandiz; Kān-Atāmān (Kān Wātān?); Dere Brūsh (ford on the Great Zāb, between Girmēnānā and Kāzān; Tēz-Kēbeh; Mawṣil, in all seven stages from Sāwdī Bulāk. According to information received from Russian soldiers who took part in the expedition against Rawandiz Ruiyndiz (summer of 1916), the pass of Garū Shīkā (6,000 feet) is a kind of promontory with valleys on either side starting from the ruins of Khāneh (Persian Lahijān), and joining on the other side in Turkish territory. There is a *ziyāret* there under the Našīḥbä Shāikh Dīmāl of the influence of which is to be attributed the parti-
emption of the neighbouring Kurdish tribes in the 
djîhâd. The name of the pass Zime Shîkh is 
explained by the presence of this zîyêt. The 
actual site of Rawândîz Ruyîndîz is described in 
M. Bitner (Der Kurdenbau Uschnje und die 
Stadt Urmianje, Vienna 1895). In the month of 
May the corn ripens at Rawändîz Ruyîndîz, the 
arable land being on the right side of the Rîbîrî 
Ruyïndiz. Like Arbul, Ruyîndîz is also a point of 
 bifurcation of roads. We have just mentioned the 
road over the Gateway Shînka pass. Another, farther 
north, goes via Sidakan, Topzawa, pass of Kelî 
Shîn (4,000 feet with a famous stele), Durno to 
Usbnî. J. de Morgan (Mission scient. en Perse, 
ii. 46) wrongly thinks this is the only road from 
Persia to Mawsil besides that which goes via 
Serdesht.

Lastly there is a road from Ruyîndîz to Shamp 
Dînernâ, of which there are four variants: 1. Shaitâm, 
pass of Khadjûtî, Kânî Rash, Cumur; 2. Shaitâm, 
pass of Garau Cariya, Kekla, Begûnîe; 3. Shai 
tâm, pass of Morgészûr, Kekla: 4. the route of the 
Turkish telegraph line by Rîbîrî-Dibur and 
Cumûr. The first of these is the best and was 
taken in 1916 by the Russian column which came 
down the Kûa pass to the support of the movement 
converging via Garû Shînka on Ruyîndîz.

History. From what has already been said it 
will be evident that Rawândîz Ruyîndîz, situated 
at the intersection of the communications of Kur 
distân as well as of roads leading farther afield, 
has always owned its importance to its position. 
It should also be remembered that in the period of 
prosperity of the Nestorian church all this country 
played a great part, mainly on account of the in 
fluence of the Metropolitan see of Arbil. We may 
mention (cf. Hoffmann, Auszüge) the names of 
Dara, Hanitha, Shaklawa (from which came one 
of the MSS. which enabled M. l'Abbé Chabot to 
establish the text of the Synclitons Orientale, Paris 
1902) as well as the fact that there were many 
monasteries in these parts. According to the late 
Metropolitan Mar Hamânisho, the mahall of Bara 
dost (not to be confused with the Barakost of the 
Shîkâ Kurds to the north of Tergawar; cf. Urmîya) 
before the war had still a few Christian communities. 
From the point of view of Kurdish history the 
destinies of Ruyîndîz have been frequently those of 
Shehhrizâr of which it formed part at certain 
times. The Persian historian S. A. Kesrewi Tabrizi 
(Mehriûân e Gonêmân, ii., Rawiûldan, Têhrêrân 
1309 = 1929) gives us some notes (p. 125, 133- 
136) on Ruyîndîz, in the time of the Atûbek 
under the Âmmedî (501-624 A.H.) the last re 
presentative of whom, a woman, became the wife of 
Djîlal al-Dîn Khwarîmshâh. A local history of the 
seeds of Ardelain, a resumé of which I published 
(in the R.M.M., xlix. 70 sqq.), also contains some 
information about the families ruling in Ruyîndîz 
down to 1249-1250 A.H. It may be added that (Shref 
Nâmeh, ii., p. 105), the brothers of Abek 
Soulîhan released Shawkân Mounzâr of the Ismîlî 
big from the castle of Royîndîz where he had been 
imprisoned by order of Soulthân Abekh (904 = 1498-1499). A Persian text in my pos 
session enables me to give a few details about 
the last lord of Ruyîndîz. The beks of Ruyîndîz 
are said to be descended from an Arab of the 
tribe of Shammar (again this fondness for inventing 
an Arab descent which we frequently find in Kurd 
genealogies). For some years this ancestor was a 
humble shepherd in the dehêt of Ruyîndîz in the 
villages of Badîlîn and Bâpshâtân (should we not 
recognise in the these ba prefixes the remains of 
the Semitic bet? [cf. e.g. Bâdjamî]). Becoming rich — some say by having found a 
treasure —, the ancestor established himself at 
Badîlîn, acquired houses and fields and became 
major there. His heirs in time became âqâ, then 
êg. Arrogant and rapacious, they had at 
the same time the reputation of being patrons of 
learning (îlim u-munâîrât). At the beginning of the 
sixth century, one of them, Memed Bek the 
Blind, established at Rawändîz, was honoured by 
Sulîhân Meğjiî who gave him the title of pasha, 
whence his sobriquet of Pasha-i Kûra. He had 
some claims on Mergawar and Şînû in which he 
met with the resistance of 'Azîz Bek of Letân 
next possession of Arbul Kerku, Sulaimânya, 
Shamdimân, 'Akrâ, 'Amadiya. The resistance he 
encountered in the tribe of Zîbûrî and notably 
that of its hero 'Azîz of the village of Sawti has 
become legendary. Taken prisoner, 'Azîz is said to 
have replied to the offer to take him into his 
service by the Pasha, who had no son, that he 
would make him one. The Pasha built several 
fortified towers the ruins of which can still be 
seen (Sidakan, among the Şîrwanîyan; 'Akrâ, 
Rawândîz, Darz). He also repaired the road in the 
pass of Ruyîndîz "with nails of iron". He built 
many schools. In his time plunder, robbery and 
rapine disappeared. "The grapes hang above the 
roads till autumn and no one dares to touch them". 
Justice was administered by 'ulama. Finally in 
1836 the Pasha was defeated by the Turks after 
a siege of four months and died soon afterwards 
in Constantinople, or others say in Cyprus. Of 
the descendants of the Pasha his grandson Sa'd Bek was kâmînâqâmât of Ruyîndîz. He was murdered 
by his servants. Yûsif Beg, son of Muşatîf Beg, 
at Badîlîn, aqâh of the tribe of Pireşûnîan, was of 
the same line and in constant rivalry with Sa'd Beg 
of Ruyîndîz. The memory of the Pasha seems to 
have been kept alive in the tribe of Mûkri where 
F. de Morgan records a curious game of this 
name, in which one of the players pretends to be 
the "Blind Pasha". A Kurdish work (Mîrzâ 
Sîrânî by Saiyid Hussain Êusni Mûkramî, Ruyîndîz 1935) 
gives a full account of the story of the Pasha, his 
struggle with the Turks, his relations with Persia 
and with Mehmîd 'Alî Pasha of Egypt, giving as 
its principal source, a Kurkish MS. (Mellîkâya 
by Mirzâ Muhammedi Wekgîye) Nîzîr). The Pasha 
struck coins in his own name: darâta ft Rawändig 
al-Amir al-Manjûr Muhammed Bîg. — During 
the Great War the Rawändig road was used in 
the winter of 1914-1915 by Halîl Bey's troops 
advancing on Urmîya (contrary to H. Grothe, Die 
Turken und ihre Gegenwart, Frankfurt a. M. 1915) 
and later in July 1916 by the Russian Ribâltenko, 
a column which Major K. Mason (Central Kurdistan, 
J. R. G. S., 1919) wrongly accuses of massacring 
5,000 Kurds, women, children and old men at 
Ruyîndîz. After the armistice and during the period 
till Dec. 1925, when the League of Nations made 
its decision, Rawändig was occasionally the head-
quarters of an English political officer; sometimes it slipped from the English and was a centre of concentration for hostile Kurdish elements. Thus in Sept. 1922 (cf. B. Nikitine, L'Iraq économique, in Rev. des Sc. Pol., July–Sept. 1923) the English were forced to withdraw their feeble forces from the mountains and to occupy the line Arbil–Kirkuk–Kifri. A Kurdish government was then proclaimed in Sulaimaniyye with a "Pâdashâh of Kurdistan", a role assumed by a certain Şâli̇kh Mahmûd, of a noble Kurd family. Driven out by the English in 1919 after the rising, which he had led, he was pardoned in 1922 and his followers proclaimed him Pâdashâh. Threatened by English aeroplanes and without resources, Şâli̇kh Mahmûd retired to Rawândiz to the Turkish emissaries. Finally, in April 1923, Rawândiz was taken by the Anglo-Metopotamian troops composed almost exclusively of Assyro-Chaldean highlanders. Two months later in the name of H. M. King Faisal a more tractable Kurdish administration was installed there as throughout southern Kurdistan (cf. above). The first governor thus appointed was a certain Saiyid Ṭa of the family of Sadûte Nehri [cf. Shâmînîn]. A brief history of Rûyîndîz since the war is given in Mîrvânt Sûrîn. At the present moment the Persian government is considering a system of roads which may give Rawândiz a certain importance. It is a question of a carriage road connecting Taurus to Mawût via Rawândiz. The Teherân government is anxious to have an outlet without the necessity of going through Transcaucasia.

Human Geography. The route through Rawândiz as well as the roads leading from it have never played a part comparable to that of the two historic arteries of traffic. This is explained by the lack of security, which is the first condition for the making of a trade route. Now this region has always lain between two hostile states: Assyria and Media, Mûsûţîr and Zâmûa, Turkey and Persia, Turkey and the Šîrâz. The configuration of the country, the mode of life of its people contribute rather to break them up than bind them together. The road, the means of communication, has here the character of a weapon or line of defence except for brief periods of peace.

Language. Kurdish is the language spoken in this region, except by the town dwellers (Arab, Altûn Kêpré, Kûrük etc.) of Turkish origin. With the establishment of the Kurdish administration and the opening of Kurdish schools following the decisions of the League of Nations, Kurdish will probably develop still more and we may look for the creation of a Kurdish intellectual centre. According to O. Mann (Die Mundart der Mûkri Kurdish, ii. 205), the dialect of Rawândiz is very like that of Shâmînîn, but E. B. Soane does not share this opinion (Kurdish Grammar, London 1913). F. Jardine's manual, Bahûman Kurmanji, a grammar of the Kurmanji of the Kurds of Mosul division and surrounding districts of Kurdistan, London 1922, is more particularly devoted to this dialect.

Cartography. The Government of India Survey is preparing a revision of the maps of this region. Until their results are published as well as those being prepared for other reasons by the Turkish Petroleum Co., there is accessible the excellent geographical material in the Report presented in 1925 to the League of Nations by the Commission of Enquiry whose task it was to collect material of an ethnographical and economic nature regarding the wilayet of Mawût (League of Nations, Question of the Frontier between Turkey and Iraq. Report submitted by the Commission instituted by the Council of September 30, 1924 [C. 400 M. 147, 1925, viii]).

Bibliography: In addition to references in the text: Spiegel, Erân (p. 27–28); Rawlinson in J.R.G.S., x. (p. 22 seq.); M. Streck, Das Gebiet der heutigen Landschaften..., Kurdistan, in Z.A., x.v., 1900 (p. 267, 382), on the ancient and Sûsânid periods; Hammer, Itchanen (ii., p. 125 and 337), on the Mongol period. The Sheref Namîh, St. Petersburg 1866 (i., introd.) mentions the castle of Rûwîn (read Rûyun).

AL-RAWDÁ. One of the series of large islands in the bed of the Nile before it divides into the Damietta and Rosetta branches. Situated near Old Cairo and extending to Kâş al-'Ain, it is separated from the right bank by a narrow canal known as al-Khalîlî, while the river runs to full width on the other side between the Island and Giza (Dîzâ). In early medieval times, it was used for three purposes: 1. as a convenient site for the Nilometer [cf. Mîrvânt] on the S. E. side, rebuilt in the reign of al-Mustûnîn (862–866); 2. as a dockyard for the construction of the fleet (Masûûdi calls it "the island of shipbuilders") until the reign of the first Ikhshîdî, who transferred the docks to the Miṣr bank of the Nile further north in the direction of the present port of Bûlûk, which developed at a still later date; and 3. as a naturally fortified resort in case of danger on the mainland, by destroying the customary bridge of boats which connected it with the fort of Babylon. Muãkawas did so when he wished to preserve his freedom in negotiating with the Arabs. Realizing this, too, Ibn Tûlûn built a fort on the Island (c. 877) and al-Sûlîh Ayîyûb built another where his body was concealed after his death by his wife Shadjar al-Durr [q.v.] until the defeat of the French at Manṣûra (1249). As a fortification, al-Rawûdã reached its high-water-mark under the Bahri Mamlûks who returned to it after the death of al-Sûlîh Ayîyûb and, entrenched behind the water of the Nile, ruled Egypt for nearly a century and a half. They further strengthened the defence of the Island by building walls and towers along its shores. In earlier times it was occasionally used as a pleasure resort where spacious gardens were planted and magnificent palaces erected, such as the Hâwçîdajo built c. 1125 by the Caliph al-Amîr for a Bedouin mistress. During the Bahri Mamlûk period, noble buildings increased in number to house the rulers of Egypt and a mosque and a madrasa (whose remains are still to be seen) were established for the use of the inhabitants.

During the Burdi Mamlûk period, Miṣr and the quarters outlying the Citadel were better favoured, although at the time of the Ottoman conquest Selim I found in the Island a safer residence. When Egypt became an Ottoman province, Miṣr and the Citadel became the seat of the Turkish governor, while the Mamlûk forces took to the Dîzâ side of the River. As a result, al-Rawûûda was deserted, its fortifications ruined, and it furnished robbers and highwaymen with a refuge.

The Island did not again attract the rulers of Egypt until the time of Muãhûmâd 'Alî, whose
son Ibrāhīm Pasha ordered large gardens to be planted there. At present it has become an Egyptian residential quarter connected with Cairo by two bridges and with Dīlūza by a third. The facilities of modern means of communication have brought it within easy reach of the centre of the capital.

The construction of a new large hospital is planned as a substitute for the antiquated Qāṣr al-ʿAynī on the northern extremity of the Island.

**Bibliography:** See Bibliographies of articles on Cairo and Mīkāyās. An elaborate account of the Island and especially the Mīkāyās may be found in ʿAlī Pasha Mābārak: al-Khaṭāb al-Tawfiqīyya, 20 vols., Cairo 1306, xviii, 2–111; Ibn Dūmān, Description de l’Egypte, ed. Vollers, Cairo 1893, iv, 109–120. (A. S. ATYA)

RAY (A.), opinion. As a technical term denoting the purely intellectual function it is used in the system of Islam in opposition to such terms as ʿilm, sunna, Kitāb Allah, din, and hadith. See the art. FIHK.

**RAWSHANIYA, Afghan sect founded by Bāyazīd b. ʿAbd Allāh, who took the title Piri-Rawshān:** called by their enemies Tārīkhān.

1. **Life of the Founder.** Bāyazīd was born at Djujliｕdār in the Pandjarāb about 931 (1525), his father’s native place being Kaniguram, an Afghan town, whither his parents returned. When his mother Banū was divorced by ʿAbd Allāh, Bāyazīd became alienated from his father, who disapproved of his seeking the solution of religious difficulties from a poor relation, the ascetic Ismāʾil; he started earning his living by transporting goods from Samarkand to Hindūstān with Turkish horses. In the town Kalīngjār, S. W. of Allāhābād, he became acquainted with one Mullā Sulaimān from whom he imbibed Ismāʾilī doctrine. Returning to Kaniguram he lived as a hermit in a cave, and evoked eight precepts for his followers; he was in consequence attacked and wounded by his father. Thence he fled to Nīngrahar, where he was given protection by a Mohmand chief Sulṭān Aḥmad, and presently won adherents among the Ghoria Khel in the neighbourhood of Peshawar from the Khalīl and Māḥmūḏ Zādī, who had recently overruled the Peshawar plain. He established himself at Kalīdhar in the territory of the ʿUmarīs, and sent out missionaries who were also raiders. At this time one Saiyīd ʿAlī Tirmīdhī aided by Akhūn ʿAbd al-Derezezh (one of the authorities for his biography) started controversies with him; they were unsuccessful, and Bāyazīd, who at some time had taken the title Piri-Rawshān (Luminous Shaikh, parodied by his enemies as Piri-Tārīk), conceived the idea of annexing the empire of Akbar, on whose treasury he presently issued drafts. He was arrested by Mūḥsin Khān Khāzī, governor of Kābul, whither he was taken. He was there accused of heresy before the ulama, who however, for a consideration, acquitted him. He retired first to Točīn, then to Tirāh, where he proposed to substitute a new religion for Islam. After a time many of his Tirāh followers reverted to Islam, and were expelled by him; they fled to Nīngrahar, and were attacked by Bāyazīd, who however was defeated with great slaughter by Mūḥsin Khān. He fled to a village in Kalāpāni, where he died (993 = 1585).

2. **Later history of the community.** Bāyazīd’s activities were resumed by the eldest of his five sons, ʿUmar, who attacked the Vīsūfānīs, a tribe which had followed Bāyazīd, but reverted to Islam; in the battle which ensued ʿUmar was killed, as was also his brother Khair al-Dīn; another brother, Nur al-Dīn, was put to death by the Gudjars. The youngest son, Djālāl al-Dīn, was captured by the Vīsūfānīs, who surrendered him to Akbar in 989 A. H. Escaping from Akbar’s court he returned to Tirāh, where he assumed the role of sovereign of Afghanistan, and Akbar found it necessary to send an army against him in 994. This army met with a serious defeat, which was repaired by a later expedition (995). The numbers of the Rawshānīs are given on this occasion as 20,000 foot and 5,000 horse. A further expedition was sent in 1000 A. H. (or 1001) which captured some 14,000 men (according to Badaoni) with Djālāl al-Dīn’s wives and children, but not apparently himself; since in 1002 he took Ghazni, but was unable to maintain himself there, and on retiring was attacked by the Hāzāra, wounded and put to death. This last affair is by some assigned to a son of his bearing the same name.

The next head of the community was Djālāl al-Dīn’s son Aḥdād, who figures in the history of Dīlahārī. In 1020 A. H. he surprised Kābul in the absence of its governor Khān Dāwrān. The attack was beaten off with great loss to the raiders, yet in 1023 Aḥdād was again in the field, but sustained a serious defeat at Fīs Balūgh. After a series of enterprises with varied success he was besieged in the fortress of Nūnghar, and killed by a musket-shot.

The historian of Shāh Dīlahān, Mūḥammad Sāliḥ Kambo, asserts that in the second year of his reign (1038) that monarch took effective steps to suppress the heresy started by Bāyazīd; nevertheless in the following year he records how the Afghān Kamāl al-Dīn was joined in the attack on Peshawār by ʿAbd al-Kādir, son of Aḥdād, and Karimād, son of Dīlahāh (Djālāl al-Dīn). The place was relieved by Saiyīd Khān, and ʿAbd al-Kādir induced to submit; in 1043 he was recommended by Saiyīd Khān, “who had caused him to repent of his evil deeds” to Shāh Dīlahān, who gave him a command of 1,000 horse. Other members of Aḥdād’s family received honours and rewards in 1047. In the same year Karimād, who had taken refuge in the Mohmand country, but had been recalled by the tribes of Bangash, was attacked, captured and executed by Saiyīd Khān. It is asserted that some relics of the community still exist in this region. A branch of the sect, called ʿIsāwī, was founded at Swat by one Saiyīd ʿIsā of Peshawār (T. C. Powdén, translation of the Kālid-i Afghānī, Lahore 1875).

3. **Doctrines of the sect.** According to the Dīlahānīs, which is friendly to the sect, Bāyazīd’s doctrine was extreme pantheism; “if I pray” he said, “I am a muṣṭafī; if I pray not, I am a kāfīr.” He marked eight stages (maṣāḥif) in religious progress: sharṭa, ṭaḥrīra, ṭabkīra, mawṣila, ṭurba, waṣṭa, wahrā, sukūnā; the last four are said to be technicalities of his system. The explanation of these stages, quoted from Bāyazīd’s Ḥulānām, inculcates lofty morality, e. g. to hurt no creature of God. The account which follows is inconsistent with this, as noxious persons were to be killed because they resembled wild creatures, harmless persons who did not possess self-knowledge might be killed, because they resembled domestic animals. They might be regarded as dead, and their property...
might be seized by the "living". Further he advocated the direction of prayer and the preliminary ablution. Other details are furnished by a hostile writer, the historian of Shāh Q Jahān quoted above, copied in Muntakhab al-Lubāb. Marriage, he says, is without a contract, there being merely a feast at which a cow is slaughtered. Divorce is ratified by placing some pebbles in the wife's hand. The widow is deprived of inheritance, and indeed is at the disposal of the heirs, who may marry her themselves or sell her to some one else. When a son is born to one of them, an incision is made in the ear of an ass, and the blood dripped on the infant's tongue. This is in order to ensure that the infant shall be bloodthirsty and have the mind of an ass. Any stranger who falls into their hands is enslaved and can be bought or sold. Daughters receive no share in the inheritance. They massacre whole tribes when they conquer them. Even on the Day of Judgment their victims, though martyrs, will not hold them to account. — According to others, however, they recognized neither Paradise nor Hell.

4. Literature of the sect. Bāyazid is said to have written much; works by him cited in the Nabshān are the ʿIḥānāmī or autobiography, mentioned above, and Khaīr al-Bayān, the sacred book of the sect, in the style of the Kurān, addressed by the Divine Being to Bāyazid. This was issued in four languages: Arabic, Persian, Hindi and Pushto. A work in Arabic, Maṣūd al-Muʿminīn, by him is also mentioned.

Bibliography: The account of the sect given by J. Leyden, in Asiatic Researches, xi. 363-428, London 1810, based on the Nabshān al-Mašāḥihī (p. 247-253 in ed. Bombay 1929) and the Pushto work Maḥzān al-Īslām of Akhund Derwezech, furnished the material for the account of the sect in Graf T. A. von Noer's Kātir Aḵār, Leyden 1885, ii. 179 sqq., and largely for that in Glossary of the Punjabi Tribes and Castes, Lahore 1915, iii. 355 sqq. Notices of the sect were also got from Indian historical works; from the Aḵār-nāme (printed, Calcutta 1881) by M. Elphinstone, History of India, London 1846, p. 517 etc.; from the Tabātabāi Aḵbār (lith., Lahore 1929) by H. Elliot, History of India, London 1873, v. 450; from the Tawākī-ī ʿIḥānāngī, transl. A. Rogers and H. Beveridge. London 1909 by Beni Prasad, History of Jahangir, Oxford 1922, who also uses the ʿIḥānāmī ʿIḥānāngī, Calcutta 1865. For Shāh Q Jahān's time the ʿIḥānām-nāme called Ḥamal-ī Sāḥib of Muhammad Sāliḥ Kambo, ed. Ghulam Yazdani, Calcutta 1923 and 1927, is the chief authority. The printed text of the Buʾātibāh-nāme (Calcutta 1867, 1868) which, according to Muntakhab al-Lubāb (Calcutta 1869), should contain an exaggerated account of the atrocities of the sect, has very little about it.

(D. S. Margoliouth)

Al-Razi, Abu Bakr Muḥammad b. Zakariya, a celebrated physician, alchemist and philosopher. Almost nothing is known of his life. He was born in 250 (864) at Rayy. There he seems to have studied deeply in mathematics, philosophy, astronomy and belles-lettres. He perhaps also studied alchemy in his youth. It was only after attaining a rather advanced age that he devoted himself to medicine. Entering the service of the ruler of Rayy, he soon became head of the new hospital in this town and later we find him in the same capacity in Baghdād. We do not know exactly how long he remained there. The reputation of being the greatest physician of his time brought him from one court to another. The fickleness of the favour of princes as well as the uncertainty of the political situation are the causes of his unsettled life. He returned several times to his native town where he died in 313 (925) (according to al-Biruni on 5th Shabān 313) or in 323.

We are not better informed regarding Razi's teachers. Several Arabic biographers regard him as a pupil of the Iranian 'Ali b. Babballāh Attar which is chronologically impossible. As his teacher in philosophy the Fihrist mentions a certain Balkhi (not the geographer Abu Zaid al-Balkhi) from whom Razi is said to have taken some ideas. Naṣīr-i Khusraw says the same thing about a rationalist philosopher with the curious name of Eranshahrī (cf. Žād al-Muṣṭārin, p. 73, 98; cf. also al-Biruni, Ḥinī, p. 4, 326; al-Ṭabarī, p. 222, 225), it is very probable that the two sources refer to the same individual. Although the influence of Razi was considerable, we know nothing of his pupils. The philosopher Yahyā b. Ḍīn, an Aristotelian, Jacobite and disciple of Fārābī, is said to have begun to study philosophy with Razi (cf. Maṣ′īdī, Kitaḥ al-Ṭanbūh wa-l-Ḥaṣbū, and a later source (Hudjwī, Kitaḥ al-Maḥābīb, transl. Nicholson p. 150) speaks of connections between himself and the mystic al-Haḍīḍī. It was in Shīʿa circles that the philosophical doctrines of Razi left the deepest mark Abu ʿIsābī Ṭabārānī b. Nawbakht, a theologian of the "Twelver" Shīʿa, borrows from him, in his Kitaḥ al-Yaḥṣūʿ, his theory of pleasure, and the ʿIsmāʿīlīs Abū Ḥāfirīm al-Razi (d. 322 = 926), Kirmānī (d. after 412 = 1021) and Naṣīr-i Khusraw (q. v.) attempted to refute certain parts of his philosophical system. Among the other authors who combated his views may be mentioned Fārābī, Ibn Ḥaṭīḥ, 'Alī b. Ṭīwān and Maimonides.

Razi is above all a physician and he is rightly regarded as the greatest physician of Islam. In addition to numerous monographs on various maladies of which the most famous is his treatise on smallpox and measles (Kitaḥ al-Ḍarbāb wa-l-ʿIṣāfāb) he wrote several large manuals of medicine which were the most remarkable since the middle ages knew. A number of his works were translated into Latin and down to the xvith century the authority of al-Razi was undisputed. His Muḥājir (Libārʾ Almansiros) is dedicated to Muḥājir b. ʿIsābī, governor of Rayy, and his Muḥājir (Regius) to 'Ali b. Wēh-Sūkīn of Tabaristan. The Ḥāwī (probably the same as the Ḫāsimī), is the largest medical encyclopaedia in Arabic. Razi is said to have devoted 15 years of his life to writing it and seems to have died before finishing it. The book is a compilation of extracts from all the Greek and Arab physicians on every problem of medicine and Razi concludes by giving the results of his own experience. While accepting earlier tradition, Razi is the least dogmatic of the Arab physicians and in the field of medical practice surpasses the knowledge of the ancients. We still possess his clinical notebook in which he describes very carefully the progress of his patients.

The same empirical spirit is found in the other branches of science which he studied. In chemistry, about which we are better informed, Razi, rejecting
all occultist and symbolic explanations of natural phenomena, confined himself exclusively to the classification of substances and processes as well as to the exact descriptions of his experiments. In spite of the statement of the Fihris, Rāzī does not seem to have been acquainted with the alchemical writings attributed to Džābār b. Ḥayyān. Pseudo-Maḍḍriti in his Kitāb Ruzbat al-Ḥakīm, endeavoured to reconcile the alchemy of Rāzī with that of Džābār. Of his writings on mechanics we only possess a synopsis of his treatise on the balance (mizān ta'bī). All his works on physics, mathematics, astronomy and optics, of which a large number are enumerated by the bibliographers, have perished.

It is the same with his metaphysical works of which we only have a few fragments preserved in later authors. Besides the Shī'ī theologians mentioned above, we must make particular mention of al-Birūnī, who in his various works frequently refers to Rāzī. He also devoted a complete risāla to a study of the life and works of Rāzī.

The following are the characteristic features of his metaphysics: Rāzī asserts the existence of five eternal (ka'bī) principles which are the Creator, Soul, Matter, Time and Space. The eternity of the world is, according to Rāzī, the necessary corollary of the concept of God, the unique and immutable principle (the line of argument of the Aristotelian philosophers). Now Rāzī denies this eternity. Only the plurality of the eternal principles, their opposition and combination, can explain temporal creation. The origin and destinies of the world are imagined by Rāzī under the form of a myth with gnostic affinities. The Soul, the second eternal principle, possessing life but not knowing, is seized with the desire to unite with matter, and to produce within itself forms susceptible of procuring corporeal enjoyments. But matter is elusive. The Creator then in his pity creates this world, with its durable forms in order to permit the soul to enjoy it and to produce man. But the Creator also sends the intelligence (ṣabī) partaking of the substance of his divinity to awaken the sleeping soul in its abode (ka'bāl) which is man and to teach that this created world is not its true home, the place of its happiness and of its peace. To escape the bonds of matter there is only a single means for every man, which is the study of philosophy. When all human souls have attained liberation the world will dissolve and matter deprived of forms will return to its primitive state.

In his physics, Rāzī, an opponent of the Aristotelians and mutakallimīn, relies on the authority of Plato and the pre-Socratic philosophers. Hylomorphism, fundamentally different from the parallel-theories of the kalām, is related in many ways — an exceptional case in medieval philosophy — to the system of Democritus. In Rāzī’s view matter in the primitive state before the creation of the world (ka'bāl muta'ābī) was composed of scattered atoms (dīnus la yatajāzzu). Atoms possessed extent. Mixed in various proportions with particles of the Void — of which Rāzī against the Aristotelians affirms the positive existence, — these atoms produced the elements. The latter are five in number: earth, air, water, fire and the celestial element. All the properties of the elements (lightness and heaviness, opaqueness and transparency etc.) are determined by the proportions of Matter and Void entering into their composition. Earth and water, dense elements, tend towards the centre of the earth, while air and fire in which particles of the void predominate, tend to rise. As to the celestial element, a mixture of Matter and Void, circular movement is peculiar to it. Fire springs from the striking of iron on stone because iron as it moves cools the air and rarifies it so that it is transformed into fire.

Rāzī distinguished universal space (ma'ānī kulli) or absolute space (ma'ānī muṣaf) from partial (dīnī) and relative (muṣaf) space. Absolute space, denied by the Aristotelians, is pure extent, independent of the body which it contains. It extends beyond the limits of the world, is infinite. There is reason to believe that Rāzī affirms the plurality of worlds. The term relative or partial space is applied to the size or extent of any particular body.

In his theory of time, which he says is Platonic, Rāzī differentiates in analogous fashion absolute (muṣaf) and limited (ma'ānī) time. It is only limited time that the Aristotelian definition of time, considered as a number of moments (in the first place of movement of the celestial spheres), is applicable, according to the Prior and Posterior Analytic. Absolute time is an independent substance which flows. It existed before the creation of the world and will exist after its dissolution. Abandoning a distinction made in the Timaeus and handed down by the Neo-Platonists to the Arabic philosophers, Rāzī identifies it with eternity (dahr, ṣaww). To attack the Aristotelian conceptions of space and time, Rāzī makes use of the view of the man in the street with a healthy mind not broken in to philosophical subtleties.

In his ethics, Rāzī, in spite of his pessimistic metaphysics, is against excessive asceticism. Socrates, whom he regards as his model, far from being the ascetic of cynical tradition, took an active part in public life. According to the maxim of Aristotle, blame cannot be attached to the human passions but only to their excessive indulgence. At the basis of his moral teaching is a special theory of pleasure and pain. Pleasure (ḥaṣṣ) is not something positive but the simple result of a return to normal conditions, the disturbance of which has caused pain (ṭarā). The sira falsaṣṣya (βλές ψυχός) aspires, according to the saying of Plato (Thætætæ, p. 176a), to resemble the Creator to be, like him, just towards man, indulgent to his faults.

In view of the individualistic ethics of Rāzī, we can understand his critical attitude to established religion. In many writings he refuted the Mu'tazili theologians (Džāhī, Nāshī, Abu 1-Kāsim al-Balkhī, Misma'ī (= Ibn Aḥbīl Zurrān)) who attempted to introduce scientific arguments into theology. Nor was he sparing in his criticism of the extreme Shī'a (refutation of Ahmad al-Kājīl) and of the Manichaeans. Among his adversaries in philosophy we find, besides the Dāhī Abū Bakr Husain al-Tammar al-mu'taļabbīhī, the Sabæan Thābit b. Kurra, the polyhistorian Mas'sūdī and Ahmad b. al-Taiyib al-Sarākhsī, a pupil of al-Kindī.

Unlike the Muslim Aristotelians Rāzī denies the possibility of a reconciliation between philosophy and religion. Two heretical writings figure in his bibliography: the Maṣḥūrīh al-Anbīyā, or Ḥīṣīh al-Mu'tanābīyīn was read in heretical circles in Islam and notably among the Karmātians (cf. Baghdādī, Pārī, p. 281). It seems even to have influenced the famous theme of the Dr Tribus,
Importus, so dear to western rationalists from the time of Frederick II (cf. L. Massignon, in R. H. C., 1920). The second, Fı Nakb laal-Adyan is partly preserved in a collection, the Khatib Al-A'm al-Nabawi of the Isma'ilî Abû Hatîm al-Râzî. The principal theses of this book are as follows: all men being by nature equal, the prophets cannot claim any intellectual or spiritual superiority. The miracles of the prophets are impostures or belong to the domain of pious legend. The teachings of religions are contrary to the one truth: the proof of this is that they contradict one another. It is tradition and lazy custom that have led men to trust their religious leaders. Religions are the self-subsisting illusions which ravage humanity; they are hostile to philosophical speculation and to scientific research. The alleged holy scriptures are books without value. The writings of the ancients like Plato, Aristotle, Euclid and Hippocrates have rendered much greater service to humanity. — Râzî’s book undoubtedly contains the most violent polemic against religion that appeared in the course of the middle ages. It takes up to some extent the arguments of the contemporary Manichaens against positive religions but above all it seems to be inspired by the criticism of religion in antiquity.

Râzî believed in a progress of scientific and philosophical knowledge. He claims to have advanced beyond most of the ancient philosophers. He even thinks himself superior to Aristotle and Plato. As regards medicine, he had attained the level of Hippocrates and in philosophy he feels himself close to Socrates. But after him there should come other learned men who would reject some of his conclusions just as he had sought to supplant the teachings of his predecessors.

(P. Kraus and S. Pines)

AL-RÂZÎ, the name of three historians of Muslim Spain. 1. MUHAMMAD B. MUŠA B. BASHÎR B. DIYÂNÔD B. LAKİT B. AL-KINÂNI AL-RÂZÎ, who took his nishâ from the town of al-Ra‘î in Persia where he was born, came from the east to Cordova about the middle of the third century A.D. (864 A.D.) to trade there. His high degree of Arabic culture gave him a welcome in intellectual circles in the Umayyad capital and the emir Muhammab b. ‘Abd al-Rahmân entrusted him on several occasions with diplomatic missions in the east or in Spain itself. His successor, his son al-Mandîrî, showed him the same confidence. It was on his return from an embassy to Elvira [v. v.] for this prince that al-Râzî died in Rab‘î II 273 (Sept. 5—Oct. 3, 866).

We would have known nothing of Muhammab al-Râzî as an historian but for a statement by Muhammab Ibn Muzain reproduced by the Moroccan writer Muhammab al-Wâzîr al-Ghassânî in his account of an embassy to Spain in 1691, entitled Alâh al-Wâzîr fi ‘Isâb al-Aṣîr (cf. E. Lâvi-Provençal, Les Historiens des Chorfa, Paris 1922, 284—286). Ibn Muzain there says that in 471 (1079—1080) he found in a library in Seville a little book by Muhammab b. Müsâ al-Râzî entitled Khatab al-Râzî, relating to the conquest of Spain by the Muslims and giving details of the Arab contingents, each distinguished by its standard (ruya) who entered the Peninsula with Müsâ b. Nuṣîr [v. v.]. The passage of Ibn Muzain has been reproduced in the Madrid edition of the Fath al-Andalus of Ibn Kûyiya (cf. the Bibl.). However little we know of this work of Muhammab al-Râzî, we cannot but regret its loss bitterly.

aràbigo-espanyola, Barcelona-Buenos Aires 1928,
p. 130.
H. Ahmad b. Muḥammad, son of the preceding,
surnamed al-Taʾrīḵi (“the chronicler”), the
first in date of the great historians of
al-Andalus. He was born in Spain on the
10th Dhu l-Ḥijjah 274 (April 26, 888) and died on
the 12th Rajab 344 (Nov. 1, 955). He was the
pupil of Cordovan scholars of repute like Ahmad
b. Khālid and Ḥāṣim b. ʿAbdAllah. He wrote several
monographs on the history of Spain: a Taʾrīḵ
Mulūk al-Andalus; a description of Cordova (Kitāb
fi Ṣinaʿat Qirtuṭa) written on the plan of the
description of Baghdad by Abu ʿl-Faḍl Ibn Abī
Ṭāhir; a book on the Spanish masāʾil; lastly a
voluminous work on the genealogies of the Arabs
of Spain, Kitāb al-Isṭaʿāb, which was to form one
of the essential sources of the Djamārat al-Ansāb
of Ibn Ḥazm [q.v.]. These various works have
unfortunately not come down to us and until quite
recently we had only a few quotations from Ahmad
al-Razi preserved by later writers. The recent dis-
covery of a fragmentary manuscript of a chronicle
relating to the 10th century in Spain now puts at
our disposal quite extensive extracts from this
author and from his son Ḥāṣim (see iii.); these
passages are collected in Documentos inéditos d’histoire
hispano-umayyade, to appear shortly.

The majority of Ahmad al-Razi’s biographers
do not attribute to him any geographical work,
but some, e.g. al-Dbabi and Yṣkūṭ, notice a Spanish
geographer whom they call Ahmad b. Muḥammad
al-Taʾrīḵi who is clearly Ahmad al-Razi; this
individual, according to these authors (al-Maʾkṣari
attributes it directly to Ahmad al-Razi), wrote a
lengthy work on the routes (masāʾil) of al-Andalus,
its anchorages (marāṣiʿ), its principal towns (umma-
ḥāt al-mudun) and the six Arab ajums [q.v.]
which were settled there after the conquest. This
description of Spain has been preserved in a
Castilian translation published in 1580 by P.
de Gayangos as an appendix to his Memoria sobre
la autenticidat de la Crónica denominada del Mon
Ruso (supplemented by R. Menéndez Pidal, Catá-
logo de la Real Biblioteca. Manuscritos. Crónicas
generales de España, Madrid 1898). The description
forms the first part of this Crónica and in its
present Castilian form comes from a translation
into Portuguese, now lost, prepared by order of
King D. John II of Portugal towards the beginning
of the xivth century by a clerk named Gil Pérez;
the latter was no doubt the author of the second
part and in the third he confined himself to summing
up very briefly the historical work in the strict
sense of Ahmad al-Razi.

The description of Spain by al-Razi, in
spite of the many difficulties offered by the fact
that it has passed through two translations, both
very often inaccurate and corrupt in the place-
names, is nevertheless a very important document
from the geographical, as well as the political
and social point of view for the Muhammadan part
of Spain in the reign of ʿAbd al-Raḥmān III. After
a number of general reflections on al-Andalus, its
situation with regard to the rest of the inhabited
world, and its climate, we have an individual
description of each of the principal districts, of
which special use was made by Yṣkūṭ [q.v.] for
the Spanish references in his Muḥājir al-Buldān.
A comparison of the Spanish text of al-Razi’s
description with that of Yṣkūṭ enables us to discover
a close relationship between the two works. They
both give the same number of administrative titles
(laçus) in Umayyad Spain of the xth century, 41 in
all: Cordova, Cabra, Elvira, Jaen, Tudmir, Valencia,
Tortosa, Tarragona, Lérida, Barbitania, Huesca,
Tudela, Saragossa, Calatayud, Barbastro, Mérida,
Shantabanya, Racapel, Zorita, Guadalajarada,
Toledo, Oreno, Faṣa b. ʿAl-Ballūṭ (Llano de las bellotas),
Ferrish, Mérida, Badajoz, Bése, Oconosoba, Santarem, Cotbrua,
Extinția, Lisbon, Niebla, Sevilla, Carmona, Moron,
Sidona (Shadhāna), Algéciras, Reijo, Ecija and
Tácoronan.

la Península Ibérica en los escritores árabes,
Granada 1921, p. 29 sqq.

iii. Ḥāṣim b. Ahmad b. Muḥammad, son of ii.,
grandson of i., continued his father’s Umayyad
chronicle down to his own time and extended the
portions dealing with earlier periods by using
sources which had not been available to Ahmad
al-Razi. He has not been the subject of notice by
any of the Spanish biographers already published
but is frequently quoted by later historians,
notably by Ibn Ḥaṣān [q.v.], Ibn Saʿīd [q.v.]
and Ibn al-Abbār [q.v.]. According to the latter,
he also wrote a monograph on the Ḥaḍīṣ of [q.v.]
of the Umayyad court of Cordova: Kīrāb al-
Iṣbikhāb liʾl-Khulāfaʾ bi-l-Andalus.

Ensaimo, No. 41; A. González Palencia, Hist. de
la lit. ar. esp., p. 131.

E. LEVI-PROVENÇAL

AMĪN AHMAD RĀẒĪ, a Persian biographer.
Hardly anything is known of his life. He belonged
to Ray to where his father Khwāja Mirzā Ahmad
was celebrated for his wealth and benevolence.
He was in high favour with Shah Ṣahmās and was
appointed by him kālim ārāf of his native town.
His paternal uncle Khwāja Muḥammad Shāh
was vizier of Khurāsān, Yazd and Iṣfahān, his
cousin Chiyāth-Beg a high official at the court
of the Emperor Akbar. Amin himself is said to
have visited India. The work to which he owes
his fame is the great collection of biographies
Haft Khīlim (finished in 1002 = 1594). For many
years he collected information about famous men
until finally he yielded to the entreaties of one
of his friends and arranged his material in book
form. The final editing of it took six years. The

The Encyclopédia of Islam, III.
biographies are arranged geographically according to
the 7 climes. In each clime the biographical
part is preceded by a short geographical and
historical introduction which is followed by notes
on poets, ulamas, famous šahāhs etc. in chrono-
logical order. The work is of special importance
for the history of Persian literature, as the bi-
ographies of poets contain numerous specimens
of their works, some of which are very rare. It con-
tains the following sections: Clime I: Yaman,
Bilad al-Zanj, Nubia, China. Clime II: Mecca,
Medina, Yamama, Hamma, Dakhkan, Azerbaijan,
Daralatabid, Golkonda, Ahmadabad, Sūrat, Bengal,
Orī-san and Kūsh. Clime III: 'Irāq, Baghdaḏ, Kūfah,
Najaf, Basra, Yazd, Fārs, Sistan, Kandahār.
Oman, Lāhūr, Dihi, India from the oldest
times down to Alkhor, Syria, Egypt. Clime IV: Kūhārān,
Balkh, Herāt, 'Eḏem, Māshhād, Nishapūr, Sabravār,
Isfārān. Isfāhān, Kāšān, Kūn, Suzā, Hamadān,
Tehrān and Fārsān, 'Eṣfān, Tabaristān, Māzandarān,
Gilan, Kāzvin, Ardabīl, Qazvin, Varamān, Nūrābād,
Tabrīz, Būljābās. Clime V: Shirwān, Ghurja, Kīwārūm, Mā wārā al-Sahr, Samarkand, Bukhara,
Farghān. Clime VI: Turkestan, Farāb, Varḵand, Kūk, Cornerstone, Kūn, Clime VII: Balkh,
Salūk, Vāḏyāl, Mādūz. Unfortunately this
valuable work has not yet been published. Maw-
lawī Aḥmad al-Muṣṭafā began his edition in the
Fihrista al-İmlās, but so far only one part
has appeared (Calcatta 1918).

Łoź (L. Berthezi)

Łoź (Ar.-radīf), *what follows immediately
after a person or thing (Fagnan, Additions); one
mounted on a group, pilon-rider*: for use in the
figurative sense in a compound epithet in Turkish (Persian); *mīrār, fāzaf-żer-żer-radīf*; the victorious
army (one which has victory on its group) (Turkālī
Līfīk, 1272 A.H., t. 22). The synonyms terafīd
and, more rarely, radīf, *the act of causing to flow
or join, to make are also sometimes
used in Turkish as well as the words terqafā and
radīf*. As a technical term radīf, pronounced
remīss, has been used: 1. In Persian and Turkīsh
prosody; 2. In the Ottoman army.

1. Persian and Turkish Prosody. — Radīf
is a kind of *hypermeter* (taking this word in a
wider sense than in classical or even English prosody).
It is the part of the line which follows the rhyme
(kāfīr in Neo-Turkish: yaqī) or more exactly
the last syllable of the latter (ratī), or which
comes between two words forming a rhyme. The
śabīd may consist of one or more suffixes, particles
or independent words. The old theorists however
disputed the quality of radīf to repeated suffixes
and gave different names to each of the (Arabic)
letters representing them: šafī (first letter); šēflūfīd
(second); māṣfīd (third); nāfīd (fourth). In Persian
and Turkish prosody the same radīf is repeated
at the end of all the lines of a piece of poetry.

Although it made its appearance in Turkish as
early as the 6th century, the radīf is an especially
Persian invention. Indeed in the national Turkish
poetry (syllabic metre) suffixes or particles repeated
at the end of the lines count as rhyme (Kowalski,
ZŁOź-radīf and ḥawma ḥawma, Hawma ḥawma,
Cracow, 1922, p. 32). The radīf existed in classical
Arabic only in an emotive form and
under another name (Garcin de Tassy, Rhétorique,
p. 143). The redīf fell into disuse in Turkey in the
6th century, probably under the influence of
French poetry.

In addition to this special use in prosody the
name redīf is sometimes given to the second term of
an irād, i.e. of a hendādīs (muṣaffat) of which the
two terms rhyme or are alliterative; as for example, Pers. ʃuₐlu-šāmān, dastʿ uda-a, khåh šavādān, Türk. şar-a şar-a, 'al a 'al (Bu'rakān-
šīh), Türk. transl. p. 128, 323, 328, 371). Mutāwīdīd
(mutāwīfīd) means *synonym*.

2. Turkish Military Usage. — Mahānī II
gave the name of redīf (azar of redīf-e meqāre) to the
reserve army created in 1534 (Jouannin and van
144) speaking of the project for this army,
under the year 1549 (May 21 1533—May 9 1544)
explains the meaning of the term by saying that
it was a force that “came after” the regular army
(muṣaffaṣeṣe redīf olarūk). They were therefore
not soldiers who had, at need, to mount behind
the cavalry on the croup, like the Roman velites.
Redīf was contrasted with nuṣūm or ‘azar-i nuṣūm
from the first that the regular army (standing army
and with ībīsā ‘reserve of the regular army’). For
the lack of an exact equivalent we may say militia in
English and *armée de réserve* or “garde nationale”
in French. The German term “Landwehr” is per-
haps nearest it but in the Prussian rather than
the Austrian sense. Sometimes the redīf are included
in the nuṣūmīe, taking the latter term in a wider
sense of regular or disciplined troops (synonym
muṣaffaṣeṣe). Fūtī (loc. cit.) calls the redīf bir nevē
‘azar-i nuṣūmīe *a kind of regular troops*.

The characteristic feature of the redīf army was the
existence of permanent cadres, whence its mixed
character. It was linked with the regular army by
its officers and with the reserve by its men (fūrād-
redīf). It was the object of its creators that this
army should provide a large number of men if
necessary without imposing too long a period of
service on the rural population (Fūtī, op. cit.)

It was decided from the first that the redīf
should consist of battalions (tabūr) and indeed this
organisation by army depots (tabūr ṣuwar) remained
in force as long as the redīf existed. The
commanders of these battalions (biyāzūkhān) were
at first chosen from the chief local families
毛病 (mâjallī) ḥōmānīn). The first
battalions formed in 1250 (May 10 934 to April 28 935)
were those of the sandalāk (q. v.) of Karabash Şişib,
Ankara, Kangī (Cankī), Siroz and Menteshe.
Ismaʿīl Bey, hereditary Kurd governor of Palu, was
appointed colonel of the three battalions in the
year 935 known as those of the “Imperial Mines”
(musallamī hāmsū) in the eyālet of Siwās (Fūtī,
iv. 171). There were three to four battalions to
the sandalāk, or 10 to 12 to the eyālet. The officers
received a quarter of the usual pay, but were only
expected to serve and wear uniform two days a week
(Mussafat Nūr Pāša, Ḳatāfāl al-ḵawālīs, iv.
109).

In 1252 (April 18, 936 to April 6, 937), the
redīf was organised in wide groups with a high
command: musallam (māḥal-shīp) *māḥal-
shīp* [cf. muṣaffaṣe] of redīf, conferred upon the
vals. The first were those of the eyālets of
Karaman (Konya), Kudawandīrgūz (Brussa: guard or
kālēt), Ankara, Aydın, Erzurum, Edirne. At
the same time plans were made to raise the money required for this purpose. The wall-marshals were given the ḥawāni (ḥarmāni) or cloaks of their new rank. Just as the troops of the line (muṣṭafā) were divided from those of the guard (ḥāṣaf) so there were redif-i muṣṭafā and redif-i ḥāṣaf. The appointment of commanders of divisions was to follow (for details see the Tekke-i Şir or report of the grand vizier Mehmed Emin Ra‘ūl Paşa in Lütfi, v. 165—170). If we may believe the ḥāṣaf-i humayyin promulgated on this occasion by Mahmūd II, these first steps gave every satisfaction (ibid., p. 74).

When the Military School (mektek-b-i hārbiye) instituted in 1251 began to supply officers, the redif in arms was converted into active forces and the officers were sent back to their oldjaks (Nerā'ī al-Wā'īfāt, iv. 109—110). The service as redif (ḵabīmt-i redif) was now definitely to assume the character of a kind of period of service in the reserve or intermittent service the duration of which (μιδδί-μάρτυρ) was to be fixed under conditions which we shall explain below.

In the ḥāṣaf-i humayyin of Gülhāne (Nov. 31, 1839) there is an allusion to an approaching improvement in the system of regional recruiting. In 1838, five years had been fixed as the period of service in the regular army, previously practically unlimited (one saw young married soldiers leaving their families for life), but this measure did not immediately make its effect felt (cf. von Moltke, Lettres sur l'Orient, n.d., p. 311, letter no. xiv. 1).

On Sept. 6, 1843 the military law of the so‘āker Ribā Pāsha (Engelhardt, i. 71) was promulgated, a law of fundamental importance, half French and half German in character, the principles of which have survived even in the most recent legislation. It confirmed the period of regular service at five years (later reduced to four), to be followed by a period of seven years during which a redif could be recalled to the colours for a month each year (later every two years). Each ordv (army corps) was to have its redif contingent (ṣin-f-i redif) placed in time of peace under the orders of a brigadier-general (liqāt, brigade) who lived at the headquarters of the ordv. In 1853 (Ubcini, i. 456) the redif were organised into 4 (out of 6) ordv, namely those of ḥāṣaf (Souats: [Asya] and Smyrna), Derese-ādett (İstanbul and Ankara), Rumeli (Mənaṣir) and Anatolia (İrāpur). The ordv of 'Arabustān and the İrāq were still to be organised. Ubcini adds this observation: “By means of this organisation the government has secured a force at its disposal equal to the regular army and capable of being moved in a few weeks either to the line of the Balkans or to any other point in the empire”. According to Branci (Guido de la conversation, 1852, p. 230), the organised reserve (māreṭṭet redif) was then 150,000 men compared with 300,000 of the regular army.

Hussein 'Avni Pāsha's law of 1869, more clearly French in character (Aristarchi, iii. 514; Engelhardt, ii. 37 sqq.), provided for 4 years active service and one of ḥāṣaf or in the active reserve, a period of 6 years in the redif in two bans (ṣif-i muḥaddem and ṣif-i tālī) of 3 years each (according to Engelhardt of 4 and 2 years respectively). In practice in 1877 there were 3 bans, the third (ṣif-i ḥāṣaf) being represented by the territorial army (muṣṭafā) then mobilised (Zoibinski, p. 98). A conscript who obtained a lucky number in the draw was drafted directly into the redif army (art. 17).

The law of 27th Şāfār 1304 = 13th Teshrin-i Ḥānî 1302 (Nov. 25, 1886; resumed by Lamouché, p. 72 and Young, ii. 394) was prepared by a commission of reorganisation which included Muftafar Walī Riḥā Paşha and von der Goltz Paşha, fixed the period of redif service at 9 years, but was soon afterwards followed by a special law (redif kanumā) of 10th Muḥarram 1305 (Sept. 28, 1887). According to this, which was however not put into force till 1892, the period of redif service was 8 years. The ranks in the redif were the same as in the regular army from general of division down to sergeant-major. These officers formed at the same time the personnel of the recruiting offices for the whole army.

According to the law regulating the uniforms of the army on land (elben-i askeriye nişān-namesi) of the 29th Djamādā 1327 = 5th Hazīrān 1325 (June 18, 1909), the redif soldiers wore as distinctive badge a dark green (redif) piping (ṣt, Pers. sīh, Arab. sīţ) at the bottom of the collar (ṣajā) of the tunic (ṣajāt) or şekeš, modern spelling: ceket, şekeš). The officers wore a piece of cloth of the same colour 7 centimetres in length fastened on the collar of the lower tunic (ṣajāt) or the full dress tunic (ṣajāt, older spell: of Pers. sāret) (Dustūr, Tertib-i Ḥānî, i. 276; A. Bilotti and Ahmad Sedād, Législation ottomane, Paris 1912, p. 171 sqq.).

The redif system was abandoned by the Young Turks. The law of 18th Ramadān 1330 = 18th August 1328 (Aug. 31, 1912) without proclaiming the dissolution of the corps ordered the formation of units of muṣṭafā with elements furnished by the battalion depots in the second inspection (muṣṭafā) of redif (Dustūr, Tertib-i Ḥānî, iv. 615). The Young Turks have been reproached with this measure and some have even seen in it the cause of the Turkish defeat in the Balkan War.

(The collections of Turkish laws or dustūr generally refrain from including the principal laws relating to the army and the two works just mentioned contain only a very few).

(J. Deny)

REFİI, an Ottoman poet and Hürфи. Of REFİI's life we only have a few hints from himself; the Ottoman biographers and historians do not seem to mention him at all. He himself describes how in his youth he studied many branches of knowledge but did not know what he should believe, and how sometimes he turned to the Sunna, sometimes to philosophy and sometimes to
materialism. He often travelled a great distance to visit a particular scholar but was always disappointed. The poet Nesimi [q.v.] was the first to teach him the grace of God and the truth, and ordered him to teach this truth in his turn to the people of Kâna, and for this purpose he had to speak in Turkish. He therefore wrote his Beşgül "et-nâmé, "the message of joy", which he finished on the first Friday of Ramadân 811 (Jan. 18, 1409). This work is not yet printed; it is quite short and written in the same metre as 'Ashîk Pasha's Gharîbînâmé, a remêl of six feet with irregular prosody. The Hurüfî teaching is expounded in a very prose style, the merits of the names and letters, the sacred number 32, the prophets, the throne of God, the human countenance, the splitting of the moon, Faîl Allah [q.v.], the founder of the Hurûfist sect—all this is dealt with from the usual Hurûfî point of view. As sources an 'Arîgânî, a Qâmûşiânâmé, and a Maḥqûkhâmé are quoted; the first and third are probably the works of the same names by Faîl Allah, the second according to Rieu was written by 'Abd-Allâh (d. 707 = 1307).

Another of Refî's works is the "Book of Treasure" (Göngûnâmé). It is printed in the Stambul edition of the Diwan of Nesimi. The Göngûnâmé is better as poetry and on the whole less Hurûfî than generally Sûfî in tone. Man from the Hurûfî and philosophical point of view, Faîl Allah and Aḥmîd ( = Muḥîn), the 72 sects, the greatest Naṣîr-i dînî, the water of life etc. are discussed in it.

Nesimi and his pupil Refî seem to be the only Ottoman Hurûfî poets of importance, and while the sect, in spite of all persecutions, continues to exist long after and even had connections with the Bektâşiye, these two poets as such do not seem to have produced any school. So far as I am aware no historian of Turkish literature has taken any interest in Refî, until quite recently Koprulu-Zâde Mehemd Fuâ'd, who has even promised us a special study of him.

REFî (url-kuttâb or Rêfî Efendi [Ar., used in Turkey], properly "chief of the men of the pen", a high Ottoman dignitary, directly under the grand vizier, originally head of the chancery of the Imperial Diwân (devân-i humâyûn), later secretary of state, chancellor and Minister of Foreign Affairs. According to d'Herbelot he was called also Rêfî kish.

This office, unlike many others, is purely Ottoman, at least as regards the particular line of development that it took. Establishing itself at the expense of the functions of the nishânpî [q.v.], we may say that it owes nothing to the influence of the more or less iriscized 'alîjahî or to the Byzantines. It seems rather to be connected with a more general and more vague institution of the East, one which deserves more profound study: that of the secretaries of the diwân or chiefs of the secretariat of the diwân. This office is found in different Muslim countries under different names: persânî among the Mongols of Persia, diwân ûfî among the Timurids, mumji in Persia, (cf. Chardin, vi. 175; 'Ewîya Çelebi, ii. 267). In the Ottoman provinces there was attached also to the valî an important official known as the diwân efendi; in Egypt under Mehemd 'Ali, the diwân efendi became a kind of president of the council of ministers. The reis url-kuttâb were in brief the diwân efendi of the capital. It is perhaps to this that we owe the use of the title reis efendi, by which they were more commonly known. We know that the term efendi was generally applied to people of the pen. The connection seems to have already been noticed by E. Blochet (Voyage en Orient de Charles Pinot, Paris 1920, p. 85).

Until the time of Sulaimân the Magnificent, the title reis url-kuttâb (or reis efendi) was not used. At least this is what we are told by Ahmed Resmi, who quotes in this connection the Bedâî-i 'Urfî of the historian Köyda 'Hüsîn Efendi of Sarajevo (cf. Babunger, G.O. W., p. 186). The latter, who was himself reis url-kuttâb, says that before Sulaimân, the official correspondence was in the hands of the evnî ahlâm or "depository of the decisions (of the Diwân)" along with the nishânpî. This point of view has been adopted by other historians (v. Hammer; cf. also the Sâhîn-i Meşrûr-i 'Abîdîyye).

There is however no agreement as to who was the first reis url-kuttâb; it is usually said to have been Djâlî (Djeblî), Zâde Mustafa Çelebi [q.v.] (cf. Babunger, G.O. W., p. 102). This well known historian, whose genealogy is taken back to the legendary founder of Byzantium, Vanko b. Mûdîn, was reis url-kuttâb in 931 (1524—1525) before becoming nishânpî, but the Nishânpî-i 'Urfâ-yî of Mehemd b. Mehemd refers to the death in 930 (1523—1524) of a reis url-kuttâb of the name of Haidar Efendi. According to other indications, it would even appear that the office goes back to Mehemd II (cf. the article NISHâNPî).

The reis or office of reis efendi lasted over three centuries during which its holder changed 130 times, the average tenure of office being 2 years and 5 months, which reveals a remarkable lack of ministerial stability: some of the occupants held the office twice, thrice and even four times.

Duties of the reis efendi. As secretary of state the reis kept records of all proceedings and reports (telkîh or takûrîr) presented to the sultan by the grand vizier acting as representative of the government and of the Diwân. These documents which were prepared by the imêdi-i diwân-i humâyûn or imêdiyî (referendari or reporter of the Imperial Diwân) were brought in a bag (kure) kept for the purpose to the ceremonial settings of the Diwân by the reis himself who handed them to the grand vizier. After being read they were given to a special officer, the telkîhî, whose duty it was to present them to the sultan.

As chancellor the reis had a kind of jurisdiction over all the civil functionaries and was the immediate
head of the department of the Imperial Divân (divân-ı kümâyûn kałemî).

This chancellory was divided into three offices (oda or kalemen):

1. the beylik, the most important, saw to the despatch of imperial rescripts (firman), orders of the viziers, and in general all ordinances (evvâmir) other than those of the department of finance (defterdar dâiresi). This office kept copies of them as did the grand vizier also. Ordinances bearing on the back the signatures of the clerk, of the chief editor (mimemêvisî), and of the head of the office (beylikgi) were submitted by the latter to the reis who placed his sign (reisî) upon them and, if it was a firman, sent it to the nishângi for the tâvârun [q.v.] to be placed upon it. — The beylik in addition retained the originals of civil and military regulations (kâmân or kâmîn-nâmê) (usually elaborated by the nishângi) as well as of treaties and capitulations (tâdâm-nâmê) with foreign powers. The reis had to consult these treaties, notably when certifying the deh-kâmân or "marginal" answers put by his subordinates on the requests or notes, known as verbal (tabir), which the ambassadors addressed to the grand vizier. It is this side of his activity which, gradually becoming more and more important and absorbing, ended by making the reis a Minister of Foreign Affairs.

2. office of the tahâni or "annual renewal" of the diplomas of the governors of provinces (beharî), of the brevets of the mellûs or judges in towns of the first class (tahâni), of the brevets of the timariots or holders of military fiefs (çabt firmanî).

3. office of the rûgân or "provisions" of different officials, as well as of the orders for pensions from the treasury (sergi) or from mabûsî (cf. the details of the organization of this office in Mouradgea d’Ossian, vii, 161).

The reis accompanied the grand vizier to the audiences which the sultan gave him and to those which the grand vizier himself gave to ambassadors. He shared with his master the midday meal as did the tawwîl bashêî (cf. ĝawxî and the two tebkerêgî, except on Wednesdays when these two were replaced by the four judges of Istanbul.

In the official protocol the reis had the same rank as the tawwîl bashêî with whom he walked in official processions, before the defterdar (which showed he was of lower rank than the latter).

The elâbî or epistolarv formulary to which they were entitled will be found in Feridîn, Mûnehbêî, p. 10. It is the same as for the agas of the stirrup [cf. kirmandêr] and the defter emimî. For the dress of the reis see Brindisi, Anciens Costumes Turcs, pl. 2; Castellan, iv. 107.

According to Mouradgea d’Ossian, the reis used to act as agents for the kâmân of the Crimâ

Administrative career of the reis. The reis, like all Ottoman officials, were chosen by the sultan or grand vizier as they pleased, but, except in case of appointment by favour, they followed a fixed line of promotion (parîk) in the administration. It was in the administrative offices, i.e., among the kudjuqân (Persian plur. which was given as an honorific title to the principal clerks or khodja or kalemen sâbitîvari) that this career was spent.

In examining the Sejfet id-ı-Risâ’î of Ahmed Resmi, we find that up to the reis Boyal Mehdem Efendi (Pâshâ) (d. 977 = 1569-1570) there is no information available about the career of the reis,

but starting with him we find that the reis were regularly chosen from among the former tekerêgî of the taxîrs or of the grand vizier. From Shekh-zade ʿAbdi Efendi (d. in 1014 = 1605-1606) the reis were mainly taken from the mektûbî or private secretaries of the grand vizier. These secretaries were themselves at the head of an office (oda) which contained a very small number of officials (khâlîf or kalifa, pl. khâlîfîs); there were only two between the years 1090 and 1000. When the number increased (at a later date there were about 30) the career of the future reis was as follows: khâlîfî in the office in question, called also mektûbî-i şadı or ali odâb, then ser-khâlîfî or bahk-kalifa "chief clerk," then mektûbî. The post of mektûbî was much sought after. It brought its holder into close contact with the grand vizier and it was then very easy to advance oneself. More rarely the future reis rose through the similar but less important office of secretary to the lieutenant to the grand vizier or Kâhya Bey (kethbâvâ khâtîb odâb).

The reis remained not the end of a career but gave access to still higher posts (see art. Nishângi for the old rules of promotion by which the reis became nishângi). It was one of what were known as the "six [principal] dignities", mescûbî sitti, namely, the nishângi, defterdar, reis-ul-kütâb, defter emini, shihî xâni defterdar, shihî xâni xâlib defterdar (Ahmed Râsim, Ta’rîkh, p. 756).

According to the Naşihatnâme (p. 39-40 of the French translation; cf. this Encyclopedia, iv. 815-816), the reis was under the authority of the Grand Defterdar (for financial matters only).

Increasing importance of the office of reis. — The growing influence of the reis is explained by the increasing importance of foreign policy in Turkey (the Eastern question).

Down to the end of the xvth century the nishângi were certainly superior to the reis: they controlled and even revised the orders and decisions of the divân (aḫânîm), but from the xvinth century onwards reis like Ogdé-żade Mehdem Shâh Efendi, Lám-i-Áli Çelebi and Huvmî Efendi shed a certain lustre on their office. From 1060 (1650) the incapacity of certain nishângi precipitated the decline of their office in spite of the ephemeral efforts by grand viziers like Shehid ʿAli Pâshâ and of the nishângi appointed by him (Râshid Efendi and Selim Efendi). It was in this period that the office of beylikgi was created (cf. above).

The Ottoman protocol (teh-ı-risâ) was nevertheless still retain for a long time traces of the originally rather subordinate position of the reis. For example they did not sit in the office of the Divân itself, called Divân-ı-kâmân (in the Kapu Sarayi or "Old Sarai"), but remained seated outside of the room in a place called reis tahtâs, "the bench of the reis", where there were also seated for certain other officials to wait upon. In the formal settings, even in those like the distribution of pay (sülîfe) to the Janissaries which took place in the presence of foreign ambassadors, the part played by the reis was rather limited. He carried in with slow step and the sleeves of his ışî turned up the bag containing the tâlîbîs (cf. above). He kissed the hem (teşk) of the grand vizier's robe, placed the bag on his left, kissed the hem of his robe against and withdrew to his place. He came in again to open the bag, handed the documents to
the grand vizier, took them back from him to fold them (bəshəmək), sealed them and gave them to the tekkəşif. If he was unable to be present, the bag of the tekkəşif was handed to the grand vizier by the sənəvi tekkəşif (Kaanın-nime of Abdulrahman Pascha, p. 85, 123 etc.).

Lucas (Société Populaire, Paris 1712, p. 216) writes that during the audience given by the grand vizier to the French Ambassadør on Grand Chanceler dumeurs debout et approuvé contre la muraille.

Things were changed at the reform of the Divan effectuated by the beginning of his reign (1792) by Selim devout of limiting the power of the grand vizier. The old Divan consisted of six vezirs of the dome (having only one consultative voice), of the Muftis (Sharkh-əl-Islam) and the two kasıkras. The new Divan was to consist of 10 members by right of office and others chosen in different ways (about 40 in all). The members by right of office were the Kislaya Bey, the Reis Efendi, the Grand Defterdar, the Celebi Efendi, the Tersane Emiri, the Cevsh baths etc. (Zinkeisen, Geschichte, vi, 1861, p. 321).

The office of reis tended more and more to become the Ministry of Foreign Affairs of the Sublime Porte, parallel to the post of Kislaya Bey (Interior).

Suppression of the dignity of reis. — The title of reis was suppressed by the khatfi kəmmən of Sultan Mahmud II addressed on Friday 27th Duv 1229 (March 11, 1823) to the grand vezir Mehmed Emin Pasha. The Turkish text will be found in the Silhəmme of the Turkish Ministry of Foreign Affairs: the French translation (or at least parts of it) was published in the Moniteur Ottoman of April 23, 1836 (according to A. L. Picard, Lettres sur la Turquie, p. 38, note 1). This document at the same time created two new ministries (μεταβατ) which in memory of their origin remained to the end in the same building as the grand vezirete (cf. Farnabi Ali in Suppl-i. 1, the Ministry of the Interior (originally of civil affairs and umur-em mu'vet, later Falişte), replacing the department of the Kislaya Bey, and 2. the Ministry of Foreign Affairs (bəsheməket), replacing that of the reis). The preamble itself that, abandoning the old regulations of the service, the sultan had thought it advisable to create real posts of vezir (μεταβατ) and not honorary ones, but without its being necessary to give the new vezir of foreign affairs the title of paşa (q.v.) “which is mainly a military one”.

Bibliography: By far the most important source is the work known as Selfinet ul-Ku′rā (which consists of: 1. Ahmad Kesmi’s work (Bahgur, G. O. R., p. 300 sq) which contains the biographies of 64 reis down to Râghib Mehmend Efendi (1157 = 1744), and 2. its continuation by Sulaiman Fakıık Efendi which contains the biographies of 30 reis down to Ahmad Wâṣif Efendi at the beginning of the sixteenth century. According to the preface to Sulaiman Fakıık’s (not Fakıık) continuation, Ahmad Kesmi had entitled his work Hikmat ul-Ku′râ: in imitation of the Hikmat ul-Kurâ of Oğhman-ıde Tâbibi, but changed it at the suggestion of RâghibPATHA to Sahifet ul-Ku′râ (the references in the Catalogue of Turkish MSS, in the Bibliothèque Nationale by F. Blochet, n° 158, should be corrected accordingly) The word hikmat apparently makes no sense, that of Hikmat which is usually found in other works (Flügel, Cat., ii. 407, N° 1250; Babinger; Brussal Mehmend Tâhir, iii. 59 note), does not seem correct either. One ought undoubtedly to read Hikmat (which rhymes with the hikmat of the prototype). The Sahifet al-Ku′rā was published by the State Press in Istanbul in 1269.

Also in addition to the references in the text: Mouradjea d’Ohsson, Etat de l’Empire Othoman, vii., 1824, index; Joseph von Hammer, Die osmanischen Reichs Staatsverfassung und Staatsregierung, Vienna 1845, ii, index Kanun-nime of Tewket (μεταβατ) Abulrahman Pascha, written in 1087 (1676-1677) and ed. by F. Kropula (M. T. M., p. 508); Esfâd Efendi, Teshkifatı Devlet-i Âlie, p. 85, 123 etc.; Silhəmme-i Nebret-i Khârifie, i year, 1301 (1885). Imprimerie Ebuzya, Istanbul (contains in addition a historical resumé and a chronological list of all the grand viziers and all the reis); Charles Perry, A View of the Levant, particularly of Constantinople etc., London 1743, p. 36. On the şâhih al-divan or reis (or) al-divan, see Kalkashandi, Sham al-Aṣkâr, i. 101 sqq.; vi. 14, 17-18, 50; Massé, Cours de la Chancellerie de l’Empire d’Hun al-Suarfa, in B. I. F. C., xi. 79 sqg. Among the Saldjaks, the offices of şâhih ad-divan and şerâzeh were quite separate: cf. Houtsma, Recueil des Textes..., Selîf, ii. 105.

(REYİO), the name given in Muslim Spain to the administrative circle (kûra) comprising the south of the Peninsula, the capital of which was successively Archidona (Arabic: Ṭugudhâna) and Málaga. The usual Arabic orthography is Xyî; in particular this is the form found in the Muğjam al-Bulûn of Yakît: but some Spanish MS’s, give the true orthography Xyî, more in keeping with the local pronunciation Reyiyo (Raiyu) attested by Ibn Hawkal. It is only, as Dozy thought, a transposition of the Latin reio (no doubt Malacitana reio): the suggestion put forward by Gayangos of a connection with the Persian town-name al-Raib is, of course, untenable.

When the friars in the south of Spain were assigned to the former companions of Balj b. Bahr [q.v.], the district of Reiyiyo was allotted to the duhul of Jordan (al-Sham). During the Emirad caliphate of Cordova, the kûra of Reiyiyo was bounded by those of Cabra and Algeciras in the west, by the Mediterranean in the south and by the kûra of Elvira in the east.

(LEVI-PROVENCAL)

RESHT, first a district, then a town and lastly the capital of the province of Gilan in Persia. As V. Barthold points out (Gilan po romanistenn Tekmauskogo, in Bull. de l’Inst. Cr. d’Hist. et d’Arch., Tiflis 1927, vol. vii.), our
information regarding the history and historical geography of Gilân is so far very scanty. Le Strange's remark that the position of the chief towns of Gilân cannot be exactly given is still true. The Tumanski MS., (tenth century) is the earliest to inform us that before the foundation of towns their names were already in existence as those of districts. In particular seven districts are mentioned in the eastern part of Gilân on this side of the river — Biêpsîh (Islam having penetrated there from the east), and eleven in the western part on the other side of the river — Biêpas. Among the seven eastern districts we find one called Lâhîdîn (i.e. Lâhîdîn) and among the eleven western one that of Resht. The towns of this name did not exist at this time. They are not mentioned, in fact, until the Mongol period.

General. Gilân is now divided into 10 districts (of which five are called Hamse-ye-Tavârlîkh), that of Mawâzî with Resht, capital of the province, being the most important. According to Rabino (1917), the town of Resht has a population of 30,000 and the district of Mawâzî 90,500 out of the total of 339,300 for the province. These figures must have increased by now. Resht, also called Dâr al-Marz or “frontierland”, lies between two small rivers, the Shahrâbâr or Seigilân in the east and the Gowher-rud in the west, which unite and flow into the Bay of Enzelî (now Pehlevi), which is eight miles from the town. The bazaars occupy a considerable part of the centre of the town, which is traversed by dark and narrow streets. Only a few years ago Resht had very few broad streets and was only partly paved. Recently there have been steps taken to improve matters. The town is divided into 7 mahalles: Zâhedân, Mahalle-ye-bâzîr, Khumairân, Khumairân-e-Zâhedân, Uståd Serâ, Çumâr Serâ and Kiâyâh. It has 6,000 houses, 3,300 shops, 20 caravanserais for merchants and 25 for caravans, 40 mosques, 12 sanctuaries, 36 tekkes, 6 medresses, 35 baths, and 7 bridges (all these figures refer to the period before the War). Among the mosques only the Masjîd-i Şâfi, the oldest, seems to be of any interest. Hasan Beg, author of the Ahsan al-Tawârîkh, calls it Masjîd-i Şâfi and adds that when Ismâ’îl Shah fled from Ardabil to Gilân, he spent some time near this mosque. In its courtyard there is a well into which women throw silver in order that their prayers may be granted. The Imám-Zâde Saiyid Abû Dâ’far is the most important sanctuary of Resht, near the governor's palace. The holy man buried there is called 'Abî al-Fattâh. Fûmenî Uståd Dâ'far, whence the name of the quarter Uståd Serâ. The ladies of Resht have always had the reputation of being of easy virtue. According to a poet of the country, Mewlâ Sa'îd Gilânî: “the young women of Resht, like intoxicated picnickers, used to go seeking a purchaser in every bazaar, holding in their hands the knot of their trousers”.

There are in Resht two important clans: the Tâife-ye Hâddîjî Samî (who came originally from Tabriz) and the Al-e Umshe (of very humble local country origin). The language of the common people of Resht is a dialect of Gileti. The upper and middle classes use Persian. Azari-Turkish is also spoken. The inhabitants are all Shi'ites except for a few Bah'î. Gilân was converted to Islam only at the beginning of the tenth century by the 'Alî Imâm Ĥasan b. 'Alî al-Utrush after a popular rising against the Djestâns (cf. Barthold, Istoriya-Geografiskii Ocher Irana, St. Petersburg 1903, p. 156). All the people of the Biepas were of the Ilâh bâl school except the chiefs of Fûmenâ and the inhabitants of Kûstîşâhân (Shâffîs). It was only after the annexation of Gilân to the kingdom of Persia by the Safawis that the people of the Biepas became converted from the Sunna to the Shî'â. According to another story however, Islâm was preached in Dailâm and Gilân in the year 1290 (903) by the Saiyid Nâsr Kapîr, one of the 'Alî pretenders to the caliphate, who belonged to the Zaidi Shî'â, “of which he was one of the learned men and an author”; in this account the conversion to Islam is placed under the auspices of the Shî'â (cf. Shekîr-râm-e gom nâm by S. A. Kasrawî Tabrizî, Teherân 1928, i. 32). The last traces of the religion of Zoroaster have not yet disappeared from Gilân. People look for white cocks because their crowing presages good fortune; the custom is observed of lighting a fire and jumping over it (for šanâme-ye akker-e râd). On the road from Fûmen, about one mile from Resht, a place preserves the name of Atesh-kâde. S. A. Kasrawî (op. cit., p. 31) does not however seem certain that Zoroastrianism was widespread in Gilân.

Generally speaking, the people were indifferent in matters of religion. We may note however that many trees, called saints, fîr or bûsr-wîr, are objects of worship, especially on the part of women (cf. notably: Welân near the Arâk bridge; Çehel Dookhter and Aghâ Bibi Zainab).

Resht is the principal export and import market for trade with Russia. Its importance as the economic centre of Gilân varies with the rise and fall in the silk-culture. Barthold thinks (op. cit.) that the development of urban life and industry in Gilân belongs to a period later than the tenth century. The geographers of the tenth century mention the cultivation of the silkworm and silks only in Tabaristan. In the eleventh century and later the silk of Gilân was particularly famous. At the end of this century, the silk of Gilân, according to Marco Polo, was sought by Genoese merchants, whose vessels first appeared in the Caspian shortly before Marco Polo wrote.

HISTORY. S. A. Kasrawî (op. cit.) gives a sketch of the dynasties of the Djestâns (end of the second to the beginning of the fourth century A.H.), Kângârids (beginning of the fourth to the middle of the fifth century A.H.), and Sâlîrîs (fourth century) who, especially the first, played a certain part in the destinies of Gilân.

In Rabino's work we have a complete historical survey from the Mongol conquest (1307) to the Persian revolution. The Tumanski MS., unknown to Rabino, contains some information about the preceding period.

In it Gilân is described as a populous and wealthy country. All the work was done by women. The men had no occupation except fighting. Throughout Dailâm and Gilân in every village there were one or two fights a day: every village fought with every other. Many people were often killed in a single day. These quarrels and battles went on until the men went to war or died or grew old. When they grew old they became pious and were called mudastîb marâfîk (knowing the customs). In all the districts of Gilân, if any one insulted another or became intoxicated or committed any act that caused injury, he was punished with
The Tumaniski MS. does not give the distances between the towns nor any form of itinerary. The only one known is that of Makdisi who wrote some years later than the author of the Tumaniski MS. The principal town of Gilan at this time was Dušâb. As Rabino points out, the only period of independence in the history of the district of Rešt (Masjed-e Rešt) was between the beginning of the 17th century (706 = 1306–1307) and the end of the ninth (880 = 1475–1476) which was spent in fighting with neighbouring chiefs of Fümen and Íáhidjân. The former were victorious and for a time the Biepas, including Rešt, was under the Ishâqjî dynasty of Fümen. With the coming of sultân Ahmad Khân of Biepas the Láhidjân dynasty won the upper hand. This period lasted from 911 (1506) till 1502 i.e. till the annexation of Gilan to Persia by Shâh 'Abbâs. Among the events of this period was the establishment in Gilân, of which Rešt became the administrative and economic centre, of the “Muscovite Company” founded in 1557 (Anthony Jenkinson, Richard and Robert Johnson), who taking the Russian route sent ten expeditions into Persia between 1561 and 1581. It is to noteworthy that the last independent ruler of Gilân, Ahmad Shâh, sent ambassadors to Moscow to seek help against Shâh 'Abbâs and obtained promises of protection which however came to nothing. The Cossacks at the same time were plundering in Gilân and Rešt and trying to gain the support of the Russian court. The most notable invasion was that of Stenka Razin who sacked Rešt in 1045 (1636). On the 2nd Safar 1082, the day of Stenka's execution, the Persians in Moscow at the time were invited to be present at it (cf. the magazine Kâtesh, No. 12, N.S., Dec. 1, 1921). From 1722 to 1734, Rešt and Gilân were occupied by the Russians (Shipov, then Matuškin) invited by the governor who was threatened by the Afgânjân. In 1734, Gilân was restored to Persia after a treaty which guarantees a Persian testimony in favour of the Russian occupation. For military reasons the Russians cleared the jungle round Rešt.

The history of Gilân and that of Rešt, which has always played a preponderant part in it, merges into the general history of Persia after its annexation. We may however touch on a few points in the very modern period short of which Rabino's work stops. During the Persian Revolution, a body of Social Democrats was sent by the Regional Committee of the Caucasus to Rešt, and there helped in Feb. 1909 to overthrow the authority of the Shâh and to establish a revolutionary committee which elected as governor the Sepêhdâr 'Arâm, who played a prominent part in the history of the period along with Sêrdâr Asad Bakhtyärî (cf. Persia: torki za mas'âl, by Pavlovich and Iran斯基, Moscow 1925). Rešt then became the base of operations of the northern revolutionary army. A few years later, during the Great War, Rešt again attracted attention in connection with the movement of the djengeli, created by Mirzâ Kâûk Khân, the object of which was to fight against foreign occupation of Persian territory. Assisted by German (von Passchen), Turkish and Russian officers, an armed force was organised to oppose the passage of the English troops under General Dunsterville on their way to Bâkû, without much success however (battle of Mendjîl, June 12, 1918). The English were able to force their way through with the help of Bičakchîv's detachment of Cossacks and established a garrison in Rešt. A second battle with the djengeli in the town itself on July 20, 1918 also ended in an English victory. On Aug. 25, peace was signed with Kâûk Khân at Enzelî. At one time, at the end of March 1918, the position of Kâûk Khân was so strong that the capture not only of Kazvin, but even of Teherân was feared. The English Vice-Consul at Rešt, Mr. Maclaren, the manager of the Imperial Bank of Persia in this town, Mr. Oakshott, and Captain Noel of the Intelligence Service were taken prisoners by the djengeljî, the latter being held for five months (cf. The Adventures of Dunsterville by Maj. Gen. L. C. Dunsterville, London 1920).

Rešt again became the arena of the revolutionary movement in 1920. After the capture of Bâkû on April 28, 1920, by the Reds, the White Fleet sought refuge in the port of Enzelî, which was held by the English. Comrade Raskolnikov, commander of the Red Fleet in the Caspian, pursuing the Whites occupied Enzelî on May 18, 1920 and forced the English to beat a hurried retreat. The appearance of Soviet troops at Enzelî encouraged the revolutionary movement in Gilân and on June 4, a revolutionary and anti-English government of Northern Persia was proclaimed at Rešt with Kâûk Khân at its head.

At the first appearance of Red forces at Enzelî and Rešt, the peasants had refused to take the land which the communists proposed to take from the landowners. The peasants feared that the Khàn's would return and make them pay dearly for their expropriation. But at the second occupation (Oct. 1920) of Rešt by the Reds the peasants greeted them frantically. Large numbers of them came among the Red soldiers and said that now they would not deliver rice to the landowners any longer and that they would seize all the harvest. The military situation was however confused. After the evacuation of Enzelî the English at first remained on in expectation of events, but they were forced to retire from Rešt in June, setting fire to all their military stores. A month later they left Mendjîl blowing up the bridge over the Sefid Râh and began to return to Baghâdîd. In the meantime the Teherân Government had sent a military expedition against the revolutionaries in Rešt. After initial successes, the Persian Cossack brigade suffered checks. It was after this that the second occupation of Rešt by the Reds mentioned above took place.

On their side, the English demanded on Oct. 25, 1920 the dismissal of the Russian (White) officers, the instructors of the brigade, who were to be replaced by English. Muṣûl al-Dawâlî's government refused to agree to this and resigned on Oct. 27. It was replaced on Nov. 1 by that of Sepêhdâr, which acceded to the English demands, so that all the armed forces of Persia were now under English control. The latter then on Dec. 19, 1920, sent an ultimatum to the Teherân government ordering the meglîs to be summoned with a view
to the ratification of the Anglo-Persian treaty of Aug. 9, 1919. The English plans were however thwarted by the rapprochement between Persia and the Soviets. On May 20, 1920, Tehran notified Moscow of her recognition of the Soviet Republic of Adharbadijan, and her desire to enter into pourparlers with the R.S.F.S.R. Having reached Moscow at the beginning of November the Persian delegate Mughawar al-Memalek opened negotiations for the conclusion of a treaty with the Soviets. On Nov. 28, Moscow asked Tehran to accept the Soviet envoy, M. Rosthen. After an attempt in Jan. 1921 to regain the position lost in the north of Persia, where the Soviets still had their troops, by inspiring the Persian note of Jan. 23, which demanded that the Soviets should withdraw their forces from Gilan, the English, in view of Moscow's firm refusal, took the first steps to remove their troops from Persia and on Feb. 26, 1921 Persia and the R.S.F.S.R. signed a treaty re-establishing diplomatic relations between the two countries. On April 25, 1921, M. Rosthen came to Tehran and in the course of the year the Soviet and English troops left Persian territory. Gilan and Reht then returned definitely to Persia. The last echoes of the revolution in Gilan were the risings of Kerbeli Ibrahim and of Saiyid Djail in 1921 and 1922.

Bibliography: H. L. Rabino's work, "Les Provinces Caspiennes de la Perse. Le Gilan", in R. M., xxxii, 1915-1916, is authoritative. It contains a very complete bibliography to which we can only add, in addition to a few books and articles mentioned above in the text, a curious brochure entitled "Tavsiye-yi Hafiz", written by Hajiqai Saiyid Mahmud of Reht and published in 1910. It deals with the agrarian system in Gilan. — La domination des Dailamites par V. Minorsky (publ. by the Societe des etudes Iran., No. 3, Paris 1932) may also be mentioned.

(En. Nikiforou)

Resmi, Ahmad, Ottoman statesman and historian. Ahmad b. Ibrahim, known as Resmi, belonged to Rethymno. He was known (epithet?) in Crete and was of Greek descent (cf. J. V. Hammer, G.O.E., vii, 202). He was born in 1112 (1700) and came in 1146 (1733) to Stambul where he was educated, married a daughter of the Reis Efendi Ta'akdji Mustafà and entered the service of the Porte. He held a number of offices, in various towns (cf. Siddilii: Othmanii, ii, 38o sq.) in Safar 1171 (Oct. 1757) he went as Ottoman envoy to Vienna and on his return made a written report of his impressions and experiences. In Dhu 'l-Ka'da 1176 (May 1763) he was again sent to Europe, this time as ambassador to the Prussian court in Berlin. He also wrote a very full account of this mission, which early attracted attention, in the west also, for its views on Prussian policy, its description of Berlin and its inhabitants and all sorts of observations on related topics. After filling a number of other important offices he died on the 2nd Shawwal 1197 (Aug. 31, 1783; on this date cf. Babinger, O. W., p. 309, note 2) in Stambul. His tomb is in the Selimeyquarter of Suctari.

In addition to the descriptions already mentioned of his embassies (scrini etin) to Vienna and Berlin, Ahmad Resmi wrote in connection with the Russo-Turkish war and the peace of Kuchik Kainerde (1760-1774) a treatise entitled "Khallatul-Fitiha", in which as a participant in the campaign and eye-witness, he gave his impressions of this important period in the history of Turkey. Of especial value are his biographical collections, particularly his "Khaliyet Ul-Rus'at" (composed in 1157 = 1744) with the biographies of 64 chancellors (reis efendiler), and his "Humadey (Humadey) Ul-Kaher"a, in which he gives the lives of the chief eunuchs of the Imperial Harem (hizir aghalari).

Of a similar nature is his continuation (written in 1772 = 1766) of the "deaths" (efeyzet) of MeHmed Emin b. Hajiqai MeHmed called Alay-Beyl-zade, in which he gives in twelve lists the deaths of famous men and women (cf. the accurate list of contents in J. V. Hammer, G.O.E., xi, 137 sq., No. 14). He also wrote several other works on geology and proverbs. The reports of his embassies are available in numerous manuscripts (cf. the list in Babinger, O. W., p. 314, to which should be added: Berlin, Staatsbibliothek, Ms. Or. 4° 1502, fo. 27b to 46b [inclusive]. Paris Bibl. Nat., Suppl. Turc No. 510 [7], Paris, Cl. Huart Coll.), printed editions and translations, which are listed by Babinger, O. W., p. 311.

To these is to be added the Polish translation Podre Rezmi Ahmed-Efendego Po Polski z posielst-wo igie do Prus 1177 (according to Wasiq, Tarik, i, 239 sq.) in J. S. Siekowski, Collectanea z Dziejow Turczech, vol. ii, Warsaw 1825, p. 222-289.

(En. Baringer)

Rewani, an Ottoman poet. His real name was Illya or Sheyla and he belonged to Adrianoople. He is said to have taken his pen-name of Rewani from the river Tanjia which flowed past (rewan) his garden. He entered the service of Sultan Bayazid II (1481-1512) in Stambul and was sent by him as administrator of the "muk" (annual sum for the poor of Mecca and Medina, to the holy cities to distribute the money. He embellished a part of it however and on the accusation of the Meccans his salary was stopped; a malady of the eyes, which then affected Rewani, was described by a poet hostile to him as the just punishment of God, whereas upon Rewani answered him, also in verse, and calmly confessed: "He who has honey licks his fingers". He then fled to the court of Prince Selim in Trebizond and entered his service. But he had to disappear from here also as he had committed some indiscretion and his property was confiscated (some sources put his appointment to the muk at this date); he was however pardoned by Selim and henceforth served him all the more faithfully. When Selim in 918 (1512) came to Stambul to dethrone his father Bayazid, Rewani is said at the last decisive council of war to have thrown his turban in the air with joy and to have praised the day. After Selim's accession he was appointed superintendent of the kitchen (mash'ak emini), then entrusted with the administration of the Aya Sofia and of the hot baths (kahfiyata) in Brusa. He built a mosque in the Kik Cheme quarter of Stambul which was called after him and he was buried there on his death in 530 (1523).

Rewani left a diwan and a methkenu entitled "Efret-nenni or Kik-i Wansli. In the still unprinted methkenui, which is not very long, he describes the drinking bouts of his time in all
brought it within the range of Islamic expeditions on several occasions.

In the first century of the Hujra, the Caliph Mu’awiyah [q.v.] sent a fleet under the command of Djasada b. Abi Umayya al-Qadi to invade Rhodes. The date is variously placed in 52 and 53 (672–73) (see Caetani, Chronographia Islamica, for this variance in the sources). Little is known about this early expedition, except that the Arabs founded a short-lived settlement, which was evacuated in 69 (679–680) by the order of the second Umayyad Caliph Yazid [q.v.]. The island was thus recovered by the Byzantine Empire in whose history the sources of the Arab occupation was long remembered by the complete destruction and sale of the famous bronze ‘Colossus of Rhodes’ to a Jewish merchant of Emesa. The metal is said to have amounted to 880 camel-loads.

In 1308 or 1310 A.D., during the reign of Andronicus II Palaeologus, Rhodes was seized by the Knights Hospitallers who had been expelled from ‘Akka in 1291 by Sulthan Khahlil [q.v.], son of Kali’un. The Order of Saint John of Jerusalem now came to be known as the Knights of Rhodes, under whose rule the island became a thorn in the side of Islam as one of the strongest outposts of Latin Christianity in the Levant. Thence the Knights played a prominent part in most of the forthcoming crusades against Turkey and Egypt, notably in the capture of Smyrna in 1344, the sack of Alexandria in 1365 and in the Crusade of Nikephoros [q.v.] in 1396. The second of these attacks determined the Egyptians to start preparations of counter-crusades against Cyprus and Rhodes. Three naval expeditions in 1424, 1425 and 1426 resulted in the annexation of Cyprus as a tributary state to Egypt.

The Mamluks then turned their plans to the conquest of Rhodes during the reign of Çakmak. In 1440, they manned a flotilla of 15 galleys with 200 regulars and several hundred volunteers. These sailed from Damietta to Cyprus for revictualling and to ‘Alaya in Asia Minor, where its Muslim Amir reinforced them with more warriors and four galleys, then direct to Rhodes. The Knights were, however, prepared for the attack, and, after a few skirmishes, the Mamluk fleet retreated under cover of night. In 1443, another fleet sailed from Damietta to Bairitt, Tripoli, Larnaca, Limassol and Adala to collect free provisions from subject and friendly states. Their first objective was the little island of Châteauroux or Castellar, known in the contemporary Arabic sources as Kasjitti al-Ra’d. This island belonged to the Knights and the Egyptians had no difficulty in reducing it. Afterwards they returned to Damietta owing to the approach of winter. In 1444, a third and more elaborate expedition was launched against Rhodes. The Egyptian fleet, carrying no less than a thousand Mamluks, sailed from Damietta to Tripoli and direct to Rhodes. This time they succeeded in landing on the Island and in setting siege to the city of Rhodes for a period of forty days, during which they pillaged all the neighbouring villages. Finally, the Knights sailed from the beleaguered town and took the offensive. Thus taken by surprise, the Egyptian army sustained considerable losses and sailed back to Damietta.

The success of the Knights in the repulse of so strong an enemy as Mamluk Egypt may be ascribed to three main causes: first, the system...
of espionage which the Order maintained in all hostile countries in order to keep their headquarters in perfect readiness for effective action at the appropriate moment; second, the great strength of the fortification of Rhodes which was made possible by its prosperity as one of the chief centres of trade in the Levant; and third, the nature of the military training of the Knights, their unity and their extraordinary valour in battle. Peace was eventually established between Egypt and Rhodes through the mediation of Jacques Cœur, the great French merchant prince of the fifteenth century, who was in favour at the court of the Sultan. The task of a decisive counter-crusade against Rhodes remained for the Ottoman Sultans. Muḥammad II besieged the capital with some slender measure of success in 1480, but it was not till the reign of Sulaimān the Magnificent [q.v.] that the Knights were finally overthrown after one of the most heroic defences ever known. On December 24, 1522, the island became the seat of a Turkish Paša, and remained under Ottoman sovereignty until it was captured by Italy during the war of 1912 and finally passed to Italian rule by virtue of the Treaty of Lausanne (July 24, 1923).

(Â. S. Âtiva)

In the year 1912, during the war between Turkey and Italy, the Italians occupied the island of Rhodes and the Southern Sporades and held them till 1923 when Turkey (treaty of Lausanne) renounced all claim to Rhodes and the islands, which are now under the sovereignty of Italy, and constitute the "Possedimento delle Isole italiane dell' Egeo"; the principal islands are 14 in number; we give them here with their historical Turkish names which are really Greek, in brackets (with the exception of Indjiri): Rodi (Rados), Calchi (Karki and Khaki), Calino (Kalimnos), Caso (Kashti), Castelrosso (Kastelorizo, Meyis), Coo (İskonkoy), Lero (Leros), Lisso (Lipos), Nissiro (Nisos, Indjiri), Patmo (Patmos), Piscopi (Ptikopis), Tilos (Eliyaki), Scarpanto (Kerpe), Simi (Sumbeki), Stamplia (Astropalia).

The extent of the "Possedimento" is 2,697 km. and the total population 130,855 (census of April 21, 1931) of whom 54,818 are in the island of Rhodes. The inhabitants are distributed as regards language and religion as follows: 104,485 Greek Orthodox speaking Greek, 8,276 Muslims speaking Turkish, 4,481 Jews speaking Spanish Hebrew, 8,000 Roman Catholics speaking Italian. The Muslims are in the islands of Rhodes and Coo. Like the rest of the population, the Muslims are exempted from military service; they have elementary schools, a medrese in Rhodes, special tribunals at Rhodes and Coo for questions of private law.

Turkish and Muḥammadan monuments. The Turks did not modify very much the topography of Rhodes; at most they did something to intensify an appearance already generally oriental; they turned the churches into mosques and built new ones; the most remarkable are the mosque of İbrahim Paşa (947 = 1540—1541), the mosque of Redjeb Paşa (996 = 1587—1588), the mosque of Murad Re'si (celebrated re'si killed in a naval battle off Cypria in 1609), built by Abū Bâkî Paşa in 1604 (1636—1637) and repaired by Muradībî Hūsan Bey in 1212 (1717—1718), the mosque of Sulṭān Muṣṭafâ (1178 = 1764). The mosque of Sulṭān Sulaimān is modern.

We may also mention the library at Rhodes which contains Arabic, Persian and Turkish MSS., founded as a waqf between 1761—1792 and 1799 by the Rhodian Ḥâfiz Ahmad Agha.

The Muslim cemeteries, which lie under the walls of the fortress, go back in part to the siege of 1522; there are many tombs of men of note who died in captivity or exile in Rhodes in the enclosure of the tekhre of Murad Re'si; amongst them we may mention: Djiānī Girāy Khān (d. 1636), Shaḥīn Girāy Khān (killed 1640), Saʿdēt Girāy Khān (d. 1695); Sāfī (the pretended son of Sultan, Sâd of Persia, d. 1175 = 1755—1756), the poet Ḥāmeth (d. 1182 = 1768—1769), the grand vizier Vūsaf Paşa (killed in 1715), the general 'Abd al-Kurîm Paşa (d. 1302 = 1884—1885).

Bibliography: Biliotti and Cottret, L'Île de Rhodes, Rhodes 1881; C. Torr, Rhodes in
RIBA (A.), lit. increase, as a technical term, usury and interest, and in general any unjustified increase of capital for which no compensation is given. Derivatives from the same root are used in other Semitic languages to describe interest.

1. Transactions with a fixed time limit and payment of interest, as well as speculations of all kinds, formed an essential element in the highly developed trading system of Mecca (cf. Lammens, La Mequée à la veille de l’histoire, p. 139 sqq., 155 sqq., 213 sqq.). Among the details given by the Muslim sources, we may believe at least the statement that a debtor who could not repay the capital (money or goods) with the accumulated interest at the time it fell due, was given an extension of time in which to pay, but at the same time the sum due was doubled. This is clearly referred to in two passages in the Koran (Sura ii. 130: xxx. 39) and is in keeping with a still usual practice. As early as Sura xxx. 39 of the third Meccan period (on the dating cf. Noelle-Schwall, Geschichte des Qorans, i.) the Koran contrasts riba with the obligation to pay zakat but without directly forbidding it: "Whatever ye give in usury to gain interest from men's substance shall not bear interest with Allah, but what ye give as zakat in seeking the face of Allah ye shall gain double". The express prohibition follows in Sura ii. 130 (Medina, obviously earlier than the following passage): "Believers, do not the riba with continual doubling: fear God, perhaps it will go well with you". This prohibition had to be intensified in Sura ii. 275-280 (evidently of the earlier Medinene period, cf. on the following passage): "Those who deviate riba shall only rise again as one whom Satan strikes with his touch; this because they say, 'selling is like usury', but Allah has permitted selling and forbidden usury. He therefore who receives a warning from his Lord and abstains shall have pardon for what is past and his affair is with Allah: but they who relapse to usury are people of Hell, they shall remain in it for ever. Allah abhors usury and makes alms bring interest: Allah loveth not sinful unbelievers... Believers, fear Allah and remit the balance of the riba if ye be believers. But if ye do not, prepare for war from Allah and his apostle. If ye repent, ye shall receive your capital without doing an injustice or suffering injustice. If any one is in difficulty, let there be a delay till he is able to pay, but it is better for you to remit if ye be wise". To evade the dogmatic difficulty of an eternal punishment for the sin of a believer, the passage in question (already presupposed in Tabari) has been interpreted to mean that by remission is meant the holding lawful and not the taking of interest; in any case the Koran regards riba as a practice of unbelievers and demands as a test of belief that it should be abandoned. It comes up again in Sura iv. 161 (of the period between the end of the year 3 and the end of the year 5; this also gives a clue to the date of the preceding passage) in a passage which sums up the reproaches levelled against the Jews: "and because they take riba, while it was forbidden them and they knew not the substance of the people". The fact that the principal passages against interest belong to the Medina period and that the Jews are reproached with breaking the prohibition, suggests that the Muslim prohibition of riba owes less to conditions in Mecca than to the Prophet's closer acquaintance with Jewish doctrine and practice in Medina. In the later development of the teaching on the subject as we find it in tradition, Jewish influence is in any case undeniable (cf. Juyroux, Handling, p. 286).

2. The traditions give varying answers to the question what forms of business come under the Kur'anic prohibition of riba, none of which can be regarded as authoritative. The ignorance of the correct interpretation is emphasised in a tendentious-tradition, obviously put into circulation by interested individuals (the tradition is probably older than Lammens, op. cit., p. 214, thinks); according to this view, the principal passage in Sura ii. is the latest in the whole Koran, which the Prophet could not expound before his death. That the rigid prohibition of usury in Muhammadan law only developed gradually is clear from many traditions. Alongside of the view repeatedly expressed, but also challenged, that riba consists only in (the increase of substance in) a business agreement with a fixed period (naz'a, naqiva, dain) we have the still more distinct statement that there is no riba if the transfer of ownership takes place immediately (ya'dan bi-yad). But even in arrangements with a time limit, a number of traditions presuppose a general ignorance of the later statutes: for example we are told that in Basra under Rabi' II gold was sold on credit for silver (this may have an anti-Umayyad bias—cf. below on Mudawwiyah—but it is illuminating); but at a later date such forms of the traditions against riba were to some extent dropped. What was generally understood in the earliest period as the riba forbidden in the Kur'an, seems only to have been interest on loans (chiefly of money and foodstuffs); anything that goes beyond this is to be regarded as a later development. The reason for such prohibitions is at different times said to be the fear of riba and sometimes we have underlying the recognition that there is no tradition of the Prophet relating to this. This is also expressed in the form that nine-tenths of the permitted is renounced or that riba was conceived as going as far as ten times the capital. The view which later became authoritative is laid down in a group of traditions of which one characteristic example is as follows: "gold for gold, silver for silver, wheat for wheat, barley for barley, dates for dates, salt for salt, the same thing for the same thing, like for like, measure for measure; but if these things are different, sell them as you please if it is (only) done measure for measure". Another common tradition expressly forbids the exchange of different quantities of the same thing but of different quality (cf. below).
Other traditions demand equality of quantity even in the sale of manufactured precious metals. This last case seems to have been especially discussed, and on more than one occasion Ma‘awiyah appears as champion of the opposite view and practice (this again has a distinctly anti-Umayyad bias). Particularly conscientious people went even further in their limitation of ribā than the generality and would only exchange wheat for barley in equal quantities. Still stricter was the view that the exchange of even the same quantities of the same thing, especially of precious metals, was ribā. This view must be held older than a difference from the usual opinion (e.g. Muslim, Bāb bāi ‘irāq mithallā hamīdīhū), which is based on the secondary interpretation of an already recognized tradition, which obviously only forbade the exchange of different kinds of quantities of the same thing but of different quality (cf. above). This same general prohibition of exchange is also given for dates. The question whether one party to an agreement can voluntarily give the other a bonus, is denied for an exchange, but affirmed for a loan. The reduction of the amount of the debt if the loan is voluntarily paid before it falls due, is sometimes approved as the opposite of ribā, sometimes disapproved, sometimes forbidden as being equivalent to ribā; in any case it is clear that the practice existed. On the sale of an animal for an animal on credit, opinion is also not unanimous. Numerous traditions forbid ribā without defining it more closely; the Prophet is said to have uttered this prohibition at his farewell pilgrimage (scarce historically). Ribā is one of the gravest sins. Even the least of its many forms is as bad as incest and so on. All who take part in transactions involving ribā are cursed, the guilty are threatened with hell, various kinds of punishment are described; in this world also gains from ribā will bring no good. In spite of all this tradition foresees that ribā will prevail.

In connection with ribā tradition mentions various antiquated forms of sale of special kinds, like muhāsala, muhābara, muhāhama etc., which concern the exchange of different stages in the manufacture or development of the same thing, or of different qualities, and which are forbidden: an exception is made, obviously because of its undeniable practical and social necessity, of what is known as ‘arija (plur. ‘arāyā), fresh dates on trees intended to be eaten, which it is permitted to exchange in small quantities for dated dates.

3. While the existence of the Kur‘ānic prohibition of ribā has never been doubted, the difference of opinion that finds expression in tradition regarding the relevant facts is continued in the earliest stage of development of Muḥammadan law. Unanimity prevails regarding the main lines of the limitations to be imposed upon the exchange of goods capable of ribā (māl ribāt); it is only permitted if transfer of ownership takes place at once and, so far as goods of the same kind are concerned, only in equal quantities. In the case of a loan it is forbidden to make a condition that a larger quantity shall be returned without regard to the kind of article. Gold and silver are generally regarded as māl ribāt (only quite exceptionally are coins of small denomination included). All the greater are the differences of opinion as to what things outside of the precious metals are liable to the ribā ordinances. In isolated cases one still finds views that show themselves uninfluenced in principle by the authoritative group of traditions (cf. above), e.g. when everything realisable is subjected to the ribā ordinances (Ibn Kāsīm) or all business dealings in things of the same kind (Ibn Sīrīn, Ḥammād) or when everything liable to zakāt is considered capable of ribā (Rāshīd b. ‘Aḥmad b. ʿAbd al-Raḥmān). Other opinions differ in the treatment of property capable of ribā from that group of traditions, although it is not known what they understand by this; possibly if at an exchange of the same kind of thing not equality of quantity but equality of value in two quantities is demanded (Ḥasan al-Ḥaṣrī) or equality of quantity also in the exchange of different kinds apparently within a limited circle of goods capable of ribā (Ṣa‘īd b. ʿUṭubār). The old interpretation that there is no ribā if the transfer of possession takes place at once is ascribed to ‘Aḥmad b. Ṭalha and the jurists of Medina. The views of most authorities however and in particular those which survive later in the law schools assume the literal acceptance of the text of that group of traditions and differ only in its interpretation. Thus there are mentioned as precurors of the later Zāhirī doctrine: Tāwūs, Māsūk, al-Šāhī, Kātāda, ʿOthmān al-Battāt; as precurors of the Ḥanafī view: al-Zuḥrī, al-Ḥakam, Ḥammād (cf. however above), Sufyān al-Ḥaṣrī; as precurors of the earlies view of al-Shāhī: ʿUṣayn b. ʿUṣayn, al-Muṣāniyyah and others; as precurors of his later view: al-Zuḥrī (cf. however above) and Yaḥyā b. ʿUṣayn. On the question whether a loan can be paid in another kind is hotly disputed if defects are revealed in an exchange of māl ribāt after it has changed hands, there are old differences of opinion.

4. In the above mentioned group of traditions the following goods in addition to gold and silver are expressly mentioned as bearing the prohibition of ribā at their exchange: wheat, barley, dates and salt (sometimes also raisins, butter and oil). The Zāhirīs, as a result of their refusal on principle to accept analogy (ṣıṣa), assume that the prohibition applies only to the six things especially named (the other kinds are rejected as not well attested). The other schools of law, on the other hand, consider the kinds mentioned in tradition only as examples of the variety of things that come under māl ribāt, but differ from one another in their lists of these things. According to the Ḥanafīs and Zaidīs (also al-Awzaʿī), gold and silver represent examples of the class of things defined by weight (māṣīh) and the four other things those sold by measure (naqīl). The Imāmī teaching is practically the same. According to the Mālikīs and Shāfīʿis, gold and silver represent the class of precious metals and the four other things the class of foodstuffs: the latter, in the Mālikī view, including actual eatables so far as they can be preserved, according to the older view of al-Shāfīʿi, provisions which are sold by weight and measure; according to his later view, which is also that of his school, foodstuffs without any qualification. The teaching of the Ḥanbalis corresponds to that of the Ḥanafīs; as regards the "four kinds", two further opinions of Aḥmad b. Ḥanbal are handed down which correspond to the two views held by al-Shāfīʿi. In these, wheat and barley are regarded as two different kinds by the Ḥanafīs, the Shāfīʿīs and the better known tradition of the Ḥanbalis (as well as Zāhirīs, Zaidīs and Imāmīs); as one kind
according to the Hanbalis (also according to al-
Lahbi b. Salih and al-Awza'i). The Hanafis and the
Imāmis, in contrast to the other schools, are content
so far as it is not a question of the exchange of
precious metals, with fixing the quantities, and do
not demand actual change of ownership during the
negotiation (mādjel). The Zāhiris, in the strict inter-
pretation of the text of one tradition, in every case
demand a change of ownership in the fullest sense at
once. The sale of fresh dates for dried dates is
forbidden by all schools except the Hanafis on the
authority of one tradition, the bārāʾī of 'Arīṣ on the
other hand is not permitted by the Hanafis, but regulated by the other schools, without any
uniformity: as regards exchange of the same material in
different stages of manufacture there are many
differences of opinion. As regards the exchange of
goods of which the kind which are not māl
sahari, the difference of quantity is generally
permitted, postponement (waṣtra, nasr) of the
single payment still forbidden by the Hanafis and
Zaidis but permitted by the other schools (with
differences in detail). At the sale of wares, even
of those which are māl sabari, for precious metal,
the payment at later date (sulam) and sale on
credit (bait al-ʿinā) with postponement of delivery
or of payment is permitted. The apparent contra-
duction of analogy in the sulam, which forms a
type of transaction by itself, has given rise to dis-
cussions on principle. The postponement of both
sales of the transaction is regarded on the authority
of a tradition as entirely forbidden in all agreements;
sales or exchange.

5. The prohibition of ribā plays a considerable part in the system of Muhammadan law. The
structure of the greater part of the law of contract
is explained by the endeavour to enforce pro-
hibition of ribā and masir (i.e. risk; q.v.) to the
last detail of the law (Bengtsson, in bil., xiv 79). Ribā in a loan exists not only when one
interests upon the repayment of a larger quantity,
but if any advantage at all is demanded. Therefore
even exchange (zamānda) is sometimes actually
forbidden (as by the Šafiis) because the vendor,
who is regarded as the creditor, reaps the advantage
of avoiding cost of transport. This did not prevent
the wide spread of this arrangement in the Arabic
middle ages and its influence upon European
money-lending. But they were always conscious
that a direct breach of the prohibition of ribā was
a deadly sin. Fears Muslims to this day therefore
not infrequently refuse to take bank interest. The
importance of the prohibition of ribā on the one
hand deeply affecting everyday life and the require-
ments of commerce on the other have given rise to
a number of methods of evasion. Against some
of these there is nothing formally to object from the
standpoint of the law; they are therefore given
in many law-books and expressly said to be per-
mitted. The Šafiis, the later Hanafis and the
Imāmis have recognised such methods of evasion
while the Mālikis, the Hanbalis and the Zaidis
reject them. The recognition of these methods of
evasion is not contrary to the strict enforcement of
the prohibition of the ghuk. The inner signifi-
cance of decrees of the divine law naturally
cannot be understood by the mind of man. This
is shown in the case of ribā in the limitation to
certain kinds of goods. The Zāhiris are thus among
the most energetic defenders of evasions of the
prohibition of ribā. Their line of argument is based
not only on their formal negative rejection of
deduction by analogy but also upon their positive
estimation under the intention underlying the evasions.
One of the oldest transactions of the Qurašids
against which several traditions are already directed, is the double contact of sale (from one of its elements it
is called bāt al-ʿinā, credit sale par excellence); one
sells to someone who wants to lend money
at interest something against the total sum of capital
and interest which are to be due at a fixed date,
and at the same time buys the article back for the
capital which is at once handed over. This
transaction was taken over in medieval Europe
under the name of mahātra (from the Ar. musāhara;
cf. Jayniboll, Handleding, p. 289, note 1, and
E. Bassi, in Rivista di storia del diritto italiano,
iv., part 2). Another method of evasion consists of
handing over to the creditor the use of a thing as
interest by a fictitious agreement to sell or
to pledge. All these practices are still in use and
in spite of the prohibition of ribā money-lending is
a flourishing business in most Muslim countries
(50% is often regarded as moderate interest).

(JOSEPH SCHACHT)

RIBĀ (A.), a fortified Muhammadan
monastery. Of the various explanations that
have been given of this word from the root root
r-b-a: "to bind, attach," the most reasonable is
that which refers to the Kurān, viii. 62: "Prepare
against them (the enemies of Allah) all that ye
possess of strength and places for horses . . . ." (min
ribā 'l-khail). The ribāt is originally the place
where the mounts are assembled and hobbled to
be kept in readiness for an expedition. Ribāṭ also has the closely related meanings of relay of horses for a courier, caravanseri. The word however was early applied to an establishment at once religious and military which seems quite specifically Muhammadan.

The institution of the ribāṭ is connected with the duty of the holy war [see MAHD], the defence of the lands of Islam and their extension by force of arms. The Byzantine empire was acquainted with the fortified monastery, like Mandrakon built at Carthage near the sea, mentioned by Procopius; but it seems doubtful if the monks living in it played any military part. The monks' hierarchical occupants of the ribāṭ are essentially fighters for the faith. The ribāṭ are primarily fortresses, places of concentration of troops at exposed points on the Muhammadan frontier. Like western castles, they offer a refuge to the inhabitants of the surrounding country in time of danger. They serve as watch-towers from which an alarm can be given to the threatened populace and to the garrisons of the frontier and interior of the country who could support the efforts of the defenders. The structure of the ribāṭ therefore consisted of a fortified surrounding wall with living rooms, magazines of arms and storehouses for provisions and a tower for signalling. This architectural scheme, the development of which will be indicated below, was of course often very summarily treated. The ribāṭ in many cases was reduced to a watch-tower and a little fort like those the Byzantines built on their frontiers. This explains the considerable number of ribāṭs mentioned by the geographers. We are told that in Transoxiana alone there were no less than 10,000 (Ibn Khallikân, transl. de Slane, ii, 159, No. 3). The coasts were also amply provided for. There were ribāṭs all along the coast of Palestine and of Africa. The fire-towers, attached to the ribāṭ or isolated, enabled messages, we are told, to be sent in one night from Alexandria to Ceuta. This is clearly an exaggeration. Nevertheless we may note a fairly rapid system of signalling and the mention of Alexandria, the pharos of which seems to have served as a ribāṭ. The Spanish coast also had its ribāṭs, as had the frontier against the Christian kingdoms, especially after the coming of the Almoravids, which saw an intensification of the jihād. For Sicily, Ibn Hawkal gives some curious information about the ribāṭs near Palermo and we know the little town of Rabato in the island of Gozo in the Maltese archipelago.

Devotion to religion stimulated individuals to multiply their foundations, notably in Ifriqiya in the vicinity of towns like Tripolis and Sfax. It was a work of piety to build a ribāṭ at one's own expense or strengthen its defences. It was equally meritorious to urge men to go there to serve the cause of Islam, to revictual the garrison, lastly and above all to go there oneself. For the coast of Palestine, al-Mukaddasi tells us of another use of the ribāṭ equally pleasing to the piets. Their fires were used to signal the approach of Christian vessels bringing Muslim prisoners whose exchange had been arranged. Everyone endeavoured to take part in this according to his means.

The building of the large ribāṭs and of many of the smaller ones was naturally the task of the sovereigns of the country. In Ifriqiya it was that of Monastir [q.v.] built by the Abbasid governor Hāvjâma b. A'yân (179 = 795). The third (ninth) century was the golden age: the Aghlabids all along the eastern coasts multiplied ribāṭs in the strict sense and muhras; this word means a fortified area containing a small garrison or a watch-tower. Monastir retained the pre-eminencc which the Prophet himself is said to have foretold for it. In the xiiith century the dead were brought from al-Mahdiya to enjoy the blessing of being buried there. But the ribāṭ of Sīs founded by the Aghlabid Ziyâdat Allah in 206 (821) had assumed considerable importance. We know that Sīs was the port from which the troops embarked for the conquest of Sicily. Compared with the muhras, the inhabitants of the ribāṭ were essentially threatened by attacks of the Mām or which was the base for expeditions across the sea, the rest of the Barbary coast was less well supplied. There were however ribāṭs on the coast of the extreme Maghrib, at Nakīr and Arzila to prevent raiding by the Norman pirates, and at Salē to facilitate the war against the Barghawâṭa [q.v.] heretics.

If the majority of the ribāṭs were official foundations, the service done by the combatants in them does not seem to have been in any way compulsory. The men of the ribāṭ, the murābiṭûn, were volunteers, pious individuals who had taken a vow to devote themselves to the defence of Islam. Some may have entered the ribāṭ like a monastery, to end their days in it, but the great majority only stayed in them for longer or shorter periods, and the garrisons were changed completely several times a year. In the ribāṭ of Arzila, this change in the garrison took place with the festival of Az Hurrâ (10th Maharram), the beginning of Ramadan and al-Īd al-Kabîr. An important fair was held on the occasion. In case of alarm the garrisons were reinforced by able-bodied men from the country round, summoned by the beating of drums (Palestine, according to al-Muqaddasi).

The ribāṭ was spent in military exercises and on guard, but also in devotional exercises. The marabouts prepared themselves for martyrdom by long prayers under the direction of a venerated shâikh. The traveller Ibn ʿAqil reveals a dark side to this edifying picture. Speaking of the ribāṭs of Palermo in the fourth (tenth) century, he tells us that "they were the rendezvous of the bad characters of the country who thus found a means of livelihood outside of regular society and at the expense of the pious and charitable".

The double character — military and religious — of the life of the marabouts found expression in the architecture of the old ribāṭs that have survived. Tunisia has preserved those of Monastir and Sīs. The first is still very imposing but the frequent restorations have complicated the original plan. The second which is simple may be taken as typical. With its high square wall flanked with semi-circular towers at the corners and the middle of the sides, it recalls the Byzantine forts of the country. The only entrance was by one of the salients in the middle of the wall. A staircase went down in the interior into the central court surrounded by covered galleries and very simple cells. The first storey, reached by two staircases, also consisted of cells on three sides of the court. Along the fourth side was a hall with a mihrâb. This was the oratory of the ribāṭ. The khibla wall was pierced with embrasures. On the level of the
terrace which are above this first storey, is the door of the signal tower, cylindrical in form, which rises from the square base of a salient at one corner and dominates the fortress from a height of about 60 feet. A little dome which also rises above the terraces crown, as in the mosque of the period, the square area in front of the minbar in the oratory.

The ribāṭ of Sūs takes us back to the heroic times when the institution had distinctly a warlike character and these frontier posts played a strategic role on the borders of the lands of Islam. It retained this character in the xii-th century and its architecture, the Maghrīb, with which the Christians in Spain kept alive the tradition of the djihād. We know that a ribāṭ built on an island in the Lower Seuqal was the starting place of the career of the Lamtūna Berbers and gave them the name of Almoravids (al-muḥābībīn) under which they became famous in history [see ALMORAVIDS]. The Almohads who succeeded them had also their ribāṭs, two of which at least are worth mentioning. The ribāṭ of Tàzā [q.v.] was fortified in 528 (1135) by 'Abd al-Mu'min at the time when he was conducting against the Almoravids a campaign which had all the appearance of a djihād. The Ribāṭ al-Fāṭy, the present name of which is that of the town of Rabat [q.v.], was, if not the port of embarkation, at least the great camp of concentration for the armies preparing to cross to Spain. The prestige of this Almohad foundation survived the dynasty which built it. Rabat, or rather the adjoining little town of Shalla, also regarded as a ribāṭ, was the necropolis of the Marinid princes, who in being buried there hoped to share in the merit of the warriors of the faith.

In the xiii century to give warning of landings by the Christians on the coast, mābrāz and signal towers were still being built "to serve as ribāṭs." Ibn Marāqī, the historiographer of the Marinid Abu 'l-Hasan, who tells of them, says however that these posts were occupied by paid soldiers. They were not true ribāṭs, the garrison of which consisted of volunteers. If however we find down to the xv century, in the extreme Maghrib, a ribāṭ like that of Asīr playing a military part in the struggle with the Portuguese, in the east, in the lands where the infidels no longer threatened Islam, the institution had changed its character or rather the ascetic discipline and the pious recitations which were the regular practices in the old ribāṭs had entirely taken the place of military exercises. From the xiv (xvii) century or perhaps even earlier, the development of mysticism and the grouping of the Sūfis into communities gave these barracks a new raison d'etre by making them monasteries. From Persia, where it originated, this evolution of the ribāṭs rapidly spread through the Muslim world. In the east the ribāṭ merged into the Persian ḥāmāstāb, Ibn Dżybar (ed. Wright and de Goeje, p. 243) refers to a ḥāmāstāb founded by Sūfis which was also called a ribāṭ, at Rās al-‘Ain to the north of the Syrian desert. When however a writer like Ibn al-Shīrīn describing Aleppo seems to distinguish the ḥāmāstāb from the ribāṭ, the difference between them escapes us. It may be supposed that the ḥāmāstāb were inhabited by hermits residing in the mountains, who spent their whole lives there and that the ribāṭs, as before, received devout men for limited periods, but one cannot assert definitely that this was the distinction.

In any case the four ribāṭs within the city of Aleppo (one attached to a mābrāz and the mausoleum of its founder with Ḥurān readers and Sūfis) had no longer anything of a military character. It was the same with the two ribāṭs of Mecca mentioned by Ibn Baṭṭāt. In Cairo the only inscription found by Van Berchem in which a ribāṭ is mentioned is that of the convent of Malik Ashraf Ḥanāl (860 = 1455).

In Barbary, which the wave of eastern mysticism had reached in the xii-xiii century, the term ribāṭ was likewise retained but applied to the ṣawīyā [q.v.] in which ascetics gathered round a shāhiğ or a shuyukh. At this period, the division of the djihād connection makes a distinction which nevertheless still remains obscure. Speaking of the ṣawīyās founded by Abu 'l-Hasan, his master, he tells us first that Ḥanāstāb, a Persian word, has the same meaning as ribāṭ and adds: "In the terminology of the fiqīrs, one understands by ribāṭ the act of devoting oneself to the holy war and to guarding [the frontiers]. Among the Sūfis it means on the contrary the place in which a man shuts himself up to worship the divinity". This last use of the word seems to be the usual one in his time. The ribāṭ al-‘Ubdīb is the group of pious foundations near Tiemcen that have grown up around the tomb of the famous mystic Shīrīb ‘Ubd al-Mu’mīn. The ribāṭ of Tāskelelt to the south west of Oran is dedicated to a saint of the Banū Iznāsen; the ribāṭ of Tāferjast on the borders of the Wādi Sūh contains the tomb of the famous Sūfī Shīrīb Ibb-al-Mu’mīn. The ribāṭ of Tāskelelt to the south west of Oran is dedicated to a saint of the Banū Iznāsen; the ribāṭ of Tāferjast on the borders of the Wādi Sūh contains the tomb of the famous Sūfī Shīrīb Ibb-al-Mu’mīn.

With this erroneous use of the old Arabic word we might connect the parallel change undergone by the word marābit (marabout). It is applied to a saint, an individual who by his own merits or the mystic initiation which he had received or his relationship with a ṣawī [q.v.] enjoys the veneration of those around him.

In Muslim Spain, the last land of the djihād, we may suppose that the ribāṭs continued to support the successive frontiers which the "reconquista" imposed on the lands of Islam; but to be certain we must wait until the study of the texts and the enquiry being conducted by F. Hernandez and H. Terrasse into the military architecture of Muslim Spain give us precise details regarding the date of the castles and their object. The evolution in meaning of the word ribāṭ would lead one to think it had ceased to mean a fortress. Among the Arabic authors of Spain and al-Masjāri as among the ṣawīs mentioned by Ibn Marāqī, ribāṭ is often used to mean a holy war, generally defensive, and it passed into Spanish in the form rebato as j. Oliver Asín has shown with the meaning of "sudden attack executed by a body of horsemen in keeping with Muslim tactics". If the Arabic term had lost its original meaning, however, another word derived from it was commonly used in a slightly different meaning. Spain saw the ribāṭs multiplying and their memory is preserved in place-names in the forms Rápita, Rávita, Rabida. The word ribaṭ was also known in Barbary. It meant "a hermitage to which a holy man retired and where he lived surrounded by his disciples and his religious servitors" (cf. Mağd, transl. Colin, p. 240 and the article ZAWĪVA). Everything points to its having been the same in the Peninsula. The multiplication of ribāṭs in Spain and their possible confusion with ribāṭs are
In preparation:

MATÉRIAUX POUR UN
DICTIONNAIRE ÉTYMOLOGIQUE
DE LA
LANGUE ARMÉNIENNE
ÉTYMOLOGIE, ORIGINE, COMPARAISON DE 10.000 MOTS

PAR

BEDROS KERESTEDJIAN

Directeur des traductions et de la correspondance étrangère du
ministère des finances de Turquie et auteur du dictionnaire
étymologique de la langue Turque

ÉDITÉ PAR

SON NEVEU HAIG F. R. A. S.

The "Dictionnaire Étymologique de la langue Arménienne" by Bedros Kerestedjian, a recognised specialist on the subject, and the result of 30 years research, will be published by me in one volume of about 1000 pages and completed probably in 1937. The specimen pages represent the treatment of the linguistic technic and material in an abbreviated yet illustrative form.

The publication of such a scientific book of some 10,000 lemmata is naturally very costly, therefore, for the convenience of purchasers, the book will be published in about 10 sets of 80 pages at 2.50 guilders a part. Payment may be made upon receipt of a part.

It is respectfully requested that all interested students, kindly sign and return the enclosed card at the earliest convenience, so that I get an approximate idea as to the number of copies required, which will materially help to quicken the publication.

The publication will not be undertaken before at least one hundred subscriptions have been received. To ensure securing copies, therefore, subscriptions should be made now. Payment may be made upon receipt of a part. An order from is enclosed.

Once started the completion of the work will take about two years.

LEIDEN

Respectfully yours,
THE
ENCYCLOPAEDIA OF IS
A DICTIONARY OF THE GEOGRAPHY,
ETHNOGRAPHY AND BIOGRAPHY OF MUHAMMADAN PEOPLES

connected with the great movement of mystic piety which, starting in Persia, had brought about the substitution of monasteries — khanābād in the east, zawiyā in Barbary — for the foundations, more military than religious, of the heroic age of Islam.

**Riḍā,** an **Ottoman biographer of poets.** Mehemd Ribād b. Mehmēd, called Zehir Marzūde, belonged to Adrianople. Of his life we know only that he was for a time musīf in Uznar Kupra (near Adrianople) and died in 1082 (1671) in his native city. Besides a collection of poems (Dīwān) Ribād wrote a Tezkīret al-Sharh, a biographical collection in which he dealt successfully in alphabetical order with the poets who lived in the first half of the 6th century A.H., i.e. c. 1591-1640. In the introduction he deals with eleven sultans who wrote poetry. The book was completed in 1060 (1640) as the taʾrīkh shows. It has been edited by Ahmad Djewdet Bey (Tezkīret-i Ribād, Istanbul, 1316, 109 p. 8")

**Riḍā Kūlī Kān B. Muḥammad Ḥādī b. Ismāʿīl Kāmīl, Persian scholar and man of letters, *"l’un des hommes les plus spirituels et les plus aimables que j’ait rencontrés dans aucune partie du monde"* (Gobineau). A descendant of the poet Kamāl Khuḍjānī [q.v.], the grandfather of Riḍā Kūlī, chief of the notables of Carah Kelateh (district of Dāngahān), was put to death by the partisans of the Sāfāvīs at whom he had supported the Kādjar (cf. Relation de l’embassy au Khârem, transl. Scheler, p. 205). He father became one of the dignitaries of the court of the Kādjar; in 1215 (1800), while on a pilgrimage to Mashhad, he heard of the birth of a son in Teherān to whom he gave the name of the imām. Becoming an orphan in 1802, Riḍā Kūlī spent his early years in Fārs; he was brought back from Fārs to Teherān, lived some time with relatives at Barfurūsh (Mazandarān), then returned to Fārs where he received his education; he then entered the service of the state of the governor-general of Fārs. His earliest efforts in poetry were published under the pseudonym of Čakir which he soon changed to that of Hīdāyat. In 1829 on the occasion of Fath ʿAḥn Shīkh’s stay in Shīrāz, he composed a panegyric and other poems which gained him the royal favour; but a serious illness prevented him from leaving Shīrāz. In 1838 Muḥammad Shīkh showed such esteem for him that he entrusted his son ʿAbdās Mīrzā’s education to him. The political troubles that followed the Shīkh’s death in 1848 sent Riḍā Kūlī into retirement. In 1851 Naṣir al-Dīn Shīkh recalled him and sent him on an embassy to Khwājā. He was next appointed to the Ministry of Education, became Director of the Royal College (dār al-fonūn), then fifteen years later, tutor (qāṭūna) to the crown prince Muṣṭafā al-Dīn whom he followed to Tabrīz where he spent several years. He returned to Teherān where he died in 1288 (1871).

Of his very numerous works, several are still unpublished, e.g. works on etymology and letters (we mention only the Miṣfah al-Khawānī, a commentary on difficult verses in Kāhānī, and the Nizād-nāma-yi Salātīn-i ʿajam-nizād, on early Persian dynasties: analysed in *J.R.A.S.*, xvii., p. 198). The bulk of his lyrical poetry (Dīwān) is also still unpublished; it totals about 30,000 lines. Of his six mathnawī (enumerated by himself, Maṭna al-Fuṣūd, ii. 582) only the epic entitled Bektâsh-nāma (or Golestān-i Fram, lith. Tabriz, 1270 = 1853) is published: it celebrates the tragic loves of the hero and the Persian poets of Arab origin Râhsī Kīkārī Balghī, known as Zāi[n] al-ʿArab. His other works which are published are mainly of a documentary nature and therefore very important. The Fikhrī al-Tawāriskh ("RePERTory of Chronicles", chronology, lith. in part at Tabriz) was presented to Naṣir al-Dīn Shīkh before the author’s departure to Khvārizm (1851); the Aghnum al-Tawāriskh (lit. Tabriz 1283) is a short précis of the history of Persia composed for the crown prince Muṣṭafā al-Dīn; the Rawdat al-Safar-yi Nāṣīrī, continuation of the Rawdat al-Safar of Mir Khvāndow down to 1270 (1853) (Teherān 1270, 3 vols. fol.), is a work of considerable size, based on eastern sources (of which several are still unpublished) and on official documents, most of which are reproduced in full; in addition to the record of political events the work contains much geographical, literary and artistic information. The Riyād al-Afīrin ("Gardens of the Initiated"), biographies of mystical poets, with an excellent introduction on Šūrism, was prepared for Muḥammad Shīkh (not lith. until 1305, Teherān). It is closely connected with the Maṭna al-Fuṣūd ("Assembly of eloquent Individuals"), of first importance for the history of Persian poetry (lith. Teherān, 2 vols. 1744); this last work, the author’s best, contains after a general introduction a collection of the history of Persian poetry, biographies and select pieces from all the poets (the poet-laureates form the first section); at the end is an autobiography and an anthology of the poems of Hīdāyat (ii., p. 581-678; autobiography and a number of the verses reproduced by the author of the Fārs-nāma-yi Nāṣīrī, ii. 125-
The researches necessary for these last two works showed Hidayat the inadequacy of the dictionaries at his disposal; he intended to remedy this by his Farhang-i anguman-ārā-yi Naṣīrī (lith. Tehran 1288) which, preceded by a remarkable introduction, gives the different meanings of each Persian word, with quotations from the classical poets. The work entitled Madārīg al-Dalā'īgha (lith. 1331) is a glossary of rhetorical and poetical terms with many examples taken from different poets. Lastly we owe to Hidayat the first editions of the Dāīm of Manūchir (lith. Tehran 1297), of the Khānā-nāme (ibid. 1275) and of the Naṣīḥat al-Majdūr (history of the fall of the Khwārizm empire) of Muhammad Zaidari (publ. posthumously, Tehran 1308). Its autobiographical character gives the attractive Narrative of a Journey to Khwārizm" (Nāṣīḥat-nāme-yi Khwārizm, ed. and tr. Sal. Shefer, in P.E.O.V., Paris 1879) a special place among his works; he undertook this journey in 1851 as ambassador sent to settle the differences between the courts of Tehran and Khiwa. This journal is a valuable document for the history of the Khānates and has been utilised by later Persian historians (notably Mohammad Ḥasan Khān; q.v.); besides valuable historical, archaeological and geographical matter, the book, which is written in a simple and natural style, is a contribution to the study of the manners and customs of the period (notably conditions of travel); we find in it pretty pictures of native life and charming landscapes. Several of Hidayat's descendants have taken a prominent part in literature, politics and administration.

(II. Massé)

RIDĪYA (1276-1420 A.D.), the only woman to succeed to the throne of Dīlāh during the period of the Muslim rule, and, with the exception of Shādjar al-Durr [q.v.] of Egypt, the only female sovereign in the history of Islam.

After the death of his eldest son, Ḥūrtimish [q.v.], despite the protests of his advisers, nominated his daughter Kīdaya as his successor on the grounds of her fitness to rule. On the death of Ḥūrtimish the courtiers, disregarding the late king's wishes, raised one of his sons, Kūnk al-Dīn Firuz, to the throne. The new king wasted his time in riotous living; all real power being in the hands of his mother, Shāhīr Turkūn, whose cruelty disgusted the people and finally led to open revolt. Eventually in 634 (1236), despite the strong Muslim aversion to female rulers, Kīdaya was proclaimed queen by the people of Dīlāh and a certain section of the army. Although the war, fought by the Malik Muhammad Dūnān, refused to acknowledge her, this was sufficient to crush all opposition. She appointed Khwādā Ṣāḥib al-Dīn Ḥusain as her wazir and placed Malik Saīf al-Dīn in charge of the army with the title of kūfūz al-Dīn Aītagīn was made amīr-i kūfūz. The Turkish amirs, however, took great exception to the favours shown by the queen to an Abyssinian, Malik Dīmāl al-Dīn Yākūt who held the position of amīr-i kūfūz (Master of the Horse). Eventually the Turkish amirs rose in revolt, put the Abyssinian to death, imprisoned the queen, and placed her half-brother, Bahārum Šah, on the throne (Ramāḍān 636 = April 1240). Malik Ḥūrtimish al-Dīn Alīnūn, the governor of Bhāītina, in whose custody the deposed queen had been placed by his fellow conspirators, decided to champion her cause. With this object in view he married her and marched on Dīlāh, but was defeated near Kažhal. On the day following this defeat both he and Kīdaya were put to death.

The only original source for her reign is the Taḥāfṣāt-i Naṣīrī of Minhādī al-Dīn [see Minhādī], the accounts of all later writers, such as Ibn Bāṭūta, Firīshā, Bahārānī, and the author of the Taḥāfṣāt-i Akbarī being untrustworthy. All that Minhādī al-Dīn relates is that she treated the Ḥubushī with favour, but this was enough to enable the later historians to interpret it as undue fondness on the queen's part. It was only towards the end of her reign that she laid aside her female attire and appeared in public clothed as a man and unveiled. The real cause of her downfall seems to have been the opposition of the Turkish amirs.

sistance; his troops scattered and there was nothing left for him but to return to Halab. Yâghi Basân then went over to Dukâk and suggested he should besiege Rîdwan in Halab. The latter however appealed to Şûkman b. Ortoğ in Sarûqî, who, at once hurried to his assistance, and when the two brothers met at Kinnârsîn [q. v.], Dukâk was completely defeated and had to recognise Rîdwan as his overlord (496 = 1096 or 497 = 1097). In order to receive financial and military support from the Fātimids, Rîdwan for four weeks had prayers said for al-Mustâ'fa, the caliph in Egypt; but on the representations of Şûkman and Yâghi Basân, who had in the meanwhile made peace with him, he again paid homage to the 'Abbasîds and asked for forgiveness from the Caliph al-Mustâ'farî in Baghdad. About the same time Dja'âmî al-Dawla left Rîdwan, settled in Himîr, and improved the defences of the town. He then took up a more independent attitude to his overlord Rîdwan: on the advice of the Fâtimids he returned to Himîr. Soon afterwards the Christians under Bohemund and Tancred again threatened Aintâkiya. The latter appeared at the head of a powerful army by a Muslim army [see DANNÎMA'LÎYÂ]. They suddenly withdrew. Bohemund fell into an ambush and was taken prisoner, Rîdwan and Dja'âmî al-Dawla won several successes, but in the end quarrelled with one another, and a year or two later (495 = 1102 or 496 = 1103), the latter was murdered at the instigation of the Assassins of Halab. In Sha'bân 498 (April—May 1105) Tancred, who had succeeded Bohemund as prince of Aintâkiya and was also count of Edessa, won a brilliant victory over Rîdwan. When Tancred besieged the fortress of Artâh, the governor there appealed to Rîdwan for help. The latter appeared at the head of a powerful army and the two forces met near Kinnârsîn. On seeing the superiority of the Muslim forces, Tancred wanted to open peace negotiations; Rîdwan for his part was not unwilling to meet him but allowed himself to be persuaded by a subordinate commander to refuse, and when the battle began, the Franks at once took to flight but returned and cut down the Muslims while they were plundering. Tancred then occupied Artâh. In 499 (1105—1106) the latter also took the important fortress of Aflamiya (Apamea). An Assassin named Abî Tâhir [q. F. ASSASSINS] who was on good terms with Rîdwan, had disposed of the commandant there, Khâlîf b. Mala'âît. One of his sons fled to Tancred and asked him to expel the supporters of Rîdwan; Tancred who had already received an appeal from the Christians of Aflamiya, laid siege to the town. He withdrew after a time but soon returned and starved the town into surrender.

When Câwâli Sakawan, governor of al-Mawsl, lost the favour of the Saljûq Sulûn Muhammad b. Malikshâh [q. v.], and was replaced by Mawdûd b. Altunêgin, he gave count Baldwin and Joscelin, who were prisoners there, their liberty on condition that they paid a ransom, liberated Muslim prisoners and assisted him against his enemies. But when Tancred refused to restore the county of Edessa to Baldwin, hostilities broke out and the latter sought the help of Câwâli. After peace had been restored between the Frankish leaders and Edessa was restored to Baldwin, Rîdwan wrote to Tancred and warned him against Câwâli, who, he said, had already taken the town of Bâlis, and was now threatening Halab whereby he might become dangerous to Christian rule in this region. In Safar 502 (Sept.—Oct. 1108) Câwâli, who had joined Baldwin and Joscelin, was defeated at Tell Bâshîr [q. v.]. He lost Bâlis, and since he could not hold his own against Rîdwan and Mawdûd, he had to make his peace with the sultan. The Christian princes then combined to besiege Tripolis, Sâ'da and Bairût. Tancred took the fortresses of al-Ahâsirî and Zardanî, and when the news reached them, the Muslims abandoned Mubiḏît and Bâlis again, and Rîdwan had to promise he would dearly (504 = 1110—1111) when sultan Muhammad summoned the princes, his vassals, for a vigorous attack on the Franks under the leadership of Mawdûd, the latter was appealed to for help by Rîdwan, whose lands the Christians were laying waste in revenge for the damage done by him in Syria. Mawdûd came to his assistance but when he appeared before Halab, Rîdwan, who no longer needed him, shut the gates and took no part in the war against the common enemy.

Rîdwan died in the last days of Djamâ'î 507 (Nov. 1115). As a partisan of the Ismâ'ilî Assassins he had at one time been one of two of his brothers, 'Alî Tâhir and Bahramshâh, assassinated. Ibn al-Athîr (3.439) also says that his manner of life was by no means laudable (kâmûn Rîdwan ghair maḥnûdâ).

Rîfâ'a Bey al-Tâhîwî, a famous writer of the first century and one of the principal creators of the modern Arabic *Renaissance*. He was born at Tâhî in upper Egypt in 1801. His parents, although of noble descent, were poor. When quite young, he devoted himself to the study of the Koran; when a young man, he went to al-Azhar where he studied seriously under the direction of Sheikh Hassân al-'Atjâr.

On leaving al-Azhar in 1824, he was appointed pay-master of the Egyptian army. At this period the celebrated Muhammad (Mehemet) 'Ali was ruling Egypt. The latter at the instigation of the French scholar Jomard sent to Paris in 1826 a group of students to learn French and study modern sciences. They were put under charge of Rîfâ'a. In Paris the latter made the acquaintance
of Oriental scholars like Jaubert, Jomard, Sylvestre de Sacy and Caussin de Perceval. He made rapid progress and soon had a deep knowledge of the French language. From his stay in Paris dates a lively and interesting account entitled Tārikh al-lībī (Bālīk 1:53) in which every line reveals a charming vivacity, and the enthusiasm aroused in this oriental mind by the manifold aspects and lights and shades of French life and culture (cf. Carra de Vaux, Peuples, v. 237 sq.). On his return to Egypt (1832) he was attached as interpreter and professor of French to the school of Medicine directed by Dr. Clot Bey and also entrusted with the editorialship of the Informations égyptiennes which later became the Journal officiel. In 1853 he was transferred to the School of Artillery and in 1853 appointed Director of the School of Foreign Languages (originally the *Translation Office*). He remained in this post until the accession of Abbas II. Unfortunately this ruler did not continue the brilliant work of his predecessor: the School of Languages was closed and its Director sent — a disgrace barely conciliatory — to the Sudan to organise the High School at Khartum.

On the death of Abbas I, Rifaa returned to Egypt. Sa'id Pasha appointed him Director of the Military School, for a very brief period, however, for the School in its turn was closed and Rifaa found himself unemployed.

In the reign of Isma'il in 1863, the School was reopened and our author again became Director of the *Translation Office*. In 1870, he became editor in chief of the educational review Kawafat al-Ma'ārif (founded) and died in 1873.

Rifaa Bey was one of the most important Arabic writers of the sixth century and his name is closely associated with the brilliant revival of literary and scientific activity in the modern east. An achieving spirit of unusual intelligence, he left behind him a considerable amount of work in all fields: history, geography, grammar, law, literature, medicine etc. details will be found in Sarks, Dictionnaire bibliographique, p. 942-947. We may note here only his translations of Telémaque, of Malte-Brun's Geography and the French Code Civil.

To appreciate the magnitude of the part he played, it must be remembered that at the dawn of the last century, the Arab world was in a state of semi-torpor and separated from European learning by a dense barrier: it was with difficulty that al-Ahmar shed a dim light on the darkness that covered this period.

As a result of his works, his activity and the phalanx of experts and translators which he gave the country, Rifaa accomplished the miracle of popularising European science, of opening the east to modern ideas, enlightening the minds of his contemporaries, awakening dormant energies and preparing the future.

We can measure the effort if we reflect that he and his pupils translated into Arabic and Turkish nearly 2000 works.

On the other hand by expanding the framework of the old classical language and by vivifying it and enriching it with a mass of new words, he enabled Arab thought to adapt itself to progress and to extend its light over modern Islam.

(Maurice Chevrol)

Al-RIFAI, AHMAD B. 'Ali ABU 'AL-'ABA', founded of the Rifaa's family, died 22nd Jumada I, 578 (Sept. 23, 1183) at Umm Abida, in the district of Wasi. The date of his birth is given by some authorities as Muharram 500 (Sept. 1168), but others say Rajab 1422 (Oct. — Nov. 1168) at Kārīyat Hasan, a village in the district of Baṣra. 'Ali, his fathār, al-Ṣabah (q. v.), has the further name al-Ṣabāḥī; al-Rifai is usually explained as referring to an ancestor Rifaa, but by some is supposed to be a tribal name. This ancestor Rifaa is said to have migrated from Mecca to Seville in Spain in 317, whence Ahmad's grandfather came to Baṣra in 450. Hence he is also called al-Maghribi.

Ibn Khallikān's notice of him is meagre; more is given in Dāhibā'ī's Tārikh al-Islam (Bolehan MS.), taken from a collection of his Mansāḥ bi 'Allaṣ bi Ṭabī' al-Dīn Ahmad b. Sulaimān al-Ḥamāð, recited by him to a disciple in 630. This book does not appear in the list of treatises on the same subject furnished by Abu 'l-Huda Efendi al-Rāzī al-Kalālī al-Sayyādī in his works Twair al-Abār (Cairo 1306) and Kitāb al-Dirāshāt (Bairut 1301), the latter of which is a copious biography, frequently citing Tārikh al-Maṣhārī by Taš' al-Dīn 'Abd al-Rahmān b. 'Abd al-Muṣīn al-Wāṣiti (d. 744; known to Hāджī Khālid 'Abd al-Ṭāhir, Umm al-Barādār by 'Āṣīm b. Hādī, Dāhibā'ī, al-Majka'ī by 'Izz al-Dīn al-Fārūqī (d. 694), and others. Al-Hamādi's statements are cited from one Ya'qūb b. Kurāz, who acted as mu'ātek (assistant) for the Rifaa. Great caution is required in the use of such materials.

Whereas according to some accounts he was posthumous child, the majority date his father's death 519 in Baghadj, when Ahmad was seven years old. He was then brought up by his maternal uncle Mansūr al-Balāṭi, resident at Nahr Dālī in the neighbourhood of Baṣra. This Mansūr of whom there is a notice in Shārīngī's Layālik (Amāran), i. 178) is represented as the head of a religious community, called Ahmad (if he is correctly reported by his grandson, Saltā'ī, p. 83 al-Rifaa'ī; he sent his nephew to Wāṣiti to study under a 'Adibī da'īk: Abu al-ʿIṣāqī, the author of al-Naqī Ḥājī, ʿAmārī was buried in the following year (546) Mansūr died and bequeathed the headship of his community (muḥākha) to Ahmad to the exclusion of his own son.

His activities appears to have been confined to
Umm 'Abida and neighbouring villages, whose names are unknown to the geographers; even Umm 'Abida is not mentioned by Yākūṭ, though found in one copy of the Marāqī j al-Ittā'ī. This fact renders incredible the huge figures cited by Abu l-Hudā for the number of his disciples (murīdūn) and even deputes (khilāfīn) of the princely style and the colossal buildings in which he entertained them. Sībū ibn al-Jauzī in Mirā'ī al-Zāmān (Chicago, 1907, p. 236) says that one of their shaikhs told him he had seen some 100,000 persons with al-Rifā'i on a night of Sha'ban. In Shaqīgarāt al-Dhāhah the experience is said to have been Sībū ibn al-Jauzī's own, though this person was born 581, three years after al-Rifā'i's death. In Tāmir al-Ahār (p. 7, 8) his grandfather as well as himself is credited with the assertion.

His followers do not attribute to him any treatises, but Abu l-Hudā produces 1. two discourses (maqāṣid) delivered by him in 577 (3rd Radjab) and 578 respectively; 2. a whole divūs of odes; 3. a collection of prayers (adā'ī), devotional emblems (āwā'id), and incantations (aḥād); 4. a great number of casual utterances, sometimes nearly of the length of sermons, swollen by frequent repetitions. Since in 1, 2 and 4 he claims descent from ʿAlī and Fāṭima, and to be the substitute (nādh) for the Prophet on earth, whereas his biographers insist on his humility, and disclaiming such titles as kubb, ḍawāṭī, or even ḍahāb, the genuineness of these documents is questionable.

In Shaqīgarāt al-Dhāhah (iv. 260) it is asserted that the marvellous performances associated with the Rifā'i, such as sitting in heated ovens, riding lions, etc. (described by Lane, Modern Egyptians, i. 305) were unknown to the founder, and introduced after the Mongol invasion; in any case they were no invention of his, since the like are recorded by Tanākhī in the fourth century A.H. The anecdotes produced by Dhahabi (repeated by Subhi, Tabakāt, iv. 40) imply a doctrine similar to the Indian ahoinsa, unwillingness to kill or give pain to living creatures, even lice and locusts. He is also said to have inculcated povery, abstinence and non-resistance to injury. Thus Mirā'ī al-Zāmān records how he allowed his wife to belabour him with a poker, though his friends collected 500 dinārā to enable him to divorce her by returning her marriage gift. (The sum mentioned is inconsistent with his supposed poverty).

Inconsistent accounts are given of his relations with his contemporary ʿAbd al-Kādir al-Ghānī. In Bagdād al-Aswār it is recorded by apparently faulty intelligence on the authority of a princely style of al-Rifā'i, and a man who visited him at Umm 'Abida in 576 that when ʿAbd al-Kādir in Baghdad declared that his foot was on the neck of every saint, al-Rifā'i was heard to say at Umm 'Abida "and on mine". Hence some make him a disciple of ʿAbd al-Kādir. On the other hand, Abu l-Hudā's authorities make ʿAbd al-Kādir one of those who witnessed in Medina in the year 555 the unique miracle of the Prophet holding out his hand from the tomb for al-Rifā'i to kiss; further, in the list of his predecessors in the discourse of 575 al-Rifā'i mentions Mansūr, but not ʿAbd al-Kādir. It is probable therefore that the two worked independently.

Details of his family are quoted from the work of al-Fārāḥī, grandson of a disciple named 'Umar. According to him, al-Rifā'i married first Mansūr's neice Khādīja; after her death, her sister Rabi'a; after her death Nalīsa, daughter of Muhammad b. al-Kāsimīya. There were many daughters; also three sons, who all died before their father. He was succeeded in the headship of his order by a sister's son, ʿAlī b. Uthmān.

Bibliography: The sources of this account have been cited above.

(R. D. S. MARGOLIOUTH)

RIHĀ, the name of two towns.

1. The Arabs called the Jericho of the Bible Riḥâ or Arīḥā (Clermont-Ganneau, in J.A., 1877, i. 498). The town, which was 12 mil E. of Jerusalem, was reckoned sometimes to the Djund of Filastīn (Yākūṭ, Ms'dām, iii. 913, e.g.) and sometimes to the district of al-Balḳāʾ (Yākūṭi, in B.G.A., vii. 113); sometimes however it was called the capital of the province of Jordan (al-Urdūn) or of Ghawr, the broad low lying valley of the Jordan (Nahr al-Urdūn) from which it was 10 mil distant (Yākūṭi, i. 227). As a result of its warm moist climate and the rich alluvial lands around it, the potashiferous fields of the country round the town produced a subtropical vegetation; among its products are mentioned, some already known in ancient times, dates and bananas, fragrant flowers, indigo (prepared from the warma plant), sugar-cane, which yielded the best Ghawr sugar. Not far from the town were the only sulphur mines in Palestine (Abu l-Fīḍāʾ, ed. Reinau, p. 236). There were however many snakes and scorpions there and large numbers of fleas. From the flesh of the snakes called tiriyākīsya found there was made the antidote called "Jerusalem tiriyākī" ( kartīsī ṭawāṣīs).

In the Kurān, Arīḥā is the town of the giants captured by Joshua; there was shown the tomb of Moses and the place where, according to the Christians, their saviour was baptised. The eponymous founder of the town (Arīḥā) was said to have been a grandson of Arphakshād, grandson of Noah. The town was particularly prosperous during the Crusades but then began to decline and was in ruins in the xith century. The modern Erīḥā in the Wādi el-Kelt occupies the site of the town of the Crusaders; it is about 800 feet below the level of the Mediterranean.

2. A little town in the district of Halab. According to Yāqūt it stood in a wooded, well watered area "on the slopes of the Djebel Labānīn". By this term the Arabs meant not only the Lebanon but also its northern continuation as far as the Orontes (Lamme, *Notan Lo Liban*, ii. 6; *M.F.O.B.* i. 1906, p. 271). But in the pre-Christ period the heights to the east of the Orontes are certainly wrongly included in the term. Rihā on the contrary was the northern edge of the Djebel Barm 'Claim' ( Ibn al-Shihna, Barsim, p. 102, 130), the modern Djebel Arbanā, a part of the Djebel Rihā or Djebel iz-Zāwiye (cf. the map Djebel Rihā or Djebel iz-Zāwiya by Roh. Garett and F. A. Norris in *Public. of the Princeton Univ. Arch. Exp. to Syria*, div. ii., sect. B, part iii. 1909).

M. Hartmann suggested that the name Rihā was concealed in the name of a *kiyāb Maṣarat yāziqyo in* the district of Abisimia in an inscription of Conclauda at Aquileia (C. I. G., v. 5732 = I. G., xiv. 2334), and that this corresponds to the Maṣqāra about 6 miles south of Rihā, while Dussaud (*Topographies de la Syrie*, 264 sq.) in 1857, the wishes to identify with Rihā itself, Harant wrote as follows in support of his view (Z. D. P. V., xxii. 145, note 3): "As in the case of Jericho, the form Rihā may have been current alongside of Rihā; in favour of this is the fact that Yāqūt, ii. 855, expressly protests against the spelling Ariha for the little town in the district of Halab: it should not be written with *alif*, while both forms were usual for the town in the "Ghawr". This supposition is certainly correct; for Ibn al-Shihna twice writes Ariha (p. 130 with the variant Rihā) and J. B. L. Kousseau (*Liste alphabetique... in Recueil de voyages et de monuments*, ii, Paris 1825, p. 2154) also knows of Ariha (Kaijā) alongside of Rihā as the name of the place and of the *nāṣja* (cf. also the Sūnāma of Halab for the year 1286, p. 118). But the identification of Maṣarat yāziqyo with Maṣqāra or with Rihā cannot however be maintained for the former is already known in the year 472 (1079) in Kamīl al-Dīn (Zubdāt Halab fi Tārikh Halab, Paris, Bibliot. Nat., MS. Arāb. N°. 1666, fol. 101) as "Maṣaratīkī in the district of the Kafrāṭīf" (E. Honigmann, in *Syria*, x., 1920, p. 252; vii., 1931, p. 99) and is still found as Maṣaratīkī about 20 miles south of Rihā (of Masmul del Uaisson, in *Syria*, xii. 99 sq.) with sketch map.

The identification of Rihā with the *Rūqja* or *Chelit Ruqja* of the Franks is also untenable; as Dussaud (I. G., *Topographies de la Syrie*, p. 167, 174, 176, 213) rightly points out that this should rather be identified with al-Ūrij of the Arabs.

There is a place noted for its ruins of antiquity called Ruwātā ("little Rihā") about 8 miles, S.E. of Rihā.

Rihā is very frequently mentioned in modern travel literature as it was on the main road from Halab to Hamā (Ritter, *Edmund*, xvii. 1522; Dussaud, *Topographies de la Syrie*, p. 151), over which Nāṣir Khusraw (before 1047) and Ibn Batūṭa (1326) travelled in their day. The town is therefore mentioned by Delon du Mans (1548), Pietro della Valle (1615), Wansleben (1671), Poocke (1737), and Damm (1754). C. Niebuhr (1778),
travelling. For example one said that so-and-so was “in the service of the imperial stirrup” (Houtsma, Recueil... seligondeis, iv. 377; iii. 18) or “in the service of the parasol (taşık) of the imperial stirrup” (ibid., iv. 7). In modern Persian one says “to be at the stirrup of a prince” for “to be attached to his court” (Kazimirska, Dialogues, p. 493 and 482–483).

In Turkish usage the same expressions were applied to:

The imperial cavalcade and the procession formed on this occasion. However, in order to avoid confusion with other uses of the word rıkib, there was also used, especially in the reigns of Mahmut II and Abd al-Medjid, the Turkish word binib which was applied to all public appearances of the sultan, whether on horseback or in a boat (Mouradgja d’Ohsson, vii. 141, 144; Jouannin and van Gaver, Turquie, p. 377 note; Androsovs, Constantinople et le Bosphore, p. 33, 494). The prince’s procession was also called meykip (meykip-i hümâyûn) (Houtsma, ii. 18; on these words in Arabic and Egyptian usage, cf. p. 485). Cf. also the name of rıkib selçük given to the eight sultân lieutenants who walked by the sultan’s stirrup in the great procession (Mouradgja d’Ohsson, vii. 25, 317).

2. The audience given by the sultan (resmi rıkib or simply rıkib), whether or not he was in procession. The grand vizier himself could only be introduced to the sultan’s presence by the latter’s formal order and his admission was called rıkib. There were ordinary rıkib and ceremonial rıkib (Mouradgja d’Ohsson, vii. 155 sqq.). Cf. details of the Mecelle rıkib-i teşrifî in Aslı Türkî, i. 23; cf. Zenker, Dict., i. 468; Ahmed Râsim, Türkî, iv. 1014.

3. The service of the sultan or simply his presence (Sekowski, Collectanea, Warszaw, 1824, i. 24). The presence was not necessarily immediate. Thus the expression rıkib-i hümâyûn (in the locative “with the sultan” was used in speaking of the troops (kapû-baîn) of the capital (‘Abd al-Râmân Şeref, Türkî, p. 292) or of the grand vizier in so far as he was endowed with the full powers of the sultan (M. T. M., p. 528). Similarly the words rıkib-i hümâyûn (in the dative) were used for petitions (arzûsât) addressed to the sultan (Meninski, Thesaurus; “Sulaimân’s Canon” or Naṣṣat-nâmê, p. 151), whence the expression muvaçîr-i rıkibîse applied to these petitions.

It is from this connection that we have the use of the words rıkib-i hümâyûn or rıkib in the sense of interim or substitute. When the grand vizier moved from place to place, the government was thought to go with him and there was appointed “to the sovereign a substitute for the grand vizier who was called rıkib-i hûmâyûnî” (Bianch, Dict., 1st ed.; Perry, A view of the Levant, London 1743, p. 37). The other chief dignitaries of the Sublime Porte had also their substitutes “of the imperial stirrup”.

Rıkib aghalarî or aghayanî rıkib-i hümâyûn or hümâyûn aghalarî. — These names were applied to a certain number of important officers or dignitaries of the palace (from 4 to 11 according to the different sources). They were the mir-arîm or “standard-bearers”, the two mir-arib (imbrokar) or “squires”, the kapûdar bâkîyân or “chief usher” and other dignitaries with different offices (cf. Lutfi Pasha, Aslı-nâmê, in Türk. Bibliothek, xii. 18 and 21 of the Türk. text ed. by Tschud; Beauvains, Notice sur la Cour du Grand Seigneur, 1809, p. 54; Mouradgja d’Ohsson, vii. 144; v. Hammer, Staatsverf., i. 61, with references to Castellani and ‘Ali; esp. M. T. M., p. 526, for the şâmîn or “usages” regarding the ağalar of the stirrup; Feridîn, Mawâdî, p. 10, for the rıkib or protocol relating to them). The following is a translation of the passage in the Aslı-nâmê which is a comparatively old text (Lutfi Pasha died in 1559): “The defenders of the fires have precedence (tasâdûr) over the szerîh beyî and the üçüngi agâhalarî. The principal (bâkî darbî) of these is the ağala of the Janissaries, next comes the mir-âlem, then the kapûdar baîlî, after him the mir-arîm, then the bâkî darbî, the bâkî darbî bukîlî and the bâkî darbî aghalaî” (starting with the ağala of the Janissaries, we have here then an enumeration of the üçüngi agâhalarî).

Considering the authority of these sources, we must conclude that the variations are the results of changes which, as far as we can tell, does not lead us to conclude that the tradition of the palace left the sultan a certain freedom in this respect. We know moreover that admission to the rıkib was in general subject to the irteân or “approval, pleasure” of the sultan.

The most important function, at least in principle, of the ağalar of the stirrup was exercised when the sultan mounted his horse: the grand mir-arîm held the inner stirrup (iç rıkib), the baş-kapûdar-baîlî agha, the outer stirrup (rück rıkib); the mir-arîm held the bridge and the teşnegir-baîlî assisted the sultan by holding him under the arm or “under the ampi” (kolmuz girmek). The kapûdar-baîlî or “chamberlains” stood all around and the agha khatfî (kâfîî) held the horse’s head (M. T. M., p. 526).

On the functions of the chamberlains, who to the number of 150, headed by the baş-kapûdarbaîlî, already mentioned, were in the service of the stirrup, and for other details see Mouradgja d’Ohsson, vii. 18 and especially M. T. M., loc. cit. Their duties were to take to the province important firmanûs and to carry out various confidential missions.

Sometimes epithets rhyming in -êb were added to the word rıkib in the language of the court: e.g. rıkib-ê hûrûmûzî “stirrup shining like the moon” (Türkîî-i Wajîf, i. 105); cf. also the epithets: hamûn, gerdân qûsûn, dawâr-sîltûn (Meninski, Thesaurus).

The tribute which the Woiwods of Wallachia and Moldavia sent to the sultan in their own name, supplementary to that (gîyâr) paid by their subjects, was known as rûkîsîyé and Ülûfe (Ahmed Râsim, i. 380; cf. Sâneau, Infirmita orientala, Bucarest 1900, i. 249).

Bibliography: Cf. the works quoted in the text. (J. DENY)

RİKÂBDAR or RİKİBDAR, a Persian derivative from the preceding (Turkish pronunciation rikâbdar, rikûbdar, rekeptar and rikiptar), properly “one put in charge of the stirrup, one who holds the stirrup, when his master mounts” (cf. French esquint, Ital. stoffiere, Russ. strimennoy, English groom of stirrup, words formed from stuf, string, stirrup = French strem, mod. Stier). In fact, remembering that the word rıkib has been given or has assumed a wider meaning [see the article],
rikābdār meant "a kind of squire, groom or riding attendant who had charge of the care and maintenance of harness and saddlery and of everything required for mounting on horseback". The pronunciation with an i in the second syllable (rikībdār or rikībdār) used alike in Egypt (Dozy; Sprio, p. 198) and in Turkey (Moldavian-Wallachian richcap or richcapar in Sanea, ii. 99) is due to a (Persian) corruption analogous to that found in the words stilībdār for stilībdar and rītīdīr for rītīdīdz (cf. the Turkish translation of the Burākān-i kāfi, p. 405). In Arabic we find the forms rikībd and jāḥībd-airībd. (Below we leave out of account the use of rikābdar in the sense of cupbearer, derived from rikāb ṣup) [used for drinking the *stirrup-cup*]*:1*. If this explanation is correct, the two rikābdār may very well be the same.

Maškārī mentions a personage who was jāḥībd-airībd already to the first Umayyad caliph of Spain (138–172 = 756–785; cf. Analectes, i. 605, reference given by Dozy). In Egypt at the court of the Fātimids, there were over 2,000 rikābdīs, or šīhībd-airībd-al-ḥādī, so called "on account of their costume (ṣayyīf)"), whose duties were the same as those of the stilībdār and tebrīdār of the time of Kalkashandī (Suleimān, ṣubn.-i, 481). As to the Persian form rikābdār, it must have been in use among the Saldājūs for we have to admit by analogy that it was from them that the Ayābīds and later the Mamlūks borrowed the term, like many others of the same kind.

In Persia itself, the term rikābdār was replaced by its (Turkish) synonym uṣenī (or uṣunī) kūrīzī (cf. Chardin, 1711 ed., vi. 112; Fere Raph. du Mans, État de la Perse, p. 24). According to the Burākān-i kāfi, the rikābdār were replaced by the ḥabīdārdī (from ḥabīdā, bridle), but it should be noted that the office of the latter was contemporary with and independent of that of uṣenī kūrīzī.

In Egypt the rikābdārs of the Mamlūks, also called rikābdīs, were members of the rikābd-kāhān, like the other "men of the sword" (arībd-al-ṣawāf), such as the šayyākārd, mahmūtārd, ḫārā-jāhām and nāḥūm-mamlūk. The rikābd-kāhān (the kīmanīt al-ṣawāf of the Fātimids) was the depot for harness and in general for all the material required for horses and stables. The heads of this service were called ṭikār (cf. the Ottoman motār whose duties were different and humbler). The rikābdārs were under the command of the mir al-ḏānī, "Marshal of the Court" (cf. the kāhdūnlar ḏāhiyat of the Ottoman court). Cf. Kalkashandī, iv. 12, 20; Ḫabīl al-Zahiri, p. 124; Gaudreoy-Demobbayes, Syrie, p. 411, 413.

The word rikābdār is found in the Jōt Nīght, where it is translated "palefriener" by E. Gautier, vi. 168 and "groom" by Burton, x. 365, note 2. From the context we might also suggest "riding attendant". Bothor gives (for Syria?) rikābdār under the French "écurier (qui enseigne a monter à cheval)" and rikābd al-khālī under "groom (celui qui monte à cheval)". The synonymic expression qāšī al-rikābd, in the sense of "good squire, one who mounts a horse well", is found in the romance of "Antara". In contemporary Egyptian usage rikābdār or rikābd means "jockey, groom" (Sprio, Habiteche). (According to the Burākān-i kāfi [Turk. transl.], the rikābdār of Egypt were replaced by the sārdājī "saddler" mentioned by Volney and others).

Turkish usage. — In Turkey the office of rikābdār must have been taken over directly from the Saldājūs but instead of becoming assimilated to that of humble grooms or rikābdī, as in Egypt, it became an important dignity at the sultān's court reserved for a single officer. It is in the reign of Orkhan (1326–1360) that we find the first Ottoman rikābdār: he was called Kočja Elys Agha ("Afī Türkādī", i. 94). It was however only under Selim i (1512–1520) that the duties of the rikābdār were defined. According to the organisation at this time, the rikābdār agha was a khaus-oddlī, i.e. he was one of the khaus-oddlī (and not odadal) or "company of the corps (Mouradaga d'Ohsoss); chambre suprême (Castillan); innerste Kammer (v. Hammer)" which was the first of the six groups of officers of the household (il or erdenn-i) of the Serail and consisted of the fixed number of 40 officers or pages including in theory the sultān himself. It had been formed by Sultan Selim to guard the relic of the Prophet's mantle (khirka-i cebed) brought back after the conquest of Egypt (Afī, i. 208; for details of the organisation see ibid., and Mouradage d'Ohsoss, vii. 34 sqg.). The rikābdār was the third of these officers in order of precedence (following the stilībdār and the tebrīdār and preceding the dulend aghası) and an officer passed in this order from one office to another. The four officers just mentioned were the only khaus-oddlī who had the right to wear the turban.

According to the usual definition repeated everywhere, the chief duty of the rikābdār agha was to hold the sultān's stirrup. It may have been so at first, but none of the documents available show the rikābdār performing this duty in practice. Indeed we have seen [cf. Rikan] who were the "aghās of the stirrup" entrusted with this duty. Now in spite of his name, the rikābdār was not one of these. The Arabic version of the Aṣfāʾ-nāme (Bairatti, p. 9, note 7) and the German translation (Turk. Bibl., No. 12 [1910], p. 17, note 1) have therefore confused rikābdār agha and rikābd aghāsı, which has given rise to an erroneous interpretation of the whole passage [cf. the corrected translation in the article Rikan].

On the other hand, western writers of the xvith century mention as the third officer of the household (icğhan) after the stilībdār and tebrīdār a "cup-bearer"! Theodore Spandon (Spandony Canthac), calls him sharabārd (cf. Garzoni, 1573) and Leinclavius khipar "hearer of the (water-)jar", a name also found in Lonicer (p. 69). This water-carrier was given other names later. D'Ohsoss (pl. 158) and the Afī Türkādī (i. 282) speak of a kish-ekki or "keeper of the kis, probably for the Arabic-Persian kis-e[r] or water-jar". Wearing a berata, he carried a ewer (masirupa) of warm water at the end of a stick. V. Hammer calls this official mātaradji or bearer of the gourd (mātara for mathara).

The use of warm water is easily explained by the fact that, as an author writing in 1631 tells us, the third gentleman of the sultān's chamber "carried him 'sherbet' to drink, and water to wash with" (De Stochove, Voyage du Levant, Brussels 1662, p. 84: Ischiopar, for rikābdār; cf. Baudier who writes: rechiopar).

On the other hand, there was an officer whose duty it was to carry a stool (sīneme) plated with silver which the sultān used in mounting his horse when he did not prefer the assistance of a mute
went on his hands and knees on the ground (Castellan, Moeurs..., i. 139; 'Ata, loc. cit.; d'Ohsllon, pl. 157). He was the iskemle aghasi or iskenetiqilir bashi, chosen from among the oldest grooms (kapudan ektisi). Wearing a dolama and a kele, he rode like the water-carrier on horseback in processions (rMal). Probably through some confusion Castellan calls him rikibdär, but adds that in his time the rikibdär was chosen not from among the khâş-adalî, but from the iskâni (mistake for kapudan'). Nor must we confuse, as Saineau (Influence orientale, ii. 104, s.v. iskembet or iskmen) does, the iskemle or iskemun aghâsi with the special commissioner of this name who was charged along with the samiqah aghâsi, to install on the throne (iscâni) the new kâdî-pasars of Moldavia and Wallachia (cf. Milange Iorja, 1933, p. 202). They were also iskemle aghâsi similar to those of the sultan in certain provinces (Rousseau, Description du pacha-dik de Bagdad, Paris 1809, p. 27).

Among the special duties of the rikibdär, we shall only mention the custody and care of the harness etc. of the sultan (as among the Mamlûks) and his pabuc or shoes and šarâme or boots (kânîn of Sulamîn or Nasîhâr-nâmê, p. 132).

It should be noted that, according to the 'Ata Târîkhî (i. 208), the services of the rikibdär like those of the lokhdars were only required on gala days (gîyâm-i-rezîmiye). This practice is said to have been introduced under Mustafa III (1757–1774) out of consideration for the age of these persons concerned for they were generally over 60 and had spent 40 years in the service of the court (âddâk yula). According to the same work, these duties were reduced to very little. During the ceremonies (selâmâlik) of the Prophet's birthday (mevlid or mevluk), the two baîwams and at the biniq or ceremonial appearances of the sultan, the rikibdär sat opposite the sultan in the imperial barge with the silhâr, khashoda bashi and the two lokhdars.

From all this we may conclude that if there really was a rikibdär in the time of Orkhan he performed not only the duties of a squire but also those of a "cup-bearer" and we know that in Persian rikibdär means "cup-bearer". In time, the rikibdär became more and more important personage, these duties were divided between two special officers: on the one hand, the koz-bekti and similar officials, and on the other, the iskemle aghâsi.

The rikibdär aghâsi, like the lokhdars, received a daily salary or šulâmî of 35 aspers (âfèî) while the silhâr drew 45 (Herâfîrens, MS. A.F.T. of the Bibliothèque Nationale, fol. 188). Like the lokhdars they had in their service two latas of the khashoda, a karaqollaci, a hallâgî with tasselled caps (cîlìyê), two şofulis, a khebîqi and two medekîs. The rikibdars who did not attain the rank of silhâr were put on the retired list (became tirad) with a pension of 60–100,000 piastres. In the absence of the lokhdar, the rikibdär performed the duties of the silhâr. On the quarters in the palace occupied by the rikibdär, cf. 'Atâ, i. 312, sq.

The four chief officers of the khashoda, including the rikibdär, were often called by the name — not official, however — of şulâmî vâzîserî or "vizziers of the armpit" because they had the privilege of touching the sultan, particularly of giving him their hand or taking him by the arm during a walk and they frequently attained the rank of wezir (Cantemir, Hist. Emp. Ott., Paris 1743, i. 119–121). The rikibdär aghâralı [cf. RIKÂB] were also şulâmî vâzîserî.

The same four officers were also called 'arz aghâralı because they had the right to present ('arz) to the sultan any petition which reached them, like the master of petitions (Rycaut, Bk. i., p. 97 of the French transl.; Castellan, iii. 185). According to Ahmad Râsim (i. 639), in processions, the iskemle aghâsi had the task of returning to those concerned petitions which were not granted.

The rikibdars were abolished by Mahmûd II, probably about the same time as the koz-bekti (in 1248 = 1832–1833; cf. Luzzi, iv. 68) and the silhâr (in 1246; cf. Luzzi, iv. 61); cf. v. Hammer, Hist., xvii. 191.

RISÂLÂ. [See RASULî.]

RIYÂDÎ, Ottoman biographer of poets. Molla Mehmêd, known as Riyâdi, was the son of a certain Muftâ Efendi of Birge (S.E. of Smyrna) and was born in 980 (1572). He was first of all employed as a maddârî, later became kâfi of Aleppo and died on 9th Safar 1054 (April 17, 1644) (according to J. v. Hammer, G. O. R., vi. 44 in Cairo). He was known as at-Adâmî, the "dumi". His chief work is his Riâyîl al-Shûrârî, a biographical dictionary of poets containing 354 names. It is known to have been finished by 1018 (1609). He also wrote an abbreviated translation into Turkish of the Wûsîyât al-A'âyân of Ibn Khallûkin. The lexicon has not yet been published but is accessible in a number of manuscripts, a list of which is given by F. Babinger, G. O. W., i. 178 (add: Stambl, Lâlî Ismâîl, N°. 314). On a German translation of an extract from it by V. v. Rosenzweig-Schwanau, cf. Z. D. M. G. xx. (1866), p. 439, No. 3 (filling 20 pages).

RIYÂH, an Arab tribe, the most powerful of those that, regarding themselves as descended from Hilal [q.v.], left Upper Egypt and invaded Barbary in the middle of the 9th (ixth) century. Their chief at that time was Mânîs b. Vâlyâ of the family of Mirdas. The Zirid emir al-Mu'izz [q.v.], who did not foresee the disastrous consequences of the entry of the Arabs into Ifrikiya, tried to come to an arrangement with him and to win over the Riyâh. The latter were the first to lay his country waste. But thanks to the protection of the chiefs of the Riyâh, to whom he had married his daughters, al-Mu'izz himself succeeded in escaping from Kairawân and reaching al-Mahdiya [q.v.].

At the first partition of Ifrikiya which followed the invasion, the Riyâh were naturally the best served. They obtained the greater part of the plains, which the Berbers had abandoned to seek shelter among the mountains; they had thrust their relatives, the Ashâbî, towards the east. They held Bedja which the caliph in Cairo had allotted to them in anticipation. The people of Gabes took
the oath of loyalty to Mūnis. "It was", says Ibn Khaldūn, "the first real conquest of the Arabs." The Djāmi', a family related to the Rīyāh, made Gaes a regular little capital, which they adorned with their buildings. Lastly, a chief of the main tribe, Muhābīz b. Ziyād, made himself a fortress in al-Mu'allaqa (a Roman circus?), among the ruins of Carthage. The powerful lords of al-Mu'allaqa, however, supported the policy of the Zirids of al-Mahdiyya, and joined them in their resistance to the Almohads.

This resistance did not long impede the expeditions sent by the Maghribis against Ifriqiya in anarchy. Defeated by 'Abd al-Mu'min in 546, 555, 583 (1152, 1160 and 1187), the Arabs were ordered to supply contingents for the holy war in Spain. 'Abd al-Mu'min, leaving a section of the Rīyāh in Ifriqiya under command of 'Ashārīr b. Sulṭān, took the others to the Maghrib with their chief, 'Ashārīr's brother Ma'sūd, known as al-Halib ("the axe"). On this occasion, the very capable and experienced military envoys of the Caliph (Dubai, al-Diyyā, and--above all--E. Fagnan), the Caliph, left the plains of the north of Bū Regres. This control was little in keeping with the traditions of the Rīyāh; Ma'sūd fled to Ifriqiya and there gave his support to the Banū Ghāniya [q.v.] who were trying to revive for their own advantage the Almoravids.

We know how the trouble stirred up by the Banū Ghāniya led to the Almohad caliph's appointing a governor of Ifriqiya invested with very extensive powers, Abū Muhammad al-Hāfīd [q.v.] family. This governor naturally attacked the Rīyāh and in order to be rid of them, encouraged the settlement in the country of the Sulaim Arabs hitherto quartered in Tripolitania. Under the pressure of the Sulaim, the Rīyāh, the principal family of whom at this time was the Dawwāsī, migrated to the plains of Constantine where they were henceforth to remain.

In their new home the position of the Rīyāh remained a very strong one. They had rights over all the centre of the modern department of Constantine, approximately from the region of Guelmâ to that of Bougie. In the Zāb [q.v.] they were on terms — which were sometimes friendly but more often hostile — with the Banū Możni of Būkra, who ruled this Hāfīd province. This is how the Banū Możni had to fight against that curious movement, at once religious and social, stirred up by the Rīyāh marabout Sa'da. The Dawwāsī, and in particular their most powerful family, the Awlād Muḥammad, held winter lands and enjoyed revenues paid by the people of the Oura in the Saharan region of the Wād Rūgh.

During the middle of the xviith century, the two chief branches of the main tribe, the Awlād Muḥammad and the Awlād Saβh, were actively engaged in the politics of the Hāfīd princes and the 'Abd al-Wādūls of Tlemcen, in the enterprises of the pretenders who threatened their dynasties. The power of the Rīyāh of central Barbary lasted till the xviith and xviith centuries. According to Bernaldo of Mendoza, they had in 1536 10,000 horsemen and large numbers of foot. The xviith century saw them assuring the Turkish Bey of Constantine, to whom they were connected by marriage and the independent sulţāns of Tuggourt. In 1644, Cathari and Warnier noted that the name Dawwāsī was still synonymous with "noble Arab."

Another group of the Rīyāh played a notable part in the history of the Zanīta states. In the extreme Maghrib, bodies of them transported by the Almohads to the plains of the coast faithfully served this dynasty, by trying to check the advance of the Marinids [q.v.]. Defeated near the Wād Slīb in 614 (1217), the Rīyāh were mercilessly punished by the victorious Marinids. Decimated and weakened, and driven northwards, they submitted to the humiliation of paying an annual tribute. Their name no longer figures on the map of modern Morocco except at a place near the road from al-Šārīf to Tanger.

Finally, at the other end of Barbary, in their first home, the name survives in the nomenclature of the tribes. The Tunisian caidate of the Rīyāh lies between Teboursuk and the hills which surround the Gulf of Tunis.

(GEORGES MARÇAIS)

RIYAL (a.), riyal franci, from the Spanish real (de plata), the name given in the modern world to the large European silver coins which formed the international currencies of the xvith and xvith centuries; the most important was the Spanish dollar (peso; properly 8 reals) but the name was also given to the Dutch, German and Austrian dollar, the French écu and Italian scudo. In the late xvith and xixth century the Austrian Maria Theresia dollar took the place of all its rivals and it still circulates to the present day around the Red Sea. The name riyal survived with it.

In the currencies of the modern Muslim kingdoms of the Ifrik and the Hīḏżjā riyal is the name of the largest silver coin, the standard being that of the Maria Theresia dollar. A riyal was also issued by the sulţān of Zanzibar in 1880. In modern Persia riyal is a money of account: originally (1930) 1 riyal = £ 1 sig. but by the system finally adopted in 1933, 100 dinars = 1 riyal = 1 pahlavi = £ 1 sig.

J. ALLEN)

RIYALA or RIYALA BEY, abbreviation of riyalu-ι humayūn kapudān, "captain of the imperial [gally]-royal" from the Italian riyaile (secondary form from riâle, abbrev. from galea reale, "the royal galleys"), a general officer of the Ottoman navy who commanded the galleys of the same name, later "rear-admiral". There was also a popular pronunciation riyaile with the prothetic i frequent in Turkish in loan-words with an initial r (cf. Hindigoua, p. 113 under "contre-amiral" and p. 457 under "riâle"; the form riyaile is found as early as Ewitty Čelebi, viii. 466 sq.). The Italian pronunciation riyaile is attested in the Itinéraire
Admiral in his absence. From 1246 onwards:

3. Tesrîn-i ʿamîr-i kâtib-i ʿâli (Bayazîd) agha
   "Intendant des galères", "Lieutenant of the Arsenal",
   "Sachwalter des Arsenalen". He was particularly
   concerned with the police of the Admiralty.

b. Admirals with the title of bey.

(Except the 4th, these officers were sea-going
admirals and took the name, of Venetian origin,
of the vessels they commanded. The name might
have the addition of humâyiyn "imperial" in a
Persian construction whence the official barbarisms:
babštarda-i humâyiyn, kapudan-i humâyiyn, etc).
The full titles in theory were: babštarda-i humâyiyn
kapudan, kapudan-i humâyiyn kapudan etc.

1. Babštarda, babštarda, babštarda-i humâyiyn
   — Ital. bastarda, Fr. bastarde oder batarelle.
   This was not the largest unit of the fleet.
   In Turkish as in Venetian usage the bastarda was a
galley larger than the gala sensile (Turk. kadırga or
   tekhir), but smaller than the galea or galiass
   (Turk. nauza) and had a very rounded poop
   "like a water-woman" (körpüs hili). Among the
   Turks it contained 26—36 oträk or benches of
   5—7 rows. The one which had the Kapudan
   Paşa on board was called (kapudan-) paşa bâbštarda
   and had 26—36 oträk. It was distinguished
   by the three lanterns (fener) attached to the poop
   in addition to that on the main mast (Tezhs, fol. 69;
   Dicwct Basha Türkî-l, 1309, p. 131). As it
   flew the flag of the Grand Admiral, it was some-
times (Menin-sk. Theanuus, i. 663; Barbier de
   Meynard) called "Captain" but we shall see that
   among the Turks this name was given to another
   vessel. Chancal has noted that the first syllable
   in the word babštarda means in Turkish "head",
   "chief" but it is difficult to say that the Ottomans
gave first place to this ship simply as a result of
a popular etymology. The disappearance of the
ship propelled by oars resulted in the abolition of the
babštarda. Officially disbanded in 1764,
according to d’Ohsson, it was still used from time
to time on certain ceremonial occasions. The sailing-
ship (balysn, "galleon") which became the flag-
sign of the kapudan-paşa, was commanded by
the "Flag-Captain" who, according to d’Ohsson,
was called in Turkish siwari kapudanı "captain
of the ship-commanders" and, according to von
Hammer (Staatsverf., ii. 493), sanıjak kapudani,
Esad Mehmed Efendi calls this officer, probably
by an archaism. babštarda-i humâyiynı paşa
"commander of the imperial babštarda of the
(kapudanı) paşa.

2. Kapudanı bey. Kapudana comes from the
Venetian (galea or nave) captana "gally or ship
holding the leader of a naval expedition, flag-
sign" (Jal). In France it was called "la capitaine"
or "capitanes" but these terms disappeared in
1669 with the office of general of the galleys, and
in the French navy pride of place was given to the
Rêale [see below]. On the kapudana which
took part in the naval battle of Çeşme (1770) cf.
Jaubert, Gravinaire, appendice, p. 3. Kapudana
and kapudana have often been confused (Hammer,
Staatsverf., ii. 291; Blochet, Voyage de Corfier de
Pion, p. 128: Douin, Naviacr, p. 250, 276,
295, 311). We find the full title of kapudanı-
humâyiynı kapudani, e.g. in a letter from Mehmed
Alı Paşa (of Egypt) to the grand vizier of the
29th Ramadán 1231 (July 1, 1821), register, No. 4, p. 71.

3 *Patrona bey.* Patrona comes from the Venetian (galea or nave) patrona or padrona, Fr. la patronne "galle carrying the lieutenant-general or the next in command to the chief of the squadron" (Jal). The earliest mention of an officer of this rank known to us is connected with the years 1676–1685 (cf. *Sūrijīlät ‘otkānāni*, i. 112, *infra*). Patrona Khallī, a janissary, leader of the rebels who deposed Ahmad III in 1730, owed his epithet to the fact that he had been *levon* on board the *Patrona* (*Relation des 2 rebellions*, p. 8; Eng. transl. in Charles Perry, *A View of the Levant*, London 1743, p. 64). — We also find the forms applied, it is true, to Christian ships: *paterna, patrona, botorna*, and even *botorna* (*Eyliya Celebi*, viii. 579, 12; i. 104, 71; viii. 447, *infra*; p. 446, 10; Hasan Așa, *Qawāhir al-Tawārīḵ*, Ms. Bibl. Paris., S. T. 506, fol. 160v—161). All these pronunciations show that the word was already well known, but was finding difficulty in being acculturated in the new order.

4. *Limān rēsî* "captain (admiral) of the port" of Constantinople, Germ. "Kapitan des Hafens". He was also commander of the mid-shipmen (*mandlidži*).

5. *Riyala bey.* Riyala comes from the Venetian (galea or nave) reale "galle which carried the king or princes" (the same name was often also applied as an epithet to vessels belonging to the king, i.e. to the state, in contrast to privately owned ships). For the lexicology of this borrowing from the Italian see the beginning of the article.

At the battle of Lepanto, Don John of Austria, Captain of the League, sailed in a Reale. A Patrona Reale went astern of the Reale of the Prince and of the Capitana of the "General Capitan dell’ Armata" of Venice. Except for these two ships, none of the 202 vessels of the allies was given the name of Reale (Contarini, *Historia delle cose . . . della vittoria della mosca da Silim Othoman o a Trincani*, Venice 1572, fol. 36v sqq.). In France the Reale was also in front of the Patronne and was the first ship of the navy, intended to carry the king, princes, the admiral of France or in their absence the general of the galleys (Jal). At the conquest of Cyprus, in 1570, Contarini (Venice 1595) gives for 185 Christian ships: 18 capitana, 7 padrona and 1 bastardella (no Reale); for the 276 Turkish ships: 1 real (sic) and 29 capitana (these terms do not correspond exactly to those of Turkish usage of that time).

It is not explained how the title of Reale came to descend among the Turks until it was applied to the ship of the admiral of lowest rank. We may suppose that they were misled by the same meaning of the word Reale [cf. above] or that they confused him with the English "rear-admiral".

*Marşulli* (State Militari, 1732, i. 146) mentions the Turkish "commandante nella Reale" as having a higher rank than the *garden-bahş* who was in turn superior to the captain of an ordinary galley. According to Esad Efendi, the *riyala* came before the *kaşunlar* bābātı.

All the officers here mentioned from the *kapudan paşa* to the *riyala* were *gâdik* deînek, i.e. they had the right to carry, in imitation of their Venetian colleagues, a commander’s baton or cane, deînek, also called *gâdikârî* aqâ (*Esad Efendi*, p. 109, 7) because it was encrusted with mother of pearl of different colours [cf. below]. It was what the Venetians called the giunetta o cana (*canna*), from canna d’India, "Indian cane", often taken in the sense of "bamboo" from which we also have the English word "cane". They alone wore small turbans and fur-trimmed robes (cf. D’Ohsson, pl. 228).

When under ‘Abd al-Hamid I [q.v.] or later under his successor Selim III, the naval hierarchy was organised and to some extent modernised, three grades of admiral were instituted (independent of the *kapudan paşa*, who was the Grand Admiral or "amiralissimo"). They were:

1. the *kapudan paşa* "Admiral". Meşmed Şükri regards his rank as equivalent to the more modern one of *șahrași bahşîye rēsî* "president of the Higher Council of the Navy". He had a fixed monthly salary of 4,500 piastres (1 piastre = 3 fars.) and in addition received pay for 1,000 men (on which he was liable to make various grants) but with the obligation to give to the *kapudan paşa* spices or *alçâlî* to the value of 4,000 piastres. He carried a green cane and had the right to have a pennon below the flag on the main mast (that of the *kapudan paşa* was above).

2. *Patrona bey* "vice-admiral" (Meşmed Şükri), modern Turkish *vis amiral* but we also find the French equivalent of "guidon" (Siymi Bey: Tungahir-Sinapiyan). Salary: 3,500 piastres. Pay of 800 men. *Dâlî* to the *kapudan paşa* of 3,000 piastres. Blue cane. Flag on the fore-mast.

It may be noted that in theory there was only one officer of each of these ranks at one time.

All three took part in the battle of Navarino in 1827 (Douin, *Navarin*, p. 250 and *passim*). They were under the command of Tâhir Paşa who had the rank of *mirâmir*—He was himself patrona but this does not mean duplicating the function of the patrona, who was subordinate to him because the commanders-in-chief of the fleet (*rayâk* or *bahş-bahş*) were chosen without regard to rank. Hüsîr-Elyas (Enderûn Türkî, p. 481) mentions a *limân rēsî* with the rank of *patrona* in 1826.

The flag-commander of the *kapudan paşa* retained his functions but seems to have occupied a position on the edge of the hierarchy which the presence of the Grand Admiral on board sometimes made unenvious (v. Hammer, *Staatserf.*, ii. 293).

We do not know at what period these ranks were replaced by the more modern terms of *mishir*, *ferîk* and *rîcâ*. The equations of rank varied considerably. The *riyala* is regarded as *mir alay, mirâmir, lûvâ, ferîk* and even *bîvindî* ferîk. It is probable that it was necessary to choose a grade between these. At Sebastopol in 1854, the Turkish frigate was commanded by a *botorna, Ahômad Paşa* (cf. Ahmad Râsim Türkî, iv. 2015).

In Egypt under the Khedives there was for a time a *riyala paşa* in command of the fleet.

However does not mention it. We still see there several remains of the Muslim period, such as a remarkable gate in the suburb of San Francisco. The cathedral of Santa Maria La Mayor has taken the place of the great mosque; the ancient citadel or Alcazaba of the Nasrid period was destroyed in 1808.

The principal fortress of the district of Tájarorná was for a long period Bobastro [q. v.] which was the headquarters of the rebel 'Umar b. Ḥaṣān [q. v.]. On the fall of the Umayyad caliphate of Spain, Ronda became the capital of a little independent state in the hands of the Berber Banū Ifrā‘; among these rulers were Abū Nūr Hilāl b. Abī Kurra b. Dūnās who was proclaimed in 431 (1039) and died in 449 (1058) after having been the prisoner of his redoubtable neighbour, the king of Seville, al-Mu'tazīd [q. v.] Ibn ‘Abdāl, and his son Abū Naṣr Faḍlā, who after having held out for some months at the capital of his principality was killed at the instigation of the Abbadīd ruler, who annexed his state in 450 (1059). Ronda then became the residence of a prince of Seville until a son of al-Mu'tamīd [q. v.], al-Raḍāl, had to surrender it to the Almoravid forces under Gārūr in 1091.

Ronda played an unimportant part under the Almoravids and Almohads. In the Nasrid period [q. v.] it was for some time the appanage of the vizier and family of the Banū 'I-Hākim and was directly concerned in the internecine fighting of this period. It was taken by the Catholic Kings after a siege of 20 days on May 20, 1485.

ROSETTA (Arabic Kāshīd), a town in Egypt, situated at 31° 24' N., 30° 24'E., on the Western bank of the Rosetta branch of the Nile (the ancient Bolbitine) about ten miles above its mouth, which is known as al-Armūsīya and is dangerous to enter. Till the ixth century a.d., ships sailed direct to Fūwa; but owing to the excessive depositing of the silt in this region, Rosetta began to take its place during the reign of al-Muta-wakkl. In the xiiith century, however, Abu 'l-Fida' remarks that it was still smaller than Fūwa; and, in the xivth, Ibn Dūmnāk (v. 114) says that it was exclusively inhabited by garrison troops (al hādīhī 'l-mudīna kulluhum muḥīthūn). After the Ottoman conquest of Egypt in 1517 A.D. and the decay of European trade through Alexandria, Rosetta became an important centre for maritime trade with Constantinople and the Aegean territory of the Turkish Empire. The Viceroys 'Alī Pasha, in 915 (1509), restored its old khâns (warehouses) and funduqs (hostels), built new ones, and cleared the silt from its docks. The town continued to flourish until Muḥammad 'Alī [q. v.] reconstructed the Mahmūdiyya Canal for navigation between Alexandria and the Nile, and thus diverted the course of trade from Rosetta which declined rapidly to a mere fishing town with but few minor local industries such as rough cotton weaving, rice pro-
duction and oil manufacture. Its population in 1907 was only 16,666.

The topography of the town is largely medieval in character and it still retains many noble buildings which mark its past prosperity. Its streets and lanes are both narrow and circuitous with only one large fish market. Till modern times its wall was maintained for defence against Arab raids. At the mouth of the River, near Kām al-Afrāh, two castles guarded the waterway entrance to Rosetta in the past. Vansleb, who saw these castles in May 1672, describes them thus: "One stands at the East-side of the River, and the other on the West. That which is about a mile and a half from Rosetta is square, encompassed about with strong Walls, built according to the old Model, having four Towers. One hundred fourscore and four fountains are in the Garison... The other Castle is but a Mosque, before it stands seven Pieces of Artillery on the Guard: Here commands also an Aqūr over a Company of Moors, who examine all that go in, or out of the City." (State of Egypt, London 1675, p. 105).

In history, only few events may be gleaned about Rosetta. In 1234 (675) it was the scene of a serious but abortive Coptic revolt; in 1326 (927) the ʿAbbāsīd fleet of ʿAbū Saʿīd Šāmil routed the North African fleet of ʿAbūd Allah al-Mahdī [1, v.] commanded by a certain Sulaiman in the waters of Rosetta; in 1218 (1803) it witnessed the ʿAlāʾīd's victory over the combined sea and land forces of the Ottoman Porte; and in 1222 (1807) it was saved by the English who came to help al-Mukāhir and his Mamluk successors. It must also be remembered that in 1799 A.D. in the neighbourhood of the town, Boussard, an officer of the French Expedition, discovered the famous Rosetta Stone now in the British Museum.

Bibliography: See works already mentioned in articles on other Egyptian towns. (A. S. ATIVA)

ROUBA B. AL-ʿADJDĀDI AL-TAMĪMĪ, an Arab poet. The name Ruba is more frequent among men from eastern Arabia than is generally supposed. Arabic philologists have given many explanations of the peculiar name: I am however certain that it is the Persian word ʿarba, meaning "four," which is implied in the name ʿAdjdādi. Al-Tamīmī is a poet of the Banū Malik b. Saʿd b. Zaid Manāt b. Tamīm. He became celebrated as a poet of adīr verses, in which genre he surpassed both his father and the latter's rival Abu ʿl-Nadżm al-ʿIdjī. Of his life very little is known. Like his father he spent most of his life in the desert (ʿadījī) and only came into the towns when he sought presents for his panegyrics from the great. Born about 655 (685), in his middle years he went about with the armies which were spreading the power of ʿAlī. His earliest productions are entirely lost, but we have a panegyric (No. 22) on al-ʿĀṣim b. Muḥammad b. Ḥaḍāf, the conqueror of Sindh, on his return from India in 94 (713). As in the following year al-ʿĀṣim was taken into prison and murdered, the date of this poem is fairly certain. Our poet then travelled in Eastern Persia, either as a soldier or a merchant, and a further poem by him (No. 26) is dedicated to another governor of Sindh, ʿAbd al-Malik b. Kāīs b. al-Dhībī who was there about 10 years later.

Whether he was in Khurāsān during the troubles that broke out after the death of Kūtaibah b. Maslamān (60 = 715) is not clear, but several poems are dedicated to individuals who took part in the fighting there. His poem attacking al-Muhallab (No. 27) shows that he was against the Yamanis as do his poems in praise of Maslama b. ʿAbd al-Malik who conquered Yazid b. al-Muhallab and killed him (102 = 720). But he must have again been in eastern Arabia or the ʿIrāq, as is shown by his poems on Kūthīlī ʿAbd Allāh al-ʿAskārī, Abūn b. al-Walid al-Badjalī and al-Muhādījir b. ʿAbd Allāh al-Kīlābī. At a later date, he dedicated poems to men who were active in Persia like Muḥammad b. al-ʿAṣfāṭīk al-Kūthāī who was in Kīrman in 129 (747) and particularly Nāṣr b. Saiyār, who failed to put down the rising of Abū Muslim and died in 131 (749). A poem (No. 41) is dedicated to the last Umayyad caliph Marwān b. Muḥammad of whom he still hopes that he will conquer all his enemies.

As he had in this way shown his attachment to the Umayyads, it is no matter for surprise that Ruba did not feel his life safe when he was summoned before Abū Muslim. Of the audience we only know that Abū Muslim showed himself a connoisseur of Arabic. Two poems in praise of Abū Muslim are to be found in Geyer's Nachträge (Diambis 4 and 6). Several other poems in praise of members of the new dynasty have survived; one (No. 55) is dedicated to Abu ʿl-ʿAbbās al-Saffār and two to his uncle Sulaimān b. ʿAli (Nrs. 45 and 47), and the latest poems of Ruba are in praise of al-Manṣūr, who succeeded his brother as Caliph in 136 (754) (No. 14 and Diamb. 8). He was then an old man and is said to have died in 145 (762).

All Ruba's poems are in the radīj metre; the few verses in other metres ascribed to him I have found to be by other poets and wrongly attributed to him. He had learned the art from his father, whom he even accuses of having taken credit for his poems when Ruba began to write, and we actually have a poem by Ruba against his father (No. 37). From his father he also inherited a fondness for unusual words and his poems are among the most difficult in the Arabic language, as they are full of words which are never or only very rarely found in other poets. One even suspects that for the sake of effect the poet coined new words which did not previously exist. He is fonder than any other poet of a kind of alliteration or, to be more accurate, an accumulation of a number of forms from the same verbal root. No one can make this sort of thing beautiful and Ruba's poems have probably survived only because the lexicographers found them a rich quarry for unknown words. A proof of this is the number of lines from his poems which are quoted in the great dictionaries, and in the Līsān al-ʿArab, for example, run to several thousands.

It is no wonder then that the learned men of al-ʿAsra and, less often, of al-Kūfa visited him to increase their knowledge of the ḥizāba until he became tired of them. We even find that Ibn Kūthawī in his Rāʾi ʿalā dājīm Sūra quotes Ruba for readings of the Kūran which have no other justification that they are different from the known readings. Ruba simply claimed to know better.

Ruba had two sons, ʿAbd Allāh to whom two poems are dedicated (20 and 56), and ʿUkba who
also wrote poems in the same metre as his father (Ḍāhī, Reyan, i. 23; Ibn Kutaita, Ṣifīr; Marzubān, Muwāṣṣiṭbān, p. 218 and 366; Ibn Rashīq, Ūmda, i. 136).

Rubās poems were collected by several scholars, among them Abū ‘Amr al-Shāhibāni, Ibn al-ʿAraṭi and al-Sukkārī, of whom the last two named are probably represented by the surviving manuscripts (cf. Dīambs 40–44). The contents of these manuscripts have been edited by Alvhwart (Berlin 1903), unfortunately without noting the commentary which is absolutely necessary for the poems of Rubā, and in the alphabetical order of the rhymes which makes it difficult to recognise the original arrangement of the collection. As this edition was incomplete, Geyer in 1908 published a collection of several rubās poets eleven further poems with the commentary under the title Alterarische Dymanben. Alvhwart had in his editions of other poets added a collection of verses which he had found in various works quoted as by Rubā. This collection was extended by Geyer in his Beyträge zum Dīwān des Rubā (Berlin, 1908, p. 156; 165). Even then there remain lines attributed to Rubā which have escaped both editors, while many lines are not by Rubā but belong to other poets. Confusion seems to have begun at quite an early date between the poems of Rubā and those of his father al-ʿAdidādi. Alvhwart also published a complete German translation of the whole Dīwān in rhyme. The value of this translation is unfortunately small as it is really only a paraphrase and does not help with the difficulties of the Arabic text.

Bibliography: Biographical notices on Rubā are found in Dījma, Tabākāt, ed. Hell, p. 147 (where unfortunately the MSS. have a lacuna); Ibn Kutaita, Kitāb al-Ṣifīr, ed. de Goeje, p. 376–381; Marzubān, Muwāṣṣiṭbān, p. 219; Kitāb al-ʿAqīābī, ex. 84–91; Ibn Khālīkān, ed. Cairo 1310, i. 187. — Lines by Rubā are quoted in large numbers in all the great dictionaries.

F. Krenkov

Rubaʿi, qua-train (plural rubā`īyāt, from the Arabic rubāʿi, "quadrupartite"). Its fundamental characteristics have also been defined (cf. the article ʿArbaʿî, in i. 470); on p. 468 sq., are given the forms of Arabic popular songs in quatrains.

It consists of two distichs (bayt) or four hemistichs (mīrāʿ) rhyming together with the exception of the third (unāb), the third being called ḥaṣṣ ("crastrated"); the two hemistichs of the first bayt (mugarrā) must rhyme. The rubāʿi in which the four hemistichs have the same rhyme is found particularly among the old poets (cf. ʿAṣūrī’s Dīwān). The rubāʿi lends itself to every kind of inspiration. According to one theorist, the first three hemistichs serve as an introduction to the fourth which ought to be sublime (bulūd), subtle (lajf) or epigrammatic (fit). According to E. G. Browne (Lit. Hist. of Persia, i. 472), the rubāʿi is "almost certainly the oldest product of the poetical genius of Persia". The Persian philologists attribute the invention of this metre to a child playing at nuts with its playmates; one of the nuts having fallen out of the hole by a rebound then fallen back rolling, the child called out ʿallām ʿullām hami ravea dā bare-gāw, "rolling, rolling, it goes to the bottom of the hole". According to the Taḥkīra of Dīwān, ed. Browne, p. 50; the child was the son of the emir Yaʿqūb b. Lāth the ʿAffārī and the officials of the court recognised in this hemistich a variety of ḥazāדī; they added a second hemistich (mīrāʿ) to it with the same rhyming, then a second line (bait) which they called ḥaṣṣ-bait ("poem in two verses"); but some scholars, considering that it consisted of four hemistichs (mīrāʿ) adopted the name rubāʿi and Rūdaki was the first to excel in it¹ (it should be noted that Asadi’s dictionary Layhātī Fārs, ed. Horn, quotes two rubāʿi by poets at least as old: Abū ʿl-Muʿayyad, p. 68 and Shahid, p. 112). The anecdote is again found in a work written in 1220 (nearly three centuries before Dīwān) called Maqām fī Maʿāṣīr Aṯār’ī by Shams-i Kāsi (ed. Mizrā Muhammad and Browne, p. 88): one holiday, in a street of Ḍīzmin, the poet Rūdaki ("at least I believe so"); says the author) was watching some children playing at nuts; a boy of ten to fifteen improvised the same hemistich in the same conditions. "These words seemed to the poet to be a suitable metre, a pleasing poetical form; he consulted the rules of prosody and recognised in it one of the derivatives of the ḥazādī; on account of the high place where the child’s eyes, Rūdaki confined himself to two lines (bait) for each poem;... as the inventor of the metre was a young and innocent boy (tar), Rūdakī called the metre tarāūna (cf. Horn, Grundr. der neu-persischen Etymol., No. 382 and n. 3: Niẓāmī’s hemistich is no doubt quoted from the Farhang-i Dījāngātī: tar ṭarāūna ṭarāūni moṣ.fig., "every young man was singing verses"). The Haft Rubā’ūn describes tarāūna as the rubāʿi of which the four hemistichs (mīrāʿ) have the same rhyme (which is at least disputable). According to Shams-i Kāsi (op. cit., p. 90), "the connoisseurs of poems set to music (mulḥūnāt) called tarāūna the rubāʿi set to music and ḥaṣṣ-bait the rubāʿi without music, because it had no more than two lines; the arabicised Persians (mustaʿriba) called the rubāʿi the ḥaṣṣ-bait, because in Arabic the ḥazādī has four muṣṭīlūn (while in Persian it has eight); each line of this [Persian] metre makes two Arabic lines [in other words: a Persian mīrāʿ is equal to an Arabic bayt]. From the fact that the metrical change used in this metre did not exist in Arabic poetry, Arabic was not written in this metre, but now the modern poets use it freely. Arabic rubāʿi have become common in Arab lands." On this point in his Dūmāt al-Kur (Aleppo 1349, p. 174), al-Bākhrzī (12th century; q.v.) says that his father repeated several Arabic rubāʿi to him; these may be reckoned among the earliest in this language. In the Sādīḳī period the vogue of the rubāʿī seems to have reached its height. Rawandi (Rūḥāt al-Suṭūr, ed. Muhammad lkbāl, p. 344) says a propos of a man of letters of Hamadān: "He was called Nādjm (al-Dīn) Dībait; he possessed wealth which he lavished on men of talent; with an inkwell and a pen he put into writing all rubāʿi that he found; he left neither property nor furniture;... his heirs shared 50 murān of manuscripts containing ḥaṣṣ-bait." No Persian metre admits of so many variations. Indeed, the theorists number 24 types of rubāʿi derived, half from the ḥazādī-ī aḥtram, half from the ḥazādī-ī ḥaṣṣ (the latter more pleasing to the ear, according to Shams-i Kāsi). The Khurāsānī philologist Ḥasan Kattān divides these two series into two trees (ṣāfāfara) which figure in the treatises on prosody (Shams-i Kāsi, p. 92; Blochmann, Prosody of the Persians, p. 68).
which clearly show the variations (azāhīf) of the ḥazāḏaj muḫammādan ẓālim (muḏfūlān. 8 times). Four different metres may figure in the four hemistichs of ruṣā. Shams-i Kāis thus explains the mechanism of this poetical form: "The beginning of the hemistichs of the dā-bātī is mužfūlā (called aḫrārā) or mužfūlā (called aḵrās). When the first foot is mužfūlā, the second becomes mužfīlān (ṣālim) or mužfīlān (μαφίλα) or mužfīlama (μαφίλα); when the first foot is mužfīlān, the second becomes mužfīlān or mužfīla or vālīlān (this last aḏlār). When the second foot is mužfīlān or mužfīlān, the third becomes mužfīlān or mužfīla; when the second foot is mužfīlān or vālīlān or mužfīla, the fourth becomes mužfīlān or mužfīlān. The (last) foot which follows mužfīlān or mužfīlān becomes fa (aḏṭer) or even fā (잡all); that which follows mužfīlān or mužfīlān becomes fafol (aḏṭum) or even fa (mužfīlama)." Further, according to Shams-i Kāis, some poets have written mužfāṭārā (pieces of several lines) in this metre, e.g. Abū Tāhir Khatānī (from whom he quotes a passage); Farruḫī also deliberately composed a kaḏa [q.v.] in the dā-bātī metre, sometimes retaining the same rhyme in the two hemistichs so that several ruṣā can be taken from it. It may be recalled that the formula ī naḥāv wa-lا ᴹα[--]a ṭa [q.v.] was used as niṣrā in certain quatrains (quoted by Ḥāfaiz Atmār Ṭāhir, Riṣālā-i Turān, ed. Behrooz, 1867, p. 9). Most Persian poets composed ruṣā in the metres mentioned. Some owe their fame to this metre: Abū Saʿd [q.v.]: Umār-i Khayyām; Bābā Afzāl al-Dīn Khānūn (ed. Ḥāfaiz-Nafisī, Teherān 1311-1312). A collection of them is attributed to Dālāl al-Dīn Rūmī (Sultān 1342, 400 p.). On the other hand, the name ruṣā is wrongly but traditionally given to the quatrains of Bābā Tāhir [q.v.] in Ḥāfaiz of maḏāhib (muḏfūlān muḏfīlān) and other quatrains in dialect (faḥlāziyāt; cf. H. Kohā Kirmānī, Turān-i milī, Teherān 1310); these are really faṭwās. On the quatrains in Arabic, cf. Dozy, Supplement, s. v. dā-bātī; Ben Cheneb, Tafsīr al-ʿA XBī Miṣām Aḏâr al-ʿArāb (Algiers 1928, p. 113-117); in Turkish: Gīlb, Ottoman Poetry, i. p. 85; in Hindū-tān: Gūrīn de Tasty, Litt. hindoue, 2nd ed. i. p. 36-37 and his edition of the Dīvān of Wāḥīd al-maṣṣūn (1906).

HENRI MASSE

RUDĀKĪ, ABŪ ABĐ AL-LĪ ʿABĀR B. MUḤAMMAD B.ḤĀKİM B. ABĀ B. RĀJĪM B. ADĀM, a native of Rūdāk in the vicinity of Samarkand; he is said to have been the first great poet in the Persian language; according to al-Balānī, vizier of Ismāʿīl b. Ḥāmid, emir of Khwārsān, he had no equal among either Arabs or Persians; he died at Rūdāk in 329 (940-941) (Samānī, Anābī, in G. S. M., fol. 262; similar text in E. G. Browne, Hand-List of Muhammadan MSS. in the University of Cambridge, No. 701). To be more accurate, Rūdākī was born and died at Bānūduj (Yakūt, Muḥjam, s. v.) near Rūdāk. Some writers wrongly say that his taḥkallūs came from his skill in playing the lute (rud, rudāk). In any case the pronunciation Rūdākī should be abandoned. We know few details of his life. From scattered allusions in his poems, it seems that Rūdākī left his native village to go to Būḥārā to the Sāmānīd amīr Naṣr b. Ḥāmid, whose pangsārī he became. Later he accompanied the amīr to Bāḏghīs and Herāt. There is located the incident, recounted by several biographers, of the courtiers desirous of returning to Būḥārā to spend the winter there begging Rūdākī to use his influence with the amīr Naṣr; the poet composed his famous poem ("The scent of the river Mūlyān") etc., which decided the prince to return at once; richly rewarded, Rūdākī returned to Samarkand, travelling sumptuously. Two verses attributed to Rūdākī refer to journeys to Samarkand and to Niẓāmī. The poets Abū Shābīr and Ṣūrān allude to a certain "Aṣyār, the favourite slave of Rūdākī. The biographers say that he was born blind, but a number of his verses which describe in glowing colours the beauties of the sensual world (quoted in Naṣfī, p. 550 sqq.), prove that he lost his sight at an advanced age; it has been supposed that the blindness was caused either by a clumsy oculist or was a reprimand on the protégés of the vizier Bālāmī. Rūdākī, banished from the Sāmānīd court on the dismissal of the vizier (326), is said to have retired to his native village; from this period (his three last years) date the verses in which he regrets his youth and his brilliant past (Naṣfī, p. 561). In his earlier days, according to his biographers and the allusions of later poets, his talents had considerably enriched him. Following Abū Saʿd Idrīsī (d. 409), author of a history of Samarkand, Samānī says that Rūdākī was buried on the hill behind Bāsūn (now a suburb of Samarkand); he adds that this pilgrimage used to be made to it (which proves his fame after death). According to some writers, Rūdākī wrote 1,300,000 bātī six maḏāhwān (the Farkhānī fraḵhāngī mentions one of them: Dāʿūrān-aḏāfā) in addition to his diwan of poetry; on the other hand, Thālī, Firdawīs and others agree in saying that he put the Kātīla wa-Dīnma (q.v.) into verse from a translation of the Sāmānīd emir Naṣr. Of his works only a few fragments remain. E. Denison Ross (J. R. A. S., 1924, p. 609 sqq.) has shown that the edition of the Diwan of Rūdākī (Teherān 1315) consists chiefly of the poems of Kaṭrān of Ṭabriz [q.v.] who lived a century later. Does this confusion come from the name Naṣr, borne by the patron of both poets and figures in their panegyrics? E. D. Ross agrees that this attribution took place early to supply the loss of the poems of Rūdākī, whose fame had remained. Ḥasan Rāzī b. Lutf Allāh in his maḏāhībān (finished in 1049) says he had examined some twenty copies of Rūdākī's Divān and only attributed a dozen kaṣādas and 20 quatrains after collation to Rūdākī, the remainder to Kaṭrān. In all, according to Ross, we may attribute to Rūdākī the authorship of the following: 1. the isolated verses quoted in the Lughāt-i Furs of Asadī (ed. Horn, p. 18-19); 2. six distichs from the translation of the Kātīlah quoted in the Tafsīr al-Mūlīḥ (J. R. A. S., 1924, p. 638); 3. four pieces quoted by Bāhākī (J. R. A. S., loc. cit., p. 639); 4. the 27 protrations in Shams-i Kāis (Muḥjam, ed. Mirza Muḥammad and Behrooz, index); 5. the famous ode on the river Mūlyān (Niẓāmī, Aḏāfā); 6. the 9 kaṣāda, No. 6 in Ethis' collection (Rūdākī, der
The pulpit mosque of the district was in Karadj, known as Karadj Rüdrāwār to distinguish it from the same place near Isphān, Karadj Abi Dulaf.

Barkiyāru 2 in 995 (1101–1102) went from Rūdrāwār via Maraj Karātēgīn to Sāwa (Ibn al-Athīr, ii. 157). Hamd Allāh al-Mustawfi calls the district Rūdrārūd with the towns of Sirkīn and Tusīn. On modern maps we find it in the southern base of the Alwand, and Tusīn after which the district is now called, a little farther south.

Not far from the village of Rūdrāwār, i.e. presumably of Karadj, was a village called Mughūn (al-Sayyid al-Murtada, Tājd al-Aṣrār, Cairo 1307, viii. 178; P. Schwarz, Iran im Mittelalter, v. 552)

The present ruins of Rūdlūwār (De Morgan, Mission en Perse, i. 136) are certainly those of Karadj, capital of Rūdrāwār (Le Strange, East Caliph., p. 197, note 1).

(E. HONGMANN)

AL-RUDHRĀWAR ZAHĪR AL-DĪN ABD SHU‘ḌA MUḤammad b. AḥṣAIN b. MUḤammad b. ABD ALLAH b. IHĀMĪ, an Aḥbāb al-wāṣi’d vizier. Al-Rūdrāwar was born in al-Ahwaz in 437 (1045–1046); his father Abū Ya‘lā al-Ḥusayn, who had died just as he was about to take over the vizierate to which he had been appointed by the Caliph al-Kā’īm [q. v.] (460 = 1067–1068), was a native of Rūdrāwar, a little town near Hamadān. He studied in Baghdad under the direction of Shaikh Abū Ishāk al-Shirazi and in 471 (1078–1079) was appointed vizier by the Caliph al-Muqtadid but dismissed after a short period of office. After the fall of Aḥmid ibn al-Dawla b. Ḍāhir [see Ibn Ḍāhir 2.] al-Muktaﬁd, again gave him the vizierate in Shahrān 476 (Dec. 1083–Jan. 1084), and this time he held ofﬁce for several years. In 1091 he was dismissed at the instigation of the Sādikī Sultan Malikshā [q. v.] and retired to Rūdrāwar. From there he went in 487 (1094) on the pilgrimage to Mecca; in the vicinity of al-Rabādha however, the caravan was attacked by Beduins and al-Rūdrāwar is said to have been the only one who escaped. He then settled in Medina where he lived till his death in the middle of Djamāda II, 488 (June 1095). He was buried on the Ba’t al-Gharkād near the tomb of Ḫūrām, the son of the Prophet.

Al-Rūdrāwar is praised by eastern historians not only for his piety and devotion to duty, but also for his eloquence and poetical gifts. He wrote among other works a continuation of the Tājdārīb al-ʿUmām of Ibn Miskawayh [q. v.], (Qāṭu Kāṭib Tājdārīb al-ʿUmām) containing the years 365–389 (979–999), edited and translated by Amedroz and Margoliouth, The Eclipse of the AḥĀbāb Caliphate, Oxford 1920–1921.

Bibliography: Ibn Khallīlīn, Wafayāt al-ʿAṣyān (ed. Wustenfeld), No. 712 (transl. de
RUDJU (Α.), return in the neo-Platonic sense, forms the main subject of the apocryphal "Theology of Aristotle". The question deals mainly with the individual souls who have descended or fallen into this earthly world of bodies but are purified by knowledge and who return to their original home, the spiritual world, either in an ecstatic condition or after separation from their bodies by death. Marduk is used alongside of rudju; the verbal forms from rudja are frequently employed; connected with these we find a number of expressions, sometimes related in meaning and sometimes giving a closer definition. The Arabic translators of the "Theology" took their terminology in part from the Kūfān and sacred tradition; we must however here confine ourselves to the neo-Platonic meaning and its reception into Islam.

In a certain sense the doctrine of return is a counterpart of the theory of emanation [cf. the article fā'ūl in the Supplement]. Everything comes from God and returns to him! Logos and (soul) myths are, however, more interwoven here than in the doctrine of fā'ūl. There is a general presupposition of the purely spiritual substantiality of the intelligent soul (nafs nūṭṣa) and of its immortality, which has not only a philosophical foundation but is supported by appeal to the ages-old cult of tombs and ancestors (see "Theology", ed. Huculak, p. 7 sq.). Orphic-Pythagorean traditions and views of Socrates, Plato and Aristotle are combined and harmonized.

Let us begin with an outline from the "Theology" (p. 4-8 and passim). The human, i.e. intelligent soul does not feel at home in its association with an earthly body. Lying in the filth of matter it longs for return to its pure origin. It was once a part of the elevated world soul produced by God through the intermediary of the intellect (alab). So long as it was in the world-soul its place was in the centre of the all. The world-soul has a two-fold countenance: on the one side directed upwards, it looks to the alab and by it to God; on the other it turns to the corporeal world which engenders it and is guided by it (cf. "Theology", p. 20). In so far as the world-soul has caused the corporeal world, it knows its product, but as a spiritual being, it always remains within itself. It is however possible that parts of the all-soul may turn more deeply to the earthly, form an idea of it and demand to be united with it. This is the cause of the descent or fall of the individual souls (nafs; also nasaal, tanasal, tanasul etc. = Greek σασσεῖται). But as every individual soul partakes of spiritual being and immortal life it can never fall completely (cf. p. 132): in part it remains with itself in the upper world, in part it combines with the corporeal world and in part it wanders to and fro. Such migrations of the soul are naturally to be interpreted in the spiritual sense, i.e. independently of time and space.

The descent of the individual souls differs very much in degree. The deeper a soul sinks into matter, the more it forgets its heavenly origin. If it gives way to its passions and desires, it cannot rise again to its origin, and even after the separation from the body by death, only with great difficulty.

But the souls that turn away through asceticism from the sensual world, prepare themselves by good deeds and — this is the most important — purify and perfect themselves by love and knowledge, can, even in ecstasy ("Theology", p. 8; cf. thereon Massignan, Textes inédits, p. 131 sq.) or after death raise themselves to their origin (nafs, nāfšu, irṣifq, tabši = Greek ἄνδρας), where they see the alab and through it God himself in light and beauty. Plato had already spoken of this elevation (e.g. Republic, vii, p. 517 B: ὀριστὶν τῷ μὲν ἑαυτῷ τοῖς ἐπικροάδιοι ἐκ τῆς ἀλήθειας ἀνθρώπων). According to the "Theology", p. 9 sq., Heracleitos, Empedocles and Pythagoras also urged the soul to this ascent; the Ikhwan al-Safa' add Polchemy, the astronomer, and interpret the ascension of Christ and Muhammad’s journey to heaven (mi’riḍ) in a spiritual sense. Muslim philosophers and mystics did the same.

After what has been said, it is evident that the elevation (inūnd) of the soul to its origin (lli la‘al) can be called a return. It is more closely defined as a return to its interior, to its own being (lli dḥāثih). It is an entering into the self, a becoming conscious of one’s own self; not a losing of being, but a restoration. The speculative mysteries in Islam went a great deal farther in this direction.

According to the "Theology" (p. 18 sq.), the return to the origin or being can only be a state (lajil) of the soul, not of the mind. The alab always remains by itself and therefore never needs to return to itself; thinking, thinker and thought are always one in its being. When in the Liber de causis (ed. Bardenheuer, § 6, cf. § 14) a return to its being ispredicated of the alab, this can only be interpreted as an uninterrupted self-consciousness. So far the doctrine of the fall and return of the soul can be presented as fairly uniform. It shows a pessimistic conception of the life of the soul in combination with the body. But it also finds an optimistic interpretation ("Theology", p. 10 sq.). With Plotinus it is observed that Plato talks another language in the Timaeus (cf. p. 28 sqq.) from that of the Phaedo, Phaedrus and Republic. According to the Timaeus, God created this beautiful world and equipped it in his great goodness with mind (alab) and life (= soul). Not only has he sent the all-soul into the world but also our (part-)souls so that the world may be as perfect as possible. If the individual soul can only conceive the sensual world correctly, i.e. as the image of the intelligible world, its combination with the physical world will not be a misfortune for it. Both worlds have come from God, the pure good. The only question is, what is the purpose of the soul in this world?

To this the "Theology" answers (p. 43 sq.) that the union of the soul with a body is not a final aim for the individual soul. In any case, union with the world soul and the contemplation of the alab and of God gives it a higher bliss for which it longs; but first of all it has to prepare itself for this. It has a divine task. If it descends into the corporeal world, it receives strength from above in its form and guide a body. Provided it does not sink too low, it derives advantage and knowledge from it. Its previously dormant strength and the nature of this now become known to it. This is its very purpose, that it should come to know itself and its origin. The journey through the corporeal world is for it a course of training. Therefore (p. 80) the individual soul should not be blamed for leaving the spiritual world and coming into this world to
adorn it and to reveal its own nature. After it completes its work it returns to its origin.

Both expositions of the fate of the soul, pessimistic and optimistic, have influenced Muslim thinkers. With the gnostics, the Ikhwan al-Safa and many mystics, pessimism predominates, while from Farabi onwards the philosophers are more inclined to optimism. It is to be noted that the terminology of the “Theology” was only partially adopted. Rudjin, for example, is found only when from the context neo-Platonic influence can be deduced; but it did not become a proper technical term. In place of rudjin and marjd we usually find ma’dad and a’maud which are explained as return in the neo-Platonic sense.

That the teaching of the Ikhwan al-Safa turns almost entirely on the spiritual substance of the soul and its immortality is well known. Goldziher has often and expressly pointed out this out (e.g. Vorlesungen, p. 34, 163 and Koraanontling, p. 183 sqq.). The third part of their encyclopedia is wholly devoted to the soul (on ma’dad, especially rasā’il 32 and 38 sq, Bombay ed.). The 38th treatise is entitled: Fi l-’Ilam wa l-’Ukdār wa l-Kiyāma; these are three synonyms for resurrection, here interpreted in a spiritual sense. But in other parts of this work also (i. 3; ii. 27—29; iv. 43 sq), there is much to the point. The famous passage in the “Theology” on the Plotinian ecstasy (i. 3, p. 69) is quoted, and the pseudo-Aristotelian “Book of the Apple” modelled on the Phaedo of Plato is mentioned (iv. 2, p. 119 sq). The value of life in the world is, it is true, sometimes recognised but the misery of the wandering soul is more strongly emphasised. It is frequently pointed out that the weak souls cannot help themselves, that they require advice and instruction from prophets and philosophers in a community of life and belief so that they may be put upon the right path of return. The principal thing is the gnosis, for what food and drink are to the body, knowledge and wisdom (’ilm and ikhwanu) are to the soul (ii. 27, p. 313 sq). Like the physician Razi and the philosopher Kindi the Ikhwan chose the Socrates of Hellenistic tradition as their first leader; he is however not the only one. The individual souls require many philosophers and prophets and also living guides (generally a late Hellenistic principle). With their help the good, wise soul advances to union with the world soul and through this with the ’awl and God. The union of the individual soul with the world-soul, is the death resurrection (kiyāma); the major resurrection takes place when the world soul separates itself entirely from matter and returns to the higher world of the spirits and of God (cf. Tj. de Boer, Wiss. begr., preis Islam, Haarlem 1921, p. 77 sq, esp. p. 96 sq). The doctrine of the ma’dad became more complicated after the theory propounded by Farabi and more clearly developed by Ibn Sinā of the ten spirits of the spheres (_tabūt). The individual souls endowed with intelligence, according to this, do not descend from the world-soul as parts of it, but they are, like the bodies of the earthly world, products of the last spirit in the series of emanation, i.e. of the ’awl fā’il. The purified soul longs for this spirit and its return is in the first place to it. Its longing goes further, to come as near as possible to God and to become like him, so far as it is possible for man. The philosophers are distinguished from the speculative mystics by the fact that from Farabi to Ibn Rushd the first question they put is: How is the union (ittifāq) of our soul with its origin (the ’awl fā’il) possible? The mystics, on the other hand, however differently their inner states and stations are described, desire nothing else than becoming one with God himself (ittifād). According to Farabi, the soul finds its return by the way of right knowledge and pious acts, but knowledge is esteemed more highly than deeds. Deeds remain in the world but knowledge enters into the spirit [cf. the article ‘MAL in the Supplement].

With the doctrine of the ecstatic conditions of the soul Farabi combines in exemplary fashion his prophetology, especially in the “Model State”, a copy of Plato’s republic, but interpreted in the cosmopolitan spirit of the Stoics. This turns upon the harmony of religion and philosophy. The agreement is based on the fact that they both come from the same source: the difference is explained by the fact that the souls of the prophets and philosophers take up different attitudes. In their ascent in the ecstatic condition to the ’awl fā’il the soul of the prophet receives revealed truth through its imagination, while the soul of the philosopher receives illuminating wisdom through its intellect. But the truth is one and the same, so the philosophers down to Ibn Rushd and Ibn Sina (vii I. = xi. cent.), teach, and many mystics are of the same opinion. Cf. Fārābī, Abhandlungen ed. Dieterici, p. 69 sqq. and Musterstaat, p. 45 sqq.

According to Ibn Sinā’s “Division of the Sciences of the Mind” (khālam al-’Ulmā al-Faṣlīya in Tir Rāzī, Constantinople, p. 76 sq), metaphysics (with Aristotle here called Theology) presents in its fundamental parts (mu’ālik) among other things the theory of emanation, but on the other hand deals with the doctrine of the dīlam of ma’dad along with prophetology as derived or applied parts (furā’ī). This means that the theory of fūd possesses a higher place than the doctrine of the return.

Ibn Sinā here again supports Fārābī. More definitely than the latter he adopts the neo-Platonic doctrine of the spirituality and immortality of the soul. This is not merely the form of its body, as Aristotle taught, of course inconsistently, but a spiritual and therefore indestructible substance. Against Plato and Pythagoras it is asserted that it has no pre-existence in the world-soul and does not migrate from one body to another. The ’awl fā’il gives (presumably from an inexhaustible supply) a suitable soul to each body that is sufficiently prepared for it. In a sense one can say that it has come into enumeration, but it is not an adding. For this reason Sinā, as Ibn Ṭufail (Ifhīr, ed. Gauthier, p. 11) remarks, somewhat undecided in his opinion on the return of all souls, even of the wicked, Ibn Sinā, on the other hand, not; but both interpreted the rewards and punishments in the next world in a spiritual sense, as was also the case with the Ikhwan al-Safa. It is also to be noted that Ibn Sinā, especially in his mystical writings, uses terms of a more Şûfī character than Fārābī.

Ghazâlī took over from the philosophers just mentioned the doctrine of the spirituality and immortality of the soul, without however, at least in his principal works, drawing from this its logical spiritual deductions regarding the next world. In his Tahāfut (ed. Bouyges, p. 344 sqq.) he defends
the orthodox doctrine of the resurrection of the bodies on the last day, while in his esoteric writings he speaks in allegory after the Sufi fashion (cf. Ibn Rushd, in Tahâfut al-Tahâfut, ed. Bouyges, p. 530 sqq.). Ibn Rushd therefore accuses him of contradiction, defends the philosophers and observes that the Sufis believe in a spiritual return (masâd rûbûnî) and are still regarded as good Muslims. But what is the personal opinion of this philosopher? It looks as if he hesitated to come out with his real opinion. It must therefore be sought in his larger works on metaphysics and psychology which have not yet been sufficiently investigated. But it is often very difficult to say where the commentator and the philosopher begins. This much may safely be said that Ibn Rushd more than Fârâbî and Ibn Sînâ regards the soul as the form of its body. With this its spiritual substantiality and individual immortality would disappear.

(R. D. de Boer)

RUH (see NAFS.)

RUH b. HATIM b. KÂBISA, GOVERNOR OF IFRIKIYA, was appointed to this high office by the caliph Hârûn al-Rashîd in 171 (782). Under al-Ma’mûr he had been qâlîb, then governor of al-Hâra; then he was appointed by al-Mahdi successively governor of al-Kufa, Sind, Tabaristan and Palestine. He must have been advanced in years when Hârûn al-Rashîd sent him to Ifrikiya in the year after his accession to the throne. He belonged to the family of al-Muhallab, which had already sent two governors to the same province and was to supply two more after him. "It seems that at this period the caliph thought of entrusting the affairs of Ifrikiya to a vassal family" (Vonderheyden). The governorship of the Muhallabids which preceded that of the Aghlabids, was very successful. The rebel Berbers appeared to be finally overcome and the Khazars and the Avars were suppressed; so satisfactorily was the position that Rûh b. Hatim when he arrived at Kairawân in Radjab 171 (Dec. 787—Jan. 788) had no serious difficulties to face. Besides, he brought with him new contingents of the gûnûn, 500 horsemen, who were joined soon after by 1,500 others brought by his son Kâbiya. For the three years of his governorship, the country was peaceful. Rûh even succeeded in concluding a peace with ‘Abd al-Wâlhâb [q. v.], the Rustamîn of Ta’hart. The authors who are our authorities upon him, notably Abu l-‘Arab and Ibn ‘Idhârî, make special mention of his generosity, his stoicism in face of adversity and of his skill in disarming his opponents.

As he was showing signs of senility, the postmaster and a kâhid of the province requested the caliph to appoint a successor to him secretly, who could take his place if necessary. Following their advice, Hârûn al-Rashîd appointed Naṣr b. Haḥîb. Rûh b. Hatim died on 10th Ramadân 174 (Feb. 3, 791), and his son Kâbiya was formally recognised as his successor in the great mosque of Kairawân. But the postmaster and the kâhid informed Naṣr, the governor designate, and Kâbiya had to give way to him.

(G. MARÇAIS)

AL-RUHâ (See OREFA.)

RUHî, is the mahkûl of the historian, whose work was until 1925 known only from the references in ‘Ali’s [q. v.] Rûkûh ul-‘Abbâr and in Munêj-djmîhâ (q. v.). J. H. Mordtmann (M. O. G., ii, 129 sqq.) was the first to identify by conclusive arguments several manuscripts of the anonymous original work. They tell us practically nothing about the personality of the author and it is only a hypothesis (cf. F. Babinger Die frühmoslemischen Jahrbiicher des Urudsch, Hanover 1925, p. xiii.) that connects the historian Rûhî with a certain Rûhî Fâdîl Efendi who, like Muhîf al-Dîn Djamâlî (cf. F. Babinger, G. O. W., p. 72 sqq.), was a son of Zenbîlî ‘Ali Efendi, distinguished himself as a poet and died young, in 927 (1528) it is said. As he is also called Rûhî Edrenewi, i.e. Rûhî of Adrianople, this hypothesis may be correct. But elsewhere (cf. Sehî, Tezkîh, p. 127), this Rûhî Fâdîl Efendi is said to have been born and to have died in Stambul.

The history of Rûhî entitled Tewârikhî Alî ‘Othmânî is written in a simple style and divided into two parts (kisâ). The author calls the first mehîbath, i.e. beginnings, the second metâfebih, i.e. elucidations. The first part falls into two sections of a general nature, the second contains eight chapters each of which describes the reign of one sulṭân. The chronicle was written in the reign of Bâyazid II (1481—1512) and ends in 917 (beg. March 31, 1511). Rûhî’s work has not been further investigated nor is there a critical edition of the text, which could easily be prepared from existing old and good manuscripts (Berlin, Oxford, Algis; cf. F. Babinger, G. O. W., p. 43). It is clear however that Luîfi Paşa’s [q. v.] Chronicle is dependent on that of Rûhî.

(FRANZ BABINGER)

RUKN AL-DAWLA, ‘ABD AL-HASAN B. BOYÉ, Second in age of the three brothers that founded the Bûyûd dynasty [q. v.]. His fortunes followed those of the elder brother ‘Ali (later ‘Imâm al-Dawla [q. v.]) up to the latter’s occupation of Fârs in 322 (934); Rûkûn was then given the governorship of Kâshân and other districts. But shortly afterwards he was forced by the ‘Abbâsid general Yâkût, at whose expense the Bûyûd conquest of Fârs had been made, to seek refuge with his brother; and when Yâkût was in turn defeated by the Ziyârid Mardwîd [q. v.], the Bûyûds’ former overlord against whom they had revolted, ‘Imâm, who then found it advisable to conciliate Mardwîd, sent Rûkûn to
him as a hostage. On Mardawijd’s assassination in the following year (323 = 935), Rukn escaped and rejoined ʿImād, by whom he was supplied with troops to dispute the possession of the Dībah with Mardawijd’s brother and successor, Washgmir. Rukn succeeded at the outset in taking Isfahan; but the first round of his contest with Washgmir ended in Rukn’s ejection from that city in 327 (939), when he again fled to Fārs.

In the next year Rukn’s help was sought by his younger brother al-Ḥasan (later Muʾizz al-Dawla [q.v.]), who had meanwhile set himself up in Khuszanḵān, against the BarIDL [q.v.]; whereas Rukn, being possessed of no territory, attempted to take Wāṣīt but was obliged to retire when the caliph al-Rādı [q.v.] and the amir Badḵjam [q.v.] opposed him. Almost immediately afterwards, however, he succeeded in recovering Isfahan, owing to Washgmir’s championship of Māhān b. Kākāḏ in a quarrel with the Sāmānī Naṣr b. Aḥmad [q.v.]; and when the latter ruler died in 331 (943), Rukn, who had meanwhile supported the Sāmānī cause, was able to drive Washgmir as well from al-Raʾy, of which he had momentarily regained possession on the retirement of the Sāmānī general Ibn Muḥtadī.

With al-Raʾy Rukn gained control of the whole Dībah; and for two short intervals (of about a year in each case) retained it for the rest of his days. Up to 344 (955–956), however, his position was highly precarious. For not only Washgmir, but also the Sāmānīs continued to challenge it. It was only by playing them off against each other and sowing dissensions between the Sāmānī princes and the officers they sent against him that Rukn was able to maintain it. Even so (as indicated above) he was driven from al-Raʾy, and his representatives were expelled from most parts of the province, once in 333 (944–945) and again in 339 (950–951), in each case by Sāmānī forces. Indeed he was obliged in the end to become the Sāmānīs’ tributary (at least two agreements for the payment of tribute being recorded); it was on this basis that he first made peace with them in 344 (955–956) as again in 361 (971–972). In the course of his long contest with Washgmir, who, until he was killed in an accident in 357 (968) never ceased to intrigue with the Sāmānīs against him, Rukn on several occasions invaded Ṭabaristān and Gurghān, but was unable to incorporate these provinces permanently in his dominions. And though in 337 (948–949), after he had defeated an attempt on al-Raʾy made by the Salārid Marzûbān b. Muḥammad, whom he took prisoner, he gained control of southern Adharbāḏjān, his ejection two years later from al-Raʾy itself [see above] naturally cost him this as well.

Rukn received his laḫab simultaneously with his brothers in 334 (945–946), on Muʾizz’s entry into Bāḡdād; and on ʿImād’s death in 338 (949), succeeded him as head of the family and amir al-ʿunūn (though this title was also held by Muʾizz). The last two years of his life were rendered unhappy — so much so that he never recovered from the shock induced by the news — owing to the conduct of his son, ʿAḍūd al-Dawla [q.v.], in taking advantage of an appeal for help sent by Bakhṭiyār [q.v.] (son of Muʾizz and his successor in the rule of al-Trāke), to imprison the latter, and, in conjunction with Rukn’s own waṣṭar Abu ʿl-Fāṭem Iba al-ʿAmid [q.v.], who had been sent likewise with a force to Bakhṭiyār’s aid, to seize that province for himself. And though ʿAḍūd obeyed his command to release Bakhṭiyār and return to his government in Fārs, Rukn was only with difficulty persuaded to visit ʿAḍūd in 365 (975–976) at Isfahan, in order to ensure that by receiving a confirmation of his appointment as heir, he should succeed without dispute. Rukn died at al-Raʾy in Muḥarram of the next year (September 976).

Rukn al-Dawla was fortunate in his employment of the remarkable waṣṭar Abu ʿl-Faḍl Ibn al-ʿAmid [q.v.] from 340 (951) for thirty years until his death in 359 (970), though, as that minister himself complained (see Miskawaih), he was prevented by the prince’s lack of royal blood and of culture from governing properly. Rukn (so he said) was in fact no more than a predatory soldier, who could secure the allegiance of his supporters only by means of largesse, and was not able to forgo revenue in the expectation of subsequently increasing its yield. On the other hand he is said to have been just and humane towards his troops and his subjects, and gave proof — especially in connection with the episode of ʿAḍūd al-Dawla mentioned above — of a tender sense of honour.

— (Harold Bowen)

RUKN AL-DIN, Sulaimān II b. Kūlid Arsān II, a Saḍḏūq ruler in Asia Minor. His father Kūlid Arsān b. Masʿūd [q.v.] in his old age divided his kingdom among his many sons. The consequence of this was that the latter set up as independent rulers and began to fight with one another so that at his death in Shaʿbān 588 (Aug., 1192) complete anarchy reigned. In the course of time however, Rukn al-Din brought the whole kingdom under his sway. Kūṭb al-Din Malikshāh who had received Siwās and Aḵṣara, began by attacking his brother Nār al-Din Ḥamādī, lord of Kāsāriya. The latter was killed and Kāsāriya passed to Kūṭb al-Din. On the latter’s death Rukn al-Din who ruled in Tokt (Dūkāt), attacked Siwās and took possession of it. He next seized the two towns of Aḵṣara and Kāsāriya. After some time, he turned against his other brother Ghiyāth al-Dīn Kalkhsuraw in Konya and laid siege to the latter. He had to give in and ceded his territory to his brother. In Ramadān 597 (June–July 1201) Malatya which belonged to Muʾizz al-Din Kaṣarsk̄ā b. Kūlid Arsān was captured. Erzerūm was the next to pass to Rukn al-Din. When the latter’s troops approached, the governor there, ʿAlī al-Dīn b. Malikshāh, the last of the Šaltūk dynasty, began negotiations by which the town was surrendered to Rukn al-Din who gave it to his brother Tughrîlshāh. Another brother, Muhī al-Dīn, who had obtained Angora when the kingdom was divided, long resisted Rukn al-Din’s lust for conquest, and only after a three years’ siege found himself forced to capitulate when supplies were completely cut off, but was promised suitable compensation. Rukn al-Din promised him
a fortress in a remote part, but laid an ambush for him in which he was attacked and killed as he left the town. Soon afterwards however, Rukn al-Din fell ill and died before the news of his brother's murder reached him. He was succeeded by his son Kılıç Arslan III (q. v.). Ibn al-Atîr (xxi. 128) gives the date of his death as the 6th Dhū'l-Qa'dā 600 (July 6, 1204); according to another statement (xxi. 59) however, the successor at Angoras and the death of Rukn al-Din did not take place till 602 (1205—1206).

Ibn al-Atîr describes Rukn al-Din as a strong and vigorous ruler: he is said to have held certain heretical views (mahdhab al-jātāsī) on religious matters which, however, he concealed from fear of his subjects.

**RUKN AL-DIN.** [See Bairars I, Barkingšek, Tüchjehrîk, Kılıç Arslân.]

**RUKNÀBâD** (or $abî Rukn) the water of Rukn al-Dawla), a canal (kanât) which runs from a mountain (called Kula'â), P. Schwarz, Iran im Mittelalter, u. 48, No. 7) about six miles from Shirāz. Enlarged by a secondary canal, it follows for a part of the way the road from Isfâhân to Shirāz. Its streams reach as far as the vicinity of the town towards the cemetery of Imam Hârîrî, and is buried, when they are not entirely absorbed for irrigation purposes. According to Fāsī's Nāṣīrī, part ii., p. 20, "the waters of the plain of Shirâz come by subterranean channels except the water from the spring of Dushk... The best waters are those of the Zangi and Kûnî canals. The Kânî-î Rukn (i.e. Ruknabâd) was made in 338 (949—950), one and a half farsâh N.E. of Shirāz by Rukn al-Dawla, and the Dailami (cf. 897) its waters rise in the ravine of Tang-i Allah Akbar a mile north of Shirâz: it waters the plain of al-Masâlî [q.v.].

In the fourteenth century, Ruknabâd is mentioned by Ibn Baṭṭûta and by Hamíd Allah Mustawi Kâzîvin (Nizâk al-Kalâbî, transl. Le Strange, in G.M.S., p. 113: "the water comes from subterranean channels and is the best that of Ruknabâd"). But it is to the poets that this canal really owes its fame. In the fourteenth century Sa'îlî declares himself charmed by the land of Fârâz and the waters of Ruknabâd (Kūltûst, Calcutta 1791, fol. 296a, l. 4). In the following century 'Ubadî Zâkâni sings the zephyr which blows from al-Masâlî and the wave of Ruknabâd remove from the stranger the memory of his native land" (text quoted by F. G. Browne, which finds in it an echo of Sa'dî, *Persian Lit. under Tartar Dominian*, p. 238). Hârîrî in particular immortalised Ruknabâd in his verses: "Pour out cupbearer, the wine that is left, for in Paradise thou shalt find neither the stream of Ruknabâd nor the promenade of al-Masâlî" (ed. Khalâlî, Teherân 1306, No. 3, v. 2). "Shiraz and the wave of Rukn and the sweet breeze of the zephyr, blame them not, for they are the pride of the universe" (ibid., No. 35, v. 7): "The zephyr which blows from al-Masâlî and the wave of Ruknabâd will never allow me to depart" (ibid., No. 168, v. 9); "May God a hundred times preserve our Ruknabâd, for its limpid waters give a life as long as that of Kiliâd" [q.v. (ibid., No. 277, v. 2), and in a piece which may be apocryphal (ibid., part 2, No. 75): "The water of Ruknî, like sugar, rises in al-Tang (-i Allah Akbar)". According to later writers, Ruknabâd, which Ibn Baṭṭûta called a great water-course (al-nâkr al-kabîr), gradually dried up. Among the notable travellers of the xviith century, Chardin, almost alone in mentioning it, saw only a large stream and gives Ruknabâd the fanciful meaning "Ruknenabat, veine ou filet de sucre" (Voyages, ed. Langles, viii. 241). At the end of the xviith century, W. Franklin praises the sweetness and clearness of the waters of this little stream to which the natives attribute medicinal qualities. At the beginning of the xviith century Scott Waring notes that its breadth was nowhere more than six feet. Ker Porter observes that the canal has become choked up through neglect. The Kutlûsh namâz depeles the disappearance of the groves that surrounded it. At a later date we have the same observation by Gobineau ("Cette onde poétique ne m'apparut que sous l'aspect d'un trou bourgeois"), Curzon ("a tiny channel filled with running water") and Sykes ("a diminutive stream").

**Fāsî's Nāṣīrî** mentions a second Ruknabâd in Fars: "The source of the warm stream of Ruknabâd is part of the district of Bîhî-nâ (Lariastân); it is over a farshân north of the village of Ruknabâd; having a bad flavour and an unpleasant smell, it is of use for agriculture; it works in a few minutes' eggs put into it; one can only bathe in it at some distance from the spring" (ii. 318 middle and 258).

(H. Massêb)

**Rûm**, the name in Persian and Turkish for the Byzantine empire. Rûm means the land of the Rhomaes (Pàmâioi) or Byzantines although in Central Asia Rûm is also used for the Roman empire. In course of time the conception
became narrower. While Rüm still is the old name for König (q. v. and RUM-SALMIK), in the early Ottoman period Rüm comprises the district of Amasia [q. v.] and Sivas [q. v.] while Anatolia included the so-called province with the capital Kütühiya [q. v.] (cf. *Ist.,* x., 1920, p. 144, note 1). From the earlier name Rüm for old Hella (cf. *Iskandar-i Rüm, i.e. Alexander the Great*), Eastern Roman and Byzantine, it was applied in Turkey to designate the modern Greeks (also Urüm) in contrast to the ancient Greeks who were called Yunanîyan or Ionians. Rüm also sometimes meant Turkey in general; cf. the expression Rüm Pâlişâhi for the sültan. Rüm later was used in a derogatory sense. Rüm Mehmed was said of the Greek character, faithless, unreliable, flattering.

Cl. also ERSERUM (i.e. Erfi Rüm) and KUMELIA.

(FRANZ BIRINGER)

**RÜM KAL'A, a fortress in Northern Syria.** According to Arnold Noldeke's description, it is situated "on a steeply sloping tongue of rock, lying along the right bank of the Euphrates, which bars the direct road to the Euphrates from the west for its tributary the Merizman as it breaks through the edge of the plateau, so that it is forced to make a curve northwards around this tongue. The connection between this tongue of rock, some 3,000 feet long and about half as broad, and the plateau, which rises above it is broken by a ditch made by man about 100 feet deep. The walls of the citadel with towers and salients follow the outlines of the rock along its edge at an average height of 150 feet above the level of the Euphrates, while the ridge extending along the middle of the longer axis rises 100 to 120 feet higher" (A. Noldeke, in *Petermanns Mitteil.,* 1920 p. 53 sq., where the main road up to the citadel, the buildings etc. are also described).

While Th. Noldeke (N. G. W. Götze, 1876, p. 12, note 2) wished to distinguish Rüm Kal'a clearly from Olymbos and identify with the former place the modern Urüm, Hörum on the Euphrates, above Balqis, Urma is now generally identified with Rüm Kal'a (Marmier, B. Moritz, Cumont, Dussaud etc.). The name of the old bishopric of Urma last appears in Mêdînos of Edessa (ed. Warshafapart 1898, p. 323): in 561 Arm. (1112—1113 A.D. the Armenian Kogh Wasil returned to Talcond of Ani, who had taken the lands of Halim Sur, Toreh and Urem, which he had taken from the Franks. The first two are İhsan Mansur and Tîrîz (Turkish) and Urem is Urma (Histor. of the crusaded, Docum. arm., i. 102 J. Markwart, Südermanen und die Tigrisquellen, Vienna 1930, p. 182, note 1 of p. 177). The Syriac chronicles record (Mich. Syr., iii. 199; Barhebraeus, Chron. syr., ed. Bedjan, p. 279) that Kogh Basil or after his death Kurig, who acted as governor for his widow, held the towns of Kaisa, Rabban, Bûhhasen and Kal'a Rhômait. It is very probable that the latter, the Syriac for Rüm Kal'a, here corresponds to the Urem of the Armenians, which is later in Armenian always called Homklay and by similar names.

Rüm Kal'a later belonged to the county of Edessa. The metropolitan Abu l-Faraj b. Shum-

mâna of Edessa, who after the second capture and destruction of this town by the Turks (1146) escaped to Samosata, was imprisoned for three years in Rüm Kal'a by Joscelin; he then wrote several memoirs "with an account of the events" which caused his imprisonment (Mich. Syr., iii. 277b; Baumstark, Gesch. der syr. Literatur, Bonn 1922, p. 293).

At the request of an Armenian of Kal'a Rhômait named Michael in 1148 Beatrix, widow of Joscelin II of Edessa, and her son demanded that the Armenian Catholics Grigor III Pahlavuni should move his residence to the "fortress of the Romans" (Arm. Hromklay) which belonged to their territory, the county of Edessa (the capital of which since the fall of al-Raḥīm in 1145 had been Tall Bâshir). The Catholicus had lived since 1125 in Cowk ("little lake"), i.e. the fortress of Kal'at Šof in the Aljbal Sawf (Šof) to which Badr-al-Dîn Mahmûd al-Aīnî fled in 803 (1400—1401) from Timurlenk (Quatremer, *Histoire des Séliouk Mamelouks de l'Égypte, t. III, 1830, p. 227), and recently visited by Höussknecht, as is evident from Armenian sources which mention the "little castle of Cowk" in the region of Tlāk" (Dâlâk Tlāk). (Papken G. W. Guleserean, Cowk, Cowk-Tlāk and Hrom-

Grigor's successor, the poet Ner-sès IV Shnorhal, the "graceful" (patriarch 1166—1173), was called Klayeč'i from his place of residence in May 1170 and March 1172 negotiations concerning a church union took place between him, Theoranos as ambassador of the Byzantine emperor Manuel Comnenos, and the bishop Iwannis (Elías) of Kaisîm and the monk Theodoros Bar Wahbûn as delegates of the Jacobite patriarch Michael the Great, who had remained in the monastery of Mar Bar Saâmûn (Briran), in Rüm Kal'a (Syr. Kal'a Kûmait or Hêmûn dê Kûmaitû, Greek Pausëios Koxês) and in Kaisîm (Syr. Kaisûm, Greek Kastôuô). (Migne, Patr. Graec., cxxii., col. 114—298; Barhebraeus, Chron. ed., ed. Abbelbos, Lamy, t. 549—551 expanded in *Mich. Syr.,* iii. 334—336).

After the death of Ner-sès (Aug. 8, 1173) his younger nephew was proclaimed Catholicos in Rüm Kal'a. His older nephew however induced his brother-in-law Mêh of Cilicia to obtain from Nür al-Dîn a charter, on the authority on which he threw his cousin into prison and had himself installed as Catholicos on Sept. 5, 1175 (Mich. Syr., iii. 353 sq.). As Grigor IV Tela (Degha, "the child") he was Catholicos from 1173—1193, the son of prince Wasil of Gerger, who was brother to Ner-sès Shnorhal. Under him in 1179 took place the synod of Hromklay, at which Ner-sès of Lampiron delivered a famous speech in which he recommended the adoption of the Chalcedonian creed (Mansi, xxii.,
col. 197—206). But the proposed union of the churches fell through because Manuel Comnenos died on Sept. 24, 1180. In the same year Theodoros bar Wabbin, who had seceded from his teacher and godfather Michael the Great and was seeking assistance everywhere to oust him from the patriarchate, came to the Catholicos in Rûm Kâla, who welcomed him kindly and sent him to Cilicia to Leon II (Syr. Lëbhûn; Armen. Lewon) of Little Armenia; the latter made him patriarch (1180—1193) of his whole kingdom (Mich. Syr., iii. 356 sqq.; Barhebraeus, Chron. eccl., i. col. 585—585; J. Gerber, Zwei Breie Barathabius, Halle [diss.] 1911, p. 3—9).

When the emperor Frederick Barbarossa was on his way through Asia Minor, in 585 (1189—1190) the Armenian ğihe of Kâla-at-Rûm (i.e. Grigor IV) sent a letter to Saladin to ask for help; in the following year he (al-Kähkâh) again sent a letter to him (Abû Shâma, Kitâb al-Râuqâsun, in Rec. hist. or. crois., Hist. arab., iv. 435 v.—435—435). After the death of Grigor IV (July 1193), the Armenians made his young nephew Grigor V Manog ("the young") or as Michael Syrus calls him, Dirâsu ("the cleric") Catholicos (1193—1194; Mich. Syr., iii. 411 sqq.). Leon of Cilicia in 1195 had him carried off and thrown into the fortress of Gubadara (Kopotar) where he perished in an attempt to escape. The Armenians thereupon made his predecessor's cousin, Gregoros, son of Shahan, his successor as Catholicos Grigor VI known as Abirâd ("the son d'erd") (1194—1203; Mich. Syr., iii. 413; Hist. or. des crois., Docum. arm., i. p. cxx.). His successors were: Howhannes VI of Sis (1203—1221), Costandin I Barzberdeci (1221—1267), Hakob I Klayecci (1267—1286), Kostandin II (1286—1289) and Stephanos IV Hromklayecci (1290—1293).

In Rûm Kâla in the nineteenth century there were also many Jacobites, among whom the presbyter Ishô (Barhebraeus, Chron. eccl., i. 665) and his sons (Bêné Ishô: Barhebraeus, i. 691, 695, 761, 754, 759; Yûkub (ibid., i. 683—685, 251, 779); the presbyter and physician Shêmôn (ibid., i. 735, 744, 747, 759—767) with his followers (Bêth Shêmôn: ibid., i. 750, 756, 767) and Ishô Şankiti (ibid., i. 740) played an important part. The Jacobite patriarch Ignatius II (Rabban Dawid, 1222—1252), celebrated for his wealth, endowed Kâla Rûmaita among other places with a splendid church (Barhebraeus, i. 665). Later he chose this fortress as the see of his patriarchate (Barhebraeus, i. 685). He did not come out openly against the Armenian Catholicos but he endeavoured as far as possible in secret to advance the Syrian church at the expense of the Armenian (Barhebraeus, i. 687—689). On the other hand, we are told that at this time, when the doubtless very profitable cult of the Jacobite saint Barsawwâm was at its height in the monastery at Gargar called after him (now Horsên Kâlaš between Malatya and Sumaisat), the Armenian also "out of covetousness" built a monastery "called after Barsawwâm" in Rûm Kâla and received many gifts from the people, to the vexation of the Jacobites. The patriarch Ignatius therefore resolved to build a Jacobite monastery there and also to buy a suitable site for it on the Nahhâ dhe-Pharzêmân (Arab.: Nahr Marzûban, now Merzûman-Câi) from the Bêné Ishô and also to get from them an agreement of sale by which they were to surrender any authority over the monks living there. When they stubbornly refused, the patriarch excommunicated them and established himself in a cave on the Euphrates but was brought back by the Armenian Catholicos. Later on he fell ill, and after a reconciliation with the Bêné Ishô through the offices of the Katholikos, died in Rûm Kâla on June 14, 1252 (Barhebraeus, Chron. eccl., i. 691 sqq.).

In 1260 Hülaşû crossed the Euphrates by bridges of boats at Malatya, Kâla-at-Rûm, Bira and Kâkhtûs (Barhebraeus, Muhûtçar Târikh al-Doval, Bâirût 1890, p. 486; Chron. syr., ed. Bedjan, p. 509). In the decades following, the Jacobite patriarch Ignatius III (1264—1282) had to defend his possession of the Barsawwâm monastery at Gargar in a desperate struggle with the physician Shimôn of Kâla Rûmaita; both had received or alleged they had received new charters of ownership from Hülaşû and Abâkû (Barhebraeus, Chron. eccl., i. 753—766; ii. 439 sqq.); later on they made up their quarrel (Barhebraeus, i. 769). After the death of Ignatius the Bânû Kâla Rûmaita made his nephew Philoxenos or Nestor patriarch in 1283 (Ignatius IV). The latter died at the beginning of July 1292 in the monastery of Barzawwâm (Barhebraeus, Chron. eccl., i. 781); after his death the Jacobite patriarchate disintegrated and three rivals appeared in Malatya, Cilicia (Gawkît monastery) and Mardin and as a result of this permanent schism the Jacobite church sank to complete insignificance (Barsawwâm [2], additions to Barhebraeus, Chron. eccl., i. 781 sqq.).

It was perhaps not merely chance that the end of the united Jacobite patriarchate which in recent years had been closely associated with the town of Rûm Kâla, happened almost the same day as the collapse of the Armenian Catholicate of Hromklay.

In the reign of Kâlûn an Egyptian army of 9,000 horse and 4,000 foot under Baisarî as well as Syrian forces under Husâm al-Dîn of Aîntab had come to Rûm Kâla and laid siege to the fortress on the Pharsian on May 19, 1280. The sultan demanded that the Armenian Catholicos should surrender the fortress and move with his monks to Jerusalem, or if he preferred, to Cilicia. When the Catholicos refused to do so, the Egyptians laid waste the country around the town which was inhabited by Armenians, on the next day forced the mayor over a wall only recently built into the town and set it on fire. The whole population fled into the citadel. After the Egyptians had ravaged and plundered the country round for five days, they retired.

In the reign of al-Eshraf Khalîl they undertook a new expedition against Rûm Kâla in 691 (1292) in which the prince of Hamîd, Malik al-Muzaffar, took part with Abu Yûsûf in his retinue (Abu Yûsûf, Annales Musulmânici, ed. Reiske-Adler, v. 542 sqq.). On Tuesday, the 8th Dûmmad II, the Egyptians appeared before the town and erected 20 pieces of siege artillery. It fell after a siege of 33 days. On the 11th Radjab (June 29, 1292) it was plundered and a massacre carried out among the garrison of Armenians and Mongols. Among the 1,200 prisoners who were mostly taken to the sultan's arsenal on June 28 (al-Nuwarî, Ms. Paris, fol. 100 v., in Quatremerre, Histoire des Sult. Mammût, i., p. 141, note 30) was the Armenian Catholicos (Arab.: Kâlûyat al-Mastûk, whom they called Kâlûyatûk); cf. Yûkût, iv. 164), Stephanos IV of Rûm Kâla with his monks; he died a prisoner.
in Damascus (Barhebraeus, Chron. syr., p. 579). According to the inscription of ownership in a Syrian manuscript (Brit. Mus., MS. Syr., N° 205), it belonged to a certain Rabban Barsamnā of Kāla Kōnātā, high priest of Rabān who in a note refers to the harsh imprisonment which he suffered from the Egyptians; Armenian verses on the fall of the fortress are preserved on a relic casket (Wright, Catal. syr. Mss. Brit. Mus., i, 231; Carrière, Inscription d'un reliquaire arménien, in Mélanges orientaux, Paris 1883, p. 210, note 1; Promus, Mem. dell' accad. di Torino, xxxv., 1884, p. 125-130). The inscription on the great gate of the citadel which was restored by al-Asfār (cf. above, vol. ii., p. 235) speaks of him as a victor who among other feats had put the Armenians to flight, an allusion to the capture of Kūm Kāla (van Berchem, in J. A., 1902, May-June, p. 456; the inscription published by Soberman, in Isr., xv., 1926, p. 176). The sulṭān sent boastful bulleins of victory to the cities of Syria in which he proclaimed the capture of this impregnable citadel as an unprecedented feat of arms and concluded with the words: "After the capture of this fortress, the road is open to us to conquer the whole of the East, Asia Minor and the [Irāq so that with God's will we shall become owners of all the lands from the rising of the sun to its setting" (al-Nuwayri, MS. Leyden, fol. 58, transl. by Weill, Gesch. d. Christen, iv. 183 sq.).

The fortress of Kašār al-Rūm was rebuilt by orders of the sulṭān by the niṣba of Syria, Sandjug Shujāj, and given the name Kašār al-Mamlūk; another part of the town was left in ruins however (Quatremerè, Hist. des Sultans Mamlouks, t/i, p. 139 sq.).

The successor of the imprisoned Armenian patriarch Stephanos, Grigor VII of Anbaraza (1293-1302) took up his residence in Sis in Cilicia, which henceforth was the seat of the Catholicos. Rūm Kāla, in spite of its restoration as a frontier fortress (cf. also Abu l-Fidāʾī, ed. Reinaud, p. 226; al-Dimishki, ed. Mehren, p. 214), under the Mamluks never seems to have recovered from the blow. In 775 (1373-1374) much damage was done by floods in Kašār al-Mamlūk as well as in Ḥalab, al-Ruha, al-Bira and Baghdād (al-Hassan b. Ḥabib, Durrat al-Aslāk fi Daulat al-ʿArāb, in Weijers, Orientalia, ii, Amsterdam 1846, p. 435).

In the spring of the year 1477 the Mamlūk sulṭān Kašīthāi made a tour of inspection as far as Kašār al-Mamlūk (described by al-Dījān Abu l-Baḡāʾī, ed. R. V. Lanzone, Viaggio in Palestina e Soria di Kaif Ba, Torino 1878; transl. R. L. Devonshire, in Bulletin l. F. A. O., xx., Cairo 1921, p. 1-43). After the battle of Mardj Dābīk, the fortress became Ottoman and in modern times came under the pashalik of Ḥalab (Ḫadżdżī Ḫalīfah, Qīḥānum-nūmā, p. 598).

The Armenian and European authors give the name Rūm Kāla or Kašār al-Rūm in many forms. Among the Armenians we find the forms Hromklay, Ḥromklay-Hofomakan, vulg. Arm. Outoum-gala (works of St. Nersēs, St. Petersburg, p. 80; his poems, Venice, p. 224, 277; Indijdjan, Altertumer Armeniens, iii. 278; Saint-Martin, Mémoires de l'Armeine, i, Paris 1818, p. 196). Gulielmus Tyrius (Hist., xvii. 16) writes Runculat; but it is no doubt identical with his Rangulatān (xi. 11; French text, ed. Paulin Paris, ii, Paris 1850, p. 164), which however he takes to be a quarter of Edessa. Schiltberger (Reise, p. 47) calls the fortress Urumbula.

Only a few remnants of the fortress now remain as well as of an Armenian monastery and a mosque (plans of the fortress in Moltke and following him in Humann-Puchstein, Reisen . . . , p. 175, and A. Noldeke, in Petren. Mitt., 1920, pl. 3, map; Plan von R. K. in: 1:2000; photographs: F. Fiech, in Geog. Zeitschr., xxi., 1916, pl. 1; Cumont, Études syriennes, p. 170, fig. 54; from the north: Humann-Puchstein, op. cit., p. 176, fig. 25; from the east with the Euphrates: A. Noldeke, op. cit., pl. 13).

RUMELI, RUMELIA. The name Rumeli, Rum-il-i (i.e. land of the Romaeans) was given in the narrower sense to the province proper of this name, which comprised Thrace and Macedonia i.e. an area which was bounded on the north by the Balkans, in the east by the Black Sea and the Bosporus, in the south by the sea of Marmara and the Aegean, the so-called White Sea, then by the Olympus range and in the west by the Pindos, Barros and Shahr-Dagh (Sa'ran planina), embracing the old territories of Thrace, Bulgaria, Macedonia, Serbia and Albania as well as the ancient Hellas, with the exception however of the strip of coast and all the islands of the Aegean or Archipelago, which were a separate governorship (çiçekli) under the Grand Admiral (kapulan pasha; q.v.: after 1849 the Çiçekli-i Bahri-i Sefid formed an eyalet, cf. Reise de l'Orient, xvi. 117, and later a çiftlik).

The governorship of Rumelia (Rum-il-i eyaleti)
was bounded in the north by Austria and Wallachia, in the east by the Black Sea, in the southwest by the Ionian Sea and in the west by the Adriatic, in the northwest by Austria and Bosnia [q. v.]. It is to be noted that these frontiers include the san- dy lobbyist [q. v.] belonging to the governorship of the Archipelago (γραφείο το ελληνικού) Gallipoli [q. v.], Negropont (Egirdir, Euboea) and Aineboghi (Nau- pactos), the former of which comprised the coast from Sambul to the outlet of the Kara Su into the Aegean Sea with a considerable stretch of land running into the interior, the second an abbey (of which comprised the east and south coast of Greece proper with the exception of the Morea (Peloponnesus).

The area of the province at its greatest extent was estimated at about 5,100 square miles while the population was estimated at not more than 5,575,000 millions of different nationalities (μιλλετ), Turks (Ottoman, who, although the ruling nation, formed the smallest part), Tatars, Greeks, Slavs, Aranais, Armenians, Jews and Gipsies. The predominant religion was Islam, while the Christian confession of the so-called non-uniat Greeks was the largest.

The governorship of the beglerbeg of Rumelia was at first Philippopolis (Filibe, now Flovdiv), which was conquered by the Ottomans in 1353. The first governor to reside there was Yozma Sanha, conqueror of that country, whose turbe is still seen not far from Stara Zagora. In 1278 (1385) there appears Timurtash-Beg [q. v.] as beglerbeg (cf. J. v. Hammer, G. O. R., i, 191), following Feridun-Beg with his residence in Sofia.

The governorship of Rumelia was divided into sandyaks, the number of which varied in course of time and the boundaries of which were constantly changing. About 1830 there were 24 of them, namely: Wiza, Krik Kilise [q. v.], Silistra (Silistra), Nikopolis [q. v.], Wicina, Sofia, Czarnom, Kustendil, Selanik [q. v.], Timisc (Triskala; q. v.), Varna (Vranca), Deliorna, Delvina, Ahtov (Kolona), Elbasan (cf. F. Balinga). Der Grundung von Elbasan, in M.S.O.S., ii, vol. xxiv., 1931, p. 80–93, iskenderiye (Scutari, Albania), Dukaghin (Dukadzin), Okhri (Uhrad, Ohrida), Perzen (Prizren), Velert (Vlora), Uskub (Skopje), Aladja Hsir (Krusevac) and Semendra (Smederovo). By an imperial khati-shrift of 6th Rabii I 1252 (June 21, 1836) the area under the Rumi, wali, governor of Rumelia, was redefined. As previously the position of Sofia as the centre of administration had favoured the rebellion of the mountains tribes especially in Albania, Monastir (Tolli Monastir, now Bitoli) at the S. E. extremity of this area was chosen as the centre of government. The province of the Rumi, wali, was divided as follows: 1. the district of the town of Monastir directly under the governor, 2. the personal estates of the sultan's mother (μιλλετ) or the land of Okhr, 3. the sandyaks of Elbasan, Kavaja, Tirana [q. v.] and Lesh (Alex- sio), which were governed by Aranau governors who could be dismissed, 4. the sandyaks of Ishkodra (Iskenderiye, Scutari), Erzen (Prizren) and Ipek (Ipek) which were under military officers (generals of division, ferik's), 5. the ayyelik's Podgorica, Bar (Antivari), Ulcinj (Dulciun), which were under native hereditary d'yan whose powers were very minutely regulated, 6. the districts of Zadrim, Mirdit, Dibra (Debar) which were under chiefs self-elected, the only Turkish officials being those who collected the taxes. The pašalik of Pristina, Niș [q. v.] and Tetovo, originally part of the eyalet of Rumelia, were transferred in 1839 to the mishir of Sofia. The pašalik of Uskub (Skopje) and Kalkandelen (Tetovo) were only under the political supervision and not the administration of the Rumi, wali, while the northern Arkan tribes and Montenegro (Karadagh), although nominally under the governor of Rumelia and in particular in that of Scutari, in reality were in no organic connection with the Ottoman government (cf. Josef Müller, Albanien, Rumellien und die österreichisch-montenegrinische Große, Prag 1844, p. 2–3). The remainder of the former Rumelia was divided into pašaliks of which Adriana- nople (formerly called sanjak of Cirmen), as Adrianopolis was the chief residence of the sultan; in 1840 there were still law-courts in Cirmen) and the three Bulgarian pašaliks of Rusçuk [q. v.], Vidin and Silistra were the most important (cf. Ami Boué, La Turquie d'Europe, vol. iii., Paris 1840, p. 181–189 with further details of the division and of the officials in 1840). The division continued to change frequently so that J. G. v. Hahn in 1860 found the eyalet of Rumelia divided into four holya, namely Ishkodra, Ohkri, Monastir and Kestryia (Kastoria) of which Ohkri comprised the whole of Central Albania i.e. down to the coast of the Adriatic (cf. J. G. v. Hahn, Reise von Belgrad nach Salonik, Vienna 1861, p. 116 = Denkschriften der Wiener Ak. der Wiss., phil.-hist. Kl., vol. xi.). Rumelia remained divided in this way until 1864, when the first vilayet law — i.e. the law the object of which was to create larger provinces and entrust them to able governors — was promulgated. The new governors were to carry through the progressive plans of the government with the help of expert officials and numerous subordinate governors (mutesearefs). The governor-general, formerly eyalet, now called vilayets at the head of which was wali, remained divided into holya, formerly sanjaks, at the head of which was a mutesaarif. As a model province the Danube vilayet (Tuna vilayeti) was first created in Radijab 1281 (Dec. 1864) and entrusted to Midhat Pasha [q. v.] who had already made a name for himself as governor of Niș and Prizren. The vilayets of Salonica and Vania (Ioannina) were formed in 1867. The name Rumellia, Rumelia disappeared completely until it was revived in 1878. In this year by the treaty of Berlin, the new principality of Bulgaria, which was declared an independent tributary principality recognising the suzerainty of the sultan, was created and limited to Bulgaria on the Danube, the former Danube vilayet (Tuna Vilayeti). From the trans-Balkan district of southern Bulgaria, an autonomous province of Turkey was formed and called eastern Rumelia (cf. Carl v. Sax, Geschichte des Macht- verfall der Türken, Berlin 1913, p. 373, 446). Aleko Pasha from 1879 to 1884 and Gavril Pasha from 1884 to 1885 acted as governors there. Western Rumelia formed part of the Ottoman empire and was divided into three vilayets: Adrianople, Salonica and Monastir. While Eastern Rumelia was occupied by the Bulgars in 1855, by the peace of Bucarest (1913) Monastir (Bitoli) was ceded to Serbia and Salonica to Greece and
only the vilâyet of Adrianople [q.v.] remained to the Ottoman empire.

The history of Islam in Rumelia, which is closely associated with the expansion of Ottoman power on European soil, is still very obscure, at least as regards the xivth-xvith century. Political disensions and the mixture of peoples favoured in Rumelia more than elsewhere the formation of sects, so that even directly after the arrival of the Ottoman on European soil (cf. Joh. Drasecke, Der Übergang der Osmanen nach Europa im XIV. Jahrh., in Neues Jahrbuch für das klassische Altertum, xxxvii. 7 sqq. and H. A. Gibbons, The Foundation of the Ottoman Empire, Oxford 1916), perhaps even earlier in the Byzantine period, as is clearly shown by the not sufficiently explained problem of the Shi' sectaritan Şerif Salîkh Dede [q.v.; i.e. “Father Yellow Pate”, as an English traveller of 1652 explains the strange name], not to speak of the obscure history of the Turks in the Wardat valley (Wardariots), all kinds of Muslim sects developed in Rumelia, the study of which has not yet been begun. Islam has been transmitted upon still kinds of religious ideas, and a kind of syncretism was created which raises difficult problems for the study of religions.

In particular, we must recall the movements to Islam, formerly Bogomiles, who inhabited certain areas of Bulgaria, Bosnia and the Herzegovina, and the Muslim sects and dervish monasteries of northern Bulgaria, where the Kılıçbaşes have flourished down to the present day, being undoubtedly favoured in their rise by the remarkable sectarism of Shaikh Badr al-Dîn Mahmûd (d. 1416 in Serres: cf. BEN KADÎ SIMAWNA and Fr. Babinger, Şeyh Bâdî ed-Dîn, der Sohn des Rückerter von Sînavat, Berlin und Leipzig 1921), who gained an astonishingly large following in Southern Bulgaria, particularly in Deli Orman [q.v.]. Closely connected with the advance of Ottoman power is the history of the Bektaşîs [q.v.] in Rumelia. They founded settlement everywhere (cf. F. W. Hasluck, Christianity and Islam under the Seljuks, Oxford 1939, 2 vols.), and quickly propagated Şifa views as far as the coast of the Adriatic. At the same time in Bulgaria, in the inaccessible forests of the vast Deli Orman, the Kılıçbaşes seem to have made considerable progress (cf. thereon also T. Kowalski, Les Turcs et la langue turque de la Bulgarie du Nord-Est, Cracow 1933). Their still unclassified history there seems to be closely connected with the holy man Demir Baba and his brothers and descendants who are still to be found there (cf. F. Babinger, Das Bekätschiklaster von Demir Baba, in M.S.O. S., ii., vol. xxxiv., Berlin 1931, p. 84 sqq.; cf. thereon already Ewliyya Celebi, Şîyâhîatnâme, vol. v., p. 579). After the prohibition of the dervish orders in Turkey, banished shâiks and monks to some extent have sought refuge here and found followers. As well as in Bulgaria the dervishes have flourished in the modern Southern Serbia where monasteries of the different orders are still to be found (cf. D. G. Gadžanow, in vol. i. of the Macedoniski Predlog, Sofia 1925, p. 59-66). A problem not yet fully explained is raised by the Pomak [q.v.] in the Rhodope mountains and round Loča (now Loveç; the so-called Pomak nâyże, cf. A. Boué, loc. cit., vol. ii., p. 24) and the Gagauz on the coast of the Black Sea. But even the history of official Islam in Rumelia still requires investigation. It is certain that in many places like Adrianople [q.v.], Philipopolis, Sofia, Sumla (Sumen), Razgrad (Herzogbad), Dupnica, Kustendil, Loča (Loveç), Plevna (Pleven), where there were the numerous and rich walis and buildings of the Mihkâl-oghlus; cf. Jordon Trifunovic, Lektor na gradu Plevna do dvostoljetnata zogna, Sofia 1933, p. 35-41), Uskub, Istop (Tipt), Prizren, Pristina, Kalkandelen (Tetovo), Prilep, Monastir (Toli-Monastir, Bitolj), and particularly in Thessaly and Macedonia, there were formed centres of Muslim culture, as the schools, mosques etc. founded there show. In these centres were born men who made a name for themselves in the intellectual history of Turkey. Uskub, Prizren and Pristina in particular are rich in such names and it may be assumed that their bearers were mainly South Slavs converted to and Islam. Epirus Albania play a special part in the cultural history of Islam; from there to the Ottoman empire, apart from Bosnia and the Herzegovina, drew its ablest and greatest statesmen and generals, for the supply was in the main maintained by the tribute of youths (dëvushma; q.v.) levied in the province of rumelia who played an important part in the political and intellectual life of Turkey is legion. They were almost exclusively natives, not Ottoman immigrants, the number of whom must always have been small, as the Turks confined themselves to exploiting the land, divided into large and small fiefs (zâmaât and tinmâr; q.v.). Ami Boué put the number of Turkish fiefs at 614 zâmaât and 8,360 tinmâr (cf. A. Boué, La Turquie d'Europe, vol. iii., Paris 1840, p. 182, without however saying to what date his figures refer).

The rule of the Ottomans in Rumelia, which began with the crossing of the Turks to European soil (1356—1357) and soon found visible expression in the capture of Adrianople in the spring of 1361 (cf. F. Babinger, in M.O.G., ii. 311 and the article OĞLAN), is only very superficially known, so far as the xivth and even the first half of the xvth century is concerned. It is, to be supposed that certain bases such as Salonica frequently given in their hands, which is the simplest way to explain the different dates given of the capture of this town for example. In view of the great political dismemberment of S. E. Europe the advance of the Ottomans met with varying degrees of resistance, and it looks as if the great Ottoman generals of the xivth and xvth centuries, who distinguished themselves on Rumelian soil and soon won tremendous influence as margraves and great landowners — e.g. the Ewnenos-oglu, the Mihkal-oglu, the Timurtash-oglu, the Malkoç-oglu, the Kawanos-oglu, a "feudal family of Asia Minor" (C. J. Jireček), who ruled in and around Tatar Bazar and since the xvith century, but perhaps already much earlier, till the year 1835 when the wali of Rumelia for the second time Kawanos-zâde Husain Paša died (cf. Sadzilî-i othmanî, ii. 223 sq. and ibid., ii. 206), families [see the articles on them] who were able to hold their hereditary estates in some cases down to the xivth century — were able to win over by an elastic policy the people who had lost their own princes and chiefs. In the course of centuries some tribal chiefs were here and there (especially in Albania and Epirus and in Thessaly) to make themselves more or less independent of the Porte so that they had to be granted a certain degree of autonomy. This is shown by the case of the Yurükbegs, of whom there were 7 in Rumelia about 1840, and
particularly of the a'yan in Albania who were able to make themselves more or less independent. The case of 'Ali lasha of Janina [q. v.] and his whole family is the most eloquent example of this. Although the decline of Turkish rule in Rumelia has now been going on for over a century, the influence of Turkish culture there is in many ways so distinct that even if there were no monuments of the Muslim period to recall the past, it will remain in manners, customs and traditions.

**Bibliography:** In addition to the numerous books of travel of all periods which form the most important source for the history of Turkish rule in Rumelia and of which the following are especially important: A. Grisebach, Reise durch Rumelien und nach Brusa im Jahre 1839, Gottingen 1844; Josef Muller, Albanien, Rumelien etc., Prague 1844; Ami Bon, La Turquie d'Europe, Paris 1849 (fundamental work also in German: Die europäische Türkei, Vienna 1889); also his Recueil d'itinéraires dans la Turquie d'Europe. Détails géographiques, topographiques et statistiques sur cet empire, Vienna 1854; the following may also be consulted: Maximilian Friedrich Thilen, Die europäische Türkei, intended as a work of reference for the newspaper reader, Vienna 1828; also A. M. Perrot, Itinéraire de la Turquie d'Europe et des provinces d'Asie. Description géographique et militaire de toutes les routes, villes, forteresses et ports de mer de cet empire, Paris 1855; C. Mostran, Dictionnaire géographique de l'empire Ottoman, Paris 1873; E. Isambert, Itinéraire descriptif de l'Orient, Paris 1874; very full statistics regarding administration, population, religion etc. of Rumelia are given in the following:

(FRANZ BABINGER)
RUMILI HIŞAR — RÜS

RUPİYA [See ANADOLI HIŞAR.]

RUPİYA (R.), an Indian coin, a rupee. In the latter xvith and early xvith centuries the silver tanka [q.v.] of the sultans of Delhi had become so debased that when Sher Shāh (1539–1545) reformed the coinage, the name could no longer be given to a silver coin. To his new silver coin, corresponding to the original fine silver tanka, he therefore gave the name rupiya = rupee, i.e. the silver coin (Sanskrit, rūpya, rūpaka), and tanka became a copper denomination. The weight of the rupee was 178 grams (11.53 grms.) and it rapidly established itself in popular favour. Under the Mughals it was struck all over India at over 200 mints and with the decline of Mughal power continued to be struck by their successors, notably the English East India Company. In the xvth century Akbar and Dālahāngir struck many square rupees; on one coin of Akbar the name rupiya occurs. Dālahāngir for a short period struck a heavy rupee of 520 grains (14.25 grms.), but on the whole the rupee has shown little variation in weight. In the xviith century the English rupee gradually drove the local issues out of circulation and with few exceptions the local mints have now been closed. Such native states as still issue their own rupees strike them on the same standard as the Indian government rupee.

Ahmad Shāh Durrānī adopted the rupee as his monetary unit on becoming independent and until quite recently it remained the standard coin of Afgānistān. The Hindu kings of Afsān also struck the rupee.

The Indian rupee having become current in British East Africa, it was adopted in 1890 as the standard coin of German East Africa also.

RÜS, the Russians; at first the Normans, then the founders of the dukedom of Kiev.

The Rūs of the west. In his description of “pain Yā‘ūbi, B.G.A., vii. 354, says that in 229 (843–844) “the Madjūs called Rūs” invaded Seville and committed all kinds of depredations. The name Madjūs [q.v.] is regularly applied to the Normans. The name even passed into the Spanish Primera Crónica General (xiiith century) according to which the Dimuwces were worshippers of fire (!). The origin of this use of madjūs is obscure. Did the Arabs and Spaniards allude to such rites as the cleansing of the dead [cf. Ibn Faḍlān? ] Masūd, Murshid, i. 364–365, speaking of events in Spain about 300 (912–913) also uses the term Rūs although he gives it a special meaning.

The Rūs of the east. There is quite a literature on the origin of the name of the Russians. The “Norman” school claims that the name Rūs “belongs to the Normans; the Finns call the Swedes Ruotsi whence in Russian Rūs (Pym), the name of the Finns Sūmi similarly becomes in Russian Sum (Cyma); the basis of Ruotsi/Rūs must be a Scandinavian word [cf. the names of the coast Reitagen and of its inhabitants Rods-karlar “rowers”). The names of the earliest Russian princes are undoubtedly Scandinavian (K’uruk < Ihroek, Igor < Ingvar etc.); the testimony of Constantine Porphyrogenetus (chap. ix.) is equally positive; in his list of the cataracts on the Don, he gives the names “in Russian” (iroposītī) and “in Slav” (rūpōmī), e.g. iulōrōm < in Scandinavian “klum isle” + fors “rapids” = οστρακομπές < in Slav ostrvony “of the isle” + prag “the cataract”. The “anti-Norman” school pronounces in favour of the native origin of the name but its arguments are mainly useful to show certain contaminations of the term Rūs (in Greek Ρος, Ρώσι) by names in Hebrew (Ῥως, Ῥωξ, Septuag., xxxviii. 2–3; xxxix. 1), Greek (ρωσία χαλκίδα “the red boats”) etc. [It is evident that the ajīhāb al-Rūṣ mentioned in the Korān with the ‘Ad and Thamūl (Sūra xxx. 40 and l.12) have nothing to do with the Araxes or the Russians, in spite of the late texts Dimnishki, text p. 106, transal. Mehren, p. 131 and the fancies of European commentators like v. Hammer, Sur les origines de l’état russe, St. Petersburg 1825, p. 24–29].

According to the Russian Chronicle, the Varangians (Vai’ag; see below) came from beyond the sea in 859 and leved tribute on certain Slav and Finnish peoples until in 862 they were driven away by the latter. The civil wars which broke out soon afterwards among them, however, forced these tribes to invite from beyond the sea “the Varangians called Rus”. The Rūs at first settled in the region of the great Russian lakes (Ilmen, Ladoga) but in 882 Oleg (< Halg) moved to Kiev. This was certainly not the first appearance of the “Russians” for previously under 839 the Annales Bertiniani mention the arrival at the court of Louis the Pious of a Byzantine embassy accompanied by envoys from the Rhow whom their king Charles had sent to Constantinople and who now wished to return home. An enquiry as to their identity showed that they were Swedes (gratis esse Scironum). The Normans in Kiev were not numerous and their marriages with Slav women accelerated their assimilation. Swiatoslaw (born in 942) already has a Slav name and c. 1000 the process of slavisation of the Normans was complete (cf. Thomsen, cf. cit., p. 123–124).

The sources of the xith and xith centuries. The Muslim sources are acquainted with the Rūs from their first appearance in eastern Europe. Ibn Khurdādbih, p. 154, mentions only Rūs merchants whom he regards as “a kind of Slavs” (qīnas min al-Sūdābīa), and describes their journeys (by sea): from the remotest parts of the Samekh to the Black Sea, to the Khasar capital and the Caspian Sea, and by land: from Tangier to Damascus, Baghād, Bayra and then into India and China; or again they travelled still farther beyond (= to the north of) Rome through the Slav countries to reach the Khasar capital, Balkh, the lands of the Toghuqzuh and China; cf. Ibn Faḍlān, p. 271). Ibn Khurdādbih does not assign any definite territory to the Rūs. It is true that the available text of his book is incomplete but another detail is significant. Ibn Khurdādbih, p. 154, speaks of “nahr al-Sūdābīa” which de Goeje identifies with the Tainais (Don) [Marquart, Streufels, p. 352, reads Tīn for Don]. The term later disappears from geographical literature but Ibn Hawkal, p. 276, and the Ištīfl al-ʿAlām
speak of a “river of the Rûs” and although the meaning they give to the term is doubtful, it is possible that their nomenclature indicates the transformation of the Šâhâbî into Rûs while Ibn Khurdâbîbh reflects the situation before the consolidation of Norman power in Russia. [In Idrîs, ii. 385, the Nahr al-Kûsya is certainly the Don].

On the other hand, the common source (Muslim b. Abi Muslim); cf. Masûdî, Tanbîh, p. 190) used by Ibn Rusta, the Hîsâb al-Âlam, Gardizi, Awwî, etc. formally distinguishes between the Kûs and the Slavs. The latter (probably the western Slavs) lived under their own princes, while the Kûs occupied, an island thirty days march in length and breadth, situated in the middle of a lake. Their king bore the title of khâkân Rûs. This version seems to refer to the sojourn of the Norman chiefs in the region of the great Russian lakes (cf. Novgorod, in Scandinavian Hold garv “the Town of the Lake”!). The Hîsâb al-Âlam adds that the Russians have many towns and Gardizi says that the population of the island is 100,000 men (marbûn); these additions may reflect the gradual expansion of the Kûs or rather their amalgamation with the Slavs.

The third tradition is represented by Iṣṭâkhri and Ibn Hawkal (A’Bu Zaid Balkhi) who place the Rûs between Bulghar and the Slavs. The point from which the description starts must be the town of Bulghar on the Volga. Three groups of Rûs are described. The king of the group nearest the Bulghar lives in Kûsâya (Kiev; Const. Porph., ch. 97). Kusâya, Kusâya. The most remote are the Salâzâs, perhaps the original inhabitants of Novgorod, the Sîrîs. The third group are the Aρghânîya whose king lives in A’rkhî (many variants, reading doubtful). They are savages who kill strangers; they come down the rivers to export the skins of black samûr and lead (riyû). Since the time of Frede, A’rkhî has usually been explained as Éća’a, the name of the eastern branch of the Finnish people Mordva (in the basin of the Soura, a tributary of the Volga to the west of Kazar). Another explanation (Reinaud, Chwolson) which starts with the variant ʿarôm and explains A’sûma by Barmian (Perm) is very doubtful. In both cases, it is necessary to suppose the previous subjection of these regions by the Rûs. In a recent work P. Smirnov seeks to prove the existence of a Russian “khâkân” in the region between the Volga and the Oka, cf. the incident quoted above from the Annales Bertianii, Cf. also M. Vasmer, Wikingerspuren in Russland, in S. B. Vr. Ak. W., 1931, p. 649–674, on the traces of Scandinavian place-names on the Upper Volga. The fourth independent source is Masûdî (cf. Marquart, Streifzüge, p. 330–353). In the Murûtî, ii. 15, he calls the Black Sea “Sea of the Rûs” for they are the only people who sail upon it and they live on one of its shores. This last allusion may be to the Russian colony of Tmutarakan (Tumtarakin, the ancient Panticapaeum on the peninsula of Taman) [although Westberg and Marquart, op. cit, suppose the Baltic to be meant here]. Among the many tribes that composed the Rûs, Masûdî, Murûtî, ii. 18, mentions the Darbâlîs = Tantûs, p. 141; the Îmûliyûn = Tantûs, who trade with Spain, Rome, Constantinople and the Khazars. This name is probably identical with al-Urdâmân <

Nordmân of the Arab chronicles of Spain [cf. Marçûs] and with the Lordîmân of the Latin chronicles, i.e. the Northmen. [Marquart, Streifzüge, p. 352, prefers to connect the word with the Arabic manâ officially in the middle of Ibn Khurdâbîbh, p. 153, this name refers to Jewish merchants].

An attempt to define the frontiers of Russian territory is made in the Hîsâb al-Âlam (372–682) but it cannot be regarded as very successful. Of first rate importance for our knowledge of the manners and customs of the Rûs is the narrative of Ibn Fadlân (q.v.) who in 921–922 observed the customs and funerary rites of the Russians, somewhere on the Volga, perhaps near Bulghar, quoted in Yâgûtî, ii. 834–840. The Arabs knew of the expeditions of Sviatoslav against the peoples of eastern Europe (Bulgâr, Būrṭâs, Khażar), cf. Ibn Hawkal, p. 286, who dates the expedition in 585 (968–969), instead of 965 as in the Russian chronicles, but Barthold has rightly pointed out that this date really refers to the investigation conducted into the question by Ibn Hawkal, p. 282, at Djurdjian. Awwî [q.v.] who wrote before 633 (1236) has preserved the name of St Vladimir (Bîkâldîmîr, popular etymology “prince of steel”) who converted the Russians to Christianity in 988. Awwî’s version (perhaps collected in Khârim) puts the date of this event in 300 (912) and adds that the Russians, whose only trade was war, had repented of their conversion and sent envoys to Khârim, from which an imâm was sent to convert them to Islam (cf. Barthold, in Zepr., ix. 1895, p. 262–267). Ibn al-Âţîb, ix. 30 is better informed as he knows the circumstances of the marriage of the malîk al-Kûsya (Vladimir) to the sister of the two Byzantine emperors Basil and Constantine; but he puts the event in 375 (985–986; cf. Dimîghî, transl. Mühren, p. 378).

The Russians on the Caspian Sea. The Muslim statements regarding Russian raids to the south of the Caspian Sea are of considerable value. At the time when the ʿAlîd Ḥasân b. Zaid (250–270 = 864–884) was ruling in Taharistân the Rûs made a raid on Abaskan [q.v.]. In 297 (909–910) the Rûs coming in sixteen ships ravaged the same region. In the following year the Rûs penetrated as far as Sarî and Pandjâb-hâzâr but suffered a defeat in Gîlân (cf. Ibn Isfandîyâr, in G. M. S., p. 199). This last raid, according to the commentators (F. B. Charmoy, Kunik), must have taken place in 301 (913) after Igor’s accession. Masûdî, Murûtî, ii. 18–25, describes it in detail “after 300 (912)”; during the reign of the Shirwàštâb ʿAlî b. Hâlîm. In 332 (943–944) the Rûs ascended the Kur and seized Bardîha (q.v. and cf. Kitchens). The very circumstantial record in Ibn Miskawwah, The Eclipse, ii. 62–67.) Dorn’s Caspia, a book written without any definite system but full of facts, deals especially with these raids. Cf. also Barthold, Nûrûs fi rªkâspîyûkî ablàstî, Baku 1925. Wâranb. Another name applied to the Normans, Waranb (old Russ. Vare˘g), usually explained as “member of a merchant association who has taken the oath”, from the Scandinavian var “promise”, is found in Muslim literature at a much later date. Abu ʿI-Fîrîd, ed. Reinaud, p. 35, says that he found the term Bahr-Waranb only in al-Biruni and in the Tahkírât of Nasîr al-Dîn Tîsî. Cf. also Brûni, al-Tâfîm, ed. R. Wright, 1934.
p. 121, on a large gulf (the Baltic Sea) which separates from the Buhr al-Mahtā, and extends north of the Sa'āliba as far as the vicinity of the Muslim Bulgars.

Idrisi. After the tenth century Idrisi alone affords any independent information about the Rus, under cli., sect. 5 (the river of the Russians, the streams along the Doniepr) and cli. vii., sect. 4 and 5 (the sources of the Dnjes, Dnieper, Russia and Kumaniya, i.e. the land of the Comans); cf. Jaubert’s trans., ii. 395—398, 401, 404, 433—434; and the passage (cli. viii., sect. 7) transcribed in 0. Tallgren-Tuulio, Idrisi, La Finlande, Helsingfors 1930 (Soc. Orient. Fenntica), p. 115—121. Idrisi however confuses traditional and contemporary data by putting them in juxtaposition, e.g. Кургана is mentioned alongside of Ков (Kiev).

Persian poetry. Nizami in his Iskandar-nama celebrates Alexander’s campaign against the Russians who had devastated Bardha‘a and carried off queen Nadjiba, an ally of Alexander’s. The king of the Russians who rules over the Burtas, the Khazar, the Alans, the Isi (in Russian Vets) etc., is called "Khan, perhaps a corruption in transcribing or in hearing the title Khan (Russ. knez) already found in Ibn Khuradhdhi, p. 17. Cf. F. Erdmann, Die Expeditionen Russorum Berdaam versus, Kazan 1826, 1828, 1832, 3 vols., and the French translation by F. E. Charmoy, L’expédition d’Alexandre, St. Petersburg 1829. English by H. W. Clarke, R.S., The Skandar-nama, p. 663—664, German by F. Jacob, Iskanders Werterfeldzug, 1932 (free and incomplete version). In the Haft Païkar of Nizami, ed. H. Ritter and Rypka, 1934, p. 11, 178—196 (transl. C. E. Wilson, i. 171—188), is found the daughter of the king of the fourth cli. (i.e., "the fair Slavonian, rosy-red of cheek") who tells a story that happened in a "Russian" town. There is more reality in the odes of Khâkânî dedicated to the Shirvânish Khakhtân (550—590 = 1115—1103) from which we learn of a raid by the Russians which this ruler successfully repelled; cf. Khanîkî, in Bull. Acad. Spb., xiv. N°. 23—24 (= Mil. Asiat., iii. 114—136).

From the Mongol period. The statements by the later writers regarding the Russians are very fragmentary; cf. for the Mongol period: Ijwâ‘aini, l. 224; Abu ‘l-Fidā‘a, p. 201, 207 (the Russians, a Turkish tribe), p. 222; Dimishkî, transl. Mehrn., p. 311, 378 (the Russians live on the islands of the Maotol, probably confused with a northern lake); Mustawfî, Nusbat al-Kalâbû, p. 264; and for the period of Timûr: Zafar-nama, l. 750—762 (as well as the geographical introduction to the Zafar-nama, Br. Mus. MS. Or. 18406, fol. 13b, on the Rus, descendants of Japhet). Turkish libraries and archives must contain important information about Russia; cf. Babinger, G.O.V., p. 310 and ino. as well as the journal of a Turkish officer at St. Petersburg in the time of Catherine II, quoted in V. D. Smirnov, Obrasa, protav, evm. liter., St. Petersburg 1891, p. 228—242 (wasting in the edition of 1903). In Persia the Safawi chronicles only mention briefly the Russian embassies; the chronicles of the Khâdîjâs, such as the Makhîth-i sulîmî of ‘Abd al-Razzâk, Nâdîjatkhulû (transl. Brydige), the Rawdat al-Safā-yi Nâsirî of Râdâ-kul Khán, and the Nâsîkh al-Tâ’ârîakhir of Sipîhr (q.v.), contain information about the Russo-Persian wars and the subsequent negotiations [cf. Tehrân]; a curious paragraph no the Russians is to be found in the Bustân al-Siyâqa of Zain al-‘Abîdin Shîrâwî, Teherân 1315, p. 299; of no value from the geographical point of view, it is curious as reflecting the ideas of the Persians about 1350: the Russians, like the other Farsag, are clever in worldly matters (dar shârga), but devoid of spirituality (qâ‘ân nazaranda). Bibliography: See the article above. A bibliography of the Muslim sources will be found in the commentary on the Idrīsî al-‘Alâm by V. Minorsky (in G. M. S., in the press). The principal studies on the Muhammadan sources are: Fraehn, Ibn Foslands och andra Araber Berichten über die Russen, St. Petersburg 1823; Chwolson, Ivestiya Ibn Dasta (read: Ibn Rusta) etc., St. Petersburg 1869; Garkavi (Harkavy), Skazaniya musulm. pisatelej, St. Petersburg 1870 and 1871 (translations from 26 + 6 Arab authors; on the necessity for a new edition of these texts and the preparation of a Corpus of Arabic sources on the Russians etc. see Krackowskij, in Zap. Inst. Vost., 1932, i. 55—62); Dorn, and Kunik, in Caspik, in Mem. ac Spb., series vii., vol. xxii., N°. 1, 1875 (Russian edition ibid., vol. xxvi., app. i, 1875); Kunik and Rosenberg, Ivestiya al-Beker, St. Petersburg, i. (1878) and ii. (1903); A. Seippel, Rerum Normannicarum fontes arabici, fasciculus i. textum continens, Christiania, i. (1806), ii. (1928) (variants, critical remarks). Westberg, Zur Klarung oriental. Quellen, in Bull. de Spb., 1899, vol. xi., N°. 4 and 5, and Akhmatza ostándikch istočnikov, in Four. Min. Nar. Prov., 1909, xiii. and xiv.; Marquart, Streifzüge, p. 330—353 (Mavüdi on the Rus); A general survey of the literature on Russian origins has recently been given by V. Mošín, Vostro-russkij vopros, in Slavie, x. (1931), 1—3. A still valuable survey is that of Thomsen, The relations between Russia and Scandinavia and the origin of the Russian state, Oxford 1877 (new edition in Thomsen, Samlede Afhandlinger, i., 1919, p. 231—444); many difficult questions are dealt with in the works of Kunik, Marquart, Streifzüge, parsim, and Westberg. Among recent works must be mentioned P. Smirnov, Vostochny shlyakh ("The Volga route and the early Russians"), Kiev 1928 (in Ukrainian; an original work) (V. Minorsky).

AL-RUSAFÁ (RUŚAFÁT AL-SHÂ‘ÂN, RUŚAFÁT HÎJÂMÁN), a town in the desert in the Syrian Palmyrene, 4 farsakh or 25 miles south of the Ephrates.

The town already bore this name in the pre-Muhammadan period. The Assyrian lists of eponyms mention in the years 850, 838, 804. 775. 747. 761. 737 B.C.C, a town Ras-ap-pa as the residence of the Assyrian governor (shamun). On a relief stele of Adad-nirari IV Rasappa is mentioned among the lands governed by Urigallu-eresh and formed with Kani (now Tell Djellâl on the Khabîr) an administrative district (Unger, Reliefsstele Adad-nirari’s III. aus Saba‘a, Publikationen der Kurl. Osmanischen Museen. ii, Stambul 1916, p. 10—12, pl. 2, i. 23 sqq.). The identification of Rasappa with Beled Sindjar by E. Forrer (Preiszeitneicht des Assy. Reiches, Leipzig 1921, p. 15) can hardly be maintained (Musil, The Middle Ephrates, New York 1927, p. 210 sqq.). In the Bible (2 Kings xix. 12; Isaiah xxxvii. 12) Rešef, for which we should not doubt read Rešaf, is mentioned along
with Gozan, Ḥaran and Benē ʿEden in Telassar. Polemy (Geogr., v. 14, 19) mentions our town in Palmyrae as "Parzafa"; the Tabula Peutingeriana, which is the geographer of Ravenna (Cosmogr., ii 15, ed. Pinder-Parthey, p. 89, 1) Mississi, the Notitia dignitatum (or., xxxiii, 15, 27) Rosafa, the Metropolitan Alexander of Hierapolis in a lettre (Acta Concil. Oecumen., ed. E. Schwarz, tom. i, vol. iv, p. 171, 23) Rasapha. The name (cf. Razaf) means "cemented road" (Clermont-Ganneau, in R. A., iv, 1900, p. 112 sq.).

About 434 the town was raised to be a bishopric against the otherwise usual practice by the patriarch Ioannes of Antioch, not by the Metropolitan Alexander of Hierapolis. It was then famous for its church of St. Sergius dedicated to the memory of the two officers of the imperial palace Sergios and Bacchos ("in the reign of Maximiianus") (the Acta Martyr., ed. in Greek by Delahaye, in Anal. Bull., xiv. 373—395; in Syriac by Bedjan, Acta martyr. et sanctor., iii. 283—322, do not bear historical criticism: Harnack, Chronologie der altchristl. Litteratur, ii. 481, note; Delahaye, in Anal. Bull., xxiii. 478). The first bishop of Parzafa was Marinianos, who is mentioned in 434, 444 and 451 (and not mentioned in the list of bishops of Resapa-Sergopolis in Le Quien, in O. C., ii. 951 sq.; cf. E. Honigmann, in Oriens Christianus, xi. 214—217). The emperor Anastasius (491—518) had the thumb of St. Sergios brought from Resapa to Constantinople and stories of the miracles associated with this relic spread even as far as Gaul (Gregor. Turonensis, Hist. Francor., vii. 31). In honour of this event the town was given the name Sergopolis and the privileges of an ecclesiastical metropolis (Ioannes Diakrinomenos in Cramer, Anastola Graeca et cod. Paris., ii. 109).

Perhaps we can have Grēkostos [I]ynos as early as 512 in the trilingual inscription of Zebed (Neubauer in Sachau, Reise in Syrien und Mesopotamien, p. 126, note 1; otherwise in Prendere, Bull. de l'Acad. Archéol. Égypt. Grecque et Latine Insct., p. 262). Georgios Kypros (ed. Gelzer, v. 865) knows a third name of the town, "Alexandria", the correctness of which has wholly been doubted; probably the great basilica in al-Rusafa also dates from this emperor (Iussaud, Topographie de la Syrie, p. 254, who however also wrongly takes Tetrapyrgia to be a name of al-Rusafa). The Syriac name also remained in use, (τὸ Ραζάφα) Ioannes Moschos, Pratum spiritual, chap. 180, in Migne, Patr. Græc., LXXXVIII/iii., col. 3052). The Armenian Basileios who in the 4th century sought to transform the profane geography of Georgios Kypros into an ecclesiastical handbook added to the town the epithet "σταυρούς", from αὐτοκτόνοικος, the correctness of which has wholly been doubted; probably the great basilica in al-Rusafa also dates from this emperor (Iussaud, Topographie de la Syrie, p. 254, who however also wrongly takes Tetrapyrgia to be a name of al-Rusafa). The Syriac name also remained in use, (τὸ Ραζάφα) Ioannes Moschos, Pratum spiritual, chap. 180, in Migne, Patr. Græc., LXXXVIII/iii., col. 3052). The Armenian Basileios who in the 4th century sought to transform the profane geography of Georgios Kypros into an ecclesiastical handbook added to the town the epithet τὸ σταυροὺς ταύτα (M. Hartmann, in Z. A., xiv. 340 sq.; Chapot, La Frontière de l'Upatra, p. 330, note 8).

Rabbah Bar ʿIda (d. Jan. 8, 611), the teacher of the Persian ʿOyānann who wrote his life (Baumstark, Gesch. d. syr. Lit., p. 203, § 311), was born in Rusafa (E. A. W. Budge, The history of Rabbah Hūnīz Ardash the Persian and Rabbah Bar ʿIda, i. London 1902, p. 115).

The town, which was situated in the desert Σαμαξίουτο (Procop., Bell. Pers., ii. 5, 29; Theophyl. Simoc. ed. de Boor, v. 13, 3; Syriac: Barbāzār: Kugener, in Oriens Christian, 1907, p. 408—412), was at first defended against the Saracens only by fortifications of no great strength; Justinian is said to have been the first to surround it with proper walls (probably before 542 A.D.) (Procop., De aedif., ii. 9, 3 f), a statement which however the results of modern archaeological research show to be exaggerated (Hezelin in Sarre-Hezelin, Archæol. Reise, i. 158; Guyer, ibid., ii. 28, 37). Justinian also built bazaars and other fine buildings and large cisterns to provide the town with water (Procop., De aed., ii. 9, 6 sqq.).

Khusraw I, who on his campaign to Syria in 530 had been promised by Kandivos, bishop of Sergopolis, 200 pounds of gold for the ransom of 12,000 captured inhabitants of Sitha on the Euphrates, on his third campaign in 570,2 proceeded to the bishop, who had come to meet him to make excuses for not carrying out his promises, and sent a force against the town, which had however soon to withdraw on account of the lack of water (Procop., Bell. Pers., ii. 20, 9—14). Half a century later, the story was already told of the miraculous rescue of the defenceless city by St. Sergios and his heavenly forces (Euagrios, Hist. eccl., iv. 28).

About 570 there were five bishoprics under the metropolitan of Sergopolis (Notitia Antiochoana, in Byz. Zeitschr., xxv., 1924, p. 75, 83). Besides the already mentioned bishops Marinianos and Kandivos we know of the following metropolitans: in 524 Sergios of Beth Rosāfā (Guidi, in Atti della R. Accad. dei Lincei, 1851, p. 507), in 550 Joseph, bishop of the Sacred Monastery of Rasīfī (Assenario, in B.O., i. 117, 553 Abrahamios (Manu, i. 390; Wright, Catal. syr. MSS. Brit. Mus., i. 797), between 793 and 980 Michael Syrus (Chrón., transl. Chabot, iii. 451 sqq., 605 sq) mentions eleven further documents, and from inscriptions we know of a certain Sergios (between 910 and 922); cf. Mich. Syr., iii. 462, No. 18 and Simeon, who, in 1093, restored the great Baslica (Musul, Palmyrena, p. 160, 267 sq).

The veneration and piuses awe which was generally felt with regard to the sanctity of the place is shown with particular clearness in the fact that the Ghassânīd al-Mundhir b. Ḥārīth only dared to meet the Byzantine envoy here (summer of 578) as he felt himself safe nowhere else from their treachery (Johann. Ephes., vi. 4; Noldeke, in Mh. Pr. Ak. W., 1887, p. 24). At this time the town was apparently not in the possession of the Ghassânīds; the inscription ascribed to him νεκρός ἐκ τῆς Αλμοσοδαρωνειας, which was found among the "Central Church extra muros" also indicates that the inner town was still Roman at this date.

In the sanctuary of Sergios at a later date among the gifts dedicated to the saint was shown a richly decorated cross given by Justinian and Theodora, then taken to Persia by Khusraw I after the plundering of Kallinikos and Barbalissos (Mich. Syr., iv. 296), but given back by his grandson Khusraw II with another cross and a gift, both of which bore long inscriptions (Euagrios, Hist. eccl., iv. 28; vi. 1; Niceph. Kallist. Hist. eccl., xviii. 21 sq; Theophyl. Simoc. ed. de Boor, v. 13; Firdawsi 1466, in Noldeke, Tabari, p. 183, note 1; C. de Boor, in Zeitschr. f. Kirchengesch., p. 315—322). On his flight to the Byzantines Khusraw II lived in 590 in Edessa in the house of the general Johannes Rosāfā (a member of the family of the Persian Rosafāyeh (Mich. Syr., ii. 380, 412; Barbebraeus, Chron. eccl., i. 271). The cistern built by Justinian and later destroyed by a Lakhmid is said to have been restored by the Ghassânīd Nuṣrān b. al-Ḥārīth b. al-Alham (Hamza al-Iṣfahānī, Tuʾīrīk, ed. Gottwald, p. 120;

In the Jālānic period this desert town sprang into fame when the caliph Hīšām b. 'Abd al-Malik, who as a prince had moved his kaṭiba from the midge-plagued Euphrates thither, made it his residence in 105 (723–724); he died and was buried here in 125 (743) (al-Ṭabarī, Tā'rīkhā, ed. de Goeje, i. 1467, 1729 sq., 1731 sq.; al-Balādhurī, ed. de Goeje, p. 179 sq., 186; H. Lammens, in *M. F. O. B.*, iv. 94 sq.). The town therefore received the name of Ruṣafat Ḥīšām (al-Balādhurī, op. cit., to distinguish it from Ruṣafat Baghdād, the eastern suburb of Baghdād with the palace of the same name, cf. vol. i., p. 565); it was also called Ruṣafat al-Šaghīm. Whether Ḥīšām did a great deal of building is doubtful (cf. E. Reitemeyer, *Die Städtegründungen der Araber*, p. 246, n. 33).

Omer Omayyads also lived occasionally in this town; for example Marwān, Sulaimān b. Hīšām and Muḥammad b. al-Walid (al-Ṭabarī, ii. 1897, 1908; iii. 95, 98; Yākūt, ii. 786; Herzfeld, *Arch. Reise*, i. 139). Shortly after Ḥīšām’s death, his successor al-Walid ordered the confiscation of all his predecessor’s property in al-Ruṣafat (al-Ṭabarī, ii. 1751). Sulaimān b. Hīšām gathered an army in al-Ruṣafat in 127 (745), and then encamped opposite Marwān II’s army at Kinnāsir; after his defeat he came back to al-Ruṣafat (al-Ṭabarī, ii. 1896 sq., 1908; Mich. Syr., ii. 505). The ‘Abbāsid ‘Abd Allāh b. ‘Ali came in 132 (749–750) to al-Ruṣafat and disbanded and burned the embalmed body of Ḥīšām (al-Ya’qūbī, ed. Houtouza, ii. 427 sq.). ‘Abd Allāh b. ‘Ali [q.v.] spent a night there when fleeing before the army of his nephew Abū Djaʿfar al-Mansūr in 754 (Ṭabarī, iii. 98).

In the spring of 144 (858) Mutawakkil came from Damascus to visit the town in order to see the palaces of Ḥīšām and Sulaimān and the old Byzantine monastery (al-Bakri, ed. Wüstenfeld, p. 379). The sons of Zikrwaḥ b. Mihrwāḥ al-Kar mátī fell upon the town in 289 (902) along with the Bani al-Asbagh by order of Subk b. Dailamī, a mawālī of the caliph Muḥammad, murdered the inhabitants, burned the mosque and laid waste the neighbouring villages (Ṭabarī, iii. 2216). Ibn al-Šafīq (in 295 = 908) again mentions al-Ruṣafat as a flourishing town. Saif al-Dawlah passed in 344 (955) from Salamya via Tadmūr, Urd and al-Ruṣafat to al-Raṣqa (M. Canard, *Sayf al-Dawla*, Algiers–Paris 1934, 226, 231, 232). The Arab geographers describe al-Ruṣafat as situated in the middle of barren desert land; its inhabitants drank only water from cisterns within its walls or when this failed they had to bring water from the Euphrates 3–4 farsābāk distant. Al-Asmaʿī, who died in 215 (830), tutor of Ḥārūn al-Raṣidd, identifies the town with al-Zawrā and mentions the wonderful monastery there. The inhabitants had to pay tribute to the Banū Khaḍafīa in return for which they were protected. The rich inhabitants were merchants or landowners, the Beduins were labourers. As a flourishing domestic industry the weaving of woolen garments is mentioned (al-Asmaʿī in Yākūt, ii. 784); in addition to articles of clothing, bags and sacks were manufactured (al-Kazwīnī, *Aqāīd b*, ed. Wüstenfeld, ii. 132 sq.). According to Ibn Būṭlān (in Yākūt, ii. 784 sq.), Kaṣār al-Ruṣafat was smaller than the Dīr al-Khulāf of Baghdād. He describes the church, the outside of which was adorned with gold mosaics, and says it was built by Constance, son of Helena. Below this church and of the same dimensions was a subterranean cistern panelled with alabaster slabs. The inhabitants of the fortress were for the most part Christians who earned their living by guarding caravans and transporting merchandise, but they also made bargains with thieves and robbers. The desert around al-Ruṣafat is so flat that one can see to the horizon on all sides. According to al-Išrīṣī (transl. Jaubert, i. 137), the town in his day (1154) had a flourishing market; a much used road led from there through the desert to Salamya and Ḥims. Yākūt was still able to see in the centre of Ruṣafat Ḥīšām the monastery of al-Ruṣafat which, on account of its architectural beauty, he describes as one of the wonders of the world (Yākūt, ii. 660 sq., s.v. *Dair al-Ruṣafat*). Abu l-Fīdā (ed. Reinhard, p. 271) gives the distance of the town from the Euphrates as less than a day’s journey.

In 1240 the Khwārizmians on their return from Syria came via Salamya to al-Ruṣafat; troops from Ḥalab followed them and fought them at Siifīn (Abu l-Fīdā, *Annals Musulm.*, ed. Kieske-Ader, iv. 458). In 668 (1269) the inhabitants of al-Ruṣafat fled for fear of the Mongols to Salamya; henceforth the town remained uninhabited (B. Moritz, in *Z. G. Erdh. Berl.*, xvii. 174 sqq.; *M. S. O. A.*, i. 1898, p. 144).

In 1300 al-Dinānihī (ed. Meher, p. 205) includes Siifīn and Ruṣafat Ḥīšām, which, as he knew occupied the site of a Greek city, in the district of Bāli, while Ḥādījah Khašīfa (Stambul 1145, p. 593) includes Bāli and al-Ruṣafat in the province of Kinnāsir with Ḥalab as capital.

The imposing ruins of the town date almost entirely from ancient times. They have in modern times been several times surveyed, thoroughly examined and fully described.

RUSČUK, capital of a district and port on the Danube in Bulgaria (often wrongly written and pronounced Rusčuk) in Bulgarian Ruse (FYRCE Rousse), is situated at the junction of the eastern Lom (Turk. Kara Lom) and the Danube, here 1,400 yards wide, opposite Gurgiu (Gyurgyalja Vardar Yor Koli), part high on the left plateau, on the state railway from Rusčuk to Varna (since 1866) and Rusčuk to Tarnovo and is one of Bulgaria's nine ports on the Danube (with about 50,000 inhabitants). After the decay of the medieval Čerwen some 15 miles inland, which survived as the name of a Bulgarian eparchy and the ruins of which could still be seen in the xvith century (cf. HADİĐIJA KHALIFA, RUMELI VE BOSNA, transl. J. VON HAMMER, VIENNA 1812, p. 44), the new Ruse arose on the Danube half a day's journey away. The Turkish name Rusčuk, by which the town is still almost exclusively known outside of Bulgaria, is undoubtedly a diminutive from Ruse (Ruse = Rusčuk; cf. the name of the island of Rhodes, Turk. Rodos and Rodos-cık for Rodosto; q. v.), but only seems to have come into being in the first third of the seventeenth century. In the two treaties concluded between the Porte and Hungary on Aug. 20, 1503 (cf. J. V. HAMMER, G. O. H., I., 331 sq. and the text on p. 618: Ruse = Rusčuk) and April 1, 1515 (cf. THEINER, MONUMENTA HUNGARICA, II. 624: Kiskő for Rusčuk) and in Mercator's map of 1584 the Bulgarian form still appears. The town must have already attained considerable prosperity in the xvith century. It quickly developed under Turkish rule and became an important centre of traffic, trade, industry and strategy in Danubian Bulgaria and surpassed the two fortified towns of Nicopolis [q. v.] and Silistria which played the leading part there at the beginning of Ottoman rule (cf. A. BAYROV, BULGARIEN, LAND UND LEUTE, LEIPZIG 1917, II. 102 sq.). The French traveller PIERRE LESCOSPIEL, who reached Rusčuk on June 14, 1576, in his valuable journal, which has only been published in part, describes Rusčuk as a populous town: cette ville est peuple et y a quantite de marchandise de toutes sortes et des vivres en abondance et a bon pric (cf. REVUE DE L'HISTOIRE DIPLOMATIQUE, VOL. XXXV., PARIS 1921, p. 45). Shortly before, the famous Ottoman architect SINAN [q. v.] built a mosque there for the grand vizier RUSTEM PASHA [q. v.] still admired in the xvith century, presumably in the north at the water's edge. The figure given for the population as for mosques varies; of the latter Rusčuk had at one time a considerable number. The Franciscan Peter Bogdan BAKIĆ, later archbishop of Sofia, in 1640 found in Rusčuk 3,000 Turkish houses with 15,000 inhabitants and 10 mosques of stone (fatiha de Pietra Bianca), and 200 Armenian houses with over 1,000 inhabitants and a citadel with five towers (cf. EUG. FERMEYDIA, OR ON THE BULGARIAN ECCLESIASTICS = vol. XVIII. of the MONUMENTA SOUTIENHIS HISTORIANS SLOVORUM MERITOSIUM, AGRIM 1887, P. 74). In 1659 Filip Stanislav Novak counted 6,000 Turkish wooden houses with over 30 mosques (ibid., p. 263; cf. also P. 7, 10, 26, 31, 88, 137, 299 [Rusci o

Rudzień: 1685], 300 with further particulars) Ewlijy Čelebi (SEVİSHEMİNE, III. 313 sq.; cf. the Bulgarian transl. by D. G. GADŽANOVIĆ, IN PERIODISLO SPIZIJA NA BULGARSKO KNIJEZBO DRUŠTOVU V SIFANI, I. 1XX., FLODÍN 1900, P. 654 sq.) about the same time mentions 2,200 houses of wood, also three Christian quarters, the mosque of Rustem Paša, baths and three caravanserais in "URASČKE". The only Jews, he says, were those who visited the place on their trading journeys. The people, whom he praises for their hospitality, lived by commerce and spoke Bulgarian as well as the "language of Wallachia and Moldavia". Ewlijj Čelebi says the pumpkin (žuvna) there was particularly good, 10 being sold for 1 peni (5 of which = 1 Vienna groschen or 3 kreuzers, 150 = 1 talar).

Rusčuk is regularly mentioned in the many records of travel on the Danube in the following centuries. References to the town in the xvith and first half of the xixth century are in general agreement. The inhabitants seem at all times to have conducted a busy trade in wool, cotton, silk, leather and tobacco, which at an earlier period was for a considerable part in the hands of Rugusian merchants, who had a settlement there from 1673 to 1755. The English clergyman R. WALSH (1827) estimated the population at 15—20,000 souls. The streets of the town, which was surrounded by walls on three sides after the manner of Turkish fortresses, as a rule sloped steeply to the Danube which part was partly undefended. Turks, Greeks, Bulgars and Armenians lived in some 7,000 houses and conducted a busy trade with Turkey (cf. R. WALSH, A JOURNEY FROM CONSTANTINOPLE TO ENGLAND, LONDON 1824, P. 207). HELMHUT V. MOLTCHE who visited Rusčuk in 1835 and described it (cf. BRIEFEN ÜBER ZUHANDEN UND BEGEHLEHNheiten IN DER TÜRKEI, BERLIN 1877, P. 11 SQ., 132 SQ., 424 SQ.) was surprised that "this important Turkish fortress with its long, dominating and enfiled lines without outer works, half armed and defectively planned" could offer the enemy such resistance. As an important frontier fortress Rusčuk suffered a great deal in course of centuries. Sieges, confiscations and bombardments (the last by the Rumanians during the world war on Aug. 28, 1916) continually altered the appearance of the town which with its regular streets and large open spaces no longer has anything of an oriental appearance. In the Turkish period Russčuk was the residence of sandjak-bey, at one time of a paša (about 1840, when Bulgaria was divided into the three paša-beks of Rusčuk, Vidin and Silistria), until in 1864 it became the capital of the new Danube vilaiet (TUANA WILAYET) with the so-called (влади) of Rusčuk, Varna, Vidin, Tulcha, Tarnovo (Tornovo), Sofia and Niš, created and administered by the reformer Mihael Paša [q. v.] and formed out of the sąds in Silistria, Vidin and Niš [q. v.]. A special printing press was instituted and in addition to a newspaper a salname (TUAna WILAYETIN SALNAME) annually published, which gives a good survey of the administrative measures. After the devastation wrought in the Russo-Turkish wars of 1811 and 1828, Rusčuk attained new prosperity as the official residence of a governor (वाँग). In 1854 Bouché de Pertuis estimated that Rusčuk had about 30,000 inhabitants in 4,000 houses (cf. VOYAGE À CONSTANTINOPLE, VOL. II., PARIS 1855, P. 413 SQ.); the German physician C.
W. Wutzer who became acquainted with Rusçuk in the governor-generalship of Sa'îd Mehmêd Pasha, thought that the population was only 24—25,000. The number of mosques in Rusçuk is very variously given by travellers. In 1840 F. Hacklander says 29, C. W. Wutzer in 1856 only 16. The fact is that many mosques were destroyed in the fighting. Nowadays (1935) Rusçuk has 19 mosques (dja- wâmi'), 9 small mosques (ma'djidî) and the monastery of the Shâhidî darwâshes founded in 1252 (1836). While in the great battle that raged on July 4, 1811 around Rusçuk the fortune of war decided in favour of the Turks under the grand vizier Ahmed Pasha, and the Russians under Kutusov blew up the defences of the stronghold and retired across the Danube after setting the whole town on fire, in the Russo-Turkish war of 1877—1878 on Feb. 21, 1878, the Ottomans under Kâzîmer Ahmmed Pasha had to surrender the town and fortress to the Russians after a long siege. The defences, renewed for the last time in 1877, were razed to the ground in 1881. Since that date the town has been a Bulgarian possession.

Rusçuk was the birth-place of the grand vizier Çelebi-zâde Sherif Hasan Pasha (d. 1205 = 1791; q.v.), of the kâbiî Amâni Çelebi (d. 1100 = 1791, according to J. v. Hammer, Geschichte der Osmanischen Dietkultur, iii. 83) and of the famous Ottoman author Ahmed Sherif Hasan Mihamet Bey (1841—1912; cf. F. Babinger, G. O. W., p. 389 sq.)

RUSTAMIDS, a dynasty of îbâdî Khâ- ridjîs of Tâhert. The first of the Rustamid imâms, 'Abd al-Rahmân b. Rustam, of Persian origin, had been made governor of Kairawân when the Khâridjî Bebers of the Djebel Nefüsa, led by Abu 'l-Khâjaib b. Ma'âfarî [q. v.] seized the town in 141 (758). Three years later (144 = 761), Muhammad b. al-Ash'âth at the head of a strong Arab army recaptured Kairawân. Ibn Rustam fled to the west and founded Tâhert [q. v.] in a region where the Khâridjîs must already have been very numerous. Fifteen years later, the Ikhâsit conferred the imâmate upon him. Six members of the same family in turn succeeded him. The chronology of their reigns is however rather uncertain. With certain gaps it may be arranged as follows:

'Abd al-Rahmân b. Rustam 160—168 (776—784)
'Abd al-Wahabbâh b. 'Abd al-Rahmân 168—208 (784—823)
Abû Sa'îd al-Aflâh b. 'Abd al-Wahabbâh 208—258 (823—871)
Abû Bakr b. al-Aflâh, dethroned 258—? (871—?)
Abû 'l-Yâkhrân Muhammad b. al-Aflâh — 281—? (879—?)
Abû Hâtim Yusuf b. Muhammad, dethroned 281—? (894—?)
Ya'kub b. al-Aflâh, dethroned. . . . . . .
Abû Hâtim Yusuf, restored . . . . . .
Ya'kub b. al-Aflâh, restored 294—296 (906—908)

The history of the foreign relations of the Rustamids, all that authors like Ibn Khaldût, Ibn 'Idhârî or al-Bakri, knew of them, is limited to a few facts. Although the kingdom of Tâhert was surrounded by enemies (the territory of the Aghlabids of Kairawân included the Zâb [q. v.] and the Idrîsids of Fas were vassals of Tlemcen [q. v.]), its existence was not directly threatened for 150 years. We find the second imâm, 'Abd al-Wahabbâh, associated in the attack by the Khâridjî Bebers (Huwwâra and Nefüsa) on the town of Tripoli which was under the Aghlabid amirs. At the same time the Rustamids, who could not recognise the 'Abbasid caliphate and had to defend themselves against the Aghlabids who were vassals of Baghda'd, seem to have sought the friendship of the Umayyads of Cordova. Ibn 'Idhârî under 207 (822) mentions the magnificent reception given by the Umayyad 'Abd al-Rahmân II to an embassy from Tâhert which included the son of the imâm 'Abd al-Wahabbâh. We also know that this Umayyad had a Rustamid among his viziers (information supplied by E. Lévi-Provençal) and that in 239 (853) al-Aflâh received a present of 100,000 dinhems from the
Umayyad Muḥammad I. The reign of this imām al-ʿAlāmah saw a conflict between the Rustamids and the Berbers of the region of Tlemcen, partisans of the Idrisids of Fāṣis, in which Tābert was victorious. Lastly we know how in 968 (908) the kingdom of Tābert collapsed in a few days before the onslaught of the Kutāmah Berbers led by the Shīʿī missionary Abū ʿAbd Allāh (q.v.). Several Rustamids were put to death and their heads sent to Raḵkāda and carried through the streets of Kairawān. Others, among whom according to some authors were the imām Yākūb and his son Abū Sulaimān, were able to escape and reach the oasis of Wargla.

What is of more importance than the relations with the other powers of Spain and Barbary, is the internal life of the Rustamid state which our usual sources ignore but of which we get a glimpse from Ibāḍī chroniclers like Abū Zakāriyya. Although hereditary, the succession of imāms was in theory regulated by the vote of the Ibāḍī community. The imām, regarded as the most worthy, most honourable and best educated man, the temporal and spiritual chief of the state, whose prestige extended to the communities in the east, was in reality under the control of the religious caste: the rābīʿ, māṭabīʿ, talaiba, the guardians of the strict observance of the laws of the sect.

In a theocratic state of this kind, crises naturally took the form of schisms. The most serious took place during the reign of the second imām, Abī al-Wahhāb. At the instigation of a rejected candidate for the imāma a group of malcontents demanded that the elected imām should rule with the control of a regular assembly. This innovation was put to the Ibāḍī doctors in the east, who rejected the principle completely. The advocates of the reform separated from the community and formed the sect of the Nukārīs (q.v.).

A second schism took place in the region of Tripoli on the death of a governor of the province and the question of his successor designated by the imām of Tābert.

Crises not so serious which seem however to have been more of the character of dynastic rivalry, disturbed the peace of Tābert from the fourth imām. The claimants to the throne gained the support of an opposition formed of diverse elements. No less than the religious prestige of the imāms, the resources of the region and the activity of its commerce attracted to Tābert foreigners from Persia, the ancestral home of the Rustamids, or from different parts of Barbary, Arabs from Ifriqiya, Naṣūfa from Tripoli, and Christian Berbers. The Zenēta nomads of Ifriqiya and the Central Maḥrūb frequented its markets and grew rich in them. Among these heterogeneous groups, some, like the Neşifs, Persians and Christians, showed themselves regularly the supporters of the established authority: while others, the Arabs in particular, and very often the nomads, were disposed to encourage the ambitions of pretenders.

Exposed to the troubles stirred up by its guests and its neighbours, this ideal state had then a somewhat agitated existence. The dynasty included able politicians, like al-ʿAlāmah who, using the luxurieux et impérs, secured peace and whose regio marked the apogee of Rustamid power. Several Rustamids were learned imāms, caring less for their tastes as rulers than for theological speculations, not to mention profound studies like astronomy. Their surprising tolerance of foreigners, even those hostile to the sect, encouraged the entrance of dissident elements into the administration and prepared the way for the collapse of Tābert and the annexation of the kingdom by the victorious Shīʿīs.

RUSTEM PASHA, Ottoman grand vizier and historian, was born in 1500 in the vicinity of Sarajevo (q.v.; cf. the report of the Bailo B. Navagero in Albérì, Relazioni degli ambasciatori venuti al senato, ser. iii., vol. 3, p. 89: d’un cavali oppresso il serraglio di Bosna, i.e. Bosna-Seray), either in Botomor or perhaps on the western border of Sarejovsko polje (cf. Č. Truhelka, in Bosatich Post, Sarajevo 1912, No. 80, who comes to this conclusion because Rustem Pasha built a bridge with 15 arches over the Željeznica of which remains still exist), of parents probably originally Christian. In a sīdiyy of the Sherf-āt court in Sarajevo. "Neftsa Khanum, daughter of Mustafa and sister of Rustem Pasha" in the middle of Shaḥ 964 (June 1557) sold through her agent Ḩājī Ali Beg b. Khair al-Dīn, wādītわる of Rustem Pasha’s hāsīṣṭan in Sarajevo, her house there; this gives the name of the father Mustaṭfa. The family are said to have been originally called Oğuz or something similar to Č. Truhelka, op. cit., says the name was Čâgâtâ. The local tradition of Sarajevo knows Neftsa Khanum as a sister of Rustem Pasha and daughter of a Mustaṭfa Beg or Paša. Rustem Pasha’s brother was the kapudan paša (q.v.; grand admiral) Sinân Paša. As a boy Rustem entered the school for pages in Stambul and then the service of the court. He became stirrup-holder (vīkbūr; q.v.), gained the favour of the sultān and was appointed governor of Diyarbakr (q.v.), later of Anatolia. In 1553 he became third and in 1541 second vizier. On Dec. 1, 1544 he received the imperial seal for the first time. In 1553 at his own request Rustem Pasha was relieved of office and retired to Scutari where his wife Mihr-i Māh (q.v.), a daughter of Sulaimān I Kāchun (q.v.), had built a palace. But by 1555 he was again grand vizier, and held this office until his death in July 10, 1561 (26th Shawwāl 968: of the various dates given, this must be the right one; J. H. Morellmann, in M. S. O. S., xxxi., 2 [1929], 28, however, gives the 26th Shawwāl 978 [July 8, 1561] as the day of his death). He was buried in his own splendid türbe in Stambul beside the Shahāde mosque (cf. (Graphics GEORGES MARÇAIS)
and Ḫusain b. Ḫasūl, Ḫadiqāt al-Djawāmi"], i. 16; wrongly in Sīdīs-ī Ṭūmānī, i. 378). In addition to the many buildings, notably mosques, which he erected with his vast wealth in various parts of the empire and for which he employed the great architect Sinān, Rustem Pasha made a reputation for himself by a chronicle of the Ottoman empire, Tavārīkh-i Aṭī ʿOṯmān, which goes under his name. In the completes version that has survived, it comes down to 968 (1560-1561). The narrative, as regards the earlier period, closely follows the anonymous Tavārīkh-i Aṭī ʿOṯmān and the Annals of Muḥyī al-Dīn Djamāl and Nesrī [q. v.]. It is only from the reign of Mehemed II the Conqueror, that it shows a certain independence, although perhaps here also an original source may be found. It only becomes important when it describes the events of his time. Although Rustem Pasha is known to have encouraged historical studies (cf. F. Babinger, G.O.W., p. 82, note), it is by no means certain whether he is himself the author of the Chronicle that bears his name or whether he only had his book compiled. A German translation of part of it was published by Dr. Ludwig Forrer under the title Die osmanische Chronik des Rustem Pascha in the Türkische Bibliothek, xxi. (Leipzig 1923; cf. thereon O.L.Z., xxvii. [1925], p. 246 sq.; ibid., xvi. [1925], p. 154 sqq., and Histor. Zeitschrift, vol. cxxxviii. [1928], p. 571 sq.).

RUYAN. A district comprising the western half of Mazaradān [q. v.].

Iranian tradition. According to Darmesteter, Avicenna, ii. 416, Ruyan corresponds to the mountain called Rāudīla ("reddish") in Yatḥ, 19, 2, and Rūyīgān-īnmand in Bundakht, xii. 2, 27 (transl. West, p. 34). Ibrānī, Chronologie, ed. Sachau, p. 220, makes Rūyīn the scene of the exploit of the archer Arish (cf. Zahir al-Din, p. 18 [Yatḥ 6, 6; in this connection mentions the hill Arūyā-xshnā)]. In the letter addressed to the mobad Tansar by king Gusnaspāhāvā (11th century [A.D.]), the latter claims to be lord of Tabaristān, Patishxīvār, Gar, Gilān, Dalālman, Ruyān and Damāvand.

Geography. According to Ibn Rusta, p. 150, and Ibn al-Fakhr, p. 304 [the latter cites Baladāhuri as authority, but the passage is lacking in the Futūh al-Buldān], Ruyān was at first an independent kūn attached to Dalām. It was conquered by Omar b. al-ʿAlī (after 141 = 758) who built a town there with a minār and attached it to Tabaristān. Ruyān comprised an extensive area the districts of which lay between two mountains [Ibn al-Fakhr: "between the mountains of Ruyān and Dalām"]; each township could supply from 400 to 1,000 soldiers [Ibn al-Fakhr: in all 50,000]. The kharāji levied on Ruyān by Ḫārūn al-Rashīd was 400,500 dirhams. The town of Ruyān called Kaddūjā was the headquarters of the wālī. Ruyān was near the mountains of Ray and was reached via Ray. The text of the two authors above quoted suggests that between Ruyān and unsubjected Dalām was a region which formed the military zone from which operations were conducted against Dalām. To this zone belonged Shalī (Qtāʿīs), a town called al-Ḵāhāra (situated opposite Kaddūjā), another (?) town called al-Muḥdāṣa and lastly Muzn. [But on these frontiers see the Hīdūd al-ʿAlam and Zahir al-Dīn].

Iṣṭakhrī, p. 206, enumerates the mountains of "Dalām" [in the broad sense] as the following: Ḫalābār Kārīn, Dībāt al-Ḵāhāra, Ḫalābār Rūyānī (according to Barthold: al-Rūyānī = Rūyān). In these last named highlands there were formerly kingdoms (mamālīk); in the part adjoining Tabaristān the kings were of Tabaristān and in the part adjoining Ray they were of Ray. According to the Hīdūd al-ʿAlam (written in 372 = 982, ed. Barthold, fol. 308), Nāṭīl (according to Iṣṭakhrī, p. 217: one marhala west of Āmu) Cūṣ, Rūdān (= Ruyān) and Kālār (west of Qtāʿīs) formed a province of Tabaristān but the authority there belonged to a king named Ustundār. Rudān produced red woollen materials for waterproofs and blue gilīn (a kind of carpet material).

Rūstardār. From the Mongol period we find the geographical term Rūstardār. According to the Yaqūt al-Kuli, p. 161, the greater part of its territory was irrigated by the Shāh-rūd ([,] and the Taʾrīkh-i Khānī, ed. Dorn. D. 298, says that Taḵān (on the upper Shāh-rūd) adjoined Rūstardār. On the other hand, Zahir al-Dīn gives the term a larger connotation and uses it sometimes as a synonym of Rūyān and sometimes with a special meaning. An examination of the passages leads R. V. Vasmer, op. cit., p. 123-124 to the conclusion that Rūstardār in the proper sense was situated towards Kudūr and Kālār while Rūyān primarily meant the country between Rūstardār and Kāsān (i.e., the country towards Ray). According to Zahir al-Dīn (p. 19-20), the eastern frontier of Rūstardār was originally at Si-sangān (near the mouth of the river of Kudūr), but in the time of the Sādūkī Sandgāz was brought back to Alūdā (near Āmu). The western frontier was at first at Malār (near Lengerdār, Gilān), but in 590 (1193) was brought back to Sakhtasar (on the eastern frontier of Gilān) and in 640 (1242) at Namāk-ṣawārūd (west of Kālārāstāk). It is curious that Zahir al-Dīn, p. 17 seems to place the "town of Rūyān" (Kaddūjā of Ibn Rusta) at Kudūr but the passage is not very explicit and the legend of the foundation of the town given by Zahir al-Dīn may belong to a period before the appearance of the term Rūstardār.

The princes of Rūyān. The title attested for the dynasty is Ustundār (perhaps *Ustān-dār < Ustān-dar; cf. Tabari, i. 263). It is not clear if the dynasty also took the title of padshūpān (< padshūpān) which in Sāsānian terminology was the first borne by the viceroy, the prerogatives of which were lessened in time by the increase in power of the military commanders (tpāh-šāh; cf. Christensen, L'empire des Sāsānides, p. 41, 43). The fact is that in the passage in Iṣṭakhrī, p. 206, the mountain of Fādūsān is mentioned separately and, it seems, to the east of *Rūyānī but it is possible that the
The names of the carpenters are Ahmed and Husain (I). The name of Ahmed b. Husain who carved a gateway at Bärfurûsh in 870, Rabino, op. cit., p. 146, and ibid., p. 141; Husain b. Ahmed who carved the gate of Buland-Imâm, near Ashraf, dated 873 (1468).

1936
ADDITIONS AND CORRECTIONS

P. 1, read: M. is now a pretty little Arab town with 9,423 inhabitants. To the east of it is the Blad, which was formerly separated by a wall, now taken down, from the town which lay to the west of it. The whole area is surrounded by a wall which is pierced on the north by three, in the west by one, and in the south by three gates.

P. 41b, article LUR, l. 71, instead of: The clans (gurūk), read: The tribes (gurūk).

P. 42b, l. 28, instead of: mutafarriṅa, read: mutafarriṅa; l. 51, instead of: southern, read: northern.

P. 43b, l. 48, instead of: village, read: valley.

P. 43b, l. 62, instead of: like, read: as well as.

P. 44b, l. 11, instead of: Bāyid, read: Ziyārid.

l. 63, instead of: Mākān, read: Mākān.

P. 62b, l. 37, instead of: Siyat, read: Siyāt.

P. 76a, ll. 1 and p. 77a, l. 6 from below, read Rūmiya, for Rūmīya.

P. 76b, add on l. 22 from below: From January to March 1928, L. Waterman conducted excavations in the region of Tell Umar for the American Schools of Oriental Research (cf. their Bulletin, No. 30, 1928). The mound seems to conceal a sīgūratu (tower built in successive stages) with a large temple adjoining it which continued to be used in the Graeco-Roman period; a Roman cemetery was laid bare in another part of the ruined area. From inscriptions found here the equation Akshak-Upli (Opis)-Seleucia is made quite certain. For Akshak, cf. also the article by Unger in the Reallexikon der Assyriologie, vol. i., Berlin 1928, p. 64—65.

P. 77b, read iv. 447, 7 for v. 447, 7.

Add to the Bibliography of the article AL-MADAʿIN: Apart from the already mentioned poem of Patchachy, unimportant in matter, in the periodical Lughat al-ʿArāb, Baghdād, iii., 1914, p. 393, cf. especially the articles by F. Djebrān in the same periodical, iii. 136—141 (with corrections by Kāẓim al-Dudjaiṭi, op. cit., p. 292—294) and Kāẓim al-Dudjaiṭi, op. cit., p. 282—294. Djebrān deals particularly with the present settlements of Arab tribes in the region of al-Madāʾin, al-Dudjaiṭi also gives an account of the latter and gives interesting information also of the pilgrimages to the tomb of Salmān al-ʿFārisī, describes the interior of this “sanctuary” and gives notes on various mounds of ruins in the region of al-Madāʾin which form a welcome addition to Herzfeld’s toponography.

P. 224a, l. 29 and 33, instead of: Maʿmūnis, read: Maʿmūnids.

P. 224b, l. 3, instead of: Farīghūnīs, read: Farīghūnīs.

P. 432b, l. 11 ab infra, add: According to Ibn al-ʿAtlīr (ed. Tornberg, i. 314, 375, cf. Yāḵūt, iv. 294) Kawāzād destituted al-Mundhār b. Maʿ al-Saʿmāʾ because of his refusal to accept Mazdakism and appointed in his place the Kindāt al-Ḥārīṭ b. ʿAmr, who had embraced the new faith. Whatever may be the truth, the relations between the king of Persia and the Arab have been influenced by Mazdakism.

P. 496b, l. 11, 12 ab infra, read: Timur who stayed in Balat (Milet) on his return from Smyrna in the winter after the battle of Angora (1402) (Ducas, p. 76, ed. Bonn, various reading).

P. 505b, l. 19, instead of: Nukāt, read: Nukāt.

P. 514b, art. MIRĀT. To be added to the Bibliography: Peltier and Bousquet, Les successions agnatiques mitiques, Paris 1935.

P. 530b, l. 32, p. 543a, l. 29, instead of: 828, read: 282.

P. 640, art. AL-MUḤĀDĀRĪNA. Add: In modern times the name Muḥādirjūn has been applied to those Muḥammadan emigrants who, as a result of the transfer of Muḥammadan territory to the non-Muḥammadan rule left their native land and went to a Muslim country in order not to be impeded in the exercise of their religious duties. For example, towards the end of the xvith century and in the xviith century large bodies of such emigrants abandoned lands occupied by the Russians and sought a new home in Turkey. A similar phenomenon
accompained the liberation of the Balkan peoples from Turkish rule and the rise of the independent Balkan states. The Muhammadans deported to Turkey from Greek territory after the Treaty of Lussan (1923) as a result of an agreement with Greece were always called Muhadjirov, even in official language. Their affairs were regulated by a "General Office for Nomads and Emigrants (Asgâr ve Muhadjirovun Müdâriyeti) umumiyyeti)."

In modern Turkey the Muhadjirov constitute an important domestic and cultural problem. Their settlements which are distributed over the whole of Anatolia are as a rule centres for the advancement of Turkish culture. The word Muhadjirov also plays an important part in place-names in Turkish territory as an element in names, mainly of recent origin.

P. 673b, l. 22, instead of: 1101, read: 1108.

l. 62, instead of: Guha, read: Gyan.

P. 674b, l. 54, instead of: Sâ'ûn, read: Sâm.

P. 686a, l. 45, instead of: Wâki'ahınigär, read: Wâki'a nigär.

P. 688a, l. 43, 55, 63, instead of: Mîr, read: Mere.

l. 66, instead of: in May 1624, read: in May 1624.

P. 691b, l. 23, to be added: 13. Ilh-il-işân ve al-thâmin (extract in L. Massignon, Recueil p. 171, note 1).

P. 692, l. 29, to be added: He has been buried at the feet of the poet Niyâzi Mişri at Kastro (Lemnos), where his tomb was still shown in 1916 (cf. L. Massignon, Recueil, p. 164).

P. 701, l. 48, to be added: In an early period Turkish has also known the form muçu (from Sanscrit mucca, mong. motor, cf. W. Bang and A. von Gabain, Türk. Turfan-Texte, v. 53).

P. 701b, l. 60, to be added: Signature was something of a privilege. Of the surviving engravings of Istanbul two only possessed it: Yumı, the son of a famous father of that name, and Şashık. The personal seals in Latin characters, made up to this day (1933), are, with a few exceptions, barbarous.

The ethnographic museum at Ankara possesses a curious collection of metal seals proven to the shaikhs of the now dissolved tarika of the Bektashis.

P. 712, art. MUKÂTIL P. SUBAIMân. Mukâtîl's commentary on the Kurân as is evident from manuscripts recently found by Ritter and Schacht is called al-Tafsîr fi mutasâhabah al-Kurân and dealt with the different meanings of single words like kudâ, kufir etc. in different passages of the Kurân. There are manuscripts in Stambul, Hamidiya, No. 58, Faizullah, No. 79, Seryâ No. 74, Umîmi, No. 561; cf. Ritter, Ist., xvii. 249, and Schacht, Aus den Bibliotheken ..., i. 58; also al-Âshârî Mukâtîl, ed. Ritter, index, p. 46. According to Massignon, La Posse d'al-Halâl, p. 520, note 2 the commentary is quoted by Abu l-Hasan al-Malaštî, Tank. 1194 (Pers.) on p. 577. Massignon calls attention to Mukâtîl's importance as a source for homonyms in which al-Shafî followed him, cf. also p. 503.

(M. Plessner)

P. 756b, l. 60, instead of: 433 (1042), to be read: 453 (1061).

P. 764b, l. 59, instead of: Nizâ, to be read: Nizâr.

P. 731b, l. 12, instead of: Sûfrîte, to be read: Sûfrîtes.

P. 936a, l. 67, instead of: Leipzig, to be read: Upsala and Leipzig.

P. 927b, Addition to the bibliography of the art Nish: B. Lovrić, Istorija Niša, prilikom 50- godišnjice oslobađenja Konstantinovog i Nemanjinoj grada (11 januara 1878-11 januara 1928). Nish 1927 (a kind of illustrated monograph).

ALTBABYLONISCHE PERSONENMIETE
UND
ERNTEARBEITERVERTRÄGE

VON

Dr iur JULIUS GEORG LAUTNER
Ord. Professor an der Universität Zürich

1936. xxii and 264 pp. With 1 plate. 8vo. price 10.— guilders

STUDIA ET DOCUMENTA AD IURA ORIENTIS ANTIQUA
PERTINENTIA VOLUMEN I

Contents:

I Personenmiete und andere Verträge über Arbeitsleistung im
Keilschriftrecht.

II Die eigentliche Personenmiete des altbabylonischen Rechts.
1. Terminologie. Der Aussteller der Urkunde und das Vertrags-
schema 2. Die Rechtsnatur des agārum-Vertrags. 3. Die Parteien
und die Vertragsabreden bei der Personenniete.

III Die Erntearbeiterverträge des altbabylonischen Rechts. Gattungsmie-

IV Hybride Formen der Personenniete.

Quellenregister — Sachregister.

From the Preface:

"Die genaue Feststellung des rechtsgeschäftlichen Typus der Ernte-
arbeiterverträge und der Unterscheidungsmerkmale der beiden Ver-
tragsarten liess das Vorkommen bisher überschener Mischformen
erkennen. Der günstige Stand der Quellen ermöglichte es, von den
verschiedenen Arten rechtsgeschäftlicher Verwertung menschlicher
Arbeitskraft für einen wichtigen Zeitabschnitt Babyloniens ein anschau-
lches Bild zu entwerfen, dessen Lebendigkeit durch Heranziehung
von Wirtschaftstexten erhöht werden konnte, die uns Aufschuss über
Arbeitsorganisation, Arbeitskontrolle und Lohnverrechnung gewährten".
